## PREFACE.

" Next to a good Dictionary, the most generally useful book is a good Gazetteer. At no time, probably, was such a work more urgently wanted than now, when the relations of this country with foreign parts have been so greatly extended, when the progress of British power and enterprise has opened up so many new fields for scientific inquiry and commercial speculation, and when so many large and interesting additions have been made to our geographical knowledge; but which, being mostly confined to special, and often expensive works, and to the transactions of learned societies, have not hitherto been accessible to the public generally."

Such were some of the reasons adduced in the Prospectus for commencing to publish the Imperial Gazetteer, the first part of which was issued in July, 1850. Whatever value these reasons may have possessed at that period, it has gone on increasing at a rapid ratio, until now, at the close of the Work, the hostilities in which we are engaged with one of the mightiest empires of the earth, impart an additional and intense stimulus to the acquirement of geographical knowledge.

In concluding this undertaking, which has occupied the Editor's attention, more or less closely, for the last eight years, little more remains than to indicate the plan upon which the Gazetteer has been written, and to note some particulars respecting its production.

A leading aim throughout has been to maintain a proper medium between those works which give lengthy and elaborate articles, and consequently treat of a comparatively small number of places, and those which, by giving very short meagre articles, often little better than registers of positions, are enabled to include an immense number of places. While in the number of articles the Imperial Gazetteer greatly exceeds works of the former, it does not fall much short of works of the latter class; for, by a rigid exclusion of irrelevant matter, by carefully avoiding the repetition of information in articles relating to the same subjects, though necessarily arranged under different heads, and by adopting a concise style of writing, space has been found, generally speaking, to notice all known towns, having not less than 1000 inhabitants, and many even of a smaller population, besides including the needful articles on countries, seas, lakes, rivers, mountain-ranges, \&c.

To facilitate the labour of consultation, the Editor has endeavoured to construct all the articles upon a uniform plan. In those on towns, first the position is given, then a descrip-
tion and enumeration of the principal buildings and institutions, followed by an account of the manufactures and trade, and closed, where needful, with succinct historical notices; the population being always at the end. In the articles on couvtries, first the position, boundaries, and general features are noticed; then, in suitable detail, the mountains and valleys, lakes, rivers, climate, natural products, manufactures, trade, people, manners and customs, language and literature, government, army and navy, \&c.; and, at the end, the chief facts in their history. All these subjects, however, are not treated of under separate headings in the articles on every country; but, where they are, they will be found generally to follow in the order above indicated, and where they are not, the subjects at least will usually be found adverted to pretty much in the same sequence.

In fulfilment of the promise made in the Prospectus to consult, in the compilation, the most recent and authentic works, both home and foreign, reference may with confidence be made to the authorities quoted at the end of the articles. That these authoritics have not been more uniformly appended as the Work advanced, was owing wholly to the urgent demands upon the allotted space by the accumulation of materials, and the fear of still further increasing the extent of the book. Besides the use that has been made of several public libraries, a private library, extending to nearly 2500 volumes, has been collected, exclusively for the compilation of the Imperial Gazetteer, including works in French, Italian, Spanish and Portuguese, German, Dutch, Danish, and Swedish.

In countries whose languages are written in the Roman or Gothic character, the spelling adopted of the names of places, is, generally speaking, that used by the natives themselves. To this rule, however, there are numerous and notable exceptions: thus, for instance, while there has been no hesitation in writing Nürnberg for Nuremberg, Würtemberg for Wirtemberg, Nijmegen for Nymwegen, Leipzig and Danzig for Leipsic and Dantzic, it was deemed inexpedient to write Livorno for Leghorn, Torino for Turin, Firenze for Florence, \&cc., though in cases like these, where an English name is used as the leading word in the article, the true native name is usually appended in brackets. In countries, the languages of which are not written in the Roman or Gothic character, the attainment of uniformity of spelling is impracticable. Linguists of the same country are not at one as to the orthography of sounds, and those of different countries spell them according to the canon of pronunciation of their native language; thus the sound of $s h$ in the English word shall would, by a Frenchman, be written cli; by a German, sch; by an Italian, sci; by a Swede, $s k$ or $s j, \& c$., rendering a strict inquiry into the nationality of the writer necessary when interpreting his orthography.

The Editor has much pleasure in acknowledging the valuable assistance he has received from William Desborough Cooley, Esq., F.R.G.S., author of Inner Africa Laid Open, \&c., \&c.; G. S. Brent, Esq., F.R.G.S.; Henry Beveridge, Esq., Advocate; Sir Robert H. Schomburgk, author of Reisen in Guiana und am Orinoko, \&c., British Consul in Santo Domingo; and without further particularizing, his best thanks are cordially returned to those gentlemen, both in this country and in foreign countries, who kindly revised the articles on the places of their residence or their
nativity, including many of the most important towns both at home and abroad; and to those very numerous correspondents, in all parts of Scotland, England, and Ireland, who, by obligingly furnishing replies to the Schedule of Queries submitted to them respecting the place of their residence, supplied an amount of accurate information that has greatly enhanced the value of the Gazetteer.

The Pictorial Illustrations, 567 in number, were sclected by, and executed under the superintendence of Mr. Robert Blackie, one of the Publishers. They are derived partly from original drawings, but principally from engravings and expensive illustrated works; the authorities from which they are taken are given under the titles of the subjects. While these authorities serve to authenticate the drawings, they also indicate where further illustrations of the same localities are likely to be found; and by thus showing the great variety of sources from which the views have been derived, give a slight idea of the extensive research undertaken in collecting them, the entire series forming only a small selection from the large mass of materials and authorities which have been accumulated and consulted for the purposes of illustration. Preference having been given to views published in the countries to which they relate, as likely to be the most authentic, works published in France, Switzerland, Spain, Italy, Germany, Holland, Belgium, Norway, Russia, Hungary, the United States, India, and the British Colonies, have thus been laid under contribution. The small Maps and Plans, 172 in number, were drawn and engraved by William Hughes, F.R.G.S., and reproduced for surface-printing by glyphography, of which art they furnish very successful specimens.

The Census of the population of the United Kingdom, in 1851, not having been fully issued until the publication of the Gazetreer was considerably advanced, the population of places in this country, in letters A-M, unless specially marked 1851, is given according to the Census of 1841; in letters $\mathrm{O}-\mathrm{Z}$ it is given according to the Census of 1851. But for the purpose of thoroughly correcting the populations of all places in Great Britain and Ireland according to the Census of 1851, an Appendix has been added, furnishing an abstract of the population returns, not merely of the places mentioned throughout the Gazetteer, but of all the parishes in the three kingdoms, and all the towns, townships, villages, and hamlets of 500 inhabitants and upwards, thus giving the population of a multitude of places that could not, with propriety, be included in the body of the Work.

In conclusion, the Editor indulges the hope that the Imperial Gazetteer will be deemed no unimportant contribution to the collected geographical knowledge of the present day, and that the efforts made to render it a Standard Work of Reference lave not been altogether without success.

W. G. BLACKIE.

# IMPERIAL GAZETTEER; 

A GENERAL

# DICTIONARY OF GEOGRAPHY, <br>  

INCLUDING<br>COMPREIENSIVE ACCOUNTS<br>OF TIIE<br>COUNTRIES, CITIES, PRINCIPAL TOWNS, VILLAGES, SEAS, LAKES, RIVERS, ISLANDS, mountains, Valleys, \&c., in THE WORLD.

# COMPILED FROM THE LATEST AND BEST AUTHORITIES, 

and illustrated witi
views and plans of the more remarkable cities, ports, and harbours.

Next to a good Dictionary, the most gencrally useful book is a good Gazetteer. At no time, probably, was such a work more urgently wanted than now, when the relations of this country with foreign parts have been so greatly extended, when the progress of British power and enterprise has opened up so many new fields for scientific inquiry and commercial speculation, and when so many large and interesting additions have been made to our geographical knowledge; but which, being mostly confined to special, and often expensive works, and to the transactions of learned societies, have not hitherto been accessible to the public generally.

It is under a due sense of the importance of these considerations, and with a view to supply other desiderata which the lapse of time and the natural mutability of things have created, that the Publishers have been induced to bring out the Imperial Gazetteer.

In compiling this Work, the most recent and authentic sources-home and foreign-from which any thing new and interesting can be obtained, will be consulted; and particular attention will be paid to the Trade and Resources of the various places described; and to the Social Condition, Manners, Customs, \&cc., of the Inhabitants. Great care will also be bestowed on the Physical Geography of Countries in the various departments of Geology, Hydrography, Climatology, Botany, Zoology, \&c., and much pains will be taken to attain accuracy in laying down geographical positions and relative distances, by consulting the best and most recent maps, or by deducing them from good written authorities. It will thus be understood that the Imperial Gazetteer will not be compiled by merely remoulding old materials, but will be an entirely new and carefully drawn up Work, adapted, in every respect, to the wants of the present day, by the information being brought down to the latest possible period.

Hitherto, most works of this kind have been compiled on one or other of two different, and, to a certain extent, opposite plans;-the one being to give the greatest possible number of places, with brief accounts of each; the other, to give lengthy articles, with a more limited selection of subjects. Both plans appear to be defective-the one, from the meagreness of its details; the other, from the scautincss of its list of places; many localities of interest, and not a few of importance, being in the latter case necessarily omitted. In the Imperial Gazetteer, an attempt will be made to avoid both these defects, by terse writing, judicious compression, and a rigid exclusion of irrelevant detail, and by dwelling only on the more prominent and interesting features of the localities described. It is, consequently, not intended to present the reader with lengthy wearisome treatises, but with concise readable articles, occupying a position between the scieutific and the popular, retaining the precision of the one without its abstruseness, and the interest of the other without its vagueness. But it must be apparent that every place, the position of which is known, cannot be given. This will be the more obvious when it is stated, that the Ordnance map of one English county alone, Cornwall, contains 19,000 names; the Gazetteer of Germany, 200,000; that of the Austrian States, a still larger number; that of Spain, about as many ; and those of other European countries would yield proportionate numbers: so that, even before leaving Europe, the list would be swollen out to far above a million of articles, the majority of them necessarily so meagre, that the Work would be rendered little better than a dry, voluminous, and costly Index. While, thercfore, such a copious list of places will be given, many of them made known to us for the first time by recent discovery, as it is hopred will satisfy the great majority of readers, the general aim will be to furnish interesting and instructive articles, rather than mere registers of positions, containing no more information than every intelligent person can himself obtain simply by inspecting a good map. By strictly following out this plan, it is expected that the lmperial Gazetteer will be rendered quite an attractive Work, not at all deserving the imputation frequently brought against Gazetteers, in common with Dictionaries, that they are but "dry sort of reading."

In conclusion, it is hoped, by the adoption of a perspicuous arrangement of matter, and by a clear and methodical treatment of subject, to render the Sarperial Gazetteer a valuable work of ready reference-a concise repertory of new and interesting information. It will thus form a most suitable companion to the "Imperial Dictionary," which has obtained so large a share of public patronage, and to which, it is hoped, it will be found in every respect equal.

As no written description of a locality can give so accurate a conception of its features or position as a plan or pietorial representation, this Work will be profusely illustrated with Engravings on Wood printed in the text. These Illustrations will comprise Views of Cities and Towns; of Remarkable Buildings, Antiquities, Natural Scenery, Costumes, Plans of Ports and Harbours, and small Maps slowing River Mouths, Islands, and Island Groups, \&c., on an enlarged seale. They will be at least Sevev IIuximed in number, and will be derived from the most authentic sources.

## HINTS

## Marked Letters.

The subjoined marked letters, used in the mames of varions foreign places, should be sounded as follows:-
$\ddot{a}$ in German, Swedish, and Danish names, as $a$ in fate.
$\ddot{0}$ in German, Swedish, and Danish names, as eu in the French word peu.
There is no equivalent for this sound in English. It is common, however, in Scotch, and is the same as oo in smoor, or ui in muir, puir.
ii in German, Swedish, and Danish names, similar to the French $u$.
The same remark applies to this as to $\partial$. The sound is a sort of com pound between that ot $\dot{\delta}$ and $e$, as in me.
a in Swedish names, nearly like oa in boat.
$\tilde{\mathrm{n}}$ in Spanish names, as Frenel $g n$, or resembling $n-n y$, as Baños, pronomee Ban-nyos.
¢ in French, Spanish, and Portuguese names, as c soft
ão in Portuguese, something resembling oung.

Distances, Measures, Heights, Positions, \&e.
Distances are given in British statute miles, and are to be understood as direct, unless otherwise expressed; having all been earefully measured on the best maps.

The area of countries, islands, \&e., is given in square statute miles, unless explicitly stated to be in geographieal miles. In smaller tracts, as counties, the area is given in imperial aeres.

All foreign monies, wcights, and measures, are reduced to British standards.

Degrees of heat are expressed according to Fahrenheit's thermometer.

Soundings, in the small maps of ports and roadsteads, are in fathoms.

Longitudes are always E. or W. from Greenwich.
For latitudes and longitudes, three special authorities have been consulted, besides maps, namely:-

Tables of Maritime Positions, in 'The Practice of Navigation and Nautical Astronomy,' by Henry Raper, Lieut. R.N. London, 1849.

Verzeiehniss Geographischer Ortsbestimmungen naeh den neusten Quellen, mit Angabe derselben, von C.L., v. Littrow. Leipzig, 1844; Wien, 1845.
Tables des principales positions Geographiques du Globe, \&c., par Pl. J. Coulier. Paris, 1828.
Generally speaking, a preference has been given to the tables of Raper and Littrow; but wherever a position has been taken from any of the three works, it is indicated by the letter (r.), ( L. ), or (c.), following the longitude. Very many positions, however, have no distinctive letter attached to them. These are either not to be found in any of the Tables above referred to, or, for some special reason, it has been
deemed better to give them on the authority of the traveller or navigator from whom the information on the locality has been derived; unless, indeed, which is frequently the ease, the only authority for them be the map.

Orthography.
The orthography of foreign names, as printed in English, is proverbially irregular. In the case of European countries having languages written in Roman or Gothie characters, this irregularity arises from two eauses-adopting the name of a loeality in one eountry through the medium of the language of another; for instance, Mayence, the French form, in plaee of Mentz, the usual English form, or Mainz, the correct German form, of the well-known town of that name on the Rhine; and, likewise, from the writer not being acquainted with the language of the country in which the locality indicated is situated. As regards countries whose languages are not written in Roman or Gothic characters, the difference of orthography has in a great measure arisen from the arbitrary methods adopted to produce the desiderated sounds-a point on which even distinguished linguists are at variance. Here also, as in the former case, still further irregularity is produced, by adopting the names of localities in such countries through the medium of some foreign continental language for instance, Jidda is frequently written aecording to the French form, Djidda; Jebel, in the same way, becomes Djebel and the sound represented in English by oo in moon, or $u$ in bull, invariably becomes ou in names adopted from French authorities.

The result of all this confusion neeessarily is, that the Gazetteer is often consulted in vain, in eonsequence of the name being looked for under a different spelling from that which has been adopted by the compiler.

To assist the inquirer, as far as possible, in finding his way out of this orthographical labyrinth, a list is subjoined of the interehangeable letters and combinations of letters of most frequent oceurrence. It will, therefore, be understood, that when a name in which any one of the following letters, or combinations of letters, occurs, is sought for in the Gazetteer, and not found, that it slould be looked for under each, or all, of the other combinations, before it is presumed that it lias been omitted:-
$x, j, g$, In Spanish names, are frequently used for each other; as Xerez for Jerez, Alaguela for Alajuela, Guadalaxara for Guadalajara, and vice versa.
Letters are sometimes doubled in words; as Arriege for Ariege, Affghanistan for Afghanistan.
$o u, u$, and $o o$, are frequently used in writing the same name; as Soudan, Sudan, Soodan; or Moultan, Multan, Mooltan.
tch, and tsch, is used for ch, sounded as in church; as Telang for Chang.
$c$ is very frequently used for $k$, and vice versa; as Callundborg for Kallnudborg.
$k h$, for $k$.
$s c h$, for $s h$.
$y$, for $i$, and vice versa.
$D j$, for $j$; as Djebel for Jebel.
When the name of a place is composed of two words, It will usually be found under the most important and distine tive of the two. Thus, St. Andrews, will be found under Andrews (St.), and not under St. Andrews. The same rule, with exceptions of course, holds good of names beginning with Cape, Port, San, and Santo, the latter two bring the same as
the English Saint. In consulting the Gazetteer, it will be well to observe, that if the place be not found registered under the one word of the name, to look for it under the other; for instance, Port Essington, if not found under Essington, look under Port, and vice versa; Cape of Gool 1Iope, if not foumd under Cape, look under Good Hope, and if not there, look under Hope.

## Prosusciation.

Numerous requests have been made, that the pronunciation of the names of places in the Imperial Gazettecr should be given. This would, indeed, have been a very useful addition to the work, and, under this impression, it has been earefully considered. The difficulties, however, which stand in the way of carrying out a scheme of pronunciation to anything like a satisfactory result, have been found insujerable. Some of these are sufficiently obvious.
There are two ways of pronouncing foreign names:-

1. Aecording to the idiom of the English language.
2. According to the idiom of the language to which they belong.
If the first be adopted, who is to decide in what way a word is to be prononnced? The sounds of the English vowels are so various and uncertain, that the same name might, with perfect propriety, be sounded several ways, and yet each be in strict accordanee with the canon of English pronunciation. For example, take Altenkirchen, the name of several places in Prussia, Bavaria, Nassau, and Oldenburg. The name means 'old churehes,' and might be pronounced with the $a$ as in fate, the $i$ as in pine, and the $c h$ as in church; or the $a$ might be as in futher, the $i$ as in pin , and the ch as in chord; or the a might be as in wall, and the $e$, in either case, as in me or in met, or one way in alten and another in kirchen. The German pronunciation would be $a$ as in wall, $e$ as in met, $i$ as in $1^{n i n}$, and $c h$ as in the Scotch word loch, there being no sound equivalent to it in English. If difficulties so great present themselves with simple German words, what will be said of such polysyllabic intricacics as Ootaguesquegamookook, Alagasquegamook, \&c., names of lakes in Maine, U. States of America?

If, on the other hand, the second plan be preferred, as being undoubtedly the more correct, two diffienltics again oceur :the first of whieh is the ligh improbability, to say the least of it, of meeting with an individual gifted with a knowledge of all the languages in the world, or even a limited number of individuals possessing that knowledge amongst them, without which the scheme could not be fully and perfectly carried out. -The second difficulty is equally insuperable. Supposing a number of uudividuals to be met with, collectively possessing the requisite qualification, how could they convey to the reader even the remotest idea of many of the sounds, there being no equivalent for them in the English language? From the simple $\delta$ or ch of the German, the rough guttural gr of the Dutch, the nasal ao of the Portuguese, or the $u$ of the Swedish, to the chuck or click of the Bosjesman, the number of sounds, of which it would be utterly impossible to give the most distant conception by means of any collocation of letters known in our language, is so great, as to render a successful attempt to indicate the correct pronunciation of many thousands of foreign names utterly hopeless.
Foreign words fiequently occurring in Maps, and, therefore, sometimes necessabily used in accoents of rlaces.

# IMPERIAL GAZETTEER; 

A GENERAL DICTIONARY OF GEOGRAPHY,

ETC., ETC.

## Ad

AALESUND

AA, a contraction for the old German Ahha, and the same as Ah, Ahe, Aha, Aach, and Ach, and meaning 'flowing water.' As a final syllable, it appears in the name of many places; as, Stockach, Biberach, \&c. Aa is the name of numerous streams in different countries.-In Prussia there are five, none of them important: 1, An affluent of the old Ijssel, which it joins below Anholt, within the Dutch territory. 2, An affluent of the Veche, into which it falls at Neuenhaus, in the ITanoverian province of Bentheim. 3, An affluent of the Eems, into which it falls at Münster. 4, An affluent of the Werre, which it joins at Herford, 15 m . S.W. Minden. 5, A small stream near Dennewitz, in the vicinity of Juterbock, called also Aha and Agerbach.-In Switzerland there are four: 1, An affitent of the Aar, rising in the canton Luzern, in lake Baldegg; flowing through the Hallwyler lake, the canton Aargau, and falling into the Aar near Willegg. 2 and 3, Affluents of lake Luzern, and both in the canton Unterwalden. The one rises in lake Lungern, flows through lake Sarner, and falls into lake Luzern at Alpnach. The other rises in mount Surenen, flows past Stanz, and falls into lake Luzern near Buoclss. 4, In canton Ziirich, a stream connecting lake Pfäffikon with lake Greiffen. After it leaves the latter lake, it is also sometimes called the Aa, but more usually the Glatt.-In Inolland, streams with the name Aa are very numerous, having generally, however, a distinguishing prefix by which they are best known; as, the Almelosche Aa, the Fivel Aa, \&c. Two streams may, however, be named, that are usually known by the name Aa simply: 1, In N. Brabant, rising near Mierde, and flowing N. till it joins the Ley, below Oosterwyk. 2, In prov. Drenthe, rising near Weestrup, taking a N. course, and falling into the II unse at Groningen.-In Belaium, one in prov. Antwerp, rising N.E. from Turnhout, flowing S.E., and joining the Little Nethe (Petit or Klein Nethes) below Grobbendonck-In France, one in dep. Pas de Calais, rising near the village of Bourthes. It takes a N.E. course, and falls into the strait of Dover at Gravelines, through the St. Omer Canal.-In Russia there are two: 1, The Boulder-Aa, prov. Liefland, or Livonia. It flows past Volmar and Venden, to which town it is navigable from its mouth, in the gulf of Riga. 2, The Treider-Aa, prov. Courland. It is formed by the junction of the Memel and the Alass, and falls into the gulf of Riga, close by the mouth of the Dwina.-(Ritter's Geog. Lex.; Van der Aa's Nederlanden; Die. de la France; Dic. de Russie.)

AACH, two villages:-1, In Baden, 8 m . W. from the N. end of lake Constance, on a steep hill, and partly surrounded by a wall. It has paper, meal, and oilmills, tanneries, and dyeworks. Its inhabitants, who are R. catholics, are much occupied in rearing cattle. Pop. 800. 2, In Rhenish Prussia, near Treves. It has a church, and in the

Vol. I.
vicinity are quarries of gypsum and lime. Pop. 300.Anch, river. See Aa.

## AACHEN, a city, Prussia. See Aix-la-Cifapelle.

## AAHAUS. See Airaus.

AAKIRKEBY, or AAKirke, a tn. Denmark, on the isl. of Bornholm, about 4 m . from its S . coast. It is the only town on the island not upon the sea-coast. Its neat church is built of black marble, quarried in the vicinity. The inhabitants are mainly devoted to agriculture. Pop. 600.(Baggesen.)

AAL, a tn. Norway, prov. Buskerud, on the Ustedal, 120 m. N.W. Bergen. Pop, $4000-2$, Aal, or El-Aal, is also the name of two small villages in Syria, pashalic of Damascus.

A ALBORG [Eel-castle], an ancient seaport, Denmark, in Jutland, cap. bail. A alborg, on the S. side of the Liimfiord, and about 15 m . W. the Kattegat ; lat. $57^{\circ} 2^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $9^{\circ} 55^{\prime} \mathrm{E}$. It is intersected by two streams, is surrounded with a fosse, and contains a cathedral, a college, naval school, a bishopric library, and various other public buildings and institutions, including a richly-cndowed hospital. It has a dockyard, and is a great place of trade; its manufactures of sugar, soap, snuff, chocolate, leather, and hardware are considerable, and its herring fishing is extensive. Herrings, corn, wool, hides, tar, tallow, and malt liquors, are exported; the first and sccond to a considerable extent. Vessels drawing more than 10 ft . are obliged, in consequence of the filling up of the larbour, to lighten before entering. About 500 annually visit the port, and 74 belong to it, including two steamers. It las direct steamboat and sailing-packet communication with Copenhagen. Formerly, Aalborg was the most considerable place for trade in Jutland; now, however, it is rivalled, and in some respects excelled, by Aarhus and Randers. It is of high antiquity, being mentioned as a famous seaport in 1070. It was fortified as early as 1513 . Pop. 7500 .- The bail. of Aalborg is bounded N. by bail. Hioring, E. by the Kattegat, S. by bail. Wiborg and Randers, and W. by the Liimfiord; area, 888 geo. sq. m. Pop. 63,200.-(Baggesen.)

AALEN, a th. Würtemberg, circle Jaxt, formerly a free imperial city, in an agreeable well-cultivated valley on the Kocher, 43 m . E. Stuttgart. It is surrounded with turreted walls, and has two gates, a fine church, and manufactures of woollen and linen goods, and ribbons, spinning mills, tanneries, and breweries. In the neighbourhood are immense forests, and extensive iron mines. Pop. 3000; all Latherans.

AALESUNI), a small seaport, Norway; lat. $62^{\circ} 24^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 5^{\prime}$ E.; bail. Romsdal, picturesquely situated within view to the S.E. of the peaked Lang Field mountains. It has a well-sheltered harbour, a considerable number of boats engaged in the cod fishery by means of nets, and carries on a good trade, principally in cod-fish, with Italy and Spain. The
steamer between Cbristiansand and Trondhjem calls here. l'op. in 1845, 557.

AAL心MEER [Eel-sea], a vil. Holland, prov. N. Hol land, on the E. shore of the sea of Haarlem, 9 m . S. Amsterdam. It has a townhouse, and a Calvinistic ehurch, close to the sea, in a churehyard which is raised some feet in order to preserve the graves dry; a R . catholie church, an hospital for orphans and aged men and women, and a well-attended school. Fishing, especially of eels, is carried on to some extent, and in the vieinity are nurseries and fruit gardens, in which large quantities of strawberries are raised for the Amsterdam market. I'op) abuut 2000.- (Van der Aa's Nederlanden.)

AMLS'T, two vil. Ilolland:-1, In prov. Gelderland, 6 m . S.W. Bommel, on the right bank of the Maas. It has a Calvinistic churel, the remains of an old castle, and 400 inhabitants. 2, In prov. N. Brabant, 4 m . S. Eindhoven, on the road between Hertogenboseh (Bois le duc) and Maastricht, on the streamlet Tongclreep. It is a long narrow village, whose inhabitants are employed in linen weaving and in agriculture.- Aalst, in Belgium. See Alost.

AALTEN, a vil. Holland, prov. Gelderland, near the Prussian frontier, 18 m . S.E. Doesburg, and 2 m . W. Bretevoert, on the left bank of the slingerbeek. It is agrecably situated on an incline, and has a comfortable prosperous appearance. It has a C'alvinistic and a R. eatholie ehurch, a school, a spinning and a weaving factory, and manufactures of bombazine, dimity, and linen goods, a brick and tile factory, oilmills, tanneries, brandy distilleries and breweries. Aalten lias monthly well-frequented markets. Pop. 2000.

AALTERE, a th. Belgium. Sce Aelrtere.
AAMADT, or Assont, a small tn. Norway, bail. Hedemarken, on the right bank of the Glommen, about 80 m . N. ('hristiania. Pop. 3000 .
A.AR [meaning Fagle, and the root of many German and Swiss names], the name of several rivers:-1, In Switzerland, the prineipal river after the Rhine and the Rhone. It gives ite name to the eanton of Aargau, or Aar country. It rises in the Bernese $\left.A\right|_{j} s$, and has its souree in three glaciers, the Oberaar, Finsteraar, and Lauteraar. The Aar forms the romantic valley of Ilasli, between the lake of Constance and the Pernese Alps; it supplies the lakes of Brienz and Thun, and then becomes navigable. It flows past, or rather round, Bern; at the confluence of the Saane, changes its course from N.W. to N., and at the jumetion of the Thicle to N.E.; tonches upon Solothurn, Aarburg, Marau, and Brugg, and falls into the Rhine, opposite Waldshut, at the village of Coblentz, after a conrse of about 160 miles. From the right side it receives, as tributaries, the Emmen, the Reuss, and the Limmat, and numerous other streams; from the left, the Simmen, the Saane, and the Thiele.-2, A small stream, prineipality of Waldeck, W. Germany. It rises N. of Corbach, antl, after a N. course of 20 to 30 miles, falls into the Diensel at Warburg, in Westphalia_- $3, \Lambda$ small strean in the duchy of Nassau, which rises near the village of Wehen, flows N. for about 20 miles, and falls into the Lahn at Dietz. - 4 , A river of IIolland, an aflluent of one of the numerous branches of the Rhine, which it leaves in N . Holland, below Aarlanderveen, muler the name of the Korte Aar, takes a N. course, is called the Kromme Aar, and ultimately, as the Aar proper, falls into the Amstel.

AAliAlj, or Abau [Aar meadow], a tn. Switzerland, cap. canton Aargau, situated at the height of 1140 ft . above the sea, on the right bank of the Aar. It has various public buildings and nseful institutions. Among the former are a council house and a church, and anong the latter a cantonal school and other seminaries, an orplan asylum, and a public library. Aaran has a thriving trade, and manufactories of silk, cotton, vitriol, leather, cutlery, and ordnance. In the environs are mines of coal and iron. The civil war, which raged for some time in Switzerland in the beginning of the last century, was terminated by the peace of Aarau in 1712. Pop., chiefly l'rotestants, upwards of 4000.

A ARBERC; or Anmeng, a small th. Siwitzerland, eanton Bern, cap. of district of same name, about 12 m . N.W. Bern, on the right bank of the Aar, on a rocky eminence, which, during ligh floods, is surrounded by the river. It consists of one wide street lined by well-built houses, has two bridges, one of which is defended by fortifications. It has little tride,
the inhabitants being chicfly occupied in agricultural pursuits. Pop. about 1000.

A ARBURG, or Aruura, a small tn. Switzerland, canton Aargan, at the confluence of the Aar and the Wigger, about $10 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Aarau. It has mannfactures of cotton and wool, with a copper foundry. The inliabitants navigate tho Aar, and carry on a small trade in wine and other articles. On a high rock above the town is a fortified castle, built by the Bernese in 1660, and for some time used as a state prison, but now employed as the arsenal of the canton of Aargan. Pop. 1700.

AAKIOENBURG, a small frontier th. Holland, prov. Zeeland, 4 m . S.E. Sluis, and 10 m . N.E. Bruges, in Belgium. It has a townhouse, an old and handsome Calvinistic church, a small R. catholic church, a school, orphan hospital, two cormmills, and some manufactures of tobacco and leather. The inhabitants are ehietly engaged in agriculture, and aro gencrally in comfortable cireumstances. Pop. 1474. Aardenburg in olden times had 74 streets, five market places, and two large public squares, and as early as A.D. 1238, it was famed for its commeree. Though now 10 m . from the sea, it formerly had a port and haven in whieh 600 vessels conhl lie, and was esteemed one of the finest towns in Flanders, and the capital of the seaports. War, inundations, and the rise in the level of the land seaward, have reduced it to its present dimensions.-(Van der Aa.)

AARGAU, or Angovia, a northern eanton of Switzerland, the 16 th in the Confederation, bounded N. by the lihine, which separates it from the grand duehy of Baden, E. by cantons Zurich and Zng, S. by Luzern, and W. by Bern, Solothurn, and Basel ; greatest length 33 m ., greatest breadth 28 m ., area about 400 geo. sq. m. It is hilly, being composed chiefly of spurs of the Alps and Jura, but lias no mountains more than 3000 ft . high; and it is well wooded, has numerous verdant fertile valleys abundantly watered by the Aar and its many tributaries from the right. The climate is misty, moist, and variable, and the soil to the left of the Aar clay, compact, and difficult to work; and to the right light, sandy, and fertile. Agrienlture is in an advanced state, and more grain is raised than the consumption of the canton demands. Hemp and hax are extensively raised, fruit and vegetables abound, and vineyards are numerous, but the wines are of inferior quality. The grazing is excellent, but cattle rearing is less extensively pursued than agriculture. Aargau is one of the prineipal seats in Switzerland for the manufaeture of cotton and silk, and for the construction of machines. Cotton goods, white and coloured, silks, ribbons, linens, stockings, and other hosiery; are made. A considerable number of people find employment in fishing in the Aar and the Rhine, in the boat traffic on these rivers, and in the transit trade, which is carried on actively, both by land and by water. Lducation is good and plentiful, and the head school in Aarau is quite a model of its kind. Aargau formed part of the canton Bern till the year 1798, when its in dependency, for which it had long struggled, was secured by the French (iovermment. Fricktbal, formerly belonging to Anstria, was added to it in 1803. Its constitution was first fixed by the congress of Vicma, in $1 \times 15$. It was then rather aristoeratic, but has been more popular since the revolution which took place, Dee. 1830. In 1841, the eonstitution was again revised, and settled in its present form. The legislative power is vested in the great council, one-half of which is renewed every three years. All citizens who have attained the age of 24 have a vote, and each 180 voters send a representative to the great council. The executive power is vested in the small council of nine members (of whom at least four must be Protestants and four R. catholics), elected hy and from the great council. I'op. 183,800; of whom 102,400 are I'rotestants, $79,300 \mathrm{R}$. eatholics, and 2100 Jews.- (Real Encyklopüdie; Ritter's Lex.)

AARIIUUS, a seaport, Denmark, eap. bail. of same name, L. coast Jutlanl, of which it is now the most important town; lat. (eath.) $56^{\circ} 9^{\prime} 30^{\prime \prime}$ N.; Jon. $10^{\circ} 13^{\prime} \mathrm{E}$. (1s.) ; sitnated at the mouth of the Ane, which flows through the town. It is surrounded by a single wall with seven gates, and contains a college, an hospital, and a eathedral of Gothic architecture, one of the largest and landsomest in the kingdom. Aarhuus carries on a considerable trade, and has manufactures of wool and flax, sngar houses, snuff mills, tinneries, distilleries, and fisheries, also a lurge establishment for
carding woollen razs, technically called shoddy. The roadstead possesses good anchorage in 3 to 4 fathoms, and is safe, excepting with S.E. winds, when the sea is tremendous. There are two lights in the harbour, one on the pilot-honse and one on the mole, visible 4 or 5 m . distance. The chicf cxports are grain, eattle, spirits, and malt. There are 49 vessels belonging to the port, whose tonnage altogether amounts to 2318 . Steamers and packet-boats regularly ply between it and Kallundborg and Copenlagen. The town was t wice almost wholly destroyed by fire ; first in 1541, and again in 1556 . In 1578,2200 of its inhabitants were swept off by the plagne. Pop. 8000.-The bail. of Aarhuus is bounded N. ly bail. Wiborg and Randers, E. by the Kattegat, S. by bail. Weile, and W. by bail. Kingkioping; area, 236 geo. sq. m. Pop. 40,000 . It is the most densely populated of the bailiwicks of N. Jutland - (Baggesen.)

AARLANDERVEEN [Aar turf lands], a vil. Holland, prov. S. Molland, 13 m . N.E. Leyden, 5 m . S. E. Woubrugge. It forms a double row of houses round the Calvinisfic church, which is an old structure. It has also a R. catholic chureh, a Jewish synagogue, a neat sehool with teacher's house attached, and a cormmill. In the vicinity are several water mills, and uany storchonses for ehcese; and the land is rich and well cultivated. Pop. about 1500.

AARLE, a vil. IIolland, prov. N. lrabant, $8 \mathrm{~m} . N . E$. Eindhoven, and 18 m. S.E. Mertogenbosch, on the right bank of the Aa. The inhabitants are chiefly engaged in lringing in waste lands, and in rearing poultry, sending some lundreds of young ehickens, every Thursday, to llertogenboseh. There is here, also, a bell foundry. Pop. 450 ; and of the combined par. of Aarle and Rixtel, 1200.

AAROE, a small Danish isl. dnchy of Schleswig, N. portion of the Little Bett, 1 m . from the coast, about lat. $55^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $9^{\circ} 45^{\prime} \mathrm{E}$. It is about $2 \frac{1}{2} \mathrm{~m}$. long, by rather more than 1 broad. Some of its few inhabitants are good pilots. 'This island is sometimes mistaken for the much larger one at the s. end of the Little Belt named Aeroe.

AARON, a small peninsula on the W. coast of France, dep. IHle et Vilaine, Bretagne, on which the town of St. Malo is built. A narrow causeway comects it with the mainland. See Malo (St).

AARWANGEN, a small th. Switzerland, cap. cirele of same name; on the right bank of the Aar, canton of, and about 30 m . N.E. Bern. It is built partly on a rising ground, and partly on a plain. It has important cattle fairs. In the vicinity is a mine of pit coal. P'op. 2153.

A AS, a vil. France. Sec Lidux Bonnes.
AAS-GAARSTRAND, a small port, Norway, bail. Jarlsberg and Laurvig, on the W. shore of Christiania Gulf, 10 m . S.S.E. Ilolmestrand. Wood is shipped here. Pop. in 1845, 434.

A ASZY, Aasi, or Nahli-el-Asy [the ancient Axius or Orontps], a river, Syria, rising on the F. side of the AntiLibanus, near the village of El-Ras, 27 m . N.E. Balbee, in a triangular-formed natural basin in the rock, measuring about 50 paces round, and nearly concealed by trees and bushes, of which chestnut, willow, and dwarf oak are most plentiful. It takes a N. course through the fertile plain of Ilamah and the valley of El-Ghab towards the lake of Antioch or Agh Denkiz, whose waters it receives, and thence flows S.W. to the Mediterrancan, into which it falls after a course of abont 200 m . It forms some lakes, receives the waters of various rivers, and by its overflowings greatly fertilizes the land upon its banks, rendering it capable of supporting a much greater extent of population than at present inhabit it. The river abounds in fish, particularly a species of eel much in demand by the treeks, for whose consumption, during Easter feasts, large quantities are annually salted and exported. The Aaszy is not navigable, being encumbered at its mouth by a sandbank, on which, in winter. there is only $3 \frac{1}{2} \mathrm{ft}$. to 9 ft . of water; but aecording to Col. Chesney, this bar might easily be removed, and the river rendered navigable, at least for boats, as far up as Murad Pasha, 27 m . above Antioch. The fall of the river from the last-named city to the sea, is not above $5 \frac{1}{2} \mathrm{ft}$. in the mile.-(Jour. Geog. Soc.)

AA'TYL, or ATll, once an inportant city, now a small vil. Syria, in the great plain called the ITanran, or llaomran, $34 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{E}$. Damasens, and 48 m . E. lake Tabaria. It lies in a wood, and is about 1 m . in circuit, though the inha-
bitants consist only of from 300 to 400 Druses, who lwell in huts among the ruined edifices. There are here the remains of two handsome temples; that on the N. sile, called El-Kaszr,

F:L-KASZR. AATYL. From Lalorde 'Voyage en Oiexth'
is in complete ruins. It consisted of a square building, with a high arch across its roof; two niches were on cach side of the gate, and in front a portico of columns, the number of which it is no: impossible to determine. On the S.E. site of Aatyl stands the other temple, which is of small dimensions, but of elegant construction. It has a portico of two Corinthian columns, and two pilasters, each of which has a projecting base for a statue. The gate is eovered with sculpture On both temples are numerous inscriptions in Greek. The tobace of Aatyl is preferred to that of any other part of the IIaouran.(Burckhardt.)

ABABlOE, or Sifelk AbADEn, a vil. Middle Egypt, on the right bank of the Nile, 8 m . S. Beni Ilassan, lat. $27^{\circ}$ $43^{\prime} \mathrm{N}$. ; Jon. $30^{\circ} 57^{\prime} \mathbf{E}$. Near it are the ruins of the ancient Antinoe, or Antinoripolis, a city built by the emperor Adrian, and named from his favonrite Sutinous, who was drowned in the Nile. These remains, which are entirely lioman, are supposed to occupy the site of a still more ancient city, named Besa, famed for its oracle, and mentioned by Abulfeda under the name of Ansina, or Ansineh, by which the place is still sometimes designated. In the times of Roman dominion, Antinoe was the capital of a province, named the Antinoite; and under the Christian emperors, the metropolis of an episcopal sce. Little of it now remains except its theatre, the snbstructure of various buildings, and the hippotrome withont the walls. The cireuit is said to lave been 3 or 4 m. , the present dimensions being 6000 ft . by 3400 . The direction of the principal streets, which were broad and spacious, with a colonnade on each side, may still be traced. Other existing monuments are the remains of varions temples, and four monumental columns bearing an inseription to 'Good Fortune,' and the date of the 14th year of Marcus Aurelius. All that eonsisted of limestone has been burnt for mortar by the Turks, or employed by then in the construction of modern buildings. Without the walls, numerous relies of antiquity are to be met with, the most remarkable of which is a ruinons edifice on the summit of a hill, said to have been used as a convent by the C'hristians, and named, from the circumstance, layr e' Deek, or 'Convent of the Cock."-(Wilkinson's Modern Ey!pt.; Voy. Duc de Raguse.)

ABA13DEH, the name of an extensive desert, Uper Eqypt, and of a number of trihes by which it is inhabited. The A babdeh desert, or descrt of the Thebaid, lies between the Red Sica and the valley of the Nile, and extends from the Kiossier and Coptos road, lat. $26^{\circ} \mathrm{N}$., into Nubia, beyont the tropic of Cancer, and bounds with the Begga, or country of the Bisharee tribes. It is traversed in various direetions by roads, both ancient and modern, contains numerous towns and villages, is of some note in point of geological and mineral productions, and is remarkable for its architectural remains, and for the number of hieroglyphical inseriptions found upon the rocks. The prineipal and most interesting road is that called the Derh $e^{\prime}$ Russafa, about 248 m . long, whieh rums diagonally aeross the desert from Coptos to Berenice, and jasses through eight Romau
stations, cach supplicd with larze wells and cisterns, for the use of the inhabitants and travellers. 'The most noted geological production of this tract of country is the breceia verde, or green breccia, made by the ancients into many useful and ornamental articles, of which the sarcophagus 'of Alexander' in the British Museum is a speeimen. Rineralds and gold have leen found in various parts. Basanite, or Lydian stone, was formerly quarried in the mountain now known by the name Om Kerrebeh. The Ababduls who inhabit this desert are nomadic tribes, the prineipal of which are the Gawalceh, the Fokara, the Aboodeein, and the Ashahab. They are supposed to be the aborigines of the country, to have come from 'sbayd, or Esbayd, and to be Arabs only in babit. Though speaking the Arabic language, their peculiar pronunciation, dark complexion, and the difference of their whole ontward appearance, readily distinguish them from the genuine Arabs. They have long hair, like the Nubians, whom, in many other respects, they resemble. Their arms, also, are the same as those used in Nubia, consisting of sword, spear, small knife, and target, which they prefer to firearms, and with which they fight, from the backs of camels, almost in a state of nudity. They live in mat huts, chicfly on the borders of the great valley of the Nile. They are well known for the excellency of their camels and dromedaries, and, though scarcely deemed of a trustworthy character, are employed in escorting the caravans which cross the desert from Sennaar.-(Wilkinson's Afodern Egypt.)

ABACAXIS, a river, Brazil, prov. Para, rising about lat. $6^{\circ} 30^{\prime} \mathrm{S} . ;$ lon. $58^{\circ} 35^{\prime} \mathrm{W} . ;$ takes a N. course, passes through lake Guaribas, and falls into the Furo, or Mauhe, an affuent of the Amazon, lat. $4^{\circ}$ S. ; lon. $58^{\circ} 30^{\circ} \mathrm{W}$.

ABACO (Cileat and Littlee), two of the Bahama Islands; the larger 86 m . long, and about 15 broad; the smaller 28 m . long, and 4 to 5 broad. They lie between lon. $77^{\circ}$ and $78^{\circ} \mathrm{W}$., and lat. $25^{\circ} 5 u^{\prime}$ and $26^{\circ} 55^{\prime} \mathrm{N}$. Area, 225 sq . m., of which 135,076 aeres are waste. Three schools have been established here by the Board of Education, appointed under the Aet to establish a system of popular education and training in the Bahama Islands. These schools were attendet, in 1847, by 226 pupils, composed of an equal number of boys and girls. Pop. 1900.

ABAD.-1, A vil. Beloochistan, on the right bank of the Naree, or Nari, 22 m. S.E. by E. Gundava; lat. $28^{\circ} 17^{\prime} \mathrm{N} . ;$ lon. $67^{\circ} 49^{\prime}$ E.- -2 , A vil. Sinde, between Shikarpoor and sukkur; lat. $27^{\circ} 45^{\prime} \mathrm{N}$.; lon. $68^{\circ} 50^{\prime} \mathrm{E} .-3, \mathrm{~A}$ tı. Persia, prov. Farsistan, E.s.E. Shiraz.

ABADEII, a tn. Persia, prov. Fars, 116 m. N. Shiraz, and 115 s.s.E. Ispahan. It is enclosed by dilapidated walls, and defended by a square fortress, containing almost all the population. It suffered much during the wars of the suecession to the Persian throne in the 18th century, and was the residence of the last prince of the bouse of Suffee, suffered to exist there by Kureem Klian, who died in 1779. The gardens around Abadeh supply Shiraz with delicious fruit. I'op. about 5000 .

ABADIOTTES, a tribe in the island of Candia, about 4000 in number, and occupying about 20 small villages. They are the descendants of the Saracens, who took possession of Candia in 823 . They are a suspicious and revengeful race, and much inclined to a predatory life, to which they are also foreed by the oppression of the Turks and Greeks.

ABAE'I'E, a vil. Brazil, prov. of, and 40 m. S. W. l'ara, on the right bank of the estuary of the lio Para, and on the island formed by the mouth of the Rio Tocantins, and the rivers Moju and lguara. The soil in the vicinity is excellent, but it is badly cultivated.-(Die. Geo. Imp. Brazil.)

ABAI, or AbAy, the Nile of Bruce, prineipal tributary of the Balir-el-Azrek, or Blue River, one of the head streams of the Nile. Its sources are in a swampy meadow, near mount Giesk, in the district of Sákkata, from whence it takes a circular direction round the peninsula of Gojam, passing through lake Dembea, and falling into the Bahr-el-Azrek, in about $11^{\circ}$ N. lat. See Azmek (Balir-el-), and Nile.

ABAI, a small seaport near the N. W. point of Borneo, about lat. $6^{\circ} 21^{\prime} \mathrm{N}$. ; lon. $116^{\circ} 30^{\circ} \mathrm{E}$. The depth of the harbour will not, at high water, admit vessels drawing more than 12 ft .

ABAINVILLEF, a vil. France, dep. Mense, beautifully situated on the Urnain, and celebrated for its iron works, and
for the excellence of its manufactures in that metal. There are altogether between 600 and 700 individuals employed in these works, and from 3000 to 4000 tons of iron are manufactured annually.

ABAITE, a considerable river, Brazil, prov. Minas Geraes, rising in the serra da Mata da Corda, and flowing into the San Francisco, after a course of about 135 m . from S.W. to N.E. In this river was aecidentally discovered, in 1796, the largest diamond ever found in Brazil, weighing $\frac{7}{8}$ of an ounce troy. It was found by three men under sentence of perpetual banishment, while searching for gold. On presenting this valuable gem to the then viceroy, they were pardoned and rewarded. The river was afterwards worked at different periods by the government, but with indifferent success. The works were ultimately abandoned to private adventurers.

ABAKANE, a large river, S. Siberia, having its sourees in the Altai momntains, gov. Yeniseisk. It is formed by the junetion of two streams, called, respectively, the Great and Little Abakane, which, rising from 20 to 30 m . apart, uite at lat. $52^{\circ} 23^{\prime}$ N.; lon. $88^{\circ} 45^{\prime} \mathrm{B} . ;$ whence the river flows in a N.F. direction till it falls into the Yenisei at Mardachi, about $7 \mathrm{~m} . W$. by N. Minousinsk, lat. $53^{\circ} 54^{\prime} \mathrm{N} . ;$ lon. $91^{\circ} 13^{\prime} \mathrm{E}$ 。. The length of the strean, from the confluence of the Great and Little Abakane, uutil it joins the Yenisei, is about 174 m . F'or about 80 m . of the latter part of this eourse it has an average breadth of about 1 m ., and is throughout dotted with islanls, which increase in number towards its junctiou with the Yenisei. The whole length of the river, from its sources, taking the Great Abakane as the original stream, is, according to Tehihatcheff, who calls it a beautiful river, 217 m . The sources of this branch are two small lakes; its earlier career is described by the writer just named as extremely impetuous, its channel narrow and rocky, and the scenery around wild and pieturesque. 'Tchihatcheff made an attempt to explore the sources of tho little Abakane also, but was compelled to abandon the enterprise, in consequence of the vast and dangerous accumulations of snow, which every moment threatened himself and his party with destruction. llaving, however, subsequently attained an eminence, which commanded a view of the sourees of the stream, he found that these, as in the case of the Great Abakane, were a number of small lakes situated in a marshy plateau, in the midst of a labyrinth of mountains.- (Tchihateheff, Voyage dans l'Altai Oriental.)

ABAKANsK, a Cossack military station, Siberia, gov. Yeniseisk, on the right bank of the Abakane, at a bend of that river, 94 m . S.W. Minousinsk; lat. $52^{\circ} 52^{\prime} \mathrm{N}$.; lon. $89^{\circ} 40^{\prime}$ E. lt consists of about 40 houses of wood, inhabited by Cossacks, and a number of yurts, or luts, occupied by a colony ot Sagaï, a distinet race from the Kal. mucks, who, however, are now begiming to construct habitations after the liussian fashion. It is enlivened by several wooden steeples, and is flanked on the W. by a range of conical mountains. The country around is very beautiful, but the soil is unfavourable to agriculture, although the climate is comparatively mild. During thrce days that Tehihatcheff remained here in the month of July, the temperature rose to $110^{\circ}$ Fah., and in the shade to $76^{\circ}$; the former being $30^{\circ}$ higher than is usually experienced in England. In the vicinity of this station, as throughout the whole of S . Siberia, there are numerous tumuli, called by the Tartars the tombs of the Cathayans, or Si-Kiatei, in which ornaments of gold and other metals have been found. Gigantic human statues, from 7 to 9 ft . high, covered with hieroglyphics, are also met with here. There is another station of the same name on a sandy flat on the right bank of the lenisei, 39 m . N. from Dinousinsk, where mumerous relies of antiquity are also found, consisting of ancient tombs and Mongolian inseriptions. It is reputed to be the mildest locality in Siberia, the summer being sufficiently warm to ripen water-melons and tobaceo.

ABANCAY, a tı. Peru, eap. dist. or prov. of sime name. It is situated in a spacious valley, on the right bank of the river Ahancay, here crossed by one of the largest bridges in the kingrlom, about 70 m . W. by S. Cuzeo, and 300 m . E.s.E. Lima; lat. $13^{\circ} 37^{\prime} \mathrm{S} .: 10 n .73^{\circ} \mathrm{W}$. It has a convent of the order of Sit. Dominic, and several sugar works and refineries. The district is about 60 m . in length from L. to W., and 40 in breadth from N. to $S$. The temperature is mild, and the soil fertile, prolucing wheat, maize,
and other grain in abundance; but sugar is the staple production, and is here so well refined as to equal in whiteness the finest sugars of Europe. Hemp is also cultivated, and considerable numbers of horned cattle are reared. The pop. of the town estimated at 5000 .

ABANILLA, a tn. Spain, prov. of, and 16 m. N.N.E. Murcia, on an incline at the foot of some rocky liills. It is divided into an upper and a lower town; the former chiefly consisting of ruins, and includiug the old parish church and the ruins of a castle; the latter comprising a number of good streets, and a square, in which are situated a fountain, granary, spacious courthouscs, the school, and the new prison. There are, besides, an old prison, a second church, several chapels, a cemetery, and some flour and oilmills. In the vicinity, barley, maize, olives, vines, figs, almonds, and prunes are cultivated, and a few sheep and goats are reared. The inhabitants, besides agriculture, are chiefly employed in manufacturing charcoal, esparto mats, and home-made linen. Pop. 4628.-(Madoz.)

ABANO, a tı. Venetian Lombardy, district of, and 5 m . S.W. Padua, famous for its sulphureous waters and mud baths, much resorted to in chronic cutaneous diseases, gout, \&c. As sulphureous waters, they are the hottest in Europe, having a temperature of $167^{\circ}-187^{\circ}$ Fah., and contain common salt, sulphuric acid, natron, and magnesia. Abano was known to the Romans under the name of Aquæ Aponi or Aquæ Patavinæ, and some remains of Roman baths were discovered at it the end of last century. It is the birthplace of Titus Livius, and of the celebrated physician, Pietro d'Abano, professor in the university of Padua, who was condemned to death for sorcery, but died before the sentence was put into execution, A.D. 1312 . Pop. 3000.

ABARAN, or Albaran, a tn. Spain, prov. of, and 22 m . N. W. Murcia, at the foot of a mountain on the left bank of the Segura. It has a square, in which are the courthouses, the dingy unhealthy prison, two schools, and the parish church. The inhabitauts are engaged in agriculture, and as muleteers; they manufacture esparto mats and home-made linen, and have some oilmills. Pop. 2455.-(Madoz.)

ABARAN, a small tn. Russian Armenia, on the S. slope of the Alaghes mountains, about 30 m . N W. Erivan. It lies near the left bank of a considerable stream of the same name, which rises in Alaghes mountains, and flows towards the Aras, but which it, in summer time, never reaches, all its waters being drawn off by the Armenians for the purposes of irrigation.

ABATZKAYA, or Abatzkoe, a tı. Siberia, gov. Tobolsk, on the left bank of the Ishim, and 40 m . E. from the town of that name. Pop. about 2000.

ABAUJVAR, a co. or district, Upper IIungary, W. the Theiss, cap. Kaschau, on the Hernad; area, 832 geo. sq. m. It is a fertile grain and grazing district, producing, likewise, excellent fruit and grapes, from the latter of which, the celebrated Tokay wine is made. Abaujvar also yields metals, and precious stones, mineral waters, and salt. Pop. 123,938.(Raffelsperger.)

ABB, a tn. Arabia, in the Djebel, or mountainous district of Yemen; 77 m. N.E. Mocha, and 104 m . N.W. Aden; lat. $13^{\circ} 59^{\prime} \mathrm{N}$. ; lon. $44^{\circ} 35^{\prime} \mathrm{E}$. It is enclosed by a strong wall, and has several mosques, paved streets, and about 800 houses built of stone. Water is supplied to it, by means of an aqueduct, from the high monntain of Baadan in the neiglibourlood. The surrounding country is well watered and fertile. Pop. supposed to be between 4000 and 5000 .

ABB'S HEAD (St.), a lofty promontory or headland, having the appearance of an island, on the E. coast of Scotlind, co. Berwick, 11 m . N.W. town of that name, and 15 m . S.E. Dunbar ; lat. $55^{\circ} 55^{\prime}$ N. ; lon. $2^{\circ} 8^{\prime}$ W. (r.). There is deep water close by the point, and a little way from it, 30 and 40 fathoms. The adjacent shore is rocky. The E. extremity of the height was occupied by a Roman station, and the W., half a mile distant, by a British stronghold.

ABBADIA, a small tn. Brazil, prov. Bahia, $50 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Seregipe, upon the Ariguitiba, 15 m . from the sea. It has a school, and a harbour accessible to coasters, and exports sugar, cotton, tobacco, and mandioc flour. Pop. of town and neighbourhood, 1200.

ABBADIA SAN SALVADORE, a tı. and commune, Italy, in Tuscany, prov. Grossetto, diocese of, and $17 . \mathrm{m}$.
S.W. Chiusi, on an clevated plain at the side of the isolated trachyte mount, Amiata, which rises to the height of 5300 ft . above the sea level. The town is surrounded by a wall, entered by gates, and comprises a small square, four principal parallel strects, and an Episcopal church. On the N., without the walls, is the abbey of San Salvalore, from which the town derives its name. The vicinity is fertile, being watered by the river Paglia, and the rivulets Pagliuola and Albineta, all of which take their rise in mount Amiata. Pop. in 1845, including the commune, 4295.-(Dizio. Univ. Italia.)

ABBA-SEEN. See Abu Sin.
ABBAS-ABAD, the name of two villages, Persia:1, A vil. and fort, prov. Khorasan, 385 m . N.E. Ispahan, and 170 m . W. Mushed, lat. $36^{\circ} 23^{\prime}$ N.; lon. $56^{\circ} 22^{\prime}$ E.; on the highroad from the latter city to Teheran, situated in a dreary desert. The village and caravanserai were erected by Shah Abbas the Great, for the benefit of caravans crossing the desert. There being only one spring here, no means of irrigation exist, and the inhabitants are often forced to traverse the desert to obtain a supply of provisions for themselves and the caravans. Besides being excmpted from taxes, they derive considerable profit from selling provisions to travellers, and are more elean and comfortable, both in their houses and dress, than the generality of the subjects of Persia.- 2 , A small tn. and fort in the frontier prov. of Azerbijan, situated upon the river Aras. It contains an old Armenian churel, now used as a powder nagazine. This Abbas-abad was treacherously surrendered to the Russians in the war of 1827.

ABBAZACCA, a tn. Western Africa, on the left bank of the Quorra, about 48 m . helow the junction of the Chadda with that river, and about 276 m . from the sea; lat. $7^{\circ} 10^{\prime} \mathrm{N}$.; lon. $8^{\circ} 15^{\prime} \mathrm{E}$. The banks of the Quorra are very low for upwards of 20 m . before reaching Abbazacea, and are destitute of towns and villages; but both are numerous below it. 'For the first time,' say the Landers, on reaching Abbazacea, 'since leaving Jenna, in Yarriba (about 345 m . W.), we behcld the graceful cocoa-nut tree, and heard the mellow whistling of gray parrots.' At a place called Damnggoo, 17 m . further down the Quorra, the natives have English muskets, and are expert in the use of firearms.

ABBEOKU'TA, or Abвeкuta, a large tn., W. Africa, cap. of the prov. of Egba, kingdom of Yoruba, or Yarribah, 60 m . N.E. Badagray in the bight of Benin. It is built on granite lills of moderate elevation, the highest not exceeding 500 ft . Its streets are narrow and irregular. Its population is composed of the inhabitants of a number of towns and villages, which were destroyed during a war that took place in 1817; and it is since that period that Abbeokuta has become the important place it now is, being about 2 m . long, and nearly as broad, with a pop. of 50,000 . The Rev. Henry Townsend states, in his evidence before the Select Committee on the Slave-trade, that the inhabitants of this town have a regular government, with a prince or chicf at its head, and that their civilization is better than what is gencrally believed to exist in Africa. The town is amply supplied with provisions of every kind, including sheep, goats, cows, fowls, and pigeons. The country around is productive and comparatively well cultivated, yielding abundant crops of yams, Indian corn, and various sorts of beans. Cotton, sugar, ginger, and indigo are also grown for home consumption. The people gladly work for wages, the latter being generally four strings of cowries, or between $4 d$. and $5 d$. a day. They are fond of peaceful pursuits, such as cultivating the ground, trading, \&c.; and, under more favourable political conditions, could harilly fail to become prosperous and happy. They manufacture leather of varions kinds, and make numerous articles in iron, such as stirrups, clasp knives, hoes, and billhooks. Their domestic slaves, of whom there are many, are treated with such uniform kinhess, that it is impossible to distinguish a slave from a free man. The heat here is very great, averaging, in hot weather, about $85^{\circ}$ or $86^{\circ}$; the highest point is about $92^{\circ}$ or $93^{\circ}$.-(Parl. Paper.)

ABlBERLEY, a par. England, co. Worcester; area, 2390 ac. ; 6 m. S.W. Bewdley. Pop. in 1841, 559.

ABBERTON, a par. England, co. Essex ; area, 1030 ac. Pop. in 1841, 248.-There is another par. of this name, co. Worcester; area, 1050 ac.; on a branch of the $A$ von. l'op. in 1841, 81.

ABBEVILLE, a large fortified $t \mathrm{t}$. and river port,

France, dep. Somue, cap, arrond. of same name, 120 m . by rail, N.N.W. I'aris, sitnated in an agreeable and fertile valley on the river Somme, which divides the town into three portions, the central and most important one being on an island. The lonses are mostly built of brick, a few are of stone, intermingled with some picturesque old structures of wood. Some of the streets are broad, but the most of them are narrow,

crooked, dirty, and badly paved, rendering the pleasant wooded promenades on the ramparts all the more acceptable. The principal buidings are the Tour le Bellroi, the barracks, the foundling hospital, and the church of St. Vulfran. The magnificent W. front, and part of the nave of this last-named edifice, were luilt during the reign of Louis XII., under the care of Cardinal Genrge d'Amboise, but the original design was never completed; the façade is in the flamboyant style, covered with the richest tracery, and the niches filled with statnes of saints attired in singular costumes. Abbeville is the seat of courts of primary jurisdiction, and of a court of commeree; and it has a chamber of eommeree, a royal society of sciences and belles-lettres, a commercial college, and a public library of 15,000 volumes. The manufactures of the town are considerable, employing 13,000 workers, and amounting annually to $£ 520,000$. They consist chiefly of cloth, serges, Utrecht velvets, calicoes, muslias, linen and woollen thread, packthread, which is femed, sailcloth, cordage, suap, lampblack, \&c. Bleaching, dyeing, taming, paper making, and buat bnilding are carried on. Abbeville, from its alvantageous position on the Somme, here a wide river, is a place of some commerce, produce, from a considerable distance inland, being brought to it for export. At high water, vessels of 100 to 150 tons can reach the harbour, and the number which annually trequent the port is ahont 350 . The prineipal articles of traftic, besides the manufactures already alluded to, are grain, oil seeds, lncerne, wine, brandy, cider, oil, \&c. Abbeville, anciently Abbatis V'illa, or Alba Villæ, was formerly cap. of the ohl county of Ponthien, and it was frequently an object of coutention during the wars between France and England. Pop. in 1846, 17,035.-(Dic. de la France.)

ABBEVILLE.-1, A well-watered and fertile district of the U. States, in the W. part of S. Carolina, hetween the rivers Savannah and Saluda; area abont $1000 \mathrm{sq} . \mathrm{m}$. Wheat, rye, oats, Indian corn, and tobacco are grown, and sheep, cattle, pigs, and sitkworins are reared. The district also posspsses
several distilleries, tanneries, and flour and sawmills. Pop. in $1840,29,351$; composed of whites, 13,880 ; slaves, 15,148 ; free coloured, 323. 2, A pnst vil., cap. of above district, 97 m . W. by N. Coltumbia, on a branch of Little river. It has a courthouse, jail, arsenal, and magazine. 3, A post vil. in Alabama, cap. of Henry co., 211 m . S.E. Tuscaloosa.

ABIBEY, the name, with and without affixes, of a number of small towns, townships, villages, haronies, parishes, and other places, in England, Scotland, and Ircland.

Those in Englanil are:-1, Abbey Hore, or Dore Abbey, par. Hereforl ; 5790 ac. Pop. 542.-2, par. Wilts; 40 ac. 1'op. 131.-3, Albey Holm, township, par. IIolm Cultram, ('mmberland, named from an abbey founded there in 1150 , by Henry, prince of Cumberland, son of I avid I., king of Scot-land.-4, Albey Milton, or Mildleton, tnship., Jorset.-5, Abbey Park, hamlet, Bucks.- 6, Abbey Routon, vil., Stafford.7, Abbey Strcet, tnship., Cumberland, St. Mary's par. Carlisle.

In Scotlanis:-1, $\lambda$ small vil., co. of, and abont 1 m . E. Haddington, and 18 m . E. Edinburgh. It is remarkable only tor its historical associations. Here, in 1178, Countess Ada of Northumberland, mother of Malcolm IV. and William the Lion, kings of Scotland, founded and richly endowed a convent or priory of Cistertian nums; and here, on July 7, 1548, the Parlianent of Scotland was convencd, and gave consent to the marriage of Qucen Mary to the Dauphin of France.-2, A vil., co. Stirling, about $\frac{1}{2} \mathrm{~m}$. N.E. Stirling. It derives its name from Cambuskenneth Abbey, which is close by. It is prettily situated, and is chiefly inhabited by weavers.- 3 , Abbey St. Buthan's, par., co. Berwick, N. part ; area, 5000 ac . ; contains the ruins of a numery dedicated to St. Bathan. Pop. in 1841, 146.

In Irelann:-1, Abbey, or Corcomroc Abbey, a par. and vil., co. Clare, on the shores of the harbour of Burren, bay of Galway, and directly opposite the town of the latter name, $118 \mathrm{~m} . \mathrm{S} . W$. Dublin, and $40 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Limerick. The ruins of the abbey are extensive, and form an interesting feature in the landscape. Гop. of par. in 1841, 1442.-2, Abbey, or Innislonnogh, a par. partly in the co. Waterford, and partly in that of Tipperary; 9378 ac. 1'op. in 1841, 4764.3, Albey Knockmoy, co. Galway; 12,386 ac.; contains ruins of old albey, in which are curious fresco illustrations of ancient Irish costumes. Pop. in 1841, 3846.-4, Abbeyfeale, jar. and vil., co. Lamerick; 18,150ac. Pop. in 1841,5492.5, Abbeygormagan, par., co. Galway; 11,750 ac. Pop. in 1841, 2930.-6, Abbey-Jerpoint, par., co. Kilkenny; 1008 ac.; contains ruins of an ancient abbey, founded in 1180. Pop. in 1841, 375.-7, Abbeylaru, par. and vil., co. Longford; 9150 ac. Pop. in 1841, 3084.--8, Abheymuhon, par., co. Cork; 4482 ac ; contains ruins of an ancient abbey of same name, founded by Bernardine monks. Iop. in 1841, 3261.-9, Ableyshrmle, par. and vil., co. Longford; 2340 ae. P'op. in 1841, 1283.-10, Abbeystrowry, 1ar., co. (ork; 9396 ac . contains ruins of an ancient abbey, in which are some interesting monuments. Pop. in 1811, 6225.-11, Abbeydarig, vil., co. Longford.-12, Abbeydorney, vil., co. Kerry, on the river Brick, 5 m. E. by N. Tralce. P'op. in 1841, 418 .13, Abbey-Leix, market tn. and par. Qucen's co., ncar the left bank of the Nore, 9 m . S.s.W. Maryborough, and 53 m . S.W. Dublin. It has a very handsome church, IR. catholic chapel, three schools, almshonses, market and session-houses, prison, and infirmary, with two woollen manufactories, a large worsted mill, and a boulting mill. It has six amual fairs. Pop. of par. in 1841,6719, of which the town comprises 1020.-14, Abbeyside, a vil. and suburb of the burgh of Jungarvon, co. Waterford. It extends along the N.E. side of Dungarvon liarbour, and derives its name from the remains of an ancient Augustinian abhey, founded in the 13 th century.

ABIBIATE-GRASSO (commonly Biagrasso), a considerable tn. and commune, Venetian Lomliardy, cap. district of' same name, prov. of, and 20 m . N.W. Pavia, on the grand canal 'di Bereguardo,' which rums from that city to Sesto, and near the left bank of the Tecino. It is well built and clean, surrounded by a wall, and comprises three churches, two chapels, two infirmaries, seven oratories, and municipal thildings. Tho manufacture of baize, cloth, silk, bricks, candles, \&c., is carricd on, and an annual cattle fair is held in July. Pop. 6803.-The district, situated in a remarkably fertile and well-irrigated plain, contains twenty-two commmes, and produces grain, grapes, mulberries, and other fruts;
vegetables of every kind, and of the best quality, abound; and on the rich pasture lands bordering the Tecino, numerons cattle are reared. Excellent butter is made, and much care is bestowed on the cultivation of silkworms. Pop. 35,338.

ABBITIBBE, a lake of Upper Canada, 45 m . long, greatest breadth 18 m . The IIudson's Bay Company have a trading port at its S.E. extremity, for the purchase of furs and peltries; lat. $49^{\circ} \mathrm{N}$. ; lon. $78^{\circ} 52^{\prime} \mathrm{W}$. It contains a number of small islands, and gives name to a tribe of Indians who ehiefly reside near it. Abbitibbe is also the name of a river issuing from the lake, which, after a course of above 240 m . S.E. to N.W., unites with the Moose river, and falls into James' Bay, in the S. part of Indson's Bay. In the estuary lies Moose fort.

ABBO, a name by itself, and, with prefixes, of four small towns in Abyssinia, kingdom Amhara, districts Maitsha and Goutto, S.W. from lake Dembea; all situated near the sources of the Abai, and within a few miles of each other; the most S . Abbo being about 25 m . from the most N . Borkon Abbo; and the two intermediate towns, Abbo, and Welled Abbo, being only 7 or 8 m . apart.

ABBOT'S LANGLEY, a vil. and par. England, co. Hertford. The vil. lies about 21 m . N. London, a littie to the W. of the mainroad to St. Alban's. It is situated on a high level, and consists of one principal strect. The houses are small, and most of them ohl. The churel is an ancient building, in the Elizabethan style of architecture, and contains some curious antique monuments. There are also two sinall dissenting chapels, and a boys', girls', and infants' school. The village is not lighted, but is well supplied with water. The inhabitants are chiefly employed in agricultural pursuits. 'There has been recently established here an interesting institution, called the 'Booksellers' Retreat,' eonsisting of seven commodious cottages belonging to the Booksellers' Provident Soeiety, and appropriated to their decayed members. There are some large paper mills in the parish. Near the centre of the parish is the station on the London and North-western Railway, called the King's Langley station. Area of par. 5100 acres. Pop. of vil. and par., including Bensont, 2115.

ABBOTs, the name, with various affixes, of several parishes in England:-1, Abbots-Anne, a par., co. Hants; area, 3100 ae.; $2 \mathrm{~m} . \mathrm{W}$. Andover. Pop. in 1841, 619.2, Ablots-Bickington, or Bickington-Abbots, a par., co. Devon; area, 1510 ac.; quarries of blue builling-stone, limestone, and marble. Pop. in 1841, 75.-3, Abbotsbury, a par., co. Dorset; area, 4050 ac.; ruins of Benedictine Abbey; large annual sheep fair. Pup. in 1841, 1,005.-4, Abbots-Kerswell, a par., co. Vevon ; area, 1670 ac. $; 1 \frac{1}{2} \mathrm{~m}$. S. Newton Abbots; monastery of Cluniac monks. I'op. in 1841, 433.-5, Albotsham, a par., co. Devon ; area, 2090 ae. ; 2 m . W. Bideford. Pop. in 1811, 114.-6, Abbots-Leigh, a par., co. Somerset; area, 2150 ac. Pop. in 1841, 366.-7, Abbotsley, or Abbots-Leigh, a par., co. IIntingdon; area, 2110 ac . Pop. in 1841, 443.8, Abbots-Morton, a par., eo. Woreester; area, 1420 ac . ; on the Birmingham and Gloncester Railway. Pop. in 1841, 234. -9, Abbotstom, a par., co. Ilants; $2 \frac{1}{2} \mathrm{~m}$. New Alresford. Pop. in $1841,325$.

ABBOTSIIALL, a par. and vil. Seotland. co. Fife, on the coast of the Frith of Forth; area, 4026 ac. Pop. in 1841, 4811.

ABCIIERON, a peninsular district of Russia, Trans-Caneasian, prov. Daghestan, on the W. coast of the C'aspian Sca. See Apcheron.

ABCOUDE, a vil. Holland, prov. of, and 13 m . N.W. Utreeht, on the left bank of tio Vecht. It has a large beautiful Calvinistic chureh, a R. eatholie chureh, and a school. The horse market, held here the last Thurstlay of August, is celebrated. Pop. about 1000.-(Van der Aa.)

ABDA, a prov. Moroeco, bounded $N$. by the prov. of Inquella, E. by that of Moroceo, S. by that of Shedma, and W. by the Atlantic. We have hardly any knowledge of the interior, further than that its N . portion consists of a series of extensive steppes or plains. On the coast, eape Cantin, the N. limit of the provinee, rises preeipitonsly, 211 ft . above the sea. About one half of the coast line S. of cape Cantin consists of white eliffs rising above a sandy beach, the remainder is composed of sand hills 150 to 200 ft . high. Inland from this portion of the coast, extends a ridge of sandy-looking hills covered with brushwood; the whole coast being sandy, barren, and nearly destitute of good water ;
but portions of the interior are said to be fertile and well cultivated.-(Jour. Geog. Soc., vol. vi.)

ABD-AL-CURIA, or And-סL-Koory, properly Andels KUri, a small rugged isl., coast of Soumali in E. Africa, between cape Guardafui (has Asser) and the isl. of Socotra, in lat. $11^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $52^{\circ} 30^{\circ} \mathrm{E}$. It is about 18 m . long, E. to W., but very narrow; and near its centre are two hills, which give it the appearance of two islands when scen from a distance. Wood and water are scarce, and the inhabitants few.

ABDASTON, or Adbaston, a par. and township, England, eo. Stafford; area, $5330 \mathrm{ac} . ; 2 \mathrm{~m}$. N. from the Birmingham and Liverpool Canal. Pop. in 1841, 610.

ABDEH, or Axser, the ruins of an ancient city, supposed to be those of Eboda, in Arabia Petroca, 70 m . S.W. by S. Jerusalem, and 210 m . E.N.E. Cairo; lat. $30^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $34^{\circ} 35^{\prime}$ E. The ruins consist of the remains of numerous houses, the walls of a large Greek ehurch, and an extensive fortress, both situated on a long hill, or ridge, overlooking a wide plain. Connected with the fortress are cisterns, and deep wells, walled up with good masonry. The ruins are surrounded by traces of ancient cultivation.

ABD-EI-GEDYR, an isl. in the river Nile, in Upper Egypt, to the S.E. of Girgeh, abont 6 m . long.

ABDIE, a par. Scotland, eo. Fife; N.W. part of the eo. on the Frith of Tay; area, about 7624 ac . ; contains several lakes; the largest, Lindores, is surrounded with beantiful scenery. Pop. in 1841, 1508.

ABDON, a par. England, co. Salop; area, 710 ac. Pop. in 1841, 155.

## ABD-UL-KOORY. See Abd-al-Curia.

ABDU-L-KURI, or Palinurus Shoal, is the name of a dangerous reof of roek and coral, lying off the S. coast of Arabia, in lat. $12^{\circ} 12^{\prime} 3 U^{\prime \prime} \mathrm{N}^{\prime}$; and lon. $52^{\circ} 11^{\prime} \mathrm{E}$. (r.), dis. covered by Capt. Haines so lately as 1835 . It extends 1850 yds. from N.N.E. to S.S.W., with a breadth of 300 to 600 yds.; its liighest part, at the time of its discovery, being a pointed rock, which was only 17 ft . below the surface. It is $8 \frac{1}{2} \mathrm{~m}$. distant from the nearest land, bearing N. by W.; the soundings in its neighbourhood vary suddenly, and are not to be relied on. Between the shoal and the shore there is a depth of 120 fathoms, but the safest navigation is to seaward. -(Jour. Geog. Soc.)

ABEL. 1 . See Abila.
ABENBERG, a small tn. Bavaria, in Middle Franconia, $15 \mathrm{~m} . \mathrm{S} . \mathrm{V}$. Nirnberg. It has two churehes and a poorhouse, and its inhabitants are engaged in needle making, and in cultivating hops. Pop. 1133.

AlSENSBERCi, a tn. Lower Bavaria, 18 m . S.W. Ratisbon, eap. of district of same name, on the right bank of the Abens, liere crossed by a bridge. It is the seat of a court of justice (landgericht), and has two churehes and a castle, the former residence of the counts of $\Delta$ bensberg. It has manufactures of eloth and other woollen fabries, and of earthenware. Hops are cultivated in the vicinity, and there are several breweries in the town. There is a mineral well in the neighbourhood, the waters of which, containing iron, salt, and sulphur, are used both internally and externally for cutancous diseases, gout, \&e. The Austrians, muter the Archluke Louis and General lliller, were defeated here by Napoleon, who took 18,000 prisoners, on April 20, 1809. Pop. $1210 .-$ The distriet has an area of 112 geo. sq. m., and a pop. of 17,000 .-(Iuhn.)

ABER, the name, with various affixes, of several parishes and villages in Scotland and Wales, and of a parish and township in England.

Those in Scotland are:-1, Aberchirder, a vil. and par. Marnoeh, co. Banff; 5 m . N.E. Turiff. Pop. in 1811, $819 .-$ 2, Abercorn, a par. and vil., co. Linlithgow, on the shore of the Frith of Forth; area, 4496 ac. There are some remains of Roman forts in this par. The vil. is beantifully situated, 10 m. W.N.W. Edinburgh. Pop. in 1841, of par. and vil., 2 I46.-3, Abercrombie, a par., co. Fife. (Sce Monance, St.)-4, Aberdalyic, a par., co. Perth; area, 2800 ae.; abounds in freestone; proprietor, Earl of Kinnoul. Battle of Duplin fought in this par., Aug. 12, 1332. Pop. in 1841, 360.-5, Aberlady, a vil., par., and bay, co. Iladdington, N. W. coast. The par. contains about 4000 ae. l'op. in 1841, 1050.-6, Aberlemno, a par. and vil., co. Forfar; 2 m .
S.S.W. Brechin; 6 m . by 5; contains two antique obelisks. Pop. 1023.-7, Aberlour, par and vil. Banff, S.E. bank Spey, 7 m. by $4 \frac{1}{2}$. Pop. 1352.- 8, Abernyte, par. Perth; 2513 ac . Pop. 280. (See also Abentour.)
In Wales:-1, Aberedov, par. Radnor, on the Edeo; with the ruins of Llewelyn-ap-(irifith's castle. P'op. 345.-2, Abererch, par. Carnarvon, near the mouth of the river Erch. Pop. 1613.-3, Aberhafisp, par. Montgomery, 3 m . W. by N. Newtown. Pop. 535.-4, Abemant, par. and township, Carmarthen, near river Cywyn. Pop. $2541 .-5$, Aber-Porth, par. Cardigan, on C'ardigan Bay. Ilerring fishing is carried on to a limited extent. 1'op. 496.-6, Aberwheeler, a township and vil. Denbigh, par. Bedfary. Pop., par. 534; vil. 114.-7, Aberyscir, par. Brecon. Pop. 117.

In Esoland:-Aberford, a par. and township, W. Riding, e?. York; are:, 3820 ae . Coal, lime, and fine white buildingstone, are wrought. Pop. 1071. See Aberford.

ABER, or Abergwnoregys, a vil. and par. Wales, co. Carnarvon, hund. Ueheff, E. side of the Menai Strait, 4 m. E. Bangor. The village, pleasantly situated at the mouth of a small river, contains a chureh, places of worship for Independents and Wesleyan Methodists, and several schools. The ancient Welsh princes had temporary resid ances here. P'op. of par. in 1841, 556.

ABERAERON, a flourishing little seaport tn . Wales, co. and 20 m . S.E. Cardigan, at the mouth of the Aeron. The houses are all on a uniform plan, and are built of stone and Carnarvon slate. The town is well supplied with water, and is improving. It has an elegant church, chapels for Independents, (alvinistic Metholists, and Wesleyans; a townhall, in the Grecian style; union workhouse, and three schools. Ship-building is carried on; large quantities of corn, butter, and lead ore, are exported; and limestone, culm, and American timber, imported. The inhabitants are chiefly seafaring people and agriculturists, and are comfortable. There are some fine public walks in the vieinity. l'op. in 1841, 53.1.
aberavon, or Aberafan, a bor. and par. Wales, co. Glamorgan, at the mouth of the Avon, and on the E. side of Sivansea Bay, 8 m . E. from the town of that name. The borough, which has inereased rapidly of late years, and has been also considerably improved, is situated on a plain at the foot of a mountain, and consists chiefly of two irregular streets; houses mostly of recent erection, and built of stone obtained in the neighbourhood: indifferently supplied with water. It has an established chureh, six chapels, a townhall, a national and three private unendowed schools; a mechanies' institute, and Bible and church missionary societies. The exports consist principally of copper, tinned plate, wrought iron, coals, cinders, patent fuel, ehemicals, and yellow metal, chiefly raised or manufactured within the limits of the borough. Of these, about 58,566 tons are exported amually. The inliabitants are mostly employed in mining, and the mannfacture of metals, and are generally in tolerably comfortable circumstances. Aberavon is one of the boroughs of the Swansea district which, in 1848, had 1309 registered electors. Pop. of par. in 1849, 1947; of bor. 5490 .

AbERbROTHIOCK, Abermothwick. See Arbroath.
ABERCONWAY. See Conway.
ABERCROMBIE, a township, Lower Canada, co. Terrebonne, district of, and 39 m . N.W. Montreal. It has manufactures of potash and maple sugar, with saw-mills.

ABERCROMBIE, a small river, New South Wales, one of the head streams of the river Lachtian, an affluent of the Murrumbidjee, and with the latter falling into the Murray. The A bercrombie rises among the Blue Mountains, and unites with the Narrawa about lat. $34^{\circ} \mathrm{s}$; lon. $149^{\circ} \mathrm{E}$., from which point the stream takes the name of the Lachlan river.

ABFRDALE, or Abembír, a vil. and par. S. Wales, co. Glamorgan, part of the bor. of Merthyr-Tydvil. It is pleasantly situated on the Dâr, $4 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. by W. MerthyrTydvil, has an ancient churel, with two beautiful new ones now (1852) erecting; places of worship for Baptists, Independentz, Unitarians, and different sections of Methodists, a national, and other schools. The parish abounds with coal and iron, and contains three extensive iron works, the produce of which is shipped at Cardiff, Neath, and Swansea. In 1839, the Messrs. Wayne, of the Gadly's Iron-works, judging from the great supply of steam eoal which the valley was capable of producing, sunk the first pit for exportation. Their
example was speedily followed by several other gentlemen, and the annual export now falls but little shert of $1,000,000$ tons. The Aberdare Railway, connected with the Taff Vale Railway, was, in a few years afterwards, opened; and, from a small village, this place has now become one of the most important places of business in South Wales. The Aberdare Canal, 7 m . long, passes within 1 m . of the village, communicating with the Glamorganshire Canal. Pop. (1841), about 6000; (1851), rather more than 15,000 ; and steadily progressing at the rate of about 1200 yearly.

ABERDEEN, a maritime co. in the N.E. of Scotland, occupying the eentral portion of an extensive promontory which projects into the North Sea, Letween the Friths of Tay and Moray. It is abont 91 m . in length E.N.E. to W.S.W., and abont 36 m . in width at the broalest part in right angles to its length, diminishing $\mathrm{s} . \mathrm{W}$. to about 10 m . It is bounded W., N.W., and N., by the comnties of Inverness and Bauff, S. and S.E. by those of P'ertlı, Forfar, and Kincardine, and E. and N. by the North sea. It has 60 m . of a sea-coast, about 14 of which, from the Dee to Ythan, are low and sandy ; the remainder is mostly bold and roeky, and, in some places, deeply penetrated by remarkable fissures and caverns; but there are no islands upon it deserving of special notice. The county is estimated to contain $1,260,890$ acres, and is divided into eight distriets, and 85 parishes, several of which are united. It is generally hilly, and in the S.W. oceur several of the highest inountains in Scotland. These are, Ben Macdhni, 4390 ft . high; Cairntonl, 4220 ; Cairngorm, 4095 ; Bennabuird, 3940 ; Lochnagar. 3800 ; ancl several others, varying from 3000 to 3700 ft . These mountains present, in some places, vast perpendicular precipices, a few of them exceeding 1000 ft . in height. Their summits are gencrally bare, rounded, and coverel with detached masses of granite. The predominant rocks of the cominty are gnciss, mica-slate, and granite; and patches of serpentine oceur in many parts. Trap rocks are of continual occurrence in the inland and hilly parts; and veins or dikes of trap are observed in parishes near the E. coast. Jint its most valuable mineral is its celcbrated building granite, large quantities of which are exported yearly from the quarries near Aberdecn and Peterhead. it is of two colours, gray and red; is extremely hard, and susceptible of a high polish. The other rocks are limestone, sandstone, and clayslate, occurring in small quantity. Several deseriptions of precions stones, inchuding roek-crystal and topaz, are oceasionally found on the momutains, and small pieces of amber on the Buchan coast. Chalybeate springs oecur in several parts of the county, the most celebratel of which are those of Peterhead, Fraserburgh, and l'ananieh.
The prineipal rivers are the Dee and the Don (both of which see). The former rises in the S.W. part of the co., in the mountains which there separate the latter from Invernessshire, at a height of 4000 ft . The latter has its source on the W . border of the co., at an elevation of 1640 ft . above the level of the sea. The salmon fishery of the Dee is worth about $£ 8000$ a-year. That of the Don is less valuable Other streams are the Y'than, Ugie, and Deveron or Doveran. Amongst the lakes in Aberdeenshire, none of which aro remarkable for their extent, is that which inspired the early muse of Byron-Lochagar. It is a small shect of water, situated amongst the mountains in the S.W. part of the co. at a leight of 2500 ft . above the level of the sea. The scenery around it is singularly wild and pieturesque, a rock of 1315 ft . in perpendicular height rising close by its margin.

In the S.W. parts of Aberdecnshire there are some extensive forests, including the celebrated forest of Mar, in which are many magnificent specimens of the scotch fir, some of them supposed to be from 300 to 400 years old. The largest measure 13 and 14 ft . in girth, 6 ft . from the groumd, and are abont 60 ft . in height. These forests are plentifully stocked with red and roe deer, and all sorts of game.
The soil of the comnty varies greatly. The finest arable land lies chicfly between the Don and the Ythan. In the lower parts roum the coast, elay is prevalent ; in the upper arable districts, there is a considerable extent of light, sharp, sandy loam. Sand, moor, and moss prevail on the hills and higher grounds, oceupying, with the mountainous tracts and other waste lands, nearly two-thirds of the entire county. The climate is, on the whole, mild; but the stmmer short, and
somewhat cold. An improved system of eultivation is extending over the county, chiefly from the example of experienced farmers from the southern districts of Scotland, many of whom have settled in it. All the crops usual in other parts of the country, with the exception of wheat, for which neither the soil nor climate are suitable, succeed well here, especially oats, of which about 16,000 aeres are grown annually; barley, potatoes, and turnips. But the mest important object now with the tenantry is the rearing of cattle, immense numbers of which are exported annually. This trade is of comparatively recent date, but has been of extraordinary rapid growth. It commenced about the year 1830, siuce which it has risen from 150 head to 18,300 -the number exported in 1849. The native breed, which is said to have greatly inereased in size since the introduction of turnip feeding, is preferred by the best judges. Dairy husbandry has also made great progress of late years; the quantity of butter now annually exported is said to exceed $£ 100,000$ in value. Sheep farming has not increased in proportion.

The old domestic stocking-knitting, for which Aberdeenshire was onee famous, is now nearly extinet; but there are extensive manufactures of cotton, linen, flax, and of woollen and sail cloth, in the city of Aberdcen, and neighbourhood.

The scenery in the mountainons parts of the country is of the most magnifieent description, and attracts numerous visitors in the stumer season. Muel pleasing seenery oceurs also along nearly the whole course of the Dee.

There are many noblemen's and gentlemen's seats dispersed over the county, one of which-Balmoral-is now a summer residence of her majesty Queen Victoria. The royal mansion

## nalmoral eastle. From an Original Drawing.

is in the parish of Crathie, on the right bank of the Dee, on a natural platform at the foot of a hill called Craig-angowan, 52 m ., by road, W.S.W. Aberdeen, and 75 N. Edinburgh. Balmoral castle was originally a very old building, but had been latterly much enlarged and improved by various occupants; it has been further altered and extended since it became the royal residence, and now presents, from the variety of styles in which the different additions have been executcd, a very irregular, but certainly very picturesque appearance. The scenery around comprises nearly all the elements of the beautiful and romantic in landscape, the principal and most striking of which are the richly-wooded hills and rocky heights which rise abruptly on either side of the Dee.

The annual valuc of real property assessed in Aberdeenshire, in 1843, was $£ 603,968$. The receipts for the relief of the poor in the year ending May 14,1847 , was $£ 28,158,15 s .9 \frac{1}{2} d$; the expenditure for the same period, $£ 28,610,4 \mathrm{~s} .5 \frac{1}{2} \mathrm{~d}$. A large proportion of the working population is employed in agriculture and in the fisheries on the coast. The county sends one member to parliament ; constituency in 1847, 3836. County town, Aberdeen. Pop. in 1851, 212,032.

ABERDEEN (NEW), a royal burgh and seaport, Scotland, co. Aberdeen, of which it is the eap., situated mostly on rising ground at the mouth of the river Dee, on its N. bank; 94 m . direct distance N.E. Edinburgh, and

Vot. I.

130 m . by rail ; lat. $57^{\circ} 8^{\prime} 54^{\prime \prime} \mathrm{N}$. ; lon. $2.5^{\prime} 7^{\prime \prime} \mathrm{W}$. (r.) It is large and handsome, the streets are in general spacious, and the houses mostly built of fine granite from quarrics in the neighbourhood. The principal strcet in the city is Union Street, in the line of which a splendid granite bridge, of one arch, 132 ft . span, and 56 ft . from the base of the piers to the top of the parapet is thrown over the ravine of the Den burn-a small rivulet which intersects the city, and falls into the harbour. A jointstock company have recently opened up a new street from the harbour to the centre of the town, and erected a great central public market ou the west side of the new strect, at a cost of nearly $£ 40,000$. Among the principal public buildings may be mentioned the county rooms, founded in 1820; the surgeons' hall; advocates' hall; Marischal College; the trades' hall; the barracks, erected on the Castle-hill; a military hospital on the Heading-hill, the ancient place of execution, now connected with the Castle-hill by an elcgant cast-iron bridge; the Bridewell, on the west side of the town, and the old cross, in the centre of Castle Street, a fine specimen of the ornamental architecture of the 17 th century.

rhk Market cross, aberdeen. From an Original Drawha.
It is of a hexagonal form, and is adorned with a series, of well executed quarter-length effigies of Scotch and British sovereigns, from James I. to James VII. It was erected in 1686 , on the site of an older cross, which was then demolished In 1839, the present structure was removed to the spot it now occupies, a distance of about 100 yards from its former position.

The ecelesiastical establishments of the city, at the time of the Reformation, consisted of one parish, containing three churehes; but in the course of the last century, the seafaring population had a church crected at Foot-Dee, and subsequently, down till 1834, when presbyteries were empowered by the General Assembly to assign districts to chapels of ease, quoad sacra, the number of churches in connection with the Establishment was 14. Since the Disruption, 14 Free churches have been erected, and altogether there are now 45 churehes in the city of Aberdecn, viz., 9 Established; 15 Free churehes; 5 United Iresbyterian; 4 Congregational ; 3 Baptist; 2 Scottish Episcopal; 1 Church of England; 1 Unitarian; 1 Wesleyan; 1 R. catholic; 3 Various.
The charitable and benevolent institutions are numerous. The principal establishment of this class is Gordon's Hospital, which is similar to George Heriot's Hospital in Edinburgh, and nuaintains and edncates 150 boys. This hospital was endowed by a citizen who acquired a large fortune in Danzig, and left the property under deed of mortification, dated Dec. 13, 1729, in charge of the magistrates, for the education of the sons of dccayed burgesses, and rclatives of the name of Gordon and Menzies. In 1816, anotleer benevolent gentleman left considerable property for the elucation of boys, under similar conditions, and which was conjoined with Gordon's Hospital; and by the economical investment of the whole funds, after defraying the cost of the building, the trustecs are enabled to command an anuual revenue of $£ 3000$. Among the other charitahle institutions of the city, we may enumerate a house of refuge, founded and cndowed by Mr. James Watt,
surgeon; four industrial schools; the deaf and dnmb institution; an orphan girls' school, and an asylum for the blind.

The most valuable of the benevolent institutions of the city is the royal infirmary, which was established by the magistrates in 1739; and which, by numerous bequests and liberal subscriptions, has become so extended as to afford accommodation for the treatment of 300 poor patients, and at the same timo constitutes a valuable adjunct to the Aberdeen medical school. Uinder the same management as the infirmary, the constituency of which are the subscribers above $£ 5$, there is a lunatic asylum, which was chicfly built by a legacy of $£ 10,000$, left by $\mathrm{Mr}_{1}$. John Forbes, of Newe. The average number of patients is 200 .

New Aberdeen is the seat of a college, called Marischal College, founded and endowed by George, Earl Marischal, in 1593. 'The original building having been found incommodious, a new structure was erected some years since at a cost of $£ 22,000$, when several new chairs were erected and endowed. The affairs and discipline of this college are managed by the Senatus Academicus, which consists of the chancellor, the rector, the dean of faculty, the principal, and 10 professors. There are 114 bursaries connected with this college and university, of the amual value of $£ 1150,70$ of which are open to competition. The average number of students for the last 20 years has been:-in arts, 190; in divinity, 120; in law, 35 ; in medicine, 81. The session commences in the beginning of November, and close the 1st of April. It was usual at this nniversity, as at most others in Scotland a short time ago, to receive students who were grounded only in Latin; but in 1847, the Senatus Academicus resolved to receive $n 0$ entrants who had not also been previously grounded in Arithmetic and the Elements of Greek.
Besides the public schools, which are under the charge of the magistrates, and to which the children of panper poor may be udmitted free of cliarge, there are five endowed schools, 36 sessional and voluntary schools, and free schools of industry. From statistical returns recently obtained by an educational society, it appears that there were about 6000 children at school within the city when the parliamentary census was taken in 1841, which is equal to nearly onetwelfth part of the population.

The manufactures of Aberdeen date from a very early period of listory. So early as the year 1200, it exported to the Netherlands woolfels; and in the 15 th century, there were exports of plaiden, fingrams, stuffs, serges, and stockings; in return for which the burgesses received wine, brandy, sugar, tobacco, soap, and iron, grain, flax, and fruit. Stocking weaving was the staple manufacture of the city for many years. In 1749, a manufactory for preparing linen thread was established, and afterwards two flaxmills were established; then followed the establishment of four cotton manutactories, all of which continue in operation. The flaxmills employ between 2000 and 3000 hands, the cotton works about 1500, and the woollen mannfactures 2000 hands; at wages varying from $2 s .6 \mathrm{~d}$. to 8 s . for females, and from 7 s .6 d . to 21 s . a week for males.

Besides these, there are three manufactories for combs, one of them the largest of the kind in the kingdom. Granite was first polished in this city; and now there is a very large establislment for preparing that stone for all sorts of useful and ornamental work. Paper making is carried on to a considerable extent in the neighbourhood, and there are several manufactories for locomotive engines in the city. There is also a good deal of ship building.

The larbour of $A$ berdeen is spacions, and is rendered safe by a pier of granite on the N. side of the Dee, which extends into the German ocean. The harbour and docks, the latter enclosing a surface of 36 acres, are the property of the corporation of Aberdeen, and the business is virtually managed by a committee annually elceted by a gencral conmission. The ordinary revenue is about $£ 20,000$, and the expenditure between $£ 17,000$ and $£ 18,000$. The foreign commerce is chicfly with N. America, the E. Indies, W. Indies, the Mediterrancan, and the Baltic. The principal imports are wheat, flour, coals, salt, flax, lime, and cotton. Exports-linen, cotton, and woollen goods ; oats, barley, and bere; cattle, sheep, pigs, butter, eggs, pork, salmon, and granite; of which last $£ 40,000$ worth is sent anmully to London. There were 12 ships formerly employed in the
whale fishing, but they are now reduced to two or three. The shipping trade of the port las greatly increased of late years. In 1849, the number of sailing vessels belonging to Aberdeen, under and above 50 tons, was 340 ; tom 65,559 : while, in 1835 , the number was only 173 ; tonn. 26,063 . The gross receipt of customs in the year 1845, was $£ 76,259$, $2 s .10 \mathrm{~d}$. The total number and tomage of vessels inwards, for the same year, was 2219 ; tomn. 277,912 . Outwards, 1522 ; tom. 214,756. There is a regular communication by steam between $\Lambda$ berdeen and London, Leith, Inverness, Cromarty, Caithness, Orkney, and Shetland. The vessels employed on these stations are all of the finest deseription, and are the property of joint stock companies in the city. On Girdle Ness point, a little S. of the cntrance into the harbour, there is a lighthouse, first used in 1833. It is a double light, exhibiting two fixed lights, one over the other, and may be seen at the distance of 13 to 16 miles; lat. $57^{\circ} 8^{\prime} \mathrm{N} . ;$ lon. $2^{\circ} 3^{\prime}$ W. There are also coloured leading lights for the harbour. A bar runs across the mouth of the harbour, on which there are 12 ft . neaps, and 16 ft . spring tides.
The mercantile institntions of $A$ berdeen comprise a guildry ; two native banks, viz., the Town and County Bankung Conpany, and the North of Scotland Banking Company; and six braneh banks, viz., a braneh of the LJion Bank of Scotlaud, the National Bank of Scotland, the Bank of Scotland, the Commercial Bank of Scotland, the British Linen Company's Bank, and the City of Glasgow Banking Company. There is also a National Savings' Bank, and two native Insurance Companies. 'The guildry, which was at one time the great commercial league of the city, being now stripped of its exclusive privileges, exists only as a charitable or benevolent institution. There are seven incorporate trades, possessed of property to a great extent ; and it is worthy of remark that the trades and the city treasmy are the principal fenholders of Aberdeen.

The municipal affairs of the town are conducted by a provost, four bailies, a dean of guild, and 12 councillors. Tho watching, cleaning, and lighting are under the control of a board of commissioners, of which the provost, the dean of guild, the city treasurer, and the convener of the trades, are ex officio members, other 18 commissioners being chosen by rate-payers, paying $£ 5$ of yearly rent.

Aberdeen was originally called Devanha; but during the Scoto-Saxon period it became known by the name of Aberdoen or Aberdon, and in subsequent ages by Aberdene or Aberdeen. The etymology of this designation is generally allowed to be Celtic, and from some manuscripts published by the Spalding Club, it would appear that for the first 12 centuries the Celtie was the only language spoken and written in this city, and the north of Scotland.

During the reign of Wavid 1., and probably about the year 1130, Aberdeen was constituted a royal burgh, and the inhabitants 'burgenses regis,' as holding their Burgagium immediately of the crown. In 1440 , the city was ranked under the 'Laws of Burrows,' and provision made 'that the provost, baillies, and council shall be chosen amnally by the common snffrages of all the honest men of the burgh.' About the year 1179 , Willian the Lion confirmed the privileges and immunities enjoyed in the name of his grandfather, and ereeted the city into a corporation by royal charter, which appears to have been the first instrument of the kind exceuted in Seotland. Thus enfranchised, the magistrates became entitled to send representatives to the national parliament, or Scottish Estates. In 1196, additional privileges were conferred on the city. In 1222-23, Alexander II. permitted the holding of a weekly market, and authorized the institution of a merchant guild, or 'Mercantile confraternity.' In 1342, David II. summoned a general council to meet in the city, at which former charters were enlarged; local improvements superinduced, the streets paved, and many of the houses, formerly built of wood, rebuilt of stone. From these circumstances, the town thenceforward became distinguished by the name of New Aberdeen. The last charter granted to the city was by Charles I., and is dated Oatlands, Sept. 9, 1638. 13y the act of Union, A berdeen becarne entitled to send a representative to the parliament of the United Kinglom, conjunctly with Arbroath, Montrose, Brechin, and Bervie; but by the Reform Bill of 1832 , it was again erected into an independent constitueney, which includes both New and Old Aberdeen.

Among the eminent men connected with Aberdeen were John Barbour, the poet, George Jamieson, the painter, James Gregory, inventor of the reflecting telescope, Dr. Beattie, anthor of 'The Minstrel,' and the late eminent physician, Dr. Abercrombie of Edinburgh; all of whom, with exception of Dr. Beattie, were natives of the town, or of its immediate vicinity.

According to the census of 1811, the pop. of Aberdeen, ineluding the par. of St. Nieholas and Old Maehar, was 66,778; pop within the parliamentary boundary, 63,288. Increase on the whole since 1831,8759 ; apparent increase within parliamentary boundary, 5269. Parliamentary constituency for 1848-49, 2832.

ABERDEEN (OLD), a small but aneient eity in Scotland, co. Aberdeen, pleasantly situated on the S. bank of the Don, about 1 m . N. New Aberdeen, of which it may now be considered a suburb. It consists of but one principal street, running N. and S., and some diverging lanes or alleys, several of which are very old. It is well supplied with water, is surrounded with many handsome villas, and is, altogether, an agreeable place of residence. The more remarkable buildings are the college (King's College), the remains of the cathedral,

king's college, oln anfrdeen. From a local Print.
the townhouse, and the old bridge of Don, The townhouse is a neat strueture, and is provided with a handsome public elock. The bridge, celebrated in Scottish tradition by the name of the 'Brig o' Balgownie,' is one of the oldest edifices of the kind in Seotland, having been erected by king Robert Bruce in the 14th eentury; it consists of one large Gothic areh of 67 ft . span. The nave of the cathedral, now used as the parish church of OId Machar, and two fine spires at the west end, are all that remains of the original structure, a magnifieent building, commenced in the 14th century, and dedicated to St. Maehar. It has still an imposing appearance, and is kept in high preservation; its large western window and oak ceiling, painted with armorial bearings, being much admired. The college buildings oceupy the sides of a large quadrangle, and, with their chapel, were renewed some years ago at an expense of about $£ 6000$. These buildings are finely set off by a noble tower, surmounted by an imperial crown of open stone work. The college was founded by Bishop Elphinstone in 1494, and was subsequently patronized by James IV. There are here 34 bursaries, held by 134 students, their aggregate value being about $£ 1800$ a year, and giving about one bursary to every fourth student. There are nine professors, and several lectureships; but the lecturers, unless also professors, are not members of the Senatus Academicus. The students wear red gowns, and are from 200 to 250 in number. There is also a grammar sehool in the town, and various other schools. Old Aberdeen has neither trade nor manufactures, but is wholly dependent on its mniversity. Pop. in 1841, about 1490.

ABERDOUR, the name of a village and two parishes, Scotland:-1, A vil., par. of same name, co. Fife, beautifully situated within about $\frac{1}{4} \mathrm{~m}$. of the sea, and much resorted to in the summer season, as sea-bathing quarters, by the eitizens of Edinburgh, being distant from that city only about 8 m .,
and having daily communication with it by steamers.The parisii lies on the shores of the Frith of Forth; abounds in coal, lime, and freestone, and is well wooded. There are here the remains of the old castle of Aberdour, built by the Regent Morton; area about 5000 ac. Pop. in 1841, 983.2, A par., co. Aberdeen, on the N. coast, 8 m . WV. Fraserburgh; from 10 to 11 m . long, and about 7 broad. The whole sea coast of this par. is bold, rocky, and picturesque; and eontains some remarkable eaverns, in one of whieh Lord Pitsligo lay concealed after the battle of Culloden, till his retreat was discovered by the footprints in the suow, of the young girl who carried him his supplies of food and other necessaries. Pop. in 1841, 1645.

ABERDOVY, a harbour on the W. coast of Wales, en. Merioneth, 10 m. N. Aberystwith ; lat. $52^{\circ} 36^{\prime} \mathrm{N}$. ; lon. $4^{\circ} 7^{\prime} \mathrm{W}$. This harbour is safe and convenient for vessels drawing not more than 15 ft .; but as the bar and channel leading into it frequently shift, a pilot is nceessary.

ABERFELDY, a vil. Scotland, co. Perth, 22 m . N.W. the city of Perth, and $53 \mathrm{~N} . \mathrm{W}$. Edinburgh. It lies in a picturesque locality, near the right bank of the Tay, and consists chiefly of one long street, with another leading off about the centre, and a small square at their junction. It has a parish and a Free chmreh, a bank, and some good sehools. In the vicinity are the 'Birks of Aberfeldy'-the wooded uplands round the fine falls of the Moness, whieh are celebrated in Scottish song. Pop. in 1841, 823.

ABERFFRAW, a small tn. seaport, and par. Wales, on the W. coast of the isl. of Anglesea, on a slope rising from the E. and S.E., at the mouth of the river Ffraw, abont 7 m . S.E. Holyhead, and 15 S.W. Bangor. It consists of two narrow strects. The houses are all of stone, and many of them thatehed. It is not lighted, and is but indifferently supplied with water. The chureh is a very ancient building, and contains one of the most perfect Anglo-Saxon arehes in the principality. There are, besides, two Methodist chapels and a free school. In summer a few large boats carry corn and potatoes to Carnarvon and Isle of Man, which forms nearly the whole trade of the place. Husbandry and fishing form the ehief employment of the inhabitants. There are six cattle fairs held during the year. Aberffraw was one of the three royal residences of Wales, and a scat of the prineipal courts of justice. In moderate weather, a vessel may stop a tide in the bay, in 4 or 5 fathoms, clean sand, above 2 cables-length from the N. side of the bay. Small vessels go further in and lie aground. Pop. of par. in 1841, 1336 ; of town, in 1850, from 650 to 700 .

ABERFOIL, or Aberfoy le, a small par. and romantic pass in the Highlands of Scotland, co. Perth, on its S. boundary, $23 \mathrm{~m} . \mathrm{N}$. Glasgow, and $16 \mathrm{~m} . \mathrm{W}$. by N. Stirling. The clachan (Anglice, hamlet) of Aberfoil, is the scene of some amusing incidents in Scott's novel, Rob Roy. The scenery around is varied and picturesque. Pop. in 1841,543.

ABERFOR1), a tn. England, co. York, W. Riding, 9 m . N.E. Leeds, and 14 m. S.S. W. York, in a valley on the river Cock, which is here crossed by a substantial stone bridge of three arches. It consists of one long street, a mile in length the houses are of stone, and generally well built. The town is not lighted, but is amply supplied with water from springs. The only buildings of any note are the church-an ancient strueture of mixed arehitecture, and the Aberford almshouses, built in 1844-5. The latter is a handsome building, and contains eight inmates, four male and four female. There are here a Methodist chapel, a R. catholic chapel, a national, and other schools. There are no manufactures, the inhabitants being mostly engaged in agrieultural labour, and a portion in collieries and lime quarries in the vieinity. Petty sessions are held here every fortnight, and Justice of the Peace courts daily. Aberford is a polling place for the W. Riding of York. Its population has greatly increased within the last 10 years.

ABERGAVENNY, a tn. and par. England, co. Monmonth, the former $14 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. from the town of Monmouth, and $157 \frac{1}{2} \mathrm{~m}$. by railway from London, pleasantly situated on rising ground, at the confluenee of the Usk and Gavenny, over the former of which there is a handsome stone bridge of 15 arehes. The town is long and straggling, and some of the streets are narrow, but great improvements have taken plaee of late years. It is now lighted with gas, and amply supplied with water, by pipes from springs in the vicinity. There are
two churehes, one of which, recently rebuilt, is a handsome structure, and contains several aneient monuments. There are, besides, several Dissenters' neeting-houses, a R. catholic chapel, a free grammar sehool, founded by Henry VIII., a national school, and several daily and Sunday sehools. The benevolent institutions comprise a dispensary, a lying-in hospital, and some minor charities. A thriving reading society, or association, was established here in 1848. Abergavenny was at one time famous for the manufacture of flannels and periwigs, but both trades are now extinet; the former in consequence of the introdnction of machinery, and the latter through the caprices of fashion. The wigs made here were composed of goats' hair, and were remarkable for their extreme whiteness, the quality which constituted their chief value. The principal trade now remaining is in wool, but a pretty extensive general retail trade has arisen from the establishment of several iron works in the vieinity. There is here, also, a large boot and shoe-making conecrn, a coach manufactory, several tamners, tallow-chandlers, saddlers, cabinctmakers, wool-turners, and brewers, \&e. \&e. The prosperity of the place is further promoted by the Monmouthshire and Brecon Canal, which passes near it. Petty sessions are held here every Wednesday. Market days, Tuesday and Saturday; the latter prineipally for grain. There are three fairs annually for cattle, sheep, horses, hogs, and flaunel. The scenery in the vieinity is singularly beautiful and pieturesque, particularly when seen from the terrace of the ancient castle of Abergavenny, which is situated on an eminence near the S . extremity of the town, and is open to the public. Area of par. 4290 acres. Pop. of town and par. in 1841, 4953.

ABERGELE, or Abergeley, a small market tn. and par., N. Wales, co. of, and 10 m . N. by W. Denbigh, and $6 \mathrm{~m} . \mathrm{N} . W$. St. Asaph. The town is about half a mile from the sea, although called a scaport in several gazetteers. Being surrounded with beautiful seenery, and having a salubrious air, it is mueh frequented by invalids, while its fine beach attraets numerous sea-bathers during the summer season. It is also much resorted to on account of its cattle fairs, of which there are three amnually. There are a chureh and several dissenting chapels here, and a national and British school. None of the churches have any architectural pretensions. The town consists of three streets, one of which, the main street, is straight. The houses generally are built of limestone, with which the neighbourhood abounds; the rest of brick. There is no trade in the town, the inluabitants consisting of shop,keepers, tradesmen, meehanics, and a few farmers. At the distance of about $1 \frac{1}{2} \mathrm{~m}$. there are some remarkable caverns. lop. of par. and tn . in $1841,2661$.

ABERGWILLY, a small vil. and par., S. Wales, co. Carmarthen, hun. Elvet ; the former on a beautiful plain in the vale of Towy, 2 m . N.E. the town of Carmarthen. It consists of one straight street, generally well kept. The honses have been well built, principally of stone, but are falling into decay. The village is well supplied with water, but is not lighted. The church is in the Gothic style. There are, also, a very handsome Independent chapel, built about five years ago, of undressed limestone, and one national school. Near the village is $\Lambda$ bergwilly palace, the residence of the bishop of St. David, a handsome structure, surrounded with finely ornamented grounds. Pop. of par. and vil. in 1841, 2366.

ABERNETHY, a village and two parishes, Scotland:1, A vil. and par., co. Perth; the former 7 m . S.E. town of Perth, and 27 m . N. W. Edinburgh. It is irregularly built, and is composed chiefly of thatched houses. Abernethy is supposed to have been the capital of the Picts. A religious house, dedicated to St. Bridget, was endowed here during the Pietish period, and long flourished under the patronage of the Scottish kings; and here the Culdes continued, till they were suppressed in the 13 th century. There is, likewise, at this place, a round tower of great antiquity, 74 ft . in height, and 48 ft . in circumference at the basc. Under the floor of this tower, three skeletons were found in 1841, indicating, apparently, that these mysterious structures were used as places of sepulture. Numerous other interesting relies of remote times liave been found in this neighbourhood, proving, in connection with its historical associations, that it had been at a former period a place of great note. Area of par,, a small portion of whieh is in co. Fife, about 7030 acres. Pop. in 1841, 1920; of vil. 827.-2, A par. partly in the co. of Elgin, and partly in
that of Inverness, being united with the par. of Kincardine. Pop. in 1841, 1832.

ABERSEE, or St. WolfaAxg, a small lake, Upper Austria, circle Traun, 6 m . W. Ischel. It is about 6 m . long by 3 m . broad; has a depth of from 500 to $600 \mathrm{ft}$. , and yichls pike, salmon, and large trout, in great quantity. Near the E. end is the vil. of St. Wolfgang, whence the lake derives one of its names.

ABERTAMM, a small market tn. Bohemia, cirele of, and 12 m. N.N.E. Elnbogeu. It lies on the Wistritz, at the foot of the Plessberg, and has a church. In the neighbouring hills are mines of silver, tin, and cobalt, in which the majority of the inlabitants are occupied. Pop. 1700.

ABERYNTWI'TH, a scaport tn . Wales, co. Cardigan, pleasantly situated on an acclivity on the bay of the latter name, at the confluence of the rivers Ystwith and Rhcidiol, 33 m. N.E. the town of Cardigan, and $180 \mathrm{~W} . N . W$. London. It was at one time strongly fortified with walls, a portion of which still remains on the shore. Aberystwith has become, of late years, one of the most fashionable watering places on the Welsh coast, and has consequently been much extended and improved. The streets are steep and uneven ; but some of them are spacious, and they are in general regular, well paved, and well lighted with gas. The houses are, for the most part, neat and substantial, and many of them large and handsome, and all amply supplied with excellent water, brought by pipes from the neighbouring lills. The principal public buildings, and other objeets of interest, are the two churches, one of which is a handsome new structure in the Gothic style, the custom house, assembly rooms, town hall, and theatre. The Marine Jarade, an elegant crescent, is situated on the margin of the sea, and close by is the Marine Terrace, a handsome range of modern buildings, commanding a fine view of the bay. At the north end are the marine baths, in which every requisite accommodation is to be met with. There are also a market place, and a handsome general mart lately creeted, an infirinary, and places of worship for Baptists, Independents, and Methodists. There are four dissenting schools and one national, an institution for the deaf and dumb for the prineipality, and an infirmary. Besides sea-bathing, for which the beach is admirably adapted, laving a gentle slope, with water of the utmost purity, there is a elalybeate spring within a few hundred yards of the east end of the town, the waters of which resemble those of Tunbridge. There are four public walks, the principal of which, called the Castle Walks, are much admired for the extensive views they command. Races are held every August, on race ground about 3 m . from the town. Archery and cricket clubs have also been established. A little west of the town, on a bold eminence projecting into the sea, are the picturesque ruins of an ancient castle, founded in 1109 . There are no particular manufactures earried on, the people being chiefly employed in seafaring, mining, and agriculture. Their condition appears to be favourable. The harbour, which was formerly in a very bad condition, has been of late considerably improved; it has now an average depth of 16 ft . water at spring tides. A substantial stone pier has been erected on the S. side of the entrance into the harbour, which protects it from the W. gales. The pier extends 260 yds. in a S.S.E. direction. The prineipal exports are lead ore from Cardiganshire, pig lead, oak bark, corn, and butter. The imports, coal, culm, lime, American timber, and general merchandise. The number and tonnage of sailing vessels registered at the port on December 31, 1847, was 164; tonn. 8934. The number of vessels that entered the harbour during the year ending December 31, 1847, was 382 ; tonn. 14,184: the number that clcared during the same period, 177 ; tonn. 7496. The government of the town is vested in a mayor, recorder, chamberlain, and common burgesses. Aberystwith is one of the contributory boroughs of Cardiganshire that return a member to the House of Commons. Pop. 4975.

AIBERYSTWITII, or Braenau, a par. England, co. Monmonth; area, $10,930 \mathrm{ac}$. 1’op. 11,272 . It contains several villages, and extensive iron-works, and abounds with valuable iron-mines.

ABHA, a large vil. Abyssinia, state or kingdom of Tigré, about 50 m . N.E Axum; the residence of a chief who rules over the territory of Massoua, and the seat of a consider able trade in cattle, horses, iron, skins, and cotton.

ABIAD (Bahr-EL-), a large river of Africa, supposed to be the true Nile, that river being formed by the junction of the Bahr-el-Abiad (White Nile), and the Balır-cl-Azrek, or Blue Nile, at Khartum; lat. $15^{\circ} 40^{\prime}$ N.; lon. $33^{\circ}$ E. (See Azrek, BaHr-EL-.) It is believed to rise under the name of Tubiri, at a comparatively small distance from the sea, in the country of Mino Moezi, a continuation of the ligh plateau of Abyssinia, situated to the N . of the great lake Zambéze, or N'yassi. It was ascended by M. Arnaud d'Abbadie, in 1812, to $4^{\circ} 42^{\prime} 42^{\prime \prime} \mathrm{N}$. lat. (Sie Nile.)

ABILA, Abil, or Abela [Hebrew, Abel, 'a grassy spot']. The name of several ancient places in Syria, of which the most noted was Abila of Lysanias, cap. of the Roman prov. of Abilene, on the river Barrada; 18 m . N.W. Damascus, on the site of the modern village of Suk Wady Barrada. A few broken pillars, and other fragments, are all that now remain to indicate its former rank.

ABILENE, a small district, or Roman prov. Syria, whose precise extent is now unknown. It lay N.W. Damascus, and was named from its chief town, Abila.

ABIN(xl)ON, a bor. and market tn. England, co. Berks, 50 m . N. W. London, r. bank of the Thames, at the junction of the Ock. Its strects are spacious, and well paved and lighted. In the centre of the town is the market place and market house, the latter a large and handsome building of freestone. The other public cdifices are the two parish ehurches, one of which, St. Helen's, is a large Gothic structure, with a fine spire; the chapels of the Dissenters, of which there are four or five, including Baptists, Independents, Socicty of Friends, and Wesleyan Methodists; the guildhall, and the county jail. The educational institutions comprise a free grammar school, a national, and a British school. There are a number of alinshouses in the town, and various minor charities. The principal manufactures are canvas, sacking, and sailcloth; the latter, however, has much fallen off of late years, owing to the competition of establishments in the N. of England and in Scotland. Malting, carpet weaving, and hemp dressing, are also carried on to a considerable extent. The corporation consists of a mayor, four aldermen, and 12 councillors. Abingdon returns one member to the House of Commons; registered electors, 315 . Scven fairs are held annually, chiefly for horses and horned cattle. Races are held in September. The branch railway of the Great Western line, leading to Oxford, passes by Abingdon, where there is a station. Abingdon is a very old town, its original fonndation being ascribed to the Saxons. In former times, it was called Scheovesham, and is spoken of in ancient records as a wealthy and important place. l'op. in 1841, 5269.

ABINGER, a par. England, co Surrey; area, 9780 ac.; $4 \frac{1}{2} \mathrm{~m}$. S.W. Dorking. Pop. in 1841, 920.

ABINGIIALL, a par. England, co. Gloucester; area, 860 ac. Pop. in 1841, 239.

ABINGITON, the name of several parishes, England:1, Abington, a par., co. Northampton ; area, 1190 ac. It has
two small charities. Pop. in 1841,143.-2, Abington (Great), a par., co. Cambridge; area, $1500 \mathrm{ac} . ; 2 \frac{1}{2} \mathrm{~m}$. N.W. by W. linton. Pop. in 1841, 358.-3, Abington (Little), a par., co. Cambridge ; area, 1120 ac. Pop. in 1841, 277.-1, Abington-in-the-Clay, or Pigotts, a par., co. Cambridge; area, 1260 ac. l'op. in 1841, 232.-Also a par. and vil. Ireland, co. Limerick and Tipperary; area, 30,400 ac. Pop. 8314.

ABIPONES, or AblloniAns, a warlike tribe of aborigines, S. America, republic of La Plata, located in EI Gran Chaco, on the right bank of the Vermejo. The men are tall, robust, well featured, and excel in swimming. Their leader in war is their judge in peace. They subsist by fishing and hunting, and hold the flesh of the tiger in the highest estimation. They are much given to war; and their weapons are long lances and arrows, with iron points. Their numbers once exceeded 100,000 , but now they scarcely amount to 5000 , and are daily dcereasing.-(Real Encyhlopödie.)

ABISCUN, or Anoskun, a small tn. Persia, prov. of, and 42 m. N.E. from Astrabad, upon the river Gurgan; lat. $37^{\circ} 17^{\prime}$ N.; Ion. $55^{\circ} \mathrm{E}$. It has a small but well-frequented port upon the Caspian Sca. The fishery near Abiscun is leased to tho Russians, who send seven or eight vessels here annually.

AB-IS TADA ['standing water'], a lake, Afghanistan (which see).

ABKASIA, AbASIA, or Abcilasia, a trans-Caucasian
prov. Russia, gov. Inseretia, bounded N. and W. by the Caucasus, which separates it from Circassia, E. by Mingrelia, and S. by the 13lack Sea. The country is composed wholly of the S. side of the Caucasus mountains-some of whose snowcovered peaks are here $12,000 \mathrm{ft}$. to $13,000 \mathrm{ft}$. high-and of the low plains intervening between these mountains and the sea. The prevailing geological formations are greenstone, porplyyry, black slate, and Jura limestone. Immense forests of the finest trees-oak, alder, chestnut, \&c., clothe the mountain sides, stretching down to the plains, whose Italian climate, ripening maize, figs, pomegranates, the fruits of central Europe, grain, and excellent grapes, invites to profitable cultivation; but the country is a waste, its numerous ruins alone proclaiming its former flourishing condition. Nor do the Abkases excel in cattle rearing or commerce-a little of the latter, in felt mantles, fox and polecat skins, honey, wax, and boxwood, being carried on-any more than in agriculture. On the contrary, with such indifference are these branches of industry pursucd, that by their means they do not obtain a sufficient subsistence; which, therefore, they eke out in the manuer most congenial to their tastes, by plunder and robbery-oceupations which, in them, have become a second nature. The slave-trade with Turkey formerly constituted one of the chicf employments, and tended greatly to reduce the population. Notwithstanding the watchfulncss of the Russians, slaves are still sceretly exported. The Abkases belong to the Circassian race, and distinguish among themselves five tribes-Abkases proper, Bsubbes, Tschebcldies, Aschawes, and Imuozahanes. Abkasia, under the Byzantine emperors, formed an independent state, scparate from Georgia. In the 11 th century, by leeirship, it fell to the kings of Georgia, under whom it dceayed; and in 1457, it fell under the supremacy of the Turks. In 1771, the Abkases asserted their independence; and, after various fortunes, about 1823, the reigning prince, Michacl Bei, called on the liussians to occupy the country, which they did, by stationing troops at Sukum, Tambor, Pitzunda, and Gagra, the chief towns of Abkasia. Area about $2638 \mathrm{sq} . \mathrm{m} . ~ P o p . ~ a b o u t ~ 52,000$.-(Real Encylklopädie.)

Al'K Asia, Little, a distriet, Circassia (which see).
AB-KETTLEBY, a par and township, England, co. Leicester; area, 2920 ac. Pop. in 1841, 380.

ABKIIASIA. Sce Ankasia.
AB-KUREN, a river, Persia. See Karun.
ABLA, a tn. Spain, in Andalusia, prov. of, and 34 m . N.W. Almeria, on the highroad between that town and Granada, situated on the S. slope of the Sierra Nevada, close and ill built, with houses raised on causeways 25 ft . above the carriage road. It lias three squares, a parish church, chapter house, public storchouse, and prison. Its inhabitants are engaged in distilling brandy, and in making bricks, tiles, and earthenware. Pop. 2120.-(Madoz.)

ABLAlKl'T (Great and Livtle), two small rivers, E. Siberia, affluents of the Irtisch, into which they fall, after having united a few miles above Ust-Kamenogorsk, in about lat. $49^{\circ} \mathrm{N}$.; Ion. $82^{\circ} \mathrm{E}$. On the right bank of the most westerly of these rivers, is the small decayed town of Ablailkit, 50 m . S.S.W. Ust-Kamenogorsk, in which are the remains of a temple, surrounded by a wall 15 ft . high, said to have been built previous to 1671 , and to have been dedicated to the native deitics, by Ablaï, chief of the Kalmucs.

In the valley of Ablaïkit are the ruins of an ancient Tartar castle, which las been dignified by the name of 'the palace of Ablaïkit,' although it would seem to have had little other claim than extent to such title. Its materials having been carried away for building purposes, laardly anything more than the foundations now remain.
iBO, a seaport tn. and dist. of Russian Finland. The tn . was at one time the cap. of Finland, as it now is of the dist. of its own name; on the river Aurajoki, between the gulfs of Bothuia and Finland; lat. $60^{\circ} 27^{\prime}$ N. ; lon. $22^{\circ} 17^{\prime} 5^{\prime \prime}$ F. It was at one time a flourishing place, but had fallen into decay, when a tremendous conflagration, which occurred in Nov. 1827, completed its ruin. On that occasion, nearly the whole city was destroyed, including the university and itz valuable library, and other public buildings, together with 786 houses out of 1100 . The university, which is now removed to Helsingfors, the Russian cap. of Finland, had, previous to its destruction, 40 professors and several hundred students, a library containing many thousand volumes, a collection of

## ABROLHOS

philosophical instruments, a cabinet of natural history, and an observatory. The town has since been in part rebuilt; but the houses and public edifices being placed at considerable distances from each other, it covers a great deal more ground than formerly. Notwithstanding the disaster above mentioned, $\AA$ bo still has some manufactures, and a considerable trade, particularly in planks, the sawing of which employs many of the people. Shipbuilding, also, is carried on to a considerable extent. The cathedral, though a heavy, ungainly building, is remarkable for its antiquity, and interesting from its associations, having been the cradle of Christianity in Finland. It was greatly injured by the fire in 1827, but has since been restored. The harbour is shallow at the town, but there is depth enough for large vessels 3 m . below; in consequence of the rising of the land along the whole of this coast, ibo is gradually receding from the sea.-The district of Abo has an area of 7480 geo. sq. m. Grain, lint, hemp, and tobacco, are cultivated, and cattle are reared. Building timber is abundant, as are also limestone, slate, and iron. Pop. of town (1841), 13,050; of district, 200,000.

ABOH , a tn., W. Africa, cap. of the Ibo or Eboc kingdom, at the upper end of a creck of the Niger; lat. $5^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 35^{\prime}$ E. Numerous little creeks lead to the dwellings of the principal men, surrounded by the huts of their dependants, and here their canoes are laid up. There is no regularity observed in the position of the huts, except that they are built on cither side of these creeklets, and about 20 to 30 yards apart, having a few palms or banana trees to afford shelter from the burning sun. Each family has one or more canoes. The huts are of a square form, mostly double, placed at right angles, neatly built of mud, and roofed with a compact matting of dried palin leaves and recds; the floor is raised a foot and a half. The entrance is square, and serves for the threefold purpose of door, chimney, and window. The houses of wealthier persons are larger, and have many compartments, with a quadrangular court, in which many of the houschold and cooking operations are carried on. The king's residence is here, and is the largest in the town. Aboh is very unhealthy, particularly on the subsidence of the periodical floods, when the muddy deposits are exposed to the sun. The people cultivate rice, Indian corn, cassava, bananas, oranges, cocoas, ground nuts, pappaws, Guinea peppers, \&c. Domestic slaves are numerons, but they are invariably well treated, and many of them become free. The natives are tall, well made, and muscular, but the hands and feet are large.-(Allen's Niger Expedition.)

ABOMEY, a tn., W. Africa, eap. of the kingilom of Dahomey, on the coast of Guinea; lat. $7^{\circ} 40^{\prime}$ N.; lon. $2^{\circ} 5^{\prime}$ E.; situated in an indifferently watered plain of rich red loam. There being almost no stone to be found nearer thinn the Kong mountains, distant upwards of 60 m ., like other Dahoman towns, it is built of clay. The town is walled, and the houses seldon execed one floor in height. Mr. Dunean, who visited it in 1845, thus describes one of the king's palaces, which may probably be taken as a favourable type of Dahoman houses in general :-' After passing through two quadrangles of ahout 60 yards by 30 , we entered the principal square. This square is formed of three sides of houses or long sheds; and on the opposite side to the prineipal part, or side, is a high wall of clay, with human skulls placed at short intervals on the top. This palace, for the king has many, is divided into different apartments, all on the ground floor; for though the ridge of the roof is of sufficient height for two stories, yet the thatch is brought down so low as to reach to within 4 ft . of the ground. Along the front is a low piazza, extending the whole length of the building. The main entrance is in the centre of the side of the square.' The human sacrifices at one time common here, and throughout Dahomey, have been in a great measure abolished, being now tolerated only in the caso of criminals condemned to death for offences of the gravest description. A court of appeal, in which the king usually presides. has been established, which has greatly contributed to put down the oppression frequently exereised upon the people by the local governors (cabocecrs). Natives from all parts of central Africa are to be met with in Abomey, which is much resorted to for traffic in slaves, and to a less extent for traffic in palm oil and ivory, all of which are shipped at Whydah, distant about 90 m . S. l'op about 24,000.-(Duncan's Trarels in Western Africa

ABONY, Abany, or SZornok-Abony, a market tm . Hungary, district of, and 50 m . S. E. Pesth, near the Zagyva. It lies in a plain, between Tapjo-Szelle and Türük Szt. Miklos, on the road from Gyöngyös to Debreczin, near Szoluok. It has a R. Catholic and a Protestant chureh. Pop. 9000.

ABOUK1li.-1, $\boldsymbol{\Lambda}$ bay on the N. coast of Egypt, of a semicireular form, and spacious, stretching from Aboukir Point, on the W., to the Rosetta mouth of the Nile, on the E., a distance of about 23 m . It is chiefly remarkable as the scene of the decisive ' Battle of the Nile,' in which Rear-Admiral Nelson, on August 1, 1798 , with 14 ships of the line, destroyed the French fleet under Brucys.-2, A small town and castle, on a point of land stretching into the Mediterrancan, and forming the western boundary of the bay; lat. (castle) $31^{\circ} 20^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $30^{\circ} 5^{\prime} 7^{\prime \prime} \mathrm{l}$ \%. (ia.) It lies near the site of the ancient Canomus, where the god Serapis was worshipped, and to which the inhabitants of Alexandria resorted for the purposes of dissipation and debauchery. The castle was strongly fortified by Mehemet Ali, and used by him as a state prison, substituting continement therein for the punislment of death. On March 8, 1801, the British army, under Sir Ralph Abereromby, effected a landing at Aboukir, in the face of a tremendous fire from the French; and on the 13 th, suceceled in driving them from a strong position on the adjacent heights, towards Alexandria. -(Wilkinson's Modern Egypt.) - 3, An islet in the bay of $A$ boukir, called also Nelson's Island, 3 m . E. from the town, and connected with the shore by a sunken reef. It contains some remarkable antiquities, part of which are now under water. Among these have been noticed paved floors of buildings, arched chambers lined with stnece, \&c.; and a singular subterranean passage, open towards the N., leading to apartments which have an aperture at top, level with the highest part of the island. The whole surface is described as covered with various plants, especially a superb species of lily; and the sands of the shore contain those beautiful shells used as earrings by the Maltese sailors.

ABOYNE, a par. Seotland, co. Aberdeen; 4 m . long by 3 broad. Pop. in 1841, 1138.

ABRANTES, a tn. Brazil, prov. of, and 28 m . N.E. Bahia, and about 4 from the sea. It has a church and two schools; and the inhabitants-for the most part Indians-cultivate mandioca, and occupy themselves in fishing and the chase. The soil in the vicinity is fertile. Pop. 2000.

ABRANTES [Latin, Abrantium], a fortified tn. Portugal, prov. Lower Beira, on the right bank of the Tagus; 73 m . N.E. Lisbon. It is situated upon a rising ground, surrounded by gardens, vineyards, and olive plantations. It is the entrepot for part of the productions of the provinces of Alemtejo and Beira, and earries on an active traffic with Lisbon, to which it sends considerable quantities of corn and oil, with melons, peaches, olives, and other fruits and vegetables; in which trade more than 100 barges are constantly employed. It contains an old castle, four parish churches, and four con-vents-one of which, that of San Vincente, is the largest and finest in Portugal-an hospital, and an old almshouse. Abrantes gave the title of duke to Junot, one of Napoleon's generals. At the capitulation of Cintra, it was surrendered to the British. Pop. 4647.

ABRESCILEW1LLER, a com. and vil. Franec, dep. Meurthe, 8 m . from Sarrebourg. Saw, paper, and meal mills, \&c. Pop. 2082.

ABRIOL $\Lambda$, a tn. Naples, prov. Hasilicata, 9 m . S. Potenza; on a steep rock, in a lealthy and fertile district. Pop. 3000.

AbROBANYA, or Abrud-Banya [in German, Grossschlatten], a market tn. Transylvania, 23 m. N. W. Karls, burg, with a German (reformed), a Wallachian, a Greek, and a R. catholic church. The most of the inhabitants-who are composed of IIungarians, Germans, and Wallachians-are employed in the neighbouring gold and silver mines, supposed to have been wrought by the Romans, and to have procured for the place the name of Auraria Magna. In the town, there is a board of directors for the management of the mines. 'I'he ore, after being separated from the earth with which it is mixed, is sent to the furnace at Zalathna. Pop. 4000.
$\triangle$ BROLIIOS.-1, 4 cape on the coast of Brazil, prov. Porto Segura, between the rivers Peruhipe and Caravellas; lat. $17^{\circ} 58^{\prime} \mathrm{S} . ;$ lon. $38^{\circ} 42^{\prime} \mathrm{W}$. Off this point, in tho

Atlantic, about 50 m . from the shore, lie the four small but dangerous rocky islands, or shoals, of Santa larbara, commonly called the Arrolios. They are projeetions from a bank of roeks, which exhibits itself oecasionally between $17^{\circ}$ and $25^{\circ} \mathrm{S}$. lat., at a distance of from 6 to 30 m . from the mainland. They are described by Capt. Fitzroy as rather low, but covered with grass, with a little seattered brushwood; the highest rising about 100 ft . above the sea, and the soundings in their vicinity so very irregular, that little dependence can be placel on the lead. The centre island of this shoal is lail down in lat. $17^{\circ} 51^{\prime} \mathrm{S}$.; lon. $38^{\circ} 41^{\prime} 30^{\prime \prime} \mathrm{W} .-2$, There is another reef of the same name (IIoutman's Abrolhos), off the W. coast of Australia; lat. $28^{\circ} 30^{\prime} \mathrm{S}$. ; $113^{\circ} 30^{\prime}$ E. In some of the islands forming this group, Capt. Stokes found traces of guano.-(Jour. Geo. Soc., ii. 315.)
abRUD-BANYA. See Abrobanya.
ABRUZZO, a territory, kingdom of Naples, of which it forms the N. extremity; bounded on the N. and W. by the Papal States, N.E. by the Adriatie, E. and S.E. by the prov. of Samnio, and S. by Savora. It is divided into three districts or provinees-A bruzzo Ulteriore I., A brazzo Ulteriore II., and Abruzzo Citeriore, so called from their respective relative positions to Naples; and when spoken of in the plural number, called, collectively, the Abruzzi. The first comprises 1143 sq. m., with upwards of 175,000 inhabitants; the second, 2220 sq. m ., with about 260,000 imlabitants; and the third, or Abruzzo Citeriore, 1700 sq. m., with about 260,000 inhabitants also. The entire territory is traversed by the Apennines, and is throughout extremely rugged and mountainous; Abruzzo Citcriore so much so, as to present the most serious obstacles to internal communication. The sea-coast of the Abruzzi, on the Adriatic, is about 80 m . in length, and is without a single harbour. Most of its rivers, which are numerous, fall into the sea just named. The eelebrated Lago Celano, the Lacus Fucinus of the ancients, is in Abruzzo Ulteriore II.; it is about 15 m . in length, with a breadth of 5 or 6 , and is chicfly remarkable for rises and falls, the causes of which are unknown ; and for its association with the name of the emperor Claudius, who cut a canal in order to prevent the lake over-flowing-a work in which 30,000 men were employed for 11 years. Both the soil and climate of the Abruzzi are various; the latter differing with the clevation of the former, being cold on the mountains, and hot on the low grounds. Though the highlands are sufficiently barren, the plains and valleys are fertile, producing large quantities of corn, wine, oil, liquorice, almonds, saffron, \&e. The mountains aro covered with numerous flocks of sheep, the rearing and tending of which, and other domestic animals, forms the chief employment of the inhabitants; whose nomadic habits, natural indolence, and want of education, cause them to neglect the cultivation of the soil, and to prefer sloth and poverty to exertion and competence. They are tall and robust in person, fond of pleasure, but sullen and revengeful in disposition, and were formerly much noted for their predatory propensities. Manufactures are almost unknown in the Abruzzi, nothing being produced but some woollens, silks, and a little earthenware; their only commerce is in the export of sheep and cattle.

ABTHORPE, a par. and vil. England, co. Northampton; area, 1960 ac. Pop. in 1841, 449.

ABU, or Aboo.- 1, A remarkable mountain, N. Hindustan, prov. Ajmcer, or Rajpootana, principality of Marwar, or Loodpoor, 65 m . W. by N. Odeypoor ; lat. $24^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $72^{\circ} 50^{\prime} \mathrm{E}$. It is the highest peak in the Aravulli range, and is stated to be 5000 ft . in height, as indicated by the barometer. The temperature on the summit is said to be so mild, that European fruits and shrubs grow on it readily. A Hindu tradition alleges that the hill was brought by the sage Vasishta, from the Himalayas, a distance of somewhere about 700 m ., that he might continue his devotions on the spot lie had been accustomed to. - 2 , A voleano, on the E. side of the island of Sangir, in the Indian Arehipelago. It is the loftiest mountain on the island, lies near the coast, and is visible from a considerable distance. It is continually smoking, and has, on several occasions, eaused great destruction by its cruptions.

ABU ARISH, a petty state, Arabia, cap. same name, on the lied Sea, between lat. $15^{\circ} 50^{\prime}$ and $17^{\circ} 40^{\prime} \mathrm{N}$., and forming a part of lemen. It is bounded, N. by IIejaz, E. by Asyr,
S. by Yemen, and W. by the Red Sca. It is about four days journey long, by about two broad, and consists chiefly of a sandy plain, nearly sterile on the coast and towards the centre, but more fruitful in the direction of the mountains, which form its E. boundary. Winter is dry; but in the warm season, which is almost insupportable to Europeans, there are daily rains, frequently accompanied by storms of wind. The country has no streams, and few wells; yet the rain water is not collected into tanks, but allowed to spread over the land without any attempt at systematic irrigation. Durra, or Indian millet, is here, as elsewhere throughout Arabia, the principal cereal cultivated. The Indian cotton plant is also grown; the Mecca balsam is plentiful; and in the gardens, senna, colocynth, bananas, \&c., are raised. The country is covered by small groups of trecs of from 50 to 150, so overgrown with parasitical plants as to present almost impenetrable thiekets. By beating the twigs of a tree called mossuak, the Bedouins form a pencil, with which they lay on their tongue and rub on their tecth a kind of finely powdered tobaeco, named Bortugal, which is enjoyed both by males and females in $\Lambda$ bu Arish, with a similar relish to that which, in other parts of the world, attaches to smoking, eating opium, and chewing betel. Gazelles and hares are numerous, wild eats and rats plentiful, and scorpions are not uncommon. Sheep, a beautiful brecd of goats, splendid horses, zebras, camele, and dromedaries, constitute the principal native riches. The chicf takes the title of Sherif.-(Ritter's Erdkunde.)

ABU ARISH, a tn. Arabia, cap. of state of same name, about 20 m . E. the Red Sea ; lat. $17^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $40^{\circ} 25^{\prime} \mathrm{E}$.; 90 m. N. Loheia. It is walled, and lies in the middle of an extensive plain, covered with the mossuak tree and jasmin bushes. Its castle, Deir-el-Nasr, is high, well built, and strong; but the palace of the Sherif is merely a large hut, internally decorated with mother-of-pearl. The town has some miserablelooking mosques, one minaret, and some deep wells. The inhabitants, who are poorly clad, carry on a little trade; and the bazaar, and the narrow streets leading to it, are dirty. Pop. 7000 to 8000--(Ritter.)

ABU GIRGEH, or Aboo Girg, a large Fellah tn. of Middle Egypt, about 2 m . W. the Nile, 50 m. S. Beni Sooef; lat. $28^{\circ} 30^{\prime} \mathrm{N}$.; lon. $30^{\circ} 50^{\prime} \mathrm{E}$. It is situated in a rich plain, at a spot where several extensive mounds point out the site of an ancient city, the name of which is unknown.

ABULLIONTE, a tn . Asiatic Turkey, on an isl. in a lake of same name, 15 m . S. the Sea of Marmora; lat. $40^{\circ} 8^{\prime} \mathrm{N}$.; lon. $28^{\circ} 32^{\prime} \mathrm{E}$. It is said to consist of 200 Greek, and 100 Turkish houses, and entirely covers the island on which it is built. It is defended by a wall, and contains a ruined castle, apparently Byzantine, chiefly constructed with large blocks of marble, derived from more aneient buildings. The island on which the town stands, is connceted with the mainland by a wooden bridge, of simple and slight construction. Abullionte occupics, according to Mr. Hamilton, the site of Apollonia ad Rhyndacum. The lake, 16 m . long by 11 broad, is celebrated for its carp, which are taken in great quantities, and sent as far as Constantinople. 1'op. 2000.-(Hamilton's Asia Minor.)

ABU-MANAH, a vil. Upper Egypt, on the deelivity of a hill. about 3 m . E. from the Nile, and 30 S.E. Girgeh.

ABU-MANDUR, a vil. and convent on the left bank of the Bolbitine branch of the Nile, about 2 m . above Rosetta. The convent-which is prettily situated close by the river, and adorned with palm trees-is supposed, by Denon, to indicate the site of the ancient city of Bolbitinum. It was from its tower, where he happened accidentally to be, that the French savant saw Nelson's fleet approaching to fight the battle of the Nile. The scenery around this locality is singularly beautiful.

ABURY, a par. and vil. England. Sce Avebury.
abUSAMBUL. See Ipsambul.
ABUSH1k, a vil. Arabia, prov. Oman, 17 m . S. W. Muscat. It lies at the foot of a pieturesque range of hills, exhibiting red, gray, yellow, and dark hrown peaks, destitute of soil and vegetation. To the N.E. th? ground slopes to a sandy flat, extending to the sea, about 6 m . distant. The village is a miserable place, consisting of mud houses, and datetree huts, with a few mud towers, looped for defence. The only water here is a warm spring, rising in a cavern in the calcareous roek behind the village, and of a temperature of $111 \frac{1}{2}^{\circ}$ Fah. It is used for irrigation, for cooking, and for medicine,
snperstition attributing to it many virtues that it does not possess.-(Fraser.)

ABU SIN or AbBa-seen, an affluent of the Upper Indus, from the right. It rises in the mountains of Hindu Kush, about lat. $35^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $72^{\circ} 45^{\prime}$ E.; takes a S. course, between lofty mountains, and falls into the Indus near Mullai; lat. $34^{\circ} 40^{\prime} \mathrm{N}$; lon. $73^{\circ} \mathrm{E}$. It is a considerable stream, bringing down drift-wood, and is not fordable. The hills and valleys around yield gold dust. The Afghans erroneously consiller it the head stream of the Indus.-(Nitter.)

ABU-SYR, Anousir, or Abooseer, the name of several places in Lower Egypt, of which the most remarkable are a vil. in the Delta, and a fortified tower on the coast of the Mediterranean. The former, $7 \frac{1}{2} \mathrm{~m}$. S. the great pyramid, and about 60 N . Cairo, lies on the left bank of the Damietta branch of the Nile, near the site of the ancient Busiris, where are various mounds and other relics of antiquity, but none meriting particular notice. The latter, called also the Arab Tower, is situated near the S.W. extremity of the lake Marcotis, probably not far from the aneient Taposiris, and is the first elevated object seen by mariners in approaehing Egypt from the W.

ABU'TIGE, Abooteege, or Abootidj [the Abutis of Latin writers, and Apothyke or Tapothyke of the Copts], an ineonsiderable tn. Upper Egypt, on the left bank of the Nile; lat. $27^{\circ} 2^{\prime} \mathrm{N}$. ; lon. $31^{\circ} 25^{\prime} \mathrm{E}$. So early as the time of Abulfeda, the poppy was much cultivated in the vieinity, and is still grown there. The place is noted for the quality of the opium it produces.

ABY, a par. England, co. Lincoln; area, 1560 ac. Pop. in $1841,312$.

ABYDOS, or Abydas, an ancient city, Anatolia, which once stood on the E. shore of the Dardanelles, at the narrowest part of the strait, opposite Sestos. Originally, it belonged to a Trojan prinee, and subsequently was inhabited by the Thraeians and Milesians. Xerxes here built his bridge of boats for the invasion of Greece; and here Alexander and his army erossed from Europe to Asia. Leander, say aneient writers, swam nightly from Abydos to Sestos to see his loved Hero; a feat in swimming onee successfully aceomplished also by Lord byron, at the expense of a severe attack of ague. A few fragments of walls are all that now remain of this city, whose site is partly occupied by the Turkish fort Avidothe only stronghold on the Dardanelles capable of defence on the land side.

ABYDUS, or Anydas [the modern Arabat el Matfoon and Elot of the Copts], an ancient city, Upper Egypt, about 6 m . W. the Nile; lat. $26^{\circ} 12^{\prime} \mathrm{N} . ;$ lon. $32^{\circ} \mathrm{E}$. ; on the great canal called the Bahr Ioosef. Even in the time of Strabo, Abydus was reduced to a mere village, yet its ruins still testify its former grandeur. It was a residenee of the Egyptian monarehs, and the reputed burying-place of the god Osiris; in eonsequence of which belief, the bodies of many Egyptians were brought from a great distance, in order to be interred within its sacred precincts. The Memnonium, or palace of Memnon, and the temple of Osiris, constitute the chief remains of this once magnificent city. In the former of these, in 1818, W. J. Bankes discovered the famous Abydus tablet, now in the British Museum, on which are engraved a genealogical list of the Pharaohs. In a cemetery to the N. of Abydus, are various antique sepulchral monuments ; and on the N.W. are limestone quarries.-(Wilkinson's Modern Egypt.)

ABYLA, or ApEs HiLh, the N. termination on the S. side of the strait of Gibraltar, near Ceuta, of a range of mountains in Moroeeo, and forming one of the pillars of Hercules.

ABYSSINIA, or IHAnESH, an aneient kingdom of E. Africa, but which, being now broken up into several independent states, has no longer any political existence. Its limits have been variously defined by different autheritics, hardly any two agreeing as to what these limits preeisely are; but they may be generally stated as extending between lat. $7^{\circ} 25^{\prime}$ and $16^{\circ} 40^{\prime} \mathrm{N} . ;$ and lon. $35^{\circ}$ and $43^{\circ} 20^{\prime}$ E., lhaving Nubia N. and W., the Red Sca and strait of Bab-el-Mandeb I., and to the S. the unknown countries stretching to the Indian Ocean. The entire length of the kingdom from N. to $s$. is about 670 m. , its breadth from E. to W., at the broadest part, about 540. The principal divisions of $\Lambda$ byssinia are
called, respectively, Dankali, Adel, Tigré, Amhara, and Shoa (all of which see). The last of these, Shoa, is rapidly becoming a great and important kingdom. Some extensive but little-known tracts on the S. and S.E., inhabited by the Galla tribes, and comprehending the province of Mera, and a great forest on the N., abounding in elephants, complete the occupation of the whole space embraced by the limits generally assigned to Abyssinia. The more marked physical features of the country may be described, generally, as consisting of a vast series of table lands of various, and often of great elevations, and of numerous ranges of high and rugged mountains, some of them of very singular forms, dispersed over the surface in apparently the wildest confusion. Enclosed in these mountains are prodigious and inexhaustible natural repositories of water, which, pouring down by the deep and tremendous ravines that everywhere intersect them, impart an extraordinary fertility to the plains and valleys below. The eountry thus presents the stemer features of mountain scenery, combined with the luxuriance of tropical vegetation. The chasms or rents that oceur in the plateanx are often of appalling depth, and are rendered more hideons by their impenctrable gloom, their summits frequently net being mere than 200 or 300 yards asunder. Harris, deseribing one of these fearful ravines, says, 'Masses of basalt, of a dark burnt brown colour, are piled perpendicularly on either side like solid walls; and rising from a very narrow channel, strewed with blocks of stone and huge fallen fragments of rock, tower overhead to the height of 500 or 600 ft . One perilous path, affording barely sufficient width for a camel's tread, leads twisting away into the gloomy depths below.' On emerging from these tremendous chasins, the traveller is surprised to find a level plain spread out on either side, instead of the lofty mountains, or steep ascents that usually overlook the deep ravines of other lands. This singularity forms one of the peculiar physical features of Abyssinia, and imparts to its great water-courses the appearance rather of enormous rents than of natural depressions. It must be observed, however, that these apparent plains are not the low levels usually understood by that term, but lofty table lands, many thonsand feet above the sea. The mountain scenery of Abyssinia is thus, as might be expected, on the most stupendous seale, including waterfalls of prodigious height. In the dry season, these falls, from their great elevation, deseend in mere spray; but, during the rains, present a magnificent spectaele. Notwithstanding, however, the wild and rugged appearance of the country gencrally, it contains numerous valleys and plains of unequalled beanty and fertility, rich in all the most valued productions of the earth. Many of these favoured districts are spoken of with rapture by travellers, both as regards the luxuriance of their vegetation, and the salubrity of their climates. The most extensive is the plain of the Dembea, emphatically called the granary of the country, where there reigns a perpetual spring.

Geology.-The geological structure of Abyssinia presents a granite base, with a superstructure of sandstone, and oceasionally limestone, schist, and breceia. The granite cones to the surface in the lower parts of the country; but sandstone predominates in the upper, and assumes a tabular form, often lying on the tops of the mountains in enormous flat masses. Large tracts are of aneient voleanic rocks. Of this elaraeter is a great portion of the country lying between Tajura and Ankober, in the S.E. part of Abyssinia, and extending over a space of about 200 m . in length from N.E. to S.W. Throughout nearly the whole of this tract, volcanic ridges are everywhere present. Small cones, each showing a distinet erater, are numerous, and the surface of the sheets of lava with which the plains below are overspread, still retains a fresh and glossy appearance, although there has been no voleanic action in this part of the world for unnumbered centuries.

Mfountains and Table Lands.-The most remarkable ant loftiest summits occur in the centre of the N. part of the kingdom, in the prov. of Samen, immediately to the W. of the river Teeazze. The highest of these, called Amba Hai, is supposed, from the cireumstance of its summit being covered with perpetual snow, to have an elevation of at least $16,000 \mathrm{ft}$. Abont 15 m . N.E. of this mountain, is mount Beyed, whose summit is also covered with perpetual snow, and whose height, therefore, though net positively ascertained, eannot be much less than that of the former. On the N.E. part of the king-
dom, a long range of barren hills runs parallel with, and at a distance of about 40 m . from the shores of the Red Sea, forming the W. boundary of Dankali. It does not attain any great altitude, the highest peaks not exceeding 1000 ft ., while the general elevation is not more than 500 . In Shoa, the mountain clains run chiefly N. and S., and reach generally an elevation of from 8000 to 9000 ft .; but many of their single pinnaeles greatly exceed that height. They are abrupt, difficult of access, and intersected by numerous deep chasms. These mountains exhibit a structure of basalt, wacke, and trachyte; the latter in all its varieties. The table lands of Abyssinia form one of its most remarkable physical characteristies, and are distinguished from all other elevated table lands by the great depression of their water-chanuels. They consist of a succession of elevated, undulating plains, many of which are 7000 and 8000 ft . above the level of the sea, and are intersected by narrow valleys, or water-courses, 3000 and 4000 ft . deep. This elevated country has lakes, swamps, verdant meadows, and cultivated land, producing various grains, and oceasionally coffee; but the higher plains, from their great elevation, yield barley only. The most remarkable of these table lands occur in the provinces, Amhara, Tigré, and Shoa.

Rivers and Lakes.-The principal river of Abyssinia is the Bahr-el-Azrek, or Blue River (see Azrek, Bahr-el-). It is one of the great branches of the Nile, and rises under the name of the Dethesa, in the Galla country, S. of $\Lambda$ byssinia, about 73 m. W. Sokka, the cap. of Enarea, and joins the Bahr-elAbiad, or White River (sce Abiad, Baili-El-), the chief branch of the Nile, at Khartoom; lat. $14^{\circ} 40^{\prime}$ N.; lon. $32^{\circ} 39^{\prime} \mathrm{E}$. The next considerable stream is the Tccazze, or Takkazie, which has its rise in the mountains of Lasta, about lat. $11^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $39^{\circ} 20^{\prime}$ E.; it pursnes a N.W. course, and finally joins the Nile, under the name of the Atbara, at Adamer, in lat. $17^{\circ} 40^{\prime} \mathrm{N}$. Its bottom is extremely narrow compared with the size of the river. Bruce describes it as being shaded with fine lofty trees, the water remarkably clear, and the banks adorned with the most fragrant flowers. It takes its name, Tecazze-'The Terrible, from its impetuosity. The Hawash (which $8 C c$ ), the third, or, according to Harris, the second largest river of Abyssinia, rises to the $S$. of the Chakha mountains, the larger branch proceeding from Lake Zawaja, about lat. $8^{\circ} 40^{\prime}$ N.; lon. $39^{\circ} \mathrm{E}$. ; at an elevation of 8000 ft . above the sea. Skirting the S.E. limits of the kingdom of Shoa, it pursucs a N. and E. direction to about lon. $42^{\circ}$ E., where it is lost in the sands, or led off in canals by the natives, after running a course of about 240 m . in length. The banks are beautifully wooded along the whole length of the stream, which may be traced by the luxuriant vegetation that marks ite route through a treeless and barren land. This river is the recipient of the waters which come from the E. declivity of the table land of Abyssinia. The Abai or Abay (which see), is also a large stream, being the the principal tributary of the Bahr-el-Azrek, or Blue River. The Anazo, likewise a considerable river, rises on the confines of Tigré, crosses the country in an E. direction towards the Sea of Bab-el-Mandeb, which, however, it never reaches, sinking, like the IIawash, into the sand when within abont 20 m . of the coast; its entire length is about 200 m . In the earlier part of their courses, while flowing over the level surfaces of the table lands, the rivers of Abyssinia are little better than muddy brooks, which in the dry season nearly disappear altogether; but, during the rains, overflow their banks and inundate the plains for miles. Where they begin to break from the level, which they do by fissures in the rocky surface, at first only a few yards in width, but gradually opening to the extent of several miles, they at once form cataracts of 80 or 100 ft . in height, and in some cases much more, and then continue down a succession of falls and rapids, so as to deseend several thousand feet in the course of a few miles. $\qquad$ The principal lakes of Abyssinia are the Tzana, Zana, or Dembea (which see), in the territory of Amhara, a large and beautiful shect of water, at a height of upwards of 6000 ft . above the sea. According to Arrowsmith's map, it is about 60 m . in length from N.W. to S.E., and about 40 in hreadth. Bruce makes it only 45 m . long and 35 broad. During the rains, it overflows its banks, and lays the low country around it under water to the distance of 2 m . It contains a number of pretty large islands, most of which are inhabited, abounds with fish of various kinds, and is much frequented
by lippopotami. The next most important lake is IIaik, in the province of Amhara, on the N. confines of Shoa; it is about 45 m . in circumference, has several bays, and contains an island called Debra Nayoodquad, almost square in form, with a monastery on it, called St. Stephen's, and 100 houses, and distant from the mainland about 260 yards. On the L. and S . there are stcep mountains, but on the N . and W. the slores are low. The other lakes of considerable extent are, Ashangee, in Tigré, about 30 m . long by 15 broad; Zawaja, near the S. boundary of the kingdom; Lugh a Summa, about 100 m . N.W. from the former; and the remarkable salt lake, Assal (which see).

Mineralogy.-Abyssinia, so far as known, is not remarkable for its minerals, neither precious metals nor precious stones having yet been discovered in it; the gold which is brought through it being all from the barbarous and unknown countries to the S. and W. Among the useful mineral products are iron, sulphur, coal, and salt. The iron is found chiefly in the high plateaux, the sulphur in the hills of Sallála, where the pits are described as being exccedingly copious. Coal beds appear to extend along the whole of the E. frontier of Shoa, but the combustible nature of that fossil is scarcely known in the country. Salt is obtained in great abundance from a salt plain on the S.E. border of Tigré, and from lake Assal. The former is said to be four days' journey in length. The salt near the surface is pure and hard, but bencath it is coarser, and requires some exposure to the air before it hardens. In some parts, the incrustation is 3 ft . deep; but, in general, at the depth of 2 ft ., it is too much mixed with earth to be fit for use in its native state. It is cut into long flat pieces by the Abyssinians, and is used as a medium of exchange. A few hot mineral springs are known and made use of in Efát and Giddem.

Climate.-The climate of Abyssinia is as various as its surfacc. In the valleys, it is delightful; but on the mountains exceedingly cold, hoar frost being met with on many of their summits in the latter end of the year, and the country around presenting the bleak and barren appearance, and scantiness of vegetation, of extreme northern regions. In other places the heat is intense, especially on the borders of the Red Sea, and in the S. parts of the kingdom, where the feeling of oppres sion, occasioned by the excessive heat, is frequently increased by hot simooms, which raise the thermometer, in the shade, to $126^{\circ}$, the usual height being about $110^{\circ}$. The mean temperature at Ankóbar, the capital of Shoa, in June 1842, was, according to Major IIarris, $62^{\circ} 1^{\prime}$; and in January of the same year, $52^{\circ}$ In the lower districts, the intensity of the heat gives rise to noxious exhalations, which occasion numerous fatal diseascs. The rains, always accompanied by tremendous tempests, begin in June, and continue till Scptember, during which period they are so violent as to put a stop to agricultural labour, and all other out-door operations. But after they have ceased, 'Pastures and meadows are elothed in checring green; the hills and dales are adorncd with myriads of beautitul and sweet-scented flowers, and the sides of the mountain ranges become one shect of the most luxuriant vege-tation.'-(Harris, vol. iii. p. 273.) The finest montls of the year are those of December and January.

Vegetable Productions.-Although situated within the tropics, the vegetable prodnctions of Abyssinia are nearly those of the temperate zone. The principal grains are millct, barley, wheat, maize, and $t$ fff. The wheat is of the finest description, and the bread made from it has been praised by all travellers who have visited the country. Teff (Ioa Abyssinica), a very small sced, is a favourite with all Abyssinians. The bread made from it is soft and spongy, with a sourish taste, and is said to be unwholesome, though not unpleasant to the taste. There are four varieties of this grain, two brown and two white; the latter is the finest and the most esteemed. Great trouble is taken to improve the cultivated sorts of grain, by changing the seed-corn at every season, and sometimes by sowing promiscuously different sorts to produce new varictics. The result is a prodigious diversity; there being no fewer than 24 varictics of wheat, and 16 of barlcy. Two crops are obtained yearly, the seed bcing sown in one field while the crop is being gathered in the next. In some places there are three harvests within the year. Large quantitics of a plant called ensete, rescmbling the banana, are raised and used as bread; it is said to be extremely agrecable. The leguminuts
regetables most extensively grown aro beans, lupines, lentils, and a kind of vetch. Flax and cotton are eultivated in some places to a small extent. Vines, also, are raised, and a little wine made. The finest grapes are grown to the F. of Lake Tzaua, or Dembea. Coffee and sugar cane are likewse eultivated, but the former is not much esteemed. being of inferior quality; and the latter is merely chewed, the art of making sugar being unknown. Citrons, oranges, and figs are met with. The woods of Abyssinia, some of which are inagnificent, contain syeamores of great size, many measuring upwards of 40 ft . in cireumference; they contain, also, beautiful specimens of the acacia.

Zoology.-The domestie animals consist of horses, eattle, sheep, goats, mules, and asses. The horses are small, but strong and active; the cattle and goats are generally small in stature, of all colours, and have very large horns; the sheep have a white body, black head and neek, are covered with hair, and have thick, short, fat tails; male without horns. The shepherd dogs are small, spotted with yellow and white, and have long pointed skulls like the fox. Mules, camels, and asses are the usual beasts of burden, the horses being generally reserved for war and the chase. Vast herds of oxen, often amounting to many thousands, are met with tinroughout the country. The oxen reared on the low grounds, called the Galla ox, have horns of immense size. The wild animals are the lion, elephant, hippopotamus, rhinoceros, crocodile, buffalo, hyem, leopark, boar, antelope, zebra, quagga, giraffe, and gazelle. Lions are not numerous, being but rarely met with. Elephants abound in the N. and S. borders of the country, particularly in the exteusive forests lying N. of Tigré. The hippopotamus, as elsewhere stated, abounds in Lake Tzana, or Dembea, where, as in other places, great numbers are killed ammally for their flesh and hides. The rhinoceros, like the elcplant, inhabits the low, moist grourds, and is numerous in eertain districts. A two-horned rhinoceros is met with but rarely. Crocodiles are found in various rivers in Abyssinia; but the largest, and most dreaded by the natives, are those that inhabit the Tecazze; these are of a greenish colour, and of formidable size. The buffalo, a comparatively larmless animal in other countries, is here extremely ferocious, and will often attack travellers. Hyenas and leopards are numerous, especially the former; but, according to the account of Isenberg and Krapf's guide, they never inhabit the same region-the leopard dreading the superior strength and ferocity of the hyena, although the former will attack man, while the latter flees from him. The antelope is rarely met with in the cultivated districts, but abounds in those that are uneultivated, especially near rivers. Among the quadrumana are a remarkably long-eared ape, and the specics of monkey ealled macae, or macaque, whieh inhabits the lofty mountains of S . Abyssinia, at a height of 8000 ft . above the level of the sea. The smaller animals comprise poreupines, rock rabbits, ground squirrels, ferrets, polecats, and otters. Serpents are numerous, and some of them of great size. Amongst the latter is the boa, which often attains a length of 20 ft . The varieties of birds are also great, and inelude eagles, vultures, Alpine ravens, parrots, herons, Guinea fowls, partridges, quails, snipes, larks, and pigeons. There are, likewise, various kinds of water-fowl to be met with on the lakes and swamps. Bees are numerous, honey being a general article of food; locusts often lay the land waste, and the saltsalya-a fly a little larger than a bee-canses whole tribes to change their residence through terror of its sting, of which even the lion, it is said, stands in dread.

Manufuctures.-The Aloyssinians lave made considerable progress in manufactures, and excel in the taming of skins. Axes, plonghshares, and spearheads are made at several places; and swordblades, knives, scissors, and razors, at fiondar and at Kiaratza. large quantities of coarse cotton cloth are manufactured in different parts of the country by women; and a finer kind, with a red or blne border, for the more wealthy classes. A coarse stuff, for counterpanes, is made from the wool and hair of the black sheep and goats. Coarse black pottery is mate in all parts of the country.

Races, Religion, Mamers, C'ustoms, \&.c.--The population of Abyssinia is composed of varions tribes, all of which have been referred by Riippell to three races. The first, which comprises a majority of the people, is a well-formed Caucasian 1ace, with features identical with those of the Bethin Arabs;
oval countenance, fine sharp nose, well-proportioned regular mouth; the lips not in the least turned up; lively eyes; hair somewhat curled, at times smooth; and medium size of body. To this race belong the inhabitants of N. Ambara and Tigré, the Falashas or Jews, the Gamant, and the Agows. The sccond race, which is Ethiopie, has less sharpness of the nose, which, in fact, is slightly eurved; thick lips; lengthened and not very ficry eye; and very much curled, ncarly woolly, hair. This race is met with chicfly on the coast, and along the N. frontier of Abyssinia. The third race is the Galla tribes, inhabiting S . Shoa, and dispersed among the soldiery over the whole country. They lave the countenance more rounded, the nose straight, and separated from the foreliead by a deep indentation; thick, but not wegro, lips; nearly woolly hair; small, deeply smk, but very bright eyes; and a tolerably firmly built, and large bods. All the inhabitants, to whatever race they belong, vary in colour from a dark brown to a yellow brown, compared by Bruce to pale ink. There are no negroes in Abyssinia except the slaves, who are likewise the only blacks in the eountry. The aecompanying cut represents a chief and soldiers. The chicf, on

adybsinian chirf and soldiers. From Rappell, 'reise in Abysinien.'
horseback, has his brow bound with a thin red band, in token of having slain an enemy in battle; over his sloulders are a sheep's skin, and a large cotton covering; for stirrup he has only a small ring, into which he inserts the great toe; the horse's neek is decorated with an ornament made from the mane of a zebra. The soldier with the musket is known to be a Galla, by his tight trousers, and cast of countenance. His sabre-knife, according to the enstom of the conntry, is bound on the right side; and lis girdle is formed of eartrilges, made from reed stems. The soldier with the spear is elothed in a cotton covering, and a black sheep's skin; on his left arm is a round leathern shield, to the eentre of which, by way of ornament, has been fastened the skin of a species of monkey (Colubus gueraza), formerly much prized for this purpose, but now less used, it having been found to form an exeellent mark for the enemy. Both soldiers have the hair dressed in twisted curls, hanging parallel to each other, in a style similar to what is seen in the semptures lately exeavated at Nineveh. As often as possible, the locks are smeared with butter, which is prevented from trickling down when melted, by a narrow stripe of eotton eloth bound round the head. The butter serves the double purpose of protecting the head from the sun's rays, and against the attacks of inseets. The Abyssinians are profligate and sensual, and given to many vices, but they are not without some redeeming traits, of which charity to the poor, and hospitality to the stranger, are the most conspienous. The eruclty of which they have been aceused, has been denied by Gobat, who diseredits Brnce's assertion that they eut pieces of flesh from the living aninal, and says that the natives manifested the utmost horror when he mentioned it. The same authority adds, that in war they scarcely ever kill a prisoner; and, when sure of victory, use every means to avoid destroying those who still resist. The benefit of this exculpatory testimony;
however, caunot certainly be extended cither to the Dankali or Galla tribes, both of which are notorious for ferocity and cruelty. The Abyssinians are irritable, but easily conciliated. The religions of Abyssinia are Christianity - which became the national religion in the fourth century-Islamism, and Judaism. The Christians are divided into three hostile parties, all deeply sunk in superstition. They baptize their male children after 40 days, and their female after 80. They attach great importance to fasting, and have preserved many Jewish customs. The Nlahometans entertain little zeal for the religion they profess, few of them having the least knowledge of the Korân, though fond of quoting its marked expressions. They live on good terms with the Christians, but are greatly inferior to them in morality. The Jews live chiefly in the neighbourhood of Gondar and Shelga, and to the N.W. of Lake Dembea. They are extremely ignorant, but are much more laborious than the other Abyssinians. They never carry arms, either for attack or defence, and maintain their own poor, none of whom they will allow to beg. In nearly all the provinces and districts, marriages are performed with great simplicity, and are as easily dissolved; but after a third divoree, men can neither contract another regular marriage nor receive the sacrament, unless they become nonks, of whom there are two classes. In some places, matrimony is solemnized by the church, the contracting partics swearing to abide by each other for life; but this is of rare occurrence; while the fidelity with which the vow is kept may be doubted. The servants of Abyssinia, says M. Gobat, are generally more faithful than in Europe; while children are more severely punished by their parents for theft than for any other offence.

The barbarous practice of eating raw flesh at their feasts, while it is yet warm and quivering, is one of the most extraordinary manifestations of their uncivilized condition and brutal propensities. The indecencies, however, which Bruce describes as forming a feature of these feasts, have been denied by both Salt and Gobat.

The administration of justice, in Abyssinia, is sufficiently simple, and almost always extremely corrupt. There are no lawyers. 'If any one has a complaint against another, he will rise before daybreak, in order to go and cry before the house of the governor of his district, till he liears him. Then the acensed person is summoned, when the accuser and accused put questions to each other alternately, in the presence of the judge. The sub-governors being easily corrupted by bribes, all important cases are presented to the governor-general, or Dejasmat, who usually gives himself much trouble to discover the truth.'-(Gobat.) No judge has the power to decide the fate of a murderer, this being left to the will of the relations of the deceased, unless the latter have been a stranger, when the Dejasmat acts the part of prosecutor. The price of a man is 250 dollars.

Language. -The Geez language was, anciently, that of Abyssinia, and remained so till the 14 th century of the Christian era, when it was supplanted by the Amharic, which is now the prevailing language of the country, and, though spoken in a great variety of dialects, is the only one which has assumed a written form. Its literature, however, is very scanty, there being only, according to IIarris, 110 volumes extant in the whole of Abyssinia, and these are nearly all of a theological nature. The ignorance of the nation generally, is deplorable, those children only receiving the rudiments of education who are designed for the service of the church. Writing is a work of great labour in Abyssinia, even to the practised scribe. 'The dilatory management of his awkward implement is attended with gestures and attitudes the most ludicrous. Under many convulsive twitches of the clbow, the tiny style is carried first to the mouth, and the end being seized between the teeth, is masticated in a sort of mental frenzy. Throughout the duration of this necessary preliminary, the narrow strip of dirty vellum is held at arm's length, and viewed askance on every side with looks of utter horror and dismay; and when, at last, the stick descends to dig its furrow upon the surface, no terrified schoolboy, with the birch of the pedagogue hanging over him, ever took such pains in painting his pothooks, as does the Abyssinian professor of the art of writing in daubing his strange hieroglyphics upon the scroll.'-(Harris, vol. iii. pp. 180, 181.) After reading this description, it will not surprise the reader to
learn that 17 years have been employed in transcribing a single MS. The ink used in writing is a mncilage of gumarabic, mixed with lampblack, which acquires the consistency of printing ink, and retains its intense colour for ages. The pen is the reed used in the East, having no nib, and the inkstand the sharp end of a cow's horn, stuck in the ground, the writer squatting beside it.

History.-The $\Lambda$ byssinians were converted to Christianity in the time of the emperor Constantire, by some missionaries sent from Alexandria. In the sixth century, the power of the sovereigns of their kingdom had attained its lieight; but before another had expired, the $\Delta$ rabs had invaded the country, and obtained a footing in Adcl, though they were unable to extend their conquests further. For several centuries subsequently, the kingdom continued in a distracted state, being now torn by internal commotions, and now invaded by external cuemies. To protect himself from the last, the emperor of $\Lambda$ byssinia applied, about the middle of the 16 th century, to the king of ''ortugal, for assistance, promising, at the same time, implicit submission to the pope. The solicited aid was sent, and the empire saved. The R. catholic priests having now ingratiated themselves with the emperor and his family, cndeavoured to induce them to renounce the tenets and rites of the Coptic church, and to adopt those of Rome. This attempt, lowever, was resisted by the ecclesiastics and the people, and finally ended, after a long struggle, in the expulsion of the R. catholic priests in 1632 . The kingdom, however, maintained its integrity and independence till the 16 th century, when it was overrun by the Moslems and Gallas, and finally dismembered. It now consists, as elsewhere mentioned, of a number of petty independent states, the principal of which are enumerated and referred to at the beginning of this article. The princes of the blood-royal now wander over the country unlieeded and unmolested, attaching themselves to any chief who may be willing to countenance and support them. The form, however, is still retained of placing the crown upon the brows of a descendant of the ancient line of Solomon, who is content to be a mere puppet in the hands of the temporary minister, enjoying a stipend of 300 dollars per annum, with some paltry revenues.-(Harris, vol. iii. p. 10.) Some account of the commerce of Abyssinia will be found in the notices of the different provinces, particularly Shoa. Pop. estimated at from 4,000,000 to $5,000,000$.-(Harris' Highlands of Ethiopia, Johnston's Travels in S. Abyssinia; D'IIēricourt, Second Voyage dans le pays dcs Adels et le lioyaume de Choa; Journals of the Rev. Messrs. Isenberg and Krapf; Riippell, Reise in Abyssinien; Balbi ; Sommerville's Physical Geography.)

ACAPONETA, or Acoponeta, a tn. Mexico, prov. Guadalajara, between the rivers St. Pedro and de Cañas, about 40 m . from where these united streams fall into the Pacific Ocean It is the chief place of the district, and is about 450 m . N. by W. Mexico; lat. $22^{\circ} 32^{\prime} \mathrm{N}$. ; lon. $105^{\circ} 40^{\prime} \mathrm{W}$. It is partly built of mud, with a spacions rural-like square, shaded by fine trees, a quaint old church, and a convent of the order of St. Francisco From an account given of it by Lient. Wise, of the U. States' navy, it seems to be a gay, and somewhat profligate little place. The countryaround is fertile, and yields the means of subsistence almost spontancouslya circumstance which goes far to account for the hilarity, and entire excmption from care, which seems to be here so general. Cassava, bananas, guavas, melons, and many kinds of fruit, are produced in the vicinity in great abundance.

иCAPULCO, or Los Reyes, a seaport tn. Mexico, prov. of that name, 180 m . S. by W. from the city of Mcxico; lat. $16^{\circ} 50^{\prime} 48^{\prime \prime} \mathrm{N}$. ; lon. $99^{\circ} 52^{\prime} \mathrm{W}$. (r.) 'The greater part of the town is on the sea-shore. The houses, in consequence of the frequency of earthquakes, are never built above the ground fluor ; those of the lower orders are of cane, thatched. Those of the better class are formed of mud and straw, generally from 3 to 4 ft . in thickness in the walls. The latter are generally tiled, to afford ventilation, and avoid insects, which are numerous and troublesome. The market is indifferently supplied ; but fowls, fruit, and vegetables are readily obtained. Human life is held here in little estimation, and a proneness to violence so general, that the inhabitants seldom leave home unarmed. The peasantry also are disarmed before entering the town, and receive their passes and receipts for arms, which are returned on repassing the boundary. At a slort distance
from the town, on a promentory running into the sea, is situated the eastle and fort of San Diego, capable of mounting 60 guns, hut little more than half this number are actually mounted.

The garrison is stated at 500 . The fort, though constructed by the best engineers of the day, is unfortunately situated, being commanded by every accessible height in its neighbourhood. The trade of Acapulco was formerly considerable, but is now almost wholly removed to San Blas, prov. Guadalajara, 520 m . to the N. W. It has still, however, a little coasting trade with Lima, Guayaquil, and Callao. The chief exports are cochineal, indigo, silver, and a few skins. The imports are cotton, jewels, raw and prepared silk, and spices. When under Spanish dominion, Acapulco was famous for its trade with the Philippines, and for being the resort of the celebrated Manilla galleons. It was then a place of great note, and remarkable for the high tone of its society, which consisted principally of wealthy Spaniards, whe acted as agents for houses in Mexico. All this, however, together with the general prosperity of the place, was annililated by the cdict of 1827, which reqnired all old Spaniards to quit the territory-an edict which was enforeed with mereiless rigour. The ruin of the town has been further promoted by natural visitations-earthquakes and inundations of the sea; no fewer than nine of the former having occurred within little more than a century, namely, between 1732 and 1837. Several of these were so violent as to destroy the town entirely. The last, which occurred in 1837, demolished all the churehes, and did not leave a single house undamaged. Some of these visitations were accompanied by sudden influxes of the sea, which, on more than one occasion, covered the Plaza to the depth of 10 ft . The town itself is extremely unhealthy, the air being moist, still, and intolerably lot; but at a little distance, a refreshing breeze constantly blows. An attempt was made to procure an adınission of fresh air into the town, by making an artificial opening in the rocks by which it is shut in, but with no perceptible effect. The bay, or harbour, of Acapuleo is esteemed one of the finest in the world for its size. It is of easy aceess, has sufficient depth of water, excellent anchorage, and is perfeetly sceure, being so completely land-locked that it resembles a mountain lake. On its N . and E. sides, it is shut in by mountains ranging from 2000 to 2700 ft . high; on the W . by heights varying from 300 to 500 ft . ; and at its entrance, it is protected from the heavy seas of the Pacific, by an island of oblong figure, which forms two mouths, or outlets, the prineipal of which is on the S . side. This fine harbour is capable of accommodating 100 vessels of the line, with moorings of half a cable range, or one cable asunder. Pop, consisting chiefly of mulattoes and Sambos, 3000.- (Belcher's Voyage round the World; Commercial Tariffs of States of Mexico, \&c.)

ACARA, a river, Brazil, prov. Para. It rises in about lat. $3^{\circ} 50^{\prime}$ S. flows nearly due N., and, after a course of about 150 m. , falls into the estuary of the l'ara, about 10 m . above the town of that name; lat. $1^{\circ} 40^{\prime} \mathrm{S}$.

ACARI, a tn. Peru, on the river St. Juan, 30 m . from the shores of the Pacific, about lat. $15^{\circ} \mathrm{s} . ; \operatorname{lon} .75^{\circ} \mathrm{W}$. It is built on a fine plain. Its port is l'oint Limas, an open roadstead, witl good anchorage, but the landing difficult. I'op. 6000 .

ACARNANIA, a district, anc. Grecee, and, along with Atolia, forming a nome, or dep. in the N.W. part of the country, as now divided, having the Gulf of Arta on the N., and the Mediterranean on the W. It contains sulphur and coal, is naturally fertile, but indifferently cultivated. It is well wooded, and has several beautiful lakes, the largest of which are Lakes Ambrakia and Ozero, the one about 7 m . in length, the other about 5 , both having an average breadth of between 2 and 3 m . The chicf town is Misolonghi.

ACASTER-MALBIS, a par. England, co. York, E. Riding; area, 4500 ac. Here is a college founded by R Stillington. Pop, in 1841, 322.

ACATEI'EC, a tn. Mcxico, prov. Puebla, $12 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Tehuacan. The valley in which the town is situated contains a considerable number of Indian familics, and several cultivated estates. Various other small Indian settlements, in S. America, bear the same or a similar name.

ACA'TLAN, a tn. Mexico, prov. of, and 60 m . S. from Iuebla; 123 m. S.E. Mexico, on the left bank of the Yopez; lat. $17^{\circ} 59^{\prime} \mathrm{N} . ;$ lon. $98^{\circ} 14^{\prime} \mathrm{W}$. Its principal trade is in salt, procured from the salt marshes in the neighbourhood. The majority of the inlabitants are Indians, or of Indian extraction.-Acatlan is also the name of six different Indian settlements in New Mexico.

ACCADIA, a tn. Naples, prov. Capitanata, district of, and $6 \mathrm{~m} . \mathrm{S}$. from Bovino. It lias a parish church, and a nont-de-piété. Agricultural produce of all kinds, fruits, wines, \&c., abound here, and the pastures in the neighbourhood are extensive. Pop. 3615.

ACCETTURA, a tn. Naples, prov. Basilicata, 18 m . S.W. Montepeloso. It has a parish elurch, and a mont-depućté. The district prodnces wines, grains, fruits, chestnuts, flax, and hemp, and abounds in good pastures. Pop. 3140.

ACCIANO, a tn. Naples, prov. Abruzzo Ult. H., district of, and 19 m. S.E. from Aquila, and 14 m . N.W. Solmona; in a valley, between two hills, liaving an agricultural po1. of 773.

ACCONBURY, or Acornnury, a par. England, co. Hereford; arca, 1470 ac. I'op. in 1811, 158.

ACCRAH, or Accra, a tn. and British settlement in W. Africa, on the Gold Coast, territory of Ashantee, 75 m. N.E. Cape Coast Castle; lat. $5^{\circ} 31^{\prime} 8^{\prime \prime} \mathrm{N}$. ; lon. $0^{\circ} 11^{\prime} 5^{\prime \prime} \mathrm{W}$. (r.) It is situated on very low ground, and is intersected by decp water-courses. The native dwellings are miserable enough; but some of the English houses are large and commodious, and well adapted for the climate. The principal oceupation of the natives is searching for gold, and manufacturing it into trinkets. Their implements are few, and extremely rude; but they contrive to make very beautiful chains, the value of which is enhanced by the purity of the metal, scarcely any alloy being admitted. The exports from Accrah are gold dust, ivory, gums, palm oil, coffee, and the ground nut, Arachis hypogea. The imports are chiefly cotton goods, earthenware, muskets, knives, gunpowder, beads, aguardiente, tobaceo, \&e. Accralı is under the jurisdiction oi Cape Coast, and is the most eastern of the British factories on the Gold Coast. The Dancs and Dutch have each a factory here; that of the former is called Christiansborg, the latter is unimportant.-(Allen's Nigr Expedition.)

ACCRINGTON (New), a tn. England, co. Lancaster, hun. of, and 4 m . E. from lblackburn. It has a handsome new chureh, three dissenting ehapels, and a national school. The inhabitants are mostly employed in cotton factories, weaving, and calico printing, there being here some large establishments for these purposes. Near it is Old Aecrington, having 1811 inhabitants. l'op. in 1841, 6900.

ACCUMOL1, a tn. Italy, Naples, prov. Abruzzo Ult. I1., district Civita Ducale, 27 m. N.N.W. Aquila, on the left bank of the Tronto; having a collegiate chureh. three convents, and ubout 3700 inhabitants.

А('LBBO, a vil. Spain, Estremadura, prov. of, and 48 m . N. from Caceres, and $38 \mathrm{~m} . \mathrm{N} . \mathrm{N} . \mathrm{E}$. A teantara, on the S.E. slope of a steep hill. It is tolerably well built, and has two squares, several steep strects, an ancient parish church, chapel of ease, townhall, hospital, prison, two schools, a cemetery, and several fountains of excellent water. The inhabitants are chiefly employed in weaving, tillage, rearing cattle, and in making oil and wine. In the vicinity is a forest of remarkably fine chestnut trees. Gane is plentiful. 1'op. 2350.

Acero is also the name of several other small villages in Spain.

ACERENZA [anc. Acherontia], an anc. arehi-episcopal eity, Naples, prov. Basilicata, about 14 m. N.E. Potenza. It was formerly the principal city of the province, but has now fallen into decay. It has a eathedral, a castle, two convents, a grammar school, and an hospital. Pop. 3420.

ACERNO, a tn. Naples, prov. Principato Citra, in a valley, surrounded with mountains, 17 m . E.N.E. Salerno. It has a eathedral and parish chureh, and is the see of a bishop, suffragan of Salerno. There are here a mont-dc-pietté, a paper manufactory, and a forge. Pop. 2500.

ACERRA, a city, Naples, prov. Terra di Lavoro, 9 m . N.F. Naples; the see of a bishop, suffragan of the archbishop of Naples. It has a cathedral, seminary, and mont-de-piété. Its situation is extremely unhealthy, but the country around is fertile. Pop. 7761.

ACHAIA, a district, anc. Greece, in the Morea, now included in the modern nome, or district, of Achaia and Elis, which extends along the shores of the Gulfs of Patras and Lepanto, and the Ionian Sea, from the river $\mathrm{Al}_{\mathrm{p}}$ heus, on the W., to the small stream, Sythas, on the E. The cap., Patras (anc. Patra), of its 12 ancient cities, is the only one now of importance; even the sites of some being doubtful or unknown.

ACHEEN, Achem, or Acheem, a small kingdom, N. end of the isl. of Sumatra, stretching along the E. coast as far as Diamond Cape, and along the W. coast to Baroos; bounded southwards by the Batta country, and having an area of about 1550 sq. m. The country is sandy, but fertile, and less covered with morass and wood than other parts of the island; and it is traversed by a ridge of hills from Aclieen Head, towards the S.E., till it joins with the Simpong mountains. Its three prineipal streams are the Sinkel, the Annalaboo, and the Acheen. Among its vegetable products are cotton, rice, and many kinds of fruits; and some attention is paid to the rearing of cattle and horses, which latter, though small, are spirited, and much sought after for the Madras market. Of other animals, there are goats, birds, abundance of game, and fish, and likewise elephants, which latter frequently do considerable damage to the rice crops. Acheen has gold and copper mines, and manufactures of gold and silver thread, silk, cotton, firearms, and gunpowder. It has a considerable trade; exports gold, precious stones, betel, benzoin, canphor, pepper, sulphur, \&e.; and imports cotton goods, eloth, salt, iron, opium, glass, and European manufaetures.

The inhabitants are partly Battas, and partly Malays, and more laborious, braver, eleverer, possessed of more information regarding foreign countrics, and, as a whole, more honourable in their deaiings than the other inhabitants of Sumatra, who rank sufficiently low in the scale of honesty, though little dependence must be placed on the good faith of merchants of the capital. In religion, they are idolaters, excepting the coast people, who are Mahometans, and possess many mosques. When a young man wishes to marry, he pays a certain sum to the father of the bride; but previously to doing so, he must be perfectly satisfied that his intended has no personal defects, otherwise the mateh is broken off. The wife and ehildren become the property of the husband, who may pledge or sell them at his pleasure. Polygamy is permitted, and, by the rich, it is practised. The king, who is called Taankito, or master, receives his revenues in kind. The government is hereditary and desputic, and the laws are severc.

Acheen was visited by the Portuguese as carly as 1506. The Dutch arrived in 1595, and, in course of the next century, overran it more than once. Ultimately, however, it was settled as an independeney, in alliance with Holland. Its prosperity has decreased considerably since it was first conquered. The extent of its population is uncertain, but it is estimated at 200,000.-(Van der Aas Nederlanden.)

ACHEEN, a tn. Sumatra, cap. of the above state, on a river of the same name, a branch of which flows through the town, and about $1 \frac{1}{2} \mathrm{~m}$. from the sea; lat. $5^{\circ} 22^{\prime} \mathrm{N}$.; lon. $95^{\circ} 33^{\prime} \mathrm{E}$. (c.) It stands on a plain, surrounded by a thick wood of palms and bamboos that runs along the coast. The houses are built of bamboos and rough timbers, and stand apart from each other. They are mostly raised on piles, some feet above the ground, in order to guard against the effects of inumia-
tion. There is here a palace belonging to the Sultan, an uncouth strueture, surrounded by a moat and strong walls. Near the gate are several large pieces of ordnance, two of which are old English guns, baving been presented by James I. to the first reigning monareh of Acheen. The roadstead in which the shipping lies, is off the mouth of the river, where there is a bar, with not more than 4 ft . water on it at low water spring-tides, and which can be passed by the vessels of the country only. The roadstead, which is gradually getting sanded up, was sheltered by several islands; but is now, during the S.W. monsoon and the rainy season, very much exposed. Acheen was at one period a place of greater note than it is now, its trade having fallen off. It was the port to which the earliest voyages to the East were almost exelusively directed, and was the point first touched by an East India Company's ship. Its trade, however, in the commodities enumerated in the preceding article, is still considerable, particularly with Singapore, Batavia, and Bengal. Rice, bullocks, poultry, vegetables, and fruit, may generally be obtained here in abundance, and plenty of fresh water. The natives are said to be treacherous, and trading vessels are warned against placing too much confidence in them. The country above the town is highly cultivated, and abounds with small villages, groups of houses, and mosques. Pop. 36,000.-(Van der Aa's Nederlanden; IIorsburgh's East India Directory.)

ACHEN, the name of two small rivers, Bavaria, both of which rise in the Tyrolese Alps. The one, after forming Lake Achen, falls into the Isar, about 3 m . within the Bavarian frontier; its total course being abont 20 m . The other, ealled Gross Achen, flows past Kitzbiihel, through the Tyrolese valley of Kaessan, and falls into the Bavarian lake Chiem, after a course of about 30 m .

ACHERN, an ancient tn. grand duchy of Baden, Middle Rhine circle, 13 m. S.S.W. Baden, and 14 m. N.E. Kehl; on the left bank of the Achern, and on the railway from Carlsruhe to Freiberg, in a picturesque and fertile distriet of the Black Forest. The inhabitants are principally oceupied in agriculture and cattle breeding, piano making, and beer brewing; and have some trade, for which there is a considerable weekly market. In the neighbourhood is the vast lunatic asylum of Illenau. At Sasbach, not far from Achern, stands an obelisk of granite, ereeted by the French in 1829, to mark the spot where their great marshal, Turenne, was killed by a cannon ball, while reconnoitering the Austrian army, July 27, 1675. Pop. almost all R. catholic, 1938.

ACHILL, an isl. and par. Ireland, co. Mayo. The former-sometimes called Eagle Island, from its being the resort of eagles-is separated from the mainland of Connaught by a narrow sound, fordable at low water; and the most westerly point of the island, called Achill IIcad, 2222 ft . high, is a well-known headland; lat. $53^{\circ} 58^{\prime} \mathrm{N}$. ; lon. $10^{\circ} 16^{\prime} \mathrm{W}$. (r.) The island itself, which is the largest off the Irish coast, is 17 m . long, and about 5 broad; comprises 35,283 statute ae.; and is very mountainous, especially on the N. and W. sides, with large uncultivated intervening bogs. The inhabitants of Achill live chiefly in miserable hovels, clustered along the sea-shore. Their occupation is fishing, and tilling the small patches of reclained land around their huts. The isle of Achillbeg, which lies about $\frac{1}{4} \mathrm{~m}$. from the mainland, is about 1 m . long, and $\frac{1}{2} \mathrm{~m}$. broad. Some fine pink crystals or amethysts, called Achill diamonds, have been found on the slope of a hill, near the village of Keem, on this island; and among the cliffs on the sea-shore there was discovered, about seven years ago, a fine bed of limestonc. At Kildurnet, and Slicvemore, there are remains of old churehes, with burialgrounds attached; at Kildurnet, also, are the ruins of an ancient eastle. The par. contains $51,522 \mathrm{ac}$. Pop. of isl. and par. in 1841, 6392.-(Fraser's Hand-book for Ireland; Otway's Sketches.)

ACHMIM, Ekhmis [anc. Chemnis or Panopolis], a tn. Upper Egypt, on the right bank of the Nile, in a fertile valley at the foot of the Mokaltam mountains, 250 m . S. Cairo; lat. $26^{\circ} 32^{\prime} \mathrm{N}$. ; lon. $31^{\circ} 45^{\prime} \mathrm{E}$. It is a place of great antiquity, and was formerly one of the most considerable cities of the Thebaïd, but was reduced to ruins by the Arabs. The streets are spacious and straight, and are adorned by some mosques, and a bazaar. The inhabitants carry on a considerable manufacture of coarse cotton eloth, rear great numbers of poultry
nud cultivate the date and sugar cane; but depend chiefly on the culture of wheat, which is produced in abundance, and of excellent quality. The remains of Panopolis, or 'City of I'an,' lie E. of the present town. Pop., consisting of Mahometans, R. eatholics, and Coptic Christians, is variously stated at 4000 to 10,000.-(Wilkinson's Modern Egypt.)

ACHMUNEIN, or Emimounein, the name of a modern village, Central Lgypt, occupying the site of the aucient Hermopolis Magna, between the Nile and the river Yousef; lat. $27^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $30^{\circ} 53^{\prime} \mathrm{E}$. The beautiful portico of the temple of Thoth formed, in 1822, almost the only relic of the ancient arehitecture of llermopolis; but being composed of limestone, it has since been removed, and burned by the Turks for mortar.-(Wilkinson's Modern Egypt.; Russell's Vicus, \&e.)

ACHONRY, a par. and lamlet, I reland, eo. Sligo; 60,896 ac.; contains several villages, and some fine ruins. 1'op. in 1841, 17.986.

ACHRAY (Locu), a small but picturesque lake, Scotland, co. Perth, celebrated in Scott's 'Lady of the Lake.' It lies between Loch Catrine and Loch Vennachar.

ACHIRIS HEAD, a prominent headland on the W. coast of Ireland, co. Galway, district Comemara; lat. $53^{\circ} 33^{\prime}$ N.; Ion. $10^{\circ} 10^{\prime} \mathrm{W}$.

ACI REALE, a scaport tn., E. coast of Sieily, 7 m . N.E. Catania. It is built on a large mass of basaltie lava at the foot of Mount Litna, and stands about 800 ft . above the level of the sea; the port being below, at the mouth of the Acis rib. It was formerly defended by a fort, whieh is now converted into a state prison. The houses are built of lava; the strects are wide, regular, and clean, and the town altogether presents an appearance of prosperity. Corn, wine, fruit, flax and diaper, form the prineipal articles of trade, and in these a considerable business is done. The environs aro fertile, and produce large quantities of flax. There is a mineral spring. The port is small, with a mole built with lava. It has several commodious warelıouses. Pop. 15,000.

ACKEN, a tn. Prussia, prov. Saxony, 22 m . S.S.E. Magdeburg, on the left bank of the Elbe, and, on three sides, enclosed by the duchy of Anlalt. It is walled, and has four gates, two Lutheran churches, and an hospital. Some trade is done in cattle, grain, wool, mercery, and wood, and in shipping on the Elbe. The mannfacture of cloth, leather, tobaceo, and mathematical and optical instruments, is carried on. A good transit trade exists, and there are some breweries in the place. Pop. 4100.

ACKLAM, the name of two parishes in England, both in the co. York:-1, Acklam East, E. Riding; 2970 ac. Roman remains. Pop. in 1841, 845.-2, Acklam West, N. Riding; 1160 ac . ; on the Stockton and Darlington Railway. Pop. in 1841, 97.

ACKWORTH, a par. England, co. York, W. Riding; 2270 ac. Friends' school. Pop. in 1841, 1828.

ACLE, a par. and vil. England, co. Norfolk; 4360 ae. Large fair on Midsummer day. Pop. in 1841, 864.

AC-METCHET. See Simferorol.
ACO-COOMO, a tn., S. I. Africa, on the left bank of Old Calabar river, lat. $6^{\circ} 46^{\prime} \mathrm{N}$. The banks of the stream, which is here about 450 yards wide, are well cultivated. Captain Becroft, who explored the river in 1842, says, that the inhabitants seemed alarmed at the appearance of the vessel, and hastened to arm themselves; but were easily prevailed upon to believe that their visitation was friendly, not hostile. On being satisfied of this, they immediately became quiet and peaceable. Several women were observed employed in boiling palm oil, in native carthen pots, in the open air.

ACOMB, or Aremam, a par. Fingland, co York Ainsty; 2320 ac .; on the Cireat North of England Railway. 1'op. in 1841, 830.

ACONCAGUA, a prov. Chili, S. America, bounded, E. by the central ridge of the Cordillera of the Andes, W. hy the prov. of Quillota and the Pacific Ocean, N. by the prov. of Coquimbo, and S. by that of Santiago; extending from E. to W . about 40 m ., and from N . to S . about 110 m . It possesses a considerable portion of cultivated ground, and is watered by two principal rivers flowing from the Andes, namely, the Putaendo from the N.E., and the Aconcagua from the S.E. The valley of Aconcagua is a tract of level ground, of an oval form, about 2500 ft . above the level of the sca; varying in
width from 1 to 8 m ., and extending W . to the ocean, about 20 m . It is watered by pure streams, and covered with farmhouses and hamlets, surrounded by orchards and vineyards. In this province occurs the loftiest summit of the Audes, the peak of Aconeagua, rising 23,910 ft. above the sea; situated in lat. $32^{\circ} 38^{\prime} 30^{\prime \prime} \mathrm{S}$.; lon. $70^{\circ} 00^{\prime} 30^{\prime \prime} \mathrm{W}$. It has been called a voleano, but erroncously ; there being no evidence of voleanic action at any part of the mountain. The height of the peak here given, is from Mrs. Sommerville's Physical Geography; other authorities make it several hundred feet less. In Johnston's Physical Atlas, it is stated to be 23,200 ft . only. But, even at the lowest estimate, it would still remain the loftiest summit of the Andes. The province is divided into four distriets- Putaendo, San Felipe, Santa Rosa, and Curimon. The whole is parcelled out, with few exceptions, into small farms, separated by enclosures of rammed carthen walls, and irrigated by numerous well-directed channels. Vegetation proceeds rapidly. The prineipal produce is grain, maize, beans, pumpkins, grapes, melons, olives, anul other fruit and garlen proluce, with a great quantity of wild marjoram. Orchards and vineyards are numerous; and inclosures of lucerne, for the fattening of cattle, are abundant. The climate here is hotter in summer, and more rigorous in winter, than in the same latitude on the coast. The capital is San Felipe. Pop. of prov. 60,000 .

ACONCAGUA [anc. La Jilla Vieja], now called San Felipe, a city, and chief place of above prov.; about 60 m . N.N.E. Valparaiso; 15 m . W. from the base of the Andes; aud about the same distance from the town of Santa Rosa, or Villa Nueva. It is laid out with great regularity, in the form of a square, surrounded by extensive alamedas, or public walks, planted with Lombardy poplars. In the centre of the town is a large open square, one side of which is occupied by the townhall and municipal offices; opposite are the church and barracks; and the remaining sides consist of shops and private dwellings. The houses are all of one story, and are in a good style of building. Roses and jessamines are seen in every courtyard, and the gardens are well filled with various fruits. The houses, as in other parts of Chili, have no fireplaces; instead of which, brawcros, or pans of live coal, are used when heat is required. The streets are tolerably well lighted and wateled at night. F'op. 12,000.- (United S'tates' Exploring Expectition, vol. i. p. 192.)

ACOONO-COONO, a considerable tn., W. coast of Africa, on the E. bank of Old Calabar river; between lat. $7^{\circ}$ and $8^{\circ} \mathrm{N}$., and lon. $8^{\circ}$ and $9^{\circ} \mathrm{W}$.; or about 70 m . L.. from Iddah, on the Niger. It is in the form of a crescent, and about $\frac{3}{4}$ of a mile in length; but the houses are of the poorest and meanest description. Captain Becroft, who explored the river in 1842, deseribes the inhabitants as a fine-looking and intelligent race. 'Both sexes,' he adds, 'wear around the middle the usual eloth of European or native manufacture, with strings of beads round the neck, wrists, and ankles.' None but children go naked ; the females wear bracelets and leglets, made of cowries. The principal men permit their finger nails to grow without paring, which is considered licre, as in many places on the Niger, a mark of gentility. 1'op. about 4000.

ACQU $\Lambda$, a vil. Tuscany, prov. P'isa, 16 m . E. Leghorn, celebrated for its mineral springs and baths, which are muels frequented, and have been resorted to since the 12 th century.

ACQUAPENDENTE [aı. Aеquepedena, or Аqua Tаrince], a small tn . l'apal States, delegation of, and $15 \mathrm{~m} . \mathrm{W}$. by N. from Orvieto, and 65 N.N.W. Rome, situated on the summit of a rock, over which several caseades are precipitated; whence its name. It is ill built, and derives its only interest from its singular position. Previously to the 17 thi century, it had few inhabitants; but Pope Imnocent X. having removed the episcopal see to it from Castro, in 1647, it became a place of some importance. It is the birthplace of the anatomist Fabricius ab Acquapendente, under whom IIarvey studied at Padua. In the last century, Aequapendente was visited by a disustrous earthquake. l'op. 3000 .

ACQUAVIVA, a tn. Naples, prov. Terra di Bari, district of, and 16 m . S. from Bari, in a healthy situation at the foot of the Apennines. It is surrounded with walls and ditches; has a handsome parish cluureh, several convents, two hospitals, and a mont-de-piété. Pop. 5300.

ACQUI, a tn . Sardinia, cap. prov. of same name, on the left bank of the river Bormida, 18 m . S.S.W. Alexandria.

It is the see of a bishop, suffragan to the arelibishop of Turin. It contains a synagogne, a theological seminary, and a royal eollege. There are here, also, warm sulphurous baths, which draw a great many visitors. The manufacture of silks is earried on to a considerable extent. Nome ruins still remain of the Aque Statiellee of the Romans. 1'op. 7000, of whom 479 are Jews.-The province of Aequi, forming part of the government of Alexandria, comprehends an area of about $534 \mathrm{sq} . \mathrm{m}$. It contains large tracts of fertile land, and some ineonsiderable mines of iron and other minerals. The principal enployment of the inhabitants is winding and throwing silk. Pop. 91,000.

ACRE, St. Jean d'Acre, or Accho, an ancient fortified tn. and seaport, Syria, on the E. coast of the Mediterranean ; lat. $32^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $35^{\circ} 2^{\prime} 30^{\prime \prime} \mathrm{E}$ (R.) ; on a low point of land stretching into the sea, forming the N.E. side of the Bay of Acre, the promontory of Mount Carmel being on the S. W. Previons to its destruction in 1832, by Ibrahim 'asha, the eity, although it bad often before been reduced to a state of decay, presented a very beautiful and imposing appearanee, from its lofty walls and mosques, overtopped by trees from the inside, and surrounded on the outside by orange, lemon, and palin trees; but. like all oriental towns, its streets were narrow and filthy.

acre, entrance of the street of the bazaar From Forbin, 'Voyage dans le Levant.'
The houses were solidly built with stone, with flat roofs; the bazaars mean, but tolerably well supplied. The prineipal objects were the mosque of Djezzar Pasha, the seraglio, the granary, and the arsenal. It had, in former times, a considerable trade; its exports with France, Venice, England, and Holland-whence oil, cotton, skins, and other goods were brought latterly-have consisted ehiefly of grain and cotton; its imports of rice, coffee, and sugar from Damietta. All this has been long since changed, and this bulwark of Syria is now little better than a heap of ruins. In 1832, it was besicged for nearly six months by Ibrahim Pasha, during which 35,000 shells were thrown into it, and nearly all its buildings, public and private, destroyed. Before it had recovered from this calamity, it was bombarded (November 2, 1840) by an English fleet, consisting of seven line-of-battle ships, four war steamers for throwing shells, and some smaller vessels, aided by two Austrian frigates, the whole being eommanded by Admiral Sir Robert Stopford. After two hours' heavy firing, a magazine blew up with a tremendous explosion, destroying two entire regiments of Egyptian infantry, and every living creature within an area of 60,000 square feet. On the following day, the town was taken possession of by the English and Austrians. But these more recent calamitics by no means comprise the
entire history of its misfortunes. In 1104, it was captured by the first erusaders ; in 1110, it was taken by Baldwin, king of Jerusalem; 77 years afterwards, it was recovered by Salaheddin, and, in 1191, was retaken by the C'hristians under Richard Cour de Lion and Philip Augustus, and given to the knights of St. John of Jerusalein, from whom it received the name, St. Jean d'Acre. The Christians retained possession of if for a century; but, in 1291, it was retaken by the Saracensan event which terminated the Latin domination in the Holy Land. From that period, till the end of the 18th century, the town fell to decay, although partially repaired, and, for short intervals, oceupied by various contending parties. It was latterly improved and fortified by Achmed Djezzar, the Turkish Pasha of Sidon, whose residence it then became. In 1799, it was for 61 days besieged by the Freneh under Bonaparte, who, by the brave resistance of the Djezzar, aided by Sir Sidney Sinith, were at length compelled to abandon the siege. The last event of importance in its history took place in 1840, as recorded above. The site of the present town was at one time occupied by a Phenician city, called Aceho, which was subsequently ehanged by the Greek sovercigns of Egypt to Ptolemais. Pop. about 12,000, of which one-third are Tuks.

ACRI, a tn. Naples, prov. Calabria Citra, district of, and 13 m. N.E. from Cosenza, in a fine salubrious situation, and fertile country. It has six parish churches, and an hospital. Pop. 7861.

ACRISE, a par. England, eo. Kent; 1170 ac.; 5 m . N.N.W. Folkstone. Pop. in 1841, 297.

ACRO-COR1NTHUS, a precipitous and somewhat conical rock, near the city of Corinth, in Greece, on which stood the ancient acropolis, or citadel, of the place, and a temple of Venus. It is about 2000 ft . above the level of the sea, and is the site of a modern fortification, which is considered one of the strongest in Grecce.

ACS, or $\Lambda \mathrm{Ts}$, a vil. Lower IIungary, co. of, and 5 m . S.S.W. from Komorn, with a castle and park, a R. catholic, and a Calvinistic ehurch, a vineyard, and four mills. Pop. 3400. Acs was the scene of a sanguinary and indccisive battle between the Austro-Russian army and the Hungarians, on July $16,1849$.

ACSA. See Ak ILissar.
ACTAEON ISLAND and REEF, situated at the S. entrance into D'lintrecasteaux Channel, Van Diemen's Land; lat. $43^{\circ} 34^{\prime} \mathrm{S} . ;$ lon. $146^{\circ} 59^{\prime}$ E. (r.) The rocky islets forming this reef, are dispersed over a space 3 m . in length by 1 m . in breadth, and are extremely dangerous, having been the cause of several disastrous shipwrecks, including that of the Actæon, from whieh they derive their name. Some of these unfortunate occurrences were attended with fearful loss of life, the vessels having been, in scveral instances, conviet and emigrant ships.

AC'TIUM, a promontory and tn., anc. Greece, situated near the entrance to the Gulf of Arta (Ambracius Sinus), on the N. coast of Acarnania. Two capes elaim to be identi fied with the former Actium-one at the entrance of the gulf; the other, Cape Madonna, a few miles to the castward. From the descriptions of ancient geographers, the former appears to be the true Actium. The town-which reecived its name from the Greek acte, a promontory- eontained a temple dedicated to Apollo; but the place owes its fame entirely to the naval battle fought in its vieinity, between Augustus and Antony, about 30 years n c., in which the latter was defeated. Augustus, in commemoration of his victory, enlarged and beautified the temple of $\Lambda$ pollo, instituted quinquennial games ealled Actia, and built the city of Nicopolis, on the opposite coast, near the modern Prevesa.
$\Lambda C^{\prime} T O N$, alone, and with varions affixes, is the name of a small tn. and of several parishes and townships in England:1, Acton, a th., co. Chester, hun. and union Nantwich, from which it lies $2 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. It has a chureh, two Dissenters' chapels, a free grammar sehool, and two national sehools. Pop. of the par., which includes 16 townships, and comprises 19,800 acres, 4134 in $1841 .-2$, Acton, a township, Cheshire, 29 m . by rail from Liverpool. Pop. in 1841, 382.-3, Acton, or Aleton, a par., co. Suffolk; annuaì fair, July 6. Pop. in 1841,555.-1, Acton-Bcauchamp, a par., co. Woreester; 1600 ac. ; great quantity of hops. Pop in 1841, 217.-5, ActonGrange, a township, Cheshire; 780 ae.; on the Birminghan

Railway. Pop. in 1841, 175.-6, Acton-Rouncl, a par., ce. Salop; 3040 ac. Pop. in 1841, 180.-7, Acton-Scott, a par., co. Salop; 930 ac. ; near a branch of the Teme. Pop. in 1841, 204.

ACTON, a vil. and par. England, co. Middlesex, hun. Ossulstone, about $8 \mathrm{~m} . \mathrm{W}$. London, on the road to Oxford, pleasantly situated on a slight inclination. It consists almost entirely of one long strect, and has nothing very attractive in its appearance, although there are many handsome villas in its vicinity. There are here, besides the parish chureh, an Independent chapel, and a R. catholic place of worship, several charity schools, and a set of almshouses for 12 poor men, and the like number of poor women. In the vicinity is a mineral spring, formerly held in great repute. The village of East Acton is at the distance of about $1 \frac{1}{2} \mathrm{~m}$. Area of par. 2260 ac . Pop. 2665.

ACTON-BUINELL [anc. Fetune, or Oak-town], a vil. and par. England, co. Salop, hun. Condover, $7 \frac{1}{2} \mathrm{~m} . \mathrm{s}$. shrewsbury, picturesquely situated on a slight acclivity, near the stratton llills, and remarkable for containing some buildings illustrative of the eeclesiastical and domestic arehitecture of the 12 th and 13 th centuries, and for having been the scene of the proccedings of a parliament held here in the 13 th year of the reign of Edward I., in which was passed the Statute Merchant Act, appointing the mode by which a statute merchant is to be made, and the various procedures to be observed by ereditors in recovering debts, \&c., \&c. There is here a beautiful cruciform church, built by Bishop Burnell, in the early part of the 14 th century, and one school, conducted partially on the national principle. Area of par., 2650 ac. Pop. 394.

AC'IUI'AN, a tn. and district, Mexico, the former 65 m. N.N.E. the city of Mexico; lat. $20^{\circ} 17^{\prime} 23^{\prime \prime} \mathrm{N} . ;$ lon. $98^{\circ} 48^{\prime} 52^{\prime \prime} \mathrm{W}$. (L.) It coutains an ancient convent of the order of St. Augustin. Its population consists chiefly of Othomies Indians, of whom there are between 2000 and 3000 families, with a snall proportion of Spaniards, mulattoes, and mustees. The principal occupation of the inhabitants of the district is rearing goats and sheep, which are prized, particularly, for their skins and fat. The land is fertile, especially in the vicinity of the town, but is much encumbered with prickly plants, thorns, \&c. The climate is mild. Singing birds, including the nigltingale, are numerous all over the district.

ACUL, a small scaport tn., N. coast, IIayti or St. Domingo; lat. $19^{\circ} 47^{\prime} 40^{\prime \prime} \mathrm{N}$. ; lon. $72^{\circ} 27^{\prime} 15^{\prime \prime} \mathrm{W}$. (L.) ; 70 m. E. Cape St. Nicholas.-Acus is also the name of a small river in the same island, which falls into the sea at the back of Point Abacou.

ACULCO, or Aculeo, a lake, Chili, prov. of, and 38 m . S S.W. from Santiago; it is about 9 m . in length, and 3 in breadth, and discharges itself into the river Maypu by a small stream, having a N . course of about 15 m . The scenery around it is remarkable for its beauty. It abounds in fish and aquatic fowls, including swans and flamingoes. In a mountainous ridge close by, are the gold mines of Alauë.

ADAFOODI $\Lambda$, a large tn. Fellatta country, W. Africa; lat. $13^{\circ} 6^{\prime} \mathrm{N}$.; lon. $1^{\circ} 3^{\prime} \mathbf{E}$. It is situated in a dry healthy plain, having a rich red soil, and is enclosed by a thick clay wall, 18 ft . high. There is here an extensive market for slaves, and for other less objectionable wares, such as Bornou armlets, bracelets, and anklets, native razors and beads, cloths of different kinds, and carved wooden bowls, bows, arrows, earthenware, provisions, \&c. It is said to be as large as Abomey (pop. 24,000), and its trade in native merchandise nearly equal. Adafoodia was the extreme limit of Mr. Duncan's travels towards the interior, and there he obtained, from an eye-witness, an interesting and minute account of the death of Mungo Park.-(Duncan's Travels in Western Africa.)

ADAJA, a river, Spain, Old Castile, rising near Piedralita, in the Sierra de Avila. It pursues an E. direction for about 20 m ., when it turns abruptly to the N., and, passing the city of Avila, falls into the Duero about 15 m . S. Valladolid, after a course of between 80 and 90 m .

ADALIA. Satalieit, or Satalaya [anc. Atollia], a scaport, Anatolia, Asiatic Turkey, at the head of the gulf of the same name; lat. $36^{\circ} 52^{\prime} 12^{\prime \prime} \mathrm{N}$.; lon. $30^{\circ} 45^{\prime} \mathrm{E}$. (r.); pleasantly situated on the slope of a hill rising to a height of 70 ft . above the level of the sca. The houses being
built circularly round the larbotur, the streets appear to rise behind each other, like the seats of a theatre. There is a bazaar, or collection of shops, where varions articles of European manufacture are displayed. The neighbourhood abounds with orange, lemon, fig, and mulberry trees, with vines, sugar canes, \&c.; and the view from the higher houses is said to be very fine, the country being fertile, and the mountains 'poctieally beautiful.' In the town are fragments of ancient buildings, columns, inseriptions, and statues, which are generally built into the walls of the town with care and some taste. Adalia is begirt with a double wall. Searcely a ship rides in the ancient harbour, a few boats occupying a port which, in early ages, contained its fleet. A stream in the neighbourhood is supposed to have been the ancient Catarractes. The Gulf of Adalia, at the lieal of which the town is situated, is a deep and broad indentation, being about 100 m . in width at its entrance, and 50 in length. Cape Khelidonia forms its W., and Cape Anamoor its E. entrance. Pop. of town, 8000.

ADAM BAY, Australia, N.W. coast; lat. $12^{\circ} 10^{\prime} \mathrm{S}$. ; lon. $131^{\circ} 45^{\prime} \mathrm{E} ; 70 \mathrm{~m}$. S.W. Victoria, Port Essington. It stretches 6 m . inland, and is 10 in breadth at the entrance, with 9 fathoms water. The river Adelaide falls into this bay. It was named by Stokes, the discoverer, after Sir Charles Adam.

ADAM'S BRIDGE, a remarkable sand-bank between Palk's Strait and the Gulf of Manaar, stretching from the island of the latter name on the N.W. coast of Ceylon, to the island of Ramiserum off the S.E. coast of the Carnatic. The bank is about 30 m . in length, and $\frac{1}{4} \mathrm{~m}$. in breadth, and con. sists entirely of sand, partly above and partly below water, collected apparently by the surf and currents, and, so far as is known, unsupported by rock. It is said that throughout the whole extent of the bridge there is not above 3 or 4 ft . water at high tides in any part. There are three principal chan nels through the bank; one near the island of Manaar, called the Tal Manaar passage, a long, narrow, and very winding channel, laving about 6 ft . water in the slallow parts, with the exception of a bar opposite its S . end, on which there is not more than 3 or 4 ft . water. The second passage is about 8 m . further to the W., and the third 11 m . from the island of Ramiscrum. The last, ealled the Tamy Coody chamel, is narrow in the centre, and 30 ft . deep, with broad curved bars opposite its two ends, on which there is not more than 5 or 6 ft . water.-(Major Sim's Report; Horsburgh's India Directory.)

ADAM'S PEAK, a lofty mountain in the S. part of the isl. of Ceylon, 45 m . E.S.E. Colombo ; lat. $6^{\circ} 52^{\prime} \mathrm{N} . ; 111$. $80^{\circ} 29^{\prime}$ E. (土.) It is of a conical form, about 7000 ft . high, and can be seen at sea, in ciear weather, from a distance of nearly 150 m . It is considered saered by the followers of Buddha, as well as by the Mussulmans of Hindoostan, and crowds of both Buddhist and Mahometan pilgrims, annually ascend the mountain in the months of January, February, and March, being the dry season on the W. side of the island. The summit is surrounded by a wall about 5 ft . high, in which are two distinct openings to admit pilgrims. By the side of this wall, a level path lias been formed encircling the rocks, which rise to a leight of about 8 ft . in the centre, and are surmounted by a small wooden temple. On the top is an impression of the foot of Buddha, said to have been imprinted when he stepped from this peak to the kingdom of Sian. The Mahometans, however, assert that the footprint was left by Adam, our first parent, who here lamented his expulsion from Paradise-supposed to have been in the island of Ceylon; hence the name of Adam's Peak. The impression itself appears to be a superficial hollow, nearly $5 \frac{1}{2} \mathrm{ft}$. long, by about $2 \frac{1}{4} \mathrm{ft}$. broad, having a border of gilded copper, studded with a few gems of little value. The offerings of the devotees, consisting of copper money, rice, cocoa nuts, cotton cloth, handkerchicfs, betel leaves, flowers, onions, ornaments for the cover of the footprint, and a lock of the hair of the head, or a portion of the beard, are forwarded at the end of the scason to the chief priest at Candy. The average aunual amount is about $£ 250$ sterling. The view from the summit is singularly magnificent.-(Knighton's Mist. of Ceylon.)

ADAMS, the name of several towns, comnties, and districts, United States:-1, $\Lambda$ tn., co. Berkshire, Massachusetts. -2, A co. in state Mississippi.-3, A distriet, New IIampshire. -4, A district, New York.-5, A co. Olio.-6, A co. and tn. Pennsylvania.

ADAMSON'S IIAlBBOUR, or Pokt Esperance, a small arm of the sea, on the S. coast of Van Diemen's Land, d'Entrecasteaux Channel, between the estuary of the Huon and S . Port; it is 2 m . wide at the entrance, and runs about 7 m . inland; lat. $43^{\circ} 20^{\prime}$ S.; lon. $147^{\circ} 15^{\prime} \mathrm{E}$.

ADAMSTOIVN, a par. Ireland, co. Wexford; area, 8134 ac.; contains several interesting ruins, and a lofty mountain called Carrickburn, said to be 3000 ft . high. Pop. in 1841, 2037.

ADAMUZ, a tn . Spain, Andalusia, prov. of, and 21 m . N.E. from Cordova, situated on the sicrra Morena, about $1 \frac{1}{2} \mathrm{~m}$. N. of the Guadalquivir; consists of solidly constructed houses, forming about a dozen ill-built streets, and has four churches, an endowed school, prison and barracks, with 2640 inhabitants, engaged partly in tillage, partly in making white soap and olive oil, and in weaving coarse linens. Considerable quantities of the oil and soap are sent to Castile.-(Madoz.)

ADANA, an anc. tn . Asiatic Turkey, district of same name, on the Shinu, about 21 m . from its embouchure in the Mediterranean ; lat. $37^{\circ} \mathrm{N}$.; lon. $35^{\circ} 15^{\prime}$ E.; situated on a gentle declivity, and surrounded by groves of mulberry, peach, apricot, fig and olive trees, and vineyards. It is large and gloomy, but well built, and contains some good bazaars. It was anciently enclosed by walls, of which parts only now remain, together with a Roman archway and bridge. The inhabitants consist chiefly of Turks and Turcomans. Pop. 10,000.

ADANAD, or Adinatha, a tn. Hindoostan, prov. Malabar, division Shiruada, 25 m . S.S.E. Calicut ; the residence of the Alvangheri Tamburacul, or chief of the Brahmins of Malabar, who are styled Namburies.

ADARE, a vil. or small tn. and par. Ireland, co. Limerick, prov. Munster ; the former $8 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Limerick, and 102 m . s.W. by W. Dublin, on the W. bank of the small river Mague, here crossed by an ancient, but excellent stone bridge of 14 arches. The houses are, for the most part, old and ill built; but great improvements have been effected of late years by Lord Dunraven, who is proprietor of the village. Adare, however, is remarkable only for some extensive and interesting ruins in the town and vicinity. These consist of the remains of a monastery, founded by the first Earl of Kildare in 1279 , of which the tower, nave, and part of the choir only now exist; of those of an Augustinian abbey, on the bank of the river; and of a Franciscan abbey on the S. side. The cloisters of both the latter are nearly in a perfect state. The par. comprises $11,933 \mathrm{ac}$. Pop. of tn . in 1841, 1095 ; of par. 4902.

ADBASTON, or Abdastox, a par. England, co. Stafford; area, $5330 \mathrm{ac} . ; 43 \mathrm{~m}$. W. by S. Eecleshall, near the Birmingham and Liverpool Junction Canal. Pop. in 1841, 610.

ADDA, Addua, or Abdua, a river, Venetian Lombardy, formed by several rivulets which descend from the Rhetian Alps, and unite at Bormio, at the N. entrance of the Valtellina valley, which it traverses throughout its whole length, passing Sondrio, and subsequently falling into the Lake of Como, about 4 or 5 m . from its N . extremity. It again issues from the S. end of the Lecco arm of the lake, and flows nearly due S. to Lodi, when it takes a S.E. direction, and ultimately joins the Po, about 5 m . W. Cremona. Its entire course, exclusive of its passage through the Lake of Como, is about 120 m .

ADDA KUDDU, an old tn., W. Africa, on the right bank of the Niger, about 250 m . from its embouchure; lat. $7^{\circ} 44^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 35^{\prime} \mathrm{E}$. It is now deserted and in ruins. A model farm was established a few miles above the town in 1841, oy the Niger Expedition, under the command of Capt. Trotter, and at the expense of the African Agricultural Society; but the death of the superintendent, the insubordination of the settlers, and the pernicious climate, caused it to be abandoned next year.

ADDERBURY, a par. England, co. Oxford ; area, 6380 ac.; on the Oxford Canal ; with a church and school. Pop. in 1841, 2526.

ADDERGEY, a small tn. Abyssinia, kingdom of Tigré, prov. Samen, cap. of its district, on the N.W. slope of the Samen mountains, near the pass of Lamalmon, and on the route followed by Bruce, in his journey from Axum to Gondar; lat. $13^{\circ} 35^{\prime} \mathrm{N}$. ; lon. $38^{\circ} 3^{\prime} \mathrm{E}$.

ADDERG()OLE, two pars. Ireland:-1, co. Mayo; area, $36,630 \mathrm{ac} . \quad$ 'op. $7379 .-2$, Galway; 8442 ac. Pop. 3321. Vol. 1.

ADDERLEY, a par. England, co. Salop; area, 2260 ac.; on the Birmingham and Liverpool Canal. Pop. in 1841, 404. ADDINGHAM, two parishes in England:-1, Adding. ham, a par., co. Cumberland; area, 9520 ac.; two small charities; Roman road, called the 'Maiden way;' and Druidical monuments on the river Eden. Pop. in 1841, 735.-2, Addingham, a par., co. York, W. Ridjng; area, 4310 ac. $\cdot 6 \mathrm{~m}$. E. by S. Ripton; worsted and cotton mills. Pop. in 1841, 1812.

ADDINGTON, the name of five parishes in England:1, Addington (Great), a par., co. Northampton; $3 \frac{1}{2} \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Thrapston; area, 1230 ac .; on the Northampton Canal. Pop. in 1841, 266.-2, Addington (Little), a par. same co., S. of Thrapston; 1170 ac. Pop. in 1841, 299.-3, Addington, a par. and township, co. Kent; 920 ac .; Druidical monument and land spring. Pop. in 1841, 208.-4, Addington, a par., co. Surrey; 3210 ac.; manor of Addington, Archbishop of Canterbury's seat, held by the singular tenure of making and presenting to the sovereign a mess of pottage at his or her coronation. It is ncar the Croydon Railway, and has a number of low tumuli. Pop. in 1841, 580-5, Addington, a par., co. Bucks; $1320 \mathrm{ac} . ; 1 \frac{1}{2} \mathrm{~m}$. W.N.W. Winslow; fund for apprenticing poor boys. Pop. in 1841, 84.

ADDLE, a par. England, co. York, W. Riding; area, 6350 ac .; fine Norman church; several charities; a flaxmill. Remains of a Roman town, and many antiquitics, discovered in 1702 and subsequently: Pop. in 1841, 1219.

ADDLETHORPE, a par. England, co. Lincoln; area, 1770. ac.; $7 \frac{1}{2}$ m. E.S.E. Alford. Pop. in 1841, 238.

ADDOO, or ADOU, one of the Maldive Islands; 10 m . in length, E. to W., and 7 in breadth, N. to S.; of a erescent form, convex towards the S., and concave towards the N.; lat. $2^{\circ} 7^{\prime} \mathrm{N}$. ; lon. $73^{\circ} 35^{\prime} \mathrm{E}$. (r.)

ADEL, or Adalec, formerly a prov. Abyssinia, now a separate kingdom; but neither its precise position nor its limits would appear to be ascertained, since hardly any two authorities agree as to cither, some making Adel and Dankali synonymous, and others including Somauli, to the exclusion of Dankali. As usually understood, however, it would appear to be that district stretching along the E. confines of Abyssinia, between lat. $10^{\circ} 30^{\prime}$ and about $12^{\circ} 55^{\prime} \mathrm{N}$., having the Sea of Bab-el-Mandeb on the E. for half its length, and the territory of Esa Somauli throughout the other half. Its entire length from N.E. to $\mathrm{S} . \mathrm{W}$. is thus about 150 m . It is bounded on the W. by the country of the Galla tribes, but its precise limits in this direction are utterly unknown, as, indeed, is the kingdom generally, it being nearly an entire blank on our maps. So far as the country has been yet exploredstill a very limited extent in comparison to the whole-it presents a volcanic formation, many extinct craters being visible, but none in a state of activity. Beds of lava, of great thickness, are also met with. The country is in general naked and barren, but presents occasional patches of good soil, in which various grains are produced, including wheat, barley, and millet. Tracts also occur covered with light green grass, on which numerous flocks and herds are reared. The climate is singularly variable, and generally very unhealthy. Both the mineral and vegetable productions of Adel are the same as those common to the other provinces of Abyssinia; as is also its zoology. The people of this country are of nomadic habits, and would appear, generally, to resemble, in most respects, those of Dankali (which see), and are indeed spoken of as the same race by many travellers; the term Dankali being indiscriminately applied to the inhabitants of both countries. The principal towns are Tajoora and 1Ioosa.-(Brant; Isenberg and Krapf.)

ADELE ISLAND, off the N.W. coast of Australia, and about 55 m . from the mainland. Its centre is in lat. $15^{\circ} 32^{\prime} \mathrm{S}$. ; lon. $193^{\circ} 15^{\prime} \mathrm{F}$. (r.) There are several small islets near it.

ADELAIDE, a tu., S. Australia, co. Adelaide, of which it is the chief place; on the E. shore of St. Vincent's Gulf, about 6 m . from the coast; lat. $34^{\circ} 55^{\prime} \mathrm{S}$.; lon. $138^{\circ} 28^{\prime}$ E. (r.) It is intersected by the river Torrens, which divides it into S. and N . Adelaide. The former is on flat ground, and twice the size of the northern part of the town. It has also been more extensively built upon, and is the established commercial division of the city. The government house, and all the public buildings and offices, are in S. Adelaide. The former is a handsome building, resembling a country gentleman's house in England, with well-kept gardens around it. Several of the
streets would do no discredit to any secondary town in England. They are all spacious, varying from 60 to 130 ft . wide, and run at right angles with each other. The public offices and jail are as yet the only publie buildings in the town worth noticing. There are, however, several creditable edifices besides, including the S. Australian Bank, which stands in a prominent position on the N. Torrens. There are two Episcopalian churches in S. Adelaide, cach calculated to hold about 1000 sitters, and having an average attendance of about 900 . Another chureh has been recently erected in N. Adelaide. There are, besides, nine dissenting places of worship, all respectable-looking buildings, the average attendance at which is about 2300 . There is also a R. eatholic church, with an excellent school attached. ILaving been planned on too large a scale, the town continues to have a straggling appearance, and will probably continue so for several years to come. At present, it is prettily studded with large guin trees. Nearly every article of European produce can be had here, and often, if not always, at a very little advance on home prices.

Port Adelaide-lat. $34^{\circ} 48^{\prime} \mathrm{S}$. ; lon. $138^{\circ} 28^{\prime}$ E. (n.) is about 5 or 6 m . from the town, with which it is connected by an exeellent macadamized road, carried, in some places, on a causeway, over a swamp. It is situated on the E. bank of a large creek, penetrating the Mangrove Swamp, by which the shore of the gulf is here fringed. The ereck, which is from 10 to 11 m . in length, proceeds first in a N.E. direction; this portion being called the north arm; then suddenly bends round, and runs for about 6 m . due S . Measures are now being taken for removing the port to the north arm, where there is broader and deeper water, and from which vessels can put more readily to sea than from the present port, which is 3 or 4 m . further up. Port Adelaide is a bar harbour. When the colony was first established, there were, at no time, even at spring tides, 15 ft . water on the bar; but having been recently deepened, vessels drawing 17 or 18 ft . may now be brought in during the winter springs. It is not considered safe, however, to load deeper than 15 or $16 \frac{1}{2} \mathrm{ft}$. There is now 3 ft . more water on the bar than formerly, and it is expected, if the deepening goes on, chat there will soon be 5 ft . Port Adelaide is a free port; and since it was declared so, its trade has greatly increased. The imports for 1848 amounted to $£ 346,137$, and the exports to $\pm 465,878$. The site on which Adelaide now stands, was selected by Col. Sight, surveyor-general to the colony, and the streets and squares laid out in 1837. Pop. between 8000 and 10,000.-(Sturt's Expedition into Central Australia, \&c.)

ADELAIDE ISLAND, an isl. in the Antaretie Ocean; lat. $67^{\circ} 15^{\prime}$ S. ; lon. $68^{\circ} 15^{\prime} \mathrm{W}$. (r.) ; discovered by Capt. Biscoe in 1831-2, who describes it as having a singularly attractive appearance, with one lofty peak in the middle, shooting up to a great height, and a lower range of mountains, extending about 4 m . from N. to S., having their summits merely sprinkled with snow, but deeply covered towards their base, which slopes down to the water, and terminates in a eliff of 10 or 12 ft . high, riven and splintered in every direction to an extent of 200 or 300 yards from its edge. At a distance of 3 m. , no bottom could be found with 250 fathoms line. Adelaide is the westermost of a chairs of islands lying E.N.E. and W.S.W., now ealled Biscoe's Range, after the discoverer. These islands front a high continuous land, to which the name of Graham's Land has been given.

ADELAIDE (QUEEN) ISLANDS, a group of islands on the S.W. coast of I'atagonia, at the W. entrance to the Strait of Magalhaens.

ADELAIJE RIVER, N.W. Anstralia. It falls into Adam Bay (which see), and is navigable 50 m . for vessels drawing 12 ft . water; bamboos and riel alluvial flats on each side, at a distance; plains openly wooded, with guin trees; soil light, not sandy. It swarms with alligators. The mouth of the river is fronted with shoals that extend out 5 m . It was diseovered by Capt. Wickham, of the Beagle, on August 31, 1839.

ADELEBSEN, or ADelefsen, a vil. Manover, prov. of, and 7 m . N. W. from Göttingen, on the right bank of the Scliwillme. It has a church and a synagogue, and the ruins of two castles, with some trade in cloth, and some linen weaving. The inhabitants cultivate tobaceo and flax. Pop. 1400.

AD-EI-JIVAK, a walled tn. Asiatic Turkey, pash. Van, 14 to 16 m . from Aklat, on the N.W. shore of the Lake Vall.

Though small, and many of the houses in ruins, it is a pretty and pleasant place, the approach to it being skirted by meadows and orchards. The greater part of the inhabitants live in detached honses among the gardens, with which the whole valley in which it is situated is occupied. The rocks are limestone, and pure water runs in great abundance through the lanes, serving to irrigate the gardens. There are here great plenty of common fruits; and water melons and grapes also thrive well. Coarse cotton cloths are manufactured, there being abont 20 looms in the town employed in the production of these fabries. Ad-el-jiváz contains about 250 Mahometan and 30 Armcuian fanilies.-(Brant, London Geo. Jour., vol. x. p. 406 .)

A1)ELNAU, a th. Prussia, eap, of circle of same name, prov. of, and 68 m . S.E. from Posen, and 40 m . N.E. Breslan, in Silesia. It lies in a flat, swampy country, on the left bank of the Bartsch, and has a Lutheran and two R. catholic churches. Tanning is earried on to a sinall extent, and some trate is done in cattle and mereery. In the vicinity is much wood; and horse breeding is successfully pursuel. Pop. 1680 .

ADELI'HI, or Fratelle, two small islands in the Grecian Archipelago, about 40 m. W. Scarpanto; in lat. $39^{\circ} 5^{\prime} 48^{\prime \prime} \mathrm{N}$.; lon. $23^{\circ} 59^{\prime} 15^{\prime \prime}$ E. (R.)

ADELSBERG, a market tn. Austria, prov. Illyria, 23 m . N.E. Trieste. It lies in an elevated situation, in a dreary, barren country, among limestone hills, on the great road between Vienna and Trieste. The inluabitants are chiefly engaged as carricrs. Pop. 1500. Adelsberg is only remarkable for the numerous and extensive stalactite caves that exist in the limestone rock in its vicinity, and which are the largest hitherto discovered in Europe. The prineipal grotto is about half a mile distant from the village; its entrance is in the face of a eliff, surmounted by a round castle; it has been explored to a distance of between 2 and 3 m . from its month, and is found to terminate in a lake. The river Poik disappears in a vast cavern 50 ft . below the entrance to the grotto, reappears at about 180 yards within the eave, and is then lost under the mountains, issuing to light agraiu at Planina, abont 8 m . off, where it is called the Unz, where planks and pieces of wood, it is said, appear ten or twelve hours after being thrown into the stream in the eavern. Having proceeded about 200 yards into the grotto, a vast gloomy space is entered, called the Dome, being a hall more than 300 ft . long and 100 ft . high; the river is heard rushing below. Crossing the latter by a wooden bridge, and scaling the opposite side by a flight of steps cut in the roek, a range of fairy-like halls and chambers, of varions sizes, present themselves. 'It is impossible to describe all the beauties and wonders of the gigantic stalactitie concretions, and lofty halls, supported, as it were, by Gothie columns, and apparently filled with statues of exquisite delicaey and whiteness. There is, however, one part of the cave which in grandenr and sublimity so far exceeds all the rest, that I must allude to it more specially. It is called Mount Calvary, and is situated near the extremity of the grotto, about $1 \frac{1}{2} \mathrm{~m}$. from the entrance. Here we suddenly found ourselves in an open space, of which we could neither sce the limits, nor distinguish the beight of the roof. In the centre, the ground rises considerably, forming a steep and rugged hill, over whieh our path led, the roof rising in proportion as we ascended, with a deep and gloomy-looking ravine on cither side. This hill, which eonsists of the blocks and fragments fallen from the lofty roof, was almost everywhere covered with a thick incrustation of white stalagmites, which, having assumed every possible varicty of form, appeared in the murky gloom like wandering spectres, or beautiful marble statues. At each step as we advanced, fresh figures were seen, arranged with apparent taste along the terraces of a rising ground. We almost fancied ourselves walking in an enclanted garden, adorned with a rich profusion of statues, columns, and vases, while the darkness made the spacious hall appear still more extensive. In short, our expectations, great as they had been, were not disap-pointed.'-(IIamilton's Asiu Minor, vol. i.)

About 3 m . from the village is the cave of Maddelena, or the Magdelenen Grotte, which is not so extensive as the one just described, but, in some respects, is more striking. -That of Adelsberg is almost level the whole way, but the Maddelena is one contiural deseent, at an angle of nearly 40 degrees, of great breadth, and supported by a greater number of massive stalactite columns.' In this cave is found that
remarkable animal, Potcus anguinus, one of the four true amphibials known to exist, being supplied with both lungs and gills for breathing. This cave is also a favourite resort of robbers, who infest the neighbouring forests.-(Hamilton.)

ADELSHE1M, a small tn. grand duchy of Baden, circle of the Lower Rhine. It lies in a vale, in the Odenwald, 32 m . E. Heidelberg. The inhabitants are principally oceupied in agriculture, vine growing, and raising eattle. Adelsheim came under the sovereignty of the Grand Duke of Baden in 1806. Pop. prineipally Protestants, 1476.

ADEMUK, a th. Spain, prov. of, and 64 m . N.W. from Valencia, on the slope of a hill, on the right bank of the Guadalaviar. Its houses are of a regular height, but the streets are crooked and badly paved. It has two spacious squares; a church, with a tower 144 ft . high; two chapels, three schools, two of which are endowed; a townhall; and several flourmills. The inhabitants are employed in weaving cotton and linen for home consumpt, in distiling brandy, and in making wax, hempen sloes, and earthenware. 1'op. 3030.-(Matoz.)

ADEN, an ancient, and once celebrated city, and seaport of Arabia, on its S. coast, abont 100 m . E. the Strait of Bab-el-Mandeb, and 120 m. E.S.E. Mocha; lat. (Sirah Island, N. point) $12^{\circ} 46^{\prime} 12^{\prime \prime}$ N. ; Jon. $45^{\circ} 5^{\prime}$ E. (n.) ; situated on the N. side of a lofty promontory, composed chicfly of masses of dark-colomred volcanie rock, wholly destitute of vegetation. The city itself is situated in an amphitheatre of rocky mountains, literally in the erater of a voleano, being elosely surrounded with lofty walls and barriers of naked rock. The houses, or rather huts, are in rows, traversing a small valley, very slight in their construction, and limited in their aceommodation; many of them are entirely of wicker work, having waggon roofs, with interwoven leaves of the date palm for a covering. In some instances, the roofs are flat. The buildings are generally of undressed stone, compacted with layers and pillars of wood instead of mortar. No glass windows are to be seen; and the apertures for admitting the light are exceedingly small. The houses in the Jews' quarter are the most respectable; but even of these, little that is favourable can be said. One of the most conspieuous objects in Aden is the tomb of the Mahometan saint, Idris ibn 'Abdallah. Few towers and minarets are visible. On the N. and W. sides of the town, there is a steep and lofty mountain called Jebel Shamshan, which rises to the height of 1776 ft ., on the highest pinnae.es of which are some old towers ereeted by the Turks. Numerous wells, and the remains of basins for the reecption of water, of great magnitude, are found in various directions; and, in the valley of Tanks, is a suecession of hanging cistorns, formed by excavations in the limestone rock. These are lined with flights of steps, and supported by lofty buttresses of imperishable masonry, forming deep reservoirs of a semi-elliptical form.-(Wilson's Lands of the Bille.) The
lauks are now in ruins, and the supply of water wholly obtained from wells, of which, aecording to Mr. Malcolmson, Civil and Staff surgeon-who resided at Aden for six yearsthere are no fewer than 350 , situated mostly, though not invariably, at the foot of the hills, eut through the solid rock to an average depth of 40 ft ., not more in many instances than 4 ft . in diameter, and built from the rock with a circular rubble wall. The water in many of the wells is brackish, and in all has a saline taste, unpleasant to strangers, on whom it acts for a time as a slight aperient-an effect, however, which ceases after a bricf period. The water, notwithstanding this peculiarity, is said to be of very superior quality, though stigmatized as 'bad'by several visitors to the place. The accounts of its supply are equally conflicting as those of its quality. Mr. Malcolmson represents the former as abundant; while Commander Brown, of the Ayrshire, who visited Aden in 1846 , asserts that it is exceedingly scarce, and supports his assertion by the very strong argument, that he paid for 'very brackish water, thrce rupees per 100 gallons; and for the best (being only one well) six rupees for a similar quantity,' which, in the latter case, would be nearly equal to $1 \frac{1}{2} d$. per gallon. The same authority represents the supply of provisions generally, inclnding vegetables, as being scanty, and charges high-again quoting prices; while Mr. Malcolmson says that both are abundant. With regard to these diserepancies, it ean only be remarked, that Commander Brown's precise statement of charges, doubtless lass its effect in determining the belief of the reader.

The climate of Aden may be divided into two scasons-the lot and cold, or the N.E. and S.W. monsoons; the former commencing at the end of April, and continuing till the beginning of October; the latter prevailing during the remainder of the year. During the continuance of the S. W. monsoon, lot winds prevail, raising the thermometer to $104^{\circ}$ in the shade. In the cold months, from Oetober till March, it falls as low as $64^{\circ}$ at night, and at mid day rises only to $86^{\circ}$. Rain occasionally falls with tropical violence in the months of November, Jannary, and February. The elimate, however, does not, on the whole, appear to be positively mhealtliy. Mr. Malcolmson says, that for scven months in the year it may be considered equal, if not superior, to that of most stations in India.

The harbours of Aden, two in number, are considered the best in Arabia. The eastward or outer harbour is divided into two small bays by the rocky islet of Sirah, which was formerly fortified. Extending from this islet, seaward, is a short projecting point, which breaks the swell of the sea, and formerly rendered the space between it and the town well adapted for an inner harbour. Of this harbour, all that at present remains is a narrow channel of deep water, close under the reef, only sufficiently eapacions for seven or eight native boats. The rest is entirely choked up with sand.

ADFA, FROM THE NURTIL-From a Dmwina its Liet Bullairs, R. N.
'Ile other, or W. harlour, called Aden Back Lay, affords a convenient and seeure haven, accessible at all scasons; and ships may anchor in any part of it. In this harbour, called Bander Tuwayyi by the Arabs, is the anchorage for the

Oriental mail steamers. It lics within the small islands sece. on the map, and S.W. from the Tank, opposite the coaling station. The scencry of this bay is of a very wild and savage character, as will be seen from the accompanying view looking
towards the coaling station, from which a road, through a deep chasm, leads to the town of Aden, about a mile and a half distant. On the E. side of its entrance, a mass of rocks, black and rugged, called Jebel Hasan, rises 1237 ft . above the level of the sca. The hight land which forms Cape Aden, when approached from the E., is scen from the sca at a distance of between 40 and 60 m .

In 1839, the town, and the peninsula on which it stands, were purelased by the Fast India Company from the Sheikh,
ings, or the wretched huts of the inhabitants. Two of the minarets were then in a dilapidated condition, and the several mosques were in ruins. The fortifications encircling the town were constructed by Sultan Soleiman. A battery formerly extended along the whole length of the shore; and here, mounted on rude carriages, are still seen three enormous brass guns, supposed to have been brought there by the Turkish flect in 1530. In the 17 th century, Aden contained 30,000 inliabitants. When Lieut. Wellsted was there, in 1835, its population did not exceed 800 -the descendants of Arabs and Somaulis, and the offspring of slaves. Not a Turk remained in the town, and only about 20 families were engaged in mereantile pursuits; the remainder gaining a miserable subsistence by supplying the llagy (pilgrimage) boats with wood and water, or by fishing. A few lBanians monopolized the greater part of the trade; and about 250 or 300 Jews, with their wives and fimilies, occupied a separate quarter.-(Nicbuhr's Arabia; Salt's Abyssinia; Wellsted's Travels in Arabia, vol. ii.; Wilkinson's Modern Egypt, vol. ii. pp. 45, 46; Account of Aden, by J. I'. Malcolmson, Esq., Civil and Staff Surgeon, in Jour. Roy. Asiatic Soc., vol. viii., p. 279 ; Brown's Remarkis on Aden, in Nautical Magazine, 1847, p. 246.)

ADEN (Gulf or), the name now generally given to the tract of sea lying between the N. coast of Somauli, terminating E. with Ras Jerdaffoon (Cape Guardafui), and the S. coast of Arabia, between Ras Arrali and Ras Agab; the former in lat. $12^{\circ} 40^{\prime} \mathrm{N} . ;$ lon. $44^{\circ} \mathrm{E}$. ; the latter in lat. $15^{\circ} 15^{\prime} \mathrm{N} . ;$ lon. $51^{\circ} 30^{\prime} \mathrm{E}$. Its length, from E. to W., is thus about 480 mr ; its breadth, from N. to S., varying from 160 to 200 m . The
to whom they belonged, to be made a depôt for coals, and a calling station for the mail steamers between India and Suez; and the result is, that not less than 24,000 tons of shipping visit the port annually, to supply the depôts with eoals. The son of the Sheikh who had sold the town refusing to deliver it up, a naval and military force was sent out, in 1840, to take possession of it; which was done. The place was afterwards attacked repeatedly by the Arabs, who, being repulsed with loss on every oecasion, finally left the town in quict possession of the English. Since then, its improvement has been rapid. Capt. Haines, of the Indian navy, the governor, writing from Aden, June 2, 1843, says: 'The city contimues to increase; and supplies of all kinds are plentiful. The pop. is now about 22,000 , instead of 600 , as in former times. It is a busy, lively place. We have as many as four stcamers a-month; and trees and gardens are springing up on all sides.' The pop. now ( 1850 ) is estimated at about 40,000 . Coffee of the liest quality, and all the other commodities which enter into the commerce of the Red Sea, are procured here; including the gums, myrrl, frankincense, and balsams, imported from the N.E. distriets of Africa.

The station is thus important to Britain, both in a commercial and political point of view. The peninsula of Aden resembles the rock of Gibraltar, and could be rendered as formidable. The town is now in a fair way of becoming the entrepôt and point of transit for the commerce of Arabia and Abyssinia, to the detriment of Mocha. 'Aden,' says a French geographer, - is unique as a military position. As a Roman eommercial colony, in the time of Constantine, it was famous for its impregnable fortifications, its preat trade, and its excellent borts, which received vessels from all parts of the known world. In the hands of England, it is sure to recover its $I^{\text {rrosperity }}$ and supremacy over all the surrounding countries, more particularly over Yemen; and to be a stumbling-block in the way of the future commercial relations between France and Abyssinia.'-(Lacroix, Annuaire des Joyages et de la Géographie for 1844.)
In the 11 th, 12 th, and 13 th eenturies, $A$ den maintained an extensive trade with India and China, and was then the entrepot of the riches of the East. Its decay dates from the discovery of the passage round the Cape of Good llope. In 1835 , according to Wellsted, all that remained of the former city were four minarets, about 100 honses, and some disjointed remnants of its walls; the rest heing occupied by tombs, mounds, and heaps of rubbish, roofless walls of older dwell-
principal bays, harbours, and inlets, on the Aralian side, are Khore Amerra, a basin-like inlet, of 3 or 4 m . in extent, about 20 m . E. Ras Arrah; Aden Bay and Harbour, the former ealled Bander Tuwayyi by the natives; Maculla, or Makallah Bay, one of the best harbours on the coast, in about lat. $14^{\circ} 30^{\prime} 40^{\prime \prime}$ N.; lon. $49^{\circ} 12^{\prime} 20^{\prime \prime}$ E. ; and Sharma Bay, in about lat. $14^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $49^{\circ} \mathrm{E}$. On the A frican side ot the gulf, there are only two bays, or harbours, of any note; these are Zeyla, in lat. $11^{\circ} 17^{\prime}$ N.; lon. $43^{\circ} 5^{\prime}$ E.; and Berbera, in lat. $10^{\circ} 22^{\prime} \mathrm{N} . ;$ lon. $45^{\circ} 10^{\prime} \mathrm{E}$. The latter is one of the most considerable bays on this coast; and, though little known to Europeans, is much frequented by trading vessels from the coast of Arabia and the adjacent parts. During the montlis of January, February, and March, E. and E.N.E. breczes prevail in the gulf. In April and May, the winds are generally light, varying from E.N.E. to S.E. and S., with elear weather. In the former month, the mercury rises to $80^{\circ}$ and $86^{\circ}$; in the latter, from $84^{\circ}$ to $95^{\circ}$. In June, July, and August, the weather is generally hazy. From September to December, both inclusive, the winds are principally from E. to E.N.E., with pleasant weather, and a temperature ranging between $76^{\circ}$ and $84^{\circ}$. The Gulf of Aden is known also by the names of Sea of Babel-mandeb and Gulf of Arabia.-(Haine's Memoir of the S. and E. Coasts of Arabia; IIorsburgh's East India Directory, \&c.)

ADENA liA, or ADANARA, an isl. and its cap. in the Indian Archipelago, belonging to the Lutch. The island lies E. of Flores, from which it is scparated by the strait of the same name; lat. $8^{\circ} 17^{\prime} \mathrm{S}$. ; lon. $123^{\circ} 14^{\prime} \mathrm{E}$. (r.) ; about 35 m . long. ly about 15 m . broad. It is mountainous and well wooded, with a river on its E. coast. Besides the cap., Adenara, which has a haven, there are the villages of Carma, Labetan, Lamau, Lamabula, and Trony. This island belonged formerly to the I'ortuguese, who have still a possession on it, named Woeri, which carries on a little trade with Coopang.

ADENAU, a tn. Prussia, prov. Lower Illine, gov. of, and 30 m . W.N. W. from Coblentz, on one of the tributaries of the Alir; 2434 ft . above the sea. It has a church and chapel; manufactures, on a small seale, of woollen and linen fabrics; three corn-mills; some tanneries; and six annual markets. In the vicinity are iron and lead mines. P'op. 1430 .

ADERNO [ane. Adranum or IIadranum], a small tn. Sicily, prov. of, and $18 \mathrm{~m} . \mathrm{N}$. W. from Catania, and about 10 m . W.S.W. Mount Etna. It is surrounded by walls, and lias several ehurches and monastic establishments. The prineipal
churcl is in a handsome square; the columns of its façade are of lava. The river Simeto, in the vicinity of the town, forms some remarkable cascades. Pop. 6623.

ADERRIG, a par. Ireland, co. Dublin; arca, 759 ac . Pop. in 1841, 127.

ADIAMAN [IIisn Mansur of Idrisi], a small tn. Asiatic Turkey, pash. Diarbekr; 75 m . W. by S. from the th. of that name, and 132 m. N.E. by N. Alcppo; lat. $37^{\circ} 45^{\prime}$ N.; lon. $38^{\circ} 32^{\prime}$ E. It is of a circular form, with a mound in the centre, and is surrounded by gardens and groves. It contains 1100 houses, several mosques, three ruinous khans, and a lath. Of the houses, 800 belong to Mahometans, and 300 to Christians. Mr. Ainsworth describes the country around as consisting of nearly level grassy plains, well watered by rivulets.

ADIGE [anc. Atissius or Athesis; German, Etsch], a large river, N. Italy; it rises in the Rhetian Alps, about lat. $46^{\circ} 30^{\prime} \mathrm{N}$., and, after a winding course of about 180 m ., chicfly S. and W., falls into the Adriatic at lat. $45^{\circ} 10^{\prime} \mathrm{N} . ;$ lon. $12^{\circ} 20^{\prime} \mathrm{E}$. In its course through Italy, it passes Verona and Legnago, and is from 300 to 500 ft . wide below the former, to which point it is navigable. Being confined, like many otlier Italian rivers, between high artificial embankuents, it is deep and rapid, and of difficult navigation, especially in the spring, when it is liable to sudden floods from the melting of the snow. The Adige and Po now enter the sea by one common delta, two branches of the former being connected with arms of the latter. This junction of the two streams at this point, has had the effect of accelcrating the encroachment here of the new land upon the Adriatic. The principal affluents of the Adige are the Eisack, the Noce, and the Aviso.

ADINJIK, a small th. Asiatic Turkey, on the S. shore of the Sea of Marmora, from which it is distant about $1 \frac{1}{2} \mathrm{~m}$.; lat. $40^{\circ} 20^{\prime} \mathrm{N}$.; lon. $27^{\circ} 50^{\prime} \mathrm{E}$. It is situated on high ground; is composed of from 400 to 500 houses, chiefly Turkish, and contains six mosques. It is a wretehedlooking place; but is surrounded with numerous relics of antiquity.

ADISHAM, a par. England, co. Kent ; area, 1810 ac. ; handsome chureh, the Palmer charity. Pop. in 1841, 372.

ADJYGHUR, a tn. and fortress, Hindoostan, prov. Allahabad, situated between Callinger and Pannah; lat $24^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $80^{\circ} 3^{\prime}$ E. The fortress, enclosing a space of about 800 yards in breadth, is placed on a steep hill, and is inaccessible except by well-defended pathis leading to the gates. It was besieged, and, after a resolute defence, taken hy the IBritish, in 1809.

ADLINGFLEET, a par. England, co. York, W. Riding; area, $4580 \mathrm{ac} . ; 9 \mathrm{~m}$. S E. llowden. Pop. in 1841,448.

ADMIRALTY GULF, Australia, N.W. coast, about 70 m. S.W.Cape Londonderry ; lat. $14^{\circ} 28^{\prime}$ S.; lon. $125^{\circ} 58^{\prime}$ E. (r.) All this part of the coast, extending from N.W. Cape to Cape londonderry, is subject to light winds during the E. monsoon, and occasionally to strong winds and gales from the N.W. during the W. monsoon.

ADMIRALTY INLET, a bay, S. side of Barrow Strait, N. America; lat. $73^{\circ} 40^{\prime} \mathrm{N}$; lon. $83^{\circ} \mathrm{W}$. The shores of the inlet, or bay, and adioining country, present a beautiful appearance from the sea; the latter consisting of verdant meadows, adorned with clumps of trees, on which deer are seen depasturing in great numbers.-The name, Admiralty Inlet, has been given also to a deep indeutation in the land recently discovered in the Antarctic seas, by Capt. Ross about lat. $64^{\circ} 15^{\prime} \mathrm{S}$. and lon. $58^{\circ} \mathrm{W}$. This arm of the sea is terminated, at about 20 m . from its entrance, by a glacier. The S.W. land of the inlet, for about 10 m . is formed of decp brown-coloured lava, and the W. coast of perpendicular cliffs of basaltic rock.-(Ross's Antarctic Expedition, 1839-43.)

ADMIRALTY ISLAND, a large isl. on the W. coast of N. America, between the continent and George III.'s Archipelago; 80 to 90 m . long, and 25 broad; its centre is in lat $57^{\circ} 30^{\prime} \mathrm{N}$. lon. $134^{\circ} 40^{\circ} \mathrm{W}$ The shores are in some larts bold and rocky, in others low. It has some commodious lays, well supplied with fresh water. Although the soil is scanty, being but a thin layer on a bottom of rock, it is covered with fine trees, mostly pine, measuring, some of them, 23 ft . in girth. The sea has made large encroachments on the island, as well as on the neighbouring contincut. The
natives are fierce and warlike, and well acquainted with the use of firearins.

ADMIRALTY ISL. $A$ NDS, a group of isl. in the S. Pacific Ocean, to the N. of New Guinea; between lat. $2^{\circ}$ and $3^{\circ} \mathrm{S}$. The largest-Great Admiralty Island-is between 50 and 60 m. in length. They were discovered, in 1616, by two Dutch ships fitted out by a company of merchants of Alkmaar, and commanded by an experienced navigator, named Cornelins Schooten, who was accompanied by James le Maire, the son of a merchant of Egmont, as commissioner or supercargo, and to whom the discovery of the islands has been attributed, though on what ground is not evident. They have been called, with apparently more propriety, Schooten's 1slands. They were visited, in 1761 , by Capt. Cartcret; by Morello, the Epanish navigator, in 1781; and by d'Entrecasteaux, when in search of La Pcrouse, in 1793. They rise little above the level of the sea, but prescnt a beautiful appearance, being covered with a luxuriant vegetation, and witl dense groves of cocoa-nut trees-the nut forming the principal food of the natives. The soil and climate are good; but communication with their shores is rendered difficult by the formidable reefs and breakers with which they are surrounded. The islanders are black, but not of the decpest shade; of large stature; wellformed, and agreeable countenances, differing but little from Europeans. They go nearly naked, the only covering of the men being a shell, and of the women a girdle of matting. Their hair is black and crisp, and their whole bodies bedaulied with a composition of red ochre and cocoa-nut oil. Both sexes adorn themselves with shells. Accounts differ as to their dispositions; some navigators representing them as doeile and friendly; others, as the reverse. Their war weapons are pointed with flint, and their knives are made of the same material. Their canoes, formed of the trunk of a tree hollowed out, having the sides raised with boards, are skilfully constructed, and many of them of great length, reaching to 50 ft ., though only 2 or 3 ft . wide. In these canoes, which earry large sails of matting, they glide along with amazing rapidity. The chewing of betel is general amongst them.

ADMIRALTY SOUND, Terra del Fuego. It extends inland, 43 m. S.E., having a width of 7 m . at the entrance, which gradually diminishes to 3 . On its N. side, the shore is straight; but the S . side has two deep inlets. It terminates in a bay, affording anchorage in from 10 to 15 fathoms; but is very much exposed to N. winds.

ADMISTON, or Athelhampstone, a par. England, co. Dorset; area, 290 ac . ; on the river Piddle. Pop. in 1841, 74.

A DN1'IIl, a par. Ireland, co. Tipperary ; area, 855 ac. Pop. in 1841, 293.

ADONI, or Adavani, a district and tn., S. Mindoostan, Palaghaut territories, bounded on the N. by the Toombudra river. It was ceded, with the country to the S. of the ToomLudra and Krishna, in 1800, to the Britislı Government. Its prineipal towns are Adoni, Chagee, and Goovoor.-Adoni, cap. of the district, is 55 m . W.S.W. Kurnool ; lat. $15^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $77^{\circ} 20^{\prime}$ E. In 1787, it was taken and destroyed by 'Iippoo Saib; and added, along with the district, in 1800, to Great Britain. It is now a place of little importance.

ADONY, a market tn. Hungary, circle of, and 24 m . E.S.E. from Stuhl Weissenburg, and 28 m . S. Buda; situated in a fertile country, on the right bank of the Danube. It has a Greck church, some Iioman antiquities, and carries on a brisk trade. Pop. 3180.

ADORF, a tu. extreme S. of Saxony, circle of, and 28 m . S. from Zwickau, 15 m . E.N.E. Ilof, in Bavaria, and within 4 m . of the Bavarian and of the lhohemian frontier. It lies in a rugged picturesque valley, on the Elster, near its source; has two churches and a public reading room; and carries on an active frontier trade. The iuhabitants are, besides, engaged in weaving, paper making, corn griuding, brewing, dyeing, vinegar making, tanuing, in the manufacture of musical instruments and strings, and in cattle rearing; which last is carricd on extensively. Pop. 2450.

ADOUR, a river. France; lias its source in the mountain ridge of the Tourmalet, dep. Hautes Jyrences. 1ts course is first N., then W. and S.W. and S.S.W.. passing St. Lever and Dax, to the former of which it is navigable, and falls into the sea a little below Jayonne. Its whole length is estimated at about 170 m . The current is rapid; and sometimes serious
itundations are caused by the melting of the snows on the I'yrenees. The Adour conveys down timber from the Pyrenees; pitch and tar, rosin, cork, grain, brandy, \&e., from Armagnae; but a shifting bar at its mouth renders the passing in and out of vessels, whieh ean only be attempted at high water, difficult, and sometimes dangerons. Abont the year 1500, the sands at Bayonne were suddenly thrown across the mouth of the Adonr, foreing the river to seck a passage for itself to the N., along the sandy plain of Cape l3reton, till it reached the sea at lBonean, 21 m . from the point where it had formerly entered. In 1579 , it was restored to its ancient channel by the celebrated architeet, Louis de Foix, at the desire of IIenry 1 II.

ADOWA, or Anouerr, a tn. Abyssinia, kingdom of Tigré, on the left bank of the river llassam, a tributary of the Tecazze, at an elevation of 6000 ft . above the sea, about 10 m . E. Axum ; lat. $14^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $39^{\circ} 3^{\prime}$ E. It lies partly on the slope, and partly at the foot of a hill; the houses, of the usual Abyssinian form, being, according to Salt, regularly disposed in streets or alleys, and interspersed with small and well-eultivated gardens, and plantations of the snowy-blossomed wansey. It is the ehief commereial depôt on the great caravan route from Massowa to Gondar; has considerable manufactures of fine and coarse cotton eloths, iron, and brass ware; and enjoys an extensive transit trade in lead, tin, copper, gold, Persian carpets, raw Chinese silks, velvets, broad cloths, dyed skins, glass ware, ivory, and slaves. The trade is condneted chiefly by Mahometans, and the inhabitants, from their frequent intercourse with strangers, especially Europeans, are said to be the most civilized of all the Abyssinians. Pop. estimated by Salt at 8000 .

ADPAR, a tn. and bor., co. Cardigan, Wales, on the river Teifi, $10 \mathrm{~m} . \mathrm{E}$. by S . Cardigan. It has a little retail frade, but $n o$ other kind of traffie. Its cattle fairs, however, of which there are 11 yearly, are well attended. Adpar, with Emlyn, contributes with Cardigan, Aberystwith, Lampeter, and Tregaron, to return one member to P'arliament. Pop. in 1841, 1619.

ADRA [anc. Abdera], an insecure port, spain, in Andalusia, prov. of, and 29 m . W.S. W. from Almeria, near the mouth of the Adra; lat. $36^{\circ} 44^{\prime \prime} \mathrm{N} . ;$ lon. $3^{\circ} 11^{\prime \prime} \mathrm{W}$. (r.) ; on an eminence facing the Mediterrancan, much exposed to the E. and W. winds. In form it is triangular, and its honses, generally only of one floor, form irregnlar, ineonvenient, badly-paved, and dirty streets, with the single exception of one, ealled la Playa, which is broad, and has some elegant buildings. It has two little squares, a townhall, prison, brick parish chureh, several chapels, two endowed sehools, and the remains of a Moorish eastle, which formed part of the town's fortifications, now in ruins. The inhabitants are employed in agriculture, fishing, listilling brandy, and manufaeturing lead from the ore procured from the extensive mines in the neighbourhood. The lead trade has inereased considerably of late years, and both the mannfactured produce and the ore are exported, cliefly to Marseilles, to the extent of about 569.4 tons ammally. The total exports of Adra, which, besides lead, include silver, wine, and fruits, amount to about $£ 130,000$ annually. In the vicinity are cultivated grapes, wheat, barley, maize, sweet potatoes, sugar, \&c. The eultivation of sugar, formerly extensive, has much fallen off since foreign sugar became ehcap. Pop. 7400.-(Madoz, Jhic. España.)

ADRAGOOLE, a par. Ireland, co. Galway; area, 8442 ac. An extensive landslip occurred in this parish in Mareh 1745. l'op. in 1841, 3321.

ADRAMY'ГI [anc. Adramyttium], a tn. Turkey in Asia, pash. Anadolia, near the head of the gulf of the same name, 80 m . N. Smyrna; lat. $39^{\circ} 35^{\prime} 30^{\prime \prime}$ N. ; lon. $27^{\circ} 2^{\prime} 30^{\prime \prime}$ E. (r.) It is built upon a hill overlooking an extensive valley of olive plantations, and consists of nearly 1000 houses, mostly Turkish. The streets are narrow and ill paved. It has a small port, from whieh are exported wool, olives, and gallnuts, ehiefly sent to Constantinople; the onlyarticle that finds its way to the markets of Europe, is a little of the gall of Valonia. $1^{3}$ opp. $5000 .-$ The Gulf of Adramyti has the large island of Mytilene at its entrance, forming two passages to the gulf, one on the $\mathbf{E}$, the other on the N . of that island. The E. passage is 10 m . wide, the N . about 5 ; there is deep water in both.

ADRANOS, or Emrenos, an anc. th. Turkey in Asia, on the left bank of a river of the same name, at the foot of a
limestone hill, 10 m . S.W. Mount Olympus, and 135 N.N.E. Smyrna; lat. $39^{\circ} 59^{\prime} \mathrm{N}$. ; lon. $28^{\circ} 55^{\prime} \mathrm{E}$. It is now in ruins, but these are of a very imposing and interesting character. The prineipal consists of a large square building, 88 paces by 65. It is built of large hewn stones, put together without cement; the wall remaining is about 30 or 40 ft . high. There are also some beantiful specimens of Iontic and Dorie seulpture, and mumerons colmmens, and traces of ancient walls. Mr. W. J. Ilamilton is of opinion that these are the ruins of IIadriani.-(IIamilton's Asin Minor.)

AIRALiA, a vil. and commune, Venetian Lombardy, prov. of, and 16 m . N.E. from Bergano. It lies in a mountainous region, and the inhabitants are chietly employed in agriculture and cattle rearing. The vicinity is noted for the quantity and flavour of its grapes. A large anmal cattle fair is held in November. 1ron, marble, and alabaster. are found in the neighbourhood. ''op. of vil. and commune, 2107.

AI)RIA [anc. Atria, or IIatrio], a city, Venetian Lombardy, 12 m . E. Rovigo, between the Po and the Adige. The present town is comparatively modern, being built with the materials of the aneient eity, which stood a little to the S. of it. The latter was at one time a flourishing seaport, and gave its name to the Adriatic, from which it is now fully 15 m . distant; the alluvial deposits of the Po, the Adige, and other smaller rivers having gradually filled up its harbour, and, in the course of ages, formed the tract of land which now intervenes between it and the sea. Many interesting relics of the ancient city are still to be seen, including baths, aqueduets, mosaic pavements, \&e. The modern city is the sce of a bishop. It has a considerable trade in cattle, grain, silk, flax, firewood, leasher, and earthenware. The country aronnd produces corn and wine. Pop. 10,400.

ADRIANOPLE [anc. Adrianopolis; Turkish, Adraneh, and Idrench], a city of European Turkey, and long its cap. ; now chicf place of the pash. of Adrianople, the largest of the empire, by the ancients called Thrace. The city lies on the left bank of the 'Tondja, near its junetion with the Maritza; lat. $41^{\circ} 41^{\prime} 27^{\prime \prime} \mathrm{N}$. ; lon. $26^{\circ} 35^{\prime} 41^{\prime \prime}$ E. (1.) It is a large and important city, being about 5 m . in circumference; but the streets are remarkably narrow and dirty. It is the see of a Greek bishop, dependent on the patriarchate of Constantinople. The chief bazaar is an extensive building, being 300 paces long, and having six gates; it is appropriated chicfly to the sale of jewellery, slawls, muslins, \&e. The chief mosque is a splendid structure, with an immense number of windows. It has four lofty minarets, and the interior is richly decorated. This edifice is believed to be the finest Moslem temple extant. Another interesting building is the palace, once the residence of the Sultan Selim. The aqueduet which supplies the city fountains, is also a noble structure; there are, likewise, numerous baths. But with these exceptions, there is not much to interest the visitor; many of the houses look as if deserted; grass grows in some of the streets ; and the whole place has an air of desolation. It is surrounded with old walls; and further defended by a citadel, in whieh are an arsenal and a cannon foundry. Adrianople can scarcely be called a port, although the Maritza is navigable to within a short distance of $i t$, during a portion of the year. Several fairs are held yearly in and about Adrianople, at which considerable quantities of British goods are disposed of. Its importance has lately been inereasing, as a central depôt for merchandise destined for the consmmption of its own pashalie, and Bulcaria. There is a British eonsulate here. Nilk and flax are the principal produets of the distriet; and the Alrianople or Trukey-red dye, produced from the madder raiset there, is famous all over the civilized world. The principal artieles exported to Britain are hare skins, otto of roses, silk, yellow berries, and valonia. There is a considerable trade in tobaeco and bees' wax with Germany. The silk produced here is somewhat inferior to that of Broossa, and is chiefly consumed in the silk mannfactories of Constantinople. The sheeps' wool is the finest in 'Turkey; and is mostly bought up for the Freneli market. Sugar eanes and rice, to a considerable amount, are grown in the tervitory, but chiefly for home nse. A few British vessels trade to Enos, the port of Adrianople, and the number is on the increase. Other foreign vessels there trading, are chiefly French and Austrian. Allrianople was, in early times, a possession of the Bessi-a Thracian tribe under the name Uscudama; and, finally, received that

## RGEAN SEA

of Adrianopolis from the Roman emperor $\Lambda$ drian, who rebuilt it in the second century, and constituted it capital of the province of Mount Hacmus. In August 1829, it was taken and oceupied by the Russians, who retained it till the 14 th of September, when they there signed a treaty of peace with the Porte. Adrianople is subject to the plague oceasionally; the latest severe visitations were those of 1836 and 1837. The surrounding territory is fertile. The city stands on the N. side of a large plain begirt with hills, on one of which it is partially built. It is approached by several bridges, over which strings of camels are usually seen passing. Pop. of city, nearly 100,000 - (Purl. Reports, \&e.)

ADRIATIC SEA, or Gulf of Venice [Mare Adriaticum, or Superum], a large arm of the Mediterranean, extending in a N.W. direction, from lat. $40^{\circ}$ to $45^{\circ} 50^{\prime} \mathrm{N} .$, bounded, N. and N.E. by Austria, E. by Turkey, and W. and S. W. by Italy. It is about 500 m . in length, with an average breadth of about 100, exeepting at the Strait of Otranto, where it does not exceed 45 m . in width. Its depth, between Dalnnatia and the mouths of the Po, is 22 fathoms; but a large part of the Gulf of Trieste, and the Adriatic, opposite Venice, is less than 12 fathoms deep. Further to the S., where it is less affected by the influx of great rivers, the gulf deepens considerably. It has little or no perceptible tide, except at Venice, where there is a rise of a few feet. Notwithstanding the present shallowness of the Adriatic, there can be little doubt that its original depth was much greater than it is now, as was also its extent, the former being affected by the deposits of sand, marl, and tufaceous inerustations-strictly analogous. to the strata of which the subappenine and uther hills of the Italian peninsula are composed-which are rapidly aceumulating at the bottom; and the latter, by the low alluvial tracts forming along its borders. The most remarkable instanee of these accessions of land occurs on the W. coast, where a series of lagoons, formed by long lines of sand bars, are rapidly filling up, and being converted into meadows by newly deposited mud brought down by the streams. Between the N. point of the Gulf of Trieste, down to the S. of Ravenna, there is an uninterrupted series of reeent accessions of land, more than 100 m . in length, whieh, within the last 2000 years, have inereased from 2 to 20 m . in breadth. It is calculated that the mean rate of advance of the delta of the Po on the Adriatie, between the years 1200 and 1600 , was about 27 yards a year; whereas, the mean annual gain, from 1600 to 1804 , was 76 yards.-(Lycll's Geology.) During summer, the navigation of the Adriatie is safe; but the S.E. gales in winter render it dangerous, vessels failing to make some of the bays on the E. side, running the risk of being stranded on the shoals on the W. The Italian and Venetian shores are low and sandy, without good ports, and bordered by dangerous shoals. The E. coast is high and roeky, and indented by nunerous bays and gulfs, affording good anchorage. The prineipal are, the Bay of Avlona and Gulf of Drin, in Turkey; the Gulfs of Cattaro, Fiume, and Trieste, in Austria; and the Gulf of Manfredonia, in Italy. The ehief trading ports are Avlona, Fiume, Trieste, Venice, Ancona, and Otranto.

ADRO, a tn. Venetian Lombardy, cap. of district of same name, prov. of, and $10 \mathrm{~m} . \mathrm{W} . \mathrm{N}$. W. from Breseia, and $10 \mathrm{~m} . \mathrm{N}$. Chiana. The inhabitants are chiefly occupied with agriculture, raising grain, fruits, and vegetables, grapes, and olives, and in rearing silkworms. Pop. of tn. 2214 ; of district, 14,563.-(Dizio. Univ. Italia.)

ADSTOCK, a par. England, co. Buckingham; area, 1130 ac. $; 3 \mathrm{~m}$. N. Winslow. Pop. in 1841, 419.

ADULIS, Adule, or Zulla, the ruins of an aneient tn. Abyssinia, territory of the Dankali, near the head of Annesley Bay, on the W. eoast of the Red Sea, 30 m . S.S.E. Arkeeko; lat. $15^{\circ} 15^{\prime} \mathrm{N} . ;$ lon. $39^{\circ} 55^{\prime} \mathrm{E}$. The ruins are situated at a distance of 3 m . from the sea, and consist merely of a fow square columns and eapitals, without either inseriptions or seulptures. Adulis, however, was a place of note at a very early period. In the sixth eentury, it was the port of Axum, and was the seat of an extensive traffie in ivory and slaves, and the medium of a large general commercial intereourse with Arabia and India. An inseription, on a tablet of white marble, found here in 525 , by Cosmas, a merchant of the period, records that Ptolemy Euergetes, king of Egypt, undertook an expedition to Adulis, from which point he pushed his eonquests along both shores of the Red Sea; and, on the

African side, subjugated the scaport states as far as Zanzibar, and the countries inland as far as Shoa.

ADVENTURE BAY, a large semicircular bay in Brune Island, off the S.E. coast of Van Diemen's Land ; its entrance, whieh is 8 m . in width, is formed by Cape Cancle, or Fluted Cape, on the S., and Cape Fredcriek Henry on the N. It was diseovered, in 1773, by Captain Furncaux, who gave it the name of his ship, the Adventure. It was again visited by Captain Cook in 1777, and by Captain Bligh in 1788 and 1792. The bay is well sheltered, the anehorage good, and abundance of wood and water is to be found on its shores.

ADVENTURE ISL $\Lambda$ ND, a small isl. S. Pacific Ocean; lat. $17^{\circ} 4^{\prime} \mathrm{S} . ;$ lon. $144^{\circ} 14^{\prime} \mathrm{W}$. (r.)

ADVENTURE SOUND, and HARBOUR, E. Falkland Island. The former is a bay 20 m . in length, and from 3 to 4 m . in breadth, eontaining some good harbours, and several islands, clothed with tussae grass; its shoals are fringed with kelp. Adventure Harbour is in the S. part of the sound, and is one of the best in it.

ADWELI, a par. England, co. Oxford; area, 500 ac . In the vieinity is Adwell-Cop, an ancient Danish entrenclment. Pop. in 1841, 46.

ADWICK-LE-STREET, a par. England, co. York, W. Riding; area, 2950 ac.; 4 m. N.W. Doneaster ; Iledge's charity. Pop. in 1841, 554.

ADWICK-UPON-DEARNE, a par. England, co. of York, W. Riding; area, 1130 ae.; near the spot where tho North Midland Railway erosses the Dearne and Dove Canal. Pop. in 1841, 180.

AGADEAN ISLANDS, a group of islands lying off the W. end of the isl. of Sicily, between lat. $37^{\circ} 55^{\prime}$ and $38^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $12^{\circ}$ and $12^{\circ} 26^{\prime} \mathrm{E}$. They are five in number, namely, Maritimo, Favignana, Levanso, and the two Formiches. Maritimo, the most westerly, rises to the height of 2376 ft ., and is about 7 m . in eireumference. It contains 50 or 60 inhabitants, who subsist by cultivating the ground, colleeting honey, and exporting faggots. Favignana, the largest of the islands, is 14 m . in circumference. It derives a considerable revenue from its tunny and anchovy fisheries, its stone quarries, and from the sale of sheep, goats, and poultry. The island abounds in game, and hares and rabbits are plentiful; fish also is abundant. Levanso, 3 m . N.E. by E. Favignana, is about 6 m . in circumference; it is high, of rugged appearance, and accessible only at two or three spots. Its ehief produce is faggots; but the few residents who are on the island eultivate a little grain and fruit, and rear a small number of sheep and goats. There is exeellent fishing all round the island, but particularly on its S. side. The Formiches are two low, barren, rocky islets, lying at the distance of between 2 and 3 m . E.S.E. Levanso; they are separated from eaeh other by a channel $\frac{1}{2} \mathrm{~m}$. wide.

AGEAN SEA, or Grecian Archipelago. The former, a name given by the Greeks and Romans to that part of the Mediterranean lying between Asia Minor on the E., Greece and part of Turkey on the W., and the shores of Roomelia, in the latter country, on the N. Its length, from N. to S., is about 400 m . ; its breadth, generally, upwards of 200 , excepting at Cape Doro, at the S. extremity of the island of Negropont, where it narrows to 90 m ., but afterwards expands to nearly its former width. Its depth is very great, there being no bottom with 200 fathom line, at less than a mile from the shore. It contains numerous islands, many of which are of voleanie origin; others are composed entirely of a pure white marble. The more southern were distribnted by the ancients into two chief groups, called, respeetively, the Cyclades, from their supposed eircular arrangement; and the Sporades, or 'Seattered Islands,' the former eomprising those lying to the W., and now considered part of Europe; the latter, those dispersed along the Asiatic eoast. Some of the islands have an exceedingly pieturesque appearance, and are very fertile, producing wine, oil, gum mastic, wax, raisins, figs, silk, honey, olives, lemons, and oranges. The elimate is more equal and temperate than that of the adjoining eontinents. Several of the larger islands contain sulphur, alum, iron, and other minerals. Most of them are high, their mountain elevations having an average height of 1500 to 1800 ft . All the islands are thinly peopled; but the men are a fine athletic raee, and, from their insular position, make excellent sailors. The religion of the inhabitants is that of the estalr
lished Greek clurch. Professor E. Forbes, in dredging the Ligean sea, has aseertained that there are eight well-marked regions of depth, each characterized by its peculiar testaccous fauna. The first of these, called the littoral zone, extends to a depth of 2 fathoms only: but this narrow belt is inhabited by more than 100 species: the sceond region is almost equally populous; and in the eighth, no less than 65 species of testacea have been taken. The majority of the shells in this lowest zone are white, or transparent. Only two species of mollusca are common to all the eight regions, namely, Arca luetea, and Cerithium lima.

Among the principal islands of the Agean Sca, are Santorin, Stampalia, Cos, Kalimno, Amorgo, Milo, Paros, Naxia, Syra, Mikoni, Andro, Nikaria, Samos, Khio, Skyro, Mitilini, Lemnos, Imbro, Nanotraki, and Thasos (all of which see, umber their respective namess).

AGiNa, Egina, or Enga, an isl. Grecee, with cap. of same name. The isl. lies in the Gulf of Egina [anc. Suronicus Sinus, 16 m . S. by W. Athens; lat. (Mount Llias on the S. part) $37^{\circ}+1^{\prime} 9^{\prime \prime}$ N.; lon. $23^{\circ} 30^{\prime}$ E. (r.) It is 8 m . in length, and about the same breadth; is in general fertile, particularly in the W. part, where it is level, and enj'ys a delightful climate, the atmosphere being so pure, that cpidemic fevers, the scourge of the Morea, are unknown in it. The prineipal agricultural prodnctions are corn, cotton, wine, olives, figs, almonds, \&c. Ngina was anciently celebrated for the splendour of its buildings, but almust the only remains consist of some tombs, vestiges of wells, a mosaic pavement, and a few of the columns of the famous temple of Jupiter, Panhellenius, or the Pauhellenium of Agina, one of the most ancient in Greece. These ruius stand on an eminence of considerable height, called Mount St Elias. It was of the Doric order, and had a portico of six columns at each end, and ranges of 12 columns along each sile, the columns on the angles being counted both in flank and in front; internally, it was divided into what may be termed nave and aisles, by two ranges of columns, the space between which was uncovered. The extreme length of the temple is 90 ft ., measured at the base of the columns, by 45 in breadth. The columns, of which there were origmally 36 , now 23 , are nearly $5 \frac{1}{2}$ diameters in height. The sculpture of the Eginetans was of a character so peculiar, as to constitute a distinct style of art, frequently alluded to by ancient writers. Specimens of these sculptures were discovered, in 1811, among the ruins of the Pauhellenium, by a party of Euglish and German travellers. In recent times, the island of Egina has again begun to rise into prosperity and importance. On a ridge, which is separated by a narrow valley from the hill of the Panhellenium, are the zuins of a town, built, and for some time occupied, by Venetians. To facilitate their commercial enterprises, this situation was abandoned, and the inhabitants removed to the site of the ancient city, on which now stands the molern Egina. This comparatively reeent town is regularly built, and has some good houses, an orphan asylum, museum, library, and lazaretto. For some time it was the residence of the Greek senate and governor, and its various institutions were in a fair way of prospering; but the removal of the court to Athens, along with the library, and other stores of Ngina, have caused the latter greatly to declinc. The pop. of the town is about 10,000.

Agina was, at an carly period, occupied by colonies from varions parts of Greece; and in the sixth century B.C., the Aginetans had attained to great wealth and importance. They sent 30 ships of war to the battle of Salamis, where the valour of those who maned then contributed much to the fortune of the day. After the war with Persia, there arose between Athens and Lgina dispmtes, which terminated in the former taking possession of the island, and expelling its inhabitants. Their capital, Agina, which, in the reign of Tiberius, was destroyed by an earthquake, stood upon the W. coast. Its only remains are the fragments of a temple, the moles of its harbour, and some traces of its walls, on the landward side. Pop. of the island, exclusive of the town, 6000.-(Gifford's Ionian Islands; Balbi, Abrégé, \&c.)

AELTERE, or AELTER, a commune and vil. Belgium, prov. E. Flanders, situated near the canal, about 14 m . W. Gihent. It is a station on the railway between that city and Bruges. Here are tanneries, brewcries, and distilleries. It bas some trade in linen. Pop. of commune, 5964.

AENG, a tn. Aracan, on the left bank of a river of same name, 80 m . S.S.E. tn. of Aracan; lat. $19^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $94^{\circ} 1 \mathrm{u}^{\prime} \mathrm{E}$. It was formerly an important emporium for goods, but has now much fallen off. The river is not navigable except during floods, and then only for the boats of the country. The situation of Aeng is tolerably dry and healthy; and, in the environs, are grown tobacco, cotton, ginger, and peppers, of good quality; but agriculture is much restricted on account of the destruction caused by the troops of elephants that infest the country.

AER(OE, or Arroe, an isl. Denmark, in the Little Belt, about 8 m . L. from the isl. of Alsen; lat. $54^{\circ} 50^{\prime} \mathrm{N}$; lom. $10^{\circ} 20^{\circ}$ E.; about 15 m . long, and 5 m . broad at the broadest part. It is liilly, but fertile, and is now destitnte of wool, although at one period covered with it. Its N.E. coast is beset with shallows. l'roducts, the same with those of the island of Funcu, to which province it belongs, and from which it is but $7 \frac{1}{2} \mathrm{~m}$. distant. It contains several towns, anel 16 villages, and is, in proportion to its extent, the most populous distriet in the kingdom. The principal town, Aeroeskjobing, is situated on the S.E. side of the island; has a pop. of about 1600; carries on a considerable trade in corn, \&c.; and owns about 50 boats and vessels of different sizes, with a tonnage amounting, altogether, to about 1260 tons. Pop, of the isl. 10,200.-(Baggesen, Der dänische staat.)

AERSCHOT, or Aarschot [Latin, Arschotium], a tn. Belgium, on the Demer, prov. S. Brabant, district of, and 8 m . N.E. from Louvain, and 23 m. N.E. Brussels. It is a place of some antiquity; and, in the 12 th century, was the capital of a county of the same name. It was celebrated in the wars of the United Provinces; and was taken by the French in 1746 and 1793. The ruined tower of Aurelian is all that remains of its ancient fortifications. The parish church is an antique edifice. There are here some gin distilleries; lace is manufactured; and there is some trade in wood and grain. Pop. 3895.

AERSEELE, a vil. and commune, Belgium, prov. W. Flanders, district of, and 14 m . N.E. from Courtrai. It has some trade in flax, thread, and linen. Pop. of commune, 3558.

AERTRYCKE, a vil. and commune, Belgium, prov. W. Flanders, district of, and 7 m . S.W. from Bruges. It has a considerable trade in flax, linen, and wood. Pop. of commune, 3185.

ATOLIA, a division of ancient Greece, which may be said, generally, to lie between the Gulf of Patras and the Piudus mountains. The ancieut inhabitants-a mixed race from various parts of Greece-had a warlike and predatory character. Their cavalry was at one time esteemed superior to any other in Grecee; and, for a long period, they successfully resisted the power of Maccdonia. Their government was originally a monarchy, which, in a short time, was succeeded by a sort of republic, composed of a number of independent states. On the establishment of Roman dominion in Greece, Stolia became a part of the great Roman province of Achaia. In later times, the country was alternately subject to the Greeks and Turks, and now constitutes, with Acarnania, on of the political divisions of modern Greece.

AEZCOA, a valley, Spain, Navarre, on the S. slope of the Pyrences; having 3100 inhabitants, partly employed in tillage, but mostly in smuggling contraband goods across the French frontier.

AFFANE, a par. and vil. Ireland, co. Waterford; area, 7773 ac. Noted for its fine cherries, introduced by Sir Walter Raleigh. Pop. 1841, 2115.

AFFOGADOS, a vil. Brazil, prov. Pernambuco, ncar the sea, on the left bank of one of the mouths of the Capibaribe, and $3 \frac{1}{\mathrm{~m}} \mathrm{~m}$. S. Recife or Pernambuco. It has three churches, and a harbour suitable for large vessels; and carrics on some trade in cotton and sugar. Pop. 1000 - (Dic. Gco. Imp. Brazil.)

AFF-PUDDLE, a par. England, co. Dorset; area, 4940 ac.; on the river Piddle, 8 m . E. by N. Dorchester. Pop. in 1841, 507.

AFFRIQUE (St.) [Latin, Sanctum Africanum], a tn. France, dep. Aveyron, cap. around. 30 m . S.S.E. Rhodez; situated in a fine valley, between two mountains, on the Sorgue. surrounded by mealows, orchards, and vineyards. The streets are, in general, broad; but the houses are, for the most part, oll fashioned and ill built. The principal public edifices are
an hospital, courthonse lately erected, the parish chureh, and a beantiful fountain placed in the centre of the principal street. It is the seat of a tribunal of premicre instunce, and of commerce; also of a communal college, and a society of agriculture It is now the third town in the department for conmerce; and has manufactories of woollen cloths, serges, coverlets, cotton yarn, and hosiery, as well as works for tanning and dressing leather. $\Lambda$ good deal of business is done here in Roquefort eheese; and here the manufacturers of Castres and Careassonne obtain their supplies of wool. The town was formerly well fortified. Pop. in 1846, 6760.

AFGHANISTAN, the land of the $\Lambda$ fghans, an extensive, but imperfectly known territory of Central Asia. It is by some writers ealled Cabool, or Caboolistan, though this would seem to have been the name of an empire much more extensive than what is now recognized as $\Lambda$ fghanistan. It is likewise at times called Kandalar; and also, though very ineptly, E. Persia. What is now generally understood by Afghanistan is that territory lying between lat. $26^{\circ} 55^{\prime}$ and $36^{\circ} 25^{\prime}$ N., and lon. $59^{\circ} 19^{\prime}$ and $72^{\circ}$ E.; bounded, N. by Khiva, Bokhara, and Budakshan; S. by Beloochistan, and part of Sinde; E. by Damann (its limits in this direction, however, leing sometimes extended to the Indus) ; and W. by Persia. Its extreme length, from N. to S. , is about 615 m ., its breadth about 600 . The N.E. portion of the territory is erowded with lofty monntains, and is called, on this aceount, Kohistan, or 'Land of Mountains.' 'These belong to the eentral Hindoo Koosh or Indian Caucasus-a continuation of the IImalaya range, and rise to a stupendous height. 'The magnificence and variety of their lofty summits,' says Mr. Elphinstone, 'and the awful and undisturbed solitude whiel reigns amid their eternal snows, fill the mind with an admiration and astonishment that no language ean express.' 'The ascertained heights of the most elevated snmmits, vary from 18,000 to considerably upwards of $20,000 \mathrm{ft}$. The loftiest peak is about 42 m. N.N.W. of Cabool. This monntainous region is traversed by numerous passes; the greatest number, and most remarkable of whieh, are between the $68^{\circ}$ and $69^{\circ} \mathrm{E}$. lon.; the highest are those of Hajeekuk and Kaloo, respeetively above $12,000 \mathrm{ft}$. The other passes, within the limits mentioned, are those of Oonna, $11,000 \mathrm{ft} . ;$ Karakootal and Akrobat, eael about $9000 \mathrm{ft} . ;$ and Shikun, 8040 ft . 'In the defiles of these mountains, the road frequently passes the base of a mural preeipiee, rising perpendieularly to the height of 2000 and 3000 ft ., and exhibits monuments of solemn grandeur, which it is diffienlt to deseribe.'-(Lieut. Burnes.) It was in the defiles of the Kurkuteha monntains E. from Cabool, between Tezeen and Jugduluk, that the British army was exterminated in 1842. The whole of the passes are free from snow about the end of June, but the most elevated peaks continue covered thronghout the year. Notwithstanding the great elevation of these regions, the heat of the sun, at mid-day, in summer, is intense, and vegetation extremely rapid. Lieut. Burnes found the inhabitants ploughing as the snow left the ground, at a height of $10,000 \mathrm{ft}$. ; the chief erop being a kind of barley, without husk. The loftier parts of the IIindoo Koosh are entirely destitute of wood, and, in many places, of verdure; but aromatie plants abound, and afford a pesture peculiarily favourable to sheep. The asafetida plant also flourishes here in great luxuriance; and is eaten with avidity by the natives, though laving the same offensive odour in the fresh as in the preserved state. The valleys, in this elevated region, present a striking contrast to the sterility of the mountains, being stored with the finest fruit trees, and elothed with a rieh verdure; the sides of the lower hills, also, are eovered with forests of pine, oak, and wild olive. The other ranges of mountains that traverse Afghanistan are the W . Hindoo Koosh, or Ghoor Mountains (ane. Paropamisus), a continuation of the eentral Ilindoo Koosh, and the Soliman Mountains. The former skirt the N. boundary of the territory, extending for about 350 m . from E. to W. They attain no great height, but are rugged and barren, of diffieult access, and little known. The latter traverse the country from N. to S., parallel with, and elose to, its E. limit. They are connceted with the central II indoo Koosh by the Khyber and Salt Hills; and their height, though mueh inferior to the former, is still eonsiderable; Mount Soliman, on which the ark is said to have rested, attaining an elevation of $12,000 \mathrm{ft}$.

Vol. 1.

Their whole length is also about 350 m ., lying between the 29th and 34th parallels of N. lat. There are numerous minor hills seattered over the various parts of the country; but the most extensive system will be found between the 30 th and 32 d parallels of N. lat., and the $66^{\circ}$ and $68^{\circ} \mathrm{E}$. Jon.; covering a space of about 150 m . in length, by about 120 in breadth, having the Kurklekee hills on the S., and the Gantee hills on the N . In the extension of the former into the adjoining territory of Belooehistan, is situated the famous Bolan Pass, so important in a military point of view, and through which the Bengal army marehed in 1839.

Although by far the greater portion of $\Lambda$ fghanistan be a land of roeks, mountains, and desert, and some of the former of the most inhospitable character, there are yet a number of fertile valleys, well watered, covered with elover, thyme, violets, and many odoriferous plants, and remarkable for their pieturesque beauty. In these favoured spots grain is grown in abundanee; and, as elsewhere mentioned, fruits of all kinds, ineluding oranges, citrons, grapes, pomegranates, apricots, apples, quinces, peaehes, pears, plums, almonds, and walnuts. The most extensive of these valleys or plains are those of Cabool and Peshawur; but there is also an exceedingly rielt level traet in the vieinity of Herat. A great part of Seistan is mere desert, as is likewise a large portion of the S. and S.W. part of the country, extending over a space of about 300 m . in length, by 100 in breadth.

There are few large rivers in $\Lambda$ fglanistan, and none that is not fordable thronghont its conrse for the greater part of the year. The prineipal are the Cabool, Helmund, FurralRood, Lora, Gomul, Khansh, Shahbund, and Urghesan, besides several minor streams. Most of these rivers are found flowing through the eentre of the kingdom, but, with the exception of the Hehmmen, whieh is said to be 400 m . in length, their courses are comparatively short, many of them being lost in swamps and deserts in the interior. There are no lakes in $\Lambda$ fghanistan, if wo exeept two sheets of water, which are rather morasses or lagoons than lakes; one of these is called Ab -Istada, and is situated about $50 \mathrm{~m} . \mathrm{S}$. by W. Ghuznee; the water is salt, and the banks are deeply inerusted with that mineral. Autlors differ as to its extent, this depending on the quantity of rain that falls, as in times of inuudation its dimensions are doubled, being sometimes about 12 m . in diameter, at others less than the half; it is not thought to be more than 3 or 4 ft . decp, horses having been ridden into it, to the distance of 1 mm . from the shore, without the water rising higher than their bellics. The other morass, or lake, is called Hamoon, a Persian word signifying a plain, and Zurral, by whieh last it is distinguished in some maps; it is ealled, besides, by various other names both by lersians and natives. It is situated in Seistan, on the W. border of Afghanistan; and is about 50 m . in length from N.E. to S.W., and about 25 m . in breadth. It has rarely a depth of more than from 3 to 4 ft ., and is almost entirely covered with reeds and rushes. The water of this lake, or swamp, is salt also, or at least brackish; the degree of saltness depending on its depth, and the nature of the bottom. The rivers IIelmund, FurrahRood, and other streams, flow into this lake, from which there is no outlet, the inerease of the waters being checked by evaporation merely.

Minerals.-These eonsist of gold, silver, copper, iron, lead, tin, antimony, zine, rock salt, \&e. Gold, so far as yet known, is eliefly eonfined to the streams that flow from the Ilindoo Koosh, but is believed to exist in some of the other ranges also, although it has not hitherto been obtained in any great quantities. Silver has been found in small qnantities in some of the valleys, and it is said that there are several mines of this metal in the Huzareh mountains, not at present worked. Copper abounds in many places, in the Kurkuteha range, in the vieinity of Tezeen, and to the S.E. of the city of Cabool, where it is believed the richest deposits are to be fonnd. Lead and antimony are met with in the Ghorbund valley, and in the lower part of the IIindoo Koosh; the latter exists also in the khyber range, and in sueh quantity as to render the waters delcterious. Iron ore oceurs in great abundance throughout the entire range of the llindoo Koosh. C'oal is found in the Kala range; also at Dobundee, in the N. of the plain of Peshawne, and in the Iluzareh eonntry.

Climate. -The elimate of Afyhanistan is various, depending more on the difference of elevation than on that of latitude,
the cold being very severe in the higher regions, and the heat intense in the lower. These extremes are strikingly illustrated by the circumstance of the summits of the mountains being often covered with snow, while the heat of the plains below is all but intolerable. Sewee, situated in Sewestan, the territory forming the S.E. portion of Afghanistan, and in lat. $29^{\circ} 20^{\circ} \mathrm{N}$., and lon. $67^{\circ} 58^{\prime} \mathrm{E}$., is reckoned the hottest place in the territory. It is also extremely hot at Kandahar, the thernometer in summer being frequently above $110^{\circ}$ in the shade, while in winter the inhabitants suffer from cold, fuel being extremely scarce. At Cabool, the snow lies for several months together, during which the people remain in their louses, and sleep, like the Russians, close to stoves, the thermometer falling to $5^{\circ}$ or $6^{\circ}$ below zero. 'At Ghuznee,' says Mr. Elphinstone, 'the cold is spoken of as excessive, even by the inhabitants of the cold countries in the neighbourhood; and traditions prevail of the city laving been twice destroyed by falls of snow, in which all the inlabitants were buried. But when the vernal equinox is past, the snow suddenly disappears, the comntry is covered with young grass, the buds burst forth, and are soon followed by a profusion of flowers; the inlabitants then throw aside their winter raiment for a thin dress of chintz or cotton, and often sleep at night under trees, or in the open air.' The prevailing winds are from the west, and are in general cold, while the easterly winds are hot. The climate on the whole, however, is favourable to the human constitution, and in some parts highly salubrions; diseases are few ; the principal are fevers, agnes, smallpox, and ophthalmia.

Vegetable Productions.-Our knowledge of the vegetable productions of Afghanistan is limited. The most common trees in the mountains are pines of various kinds, a species of oak called baloot, and the wild olive; all these are found at high elevations-the first at a height of $10,000 \mathrm{ft}$. Intermingled with these are the cypress, which attains a great size, walnut, birch, and holly. On the lower offsets of the Hindoo Koosh, the small leguminous plants from whose leaves and twigs the true indigo dye is extracted, grow spontaneously. On the plains are found the mulberry, tamarisk, acacias, date palms, willow, plane, and poplar. Besides these, many of the finest fruits of Europe grow wild, including grapes; and also several kinds of bushes bearing eatable berries. The rose, jessamine, poppy, narcissus, hyacinth, tuberose, \&c., are found in gardens, but some of them grow wild. Esculent vegetables are in general of inferior quality. Those cultivated are cabbages, cauliflowers, spinach, lettuce, onions, garlic, bectroot, \&c. But it is in the production of fruits that Afghanistan excels; few places supplying such a variety and abundance.

Animals.-The wild animals of Afghanistan are neither very numerous nor very formidable, with the exception of the wolves. Lions are few, small in size, and weak, and are chiefly confined to the hilly country about Cabool. But they differso widely in their characteristics from the true, or African lion, that Mr. EIphinstone doubts whether they are lions. Tigers are found in most of the countries east of the range of Soliman; but they also are of a weakly and timid nature. Leopards are numerous in Kolintan, but they do not attack man; wolves, hyenas, jackals, and foxes are common everywhere. The wolves are particularly formidable during the winter, in the cold countries, when they move about in large bodies, destroying cattle, and frequently assailing persons who come in their way. Bears are numerous in the woody mountains. Monkeys are found in the N.E. parts of the country, and wild sheep and goats are common in the mountain tracts, in the north. In the wilds of the Soliman, and of some other mountains, a quadruped, called the markhur, is found. It is of considerable sizc, resembles an clk, and has very large horns. The other wild animals are the wild ass or gorklar, the wild log, the porcupine, various kinds of deer and goats, the wild dog, the ferret, and the hare. There are no elephants in a wild state, and no rhinoceroses, althougli these were formerly numerous. Of birds, the number and variety are considerable, including several kinds of eagles, and many kinds of hawks, amongst which are the falcon and goshawk. IIerons, cranes, storks, wild ducks, geese, swans, partridges, and quails abound. Cuckoos and magpies, both unknown in India, are numerous in the colder regions of Afghanistan. The only reptiles requiring special notice are snakes and scorpions; the former, however, are mostly inno-
chous; the latter are large and venomous, though their bite is rarcly fatal. Turtles and tortoises are common. There are no erocodiles. Visitations of locusts are of rare occurrence, but their devastations have caused several fimines. Bees are common. Mosquitoes are less troublesome than in India, except in Scistan, where they are very formidable. The domestic animals are the lorse, camel, dromedary, mule, ass, ox, sheep, goat, dog, and cat. The horses of $\Delta$ fghanistan are not much estecmed, excepting those bred about Herat, which are of a superior description; but a hardy race of ponies, called yaboos, is reared in the Huzareh country. The inules and asses are much employed, the former in carrying the baggage of armies, and the latter in conveying manure to the fields, \&c. But the camel and dromedary are the usual beasts of burden, especially the latter. The ox is used for the plough, where horses are not to be had; they are also used amongst the pastoral tribes for carrying their tents. The sheep, which form the great dependence of these tribes, are, like those of the Cape of Good Hope, remarkable for the size of their tails, which are ahout a foot broad, and of 10 or 12 lbs. weight, composed entirely of fat; their fleece is large and fine. Dogs are kept in great numbers, and are generally of good breeds; the greyhounds are excellent, and are much used by the pastoral tribes in hunting. Amongst the cat kind, is a long-haired speeies called boorauk, which is much esteemed, and exported in great numbers, under the name of Persian eats, though nearly all from Afghanistan.

Agriculture. - Afghanistan is, on the whole, a poor and barren country; vast tracts being covered with stones, so that the tillable part of the soil bears no proportion to the untillable. The cultivators of the soil consist of five classes-proprietors; tenants ; burgurs or metayers, who labour the land for a certain portion of the returns; hired labourers; and villeins, who cultivate their master's land for a mere subsistence. Land is divided into irrigated and not irrigated, called abce and $l u l m$, and its value is stated to be from 9 to 12 years' purchase. The rent varies, according to situation and fertility, from one-tenth to two-thirds; the latter being the usual rent around the town of Cabool. The common term for a lease is one or two years, the longest five. The ordinary remmneration of labourers is, for the season of nine months, 30 rupees, with food and clothing. There are two harvests in the year in most parts of the country; one, sown in the end of autumn, and reaped in summer, consists of wheat, barley, peas, and beans; the other, sown in the end of spring, and reaped in autumn, consists of rice, Iudian corn, and maush. The first harvest is generally the most important. Besides these crops, there is another, comprehending musk melons, water melons, the scented melon, and various sorts of cucumbers, pumpkins, and gourds, which is looked npon as a distinet harvest. Wheat is the food of the people thronghout the greatest part of the kingdom, the barley being given to the borses. Turnips are cultivated in great aboudance in some parts of the country, and are used to fced the cattle. Ginger and turmeric are grown in the eastern countries; sugar cane, to a small extent, on the rich plains; and a little cotton in the bot climates. Madder is raised in great quantities in the colder regions. To these productions may be added asafetida, the plant of which, as elsewhere mentioned, is found wild on the hills. The prepared drug is exported to India, where it is a favourite ingredient in the cookery, both of IIindoos and Mahometans. Tobacco is also produced in many parts of the country. The most general mode of irrigation is from streams directed into the desired elannels, by various contrivances and expedients. The land is always watered, where water can be obtained, before being ploughed. It is ploughed deeper than in India, and with a heavier plough; all the sowing is broadcast. The place of a harrow is supplied by a plank, on which the conductor stands to guide the eattle, and increases its effect by his weight. The crop is reaped with the siekle; the srain is generally trodden ont by oxen, and winnowed by being thrown 11 , to the wind with a shovel. The grain is kept in large round hampers, supported by wooden feet, and plastered with mud, or in unburnt earthen vessels, and coarse lair-cloth bags. It is ground by windmills, water mills, and handmills; the first is in general use in the west only, the handmill being the most common, particularly in the ruder parts of the country, and among the nomadic population. Both the wind and water mills differ
from those in general use in this country ; the former lhaving the sails within the building, the wind reaching them through an aperture, and the wheels of the latter being horizontal, with the feathers disposed obliquely. The plough is generally drawn by oxen, but in some parts by camels.

Trade and Manufactures.-There being no navigable rivers in Afghanistan, and the country but ill adapted for wheel carriages, commerce is generally carried on by beasts of burden, chiefly camels, formed into caravans. The principal foreign trade is with India, Persia, and Toorkistan. The exports to India ensist principally of horses, furs, shawls, chintz, madder, asafetida, tobacco, almonds, pistacia nuts, walnuts, hazel nuts, and fruits. The imports from India are coarse cotton cloths, muslins, silks, indigo, ivory, chalk, bamboos, wax, tin, sandal wood, sugar, and spices. The exports to Toorkistan consist chiefly of articles imported from India, such as white cloths, slawls, Indian turbans, chintz, and indigo. The principal imports are horses, gold, and silver. From Bokhara, cochineal, broad cloth, paper, tinsel, eastiron pots, cutlery, and other hardware are imported, being brought there from Russia. To Persia are exported shawls and shawl goods, indigo, carpets, chintz, Indian brocades, muslins, and other cotton cloths. The inijorts are raw silk, silken stuffs, and a sort of strong cotton manufacture of various colours, called kudduk. The exports to Chinese Toorkistan are nearly the same as those to Bokhara. The imports are woollens, Chinese silk and satin, tea, porcelain, raw silk, cochineal, crystal, gold dust, golden ingots, \&c. The trade with Cauferistan is trifling, consisting of wine, vinegar, cheese, elarified butter, and slaves. Slaves are also imported from Arabia and Abyssinia. The internal trade of the country is also considerable. The principal marts are Cabool, Peshawur, Kandahar, and Herat. The commerce and carrying trade of Afghanistan are prosecuted chiefly by the Sohances, a pastoral tribe of Afglians who occupy the country eastward from Gluznee to the Indus. Many of these are men of great opulence. They amount to 100,000 persons, and take with them 24,000 camels. The manufactures of the kingdom are very unimportant. At C'abool and Kandahar, woollen goods are manufactured, chiefly shawls; but they are inferior to those of Cashmere, being stiff and harsh to the touch. The woollen fabrics of the country are rarely exported, as, from the scarcity of artificers, the want of machinery, and the great demand, there are not enough produced to supply the home market. At Peshawur, a coarse kind of cotton loongee is manufactured, which is exported throngh Tartary. The amount of British cloths sold in Afghanistan, in 1838, was $£ 47,800$ value; of Indian goods, $£ 93,300$.

People.-The population of Afghanistan is composed of a great number of different races and tribes, the principal of which are the Dooraunees, the Berdooraunees, the Ghiljies,

dooraunee and berdoorraunee.-From Elphinstone's Cabuol
and the Cauker tribe, all of which are again subdivided into numerous smaller families, or clans. Of these four principal races, the Dooramees, who are divided into two great branches, Zeeruk and Punjpan, and these again into nine lesser tribes, are the most influential, on account of the extent of territory they ocenpy; and because the royal family and high mimeters
of state belong to them. They inhabit the tract of country occupying the central portion of W. Afghanistan, and are partly pastoral and partly agricultural. They lead a happy and inoffensive life, having no feuds amongst themselves, and rarely any with their neighbours. They are fond of social enjoyments, and delight in entertaining and being entertained. Their appearance is prepossessing; they are stout, with good complexions, and fine beards, of which they take greak care. Their demeanour is at once modest and manly. They never go armed except on journeys, when they frequently carry a matchlock, with a long bayonet of peculiar construction fixed to it. The Berdooraunees occupy the N.E. part of Afghanistan, and, like the other races, are composed of various tribes, of which the most remarkable are the Eusofzyes, who are supposed to amount in number to about 700,000 . Those of this race who inhabit the upper countries, are remarkably sober and free from vices; but those dwelling on the plains are notorious for every kind of debauchery, and are, in all respects, the worst of the Afghans. They are generally stout men, with fair complexions, gray eyes, and red beards, and affect a military carriage, with an inselent and haughty demeanour. They are extremely quarrelsome, and of a savage disposition, but are, withal, brave and hospitable, active, acute, and industrious. Their arms are a spear, matchluck, long dagger, and sabre. The Ghiljies are, after the Dooraunees, the most eminent of the tribes. They are divided into two families, Toraun and Boorhaun, of which the first is divided into two, the second into six clans. The Cauker tribe inhabits the S. part of the Khakas country, N.W. from Sewestan, about the Toba and Khojal Amran mountains, and amounts, altogether, to about 200,000 in number. The total population is estimated, but from uncertain data, at rather more than $5,000,000$.

Religion.-The Afghans are mostly Mahometan Soonnees, but all the Persians in the country are Sheeahs, and between these two sects the bitterest animosity prevails; more indulgence being shown by the former to Christians than to the latter. The Sheeahs are more bigoted than the Soonnees. Besides these, there are numerous other sects, such as Sooffees, Zukkees, Roushameeas, \&c. The first, says Mr. EPphinstone, are rather a class of plilosophers than religionists; their leading tenct being, that nothing exists but God, all the rest being an illusion. No people can be more regular in performing their devotions than the Afghans. Their prayers begin before day, and are repeated five times; the last of which falls a little after the close of the evening twilight. The hour of prayer is always announced from the tops of the minarets, and has a solemn and pleasing eficet. The moollahs, or priests, are numerous. Their character and name are conferred, by an assembly of members of the order, on candidates who have undergone a regular course of study and examin ation, the essential ceremony consisting in placing on the new member the turban of a moollah, which is white, very large, and of a peculiar sliape. They are an influential body; and, being composed mostly of active and intelligent men, have acquired an almost unlimited power and authority in the country. The education of youth, the practice of the law, and the administration of justice, are entirely intrusted to them. Their means of subsistence are, in the country, grants of land, and a tax, similar to tithes; in towns, fees on marriages, burials, \&c., and the gifts of their congregations.

Government, Public Revenue, Military Force, dic.-Afghanistan was formerly a monarchy, the crown being hereditary in a branch of the house of Suldazye ; it is now divided into three chiefships-Herat, Cabool, and Kandahar. The revenue of the first is about $£ 200,000$; the one half in money, the other in produce. Cabool is believed to have yielded, under a system of grinding taxation, about £240,000; and Kandahar abont $£ 80,000$. The whole Afghan force, which is chiefly cavalry, amounts to about 16,000 men; they are but imperfectly disciplined, and are embarrassed by the multitude of their arms, which consists of a long heavy matehlock, with a bayonet, a sabre, a blunderbuss, and three long pistols, a couteau de chasse, a dagger, and four or five knives, besides a shield. The Kuzzulbaushes are the most numerous and best portion of the Afghan army. The police of the country is very bad. In many parts of the kingdom, travellers can be secured from being attacked and plundered only by engaging an escort of the tribe, or by paying customs to its chicf. In cases of robbery, the inhabitants of the district where it was
committed are liable for tho amomit stolen, in the event of the thief not being forthcoming. The police does not interfere in eases of murler perpetrated by way of retaliation, except in towns and their vicinity. Justice is alministered, in cities, by a canzee, or cadi, assisted by inferior ufficers.

Towns.-These are few in proportion to the extent of the country. The principal ones are Cabool, Kandahar, llerat, Peshawur, Dera Ghazee Kham, Dera Ismael Khan, Ghuznee, Istalif, Charikar, Jelalabal, Kala Bagh, liohat, Giriskh, Furrah, Subzawur, and Mittunkote (which see).

Mistory. - Of the carly history of Afghanistan little is known - a circumstance the less to be regretted, that its interest commences only with modern times. In 1713, Nadir Shah conquered the country. Ten years afterwards, he was murderel by the P'ersians, and was succeeded by Ahmid Shah, the founder of the Doorance dynasty, who was erowned at Kandahar in 1747 . His reign, which continued 26 years, was occupied with wars, external and internal. On his death, he was succeeded by his son Timur Shah, who was again succeeded by Zemann Shah, a younger son of the deceased prince. The latter was, in turn, displaeed by his elder brother, Mahmood, by whom he was imprisoned, and deprived of sight. Mahmood was, subsequently, dethroned by another brother, Shoojali-ool-moolk, who imprisoned him. In the course of the intrigues and convulsions which suceeeded, Mahmood obtained his freedom, re-appeared in arms, and reeovered the throne-shoojah having fled, and found a retreat. in the British territory. In the year 1837, the British (iovernment, thinking it advisable to establish a friendly alliance with the ruling powers in Afghanistan, restored Shoojalı to the throne by means of a large armed force; but though engaged in maintaining the rights of a legitimate prince, the British troops were ultimately driven (April 1842) from the country, mider circumstances of the most atrocions barbaxity and treachery; which, however, were annply avenged in the same year by another British army, under General Pollock, which, advancing throngh the Khyber l'ass, reaptured Cabool, and re-established Ibritish supremacy in this quarter of the world.

AFIUM-KARA-IISSAR, or AFisus, or AFloush-karamassin [Opium black eastle], a large city, Asiatic Turkey, pash. Anatolia, cap. of the sanjak of Karahissar, 186 m . E. Smyrna, and 170 m . S.E. by E. Constantinople ; lat. $38^{\circ} 43^{\prime} 15^{\prime \prime} \mathrm{N} . ;$ lon. $30^{\circ} 50^{\prime} \mathrm{E}$. Its situation, as will be seen from the accompanying woodeut, is sufficiently striking and picturesque. It stands partly on level gronnd, and partly on the lower acclivities of a series of rocky heights, rising from the former to the latter by a gradual ascent.

afium-Kara-hilakar.-Fiom Laborde, Voywe ch Oritar.
The remarkable isolated roek which is seen towering loftily above the town, is from 300 to 400 ft . in nearly perpendicular height; and consists of red trachyte, containing large crystals of glassy felspar. It can be ascended only by a steep and dificnlt path, winding up a narrow crevice. On the summit,
from which a commanding view is obtained, are the ruins of a Byzantine or Turkish fort, a deep well, and several receptacles for water, partly of stone, and partly hewn out of the living rock. The entire circumference of the town is nearly 3 m . Most of the houses are of stone, and well built; but the streets are extremely narrow, and in some jlaces very steep. It contains 10 mosques, one of which is a noble building, and several lofty minarets, which add much to its picturesque appearance. There are also two or three Armenian chapels, numerous khans and public baths, and an extensive range of substantial barracks, of recent erection. The streets and bazaars present a lively and bustling aspect, being always crowded with people-a result of the advantagcous position of the town, which is on the road from Smyrna to the Last, towards Armenia, Cicorgia, Persia, and the countries bordering on the Euphrates; all the caravans to and from these places passing through it, as well as those proceeding to Constantinople to and from Syria. The shops and markets are thus amply stocked with European manufactures and Jastern productions. Fabries of wool and tapestry are amongst the staple articles of industry, but firearms and sabres are also an important branch of manufacture. The town had formerly a considerable trade in red leather, but it has now fallen off; as has also the demand for its saddlery, which was at one time in great request throughout all parts of the Turkish empire. The manufacture of carpets-which is named amongst its staple protucts-is chiefly carried on in the conntry between Afium-Kara-Ilissar and Smyrna, and only to a comparatively small extent in tho town itself. 'The prineipal trade of the place, however, is in opium (Afum), from which the town has derived its name. The quantity of this drug manufactured here amually las heen variously stated, and is not perhaps accurately known. Niebulhr, who visited the town in 1837 , states, that he ascertained it to be 180 mule loads, or about 20 tons. The poppy, from which it is made, is cultivated in the neighbourhood; the species is chielly the white, which is preferred on account of its capsules, and of the useful bland oil obtained from its seeds. The best deseription of the opium manufactured here, and in other farts of Turkey, yields nearly three times the quantity of morphia afforded by East Indian opium. Afinm is the residence of a pasha, and the seat of a bishop of Armenian Chxistians. Pop. between 50,000 and 60,000 .

AFRA(iOLA, a small th. Naples, 5 m . N.E. eity of Naples, district of Casoria; situated on a plain, with a humid atmosphere. It has several churches, and several straw-hat manufactories.

AFRICA, one of the great divisions of the globe, and the third in point of extent. In form, it somewhat resembles an imperfect triangle, with its base N. amd its apex N . Its entire length from N., to S., or from Cape Bianco on the Nediterranean, to (ape Agulhas, 100 m . S.E. from the Cape of Cood Ilope, is 5000 m. ; and its greatest breathl from E. to W., or from lias Jerdaffonn (Cape Guardafni) on the Indian Occan, to Cape Verde on the Atlantic, is about 4800 m .; but in consequence of its irregular form, its area is only $12,000,000 \mathrm{sq}$. m .

It has the Mediterranean on the N., the Atlantic on the W., the Southern Ocean on the S., ant the Indian Ocean and Red Sea on the E. and N.1S. It is thus wholly surrounded by sea, excepting where the narrow neck of land, called the Isthmus of Suez, connects it with Arabia. Its ncarest approaches to the neighbouring continents oceur at the Gulf of Sucz, head of the Red Sea, at the Strait of Bab-el-Mandeb, and at the Strait of Gibraltar; a few miles only separating it from the opposite shores at these points. Its coast line, which is considerably upwards of $15,000 \mathrm{~m}$. in length, Is nowhere very decply indented with bays or gulfs, if we execpt the Gulf of Gainea, on its W. coast. The other principal indentations are the Gulf of Sidra, on the N. coast ; the Bights of Benin and Biafra, on the W. coast; and Delagoa and Sofala Bays, on the E. coast. Its more remarkable pro-
jections are Capes Bianco and Spartel, on its N. shores; Cape Verde, on the N.W.; Cape Agulhas, on the S.; and Ras Jerdaffoon, or Cape Guardafui, on the E. coast. There are but few islands of any extent so close to its shores as to warrant their being considered as speeially pertaining to it. Amongst these few are the Bissagos, off the mouth of the Ria Grande, in Senegambia; Fernando Po, in the Bight of Biafra; Prince's Island, and the islands of st. Thomas and Annobon, all in the Gulf of Guinea. On the E. coast are the Bazaruta and Queriniba Islauds, and the islands of Zanzibar and Pemba. At greater distances are the Canary and Cape de Verde Islands, off the N.W. coast. Madayasear, the Comoro Islands, and Soeotra, off the E. coast; Madagasear being separated from the continent by the Mozanbique Channel, which has a width, at its narrowest part, of about 250 m .

Table Lands, Mountains, and Deserts.-From what is known of the physical conformation of Africa, it has been inferred that it is very generally composed of a vast series of table lands, rising in successive terraces from the coasts to the interior. This is known to be the case in S. Afriea, in Abyssinia, where they present the grandest features, and at various other points; and where not positively ascertained, has been presumed from the fall in the beds of rivers. Nothing, however, is known of the surface of these table lands in the interior, which yet remains unexplered. The most extensive range of African mountains with which we are aequainted, is tlat generally known by the name of the Mountains of the Moon, whieh commences at Kissi Kissi, about 200 m . S.E. Sierra Leone ; lat. $9^{\circ} \mathrm{N}$. ; lon. $9^{\circ} 20^{\prime} \mathrm{W}$.; runs in a S.E. direction, nearly parallel with the coast, and at a distance from it varying from 80 to about 150 m . to lon. $26^{\circ} \mathrm{E}$., when it suddenly takes a N.E. course, erosses the entire continent, and terminates at Ras Jerdaffoon (Cape Guardafui) on the E. coast, a distance of upwards of 4000 m . The W . portion of this range, or that which runs parallel to the coast of Guinea, obtains the name of the Kong mountains, and, in some parts, the Snowy mountains. About lon. $12^{\circ}$ E., an offshoot of this vast chain, called the Cameroon mountains, apparently of voleanic formation, stretehes down, in a S.W.direction, to the Bight of Biafra, and, near the sea, attains an elevation of $13,000 \mathrm{ft}$. North of the Kong mountains are various lofty mountain ranges, rumning in a N. direction. Amongst these, are the mountains of Dombori and Batako. Between the meridians of $7^{\circ}$ and $11^{\circ} \mathrm{W}$., and the parallels of $11^{\circ}$ and $14^{\circ} \mathrm{N}$. , another chain of rocky heights, rising to an elevation of from 2000 to 3000 ft ., and cleft by tremendons ravines, skirts the Joliba or Niger. The next more remarkable mountains of Africa are those composing the Mount Atlas range (which see), beginning at Cape Geer or Ghir, $10^{\circ} \mathrm{W}$. lon., and extending E. as far as $50^{\circ} \mathrm{W}$. lon., where it approaches $32^{\circ} \mathrm{N}$. lat. The distance from one side to the other of this range, has beeu estimated at from 30 to 40 m. ; and the height of the highest summit, Miltsin, 27 m . S.E. the town of Moroceo, at 11,400 ft. above the level of the sea. The higher regions of these mountains are seldom entirely free from snow. A mountain of great height las lately been diseovered in E. Afriea, by the Rev. Mr. Rebmann, of the Chureh Missionary Society. Mr. Rebmann places this mountain, which he calls Kilimandjaro, or Kilima (lja aro, 'Mountain of Greatness,' in lat. $3^{\circ}$ $40^{\prime} \mathrm{S}$., and lon. $36^{\circ} \mathrm{E}$.; and represents it as being covered with perpetual snow, which, being so near the equator, would indicate a height of at least $20,000 \mathrm{ft}$. The mountain is described as having two summits rising to the limit of snow, of which the eastern is the lower; it terminates in several peaks, eovered, during the rainy scason, far down with snow, but which in the dry season sometimes melts entirely away. The western summit is the proper perpetual snow mountain, whieh, rising considerably above its neighbour, affords also much more room for snow, being formed like an immense dome. The two summits are 10 or 12 n . apart. If the position of Kilimandjaro be correctly laid down by Mr. Rebmann, it will be about 600 m . due W. Mombas, on the coast of Zanzibar, and jnst so far into a hitherto unexplored country, of which nothing was previously known. In the province of Shoa, the mountains attain a consideralle elevation; that portion of it called Effat being entirely surrounded by lofty and craggy hills.

The great deserts of Africa are the Sahara, and those of Nubia and Libya; the two latter, however, being merely con-
tinuations of the former, which is the largest desert in the world. The Sahara thus extends from the Atlantic Ocean nearly to the Red Sea, a distance of upwards of 3500 m ., having an average breadth, until it reaches Nubia, where it is interseeted by the rich valley of the Nile, of from 600 to 900 m . Its entire area has been estimated at $760,000 \mathrm{~m}$., a space equal to the superficies of the Mediterranean. (See Sanara.)

Rivers and Lakes.-The principal rivers in S.W. Africa, beginning at its N. linit and proceeding S., are the Sencgal, Gambia, Casamanza, Cacheo, the Jeba or Geba, the Rio Grande, the Nunez, the Sierra Leone River, the Adiri or Volta, the Quorra or Joliba (anc. Niger), the Zaire or Congo, the Coanza, and the Gariep or Orange River. In E. Africa there are few large rivers; the most considerable are the Zambezi or Quillimane, and the Juba or Fumbo. The former rises in the table lands in the interior, and enters the Mozambique Chamel by several mouths, at lat. $18^{\circ}$ S.; lon. $37^{\circ} 30^{\prime}$ E. It is said to have a course of 900 m ., and to be navigable, during the rains, for 200 or 300 m . from the sea. The Juba, which is said to rise in Abyssinia, falls into the Indian Ocean at the town of Juba, on the coast of Zanzibar, in lat. $0^{\circ}$; lon. $43^{\circ} 30 \mathrm{E}$. It is said to be navigable for boats to a great distance from the sea. The other prineipal rivers of E. and N.E. Africa, are the Hawash, in Abyssinia, the Atabara, the two principal branches of the Nile-the Bahr-el-Abiad, or White Nile, and the Baln-el-Azrek, or Blue Nile and the Nile itself. With the exception of the latter, there are no rivers of any magnitude, so far as known, in N. or N.W. Africa. The known lakes of Africa are few in number. The largest of whieh there is any certain account is Lake Tehad. It is situated in the territory of Bornou, and nearly in the centre of the continent; approaching the 15th degree of N. lat., and under the 15 th degree of E. lon. It is about 220 m . long, and, at the widest part, about 140 m . broad. The other known lakes of Africa are the Debo, in Soodan, in the same latitude with the Tehad, and, under the 5th degree of W. lon., traversed by the Niger; the Lake of Dembea, in Abyssinia, traversed by the Bahr-elAzrek, or E. branch of the Nile; and the Njassi, in S.E. Africa, about which little is known. Neither of these, however, are of nearly such extent as the Tchad. Lakes are also met with within the ranges of Mount Atlas, the largest of which is called Lowdejah. To the lakes above ennmerated, has now to be added a large one, recently discovered (July 1849) in S. Africa, by the Rev. Robert Livingstone, who places its N.E. extremity, though doubtingly, in lat. $20^{\circ} 20^{\prime} \mathrm{S}$. ; lon. $24^{\circ} \mathrm{E}$. It is reported to be about 70 m . in length, and is at once the souree and recipient of several fine streams. The largest of the former is thie Zonga, which flows from the lake, first in a N.E., and latterly in a S.S.E. direction. It is described by Mr. Livingstone as a beautiful stream; the banks are covered with gigantie trees, including a variety of the Baobab, some individuals of which measured from 70 to 76 ft . in eircumferenee. The water of the river is soft, cold, and remarkably elear. It rises and falls periodically, but the cause of this phenomenon is unknown. 'The natives,' says Mr. Livingstone, 'paddle along the rivers and lake, in canoes hollowed out of the trunks of single trees; take fish in nets made of a weed which abounds on the banks; and kill hippopotami with harpoons attaehed to ropes. We greatly admired the frank, manly bearing of these inland sailors; and I greatly enjoyed following the windings of the river in one of their primitive eraft, and visiting their little villages among the reeds.' The name of the newly discovered lake is Ngami, the 'Great Water.' 'It is pronounced,' Mr. Livingstone adds, 'as if written with the Spanish $\tilde{\mathbf{N}}$; the $g$ being inserted to show that the ringing sound is required.'
Minerals.-Gold, goll dust, and iron, are amongst tho best known of the mineral riches of Africa, and are the most generally diffused throughout that continent. In the country of Bambouk, S. of the Senegal, where most of the gold that finds its way to the coast is obtained, the mines are open to all, and are worked by the natives of the adjoining villages. The richest gold mine known in Africa is that of Natakoo-a small round isolated hill situated on a phain about 300 ft . liigh, and 3000 paces in circumference at the base. This eminence is of alluvial formation, heing composed of an unctuons argillaceous earth. The gold here is found in the various forms of lumpz, grains, and spangles; every
cubic foot heing loaded, it is said, with the precious metal. In searching for gold, the natives have perforated the hill, in all directions, with pits, or holes, 6 ft . in diameter, and 40 it. deep The auriferous earth is first met with about 4 ft . below the surface, becoming more abundant with increase of depth. At a depth of about 20 ft ., lumps of pure gold, weighing from 2 to 10 grains, are found. Forty m . N. of Natakoo, are the gold mines of Sinayla. The source whenee the gold is obtained here, is of a wholly ditlerent nature from that of the former. The hill, instead of being of soft argillaceous earth, is composed of rock and sandstone, and has to be pounded in a mortar to get at the gold. Gold is found, also, in the beds of the rivers in this neighbourhood. The next riehest gold mine in this part of Africa, is that of Nambia; situated at the baek of the western chain of the Tabaoura mountains. It is found in a hill similar to that of Natakoo, but is of a paler colour ; and is, on this account, preferred, being more ductile and malleable. In a valley E. of the Rio dOro, is the mine of Kombadyria-an isolated mount of argillaceous earth, as in the former two cases. llere, too, the beds of the adjacent streams contain gold, which, in this part of W. Africa, is found distributed over a surface of $1200 \mathrm{sq} . \mathrm{m}$. Before being employed as an article of commerce, the gold is melted down and formed into earrings or other trinkets; never being offered for sale excepting in a manufactured shape. This operation is performed by the blacksmiths of the country, who, with no other implements than an earthen chaffing dish, a pair of bellows, and a large and small hammer, manufaeture trinkets of surprising neatness. These are ultimately formed with the small hammer, the gold being in a cold state. Large quantities of gold dust are also found on the banks of the Barra, on the W. coast ; where, it is said, 10,000 slaves arc employed, for two months every year, collecting it. The gold dust procured here is higher coloured, cleaner, and better than that found anywhere else. The principal part of it is conveyed into the interior, where it is manufactured into trinkets previously to being brought into market. Iron is found in Moroceo, Alyssinia, Alyeria, and in various mountainous districts of Central and S. Africa. Salt is also found in great abundanec throughout the greater part of Africa, both as a residuum and as a fossil ; the former on the banks of salt lakes, the latter by mining. Though widely diffused, however, there are many large and extensive distriets without it; and there it is considered a luxury, and brings high prices. Nanganese is also common. An important diseovery has recently been made, of extensive deposits of nitrates of potash and soda, in the neighbourhood of Angra Pequena, on the W. coast of S. Africa, which are likely to be turned to good account. Copper ore, of the richest description, is to be found at a short distance beyond the Orange river; and lead, of a superior kiud, las long been known to exist near the mouth of the Vin Staaden's river, in the district of Uitenhage, Cape Colony.

Climate. -The great space which Africa oceupies on the globe, extending to the 35 th parallel on either side of the equator, added to other influencing causes, so diversifies its elimate, that no general account could give a correct idea of it. Althongh the greater part of this continent lies within the torrid zone, and might be expected to possess a certain uniformity of elimate corresponding to such a position, this is not the case. Extensive arid plains, swamps, marshes, and the exhalations of a rank vegetation, give it a fatal variety. The N. and N. extremities being beyond the tropics, and, of course, within the temperate zones, are suffieiently healthy, and so also is the E. coast generally, although, in some places, it is far otherwise. It is on the W. coast that the climate of Africa is most destructive to Europeans, and where the heat of the sun is most intense; Senegambia, between lat. $10^{\circ}$ and $11^{\circ} \mathrm{N}$. being, perhaps, the hottest place on the globe. The whole of the Gold Coast is also extremcly unhealthy, owing, it has been alleged, to the sudden extremes of heat by day and cold by night, and to the thick, sulphureons exhalations which rise from the valleys every morning, and diffuse themselves far over the surface of the land, spreading death and disease amongst the white population. In the midst of the most beautiful secnery, where trees, and rocks, and still waters, and a delightful verlure, give assurance of an earthly Iaradise, the angel of death lurks unseen, and strikes down
his vietims without warning, and while yet in the pride of their strength.

The appalling number of deaths that have occurred in the various expeditions that have gone to the coasts and interior of W. Africa, bear fearful evidence of the fatal nature of the climate. Upwards of a third of all the Europeans who lave endeavoured to ascend the Senegal river have perished in the attempt; and nearly a half of those composing the expedition sent out by Government in 1816, to explore the river Zaire, shared a similar fate. On that oceasion, the commander, Capt. Tuckey, his lieutenant, the purser, ten of the crew, and four scientific gentlemen, all died within three months; and in the case of the Niger expedition in 1841, no fewer than 41 Europeans, out of 145 , including several officers and surgeons, died in less than two months. On this expedition, numerous experiments were made to test both the air and the river water, for the purpose of ascertaining whether they contained, as had by many been alleged that they must, an extra quantity of sulphuretted hydrogen gas, supposed to be the agent of death in these regions, and to be due to the quantity of decomposing vegetable matter abounding in the rivers; but, though conducted with the greatest care, from none of the experiments did it appear that the gas in question existed in excess, either in the air or the water. In Sierra Leone, perhaps the most unhealthy spot in these unhealthy regions, the mortality amongst Europeans is very great; few ships returning without losing some of their crew, and not unfrequently so many, that they are unable to leave the port until others have been obtained. The number of governors that have perished bere from the effects of the climate, one after the other, is another striking evidence of the singular insalubrity of its atmosphere. The agent of death in nearly all these cases is fever, generally violent, and of the remittent type. Besides the known and alleged causes for this fatality, there are other and mysterious influences in operation; for in the case of the expedition commanded by Capt. Tuckey, the journal of that lamented officer bore, that no climate could be finer than that they were enjoying; that the thernometer was never below $60^{\circ}$ during the night, and seldom exceeding $76^{\circ}$ during the day; $n 0$ rain, and the sun seldom visible. The seasons of Africa consist but of two -the dry and rainy; the latter including May, June, July, August, September, and October; the former, the remaining montlis. The wet season, gloomy and checrless, is always ushered in and terminated ly tornadoes. During its eontinuance, the mountains are wrapt in perpetual fogs; and disease, though not peculiar to any season, becomes more general and more fatal. The tornadoes, however, which are always aceompanied by tremendous storms of thmoder and lightuing, lave a beneficial effect on the atmosphere, rendering it cool, clear, and invigorating. Sir James Alexander, speaking of the W. coast of N. Afriea, says, that the mornings were beautiful from half-past five till eight; that, during that time, the atmosphere was cool, and the foliage and verdure around fresh and smiling; but at the last hour named, the scene suddenly changed; the sun burst forth with inconceivable fiereeness, all sounds were hushed, and all nature drooped; men retired into their luts or tents, and the wild animals sought the depth of the forest or the jungle. With us, a typification of silence is the stillness of midnight; in these regions, it is the stillness of mid-day. Along the Cold Coast, land and sea breezes prevail; the former generally from N. N.W., the latter S.W. and W.S.W. The land breeze continues from nine A.m. till seven P.m.; but in the rainy season is irregular. Though many of the countries of Africa are deluged by rains, there are vast tracts in which hardly any ever falls. These are the deserts; and this is supposed to be one of the eauses of the high temperature of this continent, whieh is much hotter than either Asia or America, although the heat is not generally so intense as to admit of its being considered the sole cause of disease. The range of the thermometer on the W. coast, in 1819, was at the highest only $95^{\circ}$, mean $76^{\circ}$; while the average heat at sierra Leone is only $82^{\circ}$; at Cape Coast Castle, from $85^{\circ}$ to $90^{\circ}$. At the Cape, it is never below $50^{\circ}$. These places, therefore, are free from those vicissitudes, or extremes of heat and cold, which are so fatal in other parts of Atriea. The greatest height the thermoneter was ever observed to attain at the (ape was $102^{\circ}$; but the general range of the warm season is ketween $80^{\circ}$ and $90^{\circ}$.

Races of People.-Our information on this interesting branch of knowledge, like that on most other subjects conneeted with Africa, is imperfeet. Generally speaking, however, Africa, N. of the Senegal, and E. to Egypt, may be said to be inhabited by Arab races, known to us as Moors, Berbers, Kabyles, \&c. (See Algiers, Barbary, Morocco.) Egypt (which see), is inhabited by Copts; and Abyssinia and Somauli by tribes described in the articles on these countries. The original inhabitants of Cape Colony were IIottentots, who are now, however, confined to the territory N. of the colony, washed by the Atlantic, and stretching N. to about lat. $24^{\circ} \mathrm{S}$. They are of a yellowish colour, with high eheek bones, wide apart; lower portion of the face narrow; nose flat and broad; eyes small, and distant from each other; hair not diffused over the head, but in separate tufts. General stature of the men, 4 ft .6 inches; women 4 ft . ; the latter distinguished by a large accumulation of fat over the glute $i$ museles. Their language is full of guttural sounds, many words being ended by a peculiar click, disagreeable to the ear, and difficult to imitate. They are a mild and inoffensive race; but have yet made little progress towards civilization. Those living in the immediate vicinity of the Cape, have, of course, become subject to European influence; but a few tribes in the interior still retain their independence, wearing the old sheep-skin dress, observing old customs, and living in dirty kraals, or huts, composed of mats stretched over a frame of sticks. They migrate from place to place, leading an indolent and wandering life, and living chiefly on the milk of their cattle. To the E. of Cape Colony, as far as lat. $20^{\circ} \mathrm{S}$., the coast-and how far inland is not known-is inhabited by Kaffirs (see Kaffraria). Central Africa, from the Senegal S . to the eountry of the Hottentots and Kaffirs, and E. to the Indian Ocean, is wholly inhabited, in all probability, by negro races; but too little is known of this vast district to enable us to speak with precision. The physical eharacteristics of the negro are well known-skin and eyes black; hair black and woolly; forehead low; cheek bones prominent; nose broad, thick, and flat; lips thick; palms of the lands, and soles of the feet flat. In strength and stature, they are equal to Europeans. Various opinions are entertained of their intellectual capacity-some claiming for them an equality in this respect with the whites; others denying them the ordinary intelligence of human beings. Without instituting comparisons, it may be safely asserted, that they possess capabilities of a much higher order than has been generally allowed them, the proof of whieh it would not be ditticult to adduce. Though the natives of the extensive region marked out above are designated by the general term Negro, there are a great variety of nations, distinguished from each other by both moral and plysical differences. The peculiarities of the various subdivisions of the Negro race will be noticed in the articles on the eountries which they inlabit.
Animals.-With the zoology of Africa, we are yet but imperfectly acquainted; enough, however, is known to form a very interesting chapter in natural history. Of the 300 different species of mammals that inhabit Africa, 242 are peeuliar to the country. Of the Quadrumana (apes, monkeys, \&c.), it possesses 55 species, of which 48 are peculiar. Of the Cheiroptera (bats), 30, of whieh 26 are peculiar. Of the Carnivera, 66 ; peculiar, 52 . Rodentia (gnawing mammals), 48; peculiar, 38. Edentata (sloths, ant eaters, \&c.), 3, all peeuliar. Pachydermata (hog, horse, elephant, \&e.), 15 ; peculiar, 12. Ruminantia, 73 ; peculiar, 63 . Cetaceæ (whales), 10; peculiar, 8. The quadrupeds of burden are, the camel (Arabian), and the horses and asses of Barbary. Of horned cattle there are many different varieties; the oxen of Abyssinia and Bornou, both having horns of immense size-the former 4 ft . in length, and the latter measuring upwards of 2 ft . in circumference at the base, but so light, that they hardly weigh 2 lbs. eaeh; the broad-tailed sheep of Barbary, the Cape of Good Hope, and other parts of Africa; and the long-legged, small-tailed sheep of Egypt, Semnaar, and Nubia. Of goats there are a great abundance and variety, being in many places more numerous than sheep. The domestic cat $i_{i s}$ rare in Africa, but dogs are numerous. In the large towns of Egypt and Barbary, troops of these animals are maintained by the public, to aet as scavengers, the duties of which they perform with eutire effieiency. Domestic poultry are abundant in every part of Africa, though not indigenous to the
country. Amongst the wild animals, is that extraordinary species of the ape ealled the Chimpanzee, or Sinia troglodytes of naturalists. It attains the ordinary stature of man, and inhabits the countries from Sierra Leone to the S. confines of Angola. The baboons, among the inferior tribes of the Quadrumana, inhabit the mountains and rocky heights. They sometimes attain a great size, and, from their strength and mischievous disposition, are held in much dread by the natives. The monkeys, properly so called, inhabit the woods, and swarm over the whole continent.

The carmivorous and feroeious animals of Africa are numerous and formidable. At the head of these stands the lion, of which there are three varieties-the Barbary, Senegal, and Cape lions. The fur of the first is of deep yellowish brown, and the mane of the male much developed. The fur of the second is of a more yellow tint, mane less thiek, and hair nearly wanting on breasts and inside of legs. Of the Cape lion there are two kinds, one yellowish and the other brown; the latter being eonsidered the more ferocious and formidable. It is a belief amongst the S. African tribes, that the lion prefers human prey to any other. Next to the lion ranks the leopard and panther, there being no tigers in Africa. Though not generally dangerous, nor mueh dreaded, they are so numerous in some parts, that the natives will not venture to travel through the woods unless well armed, and in large parties. In other places, their increasing numbers have compelled the inhabitants of many villages and towns to remove to other provinces. There are none of those marked differences between the leopards and panthers of Asia and Atrica, that distinguish the lions of these two countries. The hyena is found in great numbers in $S$. Africa, espeeially in the neighbourhood of the Cape of Good Hope, and, it has been asserted, as ligh as Barbary. In the former region there are two species-the spotted hyena, or tiger wolf, and the strand, or coast wolf-the former being the nore feroeious. The civet is found in most parts of Africa, and is kept in great numbers by the natives, on aceount of the perfume. Ichneumons are also numerous. Of the Rodent mammals, our knowledge is very limited. So far as known, there are three varieties of hares; common rabbits; eight or ten distinct species of jerboas; squirrels, rats, and mice-the two latter being as numerous as in other countries. Of the Edentatous mammals, there are two species found in Africa, the aardvark, or ground hog (Oryctcropus Capensis), and the long-tailed pangolin (Munis tetradactyla). In the first rank of the Pachydermata, or wild, tusked quadrupeds of Afriea, stands the elephant, which, it has been said, though the point seems by no neans established, attains a greater size here than in Asia. It seems more eertain that the tusks of the African elcphant are larger and heavier than those of Asia. The differences in physical strueture between the Asiatic and African elephant, are--the head of the latter more rounded; front convex instead of coneave; ears much larger; and the general number of nails, on the hind foot, three, instead of four. The sagaeity of the Asiatic eleplant is said to surpass that of the African, but on no good authority. The intelligence of the race, generally, has been a good deal overrated. Cuvier is not disposed to estimate it higher than that of the dog. Elephants are dispersed all over Africa, S. of the Sahara. They live in herds of from 100 to 300 , and are so numerous, that their tusks (ivory) form a principal, and one of the most valuable, exports of Africa. These are found in great numbers in the woods, broken off by aecident; but the greater portion is proeured by destroying the animal, whieh is effeeted by the natives in various ways. The flesh is held in much esteem in various parts of Africa. The foot is said to be a delicaey, The rhinoceros is found in the middle and S. parts of Afriea, frequenting the same haunts as the elephant. The natives hunt this animal with great eagerness for the sake of the hide and horns -the only parts of which any use can be made, the flesh being unpleasant to the taste, having a resemblance to pork, but being mueh coarser. Of the hides, shields, harness, \&e., are made; the horn derives its value from its real or supposed medicinal virtues. The African rhinoceros is distinguished from the Asiatic by having no front or incisor teeth. Hippopotami are found in great numbers in the large rivers and lakes of Africa; amongst the former, particularly the Senegal, Gambia, Niger, and Zaire or Congo. It is peeuliar to Afriea, and is divided into two species-the hippopotamus
of the Cape (H. Capensis), and the hippopotamus of the Senegal (II. Senegalensis). The distinetion between these two species, however, is not very marked, consisting merely of some differenees in the formation of the skull. The natives take them in traps or pits, but the colonists near the Cape destroy them with the rifle. The flesh is much esteemed as an article of food; the 'Sea Cow's Speck,' the name given to the fat which lies immediately under the skin, when salted and dried, is in great demand with the epicures of Cape Town. The most valuable part of the animal, however, is its great canne teeth, which consist of the finest ivory, and is in mueh request by dentists, for making artifieial teeth, no other ivory keeping its colour so well.

The engallo, or wild boar, is also found in Africa; but it differs from that of Europe, its molar teetl resembling, in form and structure, those of the elephant. The zebra and quagga are fomd all over S . and Central Africa. The symmetry, and brilliant colonring of these animals, added to the extraordinary regularity of the stripes with which they are adorned, rank them amongst the most beautiful of quadrupeds. The quagga is less than the zebra, with the linder parts higher, and the ears shorter. Both the zebra and quagga are found in greatest numbers near the Cape, but tle former seems to be more widely dispersed than the latter. A third species, between the S . African quagga and the zebra, is found in large herds $\mathbf{N}$. of the Orange River.

The antelope is the most numerons of the rnminating animals of Africa, there being no fewer than 50 species proper to Africa, 23 of which are found within the colony of the Саре.

The giraffe, or camelopard, inhabits the interior parts of Africa, as high as the Senegal, but is not found in Gninea, or any of the W. parts.

In the interior of $\Lambda$ frica, several speeies of wild buffilo are met with; but little is known regarding them, further than that they are large and fierce, particularly those near the Cape of Good IIope.

Among the cetaccons mammals that inhabit the seas and coasts of Afriea, the most remarkable is that species of whale called lamantin (Manatus Senegaleusis), an herbivorous animal, supposed to be the original of the fabulous mermaid. The rivers and coasts of Africa abound with various kinds of fish, some of the most splendid colours. Shell fish are also abundant.

Of the ornithology of Africa, little more is known than that it comprehends a great number of birds, of the richest and gandiest plumage. Amongst the most beautiful of these is the sun bird (Cinnyrider). The ostrich is now almost exelusively confined to Africa. Its flesh, when young, is good, and the eggs are considered a delicacy both by Europeans and natives. The llottentots abstract the eggs from the nest with a long stick, that the hen may not be driven from it, but eontinue to lay. The plumes are mnch in request in Enrope for ladies' head dresses, and are therefore an important artiele of commerce. The best, however, are not taken from the wild birds, but from domesticated individnals, reared by the Arabs, who provide them with clean and soft beds, in order to preserve the feathers from injury. Valtures are found amongst the lofty mountains of Central Afriea, and in the most inaecessible places towards the Red sca. They are also found in the N. of Africa, and in the Cape colony. The two principal speeies of $\Lambda$ frican vultures are the lultur Kolbi (Kolbe's vulture), and the V. auricularis, or sociable vulture, the Oricou of the French. The latter, which is of gigantie size, is extremely uscful in consuming the earcasses of dead animals, which might otherwise pollute the air, and engender disease. It prevails most in the Namaqua country, where it was first observed by Le Vaillant. It is gregarions, living together in uumerons companies. The Guinea hen is the only gallinaccons fowl adapted to the poultry yard that Africa possesses.

The erocodile inhabits all the large rivers in the tropical countries of Africa, and abounds in the Nile, below the first cataract, never being seen above it. Lizards, serpents, and various species of voracions reptiles, abound in all parts of Africa. Amongst the insect tribes, of which there are many thousands, the loeusts are the most remarkable, having been, from time iminemorial, the scourge of the country. Hardly less formidable or destruetive are the ants, which awarm in countless myriads in tropical Africa; in many
places, their habitations, seen from a short distance, present the appearance of a native village. They move in vast armies, eonsuming every animal and vegetable substance that comes in their way.

Vegctable Productions.-The greater portion of Afriea lying between the tropies, its vegetation is, of course, modified by that eirenmstance. With execption of its S. extremity, it may be said to be wholly a palm region, one speeies or other of that uscful plant being met with thronghont nearly its whole extent, as far as yct explored. The N. of Africa, along the Mediterranean, presents a vegetation similar to that of many parts of the S. of Europe, but much more luxuriant. Wheat and maize are here cultivated; the olive, the orange, the castor-oil plant, the fig tree, and the dwarf and the date palins, are plentiful; and the Zizyphus lotus, or lote bush, is so abundant, that its fruit-which is still partially eaten-constituted formerly an important article of food to some ancient tribes, from which they were named, by the Greeks, Loto-phagi-lotus eaters. South of the Atlas mountains lies a tract, called the Land of Dates, from the great profusion in which the Phœnix dactylifera, or date palm, is diffused over its surface. Rice, maize, plantains, yams, manioc, pulse, and earth nuts (Arachis hypogea), are cultivated along the whole W. tropical coast. In Senegambia, Adanson first discovered the enormons Baobab tree-a plant also common in Nubia, and found as far S. as Lake Ngami-whose stem is sometimes 30 ft . in diameter, though not more than 10 or 15 ft . high, but laving a very large, bushy head; and whose fruit, under the name of monkey's bread, forms an important article of native food. In the same region flourishes the acacia, from which gum Senegal is obtained. Along the W. coast, likewise, but in greatest abundance on the Gninea eoast, are found the Eleis Guincensis, from which paln oil and wine are obtained; the cabbage palm, the wax palm, the shea butter tree, all yielding products important to man. To these may be added the African oak, and that plant characteristic of river mouths, the mangrove. Of fruits, the best are the banana, papaw, custard apple, lemon, orange, and tamarind. At the Cape of Good Hope, wheat and other cercals are eultivated; but the most eharacteristie vegetation of this distriet is the heaths, which grow in wonderful profusion, in great variety, and of surpassing beauty. Geraniums, and various bulbous and orehidaceous plants, are also prevalent, rendering this district a complete flower garden. The E. coast nuay, generally speaking, be said to be characterized by the same vegetation as the W. Here, however, the cultivation of rice is more general ; that of maize, less. Tamarinds, figs, and plantains, grow on this coast; and the cotton plant is found in great abundance. The N.E. part of Africa, in vicinity of Ras Jerdaffoon, is rich in frankincense, myrrh, cimnamon, and numerous other spices. The lighlands of Ethiopia are the native place of the coffee plant, which gives its name to the province of Kaffa. In many tropical localitics, but more especially along the E. coast, this plant forms thick woods. Towards the end of the 15 th century, it was introduced from Africa into Arabia. Abyssinia, though within the tropies, can scareely be said to possess a tropieal vegetation. The country, generally, is so inueh raised above the level of the sea, that its characteristic plants are more those of the temperate than of the torrid zone; part of it, however, is included in the spice region. Nulia, though further from the equator than Abyssinia, as it lies on a lower level, possesses a vegetation mnch more tropical. The Baobab, Elæis Guineensis, or palmoll tree, and Bombax pentandrum, or lndian cotton, are among its more prominent plants. Ligypt has long been celebrated for its wheat, which is there extensively grown; rice, beans, peas, sesamum, and cotton, are also cnltivated. Seına and other cassias are found in Upper Egypt, and form a considerable article of commerce. The dwarf and the date paln are plentiful; and the donm palm (Cucifera Thcbaica), is not uncommon. Further information respecting the vegetation of Africa will be given in the articles on its various countries. What has been said here is merely intended as a rapid sketch of a very extensive subject, of which, within our limits, merely a few salient points can be noticed.

Religion.-Mahometanism and Fetichism (the latter from the Portnguese word fetisso-something saerel) are the prevailing religions of Atrica, excepting in Abyssinia, where a debased sort of Christianity exists. A fütiche may be any
sort of substance-a stick, a stone, a horn, or any other casual object-which, being chosen by an individual, is set apart, invested with a supernatural influence, and worshipped as a divinity. It is from that moment believed to be endowed with a power of doing good or evil, and is feared and courted aecordingly. Several of the Afriean nations have a supreme fêtiche, some having a serpent, others a cock, others a lizard, and other animals, besides those presiding over the destinies of families and individuals. At Cape Coast, the publie fêtiche is a rock that projeets into the sea, close by the castle. Saerifiees are yearly made to this roek by the priests, with extraordinary gestures and invocations. Others of the negro tribes worship the sun, the moon, the stars; and others, idols of human form. Human sacrifices are common amongst these nations, although, it is said, only on the oceasion of the accession of a sovereign, or during the prevalence of an epidemic. The victim, on these occasions, must be brought from a distance, and his fate carefully concealed from him till the fatal blow is struck, which it is, in the presence of the assembled people and great men of the nation.

Languagcs, Social Condition, \&c.-The languages of Atrica are far too numerous to admit of any attempt being made even to enumerate them. The most widely diffused are the Arabic, the Berber, and the Mandingoe languages-the last prevailing over nearly the whole W. coast, and the former two over all the N. and N.E. parts of the continent. In S. Africa, the Hottentot and Kaffir languages are those best known. The number of languages spoken throughout Afriea has been estimated at upwards of 150 -of which 33 , it is said, are spoken between the W. Ocean and Red Sea.

As each of the varions countries of Africa presents a peculiar social phasis of its own, and as these, with numerous other details, will fall naturally to be noticed in the respective articles on these several countries, we shall here confine ourselves to W. Africa alone; that is, from about lat. $17^{\circ} \mathrm{S}$. to lat. $17^{\circ} \mathrm{N}$.-one of the most interesting portions of that eontinent. The social condition, generally, of this part of Afriea, is, as might be expeeted, extremely low; yet, important facilities for improving this condition, and for the successful introduction of civilization are not wanting. The black population are naturally of a kind, eheerful, and humane disposition; and where these may not exist, as in the case of a few tribes, there is an intelligence and general aptness, which would readily appreciate and appropriate the advantages of civilized life. The African black has none of the moody, ferocious temper of the savages of the Pacific and South Sca Islands, nor any of the proud reserve and ruthless nature of the Anerican Indian; while his love of music and song prove him to lave feelings and tendencies eminently favourable to social refinement. M'Queen describes the character of the population about Cape Lachen as exeellent; and adds, that they exlibit traits of feeling and paternal affeetion that would do honour to a civilized people. Of the population in the neighbourhood of Cape Palmas, he speaks in equally favourable terms, calling them a docile and peaceable race. Lieut. Christopher's account of the native population on the E. coast, is no less pleasing. 'He found then,' he says, 'a hospitable, cheerful, and liappy people, living in the midst of plenty.' Amongst the Fellatahs, who are, perlaps, one of the most advanced of the different nations of W. Africa, there exist many of the usages and customs of civilized life. It is matter of regret, that there should be exceptions to this general good character of the African tribes; but so it is, there being several nations remarkable for their savageness 2nd barbarity. Amongst these, the Ashantees stand conspicuous, proving-and it is no solitary instance-the singular fact, that the cleverest and most intelligent races of Africa are the most cruel and ferocious. There scems little doubt either, that eannibalism prevailed, and probably still prevails, to a considerable extent, amongst some of the tribes of W. Africa. In the industrial arts, the W. Africans have made little progress, although some of the tribes, particularly the Ashantees, Jalloffs, Dahomans, and Koorankoes, evinee considerable skill in working in metals, in tanning leather, and in the manufacture of cotton cloths; although, in this last, few of them being acquainted with the shuttle, they will take a eouple of months to work what a European would despatch in as many hours. In all matters connected with agriculture, they are also miserably backward. There is, as usual, some
of the ludierous, as well as the serious, to be found engendered of the moral darkness and low social condition of Africa. The most curious instance of this is presented in the form of a mysterious personage, called Mumbo Jumbo, whose business it is to punish refractory ladies, on whom the scoldings and castigations of their husbands lave failed in having the desired effect. In such cases, Numbo Jumbo arrays himself in a fantastic coat, which always hangs ready for his use on some convenient tree, in or near the village; puts a crown of straw on his head; and, after dark, marches into the market place, where he summons the offending fair one into his presence. Mumbo's power being absolute, she dares not disobey, but presently makes her appearance, with a crowd at her heels. She is now stripped, and Mumbo Jumbo commences a vigorous flagellation, encouraged by the applause of the surrounding mob. He is thus held in great dread by the African ladies, who will yield much rather than expose themselves to a call to appear in his presence. Mumbo Jumbo is no other than the husband of the fair culprit dressed for the occasion, or some friend deputed by him to perform this picee of eonjugal duty.

Commerce and Slave Trade.-The commerce of W. Africa bears no proportion to its extent; the clief reason for which is to be found in the barbarous state of its inhabitants, and, in part, in the unhealthiness of its climate, which prevents Luropeans developing its utmost capabilities and resources. Its principal articles of export are palm oil, gold, gold dust, ivory, gums, timber, wax, hides, feathers, \&e. The gum Senegal is exported in large quantities by the Moorish tribes, who possess the gum forests of the Sahara. They collect it in Deceniber, and pack it into sacks made of tanned ox hides. The amual produce of these forests amount to $1,200,000 \mathrm{lbs}$. The Moors take blue Indian ealicoes in exchange for their gum. During their absence on their trading expeditions, they live on the gum, consuming about six ounces every 24 hours. Those who can afford it, dissolve it in milk; those who cannot, use it as it is, or dissolve it in water. Gold and gold dust, the former fashioned into trinkets form a considerable branch of African trade. The native dealers in gold carry a pair of small scales about with them, in which they weigh the precious metal, making no difference in price between the wrought gold and the gold dust. Salt is another important article of internal trade. The demand for this necessary of life is very great, and the price proportionately high. A slab of salt, $2 \frac{1}{2} \mathrm{ft}$. long, 14 inches in brealth, and 2 inches thick, will often bring a price equal to $£ 2,10$ s., while $£ 1,15 s$, to $£ 2$ is the usual value of a piece of these dimensions. The slave trade forms a conspicuous feature in African commeree, and continues to do so, notwithstanding the efforts that lave been made to put it down. It has been calculated that about 110,000 slaves are yearly exported from the S. parts of the W. coast, besides those shipped at other places. Cuba and Brazil are great marts for slaves; the trade being encouraged in the former by the Spanish authorities, who derive a profit from their importation, the captain-general receiving an ounce of gold for every negro landed on the island, and the inferior officers proportionate allowances. Besides the external trade, a very extensive internal trate in slaves is earricd on in Afriea, and marts are established for their disposal. They are moved from place to place, in caravans of from 100 to 3000 , of all ages, but chiefly boys and girls. Slavery in W. Africa, however, exhibits a much milder character than in any other part of the world. The slave is there treated with consideration and kindness, and rarely subjected to corporal punishment. Amongst the Fellatahs, the ehildren of slaves are never sold; so that no separation between parent and child ever takes place. Slaves, on falling into the hands of the trader, are well treated, and, in being marched from place to place, are unfettered, well fed, and carefully tended; and, though surrounded by guards on horseback, armed with whips, are rarcly, if ever, touched with the thong. The cowrie, a small shell imported from the Maldive Islands by Jritish traders, is the principal circulating medium of S. and Interior Africa; but of so low a value is it, that it requires between 4000 and 5000 to make the equivalent of £I sterling. Amongst the exports to W. Africa in 1842, there were haberdashery, \&c., between $£ 12,000$ and $£ 13,000$; brass and copper manufactures, $£ 13,850$; cotton manufactures, $£ 220,564$; books, £362; arms and ammwition, £96,000!

Progress of Discovery.-There seems reason to believe that the circumnavigation of Africa liad been accomplished by tho Phenicians long prior to the earliest historical records. It is, at any rate, certain that an idea of its peninsular form was familiar in the days of IIerodotus-an evidence that the fact had been aseertained, notwithstanding it is uncertain by whom; althougle this merit has been aseribed to Neeho, kin's of Egypt, who, aceording to the historian just named, fitted out an expedition for that parpose. Sataspes, a Persian nobleman, was the next who made the attempt. He sailed from the W., and proceeded S. along the W. coast for several months, but was obliged finally to abandon the enterprise as impracticable. Sataspes was sueceeded in Afriean adventure by Euloxus, a native of Cyzieus, who made several attempts to explore the unknown regions of that contineut; but the results of his efforts have not been handed down to us, and, it may be suspected, were not very satisfactory. An expedition to the W. shores of Afriea was fitted out by the Carthaginians, about 570 years b.c., with the view of establishing colonies at such points as might be fuund suitable for such purpose. Thirty thousand persons, of both sexes, were embarked on this oceasion, on board of 60 ships, of 50 rowers caeh, and several colonies established; but the entire history of this expedition is so brief and indistinet, that no clear idea of either its progress or results can be obtained. At a later period, the lomans made some equally unsatisfaetory efforts to explore the unknown coasts of Africa, Polybius, the celebrated historian, having been sent thither by Seipio, on a voyage of diseovery. It is not, indeed, until history brings us to the expeditions of the Portuguese, those once famous and enterprising navigators, that the progress of Afriean diseovery becomes interesting, and from this point it will be found indicated in the following table-the form, it is believed, best adapted for giving at once a clear and rapid view of the subjeet. It must be premised, however, that the list contains but a seleetion from the better known travellers in Africa, there being a host of others; some of them, probably, of equal desert, whose names have been omitted, as it has not been intended to attempt more than a mere outline of the progress of diseovery in that eontinent. Influenced by a similar motive, we have refrained from detailing the extensive researehes of the French in Algeria-an omission, however, which will be found supplied, to some extent, in the article under that name:-
${ }_{1}^{\text {A.D.D. }}$......A Portuguese expedition reached Cape Bojador, but did not land.
1412 ...... APortuguese expedition reached Cape B
1433
$1+87$.....The Portuguese doulled Cape Bojador.
${ }_{1} 1437$.......The Portuguese doulled Cape Bojador. Cape of Good IIope diseovered by Bartholomew Diaz, a Portuguese navigator.
1490 ......Covillam, a Portuguese, visited E. Africa and Abyssinia.
1497 .......Vasco de Gana doubled the Cape of Good Hope.
1520 ......Avarez, a Portuguese, visited Amhara, Shoa, und Efat.
1588 ......Queen Elizaleth granted a patent to some merchants of Exeter, to carry on the trade of the Senegal and Gambia.
1018 ......An African Company formed in London-sent out an expedition, which ascended the Ganhbia as far ns Tenda.
1618 ......Paez, a Portuguese, visitcd the sourcts of the Ballr-el-Azrek.
1620 .......Capt. Jobson aseended thie Gamlia to the same height, namely, to Tenda.
1650 ..... The Dutch formed a colony at dhe Cape of Good llope.
1697-8 ...sieur Brue, a lycuchman, perforned several voyages up the Senegal.
1714 ......M. Conipagnon traversed the kingdom of Bambouk.
$1722 . . .$. .Shaw travelled through Numidia and N. Egypt, \&c.
17+8-53...Adanson travelled on the Senegal.
1761 ......Capt. Henri IIop, a Dutchman, truversed the country of the Namaquas.
1765-6 ...Bruce travelled through various parts of Barbary.
1769-70...Bruce travelled through Alyssinia.
1775-85...Sparman and Vailhat travelled through various parts of S. Africa.

1795 ......Park traced the course of the Niger.
1793-6 ...Browne travelled in Central A firica, visiting Darfoor and Bornou.
1797 ......Barrow penetrated as far as the Suow Mountains in S. Afican. In the same, and during several sulsequent years, 1lorncman travelled in various paits of $N$. Africa, and in Fezzan.
1801 ......Trutter and Somerville penctrated to Lattakoo, the capital of the Bonuanas, and were followed in the same track some years afterwards by Lichtenstein, Burchell, and Canpipell the missionary.
1802 ......Salt travelled in Egypt and Atyssinia
1805 ......Park again attempted to trare tho Niger, but never returned, having been killed, with nearly all his attendants, by the natives.
1812-3-4 Burckhardt travelled in Egypt and Nulia, visiting the latter twice.
1015 ......Belzoni visited Egypt, and made numerous interesting discoveries regardiug r.gyptian arcliitectural antiquities.
2817 ......M. Molien nade a journey to the Schegal and Ganbia.
${ }_{182}^{\mathrm{D} .}$
18 explored the S . and W. shores of Lake Te
through Bornou and lhie Fellatahs country.
1820 ......Major Laing penetrated to Timbuctoo.
1830 return by his guide.
1830 ......Lander explored the Niger, and proved that the numerous embouchures in the Guif of Benin are the delta of the Niger. Gobat penctrated to Gondar in Abyssinia.
1831 ..... Rilippell made two journeys in Abyssinia.
Jo.39 ....... Isenberg and Krapf travelled in Lgypt and Abyssinia.
18 $40-3$...I)r. Beke travelled through various parts of Ahyssinia.
1811 ......'I'rotter and Alleu survey the Niger, aud other parts of the W.
18.12-3 ...Sir W . W . C. Harris travelled in Abyssinia on his mission to Shoa. 18t3-1 ...Raffenel travelled up the Semegal, nud explored part of the Faleme.
18:3-4-5...M. Rochet d'llëricourt travelled in Adel and Shoa.
1014 ......Donean penetrated into the interior of Africa, from Whydah in the Bught of Benin, to lat. $13^{\circ} 6^{\prime}$ N.; lon. $1^{\circ} 3^{\prime} \mathrm{E}$.
1845-6 ...Richardson traversed a great part of the desert sahara.
The Rev. Mr. Rebbnan discovered a lofty mountain covered with perpetual snow, in E. Africa, about $2 \delta^{\circ} \mathrm{m}$. W. from Mombaz.
1819 ......The Rev. Robert Livingstone discovers a large lake called Ngami, in S. Afriea.
Settlements.-The principal settlements of the British in Africa are Sierra Leone, Cape Coast Castle, and the Cape of Good Hope; with several unimportant establishments on the Gold and Slave Coasts. The possessions of the Dutch are Elmina, and Axim, on the Gold Coast ; the former, 9 m . W. of Cape Coast Castle, is a well-built fort, garrisoned by 100 men. The Danes have also a few ineonsiderable ports on the Gold and Slave Coasts, the chief of which is Christiansborg, the residence of the governor-gencral. The Portuguese have several possessions on both the W. and E. coasts; and the Freneh on the Senegal, and Gambia. To these has to be added the Native Republic of Liberia, near Cape Mesurado, founded by the American Colonization Society, for the reception of free negroes from the United States.

Population. - There being no means of aseertaining the population of Africa with any approach to ecrtainty, we must be content to take the guesses of the most ereditable authorities on the point. Balbi estimates it at $60,000,000$; Malte Brun, at 70,000,000, and the Weimar Almanae, at 101,000,000. -(IIarris's Ilighlanls of Ethiopia; Martin's Colonial Library ; M'Queen's Geo. Survey of Africa; Capt. Tuckey's Expedition to the Niver Zaire ; Capt. Alexander's Colonies of Western Africa; Stedman's Wanderings and Adventures in the Interior of Southern Africa; Lieut. Christopher, On the Lust Coast of Africa; Athenceum ; Foreign Quarterly Review; Burck hardt, Ledyard, Belzoni, Pearee, Bruee, Harris, Dunean ; Allen's Niger Expedition; Johnston's I'hysical Atlus.)

AFRICAN ISLANDS, two islands in the lndian Ocean, between Amirante and Seyelelle Islands, N. Madagasear; the most northerly is in lat. $4^{\circ} 55^{\prime} \mathrm{S}$. ; lon. $53^{\circ} 30^{\prime} \mathrm{E}$. (в.) They are connected by a sand bank, and are so low, that they are almost overflowed at high spring tides. They are destitute of fresh water, but abound with turtle and aquatie birls. They were diseovered by a French vessel in 1795 .

AFSHARS, one of the wandering tribes of Persia, of foreign descent, of which description of people one-fourth of the population of that country consists, forming distinet elasses, apart from the original I'ersians, by their habits and modes of subsisting. The Afshars, who eall themselves origmally of the Turkoman tribes, are divided into two prineipal branches, Shamlu and Kirklu. They are a numerous tribe, counting altogether about 20,000 houses. They prineipally reside in towns, and are to be found in greatest numbers at Abiverd and Kelat.

AFVESTADT, or Avesta, a tn. Sweden, distriet Vesteras, on the right bank of the Dal, and about 60 m . from its embouchure, in the Gulf of Bothinia, 55 m . W.N.W. Upsala; lat. $60^{\circ} 7^{\prime} \mathrm{N}$.; lon. $16^{\circ} 9^{\prime} \mathrm{E}$. There are here extensive 1 ron and eopper works, the produce of the mines in the vieinity being manufactured here for exportation. Pop. 800 .

AF/ZULGHUR, a tn. Hindoostan, prov. Delhi, presideney of Bengal, near the Kumaon mountains; lat. $29^{\circ} 25^{\prime}$ N.; lon. $78^{\circ} 40^{\prime} \mathrm{E}$.

AGABLY, a th., N.W. Africa, oasis of Guat, desert of Salara; lat. $26^{\circ} 32^{\prime} \mathrm{N}$. ; lon. $0^{\circ} 52^{\prime} \mathrm{E}$. Caravan routes from Moroceo and 'Tripoli meet here, and afterwards diverge to Senegamlia and Timbuetoo; from the latter of whieh Agably is distant S.S.W. about 700 m .

AGADAN. Sie Agdass.

AGADEZ, a tn., N. Africa, Sahara, kingdom of Air or Asben, about 800 m. S.S.W. Mourzonk; lat. $16^{\circ} 30^{\prime} \mathrm{N}$; lon. $7^{\circ} 30^{\prime}$ E. It is situated on a hamala or table-land, is abont 3 m . in cireuit; and has almost a ruined appearance, consisting of about 700 houses, built of mud, occasionally white-washed, and flat-roofed. A tower 90 ft . to 95 ft . high is the principal defence. The manufactures, of limited extent, consist of mats and leather work, particularly sandals, and the saddles used in riding the maheris or swift eamels; the trade is chicfly in millet, whieh is almost the only food. The inhabitants, now only about 8000 , though they formerly numbered from 50,000 to 60,000, speak a peculiar language called Emghedesie, whieh is also spoken at Timbuctoo, and have five or six schools, in which the boys are taught to read the Koran and to write. -(Richardson, Barth, \&c., Exped. to Central Africa.)

AGADIR, Aqadeer, or Santa Chuz, it seaport tn. Moroeco, prov. Suse, 18 m. S. Cape de Geer or Ghir; lat. $30^{\circ} 26^{\prime}$ N. ; lon. $9^{\circ} 32^{\prime} \mathrm{W} .(\mathrm{R}$.$) ; on the summit of a hill 600 \mathrm{ft}$. in height, and surrounded by dilapidated walls; onee an inportant place, but now in a state of decay. Half way down the hill on which the town stands, and between it and the sea, there is a battery, which was intended to command the anchorage, and to protect a spring of water near the beach; but it is now likewise in ruins. The Bay of A gadir is one of the best roadsteads on the coast of Moroceo, having a moderate depth of water, and being completely sheltered from the strong N.E. winds, although exposed to those from the W. It abounds with fish of various kinds, of which great numbers are caught, dried, and sent to Mogador and the interior, and now form the sole article of trade in this once flourishing place. Provisions are good and plentiful, and water easily procured. Pop. about 300 .

AGALEGAS, or Galega, a small isl. Indian Ocean, about 485 m . N W. the N. extremity of Madagascar. The N . cnd of the island is in lat. $10^{\circ} 21^{\prime} 30^{\prime \prime} \mathrm{S}$.; lon. $56^{\circ} 38^{\prime}$ E. (r.) It is 11 m . in length, and little more than 1 m . in breadth; all low land, with a gap in the middle, where the sea breaks through on high tides, giving it the appearance of two islands when seen from a distance. It produces maize, wheat, \&c.

AGAME, a prov. Tigre, in Abyssinia, in the N.E. part of that territory, and W. from the great salt plain in which the country terminates N.E. The ground is high, but fertile and well cultivated, and the air cool and salubrious. The prineipal towns of the province are Genater and Scraxo.

AGANA (San Ignacio DE), a tn. Guahan, or Guaham, the largest, and one of the most southern, of the Ladrone or Marianne Islands, on the W. coast, 12 m . N.E. larbour of Apra; lat. $13^{\circ} 30^{\prime} \mathrm{N} . ;$ lon. $144^{\circ} 58^{\prime}$ E.; situated in a fertile district, at the base of a range of low hills. It is the principal town of the island, and is the residence of the governor of the Arehipelago. It is well fortified, and is surrounded with beautiful gardens. The streets are regular; the houses chiefly of wood, erected on posts, and standing about 3 ft . elear of the ground, roofed with tile and palm leaves. Agana was built by the Spaniards, when they founded the colony, about the middle of the 17th century. Pop. 3118.

AGATA DE GOTI (SANTA), a tn. Naples, prov. Terra di Lavoro, district of Caserta, and 15 m. E. Capua. It has a cathedral, seven parish churehes, and an abbey, and is the chief place of one of the dioceses forming the archbishopric of Santa Agata and Acerra. Pop. 5500.-There are several other towns and villages of the same name in Naples, the principal of which are Agata Santa, prov. Capitanata, district of, and 7 m . S.E. from Bovino. 1'op. 4648.-Another, in the prov. Terra di Lavoro, distriet Gaeta, built on the ruins of the ancient Minturnce of the Romans.-Santa Agata VecCHiA, prov. Calabria Ultra I., 3 m . S.E. Reggio. Pop. 1200.-Santa Acata-Nuova, at a short distance from the latter, has a cotton manufactory, and a pop. of 608.

AGATHO, or Agaton. See Gato.
AGATTOO, or Agatta, a small isl. of the Alcutian group, whose centre is in lat. $52^{\circ} 43^{\prime} \mathrm{N}$. ; lon. $173^{\circ} 37^{\prime} \mathrm{W}$. (n.) It is covered with low hills, and is thinly peopled.

AGDASS, a tn. interior of N.W. Africa, near the S.E. border of the Salara, and N. confines of Soodan; lat. $16^{\circ} \mathrm{N}$. ; lon. $8^{\circ} 22^{\prime}$ E.; on the route from Tripoli and Fezzan to the town of Kashna, in the country of Houssa, from whieh it is about 210 m . distant, nearly due N . Agdass is about 390 m . W.N.W. Lake Teliad.

AGDE [ane. Agatha], a maritime city, France, dep. Merault, about 12 m . S.E. Beziers, on the left bank of the Herault, here crossed by a suspension bridge, and 2 m . from its embouchure, in the Gulf of Lyons; lat. (harbour) $43^{\circ}$ $16^{\prime} 42^{\prime \prime} \mathrm{N} . ;$ lon. $3^{\circ} 26^{\prime} 42^{\prime \prime} \mathrm{E}$. (R.) (gde is sometimes locally called Ville Noire, from the black volcanie basalt of which it is built. It is a military place of the fourth class, and has a tribunal of commerce, an exchange, and a cathedral; the latter a remarkable structure, of great antiquity, in the Gothie style, built of black basalt, with a strong square tower, 114 ft . high, which forms a useful landmark to mariners. The town is separated from its suburb by the river, on which there is a small port, capable of accommodating about 450 vessels, of from 60 to 200 tons burden. Most of the smaller vessels are engaged in fishing, supplying the whole department, and part of that of Garde, with fresh fish. Being advantageonsly situated, it carries on an active coasting trade, there being about 120 vessels, of from 100 to 300 tons burden, belonging to the port. It has manufactories of verdigris and soap, shipbuilding, and distilleries; exports large quantities of corn and flour, and imports olive oil, dried fruits, woollen goods, leather, and perfumery, and soap from Marseilles, with which port it has a regular communication by steamers. Pop. in 1846, 8884.

AGEN [Latin, Aginnum, Agennum], an ancient tn. France, cap. dep. Lot-ct-Garonne, 74 m . S.E. Bordeaux, on the right bank of the Garonne; crossed liere by a beantiful stone bridge of 11 arches, and also by a suspension bridge, between which and the town is the fine promenade called Les Graviers. The town itself is a place of little interest, being in general ill built, with old, narrow, and dirty streets; and the exhalations from the marshes of Brais render tho air somewhat insalubrious. Among the publie buildings are, the old church of St. Caprais, the hospital of St. James, and the prefecture, originally the Episcopal palace, which is a handsome edificc. The site of the cathedral of St. Etienne, destroyed at the Revolution, is now a cattle market. Agen forms the entrepot of the commeree between Bordeaux and Toulouse. It is the seat of a bishoprie, suffragan to Bordeaux, and of a Cour Royale for the departments of Lot, Lot-ctGaronne, and Gers. It has a college, and several literary and scholastic institutions, and a public library, with more than 15,000 volumes; also, a theatre, and a house of correction. An extensive saileloth factory is carried on liere, for the supply of the French navy. There are also manufactures of serge, printed cloths, cottons, eamlets, pottery, candles, and soap; and some brandy distilleries, and tanneries. Its scarlet and deep red dyes are much esteemed; and the celebrated prunes cl'Agen, from the plum orehards in the neighbourhood, form an article of export to the value of $£ 24,000$ annually. Large flocks of geese are reared in the vicinity, and fattened on maize. In ancient times, Agen was the capital of the Nitiobriges, a people of Gaul; afterwards, a pretorian city, under the Roman emperors. Pop. in 1846, 15,517.-(Guibert, Dic. Geo. et Stat. ; French Official Papers.).

AGENOIS, an anc. district, France; in Gienne. It constituted part of the old kingdom of Aquitaine, and is now comprised in the department of Lot-et-Garonne.

AGER, a tn. Spain, Catalonia, prov. of, and $25 \mathrm{~m} . \mathrm{N} . N . \mathrm{E}$. from Lerida, in a valley. It is eneompassed by walls and fortifications, in a good state of preservation; but its streets are erooked, dirty, and unpaved. It contains a square, capacious townhall, an endowed school, and two churches. The inhabitants are engaged in agriculture, olives being the principal article of produce; and in breeding sheep, goats, and pigs, all of which animals, but the last in greatest numbers, are sold at the annual fair held in December. Pop. 2200.

AGEROLA, a small tn. Naples, prov. Principato Citra, district of, and $11 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. from Salerno. It stands on a hill, and enjoys a salubrious climate. Pop. 3470.

AGGERSHUUN, Aggeriuus, or Ciristiania, the most populous and most important of the five administrative provinces into which Norway is divided, and co-extensive with the diocese of the same name. It lies between lat. $58^{\circ} 56^{\prime}$ and $62^{\circ} 58^{\prime} \mathrm{N}$., and is bounded, E. by Sweden, S. by the Skager Rack, S.W. by prov. Christiansand, W. by Bergen, and N. by Drontheim, or Trondhjem; area, 10,911 sq. m. Pop. in $1845,567,833$. It is a mountainous romantic country, and, like other parts of Norway, the uncultivated portion bears
a large proportion to that under tillage. The soil in the small valleys is tolerably fertile, and yields grain, though not in suffieient quantity for home consumpt. (lattle and horso rearing are extensively and successfully carried on. The mountains yicld an unlimited supply of fine timber; and iron, copper, and silver, are wrought. The province is watered by the rivers Drammen, Glommen, Louven, Lougen, Klara, Nid, \&c., and of the numerous lakes that diversify its surface, the most noted are the Miösen, Fämtnd, and Tyri. It is divided into six bailiwicks, Aggerhnus, Smaalehnen, Buskerud, Jarlsberg and Laurvig, Christian and Hedemarken. The principal towns are Christiania, the eapital of the province and of the country, Drammen, Kongsberg, Laurvig, and Tönsberg. -The bail. of Aggershuus, in which is the cap. Christiania, has an area of about $717 \mathrm{sq} . \mathrm{m}$. , and a pop. of 83,755 .-Aggerinues is also the name of an aneient fortress, forming the citadel of the capital.-(Capt. Roosen in Bulletin de la Soc. Geo.; Forsell, Statistik von Schweulen.)

AGGERSOE, a small isl. Denmark, S.W. coast of Seeland, from which it is distant about 3 m. ; lat. $55^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $11^{\circ} 10^{\prime} \mathrm{E}$. It is about 5 m . long, and 1 or $1 \frac{1}{2}$ broad. At the S. extremity of the island is a lantern, clevated to a height of 24 ft . above the level of the sea, as a substitute for a lighthouse.

AGHA, or Augha, a par. Ireland, co. Carlow; area, 4184 ac.; on the river llarrow. Pop. in 1841, 1197.

AGHABOE, a par. Ireland, Queen's co.; 18,702 ac. abounds in excellent limestone. Pop. in 1841, 6310.

AGHABOG, a par. Ireland, co. Monaghan; 11,543 ac. contains several small lakes; people iniserably poor. Pop. in 1841. 7530 .

AGIIABOLOGUE, a par. Ireland, co. Cork; 18,733 ac.; a sacred well and stone, in the churchyard, the latter called St. Olan's Cap. Pop. in 1841, 6001.

AGII ACREW, a par. Ireland, co. Tipperary; 1231 ac. rop. in 1841, 409.

AGHACROSS, a par. Ireland, co. Cork; 355 ac.; two annual fairs. Pop. in 1841, 104.

AGIIADA, a par. Ireland, co. Cork; 2459 ac . ; on the E. shore of Cork harbour. Pop. in 1841, 2835.

AGIIADE, a par. Ireland, co. Carlow; 1698 ac. Pop. in $1841,521$.

AGHADERG, a par. Ireland, co. Down; 13,920 ac. Pop. in 1841, 9240.

AGIIADOE, a par. Ireland, eo. Kerry. It was anciently a bishopric; but, being merged in that of Ardfert, is now annexed with it to the sce of Limerick. The ruins of its cathedral are still extant; and near them are those of an ancient round tower, ealled 'The Pulpit,' by the peasantry, and a round castle, called 'The Bishop's Chair.' In 1231, there was an abbey here, in whieh the son of the O'Donoghue, its founder, was buried. The village of Aghadoe is distant about 2 m . from Killarney. The parish includes a portion of that town, and compreliends within its limits the beantiful island of Innisfallen, and part of the lakes of Killarney. Area of par., 19,888 ac. Pop. in 1841, 3734.

AGHADOWN, a par. Ireland, co. Cork; 8952 ac. ; contains several islands. 1'op. in 1841, 5757.

AGHA1)OWY, a par. Ireland, co. Londonderry; 16,346 ac. Pop. in 1841, 7884.

AGHAGALLON, a par. Ireland, co. Antrim; 7885 ac. Pop. in 1811, 3862.

AGHALEE, a par. and vil. Ireland, co. Antrim; 2500 ac. Pop. in 1841, 1450.

AGHALURCHER, a par. Ireland, cos. Tyrone and Fermanagh; 48,017 ac. ; extends along Lough Erne, abounds in limestone and sandstone, and contains several small lake3, and old castles. Pop. in 1841, 16,740.

AGHAMORE, a par. Ireland, co. Mayo; 22,820 ac. ; contains several small lakes, and nuch bog. lop. in 1841,7675.

AGIIANCON, a par. Ireland, King's co.; 5544 ac.; contains a mineral spring, and the ruins of Ballybrit Castle. Pop. in 1841, 1310.

AGHANLOO, a par. Ireland, co. Londonderry; 8251 ac.; eontains a mountain called Benyevenagh, which rises from the margin of Lough Foyle to a height of 1260 or 1280 ft . Pop. in 1841, 1841.

AGHARRA. See Aimara.
AGII ARUN, or Kianzlr (Hog), a vil. Turkey in Asia,
pash. Diarbekir; finely situated in a gorge of the momntains of Dark (ish Dagh, and surrounded by magnifieent walnut trees. It commands a splendid view of the plain on which the gorge in which it is situated opens.

AGHAVALLEN, a par. and vil. Ireland, co. Kerry ; 16,743 ac.; lies along the Shannon, and ineludes the island of Carrıg-a-foile; contains an old eastle. Pop. in 1841, 6606.

AGHER, a par. Ireland, co. Meath; 2063 ac. Pop, in 1841, 386.

AGIIERN, a par. Ireland, co. Cork; 3489 ac. Popl. in 1841, 1198.

AGHERTON, or Ballyagiron, a par. Ireland, co. Londonderry; 3897 ac . ; lies along the coast of the N. Channel, contains iron ore, and an old chureh, and castle. Pop. in 1841, 2318.

AGIIIART, or Ballynakilil, a par. Ireland, co. Galway; 5221 ac.; lies along the shore of Ballynakill Bay. Pop. in 1841, 4998.

AGHMA'T, or Aghmet, a vil. Norocco, on the W. slope of Mount $A$ tlas, in the vicinity of some of its loftiest summits, on the left bank of the Wad Enfis, a tributary of the Tensift, 30 m . S. Morocco; lat. $31^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $7^{\circ} 35^{\prime} \mathrm{W}$. It is said to have been at one time the residence of the Moorish emperor, and to have contained 6000 honses; but it is now an insignificant village.

AGHNAMEADLE, a par. Ireland, co. Tipperary; 10,322 ae. Pop. in 1841, 3893.

AGIIOLD, a par. Ireland, co. Wicklow; 8140 ac. Poy. in $1841,2764$.

AGHOR, a river, Beloochistan, forming the S.E. boundary of prov. Mekran. It rises in the district of Lis, takes a S. course for about 50 m ., and falls into the Indian Ocean about lat. $25^{\circ} 25^{\prime} \mathrm{N}$. ; lon. $65^{\circ} 56^{\prime} \mathrm{F}$.

AGIIOURE, or Fresmorn, a par. Ireland, co. Kilkenny; 2171 ac. Pop. in 1841, 2650.

AGHRIM, or AUghrin, a deeayed vil. Ireland, co. Galway, 82 m . W. Dublin, and 28 E . town of Galway; memorable for the signal and deeisive victory obtained in its neighbourhood, July 12, 1691, by the forces of King William, commanded by General de Guikell, afterwards Earl of Athlone, over those of James II., under the French general, St. Ruth, who was killed early in the aetion. Swords, spear heads, and cannon balls, have frequently been dug up on the site of the battle. In the village are a chureh, a chapel, and a small Methodist meeting house. Pop. in 1841, 458.-There is a village of the same name in co. Wieklow, on the left bank of the Derry, $34 \mathrm{~m} . \mathrm{S}$. Dublin.

AGINCOURT, now Azincourt, a vil. France, dep. Calais, 20 m . S.S.W. St. Omer, and 30 m. N.N.E. Abbeville; celebrated as the scene of the great victory, gained on St. Crispin's day, Oct. 25,1415 , by the English, over a French army more than six times their number. The village of Agineourt, a dirty, insignificant place, contains only a pop. of 452. Of the castle mentioned by Shakspeare, as 'standing hard by,' only the foundations remain. A wood still exists, supposed to be that in which Henry posted his arehers.(History of Eugland; Murray's Handlook for France.)

AGIO STRA'TI [anc. Nex], an isl. of the Grecian Arehipelago, 20 m. S. Lemmos, and 46 m. W.N.W. Mytilini; lat. $39^{\circ} 31^{\prime} \mathrm{N}$. ; lon. $25^{\circ} 1^{\prime} 42^{\prime \prime} \mathrm{E}$. (R.) There is a small village on the W. side of the island.

AGLIE, or AgliA, a tn. Sardinian States, in Piedmont, 20 m. N. Turin, and $10 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Ivrea. It has a collegiate chureh, and a superb royal residence, which contains a small but very choice collection of Roman antiquities, and a library. Pop. 3400.

AGLISII, the name, with and without affixes, of a number of parishes, Ireland:-1, A par., eo. Cork; 6771 ac. P'op. in 1841, 2579.-2, A par., co. Kerry; 4857 ac. Pop. in 1841, 1939.-3, A par., co. Waterford; 6856 ac. Pop. in 1841, 3783.-4, Aglish-Martin, a par., co. Kilkenny; 1343 ac. l'op. in 1841, 440.-5, Aglish-Cloghane, or Euglish, a par., co. Tipperary; 5898 ac. 1'op. in 1841, 1938.-6, AglishCormick, or Liscormick, a par., co. Limerick; 1715 ac . Pop. in 1841, 738.-7, Aglish-Drinagh, or Bullinorane, a par., co. Cork; 3310 ac. Pop. in 1841, 1026.

AGLIY, a small river, France, which has its source in the dep. of Aude, near Quillan, from which it flows S.E., enters the dep. of the l'yrences Orientales; turns nearly due F. ;
and, finally, falls inte the Gulf of Lyons 8 m . N.E. Perpig nan, its whole course being between 50 and 60 m .

AGMONDESHAM. Sce Amersinam.
AGNADELLO, a vil. Venetian Lombardy, prov. of, and 10 m . N.E. Lodi, district Pandino. Here, in 1509, Lonis XII., King of France, gained a complete victory over the Austrians; and here, in 1705 , Prince Eugène was defeated by the Duke of Vendôme. Pop. 1600.

AGNANO, a lake, Italy, about 4 m . S.W. Naples. The circular hollow in which it lies, is supposed to be an ancient crater; but some lave aseribed its origin to an excavation made by Lucullus, to serve as a fish pond. It is from $1 \frac{1}{2}$ to 2 m . in circumference, and derives its greatest beauty from the verdure on its margin, and from the fine hills around it. In summer, the air is unhealthy. Near the lake is the celcbrated Grotta del Cane, or 'Grotto of Dogs,' a small aperture in the side of the mountain, remarkable for emitting a deadly vapour, to whose noxious effects it is a common practice to expose dogs, which are thus quickly deprived of all appearance of life, but are as quickly restored on being brought into the fresh air. This grotto is alluded to by the elder Pliny. Close by the lake are also the sulphurous vapour baths of San Germano, the Aniance Thermes of the Romans.-(Eustace's Clas. sical Tour, vol. ii. p. 382.)

AGNES (Sт.), a small market tn. and par. England, co. Cornwall. The former is built on a small rocky harbour near the Bristol Channel, about $8 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Truro. It contains a free school, a British school, and several dissenting places of worship. The harbour is accessible at high water only, and, even then, is capable of reeciving but a few small vessels. There is, however, some trado in coal, lime, and slate. Market day, Thursday. This market, which is for all sorts of wares and provisions except corn, has been held from time imnemorial. The inhabitants are ehiefly miners. The coasts of the parish are exceedingly wild, rocky, and precipitons. About St. Agnes Head the eliffs are tremendous, and have often been the scene of the most disastrous shipwrecks. A pilchard fishery was established here about the year 1802. Opie, the painter, was a native of St. Agnes, having been born there in 1761. Area of par. 8660 ac.; pop. in 1841, 7757.

AGNES (St.), the most southerly of the Scilly Islands, on the coast, and ineluded in the county of Cornwall, lat. $49^{\circ} 53^{\prime} 36^{\prime \prime} \mathrm{N}$. ; lon. $6^{\circ} 20^{\prime} 42^{\prime \prime} \mathrm{W}$. (r.) It is of an irregular form, with an area of about 300 ac . The soil is fertile, and tolerably cultivated; but there is a great defieiency of water. On one of the loftiest hills, a lighthouse was erected in 1680. The light, which is revolving, is elevated 138 ft . above high water mark. Pop. in 1841, 243.

AGNO.-1, A river, Lombardy, an affuent of the Adige from the left. It rises about $21 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Verona, takes a S.E. and somewhat winding course, passes Lonigo, Cologna, and Este, and falls into the Adige at Rotta Sabadina, 8 m . N.W. Rovigo. Length, exelusive of windings, about 46 m .
-2 , Market tn ., with stream and valley of the same name, Switzerland, in canten Tessin, of which it is one of the most important places. The town is in the district of Lugano, and lies at the N. end of the Lago d'Agno, the W. arm of the Lago Lugano. It is beautifully situated, and has two handsome churches. The inlabitants are R. catholics, and speak Italian. Pop. 726.

AGNONE, a tn. Naples, prov. Sannio, district of, and 18 m . N.E. from Isernia; pleasantly situated on a hill, and said to be built on the site of the ancient Aquilonia of the Samnites. It has 18 churches, an hospital, and five monts-de-pietté, which advance loans of seed corn to the poor agriculturists in the neighbourhood. It is celebrated for the excellence of its copper manufactories, of which it has several. Pop. 7460.

AGNUR, or AkNur, a tn. Punjab, on the right bank of the Chenab, 35 m . above where it is joined by the Tauhi, or Makkati river; 95 m . N.N.W. Lahore; lat. $32^{\circ} 52^{\prime} \mathrm{N}$.; lon. $74^{\circ} 58^{\prime} \mathrm{E}$. It is a place of no importance, situated at the base of the most southern range of the Himalaya, where it first rises above the plain of the Punjab. The river is here protected by a stately fort, probably more picturesque than useful, built early in the present century by Alum Singh, and subsequently plundered by Ranjeet Singh. The old palace is in ruins, and imparts a picturesque appearance to the place. Near Agnur rises the mountain Trikota; and
about half way up its N. side is a place of pilgrimage, with a temple, much celebrated for its beauty and sanctity. The river Chenab is here a strong, clear stream, with water of icy coldness. It becomes navigable a little way above Agnur, and continues so to the sea.-(Hügel's Travels; Thornton's Gaz.)

AGO, a small isl. Sweden, Gulf of Bothnia, län or co. Gefleborg, about 6 m . from the mainland; lat. $61^{\circ} 32^{\prime} \mathrm{N}$. , lon. $17^{\circ} 22^{\prime}$ E.

AGOA DE PAO, a seaport tn . St. Miehaels, one of the Azores, on the S. coast of the island; 12 m . E. Ponta del Gada, the cap. Pop. 3000.

AGON, a small seaport tn. France, dep. Manche, about 7 m . W. Coutances. Vessels are fitted out here for the Newfoundland cod fishery. It has also some trade in timber and slates, and was formerly celebrated for its fair. Pop. 1506.

AGOONA, a small state, W. Africa, Gold Coast, territory of Ashantee; between lat. $5^{\circ} 25^{\prime \prime}$ and $5^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $10^{\prime}$ and $40^{\prime} \mathrm{W}$. It is thus about 30 m . from E. to W., and about 20 from N. to S. There are one Danish, one Dutch, and one British settlement on the coast of this district, named, respectively, Christiansborg, Crevecceur, and Fort James. Winnebah was formerly the most important place in Agoona, but it is now abandoned.

AGORDO, a small tn. Austrian Italy, on the left bank of the Cordevole, 13 m. N.W. Belluno; lat. $46^{\circ} 16^{\prime}$ N.; lon. $12^{\circ} 5^{\prime} \mathrm{E}$. It lies in a mountainous district, containing riels mines of sulphuretted copper. Pop. 3500.

AGOST'A, or Agusta, a seaport tu., S.E. coast Sicily, prov. of, and 12 m . N.N.W. from Syracuse; lat. $37^{\circ} 13^{\prime}$ N.; lon. $15^{\circ} 14^{\prime} \mathrm{E}$. It stands on the S. side of a peninsula that terminates in Cape Santa Croce, and is fortified. It was a place of some importance before the earthquake of 1693 , which buried more than a third of its inhabitants under the ruins of their houses. To deepen the calamity, the citadel was blown up, the powder magazine having been ignited, as was supposed, by the sulphurous vapours that issued from the ground. The houses are mean, and the inhabitants have a squalid and poverty-stricken look. The port is spacious, though of rather difficult access, and liable to heavy swells when the wind is from the E. or S. It exports a little wine, oil, and sardines, and has a considerable trade in salt, which is the chief article of export. Pop. 10,000.

AGOWS, a people of Abyssinia, divided into three distinct tribes, one of which inhabits the fertile country lying immediately W. from the sources of the Blue Nile, in the territory of Amhara; another, called the Gualin Agows, inhabits a distriet on the E. bank of the Tecazze, in Tigré; the third occupies a tract on the the N . bank of the same river, also in Tigré.

AGRA, a gov., prov., and district, Hindoostan.-The governaent ineludes the N.W. provinces Delhi, Mcerut, Rohilcund, Agra, Allahabad, and Benares (which see), containing an area of $51,861 \mathrm{sq} . \mathrm{m}$., and a pop. of $19,733,742$.The prov. of Agra, cap. same name, is situated chiefly between lat. $25^{\circ}$ and $28^{\circ} \mathrm{N}$. ; bounded, E. by Oude and Allahabad, S. by Malwa, W. by Ajmeer, and N. by Delli. It is about 250 m . long, and 180 broad, and is subdivided into five distriets, which, with their area, population, \&c., are exhibited in the following table:--

|  | Number of Townships. | $\begin{gathered} \text { Area In } \\ \text { geo. } \mathrm{Eq} . \mathrm{m} . \end{gathered}$ | Ara in Acres. | $\begin{gathered} \text { Land } \\ \text { Revenue in } \\ 1845-6 . \end{gathered}$ | Total Pop. | $\begin{gathered} \text { Number } \\ \text { of per- } \\ \text { sons to } \\ \text { cach geo. } \\ \text { m. } \\ \hline \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Muttra. | 9.48 | 1103 | 934,279 | $\stackrel{\text { £ }}{162,633}$ | 460,772 | $417 \cdot 7$ |
| Agra... | 1287 | 1403 | 1,188,414 | 160,032 | 657,182 | 468.5 |
| Furruckabad. | 2034 | 1562 | 1,328,206 | 130,549 | 777,089 | 497.5 |
| Mynpooric... | 1467 | 1510 | 1,280,062 | 118,673 | 481,781 | 319.0 |
| Etawah....... | 1518 | 1265 | 1,071,637 | 130,180 | 458,610 | $362 \cdot 5$ |
| Total. | 7254 | 6813 | $\overline{5,797,598}$ | 702,068 | 2,835,434 | 4143 |

The average rate of the land tax on the total cultivation, according to the table by Mr. Thornton in the Journal of the Statistical Society, from which the preceding is an extract, is 4s. 6d. per acre. The province is watered by the Ganges, the Jumna, the Chumbul, and various smaller streams. It is generally flat, and destitute of wood, but the S. and W. are hilly, and abound in jungles, which swarm with peacocks. In many parts there is a great deficiency of water, the smaller streams being either absorbed by the heat, or turned aside by the cultivators of
the soil, for purposes of irrigation, before they reael the larger; wells are, thercfore, the only other resource of the inhabitonts. The climate, except during the prevalence of the hot winds, is temperate and healthy, and, in winter nights, cool; but, on the whole, unfavourable to European constitutions. The soil is well adapted for the cultivation of indigo, cotton, tobacco, and sugar. Various kinds of grain and pulse, including millet, barley, wheat, \&c., are also raised. Wheat and barley, however, form the principal erops; rye and oats being hardly known. Owing to the scarcity of water, rice is little cultivated except in the vicinity of rivers. Cotton is the staple product. Agra has the common breeds of cattle and sheep, with horses of a good description. There are some marble and sandstone quarries; and copper has been found, but not in a situation favourable to mining. Silks and muslins were formerly manufactured, but the principal article of manufacture is coarse cotton cloth, the exportation of which l:as latterly mnch declined. This province, which was marked out by the Emperor Akbar, is now entirely either in possession, or under the control, of Great Britain. The natives, who are principally Hindoos and Mahometans, are handsome and robust, and mnch superior to the natives of the more E. provinces. The Ilindoostanee is the colloquial, and the Persian, or English, the official language.-The District of Agra extends in a S.E. direction along both banks of the Jumna, to its junction with the Clumbul. The portion of the district within these two rivers is a table land, about 60 ft . above the beds of these streams, and is composed of a light soil. In the dry season, the tanks and rivulets are without water. The entire area of the district is $1,188,414 \mathrm{ac}$. The quantity of cultivated land is $813,655 \mathrm{ac}$., and of culturable land 92,931 . The natives of Agra, and of many of the contiguous territories, have long been notorious for their predatory habits, which, previously to British ascendency, were connived at, and encouraged by, the Zemindars, or landholders, who shared in the plunder thus obtained. The total population amounts to 657,182 ; of which 586,256 are Hindoos, and 70,926 Mahometans and others, not IIindoos.-(IIamilton's East India Gazetteer: Mistorical and Descriptive Account of Lritish India; Journal of the Statistical Society of London, 1847.)

AGRA, or Akbarabad, a city of Hindoostan, cap. of prov. of same name, on the right bank of the river Jumna; 115 m . S.S.E. Delhi ; 740 m. W.N.W. Calcutta; 630 N.N.E. Bombay; and 1000 m. N. by W. Madras; lat. $27^{\circ} 11^{\prime} \mathrm{N} . ;$ lon. $78^{\circ} \mathrm{E}$. A great part of the city is now in a ruinous state, but it still maintains much of its original splendour. The houses, generally, are lofty, consisting of several stories, and the strects extremely narrow: It contains no modern buildings

of any note, but some of its more ancient structures are on a scale of great magnificence. Of these the most celebrated is the Tauje, or Taje Mahal, a mausoleum, built in the 17th century, by the Emperor Shah Jehan, in commemoration of

Noor Jehan, his favourite qucen. This superb edifice, the finest in India, probably in the world, stands on the banks of the Jumna, is enclosed on three sides by a high red stone wall, and forms a quadrangle of 190 square yards, with a lofty dome of 70 ft . diameter in the centre, and tall minarets rising from the angles of the terrace. It is built of white marble, and the great central hall, in which are the tombs of the Emperor and his queen, is paved with alternate squares of various coloured marbles; while the walls, tombs, and screens, are ornamented with the most exquisite mosaic work, chiefly of cornelian, lapis lazuli, and jasper. The chambers and corridors, which surround the hall, are finished with similar elegance. The whole cost of the building is said to have been $£ 3,174,802$ sterling. It is surrounded by a beautiful garden, adorned with fountains of white marble, and containing a profusion of fine trees and flowering shrubs. It is now in charge of the British Government, and is kept in the highest order. The imperial palace, built by the Emperor Akbar, the Mootce Musjeed, or pearl mosque, both now used as offices, warehouses, and lodgings; the mosque named the Jumna Musjeed, and the tomb of Ftimand-ud-Dowlah, are all remarkable structures. In the neighbonrhood are likewise numerous splendid remains of Indian art. The fort of Agra is large, and strongly built of red sandstone, with a ditch, a double rampart, and bastions. It has bcen repaired, and much improved, for the accommodation of the l3ritish garrison. The trade of Agra, carried on partly by land and partly by water, consists chicfly in the exportation of indigo, silk, and sugar ; and the importation of horses, camels, grain, fresh and dried fruits, and manufactured silk and cotton. Agra was at various periods the seat of the Mogul Goverument, and is intimately connected with the whole modern history of India. Previonsly to the 16 th century, it was an inconsiderable village; but, early in that century, it scems to have been first made an imperial residence by the Afghan Emperor, Sckunder. It was further enlarged by Akbar about 50 years afterwards, and by him named Akbarabad. It continued to be the occasional seat of Government till the final decay of the Mogul dynasty, about the middle of the 18 th century. In 1784, it was taken by tlie Mahratta chief, Madhajee Sindia, who retained posscssion of it till 1803, when it was besieged and captured by the British under Lord Lake. Soon after, it was made the headquarters of a civil establishment for the administration of justice, and collection of revenue; and subsequently became the seat of the British licutenant-governor of the N.W. provinces. This city is the birthplace of the celebrated Abnl Fazel, vizier or prime minister to Akbar, whom he assisted in the preparation of a work entitled the Ayeen Aliberry, containing an account of everything connected with the dominions, government, and occupations of that emperor. Agra is still regarded with great veneration by the IIindoos, as the birthplace of the sixth Avatar, or incarnation of the god Vishnu, named Parasu Rama, whose conquests extended to the island of Ceylon. Pop. in 1837, 96,597. -(Historical and Dcscriptive Account of Sritish India; Heber's Indian Journal; IIamilton's East India Gazetteer; Jac quemont's Letters from India; Martin's British Possessions in the Last Indies.)

AGRAM, or Zagrab [Latin, Zagralia], a city, Hungary, cap. Croatia, on the left bank of the Save, from which it is about 2 m . distant; 106 m . E. by N. Trieste; lat. $45^{\circ} 48^{\prime} 54^{\prime \prime}$ N.; lon. $15^{\circ}$ $39^{\prime} 8^{\prime \prime} \mathrm{E}$. (土..) ; fincly situated on a wooded slope, overlooking the fertile plain of the Save. It is the seat of various local courts, and of a bishopric. It is divided into three parts-the free, or upper town; the lower, or chapter town ; and the bishop's town. The first crowns a hill called Medred, or 'The Bear;' and it is the most fashionable of the three, being inLabited exclusively by the higher classes. The streets here are regular and well built; many of the houses are in the Italianstyle, with flat roofs; and the whole is surrounded with palisaded walks, planted with poplars, forming an agreeable

## AGUILAR DE LA FRONTERA

promenade. In the lower town, the houses are old and mean, and the strects and squares ill paved. The principal buildings are the cathedral, episcopal palace, the 'Narodne Domo,' the national casino, or club-house, and the Government house. The eathedral is a lofty and spacious building, in a mixed style, the front being Byzantine of the 11 th century, and the body Gothic. The great eastern window, which has been recently renewed with painted glass, is a magnificent specimen of this beautiful art. The episcopal palace still has the castellated round towers of the Middle Age; but the moat is now replaced by a garden, and the curtain has been pierced with modern windows. The income of the bishop is little short of $£ 30,000$ a year. Both these buildings, the cathedral and palace, adjoin the lower town. The Govermment house, in which the dicts are held, is situated in the upper town. The 'Narodne Domo' is an elegant new structure, in the Palladian style of architecture, containing a muscum, and the rooms of the Agricultural Society. There has been lately founded here an institution for sisters of charity, to which the bishop contributed $£ 15,000$. The building occupies a prominent position in the lower town, and includes within its walls an hospital for poor women, and a school for poor female children, as well as the dormitories and church of the sisterhood. There are also a civil and military hospital, an orplan institution, and a German and llyyrian theatre, which, however, are open only in winter. Two journals are published in the town, both conducted with considerable talent; and there are two libraries-a public library, and the cathedral library. The educational institutions comprise a royal acadeny, a primary and preparatory schools, and a theological seminary. There are manufactories of silk and porcelain, and a considerable trade in tobaceo and honey. Within a few miles of the town is the bishop's English park, a favourite resort of the inhabitants in the summer season; it is of several miles extent, ornamented with oaks, and intersected by numerous beautiful drives. The Save is not navigable for steamers so far up as Agram; but from Sissek, at the confluence of the Culpa, a weekly steamer descends to Semlin, opposite Belgrade, except during the winter months. Pop. 14,800.-(Paton's Highlands and lshends of the Adriatic, vol. ii. p. 138; Raffelsperger, Lcx. Oesterreich. Staaten.)

AGRAMUN'T, a th. Spain, in Catalonia, prov. of, and 25 m . N.E. from Lerida, at the foot of a hill on the right bank of the Sio. The houses are regularly built, but the strects are tortuous and unpaved. It has a square, in which is an artesian fountain; and it likewise possesses three churches, a townhall, hospital, Latin and other schools, and a public storehouse. Tho inhabitants are chiefly employed in raising corn and fruit for the markets of Barcelona; in weaving dimities, and in manufacturing hempen sandals. Pop. 2680.-(Madoz.)

AGRAPIIA, or Agrapio, a part of the Pindus range of mountains in Greece, between Thessaly and Epirus, which gives its name to a district of the Turkish pash. of Tricala. -There is likewise a vil. named Agrapila in the isl. of Corfu.

AGREDA, a tn. Spain, in Old Castile, prov. of, and 28 m. E.N.E. from Soria, on the N. slope of the sierra Moncayo. It stands on the Queyles, which divides the town into two parts, and is carried underground; having a fountain and the townhall situated over it, on a fine stone bridge of one arch. The streets are irregular, but the houses are well built, and there is a somewhat handsome square, lined with good houses. In this town are likewise three churehes, an hospital, two schools, and an abattoir. The manufactures of the place, once much more important than they now are. consist of potteryware, soap, wax, sweetmeats, chocolate, and shoes. Agreda is supposed to occupy the site of the ancient Gracchuris, or Grcecubis, which was built by the proconsul Sempronius Gracchus, in commemoration of his conquest over the Celtiberi, and it contains some Roman remains. Pop. 3847. -(Madoz.)

AGREDA, or New Malaga, a small tn. Colombia, S. America, republic Ecuador, district of, and 90 m. S.W. from Popayan; 108 m. N.N.E. Quito; founded in 1541. There are several gold mines in the neighbourhood.

AGREVE (St.), a small tn. France, dep. Ardeche, 40 m . N.N.W. Viviers, on the Rhone. It contains a Calvinistic consistorial church, and has an active trade in grain, wine, f/uit, butter, cheese, and eattle. For wines, oils, soaps,
chestnuts, and other articles, it forms the entrepot of the neighbouring cantons. Pop. $2 \cdot 185$.

AGRIB, Agarrib, or Grarib (Mount), a remarkablo mountain of Central Egypt, about 16 m . inland from the coast of the Gulf of Suez ; lat. $28^{\circ} 7^{\prime} \mathrm{N} . ;$ lon. $32^{\circ} 52^{\prime} \mathrm{E}$. (r.) It is of a conical form, and of so great a height that it can lo seen from a distance of 100 m .

AGRI DAGH. See Ararat.
AGUA, an active volcano, Guatinala, close by the old tn. of that name; lat. $14^{\circ} 33^{\prime} 30^{\prime \prime} \mathrm{N} . ;$ lon. $91^{\circ} 4^{\prime} 40^{\prime \prime} \mathrm{W}$. It rises to the height of $15,000 \mathrm{ft}$. forming a beautiful and perfect cone, verdant to the summit. It occasionally pours forth torrents of boiling water and stones, and has twice destroyed the old city of Guatimala. Agua is one of three volcanves lying close together, and presenting a scene of great magnificence; the others are Pacaya and Fuego.

AGUACIIAPA, a th. Guatimala, prov. San Salvador, about 2 m . S. from the lake of the same name. It lies about 30 m . from the Pacific, on the road between the city of Guatimala and Sonsonate; lat. $14^{\circ} \mathrm{N}$.; lon. $89^{\circ} 40^{\prime} \mathrm{W}$. It is a place of considcrable trade, and has extensive manufactures of suçar. Pop. about 5000.

AGUADILLA, a small coast tn. and haven, N.W. side of Porto Rico isl., at the N. end of a large sandy bay of the same name ; lat. $18^{\circ} 25^{\prime} 54^{\prime \prime} \mathrm{N}$. ; lon. $67^{\circ} 8^{\prime} \mathrm{W}$. (r.) The inhabitants, originally from the Canaries, cultivate tobacco and coffiee, and carry on some trade. In the haven is good anchorage in 14 or 15 fathoms, and the only danger when approaching it is a reef running off $\frac{1}{2} \mathrm{~m}$. from Point Palmas. Water good, and fresh provisions cheap. Pop. 2500.-(West India Directory.)

AGUAPEIII, a river, Brazil, prov. Matto-Grosso. It rises in the mountains from which it takes its name, on the confines of Bolivia, about lat. $16^{\circ} 15^{\prime}$ S., and, after a course first N. and then E. for about 100 m ., falls into the Jauru, an affluent of the Paraguay. From the same mountains rise the river Alegro, and some other streams, which fall into the Guapore, one of the head streams of the Amazon. These two rivers, the Aguapehi and the Alegro, the waters of both of which ultimately reach the Atlantic-the former by the La Plata, and the latter by the Anaazon-approach at Villa Bella so near to each other, that between them there is only a portage of 3 m .

## AGUARY RIVER. Sce Araguari.

AGUAS CALIEN'TES, a tn. Mexico, prov. Guadalaxara, or Jalisco, 270 m . N.W. the city of Mexico, and 70 m . S. Zacatecas. By some it is said to be cap. of a district of the same name, in prov. Zacatecas. It lies in lat. $22^{\circ} \mathrm{N}$. ; lon. $101^{\circ} 45^{\prime}$ W., on a level plain upwards of 6000 ft . above tlio sea level, and is very favourably situated for trade, the great road from Zacatecas to Sonora and Durango, crossing here the highway from San Louis Potosi to Guadalaxara. It has some handsome houses, numerous churches, three convents, and an hospital; and is surrounded by rich gardens with olives, vines, figs, pears, \&c. Manufactures of cotton fabrics carried on to some extent. An annual market is held for 14 days. The climate is mild and delightful ; the N. wind never affecting the town in consequence of its position on the W. slopes of the Cordilleras. In the vicinity are two warm mineral springs, from which the town takes its name, lying about ten yards apart from each other; and having a temperature varying from $80^{\circ}$, to $120^{\circ}$. The water is impregnated with copper, remarkably clear, and of an agrecable temperature. Pop. supposed to be 20,000.-(Ward's Mexico; Gregg's Commerce of the Prairies; Ritter's Staats Lex.)

AGUILAR DE LAA FRONTERA, a tn. Spain, Andalusia, prov. of, and $22 \mathrm{~m} . \mathrm{S}$. by E. from Cordova, on the left bank of the Cabra, on the summits and acclivitics of four low hills. It is divided into the upper and lower town; the former is named La villa, from having formerly contained the principal buildings. Many of the houses are of three floors, one of which is always occupied as a granary. Some of tho buildings-as the chapter house, the prison, the fish market, and the abattoir-are of good modern construction, and the whole town is remarkable for the whiteness of its houscs, and the cleanliness of its strects. Frontera has, besides, three elegant public squares; an old and a new townhall, both well built; a murky unhealthy snbterrancan place of security for the accused ; a church, and several chapels; a dismantled, but

Etrongly-built Moorish castle; sceveral well-attended schools, both endowed and private; an hospital for the wandering poor; and an infirnary. The inhabitants are employed as agriculturists, carriers, and sheep, cattle, horse, and mule breeders; in manufacturing soap, eloth for local consumpt, carthenware, tiles, and brieks, and in quarrying lime, gypsum, and freestonc. A fair, for the produce of the distriet, is held in September. Pop. 11,836.-(Madoz.)
aguilas (san Juan de las), a small tn. and port, Spain, prov. Murcia, 24 m . S.E. Lorea, 39 m . S.W.Cartagena, on the Mediterranean ; lat. $37^{\circ} 23^{\prime}$ N.; lon. $1^{\circ} 37^{\prime} \mathrm{W}$. (r.) The port, in whieh resides consuls of England, France, and Portugal, is neither large nor sceure at all seasons, and it is defended by a circular fort in rather a dilapidated condition. The town, whieh consists of well-built houses forming broad streets, lias a spacious square, an elegant custom house, a public granary, an abattoir, a elureh, and a school. In the vieinity, the rich lead and silver mines, in the sierras Almagrera and Lomo de bas, occupy a considerable number of the inhabitants, and others are employed in agriculture, and in fishing bonitos, sardines, \&e. The exports consist of grain, salsola, barilla, lead, silver, \&e., to the average extent annually of $£ 195,000$. Poj. $4832 .-$ (Madoz.)

AGUIMES, a tn. Canaries, isl. of Gran Canaria, at the foot of Mount Guayadeque, and about 1100 ft . above the sea level. Its houses, chiefly of one floor, and built with little taste, form three irregular streets, and as many irregularly shaped squares, both of whieh are, however, well paved. It has a church, a badly-attended school, and, outside the town, a cemetery. The trade of Aguimes consists in sending to the Palmas market the produce of the vieinity, eonsisting of grain, fruits, honey, poultry, and oil of exeellent quality. 1'op. 3073.-(Madoz.)
agulhas (Cape and Bank). The former is about 95 to 100 m . S.E. the Cape of Good Hope, and is the most S . land of Africa; lat. $34^{\circ} 51^{\prime} \mathrm{S}$. ; lon. $20^{\circ} 2^{\prime} \mathrm{E}$. (r.) Its highest part is 455 ft . above the level of the sea, and its true meridional distance from the shore is nearly 1 m . From this point the deseent E. is rather gradual ; W., the descent is at first steep, then slightly undulating; S., it is steep, then undulates to within 300 yards of the shore, where the ground beeomes flat. A lighthouse has been recently erected on the Cape, the light of which was exhibited for the first time on Mareh 1, 1849. The structure stands on an elevation of 52 ft . above high water, and bears N. $30^{\circ}$ (magnetic), distant about 520 yards from the extreme point of the Cape. The tower is about 70 ft . high; and the light being 128 ft . above high water mark, may be seen from the deck of a vessel, in elear weather, at the distance of 18 m . Its lat. is $34^{\circ} 49^{\prime} 46^{\prime \prime}$ S.; lon. $20^{\circ} 0^{\prime} 40^{\prime \prime}$ E.-The Bank of Agulhas extends from the Cape of Good IIope, along the S. coast of Africa, to Great Fish River, a distance of about 560 m . Its breadth, generally, is about 100 m . ; but opposite Cape Agulhas, it stretches out in a triangular form to upwards of 200 m . The Cape cur-rent-apparently the cause of its formation-passes clear of it throughout its whole length, defining accurately its seaward edge or limit. Grampuses, or whales, are frequently seen floating with their backs a little above water, more particularly in moderate weather, with E. winds, when the water is sinooth on the bank; at sueh times a ship may be liable to run against one of them before its crew are aware-an accident whiel has frequently happened, to the great alarm of all on board. Large seals and solan geese also frequent the Bark. Fish likewise abound; Sir E. Beleler relating, in his Voyage of the Samarang, that in two hours he caught on the Bank 42 fine fish, varying from 6 to 36 lbs ; and adding, that immediately after taking the first fish, he found that the lead ceased to deseend, in consequence of the dense shoal that swarmed below. Some of these were eaught at the depth of 76 fathoms.-Agulhas is Portuguese for 'needles.' It is quite improper to writo the name Lagulhas, or Lagullas, as is sometimes done.-(Ilorsburgh's East India lircctory; Voyage of the Samarang; Nautical Magazine for 1849 and 1850.)

AHADKOI, a vil. Turkey in Asia, pash. Anadolia, a few hours' journey E. from Ushak, or IIushak, whieh is situated lat. $38^{\circ} 58^{\prime} \mathrm{N}$. ; lon. $29^{\circ} 50^{\prime} \mathrm{EL}$. Ahatkoi is itself an insignifieant village, but is remarkable for the extent and magnificence of the ruins in its vieinity. 'On the summit of a hill,' says Mr. W J. IIamilton, 'we saw the remains of a theatre, with
half the seena and prosecnium standing, built of very large bloeks of stone. All the seats of the cavea are gone, but the hollow clearly remaining.' The ruins of another theatre, and of several temples, were also found by Mr. Hamilton, who adds, that architectural ornamented sculpture was lying abont inevery direction, and many inseriptions, but chiefly sepulchral. These ruins, Mr. II. believes to be the remains of Trajanopolis.

AHAGUAY, a slave port on the coast of Guinea, about lat. $6^{\circ} 0^{\prime} 15^{\prime \prime} \mathrm{N}$. ; lon. $1^{\circ} 45^{\prime}$ E. Besides the mumerous slaves shipped at this port, there is some traffic in palm oil and ivory. The natives are of a depraved charaeter, and given to every kind of vice, in which, however, they only follow the example of the mumerous Spanish and Portuguese residents. Cotton is cultivated, spun, and woven into cloth, by the natives, who also eultivate indigo, and manufacture it in a rude mamer. There are two markets daily, which are well supplied with Brazilian tobaceo, yams, manioe root, plantains, bananas, ginger, pepper, cotton, grass bags, and mats of various colours, \&e. Fish are canght in great abundance, chiefly in the Lagoon river, whieh is here about 70 yards wide in the dry season, and $3 \frac{1}{2} \mathrm{ft}$. deep, and flows immediately behind tho town. Tho vicinity of the town abounds in luxuriant tropical vegetation.-(Duncan's T'ravels in IF'estern Africa.)

AHAMLISII, a par. Ireland, co. Sligo; area, 16,414 ac. Lord l'almerston is proprictor of nearly the whole par. I'op. in $1841,8720$.

Alianta, or Ahante, a maritime district of Ashantee (which see.)

AHAR, a small tn. Persia, prov. Azerbijan, 50 m . N.E. Tabreez; lat. $38^{\circ} 25^{\prime} \mathrm{N} . ;$ lon. $47^{\circ} 10^{\prime}$ E. ; upon a river of the same name, and formerly surrounded by a wall, now in ruins. It contains about 700 honses, and the tomb of a saint held in reverence by the Mussulmans. The district around is well cultivated, and mueh wheat and barley are grown.-Ahar river rises in the mountains N . of Tabreez, and flows at first to the E., then to the N., and, after a course of nearly 120 m ., falls into the Aras, about 75 m . from the Caspian Sca.

AllaRA, or Agliarba, a par. lrcland, co. Longford; area, 2595 ac. Pop. in 1841, 1036.

AHARNEY, a par. Ireland, Queen's and Kilkenny eos.; 6940 ac. Pop. in 1841, 2586.

AHASCRAGH, a par. Ireland, co. Galway; 17,342 ac. There is here a holy well, surrounded with fir trees, believed to possess great virtue. Pop. in 1841, 53380 .

AHAUS, a small in. Prussia, prov. Westphalia, gov. of, and 27 m . W.N.W. from Miinster, on the right bank of the Aa. It is the cap. of a circle of the same name, and the scat of some local courts of justice, and has manufactures of linens, tiles, and tobaceo. Dyeing and lime burning are carried on, and seven annual markets, for mercery and eattle, are hehl. It has a castle, built by Bishop Ferdinand of Plettenburg, but now the property of the Princes of Salm-Kyrburg, into whose possession the town eame in 1802. Pop. 1760.-(1luln's Lex: Deutschlund.)

AHIl, or Peacock Island, a small uninhabited isl. in the Low Arehipelago, or Panmotu group, s. 1'acific Ocean; lat. $14^{\circ} 35^{\prime}$ S. ; lon. $146^{\circ} 27^{\prime} \mathrm{W}$. (r.) It is well wooded, and is surrounded by a coral belt of from 200 to 500 ft . in breadtl. Its lagoon, which is on the W. side, and to which there is only a small boat entrance, contains a favourite fish of the natives of the adjoining islands, who repair thither at certain seasons to take them.

AHINAGH, a par. Ireland, co. Cork; area, 9420 ae.; contains two ancient castles, and several antique standing stones. Pop. in 1841, 2699.

Ailiolou, Agholi, or Akelo, a small th. European Turkey, prov. Roomelia, on the W. shore of the Black Sen, on a promontory at the entrance, and on the N. side of, the Bay of Burgas, and about 11 m. N.E. the tn. of that name; lat. $42^{\circ} 31^{\prime} \mathrm{N}$.; lon. $27^{\circ} 32^{\prime} \mathrm{E}$. In the neighbourhool are salt springs, and marshes, from which the inhabitants manufacture salt of inferior quality, the profits being the property of the Sultan.

AIILEN, a small ti. Prussia, prov. Westphalia, gov, of, and 17 m . S.E. from Munster, on the right bank of the Werse. It is the seat of a local court, and has two R. ${ }_{3}$ Catholie churehes; oil-making and distilling are carried on, and three cattle markets are held annually. Pop. 2750.

AHMAR, El-Kos, or El-Ahmar [The red mound], marks the site of Hieraconpolis, a very ancient city of Upper Egypt, which stood on the W. bank of the Nile, about lat. $25^{\circ}$ $10^{\circ} \mathrm{N}$. ; lon. $32^{\circ} 40^{\prime} \mathrm{E}$., nearly opposite El-Kab.—. The word Ahmar occurs in the names of various other places in Egypt, one of which is a well, or cistern, styled El-Ahmar, abont 30 m. S.W. Kosscir, where caravans rest on their way through the great desert of the 'Thebaïd.

AIIMEDABAD, an anc. city of Ilindoostan, cap. district of same name, prov. Goojerat, on the left bank of the Sooburmuttee, 275 m. N. Bombay; lat. $23^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $72^{\circ} 40^{\prime} \mathrm{E}$. It was formerly one of the most opulent and commercial cities in the East, and was celcbrated for its buildings and handsome streets, but has now fallen into utter decay, having been ruined by the exactions of the Mahrattas. It was stormed by the British, under General Goddard, in 1780, but continued in the possession of the Malirattas till 1818, when it was ceded to the 13ritish Government by the ruling l'eshwa, or chief civil minister of the Rajah. A great part of the city, and some of its most remarkable ellifices, were destroyed by the great carthquake of 1819; among these was the great mosque, erected by Sultan Ahmed, nearly 450 years before. The excessive munieipal Iuties levied by the Mahratta chiefs, were abolished by the British Government, and a better system of taxation introduced. The pop. is supposed to amount to 100,000 . Pop. of district in 1831, 528,073.-(IIstorical and Descriptive Account of British India; Ilamilton's East India Gazettcer; Martin's Last Indies.)

AIIMEI)NUGGUR, a city and fortress, Itindoostan, cap. distriet of same name, presidency Bombay, prov. Aurungabad, on the Seena, 130 m . E. Bombay, and 70 m . N.E. by E. Poonah; lat. $19^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $74^{\circ} 50^{\prime} \mathrm{E}$. It is walled, and contains some well-bnilt streets and a good market place. The fort, which is about $\frac{1}{2} \mathrm{~m}$. from the city, is built entirely of stone; is of an oval form, with round towers, ditch, and glacis; and is about 1 m . in cireumference. It was taken by the Duke of Wellington (then General Wellesley), in 1803. In the vicinity of Alunednuggur are the mansoleum of Salabut Jung, situated on the summit of a mountain; and the ancient palace of the sultans, a massive pile, surrounded by a broad and deep moat, faced with solid masonry. In 1820, the pop., exclusive of the garrison, was estimated at 20,000 . Area of district, $9910 \mathrm{sq} . \mathrm{m}$. ; pop. about 670,000 .- -There is another town of the same name in the prov. of Goojerat, on the left bank of the Sooburmuttee; lat. $23^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $73^{\circ}$ $10^{\prime} \mathrm{E}$.

AHMEDPOOR, a th. Western India, state Buhawalpoor, on the route from the city of that name to Khanpoor, 30 m . S.S.W. the former, and 45 m. N.E. by N. the latter; lat. $29^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $71^{\circ} 30^{\prime} \mathrm{E}$. The houses are, in general, built of mud. It contains a large mosque, with four tall minarets; and has manufactures of matchlocks, gunpowder, cotton, silks, and loonghies, a fabric of rich coloured silks interwoven with cotton of the brightest colours, about 4 yards in length and 2 in breadth, worn round the waist. The pop. Las been variously estimated from 9000 to 30,000 , but may probably be about 20,000 .

AllMOOD, Asoon, or Amon, a th. and pergunnah, IIindoostan, prov. Goojerat, the former 30 m . S.S.W. Laroda, and 60 m . N. Surat; lat. $22^{\circ} 3^{\prime} \mathrm{N}$. ; lon. $73^{\circ} 10^{\prime} \mathrm{E}$. The pergunnah, or district of villages, comprehends $221 \frac{1}{2}$ sq. m., and lies along the E. shore of the Gulf of Cambay, for a distance of 30 m . A great part of it is unproductive; but more than a half is under cultivation, and suitable for the production of cotton, riee, wheat, and various Indian grains. It is the property of the East India Company, to whom it was ecded, in 1817, by Dowlet Row Sindia. The pop., in 1832, amounted to 16,347; of whom 13,144 were Hindoos, and 3203 Mahometans.

AHOGHILLL, a par. and vil. Ireland, co. Antrim ; area, 32,987 ac. Contains a Moravian settlenent called Gracehill. Pop. in 1841, 23,622.

AHR, or AAR, a river, Prussia, prov. Lower Rhine, rising in the Eiffelberg mountains, S.W. from Hildesheim. It flows N.W., changing to N.E., and, passing through the valley of the Ahr, falls into the Ihline near Sinzig, and opposite the town of Linz, after a course of about 30 m . The scenery on its banks is considered equal to that of the Rhine. In tha valley of the Alre some good wine is made.
vol. I.

AIIRWEILER, a small tn. Prussia, prov. Lower Rhine, gov. of, and 28 m. W.N. W. from Coblentz; 25 m . S. Cologne, on the left bank of the Ahr; chief place of cirele of same name, and seat of local courts. It is agreeably situated, and surrounded with a fosse and walls, in which are four gates. It has two churches and a chapel. One of the churches, a beautiful Gothie structure, was erected in the 13 th century. Ahrweiler is the centre of the wine trade of the Ahr valley, the slopes of which are covered with vineyards. The average annual produce in wine is 688,250 gals. There are here some manufactories of cloth, and some tanneries and dyeworks. Pop. 3000.

AIIUN [anc. Agclunum], a tn. France, dep. Creuse; on a mountain, at the foot of which runs the river Creuse, 11 m . S.E. Guerer. It has manufactures of cloth, a good trade in cattle, and nine fairs in the year. In the neighbourhood are extensive coal pits, and the remains of a celebrated abley of the order of Cluny, founded A.D. 997. Pop. 2212.

AIIUS, or Auuys, a vil. Sweden, about 10 m . S. Christianstad at the mouth of the Helge-A. It was at one time a considerable place, but is decayed; it is still, however, the onter port of Christianstad, and contains a custom house.

AIIWAZ, or Arwus [anc. Aginis], a small tn. Persia, nrov. Khuzistan, 48 m . S. Shuster, on the left bank of the Karoon (Kärūn), (which sce); lat. $31^{\circ} 22^{\prime}$ N.; lon. $49^{\circ}$ E.; in a flat uncultivated country. It occupies a portion of the site of the old city, and is built with its materials. It has a mean appearance; and the only respeetable building it contains is a mosque, apparently of modern date. The remains of the ancient city are numerous, and cover a great extent of ground; showing that it had once been a great and flourishing place. Amongst the more remarkable of these ruins are those of a bund, or stone dyke, whieh was thrown across the river to from a store of water for the purposes of irrigation; it is upwards of 100 ft . in length ; is, in several places, 10 ft . high; about the same in breadth, and contains many single blocks measuring from 8 to 10 ft . There are also the remains of a fine bridge and of a spacious palace. On the S. side of the town, there are several singular cavities, and some neglected water mills. Pop. about 1500 , mostly Arabs.

AI, a river, leussia in Europe, prov. Orenburg. It rises in the W. slopes of the Ural mountains, flows generally N.W., and falls into the river Oufa, about 100 m . N.E. the town of that name, after a course of alout 170 m .

AJ, or Ar, a tn. France. See Ay.
AIAS, Ayas, or Ajasso [anc. Egga], a seaport of Asiatic Turkey, on the Bay of Iskenderoon, pash. Adana, 37 m . E.S.E. the town of that name, and $27 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Iskenderoon; lat. $36^{\circ} 46^{\prime} \mathrm{N}$. ; lon. $35^{\circ} 47^{\prime} \mathrm{E}$. (r.) It was once a considerable place, and there are still some remains of its ancient prosperity ; but its trade has been long since transferred to Iskenderoon. - There is a small village of the same name in the province of Anadolia, about $25 \mathrm{~m} . W$. Angora, situated among hills, to which it gives its name.

AIASALUK, or Ayasuluk, a vil. Asiatic Turkey, 38 m . S.E. by S. Smyrna, on a hill of the same name. The latter is a picturesque insulated eminence, crowned with a ruined castle, and covered, lower down, with the remains of the Turkish town which rose into existence when Ephesus was destroyed, and from the materials of which it was built. At the foot of the hill is a beautiful aqueduct, constructed chiefly of ancient fragments; and, on the western side, is a marble mosque of Saracenic construction. At a short distance S. W. from the town are the ruins of Ephesus. The village of Aiasaluk now consists of a few miserable huts only.(Hamilton's Asiat Minor.)

AIASII, or AYAsir, a ruined seaport, Turkey in Asia, with some remains of antiquity. It lies on the coast of the Mediterranean, prov. Itelill (Cilicia) ; lat. $36^{\circ} 30^{\circ} \mathrm{N}$. ; lon. $34^{\circ} 12^{\prime} \mathrm{E}$.

AICIIACII, a small tn. Bavaria, prov. Upper Bavaria [Ober Baiern], 13 m. N.E. Augsburg, on the right bank of the Paar, here crossed by three bridges. It is the seat of the loeal court, and has a castle, church, and three chapels, townhall, orphan hospital, and general hospital; brewerics, distilleries, bleacheries, flourmills, \&c., and some trade in flax. Aichaeh was taken and burnt by the Swedes during the Thirty Years' war ; and, in 1704, by the Spaniards. 'op. 1850.

AIDAB, or DJidyd, a seaport tn . Nubia, on $\underset{7}{7}$ the Red

Sea, 171 m . N.W. Berenice ; lat. $22^{\circ} 3^{\prime}$ N.; lon. $37^{\circ} 10^{\prime} \mathrm{E}$. During the 11th, 12 th, and 13 th centuries, it was the entrepot of commeree between E. Africa and Arabia, and the point of embarkation for the caravans proceeding to Jidda, the port of Mecea. It is nearly surrounded with deserta, and is now of little importance.

AlDIN, ldex, or Guzel-inssar [anc. Tralles], a th. Asiatic Turkey, pash. Anadolia, on the Meander, about 60 m . S.E. Smyrna. It is 4 m . in circuit, and is the residence of a pasha, and a place of great trade, being next in commercial rank to Smyrna. Bazaars, shaded by trees, form the strects. It contains many fine mosques, churches, and synagogues. Of the old eity, there only remains enough to show that it occupiel an elevation overlooking the modern town. On a height stand conspicnously the ruins of an ancient palace, which is visible from a distance of many miles. The bazaars present a very animated sight, from the variety of objects exhibited, and the picturesque costumes of the natives. The heat of the sm, and the dazzling whiteness of the honses, are gratefully relieved by the foliare of the trees and plants growing in and near the strets. The environs are no less beautiful; the town being surrounded with gardens and orchards, commanding a fine view of the plain. Pop., including Turks, Armenians, Greeks, and Jews, about $30,000$.

AIDONA, a small tn. Sicily, prov. of, and 23 m . E.S.E. from Caltanisetta, and 5 m . N. İ. Piazza, in the Val-di-noto. Pop. 3700.

AIDOS, a tn. European Turkey, Bulgaria, at the foot of Mount Haemus, about 40 m . S. Shumla, and 85 m . N.E. Adrianople. It is a place of some antiquity, and was besieged and taken by Amurath, in 1391. It is noted for some hot springs in its vicinity, and for a large annual fair.

AIGASII, or Aigas, a small but beautiful isl. in Inver-ness-shire, Scotland, formed by the river Beauly, which, here parting in two, again unites, and thus insulates the spot to which the above name [Gaelic, Eilans Aiga] has been given. It is a high rounded hill, covered with oak and birch, and is noted for laving been the place of retreat selected by Lord Lovat, when letters of fire and sword were issued against him by King William, in 1697. It is $4 \frac{1}{2} \mathrm{~m}$. S.W. Beauly, and about 14 m . S.W. Inverness. The island is now the property of Sir Robert Peel.

AIGEN, the name of numerous localities in Austria, Bavaria, and Würtemberg, none of which are of any importance.

AIGIITON, a township, England, co. Laneaster ; area, 5780 ae. Here are an almshouse, R. eatholic college of Stonyliurst, and cotton factories. Pop. in 1841, 1798.

AlGLE, a small tn. Switzerland, Pays de Vaud, eap. of a district to which it gives its name; situated on the torrent called La Grande Eau, in the Val d'Ormond, about 1 m . E. from the Rhone, and 21 m . S.E. Lansanne, on the high road to Martigny. The houses, built of black marble quarried in the vicinity, and unpolished, give the town a sombre appearance. The inhabitants are principally employed in agriculture, and the cultivation of vines; the produee of which is much esteemed. 1'op. 1650.

AIGLE (L'), a tn. France, dep. Orne, 80 m . W.S.W. Paris, agreeally situated on the sides of two liills on the river Rille, which divides it into three parts. It is well built, but has few architectural oljeets of any note. There are three churches, one of which, St. Martin's, is very large, but none of them are otherwise remarkable. In the centre of the town is a castle, or chateau, built of brick, and surrounded by lime trees of extraordinary size and beauty. L'Aigle is noted for its industry, and has manufactures of linen, cotton, paper, leather, cutlery, and hardware; and a good trade in corn, wood, and cider. Large quantities of needles and pins are made here, which are held in high repute. In the neighbourhood are the mineral waters of st. Suntin. Pop. 5584.

AIGLE ( $L^{\prime}$ ), a small isl. Lower Canada, in the st. Lawrenee, formed by the confluence of that river with the riniere des prairies, which forms the S. boundary of the Island of Montreal.

AIGNAN (St.), a tn. France, dep. Loir-et-Cher, 50 in . S.W. Orleans, on the left hauk of the Cher. It is a very industrious place, and noted for its manufactory of gnu flints, of which the only quarrics worked in France-those of Meusne nul Coulfy-are in the vicinity. The quantity amuaily pro-
duced is estimated to amount to about 35 or 40 millions Cloth, eartheuware, and saltpetre, are also maile hore, and there is sone trade in wine and wood. Pop. 3146.

AlgRE, a tn. France, dep. Charente, 20 m. N.N.W. Angouleme, agrecably situated on an isl. formed by Lemps, an affluent of the Charente. Here are numerous brandy distilleries, and a good trade is carried on in grain, hemp, flax, \&c., but particularly in brandy. It has also some trade in hemp, oniouss, and wine. Pop. 1662.

AIGREFEUHLLE, the name of two villages, France, the one in the dep. Charente lnferieure; and the other in Loire Inferieure. Pop, of the former, 1688; of the latter, 1275.

AIGUEbELLLE, Aquabella, or Aquee helles [aic. Carbonaria], a tu. and commune, Sardinian States, Savoy, near the French frontier, 6 m . W. Chamberry, 984 ft . above the level of the sea. It was destroyed by the Burgundians about the fifth century ; rebuilt under the name of Aquabella; sacked by the Saracens in 835 ; and rebuilt by Rerold, king of saxony, in 998 . In the neighbouring mountains are mines of copper and iron. Pop. 1286.

MIGUEPERSE [Latin, Aques Sparsa], a mi. France, dep. Puy de Dome, 19 m . N.N.E. ('lermont, and 190 m . S.S.E. Paris. It consists of a single strect ; lined with handsome houses, and has manufactories of cloth, felt hats, and candles. In the neighbourhood is a mineral spring, which exhales carbonie acid so pure that animals are often suffocated with its waters; henee cailled, by the people of the distriet, $L a$ Fontaine empoisonnée. Pop. 2969.-There is another town of the same name, or Aiguesperses, as sometimes spelt, with a pop. of 1003 , in the distriet of Villefranche, dep. of the Rhone.

AIGUEs-MORTES [Latin, Aque Mortuce], a decayed tn. France, dep. Gard, 20 m . S.N.W. Nismes ; near the mouths of the Rhone, on the Grau du Roi, at the junction of the Caual de Beaucaire with that of Etangs. It is a fortified place, and, from its position, forms an important military post for the defence of that part of the coast. The exhalations from the salt marshes by which it is surrounded, render it very minealthy. A good deal of potash is made here, and some trade is carried on in fresh and salt fish; principal articles of export, salt and wines; of import, grain, soap, colonial produce, and wood. The town was founded in 1248, by St. Louis of France, who embarked here, in that year, for the ernsades. The walls and gates are still entire, but the fosse has been filled up. Before entering the town, to the north, is a single round tower, 90 ft . high, called the Tower of Constance, built by St. Louis, and surmounted by an old lighthouse turret of 34 ft ., which was used as a prison for Protestants, chiefly females, who adhered to their religion after the revocation of the Edict of Nantes. It was long supposed that, since the 13 th century, the sea had retired about 3 m . from the town. It seems now to be ascertained, however, that the sea never came so far up as its walls; but that elose to the town there was a small port, connected with a canal, now filled with sand, extending thence to the harbour of ciran An Roi, on the Mediterranean. Not far from Aisues-Mortes are the celebrated salt lakes of Peccais, protected by the fort of that name, which yield salt of fine quality, to the estimated valne of $£ 60,000$ yearly. l'op. 3968.- Murray's Llandbook for Prance; Balbi, Abrécé, \&e.)

AIGUILLE ( $L^{\prime}$ ), [The nedle], a mountain of Franee, formerly reckoned one of the seven wonders of Dauphiné, dep. Isere, canton Vezille, situated between the hamlet of Souchons and the town of Corps, nearly 4 m . from the latter, on the left of the great road from Grenoble to Gap; 6562 ft above the level of the sea. The lower part resembles a truncated cone, while the upper portion is of a cubical form, as if a seeond mountain had been placed above the first. It is also called Mons Inaccessus, having been long supposed inaccessible, luat, in 1492, Charles VIII., passing Girenoble on his expedition to Naples, sent the captain of his Eecheleurs to try to gain the summit, in which he succeeded.

AIGUILLON, an ancient th. France, dep. Lot-et-Garome, in a fertile vale, on the left bank of the Lot, about 1 m . above its influx into the Garonne, 16 m . N.W. Agen. It is still sur romuded by a ditel, the remains of its aneient fortification. It has two eastles, both sitnated on an eminence-one old and remarkable for its extent, and the great variety of styles of which I it is composed; the other modern, in the Italian style, oned a
fine structure. There are here a communal college, and manu factories of serges and druggets. It lias also some trade in corn, hemp, wines, and brandy. A bridge of seven arches here erosses the river Lot. Pop. 3994.

AIGURANDE, a small tn. France, dep. Fudre, partly on a hill, and partly on a plain, 26 m . S. Chateauronx, surrounded with walls and ditehes. An extensive trade is carried on here in eattle, and fairs are frequently leld. l'op. 2087.

AIKTON, a par. England, co. Cumberland; area, 5270 ac. I'op. in 1841, 802.

AILAM, or Elana, a decayed th. Arabia, in the Hejaz, at the N. extremity of the Ciulf of Akabah; about $2 \mathrm{~m} . \mathrm{N}$. the village and fort of that name, and 130 m . E. Suez. $\Lambda$ few scanty ruins are all that remain of it; and even its site is now a subject of dispute, being often confounded with Akabah. Ancicntly called Ailoth, or Floth, it gave its name to the E. or Elanitie branch of the Red Sea. It is mentioned by Moses in his account of the journeyings of the lsraelites, and Solomon used it as a naval station for his ships. It is also mentioned by several Arab writers.

AILSA CRAIG, a remarkable rocky conical isl. Frith of Clyde, Scotland, co. Ayr ; lat. $55^{\circ} 15^{\prime} 12^{\prime \prime} \mathrm{N} . ;$ lon. $5^{\circ} 7^{\prime} \mathrm{W}$. (r.); 10 m . distant, 11 ., from the coast of Ayrshire at Girvan, and double that distance E., from the coast of Argyleshire, near the Mull of Cantyre. It has an elliptical base of 3300 ft , in the

GILSA FROM THE SOUTII-From a Sketch by R. Mlackie.
major axis, by 2200 in the minor, and rises abruptly from the sea to the height of 1098 ft . It consists of columnar trap, approaching in some parts to basalt; and is precipitous on all sides except the N.E., on which it slopes towards the slore, and where alone it is accessible. At a considerable elevation are the ruins of an old tower or castle. The vegetation on various parts of the surface is described as luxuriant, though there is little pasture on it. It is a breeding place for innumerable sea fowl, gulls, kittiwakes, puffins, solan geese, \&c. $\quad$. few rabbits and goats inhabit the rock. It is chiefly from the feathers of the birds that the rent of the island is derived, and it is only during the season when the birds are sought for that any one resides on the island. It is surrounded with banks well stocked with fish.

AILU, a small isl. in the N. I'acific Occan, a little S. from the Radack chain; lat. $10^{\circ} 27^{\prime} \mathrm{N} . ;$ lon. $170^{\circ} 0^{\prime} \mathrm{E}$. (r.)

AIMARAEZ, a district, Peru, dep. Lima, at the foot of the Cordillera de Juambo, extending about $I 30 \mathrm{~m}$. from N. to S ., and 26 from E. to W., and comprising 50 villages. The climate is generally cold, except in some of the valleys, which produce sugar and grain, and afford pasturage for cattle. Three rivers pass through the district, but, on account of the height and steepness of their banks, are unavailable for any purpose, till their united streams, in lat. $14^{\circ} \mathrm{S} . ;$ lon. $73^{\circ} \mathrm{W}$., form the Pachachaca, which ultimately falls into the Apurimac, being previously crossed by a number of suspension bridges. The numerous veins of gold and silver with which the district abounds, are neglected. I'op. 15,000 .

AIMARGUES, a small tn. and commune, France, dep. Gard, 13 m . S.W. Nismes; in the middle of a marsh, between the rivers Vistre and Vidourle. It has some trade in brandy. It was here that St. Louis and his brother, the Count of Thonlouse, assembled their troops, previous to their departure for the crusades. Pop. 2611.

AIN, a river, France, which rises among the slopes of the

Jura, about 3 m . N.E. from Nozeroy, and, after pursuing a S.S.W. course for more than 90 m ., flows into the Rhone opposite the village of Anthon, about 20 m . above Lyons. It gives its name to a department in the former province of Burgundy. Large quantities of planks and timber are floated down this stream.

AIN, a frontier dep. France, in the ancient province of Burgundy, separated into two nearly equal parts by the river from which it takes its name; bounded, N. by the departments of Saône-et-Loire and Jura; E. by Switzerland and Savoy, from which the Rhone divides it, as it does also from the department of Isere on the S.; and W. by the Saône, which separates it from the departments of Saône-et-Ioire and Rhone. Its length from E. to W. is about 52 m . its breadth about 48 at the broadest parts. The E. portion is very momitainous, containing a prolongation of the Jura chain. Besides affording good pasturage, it yields asphalt, gypsum, potters' clay, marl, iron, freestone, and limestone; and the best lithographic stones in France are produced near Belley. The W. division, or district on the right bank of the Ain, though in parts somewhat marshy, has extensive tracts of cultivated land. About the middle of the department, in the mountains, is the Lake of Nantua, about 1300 ft . above the level of the sea. Numerous pools and small lakes are found in the S.W., whieli are alternately drained for cultivation, and used for breeding fish. The whole number of lakes in the department-the largest not above 2 m . long-exceeds 1600 , and the humidity occasioned by them is stated to be very prejudieial to the health. The tillage is chiefly effected by oxen, and the produce of the harvest is sufficient for the consumption of the department. The chief products are rye, maize, corn, wheat, salt, oil, and wine. Great numbers of horses, cattle, and sheep, are also reared. The greater portion of the wines are exported; those of Seyssel, as good vin ordinaire, being tho most esteemed. The manufactures consist chiefly of cloth at Bourg, the capital of the department, and at Montluel, near the Rhone; linen, and paper, at Nantua, Chatillon, and other places; straw hats at Lagnieux, and watehes at Bourg, and at Ferney, celebrated as the residenee of Voltaire. -(See these towns.) A good trade is also carried on in leather, poultry, wood, and cheeses, of which those made at Gex are highly estecmed. The geographical position of this department makes it the passage for the commerce between the $N$. and the S. of France, from Strasburg to Marseilles. The transit is incessant during the period of the importation of grain from Jarbary, received at Marseilles and intended for Switzerland. The department is subdivided into five arrondissements, 35 cantons, and 443 communes, and contains 22 cities, 404 market towns and villages; and 1467 hamlets. It forms the dioeese of Belley. Pop. in 1846, 367,362. Exeept in the arrondissement of Gers, where the greater portion are Protestants, the inhabitants generally are R. catholies. - (French Official Papers; Dic. de la France.)

AINAD, or AiNAUD, a tn. and district, Arabia, prov. Hadramaut. The town lies on the right bank of the Wady
Hagger, about 207 m . N.E. Aden ; about lat. $15^{\circ} 12^{\prime}$ Hagger, about 207 m . N.E. Aden ; about lat. $15^{\circ} 12^{\prime} \mathrm{N}$. . lon. $47^{\circ} 10^{\prime}$ E. Abont one day's journey from it is the tomb of Kaktan, a celebrated place of devotion, at which a great fair is also held.-(Chesney's Euphrates Expedition.)

AINADA, or lnada, a small tn. European Turkey, prov. Roomelia, on the W. coast of the Black Sea, near a small bay and cape of the same name, about 74 m . E. Adrianople. It is surrounded by marshes, and is extremely unhealthy. - The Cape of Ainada is the Thynias promontorium of the ancients; lat. $41^{\circ} 52^{\prime} \mathrm{N}$. ; Ion. $28^{\circ} 3^{\prime} \mathrm{F}$.

AIN AMER, a vil. Algeria, Sahara desert, 10 m . s.E. Ourgla, and 395 m . A. Algiers ; lat. $31^{\circ} \mathrm{N}$.; lon. $3^{\circ} 8^{\prime} \mathrm{E}$. It consists of about 100 houses, surrounded by date trees; and by gardens, watcred by numerous streamlets. In the vieinity is the salt lake, called Sebka and Malah, whicln every season yields 400 to 500 camel loads of salt, without any apparent diminution of the quantity.

AINDERBY-S'TEEILE, a par. England, co. York, N. Riding; area, 4300 ac. ; uear Great North of England Railway. Pop. in 1841, 760 .

AIN-MADI, a tn., N. Africa, Algeria, built on a hill about 40 m . W. El-Arout, in an arid plain; lat. $33^{\circ} 53^{\prime} \mathrm{N}$.; lon. $2^{\circ} 48^{\prime} \mathrm{W}$. It is of a semi-elliptical form, and is surrounded with defences, and large walled gardens; the lattur
are irrigated by a stream rising at the foot of Mount E1-Markeb. The houses, of which there are about 150 to 200 , are only of one story, and have terraced roofs. They are built of haked earth, small stones, \&c., and are formed into streets so narrow, as to be impassable by carriages. The town contains one large mosque, or morc. The honse of the Teherif, or governor, is the only one which is whitewashed; all the others have a mean, dingy appearance. The place was attacked by Ahel-el-Kader in 1838, and was besieged by him for eight munths without suecess. He got possession of it, however, by stratagem; but it was soon retaken. It is now a depend. eney of Algeria. Pop. about 1500.- (Sahara Algerien.)

AIN-sEFlsiFla, or simply Spasifia, a vil. Algeria, 161 m . S.s.W. Oran; lat. $33^{\circ} 25^{\prime} \mathrm{N} . ;$ lon. $1^{\circ} 15^{\prime} \mathrm{W} . ;$ on a small stream of the same name, and on the S. slope of the Merad hills. The houses, accorling to one authority, about 250 , and according to another, about 350 in number, are built of dry stone, some of them in a state of dilapidation that plainly indicates the circumstances of the people; and besides, the chalky, sandy nature of the surrounding country contributes to impart to this village a miserable aspect. In the centre of the village is a sort of square, used as a caravansary for strangers; the streets are from 3 to 6 ft . wide; and the tolerably large mosque is supplied with a minaret. In the vieinity are a number of badly-kept gardens, protected by two towers. Wheat, barley, and several kinds of fruit, including grapes, are grown.- (Bulletin Geo. Soc., 1848.)

AIN-SEFRA, a vil. Algeria, 151 m. S.S.W. Oran; lat. $33^{\circ} 30^{\prime} \mathrm{N} . ; \operatorname{lon} .1^{\circ} \mathrm{W}$. ; on the N . side of some extensive sand downs, which stretch about 9 m . N.E. to S.W. Its size is variously stated, from 102 to 250 houses, of tolerably solid construction. It has a mosque and a school, and extensive and well-enltivated gardens, watered by a stream of the same name as the village, and surrounded by a general wall defended by 14 towers. Barley and onions are earefully cultivated, and peaches, almonds, and grapes are plentiful.(Bulletin Geo. Soc.; Sahara Algerien.)

AINSTABLE, a par. England, co. Cumberland, 11 m . N.E. Penrith; area, 4110 ae. IIere was formerly a famous Benedictine nunnery, founded by William Rufus. Pop. in 1841, 501.

AIN'TY, a large district, England, co. York, W. Riding, W. the eity of York, to which it is annexed under the namo of the 'Ainsty of the city of York.' It ecutains $49,720 \mathrm{ac}$., and had, in 1841, a pop. of 9479.

AIN-TAB, or Aentab, an anc. tn. Nyia, cap. district of same name, 55 m . N. Aleppo; lat. $37^{\circ} 8^{\prime} \mathrm{N} . ;$ lon. $37^{\circ} 22^{\prime} \mathrm{E}$. It lies on the Sajur, is tolerably well built, and contains 8000 Turkish, and 500 Armenian houses, principally of stone, five fine mosques, several baths, an Armenian church, and good bazaars; its citadel, or castle, on the N. side, is built on a mound, resting upon rock, and has a very striking appearance. On the opposite, or S . side, is a spacious cemetery, laving the appearance of a large suburb. The town is well supplied with water, pure streams of whieh, it is said, flow constantly through the strects. The inhabitants are a mixed, but hardy, independent race.- The district produces cotton, wool (sheeps' and goats'), bees' wax, \&c. The cotton is coarse, and the sheeps' wool mostly used in home manufactures; but the goats' is excellent, and the small quantities produced cagerly bought for exportation. The other articles of produce in the district are oil, grain, and rice. Manufac-tures:-yellow and moroceo leather, and ealico. Mneh pine wood is cut in the mountains and sent to Aleppo, with which, and Orfah, Marash, and the port of Alexandretta, it has commereial communications, and is, on the whole, a place of considerable importance. Vineyards are numerous in the territory. Pop. of district, about 30,000 ; of the town, 3500 ; about one-fourth of the whole are Christians or Jews.

AIN TECAZZE, a small lake in $A$ byssinia, s. part of the prov. Tigré, from which flows the river Teeazze, one of the largest streams in Abyssimia. The lake lics in lat, $11^{\circ}$ $35^{\prime}$ N.; lon. $39^{\circ} 16^{\prime}$ E.

AINUNAIf, or Andexe, a liaven, Arabia, on the Red Sea, E. from the entranee to the Gulf of $\Lambda$ kabah; lat. $28^{\circ} 3^{\prime} \mathrm{N}$.; lon. $35^{\circ} 18^{\prime} \mathrm{E}$. It is formed by the Bay of Ainune, which is enclosed by the islauds of Ockmur-sur, Raymahn, and several coral reefs and small islets, some of which are covered with inaugroves. The entrance to this laven is near Ockmur-sur

Island, and is only practicable for small vessels. The interior of the haven is about 12 m . long, by about 6 broad, with a depth of 12 to 13 fathoms, and is the only secure place of shelter in the N. end of the Red Sca. The coast is very stony, but not unfruitful, being overgrown with many wild plants, flowers, and mimosa trees. The bay, or haven, takes its name from the ruins of the town of $A$ inune, which arn hard by ; and both Lave obtained their name from a rivulet which here disappears in the sands, the Ain Unne, that is, tho streamlet Unne. At this streamlet, the pilgrims from Cairo to Mecea rest on the twelfth or fifteenth day of their journey. -(Ritter's Aralicn.)

AIOU, or Yowl Islaxds, a circular gronp of small low isles, Asiatic Arehipelago, about 30 m . N. island of Waygiou, and about 100 m N. by W. the N. W. extremity of Papua, or New Guinea. They are abont 20 in number, and are fortified by an extensive reef, which projects arount them to a distance of 2 or 3 m . The southermmost islands, extending nearly E. and W, about 15 m ., are five in number; and the largest, called Aiou Baba, is about 3 m . long, laving a considerable number of huts on its W. end, and is the fourth island from the $\mathbf{E}$. It lies in about lat. $0^{\circ} 21^{\prime} \mathrm{N} . ; \operatorname{lon} .131^{\circ} \mathrm{E}$. (R.) The soutli-westernmost island of the group is detached a considerable distance from the others. 'Ilie central and southernmost islands are uneven, and a little higher than the N.E. ones, which are low and flat. Several of them are inhabited, and they abound with excellent turtle. The N.W. island is in lat. $0^{\circ} 38^{\prime}$ N.; lon. $131^{\circ} 8^{\prime} \mathrm{E}$.

AIR (Point of), N. Wales, co. Flint, W. entrance of the river Dee, 19 m . E. Great Orme's Ilcad; lat. $53^{\circ} 21^{\prime} 26^{\prime \prime}$ N. lon. $3^{\circ} 19^{\prime} 14^{\prime \prime} \mathrm{W}$. There is here a round tower, striped red and white horizontally, laving two fixed lights.

AlRAINEN, a tn. France, dep. Somme, Picardy, 16 m . W.N.W. Amiens. It is well built, and agrecably situated. The church, Notre Dame, is a somewhat remarkable structure. At one end of the town are the ruins of an ancient castle. Manufactures:-sailcloth, sacking, soap, rapeseed oil, for which there are 20 mills; cloth, thread, flax, leather, \&e. 1'op. 2080.

AIRARA, a sinall river, kingdom of Shoa, Abyssinia. After being joined by the Umptoo, and other streams, it ruus into the Casam, which falls into the IIawash.

AIRASCA [anc. Iria], a tn Piedmont, Sardinian States, 6 m. E. Pignerol. Pop. 1900.

AIRDLE, or Ardle, a small river, Scothand, co. Perth, having a course of about 13 m .; it passes through a strath or valley of the same name, anciently famous as a resort of the wild boar.

AIRDRIE, a large and thriving tn. Scotland, co. Ianark, Middle Ward; partly on a gentle acclivity, having a W. exposure, and partly on the slope and summit of a more abrupt elevation, 11 m. E. Glasgow, and 32 W . Edinbnrgh, the highroad between these two eities intersecting it from E. to W., and forming its principal strect. The other streets, many of which are spacious, mostly run at right angles, and are all well paved and lighted. The houses generally, without having mueh external pretension, have a respectable and comfortable appearance; and the shops, though not particularly gay or ostentatious, are well stocked, and exhibit many of the more substantial manifestations of prosperity. The town is now amply supplied with water by a recently formed water company. The principal public buildings are the townlall, a handsome edifice, surmounted by a fime spire; the National lBank, and Bank of Scotland. There are a number of churches, including two belonging to the Establishment; three to the Free chureh; two United Presbyterian; one Reformed Presbyterian; one Baptist; one Methodist; one Independent ; and one li. eatholic, besides one or two others. Many of these churches are very handsome structures. $\Lambda$ mechanics' institute and library have existed in the town for several years; and a commodious academy has recently been built. There are here a large cotton-spinning and weaving factory, several extensive foundries and machine shops, a distillery, a brewery, and a tan work, all in active operation; landloom weaving is also carried on to a great extent. But Airdrie owes its prosperity chiefly to the extensive operations connected with the coal and iron trade in its vieinity, being situated in the centre of the richest mining district in Scotland. Its progress has, in consequence, been umprecedented. In 1831 its population amomed only to 5594 : in 1841 it had increased to 12,306;

## AIRE

and, in 1849 , it was estimated at upwards of 16,000 . The eivic affairs of the town are administered by a provost, three bailies, a treasurer, and seven councillors. A regular police force has been established for several ycars. Courts for criminal business are beld by the magistrates every Monday; besides which, there are weekly courts held by the sheriffsubstitute on Fridays, and by the justices on Thursdays. Airdrie unites with Ilamilton, Falkirk, Lanark, and Linlitlgow, in returning a member to the Ilouse of Commons.

AIRE, a river, Eugland, rises in the moors near Malham, W. Riding, Yorkshirc. It runs about 1 m . underground, pursues a S.E. course to Leeds, from which town it is navigable. At Castleford it is joined by the Calder, and finally falls into the Ouse, 3 m . S. W. Howden, in the E. Riding. It derives its chief importance from the number of canals with which it is comnected.

AIRE, or Ayre (Point of), Isle of Man, the most northerly point of the island; lat. $54^{\circ} 25^{\prime} \mathrm{N}$. ; lon. $4^{\circ} 22^{\prime}$ W. There is a landsome lighthouse on this point, with a single revolving light, bright and red alternately, 106 ft . above the level of the sea.

AIRE-sUR-L'ADOUR, an anc. m . France, dep. landes; situated in an agreeable and fertile country, on the slope of a hill on the left bank of the Adour, 16 m . S.E. St. Sever. It is well built, and the streets are regular. It contains a college and cathedral, and has tameries, and a hat manufactory. Pop. 4667.

AIRE-SUR-LA-LYS, a tn. France, dep. l’as de Calais; on the Lys, at its junction with the Laquette, about 10 m . S.E. St. Omer, with which it communicates. The town is neat, and well paved, adorned with several beautiful fountains, but situated in a low marshy soil. The church of St. Paul is a handsome Gothic edifice. There is here an extensive barracks, capable of containing 6000 men Trade in linens, fustians, hats, thread, starch, osier work, grain, \&c.; Duteh tiles and soap are also made herc. Pop. 9591.

AIRLILE, a par. Scotland, co. Forfar, lying in the great Strathmore valley, and giving the title of Earl to the Ogilvies, whose ancient seat, the 'l3onnie House of Airlie,' was destroyed by Argyle in 1640. Pop. in 1851, 856.

AlROLA, a tn. Naples, prov. Terra di Lavoro, distriet of, and 9 m. N. from Nola, and 18 m . S.E. Capua; in a fertile plain, surrounded by mountains, and enjoying a salubrious climate. It has six churches, and several convents. Pop. 4634.

AIROLO [German, Eriels], a vil. Switzerland, canton of, and near the left bank of the river Tessin, on the S. slope of Mount St. Gothard, about 3800 ft . above the sea, on the great route into Italy; 24 m . N.N.W. Locarno, and 28 m . S. Altorf. It bas some good slated stone houses, an hospital, and a church. Garnets are found in the neighbouring valleys. The union of various lines of road here, renders it a place of considerable transit trade. The language of the inlabitants, both of town and district, is Italian. Near this village the French were defeated by the Russians, after a sanguinary battle, fought Sept. 13, 1799. Pop. 1880.

AIRTH, a vil. and par. Scotland, co. Stirling; area, 16,400 ac.; extends along the Frith of Forth 6 m ., breadth about 3 m . P. (1841), 1498, of which the vil. contained 583; (1851), 1319.

AIRTHREY, or Airtirie. See Bridge of Allan.
AIRVAULT [Latin, Aurea Vallis], a tn. France, dep. Denx Sèvres, 29 m . N. Poitiers, upon the right bank of the Thouet. It is well built, with a fountain in the centre of the principal strect, and a beautiful Gothic church. Here are the ruins of an old castle, and of a monastery, destroyed during the religious wars of the 17 th century. The inhabitants have a trade in wine, grain, flax, hemp, clocks, brandy, and wool; manufactures of cloth and serges, tanneries, \&c. Pop. 1957.

AISNE [anc. Axona], a considerable river of France, which gives its name to a department. It rises near the vil. of Beaulicu, in the basin of the Meuse, and, after a course of above 150 m ., first to the N. by W., and then to the W. by S., falls into the Oise, about 1 m . above Compeignc. It becomes navigable from Chatean-Porcien.

AISNE, a dep., N.L. France, so called from the river of the same name, cap. Laon. It is formed of portions of the ancient provs. of Picardy and the Isle of France; bounded, N. by the dep. du Nord, and the Belgian prov. of Hainaut; E. by the deps. of the Ardennes and Marne; S. by that of the

Scine et-Marne; and W. by those of Oise and Somme; area, $1,486,124 \mathrm{ac}$., or $2322 \mathrm{sq} . \mathrm{m}$.

The surface, in general, consists of uudulating plains, intersected in the N. by low hills and voles; in the central and S. parts, the summits of the hills seldom rise to more than 500 ft. above the level of the sea. The soil is for the most part calcareons, except in the N. districts, where it is clayey, and in some parts slatey. In the S., chalk is found, and, in other parts, freestone, slates, turf, \&c. The elevated table lands are the most fertile. Wheat, rye, maslin, potatoes, hops, flax, hemp, and bectroot are among the chief agricultural produce. Two-thirds of the harvest are exported, and, compared with its extent, more oxen, horses, and sheep, are reared, than in most of the other departments. The breeding of merinoes is carefully attended to; and the annual amount of wool is calculated at more than two millions of pounds. The cheese made in this district is of excellent quality. Beetroot sugars, and lecehes, are also exported. These last are got in the lakes, of whieh there are 80 , covering more than 2470 ac . of land. The oil made from the beechmast yields, in some years, as much as $£ 20,000$. The vine is not cultivated to any great extent except in the arrondissements of Laon, Soissons, and Chateau-Thierry. The manufactures of this department are very important. They consist of cotton at Guise, on the Oise ; linens, cottons, laces, lawns, cachmere imitation shawls, soap, and vitriol at St. Quentin; glass at Nouvion; champagne bottles; and mirrors. The department is subdivided into 5 civil, and 7 electoral, arrondissements, 37 cantons, and 840 communes. Besides the cap., the principal towns are Soissons, Chateau-Thierry, Vervins, and La Ferte Milon, the birthplace of Racine. The river Oise in the N., the Aisne in the centre, and the Marne in the S., with their tributaries, water the department. Several canals traverse it; and the great roads from Paris to Lille, and from Paris to Mons, with other public routes, pass through it. P'op. of dep., 557,422.-(F'rench Official Tablis.)

AISTHOKPE, or EASt Thorpe, a par. England, co. of, and $6 \frac{1}{2} \mathrm{~m}$. N.W. from Lincoln; 1150 ac . Pop. in 1841, 82 .

AI'TUTAKI, or Whytootackie, an isl. in the S. Pacific Ocean, one of Cook's group; lat. $18^{\circ} 54^{\prime}$ S.; lon. $159^{\circ} 32^{\prime}$ W . (R.) It is about 9 m . in length, and rises to the height of 360 ft .

AIVALI, or Kinonia, [anc. Heracleia], a tn. of Asiatic Turkey, sanjak Karasi, on the promontory forming the W. side of the Gulf of Adramyti, 66 m. N. by W. Sinyrna ; lat. $39^{\circ} 18^{\prime} \mathrm{N}$. ; lon. $26^{\circ} 42^{\prime} \mathrm{E}$. In the beginning of the present century it was a place of considerable note, possessing a college and library, two hospitals, and extensive manufactorics of soap, numerous oilmills and tanncrics. But, in June 1821, during a contest between the Greeks and Turks, it was set on fire by the latter, and reduced to ashes. It is said to be reviving.

AIX [anc. Aques Scxtic], an anc. city of France, dep. Bouches-du-Rhone, chief place of arrond., agreeably situated near the river Arc, in a plain surrounded by fertile hills, $18 \mathrm{~m} . \mathrm{N}$. Marseilles. The town was greatly embellished by Louis XIV. Most of the modern streets are broad and well paved, but those of the old town are narrow and dirty. The houses, in general, are well built, and the public buildings handsome. A principal strect, eailed the Cours, or promenade of Orbitelle, is bordered with elegant honses, planted with avenues of trees, and adorned with public fountains, one of which has a statue, by David, of le Bon Roi René. In the centre of the market place is another public fountain; and near it a curious elock tower, erected in the Middle Ages, the internal machinery of which puts in motion some antique figures when the clock strikes. In the old town, the feudal walls and gates of whieh are still standing, is the ancient cathedral of St. Sauveur. A mongst the chief ornaments of Aix are the baptistery, constructed with the remains of a Roman temple, and the carved wooden doors, exceuted in 1503, which are curious specimens of the state of art at the commencement of the 16 th century. The townhall, situated in a narrow street, is an elegant edifice, and contains a large collection of anti-
quities. The 'Palais, a very old building, which oceupies, one side of a fine square, called 'The Place des Precheurs, has several large halls, in one of which the parliaments of Provence formerly assembled. Before the first French RevoIntion, this city had a university, fommed in 1409 , by l'ope Alexander V., and several richly-endowed ecelesiastical establishments. It is the seat of an archbishop; a royal court of appeals for the departments of the Basses-Alpes, the Var, and the Bouches-du-Rhone; a chamber of commerce; a school of theology and jurisprudence; a royal academy; a library, having not less than 100,000 volumes; and a museum. Its literary and scientific institutions, with its facilities for stuly, have aequired for it the title of the Athens of the $s$. of France. There are two public hospitals, and one lunatie asylum in Aix, also a theatre. There are in the town several manufactories of silk and velvet stuffs; also of hardware, linen, printed calicoes, and woollen eloth. On the hills around are almond groves, and plantations of olives, which furnish the much-esteemed sweet oil of Aix, the best produced in France; the trade in which, however, began to decline after the destruction of a large portion of the olive trees in 1788 , and has greatly fallen of since 1830 , when an umusually severe frost killed many more. Among the articles in whieh the commerce has much increased within the present century, are grain, almonds, plums, raisins, figs, brandy, wine, vermicelli, and fish. The celebrated tepid mineral springs of $\Lambda i x$ were known to the Romans, but they were for a long time disused. In 1704 they were again discovered, and identified by the medals and inscriptions dug up; but they are in less repute than formerly. The water is clear, light, and moderately warm, without much taste or smell. The bath house belongs to the hospitals. Aix is the birthplace of Tournefort, Vanloo, and Adanson. Pop. in 1846, 27,280.

A1X, or Aix-Les-Bains, a tn. Sardinian states, Savoy Proper, 8 m . N. Chamberry, near the Lake Bourget, in a fertile valley, through which a long avenue of poplars leads to tlie lake. Lix is celebrated for its hot aluminous and sulphurous springs, which annually attract a number of strangers. The waters were in repute with the ancients, by whom they were called Aque Gratiance, because the proconsil Domitius repaired them in the reign of the Emperor Gratian. There still remain some ruins of a triumphal areh, and of a temple of Viana. Pop. 2882.

AIX (Ile D'), or Ile $1{ }^{\circ} \mathrm{E}$, a small isl. on the coast of France, dep. Charente-Inferieure, in the Bay of Biseay, lying between the isl. of Oléron and Rochefort on the mainland, about 5 in . off the shore, opposite the mouth of the Charente, and separated from Rochelle and breton lyy the Basque roads; lat. $46^{\circ} 0^{\prime} 36^{\prime \prime} \mathrm{N} . ;$ Ion. $1^{\circ} 10^{\prime} 30^{\prime \prime} \mathrm{W}$. (r.) It has a strong military fort, and batteries, to defend the entrance of the roads; and a village eontaining 256 inhabitants, the greater part fishers. There is a lighthouse on the island. Pop. about 400 to $500 .-$ - Aix is also the nane of a small river in France, dep. Loire Infericure, which, after joining the Ysable, falls into the Loire.

AIX D'ANGILLON, a th. France, dep. Cher, 12 m . N. F. Bourges, formerly known under the name of the fortress of Gillon. It has two fairs in the year, at whieh a great number of cattle and horses, asses and swine, are sold. Pop. 1426.

AIXE, a small th. France, dep. Haute-Vienne, 7 m . S. W. Limoges, on the Vienne river. There are here manufactories of bandboxes, nails, brieks, and tiles. Pop. 2631.

MIX-EN-OTHE, a small th. France, dep. Aube, 15 m . W.S.W. Troyes; has a cotton factory, a tamnery, and hat and tile works, and some trade in grain, wool, and cattle. Pop. 1997.

AIX-L $\Lambda$-CHAPELLE [The waters of the chapel; German, Aachen; Latin, Aquisgranum], an anc. and eclebrated city of W. Germany, prov. Lower Rhine, cap. district of same name; 38 m . W. by S. Cologne, 80 m . S.E. Brussels, and 185 m . N.E. Paris; lat. $50^{\circ} 46^{\prime} 34^{\prime \prime}$ N.; lon. $6^{\circ} 4^{\prime} 40^{\prime \prime}$ F. (L.) It is pleasantly situated about 500 ft . above the sea level, in a rich valley, watered by the Wurm, and surrounded by the Veen hills. The city, enclosed within ramparts, which serve as promenades, is divided into the inner and the outer towns; the streets are well built, particularly that called New Strect. It contains three monasteries, and 18 churehes; a handsome theatre; a public library, of 10,000 volumes; a
gymnasium, or higher grammar sehool; three hospitals; and other charitable institutions. In the townhall, in the market place, is the coronation room, adorned with the portraits of the German Emperors, and many precious relies of old (ierman art; together with half-size portraits of Napoleon and the Empress Josephine, painted by Inavid, and presented by the Emperor to the town. The market place itself is adomed with a beautiful fountain, surmounted by a bronze statue of Charlemagne.

As the chicf station of the Belgo-Whenish Railway, conneeting with Antwerp, Ostend, and Cologne, Aix-la-Chapelle affords an extensive mart to the commerce of I'russia, and is, besides, the scat of commercial and factory courts. It was formerly eminent as a manufaeturing city, especially of cloth and needles; and its prosperity in this respeet scems of late to be reviving. Its woollen cloths are highly esteemed on the continent of Lurope. In 1816, there were 2362 hand, and eight power looms, employed in this manufacture; 62 spining factories, with 62,699 spindles for carded, and seven mills, with 6570 spindles, for combed wool. It is estimated that about 3000 of the inhabitants are engaged in making the cloth, while more than 12,000 in the town and neighbourhood are occupied in preparing the wool. Carpets, neetles, waxcloth, leather, watches, soap, and sal-ammonia, are also manufactured to a considerable extent. There is, likewise, a pretty large wholesale wine trade. Although, however, presenting, in its nmmerous chimney stalks, an appearance of being an extensive seat of manufactures, and having considerable commercial relations with France and Belgium, Aix-la-Chapelle derives its celebrity cliefly from its historical associations; and its importance and prosperity, principally from the influx of visitors to its baths, of the former of whom there are annually from 7000 to 8000 . There are, in all, eight mineral springs here, six of them warm. The most famons is the imperial spring, or Source de l'Empereur, which has a temperature of $143^{\circ}$ Fah., and the vapour of which, when confined, deposits sulphur. For the accommodation of strangers, there are eight bathing houses. The rooms for bathing are excellently fitted up, with baths from 4 to 5 ft . dcep, built in massive stone, and in the old Roman style. Outside the walls is Lousberg, rising nearly 300 ft . higher than the city. It is a favourite summer evening resort of the denizens of Aix-la-Cliapelle, where they can regale their cyes with a magnificent view of the surrounding country, their ears with fine music, and their stomachic cravings with all luxurious delights.

During the Middle Ages, it was a free imperial city, and its citizens, throughout the empire, were exempt from feudal service, from attaclmment of their goods and persons, and from all tolls and taxes. Charlemagne raised it to the rank of secont city in his empire, and made it the capital of all his dominions N. of the Alps. 1t became his favourite residence after 768. and he spared no expense in beautifying it. Till the dissolntion of the Germanic empire, the coronation of the Emperors of Germany, by right, was celcorated here, though, in some instances, this ceremony was performed at Frankfort. The imperial insignia were preserved here till 1795, when they were carried to Vienna. In the cathedral, a large flat slab of marble marks the tomb of Charlemagne. In 997, Othe 11 II. ordered it to be opened, when the body of the Emperor was found in good preservation. The chureh of the F'ranciscans contains a splendid 'Descent from the Cross,' by liubens, which was carried to l'aris, but brought back on the fall of Napoleon.

By the treaty of Luneville, concluded Fel. 9, 1801, which separated the left bank of the Rhine from Germany, the city was transferred to France, and remained the elicf town of the French department of the Roer, till 1814, when it was restored to Prussia.

A peculiar historical interest attaches to this city, as the place where several important congresses have been held. Two famous treaties of peace have been concluded here; the one, May 2, 1668, between France and Spain, putting an end to the war of devolution, carried on by Louis XIV., for the possession of a great portion of the Spanish Netherlands, which he claimed in right of his Queen; and the other, Uctober 2, 1748, between the prineipal sovereigns of Europe, terminating the war of the Austrian succession. Here, too, was held the celelrated congress of 1818 , its object and result being the withdrawal of the allied troops from France. The
names of several of the streets, such as Alexander Street, after the Emperor of Russia; Francis Street, after the Emperor of Austria; and Wellington Street, were given in consequence of this congress. Pop. in 1842, including Burtscheid, which may be considered a suburb, 49,698. - The DISTHICT, or governmental circle (Regierungs-bezirk) of Aix-la-Chapelle, or Aachen, as it ought more properly to be styled, lies in the prov, of the Lower Rhine, bounded, N. by the district of Diisseldorf, E. by Cologne and Coblentz, S. by Treves and the grand duchy of Luxemburg, and W. by Belgium and Holland. It has an area of 1200 geo. sq. m., and is watered by the Roer and the Wurm, which fall into the Maas; and by the Kill and the Our, which fall into the Moselle. The S. part of the district is hilly and moorish; towards the N., it is rich and fertile. In the S.E., the people are mainly employed in mining; in the S.W., especially at Malmedy, St. Vith, and Eupen, in leather making; in the N., in agriculture; and in the centre, in cattle rearing, and in various kinds of manufactures, more especially of iron, hardware, and woollen goods. There are 523 elementary schools in the district, attended by 63,237 pupils; and attending other schools there is a further number of 1391 , giving a total of 64,628 children attending all descriptions of schools, being 18.73 per cent. of the children between six and 14 years of age. Pop. 380,000 .

AlZENAI, a tn. France, dep. Vendée, 8 m . N. BourbonVendée, in the commune of Poiré. Pop. 3519.
$\Lambda J \mathrm{ACCIO}$, or A.sazzo [Latin, Adjucium], a tn. France, cap. of the dep. and of the isl. of Corsica. It lies on the S.W. coast of the isl., on a tongue of land in a bay on the N. side of the Gulf of Ajaceio, surrounded by high monntains, which shelter it from the N. and L. winds: 60 m . S.W. Bastia, the former cap. of the isl. The principal streets aro broad and straight, and the houses well built. It is the see of a bishop; and has a cathedral, a communal college, a royal school of navigation, a public library of about 14,000 volumes, an agricultural society, and a botanical garden, on property once belonging to the Bonaparte family, with many fine promenades. It is likewise the seat of a tribunal of primary jurisdiction, and one of commerce ; and a military place of the third class. Its harbour, the entrance to which is rendered unsafe by projeeting rocks, is secure and commodious, though exposed to the winds from the W. The town and bay are defended by a citadel. The bay, which is one of the finest in Corsica, is bounded by Cape Sanguinario on the N., and by Cape Muro on the S. An intermittent light is established on the summit of Sanguinario Island, in lat. $41^{\circ} 52^{\prime} 50^{\prime \prime} \mathrm{N} . ;$ lon. $8^{\circ} 35^{\prime} 50^{\prime \prime} \mathrm{E}$. The lighthouse is 52 ft . high, and the light stands 321 ft . above the level of the sea, and may be seen from a distance of 20 m . The principal trade is in olive oil, wine, grain, oranges, citrons, and other fruit; and in coral, the fishing of which, together with that of anchovies, is prosecuted to a considerable extent on the coasts, and particularly in the Straits of Bonifacio. Ajaceio is famous as the birthplace of Napolcon Bonaparte, tho was born here on August 15, 1769. The register of Napoleon's baptism is to be seen in the parish books. The house in which he was born, now inhabited by his mother's relations, of the name of Ramolini, and still one of the best houses in Ajaccio, forms one side of a little square, planted at the four angles with four acacias. The room in which he first drew breath is dark, having only one window. The Melelli olive gardens in the neighbourhood, formerly the property of the Bonapartes, was a favourite resort of Napoleon, in his young days. Pop. in 1846, 11,541.
$A \mathrm{~J} A \mathrm{~N}$, a coast and country of E . Africa, about lat. $9^{\circ} \mathrm{N}$.; lon. $50^{\circ} \mathrm{E}$. It is little known; soil generally flat and sandy; and is said to possess a valuable breed of horses, which are bought up in great numbers by foreign merehants.

AJEHO, a tn. of the Chinese empire, territory of Manchuria, 120 m . N. Kirin, and 75 m . W. Soongari. It is of reeent formation, and is inhabited solely by immigrants from China. It is governed by a mandarin of the sceond order, who has several Christian families within his jurisdiction. The population amounts to 60,000 , and is daily increasing.

AJELLO, a tn. Naples, prov. Calabria Citra, distriet of l'aola, 10 m . S.W. Cosenza. It is built on a rock, and has a fortified castle, said to be ancient Tilesium. Pop. 3860 . There are three other towns of the same name in Naples; one in the prov. of Abruzzo Ultra I I.. district of, and 21 m . S.E. from Aquila, near the Lake Fucino; another in the prov. of

Principato Ultra, district of, and 2 m . S.E. from Avellino. canton Solofra-pop. 1490; and the third in the prov. of Principato Citra, district of, and 3 m . N.E. from Salerno, canton of Baronisi.

AJETA, a tn. Naples, prov. ('alabria Citra, distriet Paola, 14 m . N. Umbriatico ; upon a hill. Pop. 3490.

AJMEER or Rajpootana, a prov. Hindoostan, situated between lat. $24^{\circ}$ and $31^{\circ} \mathrm{N}$. , and bounded, N. by Mooltan, Lahore, and Delhi; E. by Delhi and Agra; S. by Goojerat and Malwa; and W. by Mooltan and Sinde. Length 350 m ., average breadth, 200. A great portion of the surface is desert, ard part of it wholly destitute of inhabitants, water, and vegetation. In the S., it is watered by several rivers, and is consequently more fertile. The whole of the soil is remarkably saline, containing many salt springs and salt lakes, and the water of a large portion of the wells is brackish. In many places, it is covered with the cactus, and other thorny plants; but, except in the lilly parts, the province is almost destitute of trees. On the N.W., some parts are of liard elay, which sounds under the horses' feet like a board, and is quite destitute of vegetation. The lighest mountains are the A ravulli range, in which is the peak $\Delta$ bu (which see). The inlabitants of Ajmeer are usually divided into two great tribes-the Rlaatores, and the Chohan Scesodya Rajpoots. The common inhabitants of the desert are Jauts; the higher classes, Rhatores. They are described as handsome in person, hardy, and brave: but indolent, and much addicted to the use of opium. The stock of the country consists of bullocks and camels. The wild animals are the desert rat, whose undermining operations render the ground dangerous to horsemen; the fox; the antelope; and the goorkhur, or wild ass, whose speed outstrips that of the flectest horse. The villages are generally built of a coarse stone, brought from the neighbouring hills, the huts of the desert being eomposed of straw. The three great divisions of Ajmeer are, S., Oderpoor or Marwur; W. and N., Joodpoor or Marwar; and E. and N., Jeypoor, Jyengaur, or Ambher, all three names being applied to it. Ajmeer was never thoroughly subdued under any of the great dynasties that prevailed in India. In 1193, it was overrun by Mohammed, the first Gauride sovereign, and continued tributary to Dellii till 1748 , when its numerous chiefs and prinees, always of a rebellious character, assumed total independence. In the course of the present century, it was brought under British sway, with manifest advantage to the district and people; large numbers of whom, leaving their fastnesses, came to resume their abandoned abodes, as soon as peace and tranquillity were assured to them by British influence.

AJMEER, or AJmere, a city, Ilindoostan, formerly cap. of the prov. of the same name, is 540 m . N. by E. Bombay; lat. $26^{\circ} 20^{\prime} \mathrm{N} . ;$ Jon. $74^{\circ} 40^{\prime} \mathrm{E}$. It is a place of some antiquity, and, during the reign of Jehangeer, was occasionally the residence of the court. In 1616, that Emperor was visited at Ajmeer by the English ambassador, Sir Thomas Roe, and, about the same period, a factory was established in the eity by the East India Company. In 1818, it was ceded to the British by Dowlet Row Sindia, and, in consequence of a long period of war and anarehy, was then in a most ruinous state. In the course, however, of five years of peace and regula government, it had risen from its ruins, and has gradually become one of the handsomest cities in British India-strects, squares, and bazaars, rising in it daily; while a general uniformity of plan has been maintained throughout. It has now, also, become the place of residence of many mereliants of the first consequence in Marwar. It lies at the foot of a considerable hill, the rocks, trees, and brushwood behind forming a picturesque background. On the summit of the hill stands a fortress, named Taraghur, nearly 2 m . in circumference, with bastions, bomb-proofs, storehouses, tanks, and cisterns. It is capable of containing 1200 men , but is now fast going to decay. A fane, or temple, within the fortress, is one of the most ancient and entire monuments of Hindoo architecture. The old palace and gardens of Shah Jehan are still in existence, the former being partly habitable. The most remarkable object connected with Ajmeer, is the tomb of Khoja Mayen ud Deer, a renowned Mahometan saint, to which many pilgrimages are made by the devout Mussulmans. In a valley just above the city, the Emperors of Delhi formed, by means of strong embankments, a fine lake, which, during the rainy season, is 6 m . in eircumference. The place is
also celebrated for its gardens and vineyards, the grapes produeed being the largest and best in India. Pop, about 25,000.- (Hamilton's East India Gazettcer; IIeber's Journal; IIstorical and Descriptive Acrount of British Iudit; Martin's East Indies.)

MJOFRIN, a tı. Spain, New ('astile, prov, of, and $9 \mathrm{~m} . \mathrm{S}$. from Toledo. It stands on a plain, and comprises about 30 well-built streets, and three squares, with a ehureh, ehapter house, courthonse, two hospitals, five sehools, and a deeayed old prison. The inhabitants are engaged in agriculture, in weaving coarse eloths and serges, and also in roperies, and matting factories. Some sheep and mules are pastured in the surrounding eountry. Pop. 2883.

AJURUOCA, a th. Brazil, prov. Minas Geraes, on the Ajuruoca river, here crossed by a bridge, 179 m . S.W. Ouro Preto, and 117 N.E. Nio de Janeiro. 1t lies in a fertile country, at the foot of the Mantiqueira ridge of hills, and has a chureh, prison, and townhouse. The soil of its environs, once auriferous, has long been exhausted of the precious metals, and the inhahitants have consequently turned their attention to the more profitable pursuits of agrieulture, and rearing swine for the Rio de Janeiro market. The district is rieh in tobaceo, millet, mandioca, sugar eane, and coffee, and, with the town, contains a pop. of 12,000 .-(Dic. Geo. Imp. Brazil.)

AKABAlI (Gulf, Castle, and Village of), in Arabia, an arm of the Red Sea, on the E. side of the peninsula of Mount Sinai, which separates it from the Gulf of Siez. It extends nearly 100 m . in a straight direetion N.N.E., being in general about 9 or 10 m . wide, and, where broadest, 16 or 17 m . It has the appearance of a deep narrow ravine; the circumjacent hills rising, in some places, 2000 to 2500 ft . perpendieularly from the shore; the varied hues of the granite rocks, bathed in sunlight, presenting a speetacle of wild magnificence. The gulf has in some places a depth of 200 fathoms, and, in some parts, is unfathomable; the flow of its water is gentle and equable, though at times strong, from the violence of the winds. At its S. extremity it communieates with the Red Sea, by ehannels on each side of the island of Tiran; one of whieh, that between the latter and Ras Furtak, being about 1 m . wide at its narrowest part. From las Mohammed, further to the S. than the Strait of Tiran, to Akabah, the gult consists of a suceession of bays, bounded by rocky headlands. It is subject to boisterous winds, and dangerous and sudden swells, and is, in many parts, obstructed with hidden shoals and coral reefs, which render the navigation peculiarly unsafe. By the ancients it was styled Sinus Elanaticus, from the port of Elana, at its N. extremity. (See Ailair.) - On the E. side of the gulf, is the Castle of $\Lambda \mathbf{K A B A H}$, from which the former takes its name ; lat. $29^{\circ} 30^{\prime} 58^{\prime \prime} \mathrm{N}$; lon. $35^{\circ} 0^{\prime} 53^{\prime \prime}$ E. (L.) It is an oblong quadrangle of high thiek walls, with a tower or

AK.SBAH ENTRANCE TU THE FORTRESY.
Fiom Laborde, Voyage de I'Arable lectree.
bastion at each of the four corners. All around the walls, on the inside, is a row of ehambers, or magazines, one story ligh, with a solid flat roof, forming a platform round the interior of the castle. On this platform are ereeted, in several parts, temporary huts, or elambers, covered with the stalks of palm leaves, and occupied by the garrison apparently as a dwelling.-(liobinson.) It is a place of no strength, presided
over by a Turkish governor, and garrisoned by some 30 or 40 Egyptian soldiers. It is said to be infested with scorpions, for the destruction of whieh a numerous staff of eats is maintained. This fortress, like some others, was built for the protection of the pilgrim caravans on their way from Cairo to Meeea. Government stores are here kept for their supply.-The Vhllage of $A$ kabal is situated at the N. extremity of the gulf, and is supposed to be the Eizon-geber of the Old Testament. It is now remarkable only for its date groves, some of whieh are 1 mn . in length. Water is plentiful and good; fruits and vegetables abound. The name Akabah, signifying a monntain pass, or stcep declivity, is derived from the long and diffieult descent of the pilgrim route, from the mountains in the neighbourhood of the village, called by Edrisi Akabat Aituh.-There is another Akaba, a day's distance from the above, called Akaba Esshamic, or the Syrian Akaba. It lies in the great pilgrins ronte from Damascus to Nccea, and, like the Egyptian Akaba, appears to take its name from a stecp acelivity.

AKALZ1K, Aкhalzik, or AkıにA, a th. Russian Armenia, district of same name, 110 m . W. Tillis, 125 m . N.E. Erzeroom; lat. $41^{\circ} 35^{\prime}$ N.; lon. $42^{\circ} 45^{\prime} \mathrm{E} . ;$ on the left bank of the Dalka, 10 m . N.W. from its junction with the Kur. It is without walls, but defended by a strong citadel, built on a rock, which, when it belonged to Turkey, baffled all the attempts of the Russians to reduce it. Akalzik is the seat of a Greek archbishop, and contains two Christian cluurehes, a Jews' synagogue, and several mosques; one of which, that of Sultan Almed, is built on the model of St. Sophia at Constantinople, and lias a college and library attached to it. The latter was accounted one of the most eurious in the Last; but the Russians have removed about 300 of the most valuable works to St. Petersburgh. The neighbourhood prodnees silk, honey, and wax, with excellent fruits, raisins, peaehes, apricots, and figs. Some manufactures are earricd on, and the inhabitants prosecute an aetive trade with various places on the Blaek Sea. Formerly a large slave market was held here; but it has been suppressed by the Russians, sinee they aequired possession of the town. In the vicinity are some alkaline springs. l'opulation (1850), 12,060, which includes Armenians, Georgians, Turks, Rus. sians, and Jews.

The former Turkish pashalic of Akhalzik or Tcheldir, as named by the Turks, forms now a political and administrative subdivision of Russian Armenia. It is a mountainous country, watered by the Kur. From the elevation of the country, the winters are long and rigorous; while the heat in summer is equally intense. The elimate, however, is healthy, the air pure, and the soil fertile; but the sudden changes of the seasons are unfavourable to cultivation; maize, barley, tobacco, flax, and cottou are among the ordinary produce, while excellent fruits grow without much culture. The inlabitants raise cattle and sleep in considerable numbers, particularly the latter, and pay great attention to the breeding of bees and silkworms. Game is abundant. Some woollen, cotton, and silk stuffis are fabricated ; and the exports consist ehiefly of eattle, hides, tallow, honey, and wax. The territory is one of the last conquests of Kussia from Turkey. Pop estimated at 70,000-Georgians, Turks, Armenians, and Jews.

AKARAO, a harbour or inlet in the isl. of New Munster, New Zealand, in Bank's Peninsula, having Heroine IIead on the N.E., and Iron Ilead on the S.; lat. $43^{\circ} 54^{\prime}$ S.; lon. $173^{\circ} 1^{\prime} \mathrm{E}$. (r.) The harbour stretehes N. into the land for about 10 m ., with an average brealth of about 2 m . A scttlement was formed here by the Freneh in 1840 ; and a French frigate was, in 1846 , constantly on the station for the protection of the settlers, who are few in number, not amounting to 100 . They live peaceably under British laws, and employ themselves wholly in agriculture, and in cultivating gardens for their own support. The harbour of $A$ karao is said to be a very fine one.

AK $\Lambda$ SSA, a tn. or vil., W. $\Lambda$ friea, on the banks, and near the mouth of the Jio Nun. The huts of which it is composed are of a quadrangular form, and are built of bamboo, and roofed with palm leaves; they are mostly of two compartments, communicating with each other. The bedplaces are flat narrow boards, raised about 18 inches on four stones. The native males are well made and active, and oceupy themselves in fisling, and the eulture of small plantations of cas-
sada, Indian corn, and bananas. They barter palm oil for tobacco and spirituous liquors, of which they are excessively fond. Pop. about 200. $\qquad$ Akassa is also the name of a river of N.W. Africa, which flows along part of the N. border of the Sahara, and S. boundary of Morocco, and falls into the Atlantic about 30 m . S.W. from Cape Non; lat. $28^{\circ} 15^{\prime} \mathrm{N}$.(Allen's Niger Expedition.)

AKELY, or Oakley-cux-Stockholt, a par. England, co. Bucks; area, $1080 \mathrm{ae} ; ~ 2 \frac{1}{2} \mathrm{~m}$. N.E. Buckingham; 7 ac . of this par. divided between poor families and widows. Pop. in 1841, 362.

AKENIIAM, a par. England, co. Suffolk, $3 \frac{1}{2}$ m. N. by W. Ipswich; area, 1060 ac. Pop. in 1841, 117.

AKEREH, a large vil. in Kurdistan, 35 m . N.E. by E. Mosul; lat. $36^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $43^{\circ} 40^{\prime} \mathrm{E}$. It consists of about 500 houses surrounded by gardens, and is protected by a strong castle, situated on the summit of a rock which overlooks the village.-(Col. Shiel's Journey through Kurdistan, and accompanying Map, London Geo. Jour., vol. viii.)

AKERMANN [ane. Tyras], a seaport tn. Russia in Europe, prov. Bessarabia, near the mouth of the Dniestr in the Black Sea ; lat. $46^{\circ} 11^{\prime} 51^{\prime \prime}$ N. ; lon. $30^{\circ} 21^{\prime} 51^{\prime \prime} \mathrm{E}$. (t.) It is ill built and dirty. It contains some mosques and Greek churches. The port is good, and is commanded by an old dilapidated citadel, which, when the town was under Ottoman sway, contained a strong garrison. Some defences still remain. The vicinity produces fine grapes, from which excellent wine is made. Jarge quantities of salt are male from extensive saline lakes in the neighbourhood. The site of Akermann is believed to have been included in the Roman colony of Julia Alba. A treaty was signed here, Oct. 6, 1826, between Russia and the Porte, by which Moldavia, Wallachia, and Servia, were made dependencies of Russia, and passed from under the protection of Turkey. Pop. (1849), 16,076; chiefly Greek $\mathbb{*}$, Jews, and Armenians.

AKhalkilalak, or Achalkalakt, a tn. Armenia, belonging to Russia, on the W. border of Georgia, district of, and 35 m . S.E. by E. from Akalzik, and 80 m . W.S.W. Tiffis; on an affluent of the Kour (anc. Cyrus) ; lat. $41^{\circ} 20^{\prime}$ N.; lon. $43^{\circ} 20^{\prime}$ E. In the Middle Ages, this was one of the most considerable cities of Armenia.- There is another town of the same name in Georgia, 10 m . S.S.E. Gori, and 30 m . N.W. Tiflis ; lat. $41^{\circ} 52^{\prime}$ N.; lon. $44^{\circ} 22^{\prime}$ E.

AKIIALZIKH, a tn. Asiatic Russia. See $\Lambda$ kalzik.
AK-IILSSAR [White castle], or Acsa, a tn. Asiatic Turkey, pash. Anadolia, 56 m . N.E. Smyrna, on the Kodos, in the valley of the Ifyllus; lat. $38^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $27^{\circ} 55^{\prime} \mathrm{E}$. It consists of about 2000 houses, and several hundred huts for the poorer population; and contains nine mosques and one Greek church. About 300 of the houses are inhabited by Greeks, 30 by Armenians, and the rest by Turks. This town has been long noted for the skill of its dyers, and still maintains its reputation in that art; large quantitics of scarlet cloth being sent weekly to Smyrna. Ak-IIissar teems with relics of a former city, although there is no trace of the site of any ruin or early building. These relies comprise fragments of carved stone so abundant, that, in many places, the streets of the modern town are paved with them; while, for a distance of 2 m ., the wells are formed of Corinthian pillars, the bucket being drawn through holes cut in the centre. Here stood the ancient Thyatira, the seat of one of the seven ehurches of Asia. Pop. about 5000 ; of which nearly one-sixth are Greeks.

AKHLAT, a tn . Asiatic Turkey, on the N. shore of Lake Van, at the foot of the Nimrud-Tagh mountains, 30 m . N.E. Bitlis, or Bedlis. The environs abound in grapes and other fruits. It is, however, a poor place, though formerly the residence of the ancient kings of Armenia. The relics of the old city, with numerous other remains of antiquity, are at some distance from the present town, in a ravine. Akllat is surrounded with a double wall and ditch; it is further protected by towers and a citadel. The houses are built of square stones cemented by clay, similar to those of Bitlis. Number of households, about 1000 . Probable pop. from 3000 to 4000.

AKHMIN, or Ekimms, a tn. Upper Fgypt, 15 m . N.W. Girgeh, on the right bank of the Nile, from which it is about $\frac{1}{4} \mathrm{~m}$. distant. It has a bazaar, and a market every Wednesday. Akhmin stands on the site of Chemmis, or Wednesday
Vol. I.

Panopolis, formerly one of the most celebrated cities of the Thebaid. On the side of the town furthest from the river, beyond the present walls, are the remains of some of its ancient buildings. Fabrics of cotton are manufactured here. Pop. 10,000.

AKHTIRKA, or Akurka, a tn. Russia, gov. of, and about 60 m. N.W. from Kharkoff, or Kharkov, chief place of a distriet, and situated on a small river of the same name; lat. $50^{\circ} 17^{\prime} 58^{\prime \prime}$ N.; lon. $34^{\circ} 57^{\prime} 2^{\prime \prime} \mathrm{E}$. (t.) It is surrounded with ditches, and contains eight churches; one of which is held in great vencration, from its containing an image of the Virgin. There is here a manufacture of light textile stuffs; and, on the 9 th of every May, a great market, or fair, is held. The environs are fertile; and the orchards produce excellent plums and cherries. Akhtirka was founded by the Poles, in 1641. Pop. 13,500.

AKI, a principality, Japan, in the W. portion of the isl. of Niphon, opposite that of Sikoko. It is divided into eight provinees; is mountainous and woody; the soil is poor, producing only some rice of an inferior quality, and a little grain. There are salt works on the coast ; and sponges are found upon the reefs which border it.

AKIR, a vil. Syria, on the right bank of, and 3 m . N. from the Wes Surur ; lat. $31^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $34^{\circ} 50^{\prime} \mathrm{E}$. There is a river of the same name in the S. part of Syria; lat. $28^{\circ} 54^{\prime} \mathrm{N}$.; lon. $33^{\circ} 40^{\prime} \mathrm{E}$.

AKISKA. See Akatzik.
AKKA, a tn . Morocco, prov. Sooza, on the border of the Great Desert, on the caravan route from Moroceo to 'Timbuctoo; lat. $29^{\circ} 4^{\prime} \mathrm{N} . ;$ lon. $8^{\circ} 30^{\prime} \mathrm{W}$. It lics in the midst of a well-watered and well-cultivated territory, and forms a convenient halting place for caravans. It contains only about 200 houses, of which 50 are inhabited by Jews.

AKKRUM, a vil. Holland, prov. Friesland, 8 m. N.W. Heerenveen, and 7 m . E. Sneek. It is a beautiful and prosperons place, lying on the left bank of the Boorn, on the highway between Heerenveen and Leeuwarden. It possesses a large Calvinistic and a Boptist ehureh, a school, boat-building yards, anchor smithies, and a tannery. The inhabitants are employed in the rearing of cattle, in river traffic, and in trading, chicfly in butter and cheese. Pop. 1100.-(Van der Aa's Nederlanden.)

AKLANSK, a tn. and territory, Siberia, gov. Okhotsk, on the left bank of the Aklan, near the head of the Gulf of Penjinsk; lat. $61^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $162^{\circ} 30^{\prime} \mathrm{E}$. It was founded in 1679; has some fortifications, constructed of wood, to protect it from the incursions of the Tehuktchi and Koriaks, and is guarded by a post of Cossacks. It is the place of barter with the nomadic tribes. The adjacent country is little cultivated. Pop. 2000.

AKNUR. See Agnur.
AKORA, or Akara, a tn. in Afghanistan, on the right bank of, and 3 m . from the Cabool river, and 27 m . E. by S. Peshawer; lat. $34^{\circ} 3^{\prime} \mathrm{N}$.; lon. $72^{\circ} 10^{\prime} \mathrm{E}$. It was formerly a place of considerable importance, with a neat mosque and handsome bazaar, built of stone, but has been nearly laid in ruins by the Sikhs.

AKOOSCHA, a territory and tn. Russia, prov. Daghestan. The former occupies the E. slope of the Caucasus, and is inhabited by a people called Lesghians, who speak a peculiar dialect. They consist of about 18,000 families, distribated through 34 villages; and are governed by a kind of federative republic, composed of 12 cantons. Each village has a chief of its own, who is always the cldest man in it. The people are employed partly in agriculture, and partly in rearing sheep; but in the latter much more extensively than the former. The town, capital of the district, is situated on a high mount of the Caucasus, near the source of the Torkali, 55 m . W.N.W. Derbent. Pop. (1842), 3000.

AKOWAAY, a tn. and independent settlement on tho Guinea coast, situatcd on the N. side of a lake-like expanso of a lagoon, which extends, parallel with the sea, along the Bight of Benin, from the E. of Whydah to the river Volta. Akowaay lies on a rising ground, is shaded with fine trees, and is well built for a town in this part of Africa. Large cotton trees grow in the neighbourhood; and the soil is good, and well suited for growing corn, manioc, gourds, and all sorts of vegetables. Pop. 7000 to 8000.-(Duncan's Travels in Western Africa.)

AKRABI, a small tribe, inhabiting a district of about 20 sq. m. on the S.W. coast of Arabia, near Aden. They are described, by Captain Haines, as a fine body of men, bnt addicted to war and rapine. The women are pretty, of a slight, clastic, healthful form, with great cheerfulness of manner. The chicf produce of the territory occupied by the Akrabi is millet, of which they export great quantities. They also raise large flocks of sheep and goats.

AliliON, a small but flourishing tn., U States, Ohio, on the Ohio Canal, 30 m . from its junction with Lake Frie, and 105 m. E. Columbus. It carries on an active and extensive trade; and contains a courthouse, a jail built of stone, five elturehes belonging to various dissenting botlies, an aeadeny, and six schools. lts manufactures comprise four fulling mills, five woollen factories, four flourmills, a powder mill, a grist and oilmill. There are two printing offices, and three weekly papers. Pop. 1665.

AKSAI.-1, A river, Cireassia, rising in the N.E. slopes of the Caucasus, about lat. $42^{\circ} 20^{\prime} \mathbf{N}$.; Jon. $43^{\circ} 52^{\prime} \mathrm{E}$. It flows N.N.E., and falls into the Terek about 48 m . from where the latter joins the Caspian Sea, after a course of about $120 \mathrm{~m} .-2$, A vil. on the right bank of the above river, 35 m . S.S.W. Kizliar, said to be frequented by slave-dealing Jews and Armenians.

AK-SERAI [White palace], a tn. Asiatic Turkey, cap. of a sanjak of same name, jrov. Kharidj, about 90 m. N.E. Konia; lat. $38^{\circ} 35^{\prime} \mathrm{N}$.; lon. $34^{\circ} 5^{\prime} \mathrm{E}$. It lies in an open and well-cultivated valley, on the left bank of the S.W. Kizil Irmak. Ak-scrai, under the Arabs, was a considerable and opulent town, and now derives its chief interest from its numerous Saracenic remains, some of which are of great beauty. It contains 810 houses, a few of which are oceupied by Armenians, the rest by Mahometans. The sanjak of Ak-serai ocetrpies a large plain, inhabited chiefly by wandering Kurds and Turcomans, the former of predatory habits, the latter leading a quiet and pastoral life. The head of the valley of the lleyaz-su is composed of level uplands, terminating in abrupt eliffs overhanging deep ravines, with shingly and sandy declivities, strewed with rocky detritus.

AK-SHEHR [White town], a th. Asiatic Turkey, pash. Kharidj, sanjak Ak-shebr, 70 m . N. W. Konia; lat. $38^{\circ} 23^{\prime}$ N.; lon. $31^{\circ} 25^{\prime}$ E. ; on an E. slope of the Sultan Dagh mountains, at the entrance into an extensive valley, watered by the river Kazma, which flows into the salt lake of Ain Ghiul, between 2 and $3 \mathrm{~m} . \mathrm{N}$. from the town. The houses rise in terraces, one above the other, or are dispersed amidst groves and gardens. There is a carpet manufactory here, and a considerable trade. Antiquaries have hazarded the opinion, though unsupported by evidence, that more than one ancient city had occupied the site of Ak-shchr, or its immediate vicinity. 1'op. 6500.

AKSU, a small tn. Asiatic Turkey, pash. Anadolia, sanjak Khodavenkiar, 18 m . E. by S. Brusa, and about the same distance E. Mount Olympus. The ligh road from Kitaya to Brusa and Mondania-the latter on the gulf of that namepasses through it.

AKSIllNSK, a fortress, Siberia, gov. Irkntsk, right bank of the Onon, near the Chinese frontier, and $70 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Doroninsk. It has some trade in minever and zibelline skins.

AKSOU, AKsu, or Oкsu, a district and large commercial and manufacturing tn. Little Lokhara, a prov. of China, in the N. W. part of that empire. The town is 310 m . N.E. by E. Kashgar; lat. $41^{\circ}$ N.; lon. $79^{\circ} 7^{\prime}$ E. ; and is situated in the valley of the Aksou, at the termination of a road leading across the Tian Shan mountains, to the province or district of Ilf, with which it earries on an extensive trade. It is a flourishing place, being much resorted to by caravans from all parts, and being a convenient place of exchange for the merchants of Iussia, China, and Tartary. It is celebrated for its manufactures of cotton cloth and saddlery. The former is a peculiar fabric, called bias, and is unglazed; the latter is manufactured from deer skin, and is highly esteemed. The saddles and bridles, in particular, are elaborately and beautifully embroidered, and otherwise ornamented, and are exported in great numbers to distant countries. The artizans of the place also work skilfully in precious stones, and execute jasper vases with much taste. On market days, the town is crowded with buyers and sellers, and presents a very lively
and stirring appearance. There are here a Chinese custom house, and garrison of about 3000 men, the officers of which, however, are accountable to those at Ouchi, a large town about 70 m . W. Aksou.

Akson was formerly the residence of the kings of Kashgar and Yarkand. In 1716, it was nearly destroyed by an carthquake, and, in the beginning of the present century, suffered severely from an inundation, by which 3000 persons perished. The district is well watered by several mountain streams, and is very fertile, producing grain, fruits, vegetables, and cotton in abundance, and pasturing great numbers of eattle and sheep. The inhabitants are industrious, generally in comfortable circumstances, and are remarkable for their generosity and hospitality, often ridiculing the niggardliness of the other Mahometans. A Chinese writer thus naïvely characterizes them: "Their manners are simple; they are neither cowards nor rogues, like the other Mahometans; they are fond of singing, drinking, and dancing, like those of Kuche.' They are said, however, to be, with all their good qualities, extremely irascible; and, when excited, apt to lave recourse to violence. There is said to be a mine of rubies near Aksou, but not worked. Pop. of town, 20,000; of the entire district, considerably upwards of 100,000 .

AKSTAl $\Lambda$, a river and valley, Georgia. The river is an afluent of the Kur from the right, into which it falls, about 32 m. S.S.E. Tiflis. It rises about $15 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. the N. point of Lake Goksha, or Sévan, and runs a generally N.E. course of about 50 m . The valley through which it flows is voleanic, and the villages in the valley are nearly all Armenian. Several of them have vineyards, and plantations of mulberries, but of no great extent.-(Dubois de Montpereux's Voy. Autour du Caucase.)

AKTEBOLI, a small haven of European Turkey, sanjak Kirklisel, on the S.W. coast of the Black Sea; lat. $42^{\circ} 4^{\prime} \mathrm{N}$. ; lon. $27^{\circ} 59^{\prime} \mathrm{E}$.

AKUN, an isl. and active voleano, of the Aleutian scries; lat. $54^{\circ} 17^{\prime} \mathrm{N}$.; lon. $165^{\circ} 32^{\prime} \mathrm{W}$.

AKURKA. See Aкитиrкa.
AKUTAN, an isl. and active volcano, of the Aleutian series; lat. $54^{\circ} 22^{\prime} \mathrm{N}$. ; lon. $165^{\circ} 40^{\prime} \mathrm{W}$. (R.) The voleano is 3332 ft . in height.

AKYAB, a seaport, India beyond the Ganges, prov. Arracan, of which it is the cap. as well as of a district of its own name. It lies on an island at the mouth of the Mayu or Arracan river ; lat. $20^{\circ} 8^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $92^{\circ} 54^{\prime} \mathrm{E}$. (k.) 'The town, which was commenced in 1826, is composed of liouses built chicfly of bamboo. They are, however, spacious and airy, and are elevated a few feet above the ground, to guard against damp. The harbour, though its entrance be rather intricate for strangers, has good and safe anchorage, in $3 \frac{1}{2}$ to $5 \frac{1}{2}$ fathoms water. This port has been rapidly rising in importance, more especially as respects its shipments of rice to various ports in the East, to Europe, and even to America. When eleaned in the U. States, it is sometimes re-exported with the Carolina brand upon it, veing little, if at all, inferior to the rice of that State. Akyab is a free port, and all commodities, opium excepted, are exempt from duty. The imports are unimportant, there being no market for any quantity of one article. There is a civil judge here, who tries all suits for sums not exceeding 500 rupees ( $£ 50$ ); the language used in this court is Burmese. 1'op. about 5000 . -The district of Akyab is the largest of the three into which the prov. of Arracan is divided. It is much intersected with rivers and salt-water creeks or natural canals, with water sufficient to admit a vessel of 300 to 400 tons, proeceding 20 to 25 m . beyond Akyab. Rice is the prineipal erop, and the only grain exported. The natives are deficient in the method of cleaning it, so that it is often slipped in the husk. Other articles of produce exported are sandoway, tobaceo, bees' wax, honey, raw cotton, hides, horns, wood oils, sliark fins, fish maws, chillies, ginger, cows, bullocks ponies, and salt, which last is next in importance to grain. At the port, and in the district of Akyab, there are generally, loading at the same time, between 100 and 200 vessels, chiefly small eraft from the Coromandel coast, where paddy is cleaned for the Mauritius and Bourbon markets. During 11 years, ending 1848, the grain exports from the port and district amonnted to the average of 62,425 tons; and the number of vessels to 525.-(Jour. Geo. Soc.; Nautical Magazine, 1849.)

ALA, a tn. Austrian Tyrol, circle of, and 9 m . S. from Roverede, on the left bank of the Adige. It is the last station in Tyrolese ground when travelling towards Italy, and lies on a picturesque slope, its well-built house3, in seattered groups, forming a kind of creseent, half encircling the mountains which rise above it. Ala has a gymnasium and elementary school; manufactories of velvet and silk, more important formerly than at present; and its inhabitants are also engaged in raising grapes, grain, fruit, and in meadow eulture. It oceupies the site of the Mansio ad palatium of the Romans; and, during the Middle Ages, it was named Sala. Pop. 3800 .

ALABAMA, one of the S. United States, America, bounded, N. by Tennesse, E. by Georgia, S. by Florida and the Gulf of Mexico, and W. by Mississippi. Greatest length, from N. to $\mathrm{S} ., 317 \mathrm{~m}$. ; greatest breadth, about 185 m. ; superficial extent, $46,000 \mathrm{sq}$. m., or $28,160,000$ acres ; between lat. $30^{\circ} 10^{\prime}$ and $35^{\circ} 0^{\prime} \mathrm{N}$. ; and between lon. $85^{\circ} 0^{\prime}$ and $88^{\circ} 30^{\prime} \mathrm{W}$. The S. part of the State, whieh borders on the Gulf of Mexieo and Florida, over a space of 50 or 60 m . in width, is low and level, and wooded with pine, eypress, and loblolly; the middle is hilly, with some traets of level sand, or prairies; the N. is broken and mountainous. The district is interseeted by the rivers Alabama, Tombigbee, Mobile, Black Warrior, Coosa, Tallapoosa, Tennesse, Chatahoochee, Perdido, and Cahawba, some of which are navigable by steamers for several hundred miles. The soil is various, being in some places, particularly in the S., sandy and barren; in others, fertile. On the margin of the rivers there is some rich land; beyond, the ground is lew, wet, and interspersed with stagnant pools. Next to this river swamp, and clevated 10 or 15 ft . above it, there lies an extensive tract of level land, composed of a black rieh mould, and covered with wood. To this suceeed the pruiries-widespreading plains, or gently undulating land, without timber, and clothed with grass, herbage, and flowers. The climate in the S. of the bottom land skirting the rivers, and of the country bordering on the mussel shoals of the Tennesse, is unhealthy. In the more elevated parts, it is mere salubrions, the winters being mild, and the summers tempered by breezes from the Gulf of Mexieo. Its staple production is cotton; but it also produces wheat, barley, oats, rye, maize, potatoes, hay, tobacco, rice, and sugar. Iron ore is found in several places, and coal abounds on the Black Warrior and Cahawba. Marble, also, is found, and gold ore in small quantity. Live stock:-Horses, mules, cattle, sheep, swine, and poultry. Principal mannfactures:-Cotton, iren, lcather, hardware, bricks, and carriages.

The legislative power of Alabama is vested in a senate, consisting of 33 members elected for four years, one half going out every two years, and a house of representatives, consisting of 100 members elected for two years, chosen by universal suffrage, and, together, forming the General Assembly of the State. The governor, in whom the executive power is vested, is elected for two years. The State sends five representatives to Congress. It is divided into 49 counties; its prineipal towns are-Montgomery, now the seat of gevernment; Mobile, the ehief port; Cahawba, St. Stephens, Tuscaloosa, Wetunpka, Florence, and IIuntsville. In 1848, the exports amounted to about $£ 2,385,549$; the imports to $£ 83,879$. In the present year ( 1850 ), the national debt is $£ 2,077,187$, on which an interest is payable annually of $£ 108,516$. Pop. in $1845,624,827$, of which 253,532 were slaves in 1840 , and 2039 free people of colour.-(U. Statcs' Gaz. ; Davenport's American Gaz.; Tanner's Canals and Railroads of the U. States; Murray's U. States.)

ALABASTERR, Eleuthera, or Ethera, one of the Bahamas. Sce Bailama Islands.

ALABA'T, one of the smaller of the Philippines, on the E. coast of the island of Luçon, prov. Tayabas, near the head of the extensive inlet at the S. end of the island, which terminates in the Gulf or Bay of Lanon or Lampon. The N. point of the island is in lat. $14^{\circ} \mathrm{N}$. ; lon. $121^{\circ} 55^{\prime} \mathrm{E}$. (R.) 1 it is about 10 m . in length, and from 4 to 5 m . in breadth. The inhabitants are described as a savage race.-(Mallat's Philippines.)

ALACRAN, or Alachanes (The), a reef, or shoal, Gulf of Mexico, off the N. coast of the peninsula of Yucatan, from which it is distant about 80 m . On the S . side is a harbour called Port Alacrane, in lat. $22^{\circ} 23^{\prime} 36^{\prime \prime}$ N.; lon. $89^{\circ} 42^{\prime} \mathrm{W}$. (R. It is secure, and well sheltered by dry reefs, when protect it as
effectually as land. On February 12, 1847, the mail steam packet Tweed was lest on this reef, when 72 persons perished.

ALADAN, Alada, or Aladine Islands, a eluster of small islands, Bay of Bengal, off the coast of Siam, forming part of the Mergui Archipelage; lat. $9^{\circ} 35^{\prime} \mathrm{N} . ;$ lon. $97^{\circ} 58^{\prime}$ E.

ALADJAHISSAR, or Krukovatz, a tn. Enropean Turkey, cap. sanjak Krukovatz, prov. Servia, on the right bank of the Morava, about 95 in . S. Semendria; lat. $43^{\circ}$ $1^{\prime} \mathrm{N} . ;$ lon. $21^{\circ} 23^{\prime} \mathrm{E}$. The sanjak is traversed by offsets from the Balkan range, and is watered by the Morava and some smaller streams, all of them discharging their waters into the Danube, to which the district gradually slopes. It contains some mines and vineyards.

ALAEJOS, a tn. Spain, Leon, prov. of, and 30 m. S.W. from Valladolid, near the left bank of the Trabancos. It is agreeably situated, and its regular, paved, and clean streets are lined with dry, elegant vaults for storing wine, the preparation of which constitutes one of the chief occupations in the town. It has a square, in which are the townhall, the prison, and one of the two churches possessed by the town, both of them spacious Doric buildings. There are, likewise, in Alaejos four schools, an hospital for wayfaring poor, and several other benevolent institutions. The inhabitants are employed chiefly in raising wheat, barley, rye, and peas, of which considerable quantities are exported to Madrid and Portugal; in growing wine, part of which is also exported; in weaving domestic linens for local consumpt, and in tanning leather. Pop. 3255.-(Madoz.)

ALAGIEEZ, a volcanic mountain, and mountain range, bordering the N. side of the basin of Armenia. It lies on the N. side of the great plain of the Araxes, and, on the E., touches on Lake Gokelia, or Sevan, and on the N. it is connected with offshoot mountain ranges of the Caucasus. On some parts of its slopes large quantities of sulphur are obtained. Its highest peak rises $13,628 \mathrm{ft}$. above the sca level.

ALAGOAS, a maritime prov. of Brazil, deriving its name from various intercommunicating lakes for which it is noted. It lies between lat. $9^{\circ}$ and $10^{\circ} 30^{\prime} \mathrm{S} . ;$ and is bounded, N. and W. by the prov. of Pernambuco, S. by the prov. of Sergipe dcl Rey, and E. by the Atlantic; length about 130 m . by a breadth of about 90 m . This province has several lakes, none of them of great extent, frequented by a great variety of birds; and several ridges of lills, noue of them of great elevation, but generally well wooded, and inlabited by abundance of game, ounces, macaws, \&e., which furnish a grateful sustenance to various tribes of nomadie Indians that frequent these wilds. From the extent of surface covered by lakes and by forests, the climate of Alagoas is on the whole moist. The plains near the sea are generally sandy, and not very fertile; but inland, the soil is good, producing, besides tobacco, cotton, and sugar, which are exported to Bahia and Peruambuco, mangoes, oranges, jaek fruit, and abundance of fine timber used for shipbuilding in the above-named ports, and in Maçeyo. Cattle are reared, but not in numbers sufficient to supply the demands of the coast towns. Limestone, granite, and various kinds of clay abound in the prov. Pop. 120,000.-(Dic. Geo. Imp. Brazil.)

ALAGOAS, a city and seaport in the above prov., on the coast of the Atlantic, S. side of an arm of the sea named Mandau, which runs inland about 40 m , and about 20 m . distant from Maçeyo; lat. $9^{\circ} 40^{\prime} \mathrm{S}$. ; lon. $3 \overline{5}^{\circ} 59^{\prime} \mathrm{W}$. It is built on an elevated situation, and, being adorned with lofty mango trees, has an extremely picturesque appearance when viewed from a distance, but does not impreve on a nearer inspection. The houses are mostly of stone, and generally mere than one story in height; many of them, however, are falling into decay, while the streets liave altogether a deserted appearance-a consequence, chiefly, of the expulsion of the Portuguese by the Brazilians. There are eight churches and two convents in the town, all handsome buildings. The market is well supplied with fresh and salt-water fish, and with the fruits of the district. The town has fallen off sinee the seat of local government was transferred to Maceyo, which is the chief place of trade. The principal productions of the country around are sugar, cotton, mandioca, hides, Brazil wood, and rosewood. Pop. of town and district, 12,000.

ALAGON, a river, Spain, formed by the union of several small streams whieh take their rise in the sierra Francia, prov. Salamanca. Flowing in a S. direction, it traverses and
irrigates a considerable portion of the province of Caceres, changes, at liolobos, its course to S.W., and, receiving several affluents, falls into the Tagus, about 2 m . N.E. Alcantara. The Alagon is about 120 m . in length, and noted for the size and flavour of its trout and other fish.- (Madoz.)

ALAGON, a tn. Spain, Aragon, prov. of, and 15 m . N.W. from Saragossa, near the junction of the Jalon, or Xalon, with the Ebro, an 1 elose upon the Aragon Canal. It is a wellbuilt, well-arranged, little town, with clean and paved strects. It possesses two churches, four schools, and an hospital. The inhabitants are principally occupied with agriculture ; producing grain, olives, grapes, \&c., and in manufacturing a small quantity of saltpetre. l’op. 1932.-(Madoz.)

ALAGUASH, or Allagasir, a river in Maine, U. States, America. It is the outlet of the waters of numerous lakes, among which the most considerable are Aphmoogenegamook, Alagas-quegamook, and Potaques-quegamookook, from which it takes a crooked N. course, interspersed with numerous rapids round the Allagash mountains, over a considerable fall, called the Great Fall, to the river St. John, which it enters; lat. $47^{\circ} 4^{\prime} \mathrm{N}$. ; lon. $65^{\circ} 5^{\prime} \mathrm{W}$.

ALAls, a flourishing manufacturing tn. France, dep. Gard, upon the Gardon d'Alais, at the foot of the Cevennes mountains, and formerly cap. of the distriet of Cevennes ; $38 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Avignon ; $23 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Nismes, to which there is a railway. Although pretty well built, there is nothing remarkable about the public buildings. In the town there are a I'rotestant consistorial church, a tribunal of commerce, and one of prinary jurisdiction, a communal college, an agricultural society, a chemical laboratory for the engineers employed at the mines, a theatre, and a public library containing about 4000 volumes. Alais owes its prosperous condition to the richness of the surrounding country in coal, iron, lead, zinc, and manganese, all of which are wrouglit, but more especially the first two, with great assiduity. The coal of the district was not wrought until 1809, and from that period may be said to date the rise of Alais. Manufactures : -lron, cast and malleable; regulus of antimony, litharge, silk gloves, stockings, and thread; ribbons, serges, leather, class to a considerable extent, porcelain and pottery ware. Trade:-Grain, wine, sulphate of iron, coal, and the various artieles manufactured in the town and neighbourhood. In the vicinity are several chalybeate springs, which, during the autumn months, are visited to some extent for their medicinal properties. Pop. in 1819, 8000; in 1846, 17,838.-(Dic. de la F'rance.)

Al.AJUELA, a tn. Central America, state Costa Rica, $25 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Cartago; lat. $9^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $83^{\circ} 40^{\prime} \mathrm{W}$. Some of the better houscs have a handsome appearance; they are long and low, with broad piazzas and large windows, laving wooden balconies. The plaza is beautifully situated. Mr. Stephens, deseribing the town as it appeared on a Sunday, says, "The inhabitants, who were cleanly dressed, were sitting on the piazzas, or with doors wide open, reclinng in hammocks, or on high-batked wooden settees inside. The women were dressed like ladies, and some were handsome, and all white. As we passed along the street, we were aceosted in the most friendly manner by all we met.' 'The road, for two or three miles befere entering the town, is lined with houses, 300 or 400 yards apart, built of white-washed adobes, and the fronts of some are ornamented with paintings. Rows of trees, bearing beautiful flowers, and which, in some places, completely embower the houses, run on either side of the road. In the fields, the growing of sugar canes is the chicf culture ; every house has attached a small sugar mill. Pop. about 10,000 .

ALAKANANDA, a river, Hindoostan, rising in the Itimalaya mountains, about lat. $31^{\circ} \mathrm{N}$. ; lon. $79^{\circ} 35^{\prime} \mathrm{E}$. ; and flowing S . W. through the prov. of Gurwal. At Devaprayaga, a small town 12 m . W. Serinagur, lat. $30^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $78^{\circ} 40^{\prime}$ E., it unites with the Blagirathi in forming the river Ganges. It is one of the sacred rivers of the llindoos, and abounds with a species of fisli named roher (Cyprinus denticulatus), which the Brahmins daily feed, and some of which become so tame, as to eat bread from the hand. Another species, named soher, beautifully eoloured, and of fine flavour, is found in the river.- (Hamilton's East India Gaz.)

ALAK-DAGH [Beautiful mount], a lofty mountain, Turkish Armenia, prov. Erzeroom, about 50 m . W. Mount Ararat, with which it is connected by several lofty ehains. Its
height has not been accurately ascertained, but is stated at 9000 or $10,000 \mathrm{ft}$. above the sea. On the N . faces of the highest peaks, Mr. Brant saw large masses of snow lying in the month of September.-The name Alak-dagn is applied also to a portion of the Altarian mountains, and to a range of nountains in Anadolia, 35 mn . N.W. Angora.

ALA KOI [Beautiful village], a vil. Asiatic Turkey, pash. Van, on the E. side of the lake of the latter name. It contains a clureh; and, on a hill overlooking the village, are the ruins of another of ancient date, while at the bottom there is a third of smaller dimensions. There are extensive vineyards in the vicinity, and a considerable quantity of wine is made, which is sent to, and disposed of, in the city of Van. The Lake of Van is not visible from the village, being shut out from view by an intervening range of low hills.

ALAMLDA [A row of trees], the name of several towns and villages, Spain:-1, A vil. Old Castile, prov. Soria, whose inhabitants are employed in agriculture, in rearing sheep and goats, and in weaving domestics. Pop. $372 .-2$, A tn. Andalusia, prov. of, and 54 m . N.W. from Malaga, on the road from Sevilla to Granada. It has a church and granary ; soil in the vicinity is of good quality, producing grain, olives, and vegetables. Pop. $3690 .-3$, A tn. New C'astile, prov. of, and 8 m . from Madrid, noted for the Caprichio, the fine palace and pleasure grounds of the Dukes of Osuna. I'op. I02.-4, A vil. Leon, prov. Salamanca, about 16 m . from Ciudad Rodrigo. It has irregular streets, a chureh, school, and some flourmills. Pop. 714.-5, Sta Muria de la Alameda, a tı. Old Castile, prov. of, and $36 \mathrm{~m} . \mathrm{W}$. from Madrid, on the confines of the two Castiles. It has a cold, unhealthy climate, and contains a church and sehool. Pop. 560.-6, Alameda de la Sagra, a tn. Old Castile, prov. Toledo, and 8 m . from lllescas. It has regular streets, a townhouse, granary, and churel. Pop. 1027.-7, Alameda del Valle, a tn. Old Castile, prov. Madrid, 10 m . from Biutrago, in a valley of the same name. Pop. 242.-(Madoz.)

ALAMOS (Los), a tn. Mexico, prov. Sonora, 140 m . N.W. Sinaloa, between the Rio del Fuerte and the lio Mayo; situated in a barren plain, in a district celebrated for its silver mines, which are a few miles distant from the town. The merchants of Alamos are generally wealthy, and the town itself handsome. It contains some good and well-paved streets. The houses are generally built of stone or briek, laid over with stucco. Those that surround the square are of modern arehitecture, and belong to the principal miners and mercliants. A new chureh of stone, finished in 1826, is a very elegant building. The Alameda is a pleasant promenade, formed of avenues of poplars, with stone seats at intervals. Provisions are dear, being brought from a great distance; the water used in the town is drawn from deep wells, and is very ball, and scarce. The inhabitants are described as proud, reserved, and unsociable, even amongst themselves. They have no amusement exeept gambling, which they carry to excess. Pop. about 6000 ; and from 3000 to 4000 more are employed daily in the mines.-There are four other towns of the same name in S. America.-(Ward's Mexico, vol. ii. App.)

ALAMU'T, or Alamoot, a district of Persia, a little to the N.W. of 'Tehran, between loni. $50^{\circ} 0^{\prime}$ and $51^{\circ} 0^{\prime}$ E., and intersected by the 36 th parallel. It is bounded N. by a high range of mountains, which separate it from the provinces of Gilan and Mazanderan, and is about 30 m . in length by 20 in breadth. In this district is situated the ancient stronghold of the chiefs of the Assassins. (See Assassins.) It stood upon a high, naked, and exceedingly steep rock, and was deemed impregnable before gunpowder became a munition of war. $\Lambda$ few dilapidated walls and cisterns are all that now remain of 'the vulture's nest,' as this stern retreat was sometimes called. 'The vicinity of the rock,' says Col. Shiel, 'is a most dreary solitude; excepting eagles and lizards, not a living thing is to be scen, nor even a single tree, but the view from the summit is very fine.'

ALAND, or Orand, Islands, a large group of 80 inhabited, and 200 uninhabited islands, situated between the GuIf of Bothnia and the Baltic Sea, and near the mouth of the Gulf of Finland, between lat. $59^{\circ} 50^{\prime}$ and $60^{\circ} 40^{\prime} \mathrm{N}$.; lon. $19^{\circ} 30^{\prime}$ and $21^{\circ} \mathrm{F}$., and occupying a space of about 352 geo. $\mathrm{sq} . \mathrm{m}$. They formerly belonged to Sweden, but are now imeluded in the govermment of F'inland, having been ceded
to Russia in 1809. The navigation amongst them is rendered difficult by the narrowness and shallowness of the ehamels. The principal islands are Aland, which gives name to the group, Lemland, Lumparland, Ekeroe, Fogloe, Kumlinge, Braendoe, Vordoe, and Hannoe. The whole group is composed mainly of red granite, with here and there strata of red marl and limestone. This foundation is covered with clay, flint, and humus; and along the coasts are large masses of leldspathic flint. Aland, distant about 30 m . from the Swedish coast, is the largest of the whole, being 25 m . long, and about 22 broad. It is hilly, deeply indented by numerous bays, and contains forests of pine and birch. It has also some good pasture and arable land, and is watered by several small streams. Wheat, barley, and rye are raised here, as in some of the other islands, in sufficient quantities for the supply of the inlabitants, who rear also a number of horses, eattle, sheep, and goats. In this island there is a harbour capable of containing the whole Russian fleet, and a citadel in which, it is said, 60,000 men might be quartered. Besides other occupations, the inhabitants employ themselves in shooting wild fowl and other game, in quarrying and burning limestone, but principally in fishing and eateling seals, which abound on their coasts. The produce of the country, consisting of butter, salted meat and fish, checse, hides, charcoal, timber, line, and game, is conveyed in small vessels to the neighbouring ports upon the Baltic. The whole arehipelago of Aland is divided into eight parishes, of which five are in the prineipal island. There are various good ports and several villages, or hamlets, of which Castleholm, in Aland, where there is an old eastle, is the chief place. The inhabitants are entirely of Swedish extraction. The first vietory of the Russians over the Swedes was gained in the neighbourhood of these islands, by Peter I., in 1714. The prineipal ports are now generally occupied by detachunents of the Baltic flect; and one of the smaller islands, on which a telegraph is established, is inhabited by the pilots who are employed by the Russian Government for conducting the mails and travellers. Pop. 14,000, of which 9000 are in Aland, and 3000 in Kum-linge.-(Guibert, Dic. Gco. ct Stat.)

AL-ARAISH. See El-Araisis.
ALARO, a tn. isl. of Majorea, belonging to Spain, situated on the slope of a high mountain in the interior, 11 m. N.E. l'almas. It is tolerably well built, and has two municipal offices, a church, and two endowed schools; some water, and several windmills, brandy distilleries, and manufactures of soap and coarse cloth. Y'op. 4080.

ALASEA, or Alased, an important river, N.E. Siberia, between the Indigirka and the Kolyma; it rises in lat. $67^{\circ} \mathrm{N}$., in the Alasio hills, and, flowing nearly parallel with the foriner river, falls into the Aretic Occan, about 100 m . to the N.E. of the embouchure of that river.

ALA-SHEHR [ane. Philadelphia], a eity, Turkey in Asia, pash. Anadolia, 82 m . E. Smyrna, stands on part of Mount Tenolus, near the river Cogamus, famous as the seat of one of the first Christian churches. It is of great extent, but the houses are mean, and the streets narrow and dirty. A vast number of interesting remains of antiquity are seattered about the town, consisting of fragments of beautiful columns, sarcophagi, fountains, \&c. Ala-Shelr was built by Attalus Philadelphus, king of Pergamos, and is still a place of some importanec, being mueh resorted to by earavans going to and from Smyrna. Pop. 15,000 .

## MLAsKa. See Aliaska.

ALASSIO, a seaport tn . Sardinian States, prov. of, and $5 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. from Albenga; lat. $44^{\circ} \mathrm{I}^{\prime} \mathrm{N} . ; \operatorname{lon} .8^{\circ} 11^{\prime} \mathrm{E}$. The port is excellent, and carries on a considerable trade. Pop. 6000.

ALASSONA, a tn. European Turkey, in Thessaly, on the left bank of the Saranta Poros; pash. of, and 35 m. N.E. from Tricala, or Trikhala, and $25 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Larissa. It has a Greek convent, a considerable summer market, and a population of about 3000 .

ALATA, a small river, Abyssinia, a tributary of the Bahr-el-Azrek, near its confluence with whieh oceurs the celebrated cataract of Alata, first described by Bruce. The cataract on the Bahr-el-Azrek is locally known by the name of Tis Esat, or 'Smoke of fire;' and is situated about 20 m . S. Lake Tzana, about 5000 ft . above the level of the sea; lat. $11^{\circ} 30^{\prime} \mathrm{N}$; lon. $37^{\circ} 40^{\prime} \mathrm{E}$. (See Azrek, Bahr-el-.)-There
is a vil. named Alata in the isl. of Corsica, about $6 \mathrm{~m} . \mathrm{N}$. Ajaccio.

ALATA CASTRA, a Roman fortress, Scotland, co. Moray, par. Duffus. See Burghead.
aLATAMAHA, or Altanaha, a river, Georgia, u. States, Ameriea, formed by the union of the Ocmulgee and the Oconee, from the sources of which, in the Alleghany mountains, its course is about 500 m . It is a large but gentle stream, flowing through forests and plains, and falling, by several outlets, into Altamaha Sound, 60 m . S.W. Savannah. Its average breadth is 600 yards, its depth 8 ft .; and the bar at its mouth has 14 ft . at low water. On both branches, it is navigable by vessels of small size for 300 m . from the sea.

ALATRI, a tn . Papal States, delegation of, and 5 m . N. from Frosinone. It has some trade in wine, oil, and common eloth. The bishop holds immediately from the Pope. Pop. 9000.

ALATYR, a tn. Russia, gov. of, and 90 m . W.N.W. from Simbirsk, at the confluence of the Alatyr with the Sura; lat. $54^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $46^{\circ} 15^{\prime} \mathrm{E}$. The houses are constructed of wood; and it has a considerable trade in corn. Pop. (1850), 7247. - The river Alatyr rises in the gov. of l'enza, Hows E. through part of Novgorod; and, in Simbirsk, falls into the Sura, at the town from whieh it derives its name, after a course of upwards of 125 m .

ALAUSI, a tn. Eeuador, dep. Assuay, cap. of a district of same name, 140 m . S. Quito, on the road from tlat city to Cuenca; lat. $2^{\circ} 13^{\prime} 22^{\prime \prime} \mathrm{S}$. ; lon. $79^{\circ} 15^{\prime \prime} \mathrm{W}$. (L.) It lies at an altitude of 7980 ft . above the sea, in the valley of Alausi, on a small river of its own name, an affluent of the Gulf of Guayaquil. It has a church, a Francisean convent, and a sehool; and in the neighbourhood are warm medieinal springs, whose waters are used to some extent. Manufactures:-C'loth, both woollen and cotton, in which, also, some trade is done. The valley to which Alausi gives its name, is one of the highest and rieliest in the Andes of Eeuador, producing sugar cane, grain, and fruits of every kind.-(Gutsmuths; Alcedo ; Guibert, Dic. Gco. et Stat.)

ALIVA, a hilly prov. in the N. of Spain, cap. Vitoria, one of the three Basque provinces, between lat. $42^{\circ} 23^{\prime} 46^{\prime \prime}$ and $43^{\circ} 8^{\prime} 5^{\prime \prime}$ N.; lon. $2^{\circ} 11^{\prime}$ and $3^{\circ} 6^{\prime}$ W.; bounded, N. by Biscay, N.E. by Ginipuzcoa, E. by Navarre, S. by Old Castile, and W. by Santander; area, $2059 \mathrm{sq} . \mathrm{m}$. The general features of this province are very rugged, branches of the great Pyrenean chain ramifying throughout its length and breadth, and forming a natural boundary between Alava and the other two Basque provinces-Biseay and Guipuzcoa. The mountains yield iron, copper, lead, and antimony; marble, frecstone, white limestone and granite; most of which are wrought to some extent; they are elothed with oak, chestnut, holly, pine, and other hardy timber, and abound in ferruginous, calcareous, and sulphurous springs. The principal streams are the Zadorra and Ayada, both affluents of the Ebro, which forms the boundary between Alava and Old Castile. In the N. part of the province are 'salines,' or 'salt pools.' The valleys are fertile, but the system of agriculture is very defective, and the implements used in lusbandry of the most homely and primitive description. Grain, especially maize, the staple food of the inhabitants, vegetables, flax, hemp, and abundanee of fruits of excellent quality, are produced; and wine is plentiful, but inferior. Sheep, goats, pigs, horned cattle, and mules for agricultural labour and carrying, are reared, and deer and game of all kinds abound. The chief occupation of the people is husbandry, but many are also employed in tanning, in grinding corn, expressing oil, and manufaeturing eloth, felt hats, linen drills, earthenware, hardware, and glass; and some are engaged as carriers. Alava exports fruits, iron, copper, and manufactured goods; and imports sugar, chocolate, tobacco, and implements for mechanical purposes. Education is little attended to, partly from the children being too early sent to labour, and partly owing to the peculiar prejudices of the people, who, both in language, costume, and manners, are entirely different from those of the other portions of the peninsula; and who, priding themselves ou nobility of birth, resent, as an insult, any attempt to correct their moral defieiencies. It is worthy of remark, that, though much addicted to smuggling yet theft and murder is much less frequent among them than in most other districts of Spain;
and the hospitality of the peasantry, according to their lumble means, is proverbial. For costume, and other particulars respecting the 'Biscayans,' see Basque Provisces. Pop. 81.397.-(Madoz, Dic. de España.)

MLAYA [anc. Coracesium], a seaport tn. Turkey in Asia, pash. Itshili, eap. sanjak of the same name; lat. $36^{\circ}$ $31^{\prime} 30^{\prime \prime} \mathrm{N} . ;$ lon. $32^{\circ} 1^{\prime} \mathrm{E}$ (r.); situated on the face of a rocky promontory, from 500 to 600 ft . in height, and surrounded with old walls, now falling to rnin. The town and adjacent clifts of compact white limestone, Lave a pieturesque appearance from the sea. But from its being built on an acelivity, the streets are so stecp, that one ouly is practicable for horses. The houses are wretched, and the mosques small and mean. There is here neither pier nor harbonr. There is, however, good anchorage in the roads, from two to four cables' length from the shore. About 9 m . N.E. from the town, is seen the peak of a mountain nearly 5000 ft . high, which forms a good landmark to mariners. Pop. 2000.

ALAYOR, or Aleyor, a tn. isl. Minorca, belonging to Spain, situated in the interior about 10 m . W.N.W. Port Mahon. It is a close-built and uneven town, having a townhonse, two churches, an hospital, endowed school, some windmills, brandy distilleries, linen weaving. cheese making, and a small trade in wine and potatoes. Pop. 4722.-(Madoz.)

ALB, or Alp, called also the Swabian Alps, a chain of mountains appertaining almost exclusively to Wiirtemberg, extending S.W. to N.E. from the source of the Neckar, by which river it is separated from the mountains of the Sch warzwald, or Black forest, to that of the Jaxt, a total length of 84 m ., and laving a breadth varying fron 15 to 20 m . It forms the water sled between the Neckar and Danube; andl, in different parts, takes the names of Rauhe Alb , or rough $\mathrm{A}_{1} \mathrm{~s}$, by which, indeed, the whole chain is designated, though properly restricted to the district between Lauchart and Zainingen; Hochstrass, applied to the district round Blaubeuren; and Aalbuch to the elevated plains between Aalen, Heidenheim and Weissenstein, on the right bank of the Brenz. It slopes gently towards the Danube, and shows its greatest escarpment towards the valley of the Neckar, seen from which it appears very much like the Jura when viewed from the basm of the Aar, that is to say, it exhibits a line of heights uninterrupted and almost of the same level, above which a few points are elevated. Its geological structure is the same as the Jura, of which, indeed, it seeus to be an E. continuation. Though, like the Jura, it is deficient in water, yet from its slopes rise the Koeher, Vils, Rems, Lauter, Erms, Echatz, Lauchart, Brau, Brenz, \&e. Its three most important sumnits are the Hohenberg, 3369 ft ; the Deiligenberg, 3331 ft ; and the Schafberg, $332 \pm \mathrm{ft}$. above the sea level.(Orographie de l'Europe.)

ALBA [the Alba Pompeia of the Romans], an episeopal city, Sardinian states, cap. prov. of same name, 30 m . S.E. Turin, and $15 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Asti ; on the right lank of the Tanaro, which is crossed by a bridge of boats. The country round it is called Albezano. The town, which is the see of a bishop, suffragan to Turin, contains a cathedral, several churches, and a college. It las an extensive trade in cattle. Pop. 7500. - The prov. is watered by the rivers Samaro, Belbo, and Bormida, and produces in abundance grain, maize, wine, and truffes; and the silk is considerel to be the best in Piedmont. Amongst the products are marble, rock salt, and sulphate of magnesia. Pup. 105,737.

ALBACETLE, a prov. S.E. of Spain, partly in Murcia and partly in New Castile, between lat. $38^{\circ}$ and $39^{\circ} 43^{\prime} \mathrm{N}$. ; and lon. $0^{\circ} 57^{\prime}$ and $3^{\circ} 9^{\prime} \mathrm{W}$. It is bounded, N . by the prov. Cuença, E. by Valencia and Alicante, st by Mureia, and W. by Ciudad Real and Jaen ; area, 3345 sq. m. The surface of this province is conssderably varied, presenting, in some parts, lofty sierras, peaks of which attain a height, above the sea level, of 5000 lit.; and, in other parts, rich plains and arable land. As a whole, it is hilly; but its valleys everywhere are fertile. The hills produce pines, fit for naval purposes; abundance of oak; also junipers, sarsaparilla, and various other interesting plants. The province is well watered by the Jucar, the Gabriel, the Segura, the Mundo, and numerons smaller streams, all of which empty themselves into the Mediterranean; and it possesses several salt lakes, or salines, and numerous medieinal springs-hot and cold, saline, acidulous, ferruginous, sulphurous, and calcareous. Agriculture is in
an advanced state for Spain; and cereals, hemp, tobacco, grapes, almonds, nuts, oranges, limes, lemens, olives, aloes, saffron, and rich honey, are produced ; the grapes and saffiron in large quantities; the annual produce of the latter amounting to $12,000 \mathrm{lbs}$. The pasture lands are rich; and large numbers of sheep and goats, and a considcrable number of cows, horses, mules, and asses, are reared. The mineral riches of Albacete consist of building stones, millstones, gypsum, iron, copper, zine, antimony, sulphur, and coal ; but none of them are wrought to any great extent, some not at all. The main oceupation of the people is agriculture and cattle rearing; some are employed as carriers, and others in various trades and manufactures; in weaving sundry kinds of coarse eloths, chiefly for local consumpt; making earthenware, hardware, and soap; distilling brandy, \&c. The trade of the province consists in experting ayricultural produce, and some iron, zine, and sulphur. The state of elucation is miserably low, and crimes against the person are numerous. 1'op. 195,531.- (Madoz, Dic. de Espana.)

ALBACETE, a tn. Spain, in Murcia, cap. prov. of same name, on the highway between Madrid and Cartagena, and 110 m . N.N. W. the latter place. It lies in a fertile but treeless plain; is badly supplied with water, which is, also, of very indifferent quality. The streets mostly cross each other at right angles; they are commodious, and generally clean. Many of the houses are decorated with green painted balconies. The town has, likewise, six squares; in which are to be found the courthouses, barracks, and hospital, civil and military; and the most noteworthy buildings are the parish churel, of the 16 th century ; the chapter houses; the palace do Pino-Hermoso; and the bull ring. Besides these thero are a chapel, an hospital for wayfaring poor, a normal seminary, and numerous publie and private schools. Albaecte, from its position, is a place of considerable business; and carries on trade, both direct and transit, with Murcia, Alicante, Valencia, and Madrid, exporting grain, saffron, and cattle; and importing cod fislr, sardines, rice, sugar, wine, iron, cloths, \&e. The inhalitants are prineipally engaged in the carrying on trade; in making a sort of clasp-lagger knives, called cudrillo and navaja, in quality said to be second only to those of Toledo, but far inferior to Sheffield goods; in making shoes, soap, earthenware, and other articles to a smaller extent. A large fair is held in September. I'op. 13,143.-(Madoz, Dic. de España.)

ALBA DE TORMES, a tn. Spain, in Leon, prov. of, and 17 m . S.E. from Salamanea, on a slope on the right bank of the Tormes. It has two squares, in the larger of which are the parish church, and the townhall ; and it likewise possesses a publie granary, an endowed hospital, and three superior and well-attended schools. Its inhabitants are chiefly devoted to agriculture. At Alla de Tormes, Oct. 19, 1809, Marshal Kellerman gained a victory over the Spanish Duque del Parque. Pop. 2176.

ALBALA, a small tn. Spain, in Estrenadura, prov. of, and 20 m . S.S.E. from Caceres, at the extreme E. of the sierra de Moutanches. It has a chureh, townhall, school, and several fountains. The inlabitants are engaged in tillage, feeding cattle, manufaeturing gray plush, and expressing oil. The produce of the vieinity in grain, fruits, and vegetablez, is abundant; and black sheep, cattle, and pigs, are reared. P'op. 2133.

ALBALATE DEL ABZOBISPO, a th. Spain, in Aragon, prov. Teruel, 46 m. S.E. Saragossa, on the left bank of the Martin, an affluent of the Ebro, situated on a slope, and pretty regularly built; having a church, a Latin and two other schools, an hospital, and cemetery. The inhabitants manufacture linen, coarse cloth, and baize ; cultivate grain, wine, oil, silk, and wool; and rear sheep and goats. Pop. 3746 .-Almalate is likewise the name of various other villages in different parts of Spain.-(Madoz.)

ALBAN ('Sr.), a tu. Prance, dep. Lozìre, 18 m . N. Mende. It has manufactures of woollen stuffs, and an hospital for insane females. Pop. 2155.-There are several small towns and villages in 1rance of this name; amongst them is a hamlet, dep. Loire, remarkable for its mineral waters, which are much frequented.

ALBANCl1EZ, a tn. Spain, in Andalusia, prov. of, and 28 m . N.E. from Almeria, on a bill in the midst of lofty sierras. It contains a large square, a parish church, chapter house,
prison, two endowed schools, and a cemetery. Manufaetures: -Linen fabries, quilts, and blankets, oil, and large quantities of tiles and brieks. Grain, grapes, olives, and fruits are cultivated ; and a few sheep and mules, for farming labour, reared. Pop. 2190.-There is another Albancinez, also in Andalusia, prov. of, and 16 m . E. from Jaen. It has a church and school ; but, as a whole, has a very ruinous aspeet, its houses being ill built, and in a state of decay. Pop. 1193.

ALIBANIA [called Schkiperi, by the natives (from Schlipe, a rock); Arnoutlouk, by the Turks; Arnautska-semlia, by tho Servians; and Albania, by the Greeks], a mountainous country, European Turkey, between lat. $39^{\circ}$ and $43^{\circ} \mathrm{N}$. ; lon. $19^{\circ} 5^{\prime}$ and $21^{\circ} 28^{\prime} \mathrm{F}$. It is about 290 m . in extreme length; and, in breadth, varying from about 90 m . in the N . and centre, to about 40 m . in the S., near the Gulf of Arta; bounded, W. and S.W. by the Adriatic and Ionian Seas; N. by Montenegro, from which it is separated by the river Moracha, and by Bosnia; F. by Servia, and that part of Roumelia aneiently ealled Moesia and Macedonia, and by Thessaly or Trikala; and S. by Greeee. The N. and E. boundary, from Bosnia to the Gulf of Arta, is formed by a ridge of mountains whieh, generally speaking, also constitutes the water shed. It is called Raehka, and Djamus, on the Bosnian frontier; Shar Dagh, Vitzi, Grammos, \&c., on the frontier towards Roumelia and Thessaly. The conntry is divided into, 1, Upper Albania, as far S. as El-Bassan, on the river Scombi, comprising the pashalies of Ipeh, Prirsen, and Seutari, and several ayanships; 2, Central Albania, from El-Bassan S. to the mountains of Tomor and Skrapari, and the mouth of the Vojutza, governed by the Ayans of El-Bassan, Tirana, Cavaja, and Durazzo ; and, 3, Lower Albania, or Epirus, S. to the Grecian frontier, wholly governed by the pasha of Janina. Some writers include Montenegro in the limits of Albania, and exclude Epirus. In the boundaries laid down in this artiele, we have followed that elaborate and thorouglily scientific work, 'La Turquie d'Europe, par Ami Bone.'

Mountains.-Albania is composed of at least nine ridges of hills, of which six are in Epirns, and three or four in Central and Upper Albania ; all laving a direction N.W. to S.E., execpting the hills along the $\mathbf{N}$. and S . slope of the Dibres, of Lake Ochrida, and the Shar Dagh, which last has a direction N.E. to S.W. In the S. of Epirus, the hills are low, destitute of wood near the sea, and composed of a series of calcarcous cliffs; but more to the N., they attain a considerable elevation. In Central Albania they are comparatively low, while those in Upper Albania are the loftiest in the country; some, in the latter district and Epirus, having snow on them nearly nine months of the year. The following are a few of the principal heights:-

Besides those speeified, there are many other peaks, both in Epirus and in Upper Albania, above 4000 ft . high.

Rivers.-Albania has no great rivers, in consequence of their course being so short, and its inclination so great, causing many of them in summer to have scarcely any water, and some of them even to be completely dry. In Upper and Central Albania, and the N. of Epirus, the general course of the streams is E. to W., though the White and the Black Drin, before their junction, run respectively S . and N., and the Vojutza and its affluents run S.E. to N.W. In S. Epirus, however, the streams gencrally run from N.E. to S.W., or from N. to S., and only here and there from N.W. to S.E. The Drin, or Drino, is the largest Albanian river. It is formed by the White Drin, rising on the Bosnian frontier; and the 13laek Drin, issuing from Lake Ochrida. The former flows S., and the latter N., to their junction, about 15 m . S.W. Prirsen, after which the course of the river is W. It falls into the Adriatic about $14 \mathrm{~m} . \mathrm{S}$. Scutari; and its whole length, from either source, is about 150 or 160 m . It is navigable for large vessels as far up as Scela, and for boats of 40 to 50 tons above Lesch. The Bojana, which connects

Lake Sentari with the Adriatic, is navigable for eoasters to Oboti, a short distance below the town of Seutari. Exeepting the Arta and Lorou, which are navigable near their mouth, none of the other rivers of Albania can be navigated; being, at most, useful for the purposes of flotation and irrigation. In this class may be named the Scombi, Ergent, Vojutza, Kalamas, Mattia, Mavro-potamos, \&c.

Lakes.- Albania, like Greece, being a continuation of the mountains that constitute Herzegovina, and having a similar composition, partakes of the peculiar system of subterranean streams that characterizes the waters of that country. In this respect, Epirus is espeeially remarkable for its cireular basins, its cavities without water, its ponds and water courses that disappear at certain seasons, and also for its gulfs and subterranean rivers. The finest example of this last is found in the Lake of Janina, formed of two liasins, united by a channel so narrow and filled up by plants and islets, that in process of time, probably, there may be two lakes in place of one. The whole lake is about 10 m . long, by 1 to 3 m . broad. The upper, or N. and smaller lake, pours its waters into a gulf at its S.W. part, whence they re-appear in a hollow to the S. W., and form the Velschistas, an affuent of the Kalamas. The waters of the lower lake escape by subterrancan courses, and near Vestavesti form the sourees of the St. Gcorges, an affluent of the Lorou. The Lake of Jamma thus sends its waters beth to the Gulf of Arta and to the Ionian Sea. The highest and most beautiful lake in Albania, and even in Turkey, is that of Ochrida, whieh lies 2147 ft . above the sea level. It is about 20 m . long, by about 8 m . broad at its widest part. The Lake of Scutari, in Upper Albania, which would seem to have been at one time even larger than now, is the largest lake in the eountry, being somewhat longer, though not quite so broad as Ochrida. It has some islands ncar its W. shore, and abounds with fish. There are several smaller lakes, but none of them important.

Geology--Gcologieally, Albania belongs to the eretaceous system of the Alps, and is composed ehiefly of nummulitic limestone, with here and there upheaved schist and serpentine. Along the courses of the rivers, but more especially at their mouth, are alluvial deposits and sometimes tertiary elay. It is not certainly known that the country contains any metals, though some authorities contend that argentiferous lead and eopper are to be found in Epirus.

Vegetation.-In consequence of its lofty mountains and southern position, Albania possesses an extremely varied vegetation. Alpine and subalpine, the forms are similar to those found on the Alps of Switzerland, and on the mountains of Seotland ; many being identical, though of course not a few are different. Saxifraga media, well known on the Pyrences, is here found in abundance, though wanting in the Alps, which, in their turn, possess the rhododendrons, which are wanting in Albania. Though by no means a thickly wooded country, it possesses many species of oak, the poplar, hazel, plane, chestnut, cypress, and laurel. Vines are good, especially in Epirus, and the orange, almond, fig, mulberry, eitron; likewise maize, wheat, and barley, either grow naturally, or are cultivated.

Zoology.-Bears, wolves, chamois, and deer, are found on the mountains; sheep and goats, but more especially the latter, are numerous ; cows are kept to some extent ; the horses are exeellent and sure-footed, and mules and asses are plentiful. The lakes abound in water fowl, and a kind of clupea, or herring, ascends the Bojana to Lake Scutari, where it is taken in considerable quantities. Various other kinds of fish, but particularly eels, inhabit the lakes and streams; and with such rapidity do many of these latter diminish in the summer, that large quantities of eels are frequently left dry in the beds of the rivers, or of the water courses made for the purposes of irrigation. Eagles, various kinds of hawks, and numerous other kinds of birds, are plentiful, and lawking is a frequent amusement of the wealthier classes, the pursuit of birds with guns and dogs not being held in mueh estecm. Mosquitocs in many parts abound; in Epirus the cochineal insect thrives : bees are reared everywhere; and, in the marshes in the basin of the Arta and near Lake Scutari, leeches are found in considerable numbers.

Climate.-The heat of summer is almost insupportable in the maritime valleys of Albania. There are in the country numerous circular cavities, whose waters being absorbed, the air in summer is stagnant and heavy, giving rise to
those dangerons intermittent fevers that regularly visit the country, especially from July to November. The temperature in July and August reaches, in the shade, to $97^{\circ}$, and even to $101^{\circ}$. The winter or cold season lasts from November to April ; snow on the coasts is rare, though on the monntains plentiful. October and December are the rainy months, in which the rivers overflow their banks.

Trade, Commerce, and Tozons.- In the import and export trade of this province, vessels under the British and Ionian, the Greek and Ottoman flags, are almost the only ones engaged; a few Austrians forming occasional exceptions; while French and Russians are still more rare. The exports are shipped ehiefly at Prevesa, or Previsa, at the entrance to the Gnulf of Arta, and consist principally of grain, timber, oil, salt fish, cheese, tobaeco, eotton, wool, and capotes-a large white woollen outer garment manufactured in the eountry. The cotton is received through Thessaly, and is exported to the German and Italian ports of the Adriatie. The chief imports, most of which come also by the way of Previsa, are sugar, eoffee, gunpowder, firearms, ironmongery, common eloths, linen, and velvets. The principal connections of the coast are with Greek houses at Trieste, and Maltese houses, through which they reeeive the manufactures of Great Britain. In the year ending December 31, 1842, there arrived at Previsa 535 British and Ionian vessels, and 528 departed; and, probably, about 150 more from varions other comntries. The internal trade of the eountry is carried on by means of pack lorses; four or five of which are attached to each other by cords, and guided by one man. Other ports besides Previsa, are Parga, Avlona or Valona, Durazzo, Dulcigno, \&e.; and of principal towns, may be named Arta, Janina, Seutari, \&e.

Gorernment.-Albania is under the government of the different Turkish pashas in whose territories it lies; but the power of the former is much limited by the bold and warlike tendencies of the inhabitants, whieh will not brook a despotic eontrol. The local authorities are constituted differently in different places; and although all the tribes are nominafly subjeet to the Turkish Government, a great part of them are virtually independent.
People, Manners, Customs, \&c.- The Albanians are of rather short stature, muscular, active, and of a warlike spirit. The women are tall and strong, but not beautiful, having generally an air of wretchedness, the result of the laborious work they are eompelled to perform, and of the harsh treatment they meet with from their husbands. The dress of the men eonsists of a shirt of white cotton, worn often till it becomes black; drawers of the same materials; a mantle of white woollen; a large great coat or capote, with loose open sleeves; and a waist girdle, formed of a coarse shawl drawn tight by a belt that contains their pistols. The habits of the Albanians are filthy, many of them wearing their garments till they are falling to shreds, and are covered with vermin. Their food is simple and nourishing, and their cottages neat. The distinguishing feature of their character is a strong feeling of nationality. They are all trained to arms, and make brave and hardy soldiers; but their discipline is very imperfect. Their usual arms are two pistols in the sash or girdle; a yatagan or cutlass, slightly bent forward; a sabre bent backward, hung to a belt; and a long musket. They are numerous in the Turkish army, of which they constitute the best soldiers. In agricultural operations, their indolence is remarkable. The females, who are regarded as an inferior sort of beings, are compelled to do the most laborious work. The Albanians are fond of ornament, and much aldicted to dancing. Their native language appears to be founded on the ancient Illyrian; but, hitherto, no good grammar or dictionary of it has been published. Most of the natives acquire also the Greek tongue. They are divided into Greek Christians, R. catholics, and Mahometans. Pop. estimated at $1,600,000$.

History.-Though Albania has frequently changed its name, its masters, and its boundaries, a people have been embosomed in its mountains from the earliest records of history, whose language and habits have retained unusual traces of nationality. The earliest geographer who mentions the Albani of this district is Ptolemy, and they appear in lis time to have been a small tribe of Illyrians. In the 9th and 10 th centuries, Albania was included in the great Julgarian kingdom established south of the Danube; but it was not till the year 1079 that the

Albanians began to act an important part in history. From this period, they exereised important influence in the perpetual wars of their neighbours; but, in 1383, they were dufeated, for the first time, by the Turks, and again in 1478-their last struggle-when Albania became a province of the Turkish dominious, still maintaining, however, a certain degree of stubborn independence, which the Porte has hitherto found it impossible to overcome.- (La Turquie d'Europe, par Ami Boué; Count Karaezay, in Jour. Geo. Soc.; Ency. Metrop.)

ALBANO [Latin, Albanum], a tn. Papal States, comarea of, and 14 m . S.E. from Rome, on a hill about 900 ft . above the sea level, and on the S. side of the lake of the same namo [see next article]; celebrated for its beautiful scenery and pure air. The modern town oceupies part of the grounds of the two villas of Pompey and Domitian. The most remarkable remains at Albano, however, are those of the amphitheatre of Domitian, mentioned by Suetonius and Juvenal as the seene of the most revolting eruelty of that tyrant. Near the gate of the town, on the side of the road, rises an ancient tomb, said, by some, to be that of Ascanius, the son of AEneas; but, by others, the sepulelre of Clodius, slain by Milo. The wine of Albano, the produce of the vineyards around the lake, still retains the reputation it had in the days of Horace. The neighbourhood of the town was studded with the villas of the Roman patricians, many of whieh are still traceable. It is yet much resorted to, in summer, by wealthy Roman families, who have their eountry seats there. Albano has been the see of a bishop since A.D. 460. Adrian IV. (Nicholas Breakspeare), the only Englishman who ever filled the papal chair, was Bishop of Albar o for some years previous to lis elevation to the pontifieate. Pop. 5600.-(Murray's IFanibook for Central Italy, pp. 503, 504; Eustace's Classical Tour through Italy, vol. ii. p. 256 .)

ALBANO [Latin, Lacus Albanns], a lake, Papal States, near the town of Albano, and 13 m . S.E. Rome, of an elliptical shape, upwards of 2 m . in length, and about 6 in circumference; supposed to occupy the crater of an extinct volcano. Its situation is picturesque, being surrounded with steep crags, mantled with eoppice; while its high banks are covered with tastefully laid out gardens and orchards. But the most remarkable circumstance connected with it, was the formation of the emissary (emissario), by which the Romans, while engaged in their contest with the Veientes, A.v.c. 359 (B.c. 394), succeeded in lowering the waters, which, they feared, might burst their banks, and destroy the adjacent country. This emissario, or tunnel, is cut mostly through solid rock, at a depth of about 430 ft . bencath the summit of the cliff. Its length is fully $1 \frac{1}{2} \mathrm{~m}$. ; its width, everywhere, at least 4 ft . ; and its height from $7 \frac{1}{2}$ to 10 ft . It is carefully built round with solid masonry, and altogether diseovers an extraordinary degree of skill and perseverance. Its upper end is nearly on a level with the surface of the lake, or 919 ft . above the sea. It runs under the hill and town of Castel Gandolfo. From the statements of Livy, and from indications on the banks of the lake itself, it appears that its waters stood, at one time, about 200 ft . higher than their present level, and discharged themselves by a gully, artificially widened, into a broad canal.

AlBANO, or Monte Cayo [Latin, Mons Albanus], Papal States, the highest point of the chain of mountains which bound the Campagna di Roma on the E. and S. ; nearly 3000 ft . above the level of the sea. On the summit stood the celebrated temple of Jupiter Latialis, built by Tarquin the Proud ; memorable in loman history as the seene of the Feria Latine, the solemn assemblies of the 47 cities forming the Latin confederation. The sides of the mountain are covered with fine woods, consisting principally of chestnut trees. The view from the peak is exceedingly beautiful, extending over an immense tract of country. The ascent to it is by the ancient Via Triumphalis; the road by whieh the Roman generals, who were allowed the honours of the lesser triumph, or ovation, ascended on foot to the temple of the Latian Jupiter.-(Murray's IIaulbook for Central Italy.)

ALibaNO (SANt- 7 , a vil. Sardinian States, in Savoy, 2 m . from Chamberry, on the Aisse. Several antiquities have been found near an old Roman way which passed through it. Pop. 1250 .-Also the name of a vil., prov. of, and 7 m . W. from Vercelli.

ALBAN'S (St.), an anc. bor. and market tn. England, co. Hertford, hun. Cashio; 21 m. N.W. London, and $6 \frac{1}{2} \mathrm{~m}$. NE. Watford station, on the London and Birningham Railway. It is situated on the summit and declivity of a small hill, and consists of ten principal and several smaller streets, many of which are very steep, but all elean and well kept, excepting in the lower parts of the town, where drainage is much neglected. In the older quarters, the lanes and alleys are narrow, and many of the houses ancicut; but, in the newer portion, the openings are more spacious, and the houses, which are all of brick, are well built. The town is well paved, and lighted with gas, and amply supplied with good watcr. The chief public buildings are the Abbey church, the churches of St. Michael and St. Peter, the jail, the clock house, an old Roman watch tower, and the townhall, a large substantial building. There are also several disscutung meeting houses, and a small 1. eatholic chapel. The charities comprise a free grammar school, founded by Edward VI.; a bluc-coat school, in which between 30 and 40 boys are clothed and elucated; a girls' school, and several almshouses, the principal of which was established by Sarah, Duchess of Marlborough. There are, besides the schools above enumerated, three daily and Sunday national schools. The principal object of interest in St. Alban's is the Abbey Church, part of a celebrated monastery, founded in 793, by Offi, King of Mercia, one of the Saxon kingdoms. It stands on an elevated site, and, being a very large and beautiful structure, in the form of a cross, has an imposing appearance. Its architecture is of various styles, comprising that of every age from the time of the Normans to that of Edward IV.; while the matcrials of which it is composed are equally heterogeneons. The oldest parts of the building are towards the centre. Its entire length is upwards of 600 ft . from E. to W., including a chapel at the E. end; its extreme brcalth about 200 ft . It contains the ashes of King Offa, and those of Humphrey, Duke of Gloucester, youngest son of Henry IV. The remains of the celebrated Lord Bacon lie in the church of St. Michael. St. Alban's has little or no trade, and its only manufacture is straw plaiting, and straw bonnet making, both of which, however, are carried on to a considerable extent. There are also silkmills for winding and throwing silk, which employ a considerable number of hands. The town is governed by a nayor, four aldermen, and 12 councillors, and the usual corporate officers. It returns two members to Parliament, and gives the title of Duke to the family of Beauclerc. St. Alban's is situated close to the site of the ancient Veruhimium (Verulam), parts of the walls of which are still standing. Registered electors, 541 . Pop. of bor. in 1841, 6246.-(Correspondent in St. Alban's.)

ALBANS HEAD (ST.), a headland, or promontory, English Channel, on the coast of Dorsetshire, 441 ft . above the sea. On the cliff, near the top, are the ruins of a chapel supposed to have been erected in the 12th century; lat. $50^{\circ}$ $35^{\prime} \mathrm{N} . ;$ lon. $2^{\circ} 3^{\prime} \mathrm{W}$. (r.)

ALBANY, a city, U. States, America, co. Albany, cap. of the state of New York, and the second in pop., wealth, and commerce; on the right bank of the Hudson, $132 \mathrm{~m} . \mathrm{N}$. the city of New York, and 312 m . N.E. Washington; lat. $42^{\circ} 39^{\prime}$ $3^{\prime \prime}$ N.; lon. $73^{\circ} 44^{\prime} 49^{\prime \prime}$ W. It was founded by the Dutch carly in the 17th century; received its present name from the English, to whom it capitulated in 1664; and, next to Jamestown, in Virginia, is the oldest town in the U. States. The site on which it is built is very uneven, rising from a flat alluvial tract on the margin of the river, to a height of 220 ft . above its level. The city has been greatly improved of late years, and now contains many handsome buildings. The principal public edifices are the capitol, or state house, the scat of the Senate and House of Assembly; the Albany academy, a spacious and elegant structure of freestone, accom. modating 400 students; the Albany female academy, with 300 to 350 pupils; the city hall ; the state hall, for the public offices; the state arsenal; the medical college; and about 40 places of worship, belonging to various denominations. Its literary institutions comprise a public library containing 27,000 volunes; a young men's association for mutual improvement, consisting of 1500 members, who have a reading-room and library containing 8000 volumes. Amongst the principal charities are the Albany orphan asylum, which maintains from 80 to 90 children, male and female; the poorhonse, and St. Joseph's orphan asylum - a R. Catholic institution, but for Yol. I.
females only, the number of immates being generally about 40. Albany lies near the head of tide water, the Hulson being navigable as far as the city for vessels of 80 tons; and when the navigation is not obstructed by ice, steamers ply daily between it and the city of New York. In 1853 the total tonnage that arrived at the port was 87,968 . The Erie and Champlain Canals unite about 9 m . N. of the city, where they are connected with a basin covering 32 acres. By these canals, pine from Michigan, Pemsylvania, and Canada, and oak, cherry, and poplar timber from Ohio is brought, rendering Albany one of the largest lumber markets in the world. In 1852 the total imports by canal were $£ 5,487,836$, of which the amount for lumber was $£ 1,284,243$. Other important articles reccived the same year were-flour, $1,651,789$ barrels; wool, 4, 145, 970 lbs.; oats, $2,981,938$ bushels; wheat, $1,495,714$ bushels; barley, $1,386,678$ bushels. The Now York and Albany Railway, and several other railways connecting AIbany with Boston, and many places to the E., terminate on the opposite side of the river. On the W., the Mohawk and IIudson Railway connects it with several other important lines. Though chiefly noted as a place of trate and of thoroughfare, the manufactures of Albany are various, and some of them extensive. They includecarriages, hats and caps, morocco leather, ropes, soap and candle, musical instruments, copper, tin, and sheet-iron, oilcloth, stoves, and carpets; a number of breweries, and some malting-houses. Nmnerons stcamers and tow-boats ply between Albany and New York, besides other vessels navigating the 1ludson. Pop. (1850), 50,763 .

ALBANY, a small maritime division, E. frontier, colony of Cape of Good IIope, about 550 m . E. Cape Town ; bounded, N.W. by the division of Somerset, W. by Uitenhage, E. and N.E. by the division of Victoria, annexed to the colony of the Cape in 1847, and by the river Kunap; and S. by the Indian Ocean. Its coast line, extending from Great Fish River on the N.E., to Bushman's River on the S.IV., is about 35 m . in length. The whole length of the district, from N.W. to S.E., is about 65 m . ; its breadth from 30 to 40 . The N. portion of the division is intersected by Great Fish River. The other streams of any note are the Karecga and the Kowie. The prevailing formation is sandstone and graywacke; quartz and clay slate are common. The surface is agrecably diversified, presenting in some parts the rugged features of African scenery; in others, the softness of the champaign districts of England, or continent of Europe. The climate, also, is extremely healthy. Dividing the district nearly through the middle, the lower part, or that nearest the sea, is best suited for agricultural purposes, being free from obstruction of every kind, and having a soil well alapted for the production of grain of all descriptions. This portion of the country is thickly settled, and is stamped in every part with the distinctive marks of an English colony, having a park-like appearance, and being studded with beautiful shrubs and trees, while numerous comfortable-looking farm houses, with neat enclosures, dot the surface of the land. The upper, or N. portion, again, is better suited for sheep rearing, and is considered, on this account, at present as by far the most valuable. In this part of the country there are some mountains of considerable height; the chief of which are N. the Kafir, W. the Fish river, and S.W. the Assegai Mountains. The indigenous trees and bushcs of the district are varions, and many of them extremely beautiful; and, as but few of them are deciduous, they retain their beauty during the whole year. At midsummer, which is there the month of January, the plains and valleys are covered with flowers and shrubs of the gayest colours, and the most fragrant odour. Useful kinds of timber are abundant, and both the soil and climate appear favourable to many of the forest trees of Europe, and also to the fruits both of warm and cold latitudes. The oak and fir are common, and grow rapidly and luxuriantly, attaining often a large size; but their timber is more soft and porous than that of colder climates. Orange trees thrive well in moist situations, and produce fruit of fine quality. Pcaches, nectarines, apricots, mulberries, apples, and pears, are abundant. Plums are in great variety, but less plentiful. The vine is common and prolific, but no good wine has been yet produced here. Melons, and many other plants of a similar class, thrive exuberantly, and are very productive. Gooseberries and currants are not uncommon, but their fruit is scanty and rather insipid. The cotton tree, though not culti-
vated to any extent, suceceds well, and produces cotton of good quality. The most prodnetive of the cereals is maize. Wheat is suceessfully cultivated, but is subject to rust near the eoast; and is not of sueh good quality, either in respeet to colour or weight, as that which is produced more in the interior, or in the $\mathbf{W}^{\text {F }}$. distriets. Barley and oats are abundant; and kitchen vegetables, of every variety, may be produced in suitable situations. Wine, though of very indifferent quality, was formerly the staple produce and export of the district. Wool is now the great object of attention, partieularly in the E. distriets, where great solicitude is entertained for the improvement of the live stoek. The stoek of sheep amomits to ahout 311,000 ; goats, 84,463 ; liorned cattle, 46,429 ; horses, 3014.

The trade of the district is considerable, extending itself far into the interior to the N., and also along the E. coast. The exports amount to about $£ 100,000$ annually ; and the imports, of which a eonsiderable portion consists of hides, skins, and tallow, to upwards of e $£ 162,000$. The quantity of fine wool produced yearly, is upwards of $853,000 \mathrm{Ib}$ :. Manufactures have made little progress, but there are several tanneries, soap works, ard tile kilns. Ilats, also, are made to some extent, and are much esteemed for their durability. The cap, is Graham's Town (which see), situated nearly in the centre of the division. There are also the towns of Bathurst, Salem, and I'ort Francés, at the mouth of the river Kowie, whieh is mueh impeded at its entrance by sand. Pop. of division, 14,723, of which 6132 are coloured.-(Cape of Good Hope Almanac.)

ALBANY, a river, Upper Canada, district of same name, which has its source in Lake St. Joseph, about lat. $51^{\circ} \mathrm{N}$. ; lon. $90^{\circ} \mathrm{W}$. ; and, after an F.N.E. course of about 380 m ., falls into Jaines's Bay (the S. part of IIudson's Bay), by a large estnary, containing many small islands, on one of which is situated Albany fort and factory. Other three trading houses have been ereeted on its banks. By afluents from the right, and numerous small lakes, this river gives water communieation with the great Lake Superior; and, likewise, by streams and lakes to the W. and N., it communicates with Lake Winnipeg. In the estuary is a considerable eataract, called the Great Fall, there being a smaller one about 40 m . further up the river.

ALBANY ISLES, Australia, N.E. coast; they are six in number, but one only is of considerable size. In Port Albany, in the S.W. of the great island, there is a harbour suitable for large vessels, where drinking water may be obtained. The S.E. peak of this island is in lat. $10^{\circ} 45^{\prime} \mathrm{S}$. ; lon. $142^{\circ} 39^{\prime}$ E. (r.)

ALBASSIN, or Albasayne, called by the Chinese Falisa, meaning the embouchure of a river, a locality, still given on our maps, in the Chinese prov. of Manehooria, on the left bank of the Amoor; lat. $53^{\circ} \mathrm{N}$.; lon. $122^{\circ} 30^{\prime} \mathrm{E}$. It was formerly a Russian fort, oceupied during the boundary wars with the Chinese, and appears, subsequently, to have been dignified with the appellation of town. Along with the surrounding country, Albassin was abandoned by the Russians to the Chinese, at the treaty of Nerehinsk, 1689. Its fort was razed, and we possess no account of it being at present an inhabited locality.

ALBATIOSS ISLAND, a small isl. Bass's Strait, Australasia; lat. $40^{\circ} 22^{\prime} \mathrm{S}$. ; lon. $144^{\circ} 39^{\prime}$ E. (R.) It is about $1 \mathrm{~m} . l \mathrm{long}$, and 125 ft . high, and has obtained its name from the great numbers of albatross by whieh it is frequented. It abounds also with seals.

AL13AY, a prov., tn., and bay, Island of Luzon, one of the Philippines. The rrov. Albay forms the $S$ portion of the island, and is bounled, W. by prov. Camarines, and on the other three sides by the sea, its S. coast forming the N. sido of Bernardino Passage, or Strait. This province is fertile and rich, the air is cool, and the roads generally are so good as to be suitable for carriages. 'The mountains which traverse Albay are a continuation of the Luzon Corilillera. They are inhabited by two native tribes, Igorrotes and Negritos, and present two remarkable peaks, both voleanoes; that of Bulusan, in the S., being nearly silent, and, from its isolated position and conical shape, serving as a landmark to mariners; and that of Albay, formerly called Mayon, being always active, and subjeeting the province to frequent earthquakes. The coasts are irregular, and, in general, bad; but thore are
two excellent harbours, the Bay of Alhay on the L., and that of Sorsogon on the W. The province is divided into 37 peublos, or parishes, and has a pop. of $123,69 \%$.- Albay, the cap., is hard by the volcano, and about 2 m . from the bay of the same name; lat. $13^{\circ} 22^{\prime} \mathrm{N}$. ; lon. $123^{\circ} 52^{\prime} \mathrm{E}$. It is a large regularly built town, having some stone houses, and is casa reale, a church, a convent, and an administration of tobaceo and wine; and it carries on an aetive commerec. Pop. 13,115.-Albay 13.iy, or Gulf, W. eoast of the prov., is large and secure, and almost land-locked. North it is protected by the islands of Datu and Rapurapu, between the latter of which and Point Malalabon, on tho eeast of Linzon, is the entrance to the bay, 4 to 5 m . wile. From Point Malalabon to opposite the town of Albay, is 19 m .; and the greatest breadth is about $1: 2 \mathrm{~m}$.-(Mallat's Philip)pines.)

ALBAY1)A, a tn. Spain, prov. Valeneia, 9 m . S. by W. Sin Felipe; pleasantly situated, tolerably well built, and havinis two squares, two parish churehes, a Latin and two primary schools, an hospital, prison, cemetery, and an extensive old palace of the Marquis of Albayda. The inhabitants are engaged in linen weaving, brandy distilling, and soap boiling, and cultivate grain, grapes, oil, and vegetables. An annual fair is held in July. Pop. 3130.-(Madoz.)

ALBEGNA (Abbinia), a river, Italy, Tuseany. It takes its rise on Mount Amiata, about 5 m . E. Castaglione, 3000 ft . above the sca level; and, pursuing a S.W. course for about 38 m ., falls into the Mediterrancan, after having been augmented by several tributaries.

ALBEMARLE SOUND, a large inlet, E. coast of N. Carolina, U. States, Ameriea, from 4 to 15 m . in width, and penetrating into the land for about $70 \mathrm{~m} ., 20$ of which, and the narrowest part, ruming nearly due N. It receives the Roanoke and some other rivers, and communicates with Pamlico Sound by two narrow channels, and with Chesapeake Bay by a canal cut throngh the Great Dismal Swamp.Albemarle is also the name of a co., Virginia, U. States.

ALBENDOlRF, a vil. Prussia, prov. Silesia, gov. of, and 50 m. S.W. from Breslan, and 7 m . N.W. Glatz, near the Bohemian frontier. It is chiefly remarkable as a R . eatholic place of pilgrimage. There are here a fine chureh, numerous elapels, statues, \&c., all contributing to a representation of the eity of Jerusalem, and history of our Saviour. All the rising grounds in the neighbourlood of the village are made use of, as Calvary, Golgotha, Sion, \&e., in order to complete the picture. In $1822,83,000$ pilgrims visited this place. Pop. 1300.-(Iluhn's Lex. Deutschland.)

ALBENGA, a small maritime tn. Sardinian States, cap. prov. of same name, $44 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Genoa, at the mouth of the Centa ; residence of a bishop, sufiragan to Genoa, and having a theologieal seminary. The environs produce oil and hemp, in abundance, but the place is eonsidered unhealthy. It is the Allium-Inganmum of the liomans; and some ruins of a rotunda, and an ancient bridge, are still to be seen. I'op. 5000 _-The prov. comprises the seven districts of Alassio, Albernga, Calizzano, Andora, Loano, and Finale Bergo. Pop. $52,594$.

ALBENQUE ( $\mathrm{l}^{\prime}$ ). See Lalbexque:
ALBENS, a small tn. Sardinian States, in Savoy, prov. Genevois, 6 m . N.N.E. Aix, where numerous Roman antiquities have been excavated. Pop. 1300.

ALBERBURY, or Abberbury, a par. England, cos. Montgomery and Salop; area, $6040 \mathrm{ae} . ; 8 \mathrm{~m}$. W. by N. Shrewsbury. Ruins of New Abbey. Glyn, a hamlet in this par., birthplace of old Parr. Pop. in 1841, 1861.

ALIBELiCA, a th. Spain, prov. of, and 4 m . S. from Murcia, having a parish chureh, two sehools, and a bishop's palace. The inhabitants are exelusively devoted to agriculture and eattle rearing. Pop. 2406.-The name Albencril is also given to a river in Alicante, a mountain in Avila, a town in New Castile, and a village in Leon.-(Madoz.)

ALBERCHE, a river, Spain, whieh, rising in Old Castile, in the sierra de $A$ vila, about 3 m . s . Villafranca, flows E. by S., traversing the province Avila; enters New Castile, and flows S.R. to within 8 m . of Navalearnero; when, ehanging to S.W., after a course of about 1.48 m ., and being augmented by numerous tributaries, it falls into the Tagus, about 3 m . E. of Talavera.-(Madoz.)

ALBERES MOUNTAINS, the name of the E. portion of the Pyrenees (which see).

ALBERIQUE, a tn . Spain, Valencia, $11 \mathrm{~m} . ~ \AA .$. San' Felipe, on the high road to Madrid. It is surroundel by a wall and fosse; has irregular streets; a principal and four s:naller squares; two parish churehes; an old palace, once the residence of the Dukes del Infantado; a prison ; two hospitals; and several sehools. The inhabitants trade in silks, rice, and fruits. A fair is held at midsummer, when large quantities of silk are sold. Pop. 3101.-(Madoz.)

ALBERONA, a tn. Naples, prov. Capitanata, district of, and 21 m . W. from Foggia; situated in a valley. Pop. 2300.

ALBERT [formerly Ancre; Latm, Ancora], a small tn. France, dep. Sonme, $14 \mathrm{~m} . \mathrm{N} . \mathrm{V}$. Péronne, and 18 m . N.E. Amiens; on the river Mirammont, an affluent of the Somme. It has cotton and paper mills, printworks, and bleaclifields, with a considerable trade in corn and cattle. There is a cave or quarry in the neighbourhool, discovered in 1752, where, within a space of 1100 ft . long, by 6 broad, a great variety of petrifactions (cliefly of marsh plants) are found. Pop. 2328.

ALBERT (Lake), a bight off Lake Alexandrina, or Victoria, S. Australia, connceted with the former by a narrow chamel. See Australia.

ALBERT RIVER, N. Australia, falls into the Gulf of ('arpentaria; lat. $177^{\circ} 30^{\prime}$ S. ; lon. $140^{\circ} \mathrm{E}$. See AustraliaIivers.

ALBEITTON, a tn., N. Australia, cup. Gipp's Land, on the banks of the Albert river. It is a post town, and petty sessions are held in it.

## ALBI. See Alby.

A LBIANO, a vil. and commune, Italy, in Tuseany, prov. Pisa, 16 m . S. by E. Pontremoli, on the slope of a small hill which forms the S. projection of Mount Bolano, whose E. base is bathed by the river Magra, which joins the Vara to the S.W. It contains a parish church, and a castle, surrounded by old turreted walls, once the property of the Marquises of Melaspina, and onls approachable by one narrow and steep path. Pop. of vil. and commune, 1213.-(Dizio. Univ. Italia.)

ALBIGEOLS, formerly a district of France, in the ane. prov. Ruteni; now in Languedoe, dep. Tarn.

ALBINEN, a vil. in Switzerland, canton Valais, on the N . side of the lhone, from which it is between 4 and 5 m . distant ; lat. $46^{\circ} 23^{\prime} \mathrm{N}$.; lon. $7^{\circ} 38^{\prime} \mathrm{E}$. It stands on the summit of a precipice, and is accessible only from the valley below, by ladders placed perpendicularly against the face of the rock. These are ascended and deseended by the inhabitants, including women and children, during night as well as day, and often with heavy burdens, wathout the slightest hesitation, although the ladders are frequently awry and unsteady, and many of their rounds loose and broken.

ALBINO, a tn. Austrian Lombardy, delegation of, and 7 m . N.E. from Bergamo, upon the Serio. It is well bult, and remarkable for the palace and beautiful gardens of Count Spini. The parish chureli is old. It has a normal school, with extensive silk spiming mills, lime and tile kilns, and manufactorics of agricultural implements. The distriet contains quarries of black marble, and whetstones, of great repute. In Mount Poretto, in the neighbourhood, alabaster is found of surpassing beanty. Pop. 2500.

ALBINO, the name given to a variety of the human species, distinguished by the physical peculiarities, an unnafural whiteness of skin, the more remarkable that it occurs most frequently amongst blacks, and tribes gencrally of a dark eomplexion; white and silky hair ; eyes weak and mostly red, but sometimes also blue; constitution feeble. They are to be met with in various parts of the world, but are perhaps most numerous in Africa

ALBION, the ane. name of Great Britain, said to have leen given to it on account of the lofty white cliffs on the S. shores of the island.

ALBION, the name of several post townships, townships, and post villages in the U. States:-1, Post township, co. Kennebee, Maine. Pop. 1624.-2, Post township, eo. Orleans, of which it is the cap., state of New York, contains a courthouse, jail, clerk's office, Baptist, Methodist, anl Presbyterian churches, an academy and female seminary. Pop. 1400.-3, Post vil., eo. Calhonn, Michigan.-4, Post vil., co. Edwards, Illinois; it occupies a high and healthy situation,
and is settled chiefly by English emigrants.-5, Post vil., 8 . Carolina-6, Township, co. Oswego, Albany. Pop. $1503^{3}$.7, Township, co. Calhoun, Miehigan. Pop. 932.

ALBION (NEW), an extensive tract of land on the N.W. coast of N. America, discovered by Cook, Marcl 7, 1778. This name was originally applied by Sir Francis Drake, in 1578, to California, and part of the coast to the N.; but reeent grographers limit the designation to that part of the coast of the Pacific Ocean which extends between $43^{\circ}$ and $48^{\circ}$ N. lat. It is wholly included in the U. States' territory of Oregon (which see).

ALBIS, a mountain range in Switzerland, canton Zug, rumning nearly parallel with the S. part of the Lake of Zurich, from which it is distant between 3 and 4 m . The highest summit, called IIitliberg, attains an clevation of 2792 ft . above the sea level, and commands an extensive view. There are two roads across these mountains, both leading from Zurich to Luzern, one of which, the most northern and the longer, passes under the Il itliberg; the other, the one now most commonly taken, crosses the ligh Allis, and is available to carriages, unless very heavily laden. The views commanded by this line of ronte are exceedingly beautiful.

ALBISCOLA-MARINA, a vil. Sardinian states, prov. of, and 3 m . N.W. from Savona, on the Mediterranean. It is surrounded by a fertile country, eovered with a luxuriant vegetation, and producing fruit in creat abmdance.

ALBLASSERDAM, a vil. Holland, prov. S. IIolland, 10 m . S.E. Rotterdam, and 3 m . N. Dordrecht, on the right bank of the Alblas, which is here crossed by a dam; hence the name. It is a well-built village, has a Calvinistic chureh, a good harbour, and a yearly horse market. Pop. about 1200. -(Yan der Aa's Mcderlanden.)

ALBP()CACER, a th. Spain, in Valencia, prov. of, and 32 m. N.W. by N. Castellon de la Plana, on the W. declivity of the sierra Engarceran. It is indifferently built, with steep and irregular, though wide streets, and possesses a large and landsome parish church, several chapels, a townhouse, prison, hospital, two schools, a publie storehousc, and cemetery. Manufactures:-Linen and woollen fabrics, hardware and carthenware. Produce of vicinity:-Girain, wine, oil, fruits, vegetables, silk, wax, and honey; sheep, goats, horned cattle, and pigs. Iron is found here, but not wrought; and several valuable marble quarries exist in the neighbouring mountains, on which, likewise, in many place3, oak, beech, pine, and other hardy trees are plentiful. Pop. 1834.(Madoz.)

ALBOLODREY, a tn. Spain, in Andalusia, prov. of, and 20 m . N.N.W. from Ahncria, on the left bank of the river Almeria. It is built on lilly ground, but still regular, having three squares, a chureh, some schools, a townhall, prison, and the ruins of an old fortress. The inhalitants are engaged principally in tillage, cattle rearing, and as carriers; and occasionally a portion are employed in the lead inines of the sierra de Gador. Pop. 2067.- (Madoz.)

ALBONA, a sinall tn. Anstria, prov. Illyria, near the Gulf of, and about 22 m . S.W. from the tn . of Fiume. It lies in the midst of a rocky district, unsuited for the cultivation of grain, but abounding in excellent fruit, especially grapes, olives, and chestnuts. Pop. 1550.

ALBOR, one of the Bahama Islands, vetween the islands Neque and St. Salvador.

ALBORAN, a small isl. Spain, Meliterrancan; prov. of, and 66 m. S.S.W. from Almeria ; lat. $35^{\circ} 58^{\prime} \mathrm{N} . ; 1 \mathrm{lon} .3^{\circ} 1^{\prime} \mathrm{W}$. (r.) It is about 2 m. long, 1 m . broad, low, flat, uncultivated, and inhabited by a few fishermen only. On its S . side is a roadstead, resorted to by smuggling, piratical, and fishing vessels.

ALBOURN, a par. England, eo. Sussex, $2 \frac{1}{2}$ m. N.W. IIurst Pierpoint; area, 1280 ae. Pop. in 1841, 395.

ALBOX, a tn . Spain, in Andalusia, prov. of, and 40 m . N.N.E. from Almeria, agreeably situated on the banks of the rivulet called Rambla de Oria, which divides the tn. into the two quarters of San Francisco, and La Lema, the latter of which is chiefly inhalited by mechanics. It has several good streets, a fine square (the Plaza de la Constitucion), and a smaller one, with a central fountain. The principal public buildings are two rather handsome clurches; some schools; a well-endowed hosjital for infirm poor and foundlings, founded in 1764; a fine townhall; and a small prison. lt also has
several fountains, and two cemeteries. The manufactures are blankets, coarse lineu and hempen fabrics, earthenware jars, dishes, and plates; and comected with the town there are several corn and oilmills. The exports are considerable quantities of oil and eorn; and the imports, wine and brandy. A fair lasts from November 1 to 15 ; and there are weekly markets. Pop. 7425.-(Madoz.)

ALBRIGIITON, a par. England, co. Salop; area, 2970 ac. Here are several charities, and two amual cattle fairs. Pop. in $18+1,1058$.

MLBUELiA, a river, Spain, prov. Badajos, rising in the mountains about 5 m. W. la Parra; and, flowing N., empties itself into the Guadiana, 9 m . E. Badajos, after a course of about 50 m .-(Madoz.)

ALBUERA, a vil. Spain, in Estremadura, on a river of its own name, an afluent of the Guadiana, $13 \mathrm{~m} . \mathrm{S}$. by E. Badajos having only 450 inlabitants; but celebrated in military listory, as laving been the scene of a sanguinary contlict, May 16, 1811, between the French under Scult, and the Anglo-Spanish army under Lord Beresford, in which the former was defeated. In this battle the French lost 8000 nien, and the allies 7000 , all within the short space of four hours.

ALiBUFEIRA, or Alborema, a small seaport and tn. Portugal, on the S. coast of prov. Algarve, 13 m . E.S.E. Silves, and 29 m . E. Lagos, at the head of a bay of its own name; built on the edge of a light rock on the slore, enclosed witly a turreted wall, and defended by a battery on the beach. It lies between two lills, on very meven ground; is abominably dirty, and has a church, hospital, and about 3000 inhabitants, elifetly fishermen.-(Willkomm's Zwei Juhre in Portugal.)

ALBUFERA, a lagoon, Spain, prov. of, and $10 \mathrm{~m} . \mathrm{S}$. from Valeneia, about 10 m . long, and 25 in cirenit, separated from the sea only by a narrow strip of land. It swells in winter, and is then a complete prescrve for fish and wild fowl, of which last, no less than 70 varieties frequent it. Its banks are thickly studded with rice plantations, the cultivation of which is very destructive to life. This lake and domain, valued in 1833 at $£ 300,000$, was conferred on Marshal Suchet, by Napoleon, together with the dukedom of Albufera, as a reward for lis capture of Valencia. The property, however, was soon afterwards restorel to the Valencians, by the Duke of Wellington.

ALBULA, a mountain and river in Switzerland, both in the Grisons, the former oceurring in that portion of the lihatian Alps, by which the E. part of the canton is intersected; lat. $46^{\circ} 37^{\prime}$ N. ; lon. $9^{\circ} 53^{\prime}$ E. It presents two lofty peaks, one of which, Crap Alv, or White Rock, is 7560 ft . in height, the other on the S.E., called I'iz Err, is 8770 ft . high. There is a pass over this mountain, the culminating point of which, marked by a cross, is 6980 ft . above the sea level. Some parts of this pass are dangerous, fragments of broken rocks often hurling down from the lieiglits above, and in spring avalanches are to be appreliended, while nearly the whole pass is one scene of complete desolation.-The river AlumLa proceeds from a small lake near the foot of the mountain, and after thowiur for about 25 m . in a N.N. W. direction, falls into the Ilinter-Rlicin, 2 m . N. from Tusis.

ALBUNOL, a tu. Spain, in Audalusia, prov. Granada, 35 m . W. by S. Almeria, near the coast of the Mediterranean. It is well built; las clean, paved streets, a good square, church, three sclools, a storehouse, two prisons, and several convents. The inlubitants are engaged in preparing wine, raisins, figs, aud almonds; in husbandry, cattle rearing, carrying, and fishing; and in distilling. They export fruits, wine, and spirit of wine ; and import grain, wood, and colonial produce. Pop. 6764.

A1IBUQUERQUE, a th. of the Mexican Republic, prov. New Mexico, situated to the W. of the sierra Obscura, on the left bank of the Rio del Norte; 50 m . S. W. Santa Fe. It is famed for the beauty of its women. Pup. 6600.

ALBUQUERQUE, a tu. Spain, Estremadura, 23 m . N. by W. Badajos, and close on the fromier of Portngal. It is a miscrable decaying place, with thee or four sipuares, two parish churches, two schools, two hospitals, a prison, ani several publie fountains. Its manulacturis we lineu, sombrero hats, potteryware, soap, and chocolate. In the vicinity, grain, wine, vil, honey, fruits, vegetables, and flax,
are raised in abundance. An annual fair is licld in September. Pop. 5470 -(Madoz.)

ALISURG1I, a par. England, co. Norfolk; area, 1430 ae.; 4 m . E. by N. Harleston. Pop. in 1841, 589.

Alibuliy, or Albbury, a par. England, co. Oxford; area, $1250 \mathrm{ac} . ; 3 \mathrm{~m}$. N.W. Tetsworth. Pop. in 1841, 244.

ALBUliY, or Alderbury, a par. England, co. Surrey; area, $4920 \mathrm{ac} . ; 5 \mathrm{~m}$. S.E. Guildford; fund for ayprenticing poor children. Pop. in 1841, 1079.

ALBY, a par. England, co. Norfolk; area, $840 \mathrm{ac} ; 4 \mathrm{~m}$. N. by l:. Aylsham. Pop. in 1841, 299.

ALBY, or Alan [Latin, Albiga, Alba Augusta], an anc. city, France, cap. dep. Tarn, on the left bank of the Tarn river, on a hill in the midst of the plain of Languedoc, 338 m . S. l'aris, and 42 m . N.E. Toulonse. It is the seat of an archbishop; is very ill built, the streets being narrow, irregular, and dirty, and the houses all of brick. Its squares are few, and not remarkable, excepting that in the new quarter of Vignan, which is large and regular, not to say fine. The promenades and avemes which terminate in this square are charming, and are designated the Lists of Albi. They were formerly separated from the ramparts of the city by a broad ditch; and in them used to assemble, during the times of chivalry, the knights of all the surrounding eonntry, to take jart in the tourneys of the times. The diteh is now filled up, and the ramparts thrown down, so that the suburbs now form part of the town, and tend much to beautify it. In all quarters of Albi there are numerons fonntains of excellent water. The principal building is the cathedral of St. Cecile, a Gothic brick edifice, begun in 1282, and not eompleted till 1512. Other important edifices are, the chureh of St. Salvi, the courthouses, and the general hospital, which last is indeed a very fine structure. Besides a tribunal of commeree, and a communal college, there are in the town a museum of natural history; a society of rural economy, trade, and statistics; and a pnblic library of more than 12,000 volumes; also a theatre and barraeks. The mamufactures are of coarse linen cloths, sacking, cottons, table eloths, handkerchiefs, hats, cord, tools, files, seythes, and wax candles. Woad (pastel) has been made liere from a very carly period. In the neighbourhood are copper, glass, and paper works, and a foundry for casting bullets. The town suffered much in the religious wars of Franee; and from it the l'rotestant reformers of the I2 th and 13 the centuries, called the Albigenses, took their name. Pop. in $1846,14,211$.

ALCACER-DO-SAL [Salt castle], a th. Portugal, prov. Estremadura, on the riglit bank of the Sadâ ; 55 m . E.S.E. Lisbon, in the midst of an extensive plain; is enclosed by walls, and defended by a fortress on a steep rock. It lias some chmrches, an hospital, two schools, and a prison; and, on the banks of the river, are numerous salt pans. Considerable quantities also of sedgemats and rushbrooms are made here, chiefly for the Lisbon market, and much corn is sent lience down the river for Setubal and Lisbon. During the war of succession in Portugal, the town and eastle were taken alternately by the contending parties. Pop. 1909.

ALCALA DE CIIIVET, a tı. Spain, Valencia, prov. of, and 30 m. N.N.E. from Castellon de la Plana; in a pleasant valley on the road from Barcelona to Valeneia. The streets are narrow and tortnous; the public buildings comprise a church of modern arehitecture, three schools, an hospital, asylum, townhouse, and jail. There are two tobaeco factories, five brandy distilleries, and some oilmills, in the town. The vicinity produces grain, wine, oil, honey, wax, fruits, and vegetables; and game is plentiful. Pop. $4950 .-$ (Madoz.)

AICAIA DE GUADAIRA, or De Los Panederos [ane. Mienipa-a place of many springs], a tn. Spain, in Andalusia, prov. of, and 6 m . E.S.E. from Seville, on the Guadaira, crossed here by a stone bridge of seven arches. It stands near the river, and is overlooked by the ruins of an ancient fortress, crowning the summit of an adjacent eminence, the site of an old Moorish town, once surrounded by walls, with a deep and wide fosse. It eomprises four squares, and several tolerably eonstructed, though steep streets; two parish churches, with cemeteries attached; municipal offices; two general hospitals; a lying-in hospital, and house of refuge; three primary schools; a prison; abattoir ; and several public storehonses. The manulactures are earthenware, brick,
soap, and coarse cloth; and, connected with the town, are flourmills ; but the place is chiefly noted for its bread, reputed the best in Spain, being remarkably white and fine flavoured, and so much esteemed, that 130 mules are daily employed in conveying it to Seville. There are, at least, 50 bakeries in the town. The vicinity produces grain, wine, oil, fruits, vegetables, honey, and silk. Sheep, horned cattle, and a few goats and pigs, are reared; and, in the neighbouring hills, are several quarrics of granite and freestone; and numerous tunnels, some two leagues in length, whence flows the purest water, which is conveyed to Seville, first in a brick cañeria, and, subsequently, by an aqueduct of 400 arches, called the Caños de Carmona, from its contiguity to the highroad to that city. Pop. 6700.-(Madoz, Diccio. de España.)

ALCALA DE HENARES, or De San Justo (anc. Complutum), a city, Spain, in New Castile, prov. of, and 16 m . E N.E. from Madrid, and about 1 m . from the right bank of the Henares. It has an imposing appearance when

ALCAI. $\triangle$ DEL JUCAR, a tn. Spain, in Murcia, in a rocky locality on the left bank of the Jucar, 19 m . N. by W. Albacete; a gloomy, dirty, and unlicalthy place, with narrow, steep, and tortuous streets; having a parish church, two endowed schools, and a prison. The inhabitants are chiefly engaged in tillage, and domestic weaving. The vicinity produces grain, oil, vegetables, and some fruits; mules and asses are numerous. 1'op. 2883.-(Madoz.)

ALCALA DE LOS GAZULES, a tn. Spain, in Andalusia, on the slope of the Ronda mountains, prov. of, and 37 m . E. by S. from Cadiz. It is situated at a height of 2530 ft . above the sea, and comprises an old and new town, the former of which is partly enclosed by a ruined wall ; a few wide, wellbuilt streets, with others narrow and tortuous; three spacious squares, a parish church, clapel of ease, three schools, two hospitals, barracks, storehouse, and several handsome fountains. Close to the town also are the remains of an old castle. The surrounding country is rugged and bleak, suitable only for pasture. The inhabitants exhibit but little industry or activity. Pop. 6120.-(Madoz.)

ALCALA DEL, RIO, a tn. Spain, in Andalusia, prov. of, and 8 m . N. from Seville, on the Guadalquivir, having a parish church, and chapel, two endowed schools, a townhall, a prison, and storehouse. The inhabitants are employed in tillage and pasturage ; the produce of the vicinity being grain, fruits, and vegetables; sheep, goats, and horned cattle. Pop. 2820.(Madoz.)

ALCALA-LA-REAL, a city, Spain, in Andalusia, prov. of, and $30 \mathrm{~m} . \mathrm{S}$.W. from Jaen; in a glen on the N. side of the Granada mountains, at a lieight of above 2700 ft . above the sea level. It is irregularly built, with steep and narrow streets; but has a large square, ornamented with a fountain. The chief public buildings are two parish churches; a chapel of ease; a town and courthouse; a Latin, and six primary schools; a civil hospital, furmerly a fine abbey; storehouse, prison, several convents; and a tower, containing the first clock made in Spain. The
viewed from a distance; but, on nearer inspection, is fonnd to be in a state of decay. It is enclosed by crumbling walls, and the houses are mean, and in a ruinous condition. It contains three pretty large squares, one of which, the Plaza de Cervantes, is ornamented with trees, and a fountain; another, the Plaza de Toros, comprises a respectable townliall, and some large storehouses, and two pretty alamedas. The other public buildings include the magnificent Gothic church, El Magistral, with three others ; a theatre, hospital, barracks, and riding school; with a handsome palace, belonging to the Archbishop of Toledo. The largest, however, and in some respects, the finest edifice in the place, is the Collegio Mayor de San IIdefonso, founded in 1510 , and richly endowed by Cardinal Ximenes. A university was established here once, second only to Salamanca, having 19 colleges, and 10,000 students; reduced to about 400 , previous to its removal to Madrid. The Collegio has three squares, and a magnificent chapel, containing the tomb of the founder, with lis effigy-the masterpiece of Dominico el Fiorentino; the luilding, however, like many others in Spain, was never finished. Here was printed, at the expense, and under the direction of the Cardinal, the far-famed Complutensian Polyglott, 6 vols. folio, $1502-1517$. It was not published till 1522 , the expense exceeded the then enormous sum of 52,000 ducats ( $£ 11,112$ ), and only 600 copies were printed, of which three only were on vellum; and one of which subsequently sold for $£ 522!$ Alcala has very little industrial activity; it supplies the capital with much of its bread, and has also tanneries, soap works, chocolate mills, and manufactures of coarse linen and woollen fabrics, with two well-attended fairs, in August and November. Alcala numbers among the distinguished individuals to whom it has given birth, Cervantes, the celebrated author of Don Quixote; the Emperor Ferdinand, brother of Charles V.; the poct Figuerroa; and Antonio de Solis, the historian of the conquest of Mcxico. Pop. in 1768, estimated by Estrala at 22,000, now diminished to 3968.(Madoz, Diccjo. de España.)
inhabitants are principally engaged in agriculture; and in the city there are three soap factories, and two brandy distilleries. The vicinity produces grain, fruits, and vegetables, of the finest quality, and in great abundance. Sheep, goats, pigs, and horned cattle, are reared, though in too limited numbers for the consumpt of the people. Fruits and grain are exported; and wearing apparel, cloth, cotton fabrics, iron, hardware, rice, and oil, are imported. Pop. 11,5221.-(Madoz.)

ALCAMO, a tır. Sicily, prov. Trapani, situated in the val di Mazzara, on the high road between Palermo and Trapani, from which latter town it is distant 25 m . E. Its situation on a height is pIcasant and commanding, and it is surrounded with entire forests of olive trees. The streets are dirty and ill paved. Near Alcamo are the ruins of the ancient Segesta, including the remains of a magnificent theatre, and temple. -The district of Alcamo is divided into four cantonsAlcano, Castel a Mare, Palatafimi, and Gibellina. Pop. 15,834 .

ALCANADRE, a river, Spain, Aragon, which rises in the sierra de Guara, near Voltana, prov. Huesea; flows S. and S.E., and, after receiving several affluents, joins the Cinca at Vallovar, 17 m . W. by S. Lerida, after a course of about 60 m .

ALCANAR, a tn. Spain, Catalonia, prov. Tarragona, 19 m. S. Tortosa. It has a church, endowed school, and cemetery. The inhabitants are employed in domestic weaving, expressing oil, and cultivating the grain, fruits, and vegetables, which abound in the vicinity; wheat is exported; implements of husbandry are imported. Pop. 3022.-(Madoz.)

ALCANEDE, a tn. Portugal, prov. Estremadura, comarea of, and 13 m . N. from Santarem, with a strong castle on a rock. Pop. 1640.

ALCAN1Z, a city, Spain, Aragon, prov. of, and 66 m . N.E. from 'Teruel, and about the same distance S.E. Saragossa, on a rising ground on the right bank of the Guadaloupe, here crossed by a substantial stone bridge of seven arches. It comprises nine squares, and numerous well-constructed, paved, and spacious streets, lined with edifices, several of which have

## ALCAUDETE

considerable arehitectural merit. The public buildings are a magnificent collegiate chureh, with many fine tombs and pictures; three parish churehes, a townhouse, a large Gothie guildhall, ecclesiastical courthouse, police oftice, college; Latin, and four cther schools; hospital, secure and wellventilated prison, cavalry barracks, storehouse; several convents, one of which is used as an infantry barracks; and theatre. A public promenade, 1 m . in length, ormamented with trees and shrubs, and having a fountain of good water, affords seope to the eitizens for recreation. The manufactures are silk, worsted, coarse linen, hats, gypsim, and soap; there are also llour and oilmills. The exports consist of grain, silk, wool, and oil; and the imports of wine, hardware, cotton fabries, and leather. The vieinity produces abundance of grain, fruits, and vegetables, silk, wool, honcy, and wax. Sheep and a few goats are reared, but there are few eattle fed. Two annual fairs are held in June and August for grain, cattle, and general merchandise. Pop. 5100 .- (Madoz.)

ALCANTARA, a river in the E. part of Sieily, having its rise in the Neptunian mountains, and its embouchure 5 m . S.S.W. from Taormina, on the S.E. coast of the island. Its whole course is about 36 m . in length.

ALCANTARA (ane. Norba Casarea), a fortified tn. Spain, Estremadura, prov. of, and $33 \mathrm{~m} . \mathrm{W} . \mathrm{N} . \mathrm{W}$. from Caceres, on the summit of a rocky acelivity, on the left bark of the Tagus, surrounded by old walls mounted with cannon, and having five gates. Un the E. side is the castle, containing a tower of fealty, and having a subterranean communication with the Tagus, whence an abundant supply of water is obtained. The town comprises two principal, and several smaller squares, and numerous narrow, stcep, and, for the most part, ill-built streets. It has two parish churches, one of whieh is a large Gothic pile; a townhall, several schools, a enstom house, hospital, prison, some convents; the hereditary mansions of the Marquis de Torre Orgaz, Count de Canilleros, and the Viseount de la Torre; and a barrack for veterans. Since the last war with Portugal, the manufacturing industry of this town has been reduced to a little weaving, tanning, and the mechanieal proluctions requisite for the population. Its commeree consists in exporting wheat and barley to Zarza and Ceelavin, of rye and wool to Portugal, and of oil to the interior of the peninsula; and in importing wearing aprarel, linen, and colonial produce. The vicinity abounds in grain, wine, oil, fruits, vegetables, honey, and wax; and depastures considerable numbers of sheep, goats, eattle, pigs, horses, and mules.

Alcantara was, in 1214, taken from the Moors by Alonso VIII. of Castile, and given to the knights of Calatrava, to whom were subsequently united the military order of monks called 'de San Juan de Percyrr,' founded by Suero Rodriguez larrientos, in 1156 ; their noble eonvent, Lan Benito, built of granite, still remains, though ruinous, and in its chmreh are some pietures by Morales. The Portuguese general, Lapisse, in 1809, occupied the town one night, whieh was employed in the commission of the most wanton barbarities; since then, its dilapidated convents, and roofless houses, alone indieate its former grandeur. The bridge in its vicinity, built for Trajan, A.D. 105, is worthy its founder, and has survived the violence of men and elements for 17 centuries; at its entrance is a chapel dedicated to Trajan, with some verses inseribed, which in one couplet reeord the name of its architect, Caius Julius Lacer:

## Ponfem perpetui. mansurum in secula mundi

Fecit divina nobilis arte lacer.'
The bridge was partly blown up, in 1809 , by Col. Mayne, but repaired, in 1812, by Col. Sturgeon. Pop. $4275^{\circ}$. (Madoz.)

ALCANTARA, a scaport, Brazil, prov, of, and 20 m . N.W. from Maranham, across the lhay of St. Mareos, on a semicircular hill, on the W. side of whieh the town is situated; lat. $2^{\circ} 23^{\prime} 33^{\prime \prime}$ S.; lon. $44^{\circ} 22^{\prime} 59^{\prime \prime} \mathrm{W}$. (t..) It is defended by a fort, anit many of the houses are built of stone, and are two stories high, though for the most part they have only a ground floor. It has five churches, two convents, a townhall, a prison, and a quay; but, as a whole, the town is in a very dilapidated state, and the streets are overgrown with weeds, while its general aspeet indicates decay. The more wealthy residents are the proprictors of cotton plantations; the poorer elasses gain a livelihood by fishing, and making hammocks; some of which are
so finely wrought as to sell for $£ 6$ or $£ 8$ each. There are some salt pits within a few miles of the town, which were once jrofitably worked by the Jesuits, to whom they lelonged, but are now muel neglected. In former times, Alcantara was the capital of the capitania of Cuma.

ALCANTARlLLA, a tn. Spain, prov. of, and 5 in . S.W. from Mureia, on a rising ground, about 1 m . from the right lank of the river Scgura, having a parish ehureh, two endowed schools, and an hospital, The people manufacture soap, and cultivate grain, fruits, vegetables, and flax. A few domestic cattle are reared. Pop. 3481.- (Madoz.)

ALCARAK, a city, Spain, in New Castile, prov. of, and 43 m. S. W. from Albacete, on the E. slope of an isolated hill, on the left of the river Guadarmena, overlooked by a ruinous castle, which crowns the smmit, and commanded on the N., S. and E. by mountains of greater altitude, called the sierra de Alcaraz. The city has seven approaches, leading into four prineipal streets, which converge in the Ilaza mayor, or eentral square; and it has a second square, some very steep streets and lanes, three parish churches, an endowed sehool, substantial townhouse, hospital, and numerous eonvents, with churches attached, one of which is used as a jail. The inhabitants are cmployed in weaving, iron founding, tillage, and cattle feeding. They export fruit, and the produce of their looms; and import oil, wine, and other requisites, by mules. The vicinity produces grain, fruits, vegetables, hemp, and flax; and affords good pasturage for sheep, goats, pigs, and horned eattle; in the neighbouring sierra, zine, calamine, and copper exist, but they are not wrought. Pop. 7325.-(Madoz.)

ALCASSAR, or Al-KAsm, a th. Moroceo, prov. Fez, on the Wad al Khos, $25 \mathrm{~m} . \mathrm{S} . E$. El-Araish; lat. $35^{\circ} 1^{\prime} \mathrm{N}$. lon. $5^{\circ} 49^{\prime} \mathrm{W}$. It lies so low as to be entirely flooded in winter, and it is deseribed as still a considerable place; but dirty, straggling, and dilapidated, containing 10 or 15 mosques, of which two only are fit for use. The artizans are Jews, and the merchants Moors. A number of storks, esteened saered by the Mussulmans, are allowed the range of the town, perching without molestation on the roofs of the houses and mosques. Alcassar is surrounded by gardens and orchards, and by a flat tract of rich meadow land. About $6 \mathrm{~m} . \mathrm{N}$. Alcassar, near the Wad Emhagen, or Elmahassen. was fought, in 1578, a memorable battle between Don Sebatstian, King of Portugal, and the Moors, in which the former and the flower of his army were slain.

ALCASiSAR CEGUER, a small fortified vil. Morocco, prov. Fez, on the Strait of Gibraltar, at its narrowest part between Ceuta and Tanger. Built in the 12th century by Jacob Almanzor, it was taken, in 1468, by Alphonzo, King of Portugal, but abandoned soon alter by the Portuguese, and re-ocenpied by the Moors.

ALCATMAZ, or Al.catras, a small rocky islet on the W. coast of Africa, abont 50 m . W.N.W. the embouchure of the river Nunez; lat. $10^{\circ} 37^{\prime} \mathrm{N} . ;$ lon. $15^{\circ} 21^{\prime} \mathrm{W}$. (m.) It is of volcanie origin, about 40 ft . in height, deeply rent with fissures, and is entirely destitute of vegetation, but is covered with bookies (Pelicauus sula), who maintain a deafening elamour in the night. Turtle also are nmmerons, but are not easily canght. The sea aromb is crowded with sharks, so fierce, says Capt. Belelter, that they attack the oars, and frequently leave the marks of their teeth in them.

ACLATRAZES, or AlCATRAsses, a group of barren rocks, E. coast, S. Ameriea, 20 m . from the mainland; lat. $24^{\circ} 6^{\prime}$ s.; lon. $45^{\circ} 40^{\prime} \mathrm{W}$. (r.) ; 30 m . S.W. the island of St. Sebastian, and $180 \mathrm{~S} . \mathrm{W}$. Jio Janeiro. It is recommended that vessels should not approach noarer to these rocks than 4 or 5 m ., and that only with a fatir wind.

ALCAl'DE'TE [anc. Inditunum], a tn. Spain, in AndaIusia, prov. of, and 26 m . W.S.W. from Jarn, on a deelivity at the junction of three hills, which nearly enelose the space it occupies; overlooked by the ruins of an ancient castle, and comprising a large polygonal Plaza, and ummerous tolerablybuilt streets, the most of which are javed; two churches, town and courthouses, four schools, a prison, two hospitals, an orphan asylum, public storehouse, baths, fountains, aur several convents with clutches attached, in some of which are preserved fine pietures, and other works of art. The inhabitants are occupied in making oil, working bassmats, and ropes, in domestie weaving, and in agriculture. They
export grain and oil; and import silk, cotton, linen, and woollen fabries, and hardware. In the vicinity, grain, fruit, and vegetables are grown, and silk is produced; considerable numbers of sheep, goats, pigs, horned cattle, mules, and asses, are reared, for which, and other mereantile purposes, an annual fair is held in Augnst. P'op. 6240.-(Madoz.)

ALCAZAR DE SAN JUAN, a tn. Spain, in New Castile, prov. La Mancha, 45 m . N.E. Ciudad Real ; regnlarly built, and having two good squares, with three churches, some ruined convents, several schools, an hospital, two prisons, barracks, and a theatre. Mauufactures:- Soap, saltpetre, and chocolate, of whieh some is exported. The imports consist of wine, oil, hardware, and wearing apparcl. The vieinity produces grain and fruits ; some sheep and mules are reared, and a fair is held in September. Pop. 7540.-(Madoz.)

ALCESTE ISLAND, a small isl. in the Yellow Sea, off the N. shore of the promontory of Shan-tung, and near its E. extremity ; lat. $37^{\circ} 29^{\prime} \mathrm{N} . ;$ lon. $122^{\circ} 42^{\prime} \mathrm{E}$. (r.) A reef stretches round it for about lialf a mile, some parts of which appear above water.-There is another isl. of the same nane in the Korean Arehipelago, about 110 m . N.W. from Quelpaert; lat. $34^{\circ} 7^{\prime} \mathrm{N}$. ; lon. $125^{\circ} 21^{\prime} \mathrm{E}$. (r.)-Alceste is also the name of a rock in Gaspar Straits, in which H.M.s. Alceste struck, and was wreckel, Feb. 18, 1817, when returning from China with Lord Amherst and suite. No lives were lost on the oceasion. The roek is in lat. $2^{\circ} 46^{\prime} \mathrm{S}$.; lon. $107^{\circ} 2^{\prime}$ E. (n.)

ALCESTER, or Alxecester, a market tn. and par. England, co. Warwick, the former in a fertile vale, at the confluence of the Alue with the Arrow, from the former of which it derives its name, 13 m. W.S. W. Warwick. It consists of one prineipal street, and several smaller ; and contains many old houses, a fine churel, and a liandsome townhouse. The manufacture of needles is carried on to a considerable extent, and it has a good trade in corn and malt. A free grammar sehool was founded here in 1594. The principal charities are an endowed school for 12 boys and as many girls, and several almshouses. The town is supposed to have been a Roman station, having been built on the site of the old Roman way called Iekenild Street, now known as Iekle Street. Various coins, urns, and other remains of antiquity, have been fomid in the neighbourliood. Pop. in 1841, 2399.

ALCIRA, a tn. Spain, prov. of, and $25 \mathrm{~m} . \mathrm{S}$. by W. from Valencia, on an isl. formed by two arms of the river Jucar, here crossed by two stone bridges, one of two and the other of four arehes. It is surrounded by old walls flanked by strong towers, with several gates, and has some squares, and numerous wide, though ill-built streets, a Gothic parish church, conventual churehes, townhouse and guildhall, with jail attached ; a Latin, and four other schools ; an hospital, cemetery, promenade, and many public gardens, adorned with fruit trees, shrubs, and flowers. The occupation of the inhabitants is confined chiefly to the manufacture of earthenware, the production of silk, and the eultivation of their fertile soil, which yields grain, wine, oil, fruits, and vegetables, in great abundance; and in the export of which articles, especially silk, their trade consists. Two annual fairs are held in July and Dceember, for cattle and general traffic. Pop. 13,000.(Madoz.)

ALCISTON, a par. England, co. Sussex ; area, 1620 ac.; $4_{4}^{3} \mathrm{~m}$. N.E. Seaford. Pop. in 1841, 275.

ALCOBA (Sembi de), a chain of mountains in Portugal, prov. Beira, and extending $S$. into the comareas of Coimbra and Viseu, between the Mondego and Vouga rivers.

ALCOBASA, a small market tn. Portugal, and eap. of comarea, prov. Estremalura; 58 m . N. Lisbon; 15 m . S. W. Leiria; not far from the sea, and near the junction of the small rivers Aleoa and Baça, whence its name. It has five churehes, and is celebrated for its magnificent Cistercian monastery, the richest in Portugal, founded in 11.18 by Don A1phonso I., and containing the tombs of several kings; and, among others, of Don Pedro and his ill-fated wife, Iñez de C'astro, whose praise has been sung by Canoens. The kitehen is nearly 100 ft . long, and 63 ft . high; and its fireplace is 28 ft . long, and 11 ft . broad. Aleobaça is the seat of several manufactories. Its industry comprises the manufacture of cotton fabrics, muslins, fustians, and wool. The Marquis de Pombal, also, when prime minister, established 250 cotton looms in the monastery. Pop. 1353.

ALCOENTRE, a small tn. Portugal, prov. Estremadur't, comarca of, and 20 ml . S.W. from santarem. It is within the lines of Torres Vedras, and was occupied by the English troops during the peninsular war.

ALCOLEA , the name of several towns and villages in Spain:-1, Alcolea de calatrava, a tn. New Castile, prov. of, and $12 \mathrm{~m} . \mathrm{W}$. by N . from Ciudad Real, having a square, parish church, townhall, prison, two schools, a storelouse, and cemetery, with an agricultural pop. of $1200 .-2$, Alcolea de cinca, a tn . Aragon, 1rov. of, and 35 m . from Iluesca, in a plain on the riglit bank of the river Cinea; well built and paved, with two squares, a parish clurch, townhouse, two schools, prison, granary, and cemetery. Weaving, tillage, and carrying, employ the inhabitants; who import wine, harlware, and wearing apparel, and export fruits, \&c. An annual eattle fair is held in October. Pop. 1200.-3, Alcolea de las peñas, a tn. New Castile, prov. (uadalajara, $10 \mathrm{~m} . \mathrm{N}$. by W . Siguenza; ill built, with a chureh, schoul, townhonse, prison, and an agricultural pop. of $180 .-4$, Alcolea del rio, a th. Andalusia, prov. of, and 25 m . W.N.W. from Seville; tolerably built, and having a chureh, two schools, and a prison, with a farming pop. of $1707 \cdot-5$, Alcolea-del-Tajo, a tn. New Castile, prov. Toledo, $17 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. by W. Talaverat de la Reyna; well built, eomprising a chureh, sehool, prison, and townhall. Pop. 160 - There are several other inconsiderable villages called Alcolea.-(Madoz.)

AlCONbURY, or Alkmundbury, a par. England, co. Ifuntingdon; area, 3700 ac.; an annual fair for pedlars' ware, June 24; intersected by Alconbury brook, a branch of the Ouse. Pop. in 1841, 823.

ALCONBURY-WITH-WESTON, a par. England, co. IIuntingdon; area, $1540 \mathrm{ac} . ; 6 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Huntingdon. Pop. in 1841,491.

ALCONCHEL, a tn. Spain, in Estremadura, prov. of, and 25 m . N.N.E. from Badajos, on the slope of a hill. It is meanly built, and is overlooked by an old castle. It contains a cluwch, some selicols, a townlall, and small prison. The inhabitants are employed chiefly in tending cattle, raising corm, and weaving coarse linen and woollen clotls. The agricultural produce of the neighbourlood is very abundant, and the fruits fine-flavoured; an amnal fair is held in May. Pop. 2020.

ALCORA, a tn. Spais, in Valencia, prov. of, and 10 m . N.N.W. from Castellon de la llana. It is, on the whole, well built, and has a church, four chapels, several sehools, two hospitals, an asylum, and muniepal honse. The inhabitants are much engaged in potteries and brandy distilleries. In the neighbourhood are found considerable quantities of cimabar and sulphur ; and silk is cultivated. The agricultural productions are grain, fruits, vegetables, hemp, oil, and grapes, which are exported. An ammal cattle fair is held in October. Pol. 5600 .-(Maduz.)

ALCO'TIM, or Alcoutin, a tn. Portugal, prov. Algarve, comarea of, and 23 m . N.E. from Tavira, upon a height on the right bank of the Guadiana. It is enclosed within old walls, and prettily situated on the margin of the river, at the foot of a mountain, on whielı is a castle in ruins. Pop. 1561.

ALCOVER, a tn. Spain, in Catalonia, prov. of, and 10 m . N. from Tarragona, on the Angura, comprising two churehes, two schools, an hospital, and several fountains. The inhabitants are engaged in making earthenware and soap, distilling brandy, and eultivating the grain, wine, oil, fruits, and vegetables of the vicinity; some cattle are reared, and an annual fair held in Oetober. Pop. 2812.-(Madoz.)

ALCOY, a large tu. Spain, in Valeneia, prov. of, and 24 m . N. by W. from Alicante, near the source of a river of its own name, crossed here by a Roman bridge. It lies in a hollow, formed by the slopes of the surrounding hills, and is remarkable for its antique, picturesque-looking houses, overhanging the terraced garders and ravines. It is enclosed by clay walls, whieh were much damaged by shot during the last civil war; and is entered by numerous gates, four stone bridges serving as meaus of communication between the different quarters. It contains many modern buildings-a rare case in the towns of Spain; and the Plaza de la Constitucion may vie with most squares out of the first class of Spanish cities. The streets are regular, well paved, and some of them even provided with drains. The public edifices comprise a large parish chureh, of bastard elassic architeeture, built in 1740, and three smaller churches, some good and well attended schools, it
townlall and eonsistory, a poor asylum, public granary, and a prison, formed out of a former convent. It is a busy, commercial place, aud contains many coarse woollen and paper manufactories, especially of papel de hilo, or books of tissue paper, for making papelitos, or paper cigars. Madoz states that 200,000 reams of paper are annually made here, of which 10,000 are usel for writing, 10,000 for packing and other purposes, and 180,000 for making the papelitos1 The pclaclillas of Alcoy, or almond sugar plums, are held in high estimation. As respeets the people, Mr. Ford deseribes them as 'having an air of misery; wearing slabby round hats, that give them a poverty stricken appearance; and as unaequainted with the courtesies and salutations of high-bred Spain.' The agricultural produce of the neighbourhood is grain, wine, oil, fruits, including excellent figs and vegetables. Sheep, goats, pigs, horned cattle, mules, and a few horses, are reared. Two fairs are held annually, one in April, and the other in October. Pop.27,000.-(Madoz.)-Alcoy is also the name of a small river of Valencia, rising S.W. of the above town, and flowing N.E about 45 m . into the Mediterranean.

ALCUDIA, the name of several towns in Spain:-1, A city and port in the isl. of Majorea ; lat. $39^{\circ} 50^{\prime} 45^{\prime \prime} \mathrm{N}$.; lon. $3^{\circ} 9^{\prime} 6^{\prime \prime}$ E. (L.) ; at the N.E. extremity of the island, between the large bay of its own name and that of Pollenza. It is surrotuded liy old walls, and defended by two strong castles and I deep and wide fosse. It is tolerably built, but, owing to the great number of ruinous and uninhabited houses, has a desolate appearance. It has a parish church, townhouse, two schools, an hospital, and a cemetery. The inhabitants are engaged in weaving, fishing, and agriculture. As a port, its trade is inconsitlerable. Pop. 1116.-2, Alcudia de baza, a tn. Andalusia, prov. of, and 34 m . N.E. from Almeria, on the summit of the sierra de Filabres; having a chureh, eemetery, storchouse, and fountain, with an agricultural pop. of 532.3, Alcudia de carlet, a tn., prov. of, and 20 m . S. by W. from Valencia, on the right bunk of the river Magro; well built, with a chureh, three schools, townhonse, and prison. Weaving, distilling brandy, making earthenware, and agriculture, are the chief employments of the people. 1'op. 1759.-4, Alcuclia de Guadia, a tn. Andalusia, prov. of, and $32 \mathrm{~m} . \mathrm{W}$. by N. from Grasada, and 4 m . E. Guadix; comprising a sqnare, with a central fountain, ehureh, townhall, prison, and two schools, with an agricultural pop. of $722 .-5$, Alcudia de crispins, a vil., prov. of, and $32 \mathrm{~m} . \mathrm{S}$. by W . from Valencia; having a chureh, a palace of the Counts of Orgaz, and an agricultural pop. of 626.-6, Alcudia is also the name of a valley in New Castile, prov. Ciudad Real, and of several other villages not worthy of notiec.-(Madoz.)

ALCUESCAR, a tn. Spain, Estremadura, prov. of, and about 20 m . S.E. from Caceres, on the W. slope of the sierra Leon, a prolongation of the Toledo range. It is mean, ill built, and confined, but has a parish church, some schools, a courthouse, granary, and prison. The inhabitants are chiefly employed in tillage, rearing hogs, expressing oil, and domestic weaving. The vicinity yields grain and abundance of fruits. Pop. 3560 - (Madoz.)

ALDABRA JSLANDS, three islands situated at the N. ertrance into the Mozambique Channel, called, respectively, East, Middle, and West Islands, but so connected by islets and rocks, as to appear one island ; lat. (N.W. point) $9^{\circ} 23^{\prime}$ S. ; lon. $45^{\circ} 50^{\prime} \mathrm{E}$. (n.) East Island is of moderate height, and is here and there interspersed with a few trees; las a fine white sandy beach, and is covered with brushwood and verdure; the whole combining, gives it a very beautiful appearance. Middle Island is the highest, and is, in part, covered with lofty trees; it has also a beautiful beach, and is clothed with verdure. West Island is level, and has few trees or bushes, but resembles the two former in other respects.

ALDAN MOUNTA1NS and RIVER, in Rnssian Sileria. The former are a branch of the Stamovoi mountains, running N.W. to about lat. $67^{\circ} 30^{\prime} \mathrm{N} .$, from lat. $61^{\circ} 20^{\prime} \mathrm{N}$. , their total length being upwards of 900 m . Their geological composition is chicfly limestone, clay, slate, and graywacke. Vast forests of lareh (l'inus larix) clothe their sides; and, in the lat. of $61^{\circ} \mathrm{N} .$, grow at an clevation of 2240 ft ., single trees being found at a height of 2500 ft . The greatest heights of these mountains, so far as ascertained, are from 2000 to upwards of 4000 ft . Mount Kapitan, the most elevated summit of the range, attains an elevation of 4263 ft .

The Aldan River, a tributary of the Lena, flows parallel with the mountain range till it falls into the Lena, in lat. $57^{\circ} 30^{\prime} \mathrm{N}$., about 90 m . below Yakutsk. It rises in the Yablonoi range, under the 56 th N. parallel, thence running N.N.E. past Maiskaia to lat. $57^{\circ} 30^{\prime}$, where it turns abruptly W., and joins the Lena about 80 m . below Yakutsk, after a course of about 800 m . The great road from Yakutsk to Okotsk erosses it at Allanska, which lies 760 ft . above the Sea of Okotsk.-(Erman's Siberia.)

ALDAYA, a tn. Spain, prov. of, and about 3 m . W. from Valencia, on the left bank of the river Furia. It is ill built, and has a chureh, two endowed schools, a townhouse, and public granary. The inhabitants are engaged in tillage and distilling brandy: The vicinity produces grain, wine, oil, vegetables, and fruits, especially melons. Pop. 2000.-(Madoz.)

ALDBOROUGII, or Aldehurgif, a small seaport tn. and par. Englaul, co. Suffolk; lat. $52^{\circ} 9^{\prime} 2^{\prime \prime}$ N.; lon. $1^{\circ} 36^{\prime}$ E. (R.) ;20 m. E.N.E. Ipswich, and $82 \mathrm{~m} . \mathrm{N}$. R. I ondon; picasantly situated between the river Alde and the sea, and running nearly parallel with the beach of the latter. It formerly consisted of three prineipal streets, but one of these was swept away by the sea, the cncroachments of which have long been doing serious damage to the town. These, however, have been temporarily cliceked, by two sand banks which have been recently thrown up for that purpose. The old borough was situated $\frac{1}{4} \mathrm{~m}$. E. of the present shore ; and on the spot where it stood, there are now 24 ft . of water. The older houses of the town are of a mean description; but a mumber of liandsome new houses and villas have been built of late years, in consequence of the place having become a favourite resort for sea bathing, for which its beach is well adapted, while its climate is reckoned eminently salubrious. The parish chureh, a large and ancient structure, is situated conspicuously on the summit of a hill, and forms a convenient land mark for mariners. It is of a mixed perpendieular and decorated style, and lias been much disfigured by unscemly repairs; but is now (1850) in course of restoration, a now and magnificent window having been recently put up. There are, besides, places of worship for various denominations of dissenters, and a flourishing national dally school, supported by subseription, several benevolent associations, and a mechanies' institute. The town is well supplied with water. The harbour is safe and commodious. The trade of the port consists principally in the export of corn and wool ; the import of coal and timber, and in fish curing. A great proportion of the inliabitants are employed in fishing and seafaring. Crabbe, the poet, was boin here on Cliristmas cve, 1754 ; and an elegant bust and plinth have recently been erected in the parish chureh to his memory. Aldborough formerly returned two members to Parliament, but was disfranchised by the Reform 13ill. Market days, Welnesday and Saturday. Two fairs amnually. Area of par. 1130 ac . Pop. of tn. and par. in 1841, 1557.(Correspondent in Alllorough.)

ALBBOROUGH, a market tn. and par. England, co. York, W. Riding, on a plain on the river Cre, about 16 m. N.W. York. It is small and irregularly built, and remarkable only for its great antiquity, as it is supposed to have been the capital of the Brigantes. Uuder the Romans it was ealled Isurium, and was then surrounted by walls said to have been about $1 \frac{1}{2} \mathrm{~m}$. in circuit. Many Roman antiquities have been found here, including coins, urns, the remains of aqueducts, and some beautiful tesselated parements, a rare specimen of which was discovered in September 1848 , on the property of Andrew Lawson, Esq. Aldborough formerly sent two members to Parliament, but was disfranelised by the Reform Act. It has one church. It is governed by a bailiff. Petty sessions are held in it. Market day, Wednesday. An amual fair in September. Area of par. 8750 ac Iop. in 1841, 2424.-A LDBonoviil is also the name of a par. Norfolk, hun. Erpingham ; area, 590 ac. Pop. in 1841, 293.

ALDBOURNE, or Aunourne, a par. England, co. Wilts; area, 8060 ac ; 6 m. N.E. Marlborough; ancient chureh and vicarage. Pop. in 1841, 1556.

ALDBLOU'GH, a par. Ençland, co. York, E. Riding; area, 5240 ac. Pop. in 1841, 1119.

ALDBURY, a par. England, co. Jertford; area, 2020 ac.; on London and Birmingham Railway; ancient elureh. Pop. in 1841, 790.

## ALDSTONE

ALDEA [Village], the name, with various affixes, of numerous small places in Spain, Portugal, and Brazil.

In Spain, the chief are:-1, Aldea-da-vila de Duero, in Leon, prov. of, and 28 m . N. by W. from Salamanca, on the Duero; having 1500 inhabitants.-2, Allea del Cano, in Estremadura, prov. of, and 15 m. S. by E. from Caccres; having 1300 inhabitants.-3, Aldea del Rey, in Ncw Castile, prov. of, and $13 \mathrm{~m} . \mathrm{S}$. by E. from Ciudad Real ; having 1700 inhabitants, much employed in lace making.-4, Aldea-nueva de Centenera, in Estremadura, prov. Caccres, 13 m. E.N.E. Truxillo; with 1650 inhabitants.-5, Aldea-nueva de Ebro, in Old Castile, prov. Logroño, and $5 \frac{1}{2} \mathrm{~m}$. N.W. Alfaro; with 1900 inhabit ants.-6, Ald a-nueva de lavera, in Estremadura, prov. Caceres, 23 m. S.W. Plasencia; having a large church, townhall, hospital, prison, and 2400 inhabitants, chiefly agricultural. There are 40 or 50 more, but none worth notice.

In Portugal, two only deserve notice :-1, Aldea Gallega, prov. Estremadura, on the Bay of Montigo, which forms a part of the left shore in the Tagus estuary, about 10 m . E. by S. Lisbon, and one of the chief ferry stations to that city; having 3960 inhabitants, chiefly boatmen (eatraciros) and fishermen. -2, Aldea Gallega da Merciana, same prov., on the left bank of the Tagus, 9 m. W.N.W. Alemquer. Pop. 1452. There are many other Aldeas-all unimportant.
In Brazil are the following:-1, Aldea-das-Pedras, prov. Goyaz, on the road from Meico-Ponte to St. Paul, 130 m . S St. Cruz. -2, Allea do Campo, prov. Espirito-Santo, S. of the river Doce. Its inhabitants make and export linen.3, Aldea Goitacaze, prov. Espirito-Santo, at the head waters of the Reis-Magos. The naturalist, St. Hilaire, calls this village Pequiri-Açu.-4, Aldea Velha, prov. Espirito-Santo, about $8 \mathrm{~m} . \mathrm{N}$. Almeida. The Indians of the district construet canoes, and the women spin cotton, mannfacture a kind of eoarse cloth, and thread which is sold in Rio de Janeiro and Bahia for lamp and candle wicks.-5, Aldea Velha, prov. Rio de Janeiro, in the district of Cabo Frio.-(Madoz, Diccio de España; Dic. Geo. Imp. Brazil.)

ALDEBY, or Aldenurgh, a par. England, co. Norfolk; area, 2690 ac. $; 2 \frac{3}{4} \mathrm{~m}$. N.E. Beccles. Pop. in 1841, 496.

ALDENHAM, a par. England, co. Ifertford ; area, 5830 ac. ; $2 \frac{1}{2} \mathrm{~m}$. from Watford, on the London and Birmingham Railway; old ehurch. Pop. in 1841, 1662.

ALDERBURY, a par. England, co. Wilts ; area, 3950 ac. ; 3 m. S. Salisbury, on the South-Western Railway. Pop. in 1841, 1440.

ALDERFORD, a par. England, co. Norfolk ; arca, 320 ac ; 3 m . S.E. by S. Repham. Pop. in 1841, 44.

ALDERLEY, a vil. and par. England, co. Gloucester; area, $730 \mathrm{ac}$. ; handsome church, with monument to Sir Matthew Hale, who was born here, Nov. 1, 1609. Curious fossils are sometimes found. Pop. in 1841, 174.

ALDERMASTON, a par. England, co. Berks; area, 2240 ac. ; 8 m . E. Newbury, on the navigable river Kennet. Pop. in 1841, 662 .

ALDERMEN ISLANDS, a small group of islets off the E. coast of the most N. of the New Zealand Islands, New Ulster, and about 12 m . from the shore; lat. (S. point) $37^{\circ} \mathrm{S}$. ; lon. $176^{\circ} 4^{\prime}$ E. (R.)

ALDERMINSTER, a par. England, co. Worcester; 3480 ac.; on the Moreton and Stratford Railway. Pop. in 1841, 508.

ALDERNEY, the most N. of the islands in the English Channel, known by the name of the Channel Islands, 10 m . due W. from Cape La Ilogue, in France ; lat. $49^{\circ} 42^{\prime} 54^{\prime \prime} \mathrm{N}$.; Ion. $2^{\circ} 12^{\prime} 2^{\prime \prime}$ W. (R.) It is between 3 and 4 m . long, and about $1 \frac{1}{4}$ broad. The coast is bold and rocky; the cliffs in many places rising from 100 to 200 ft . in height. In the interior, the soil is fertile, producing excellent crops of corn and potatoes; but round the coast it is sandy and sterile. A bout a third of the island is occupied by grass lands. The climate is mild and healthy. The Aldcrney cows, a small, straight-backed breed, have long been cclebrated for the quality of their milk, which is exceedingly rich, but not great in quantity. The cows are not handsome, and are in no great request anywhere but in the islands; in which, however, they are so much estecmed, that the importation of any other description of cattle is prohibited under the severest penalties. The town, as it is simply called, is situated in a beautiful valley near the centre of the island; it is partly Yol I.
paved, but presents nothing worthy of particular notice. The civil power is vested in six jurats, who are chosen by the poople, and hold their offices for life, unless removed for misbehaviour. These, witlı 12 'douzaniers,' representatives of the people, furm a sort of local legislature. Alderney is a dependency of Guernscy. French manncrs, and the French language, prevail amongst the inhabitants; but all under stand, and many speak English. They are about equally divided between the Established chureh and Wesleyan Methodists. The strait which separates the island from the mainland is called the Race of Alderney, from the velocity with which the current runs through it, being at the rate of 8 m . an hour. It is a deep and gencrally safe channcl; but, when wind and tide meet, is extremely dangerous. There is but one harbour in the island, Crabby, and there small vessels only can be accommodated. At the distance of about 6 m . N.W from the island is a cluster of rocks, called the Caskets, on the largest of which there are three lighthouses; an alarm bell has recently been added, to be used in foggy weather when the lights become invisible. Pop. of the isl. in 1841, 1030.

ALDERSHOTT, a par. England, co. Hants; 4070 ac.; 3 m . N.E. by N. Farnham. Pop. in 1841, 685.

ALDER'TON, the name of several parishes, England :1, A par., co. Wilts ; 1700 ac. ; 8 m . S.W. Malmesbury. Pop. in 1841, 183.-2, A par., co. Northampton, 3 m . S.E. Towcester. Pop. in 1841, 166.-3, A par., co. Gloucester ; 1750 ac.; near Tewkesbury ; Saxon encampment. Pop. in 1841, 411.-4, A par., co. Suffolk; 2680 ac. ; 7 m. S.E. Wood bridge. Pop. in 1841, 620.

ALDFORD, a par. England, co. Cheshire; 2820 ac. ; on the river Dee; ancient castle and townhouse. Pop. in 1841, 835.

ALDHAM, a par. England, co. Suffolk; 2170 ac.; on the Ipswich and Bury St. Edmund's Railway. Pop. in 1841, 293.

ALDINGBOURN, a par. England, co. Sussex ; 3080 ac.; 4 m. E. Chiehester. Pop. in 1841, 772.

ALDINGHAM (UTPER and Lower), two united parishes, England, co. Lancaster; 4680 ac ; 5 m . S. Llverstone. Owing to the progressive encroachments of the sea, tho chnrch, once in the centre of the parish, is now within reach of the high tide. Pop. in 1841, 907.

ALDINGTON, a par. England, co. Kent; 3420 ac.; near the South-Eastern Railway. The living of Aldington was once held by Erasmus of Rotterdam. Pop. in 1841, 733.

ALDIS PEAK, a prominent mountain, N.E. Australia; lat. $24^{\circ} 50^{\prime} \mathrm{S}$.; lon. $149^{\circ} 3^{\prime} \mathrm{E}$. It is an excellent land mark, and can be seen at a great distance from the N.E. It was discovered by Dr. Leichhardt in 1846.

ALDRIDGE, a par. England, co. Stafford; area, 7930 ac. near Walsall. Here is a curious pool, Druidmeer (literally, Druid sea) ; an extensive distillery, and a manufactory of earthenware and tiles. Pop. in 1841, 2094.

ALDRINGHAM, a par. England, co. Suffolk ; area, 610 ac. Fair on St. Andrew's day. Pop. in 1841, 401.

ALDS'PONE, or Alston, a market tn. and par. England, co. Cumberland, on the declivity of a steep hill, near the confluence of the rivers Nent and S. Tyne, 17 m . E.N.E. Pen rith. The town consists of one main strcet and two smaller neither of them regular. The new houses are chiefly of stone, roofed with slate, and are generally substantial and well built, being much superior, in all respects, to the older dwellings. There is abundance of excellent water brought from a neigh bouring lill, and collected in tanks. The town contains a church, and meeting houses belonging to various religious denominations; a grammar, infant, and Lancasterian schools. There is also a mechanics' institute, having a library of 500 volumes, and a museum; and a savings' bank, the deposits in which amounted, in 1849, to considerably upwards of $£ 18,000$. The only manufactory in the town is a worsted spinning mill, employing about 70 hands. The country around is a dreary waste of naked hills, but rich in minerals. The lead mines in the parish are extensive and very productive, giving employment to upwards of 1000 people. Copper ore and zinc have also been found, and beautiful specimens of spar; and, in the lead mines, are numerous large caverns, exhibiting magnificent grotto work, and resplendent with crystals. Most of these mines belonged to the Earl of Derwentwater, but fell to the Crown on the attainder of that
unfortunate nobleman in $\mathbf{1 7 1 5}$. They were afterwards transferred, by Act of Parliament, to Greenwich hospital, to which they still belong. They are let by the governors of that institution on working leases to the London Lead Company and others, on condition of payment of one-seventh of the ore raised. Upwards of 17,000 bings of lead, each bing weighing 8 ewt., were obtained from these mines in 1849, worth, on an average, about $£ f$ per bing. The moral character of the people of this distriet is singnlarly good; out of a population of upwards of 7000 , there have only been 11 committals in 15 years, and of these seven only were natives, with a few minor cases determined snmmarily by the magistrates. Pop. of tn . in 1841, 1650; of par., 6062.-(Correspondent in Alestone.)

ALDSWORTII, a par. England, eo. Gloucester; area, 3460 ae.; on the Cheltenham, Oxford, and London United Railway. Pop, in 1841, 365.

ALDWINKLE (St. Peter's), a par. England, co. Nortlampton, 4 m. N.E. Thrapston. Pop. in 1841, 183. Aldwinkle (Alli Saints), a par. adjoining the former; united area, 2.150 ac .; here are several charities. Pop. in 1811, 272.

ALDWORTH, a par. England, co. Berks ; area, 1960 ac. ; $4 \mathrm{~m} . \mathrm{S}$. East Ilsley. Pop. in $1811,314$.

ALEGRETE, a fortified tn. Portugal, prov. Alemtejo, comarca of, and 8 m . S.E. from Portalegre, near the Spanish frontier. In the neighbourhood are chestnut forests. Pop. 1130.

ALEI, a river, Siberia, an affnent of the Obi, gov. Tomsk. It rises from two head streams, about lat. $50^{\circ} 42^{\prime} \mathrm{N}$.; lon. $82^{\circ} 35^{\prime} \mathrm{E} . ;$ in that part of the Altai mountains called Ti heräzki Bjelki, and of granite formation. It takes a N.W. course, very winding and irregular, partly throngh a plain about 1000 ft . above the sea level, and covered with poplars and willows, and partly through a deep valley composed of clay slate, over granite, till it reaches Novo Aleish, about lat. $51^{\circ} 15^{\prime} \mathrm{N} . ;$ lon. $81^{\circ} 2^{\prime} \mathrm{E}$., where it is 939 ft . abeve the sea level, and where its S . bank, being composed of porphyry mountains, the river turns to the N.E., which general direction it maintains, chiefly through a level conntry, partly covered with pines, till it reaches the Obi, 20 m . S.S.W. Barnaul ; lat. $33^{\circ} 1^{\prime} \mathrm{N}$. On various points of the banks of the Alei are mines of copper, the ore from which is conveyed down the river, which is navigable, especially in spring, and for country boats, for a great part of its course. The steppe through which the Alei flows in the N. part of its course, is often set fire to, for the purpose of burning up the hard stems that prevent the mowing of the young grass.-(Ritter's Asien.)

ALEKSANDRIA, a tn. Russia. See Alexandila.
ALEKSANDRIA, a th. Caucasus, 10 m . S. Gheorghievsk; lat. $44^{\circ} 19^{\prime} \mathrm{N}$.; lon. $43^{\circ} 10^{\prime} \mathrm{E}$.

ALEKSANDROV, a tn. and district, gov. Caueasia, Rnssia, the former $43 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Gheorghievsk; lat. $44^{\circ} 28^{\prime} \mathrm{N}$.; lon. $42^{\circ} 42^{\prime} \mathbf{E}$. The S . boundary of the district is formed by the Caucasus mountains, the S.W. by the Koulian, and the N. by the river Kalaous. Some forest wood is found in the S., but it is only used for fuel. The soil is generally fertile, and suited to the culture of grain and vines. The Kalmucks establish their winter quarters on the heaths of the $N$., and numerous loands of Nogays pasture their flocks in the valleys of the $S$.

ALEKSANDROV, a small tn. European linssia, gov. of, and 69 m. W.N.W. from Vlatimar, and 58 m . N.E. Hoscow, on the banks of the river Seraia, which falls into the Kliazma. The Czar Ivan Vasilievitch sometimes passed the summer here; and it was in this little town that he established the first printing press introduced into Russia. It has two chiurches and a numnery. The splendid haras, or breeding stud for borses, which is here supported at the expense of the crown, is renowned for the variety of its breeds, and for the extent and character of its buildings. This establishment was commenced by the Empress Elizabeth in 1761, and 20 years elapsed before it was completed. Pop. 3000.

ALEKSANDROVK $\Lambda$, the name of a great number of small towns in Russia, there being no fewer than four in the prov. of Kherson alone, and all within about 50 m . of each other, and in almost every other province there is one or more. The name is sometimes spelled Alexandrovka.

ALEKSANDROVSK, a tn. European Russia, gov. of, and 48 m . S. from Ekatherimeslav, or Iekaterinoslav; cap. district of same name, on the left bank of the Dnieper, at the mouth of the Moscovka. It is fortified, and has a considerable transit trade with the interior of the empire; goods from thence coming here for shipment by the Dnieper for the Black Sca. 1'op. (18.12), 5192.-The L. part of the district of Aleksandrovsk is watered by the Namara; the S. by the Kouskara, which separates it, throughout a large extent, from the province of the Saurida. The greater part of the surface is barren heath; there are very few villages, and cultivated land is rare.

ALEKSIN, or Aleseina, a tn. European Russia, prov. Tula, on the right bank of the river Oka, about $100 \mathrm{~m} . \mathrm{S}$. Moscow, and 32 from Tula. It has some trate in hemp, hides, tallow, honey, and salt meat. 'Two great fairs are held here anntally. I'op. 2500.--The district of Aleksin contains some iron works, and a manufacture of linen, and 240 villages, with a pop. of 90,000 .

ALEMOU'IH. See Alnemouth.
ALEMQUER or Alenquen, a small tn. Portugal, and eap. of comarea, in prov. Estremadura, on a small river of the same name; 2.1 m. N.N.E. Lisbon, and about 8 m. W. the Tagus. It has five chmrches, three convents, an hospital, and paper mill, onee the largest in Portngal; the environs produce good wheat and grapes. Pop. 2485.

ALEM'TEJO, or Alentejo, [from Alem, beyond, and Tejo, the Tagus], the largest, but least populons prov. of I'ortugal, bounded, N. by Estremadura and Beira Baixa, E. by Spain, S. by prov. Algarve, and W. by Estremadura and the Atlantic ; length, N. to S., 150 m . ; arerage breadth, E. to W., about 70 m . ; area, about 7728 geo. sq. m. The greater part of the surlace of this province is undulating, broken up only by low hills running N.N.E. to S.S.W. To the E. rise, in unconnectell groups, the low serras de Mamed, de Portalegre, de Ossa, de Evora, and Mont Muro, rendered picturesque by stecp cliffs, and by the numerons ruins and fortifieations with which they are bedceked. To the W., the hills sink into broad plains (eampos), which, before reaching the sandy coast, are traversed by isolated ridges of rock; to the S., towards Algarve, they attain the height of 4000 ft . The hills are composed mostly of saidstone and graywacke schist, and give rise to no streams of importance; the prineipal rivers of the prov. rising in Spain, as the Cuadiania in the S., and the Tagus in the N. Of the streams that are purely Portuguese may be named the Sado or Saldao, and the Zetas, and their affluents. The elimate in the S. and W. is hot and dry ; and the country is compesed of plains covered with brown heath, without tree or bush, but here and there varied by marshy tracts. Agricnlture, in these localities, is little attended to, the heaths serving chicfly to feed sheep and goats. In the E. the valleys are very truitful, and the hills grow fine wood. The principal cereals enltivated are wheat and barley, and, next to them, rice and maize; of all of whieh a considerable quantity is exported to Lisbon and elsewhere. For this abundance of grain the inhabitants of Alemtejo are in no way indebted to their own agricultural industry or skill, both of which are in a very low state, but wholly to the riehness of the productive part of the province. Grapes, olives, citrons, lemons, figs, and other southern fruits, are plentiful ; and in the woots are fonnd the evergreen oak, the cork oak, chestnuts, pines, \&c. The rearing of sheep, goats, and pigs, and the culture of bees, are extensively carried on; cattle, ass, and mule rearing is less attended to. Goorl oil, tolerable wine, wool, and honey, are produced. Game is plentiful. In some localities cloth is woven, and potteryware made; but the mannfactures of the provinee, as a whole, are of little account. Salt is exported. The principal towns are Evora the capital, Portalegre, Elvas, Estremez, Beja, and Mertola. Pop. in 1835, 384,000.- (Real Encyklopädie; IIassel's Portugal; Taboa Geografico Luzitana.)

ALENCON [ane. Alenconium], a th. France, chief place of dep. of the Orne, formerly cap. of the duchy of Alençon; standing on an extensive plain, on the right bank of the Sarthe, near its jmnction with the Briante, $5>\mathrm{m}$. S.S.E. Caen, and 105 m . W. by S. Paris. Of the walls and former fortifications of the town, four gates are all that remain. The streets are in general broad, well paved, and elean. Among the principal buildings are the eathedral, the prefecture, the corn

## ALEPPO

market, the college, and the townhouse, the towers of which last are the remains of the old castle of the Dukes d'Alençon. The town contains a communal college, with an observatory; a Societé d'Emulation; two hospitals, one of them for the insane; a public library of about 8000 volumes, a museum of natural history, and a theatre. Alençon is the seat of considerable manufactures, and of an extended commerce. It was long famed for the manufacture of point lace, called 'pointe d'Alençon,' but this branch of industry, as well as the making of straw hats, for which it was also known, is now much fallen off. The principal mauufactures now are cotton spinning, flax spinning, weaving of cotton, woollen, and linen fabries, tanning, glass making, distilling, and brewing. A kind of hempen and linen cloths made here, styled 'toiles d'Alençon,' are held in high estimation, and nearly 22,000 picees are sold annually. There are some bleacheries in the environs; and the embroidering of muslin ocenpies a considerable number of hands. Perry and cider are manufactured in considerable quantities, the latter being the common drink of the country; and down and quills form staple articles of trade. The district produces abundance of cattle, poultry, and a good breed of horses. Amongst its minerals are iron, granite, and freestone. The species of fine rock crystal, called 'diamants d'Alençon,' formerly found in the neighbouring granite quarries, is now nearly exhausted. Pop. in 1846, 14,388.

Aleoutes. Sce Aleutian Islands.
ALEPE, or Alirt, a tn. and fortress, Malabar, prov. Travancore, IIindoostan, 30 m . S. Cochin; lat. $9^{\circ} 30^{\prime} \mathrm{N}$; lon. $76^{\circ} 25^{\prime}$ E. It is populous, and is the chicf depôt from which the Travancore Govermment exports its pepper, grain, and timber.

ALEPPO, or Maleb-es-Shabha [anc. Chalybon and Berraca], a eity, N. Syria, pash. of the same name, on the small river Koik, 60 m . S.E. Iskenderoon, which is its port, and the nearest point on the Mediterrancan shore, 195 m . N.N.E. Damascus; lat. $36^{\circ} 11^{\prime} 25^{\prime \prime}$ N.; lon. $37^{\circ} 5^{\prime} 23^{\prime \prime}$ E. (r.). It is encompassed, at the distance of a few miles, by a circle of low rocky lills, destitute of trees and scantily watered, but affording good pasturage for sheep and goats. It occupies eight small hills, of unequal height, with their intermediate valleys, and is surrounded by walls 30 ft . high and 20 broad, in which there are seven gates. Its circumference within the walls is about $3 \frac{1}{2} \mathrm{~m}$. ; without, and including the suburbs, about 7 m . Its appearance, on approaching it, is striking and picturesque. Numerous mosques, cupolas, and minarets, the last of dazzling whiteness, crowd on the
of the city, particularly in that called called Djedeide, the streets are well paved; and, in general, better kept than those of any other town in Syria. An ample supply of water is brought into the city by an ancient aquednct, from two springs 8 m . distant. On an oval hill in the N.E. corner of the city, stands the castle of Aleppo, a conspicuous object, surrounded by a broad and deep fosse, $\frac{1}{2} \mathrm{~m}$. in circumference; now filled up with gardens and plantations. A large square tower, beautifully inlaid with a dark-coloured stone, forms the entrance; but the interior is in ruins, two houses only being now habitable. The only other public buildings of any interest are the ancient seraglio, or palace of the pasha, and the mosque of Djami-el-Adclich. The former, now also in rains, was of great extent and magnificence; but the only portion of its splendours now remaining is a gateway of admirable workmanslip, the arch of which is composed of blocks of polished white and black marble. The seraglio was destroyed, in 1819-20, during the siege of the city by Kourchid Almed Pasha. The mosque of Djami-el-Adelich is reckoned one of the most graceful structures of the kind in Syria; it is surmounted by a magnificent dome, and by a tall and elegant minaret. A spiral staircase conducts to the top of the latter, from which a splendid view of the city and surrounding country is obtained. The beautiful portico of the mosque was much injured by the earthquake of 1822. There are two libraries in the city, one attached to the Osmanieh mosque, the other to a college called the Alimedieh; the latter, though sufficiently meagre, is reckoned the best in Syria. Such institutions, however, meet with little encouragement in Aleppo, the taste for literature being extremely limited; neither is education in a better condition.

Previous to the earthquake of 1822 , Aleppo carried on a considerable trade with England; importing thence large quantities of red cloth, \&c.; and re-exporting the Indian manufactures brought overland from Bagdad. Its manufactures were then also very valuable; consisting of shawls, cottons, silks, gold and silver lace, \&c. ; in which, it is said, 12,000 artizans were engaged. But, on the occasion of the calamity alluded to, the town was nearly deserted by its surviving inhabitants, and its trade ruined. Both the latter and former, however, have considerably improved since; and Aleppo still retains, or has regained, its ancient reputation for the excellence of its silk stuffs, with gold and silver thread, and its flowered and striped cottons; in the manufacture of which about 4000 looms, and nearly 5000 persons, adults and children, are employed. There are, besides, numerous soap, dyeing, and print works. Its trade with England las also revived, 5000 bales of British nanufactures being ycarly imported; while its caravan trade with the interior is likewise rapidly improving; the merchants finding they can now be supplied in Aleppo with all they want. Considerable quantities of wool and silk are exported to France and Italy; of the former, 2568 bales were exported in one ycar lately, and 179 of the latter. The retail, or shop trade, however, does not seem to be very vigorous, owing in part, perhaps, to the smallness of capital employed in it; the aggregate amount of which, according to Dr. Bowring, does not exceed $£ 20,000$ sterling.

The celebrated gardens of Aleppo, nearly 12 m . in length, are sitnated to the S.E. of the city; but, though much prized by the natives, they have few attractions for Europeans; being subdivided and enclosed by low stone walls, and exhibiting little of cither taste or skill in management or arrangement. The trees are, for the most part, crowded close together, with little regard to symmetry; while the kitehen and flower gardens, of which the whole is a compound, are undistinguished by the intervention of parterres or grass plots. Close to the city are many extensive quarries, from which is obtained a white gritty stone, easily cut at first, but becoming indurated after exposure for some time to the air. Of this stone all the houses are built. The climate of Aleppo is healthful; but is, in suminer, excessively hot, though considerably moderated by the W. winds which then prevall. In winter, there are considerable falls of snow. The eartliquake already alluded
to, by whiel Aleppo was nearly destroyed, oceurred on August 13, 1822. It lasted only 10 or 12 secouds; but, in that short space of time, not only Aleppe, but a number of other towns in Syria, were converted into heaps of stones and rubbish, and 20,000 human beings destroyed. Aleppo was a place of considerable importance in very remote times; having risen on the destruction of Palmyra. From that period, its prosperity continued to increase until the discovery of a passage to India by the Cape of Good llope, when it began to decline. Its pop. in 1795 was, it is said, 250,000 , while it is not now more than 60,000 , or 65,000 ; of which 16,000 to 18,000 are Christians. Col. Chesncy gives a somewhat different account of the population. He says that it was formerly 150,000 , and that it is now reduced to 100,000 ; of which 66,500 are Turks, 3000 Armenians, 19,000 Greeks, 4500 Jews, 5000 Maronites, 2000 Syrians and Aleppines. The language usually spoken here is Arabic.-The Pasinilic of Aleppo oceupics the N. extremity of Syria, and extends southward from the borders of Asia Minor at the foot of the Taurus, to Damaseus, Tripoli (in Syria), and the confines of Arabia Deserta; the Mediterranean Sea and the Bays of the Orontes and Iskenderoon being its W. limits, and the Euplrates its E. Its surface contains about $7372 \mathrm{sq} . \mathrm{m}$. The W. side is mountainous; on the E., the hills are lower and more undulating. The soil in general is excellent, and the climate good.-(Dr. Bowring's Report on Syria; Paton's Modern Syrians; Jour. Roy. Gco. Soc.; Survey of the Euphrates and Tigris, by Lieut.-Col. Chesney; \&c. \&c.)

ALER1A, a small decayed vil. Corsica; once a considerable city, and the see of a bishop. It is now remarkable ouly for the ruins of the Roman colony of Aleria.

ALESEINA. See Aleksin.
ALESSANDRIA della Paglia, or Alexandria, a tn. Sardinian States; chicf town of the gov., of the prov., and of the military division of the same name; sent of a council of justice under the jurisdietion of the senate of Turin, 48 m. E.S.E. Turin; on the right bank of the Tanaro, a little above where it is joined by the Bormida. The town is fortified; has a citadel; and is the seat of a bishop, suffragan to Vercelli; and the residence of a chief rabbi. It has a royal college and theological seminary, a cathedral, 12 parish churches, three hospitals, an orphan asylum, a gymnasium, very extensive barracks, and a theatre. Manufac-tures:-Linen, silks, cloths, and wax candles. Alessandria is considered to be one of the strongest towns in Europe, both from its citadel, its outer works, and from the sluiees of the Tanaro, by which the surrounding country can be inundated. It is the bulwark of Piedmont; and was founded in the 12th century, under the auspices of Pope Alexander III., the patron of the Guelfs, for the purpose of defending N. Italy against the Emperor Frederick I. and the Ghibellines. In the year 1707, it was ceded, by the Emperor Josepl. I., to the Duke of Savoy; was taken by the French during the war of the Spanish suecession, and retaken by Prince Engene; in 1796, it capitulated to Bonaparte; on June 25, 1799, it fell into the hands of the allied Russian and Austrian army ; and, after the battle of Marengo, was restored to the French, who kept possession of it till 1814, when it was restored to the King of Sardinia. The battle of Marengo was fought a little to the E. of the town, on June 14, 1800. Pop. 36,000; of whom 550 are Jews.The prov. is rich in pastures, and produces large numbers of cattle. The fields, in general, are surrounded by ditches of water, on whose banks grow inulberry, poplar, and walnut trees. The climate is temperate ; but the siroceo is occasionally felt. Wheat, maize, wine, silk, fruit of fine quality, madder, wood, and the finest flax of Pielmont, are produced in the province. Wood is very scarce. Pop. 99,556 .The gov. is composed of the provinces of Alessandria, Asti

Cassali, Acqui, Voghera, and Tortona; whose united pop. is 547,662

ALESSANO [Alexanum], a tu. Naples, prov. Otranto, district of, and 21 m . S.E. from Gallipoli; built on the ruins of the ancient Leuca. Residence of a bishop. It has an hospital, and some manufactories of muslins and cotton stuffs. Pop. 1745 .

ALIESSIO [anc. Lissus, of the Romans; Akrolissus, of the Greeks], a th. Turkey in Europe, prov. Albania, district or pash. Scutari, on the left bank of the Drin, about 5 m . from its embouchure in the gulf of that name; situated in a plain, planted with olives. It contains a bazaar and a fortress -the latter small, and in bad condition, and containing only the barracks, a few Christian families, and a mosque, in which is buried Scander-beg, or Iskander-beg, a celebrated Albanian prince and wartior, who flourished in the 15 th century. Beyond the fortress is an extensive suburb, ealled Varoshi, a thriving place inhabited by Turks. Alessio is the see of a bishop dependent upon that of Durazzo, from which it is 25 m . N. Some traces of the ancient Lissus are still visible.-(Jour. Roy. Geo. Soc., vol. xii.; Guibert, Dic. Geo. et Stat.)

ALE'T, or Aletir [Latin, Alecta], a small tn. France, dep. Aude, $6 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. Limoux, and 37 m . N.W. Perpignan; upon the right bank of the Aude, in a beautiful valley abounding in fruit, at the foot of the Pyrences. It las four mineral springs, three of them cold; and its baths are celebrated. In the environs are tile works, and copper and iron mines. Pop. 1320.

ALEUTIAN ISLANDS [from the Russian word Aleut, a bold rock], an extensive range of small islands belonging to Russia, in the N. Pacific occan, between Cape Aliaska, in N. America, and the peninsula of Kamelatka, in Asia; extending from lon. $163^{\circ} \mathrm{W}$. to $166^{\circ}$ E., or for about 600 m .

They were formerly divided into three grouns- the Aleutian, Andrenovian, and Fox Islands; but are now all comprehended under the name Aleutian. The first known of these islands was discovered, in 1741, by Beliring, whose name it bears, and who died there; the others were discovered, at different periods afterwards, by various Russian adventurers, who sought these regions in quest of furs, particularly that of the sea otter. They were subsequently visited by Captain Cook in 1788, who determined their exact positions. Those nearest Kamchatka are Behring's and Miednoi, or Copper Islands; the first situate in lat. $55^{\circ} \mathrm{N} . ; \operatorname{lon} .166^{\circ} \mathrm{E}$. Southeast of the latter are the small islands of Attoo, Semitshi, and Agattoo, between lat. $54^{\circ}$ and $55^{\circ} \mathrm{N}$. The Andrenovian group, or central part of the chain, lies between lat. $52^{\circ}$ and $54^{\circ} \mathrm{N} .$, and comprchends the islands of Kiska, Amchitka, Tanaga, Kanaga, Adagh, Atcha, and Amlia, with a number of smaller islands. Of the group nearest Cape Aliaska, called by the Russians Syssie Ostrova, or Fox Islands, the principal are Oomnak, Oonalashka, and Oonimack. Beyond these, to the N.E., lies the large island of Kodiak, generally considered as belonging to the group called Schumagin's Islands, on which there is a village of about 400 inhabitants. The largest of the whole eluain are Behring's island and the island of Oonalashka.

The Aleutian islands are of volcanic formation; and, in a number of them, there are volcanoes still in active operation. At present, there aro upwards of 24 in this state, varying from 3000 to 8000 ft . in height. In 1796, a volcanie island, now called Jomuna Bogoslowa, rose in the middle of the line, or
chain, of islands. It was first observed after a storm, at a point in the sea from which a column of smoke had been seen to rise. Flames afterwards issued from the new island, accompanied by a frightful earthquake. Eight years after its emergenee, it was found, in some places, to be so hot that it conld not be walked upon. It is now several thousand feet high, and 2 or 3 m . in circumference, and is still increasing in size. Earthquakes, also, of the most terrific description, are of frequent occurrence in this region; agitating and altering the bed of the sea and surface of the land throughout the whole tract. The appearance of the islands is singularly dismal and barren; lofty walls of black lava rise perpendicularly from the sea, and beyond, steep mountains of rock shoot up to the clouds; while the coasts are so encompassed with reefs and breakers as to render navigation amongst them exceedingly dangerous. The soil is, in general, very poor; but, in some particular spots, esculent vegetables thrive well ; and some of the most E. of the islands produce potatoes, and maintain considerable munbers of domestic cattle, althongh the latter do not generally thrive on these islands. Springs of water are numerous; and valleys clothed with a rich herbage, and capable of supporting herds of cattle throughout the year, are to be met with in some of the islands, especially Oonalashka. Bears, wolves, beavers, ermines, and river otters, are plentiful ; while the Fox Islands, as their name implies, abound in foxes-blaek, red, gray, and brown. The kinds of fish most usually caught are salmon and halibut; the latter frequently of immense size. Seals and whales are abundant on the coasts.

The inhabitants-who scem to be a mixed race between the Mongolian Tartars and the North American Indians-are below the average stature, but stont, and well proportioned. They have a round face, small eyes, a brownish complexion, a flat nose, and black hair. In the females, the complexion is of a lighter shade, and the hair approaches to brown. The dress, which is common to both sexes, consists of a frock of seal skin, fastened round the neek, and descending below the knees. This simple dress is often ingeniously sewed and adorned with glass beads, white goats' hair, and small red feathers. In their native state, they pierced the lower lip, the nose, and the ears, to suspend in them bones or crystal rings. The women wore around the neck, as well as the hands and feet, chaplets of variegated stones; and more espeeially, when they could procure it, amber. They also tatooed the body, adorning it with various figures; and, when the female belonged to a family of distinction, depieting on her person a symbolical representation of the deeds by which they had aequired renown-the number of enemies slain, or beasts of prey destroyed. The most striking feature in the constitutional temper of the Aleutians is a kind of passive quiescence and patient enduranee, amounting almost to insensibility. Left to themselves, they will pass whole days in absolute idleness, seareely opening their lips to give utterance to a single syllable, or making the least exertion to satisfy the cravings of appetite; and, on the other hand, when placed under a master, they will toil on at any task which may be appointed them, slowly, indeed, but without interruption, until it is accomplished. Instances are even given in which they have carried this implicit obedience so far as to sacrifice their lives in endeavouring to perform impossible tasks, whieh senseless or tyrannical masters had imposed upon them. In the ordinary relations of life, the Aleutians exhibit much that is amiable. Parents are treated with great respect and deference, and children are the objects of the fondest affection. The husband is addressed by the wife as father, and he applies to her the name of mother. The whole family appear to cling to each other, and take a deep interest in whatever affects their common honour and welfare. To this happy state of domestic life there must, however, be numerons exceptions. The existence of polygany, and the still more monstrous practice of polyandry, seem almost inconsistent with the very idea of what is usually understood by a fanily. As might be anticipated, from the passive qualities of the Aleutians, they are not remarkable for their courage. Provided the destruction of their enemy can be accomplished, it seems absolutely indifferent to them whether it be by force or stratagem. The chief employments are luinting and fishing, and in both they show great dexterity. They will face the bear simply armed with a gun or a bow; and have even been known, when these
weapons had failed, to encounter and overcome him with a knife. But the sca seems to be their proper element. In the pursuit of the whale and the seal, they are equally sliilful and intrepid. The boat which they employ is a kind of canoe, called a baidur, consisting of a frame of wood or bone, covered with seal skin. It is long and narrow, in general holding only a single person, whose bust rises out of a circular hole cut in the skin, which stretehes from gunwale to gunwale, like a deck; and is so light, that a man can easily carry it. Fleets, consisting perhaps of a 100 of these baiulars, each managed by double paddles about 8 ft . long, will venture 50 or 60 m . to sea, and encounter all the perils of a stormy ocean, in quest of the sea otter. While the men are thus employed, the women occupy themselves in covering canoes, and making mats, baskets, and other articles of straw, which display much neatness and dexterity. The food in common use is of the coarsest description - whale's flesh, almost in a putrid state, and fish often of similar quality. Could anything add to the disgust which the very idea of such a meal inspires, it would be the filthy manner in which it is cooked; both the place and the utensils being allowed to remain in the dirtiest state imaginable. Notwithstanding of the grave and almost demure manners of the Aleutians, they are not strangers to amusements, and even theatrical representations. They have both songs and dances, and a kind of dramas, in which some striking ineident connected with their history is exhibited. The popularity of these is so great, as to have more than once collected crowds, which caused a famine.

The religion of the Aleutians was a ramification of Sham-anism-a superstition prevalent throughout the N. of Asia. They acknowledged a higher Deity, or Creator, but paid no worship to him, under the idea that he had left the charge of the world to certain good and evil spirits, called Kougalih, and Aglikaïakh. They worshipped the elements, and the heavenly bodies, particularly the sun and the moon, which were supposed to have great power in hnman affairs; the sun, when blasphemed, striking the blasphemer blind by its rays; the moon killing him by the stones whieh she throws down upon him; and the stars compelling him to count them-a task, the performance of which cost him his reason. They had neither temples nor idols; but near every village, on a roek, or other eminence, was a supposed holy plaee, which the old men alone, and the priests, or shamans, were permitted to visit. On these, with mysterious ceremonies, they deposited offerings, consisting usually of the skins of wild beasts, or the feathers of aquatic birds. Amulets, or charms, were also in general use, some of them being supposed to secure their fortunate possessor against all aceidents, and bring him off scatheless and victorious from every combat. The most effectual of these talismans was a girdle, composed of cords or grass, with a particular arrangement of knots. In regard to the immortality of the soul, and the origin of the human race, the views of the Aleutians must have been originally derived from a Divine source. The strongest proof of their belief of the former, is derived from one of the most horrid of their practices. On the death of a chicf, his slaves were saerificed on his tomb, that they might go and continne their serviecs to him in the other world. The general idea was, that the disembodied spirit returned invisible to its family, whom it accompanied for good or evil in all their excursions. It is even said to have been invoked by them, particularly when engaging in war, to avenge some insult that had been offered to the family. The original form of government was patriarchal. Every village, which, from the frequency of intermarriage, in faet formed only one family, was governed by its toion, or chicf; and a union of villages, under some superior toion, on whom valour or wisdom conferred the dignity, formed a kind of state. Under the dominion of Russia, all the primitive institntions and habits of the Aleutians have been greatly modified, and many of them have rapidly disappeared. Unquestionably, the best virtnes of savage life have thus been lost; and one of the first effeets of civilization was the introduction of its worst viees, and one of its most disgusting diseases. But these are partly compensated by numerous blessings. The Aleutians have already aequired some skill in mechanical arts. Many of them have learned to read, and actually pernse the Scriptures in their own tongue. Their abandonment of Shamanism for the religion of the Greek chureh, aud the deep interest wbich
they seem to take in its ritual, is probably much less the effect of conviction than of deference to the authority of their masters; but the fact that there are already four chnrehes in the islands, thronged by native worshippers, that the vindictive spirit which at one time prevailed, and made family fends implacable, has in a great measure disappeared, gives reason to hope that the Aleutians, instead of being regarded as savages, will, at no distant period, be entitled to claim a place among civilized men.-(Erman.)

ALEXANDER ISLAND, a small ish. in the Antaretic Ocean, in about lat. (N. point) $68^{\circ} 51^{\prime}$ s.; lon. $73^{\circ} 10^{\prime} \mathrm{W}$.; discovered by Bellinghausen in 1821 , but not approached nearer than 25 to 30 m ., on account of the surrounding ice.

ALEXANDERSBAD, mineral springs and baths, Bavaria, prov. Upper Franconia, 17 m. N.E. Bayreuth; on the E. side of the Fichtelgebirge, near the village of Sichersreuth, upwards of 1900 ft . above the sea level. From its mountainons situation, the elimate is somewhat rude. The water springs from granite, limestone, and mica schist; is clear, has a pleasant chalybeate and somewhat sharp taste, and has a temperature of about $49^{\circ}$ Fah. It is an earthy, saline, chalybeate spring, containing a considerable quantity of carlonic acid gas, and is esteemed a good restorative and tonic. The water is used both externally and internally, and the baths are a good deal frequented.

ALEXANDRETTA, Iskexderoon, or Scanderoon, a small seaport tn . Syria, district Alexandretta, S.E. coast ot the Gulf of Scanderoon ; lat. $36^{\circ} 35^{\prime} 18^{\prime \prime}$ N. ; lon. $36^{\circ} 9^{\prime}$ E. (r.) The houses are in general extremely mean looking; but some recent erections have given a rather more respectable appearance to the town. These include the residence of the English vice-consul, and some granarics built by lbrahim Pasha. The town is surrounded by marshes, which render it very unhealthy; but it is now less so than formerly, in consequence of one of the largest having been thoroughly drained some years ago. The others, being all above the level of the sea, might be very easily drained, to the great advantage of the port. The latter consists of a fine bay, running in S.E. from the gulf, protected from all winds, and capable of containing in security from 30 to 35 sail. Being the natural port of Aleppo, and of all N. Syria, the greater portion of both British and foreign imports and exports pass through it. The direct importations consist principally of grain, rice, and salt. 'The staple articles of export are galls, silk, cotton, and dips, or beshmet, made from grapes into a consistence resembling honey, and which forms a great article of food among the natives of the country. The inhabitants of Alexandretta are about half Grecks and half Turks and Fellahs.

ALEXANDRIA, an anc. city and seaport, Egypt, about 1.4 m . W. of the most W. mouth of the Nile, on the ridge of land between the sea and the bed of the old Lake Mareotis; lat. (Point Eunostos) $31^{\circ} 11^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $29^{\circ} 51^{\prime} 5^{\prime \prime}$ E. (r) The ancient city of Alexandria was founded 332 years 1.C., on the site of a small town called Racôtis, by Alexander the Great, who gave it his own name. As the site of a great commercial city, the situation was well chosen, presenting a probability, afterwards fully realized, of uniting the traffic of Enrope, Arabia, and India. Of the ancient city, the plan of which was drawn out by Dinocrates, a celebrated architect of antiquity, little else than a wide ecries of rnins now remains. It stood a little to the S . of the present town, and was of great extent, having a circumference of 15 m ., with a pop. of 300,000 free inhabitants, besides, at least, an equal number of slaves. Its magnificence was so remarkable, that the Romans ranked it next to their own capital ; and Amer, general of the caliph Omar, in his letter to the latter after the capture of the city, A.D. 640, thus speaks of it:-" 1 have taken the great city of the West. It is impossible for me to enumerate the variety of its riches and beanty, and I shall content myself with observing, that it contains 4000 palaces, 4000 baths, 400 theatres, or places of amusement, 12,000 shops for the sale of vegetables, and 40,000 tributary Jews."-(Gibbon.) The city was regularly built, and tra versed by two principal streets, each 100 ft . wide, and one of them 4 m . long. One-fourth of the entire area on which it was built, was covered with temples, palaces, and public buildings. Under the Cæsars, it attained an extraordinary degree of prosperity; large fleets of merchant vessels traded with India and Ethiopia, and returned laden with the
most valuable productions of these countries, to be afterwards distributed through Egypt and other lands. An industrious population improved the gencral welfare. The inhabitants have been accused of an extraordinary irascibility, which led, on the slightest occasions, to disturbances of the most serious character; but it is more than probable that this proneness to tumnlt and riot had its origin with, if it was not confined to, the idle, mercenary troops, of which great numbers were always quartered in the city, and who were ever, says Wilkinson, more ready to govern than obey.
The weaving of linen, and the mannfacture of glass and papyrus, were the chief occupations of the industrial population of the ancient city. The most remarkable remains of the Alexandria of former times are the famons obelisks, known by the name of Cleopatra's Necdles. These obelisks, of which there are two, are of red granite, and abont 70 ft . high, with a diameter at the base of about $7 \frac{1}{2} \mathrm{ft}$. One only is now standing; the other lying prostrate at the foot of it.* Pompey's, or, more properly, Dioclctian's pillar, stands on an eminence about 1800 ft . to the S . of the present walls. Its total height is 98 ft .9 in . ; circumference, 29 ft .8 in ; diameter at the top of the capital, 16 ft .6 in . In a hollow space to the S.W. of this column, is the site of an ancient circus, About a mile W. of the pillar, and without the walls of the ancient city, are the catacombs, now in a ruinous state, but still sufficiently impressive. They are of great extent, and present some beautiful specimens of architecture. Fragments of columns, and other ruins, scattered over a wide space, with traces of walls, vestiges of public baths, and noble edifices of various descriptions, all bear evidence of the grandeur and magnificence which had characterized this great city of the East.

The modern city, though the scene of much bustle and gaiety, has no pretensions to any of the splendours of its predecessor ; if we except, perhaps, that picturesque and distinguishing feature of Eastern cities-the minaret, some of those of Alexandria being of great elegance and beanty, as will be seen from the accompanying woodeut. The streets

MINARETS AT ALEXANDRIA.-From lloreau, Panorama de l'Ekypte.
in the Turkish quarter are narrow, dirty, and irregular; the houses are, in general, from three to four storics in height, and are substantially built, but have a dull monotonous ap-

* This obelisk, which had been entirely buried in the sand during the erection of the new fortifications round the city, has been recently brought to light again. It belongs to the British Government, to whicb it was presented by Mehemet Ali.

## ALEXANDRIA

pearanee, from want of windows to the streets. In the Frank quarter, which has greatly increased of late years, the town wears a more lively and agreeable aspect. The houses are elean, and brilliantly whitewashed, and the principal street is the finest and largest in the eity. In the Frank quarter is a large and elegant square, called the Pierra Grande, in which are the principal hotels, and most of the consulates. There is a small theatre in the city, but no regular corps dramatique, the aetors being all amatcurs and Europcanso During the earnival, the city beeomes very gay with public and private balls, the former at the Cassino, and with other festivities.

The streets are at all times crowded with camels, mules, and asses, whose drivers maintain a constant din, calling on passenger 3 to keep out of the way, to which are added the vociferations of jugglers, mountebanks, and hawkers. The mixel eharacter of the population, however, and the great variety of costume that meets the cye, give to the streets a lively and interesting appearance, in dcspite of their want of all other attractions. Shops are numerous, and well supplied with all sorts of European goods, tastefully arranged and displayed. There are few bazaars, but they are amply provided with cloth, tobaceo, sherbet, and vegetables. The only objects of interest in the town are the Pasha's palace and the arsenal; the former is not remarkable for splendour, either external or internal-with the exception of a few of the apartments, whieh are itted up in good taste, simplicity being their prevailing eharacteristic. The arsenal, whieh was begun in 1827 , occupies a site of 60 ac ., with a good frontage to the sea, It is provided with slips for line-of-battle ships and frigates, but all the anchors, cables, tanks, and ordnance used are brought from England. Several educational and judicial institutions in the eity, mark the liberal policy of Mehemet Ali. Amongst these are two sehools-a preparatory school with 800 pupils, and a primary school with 200. Commereial differenees are settled by a national tribunal of commerce, one of which is at Alexandria, and another at Cairo. There is also a board, ealled the commission of ornament, composed of Egyptians and Europcans, for the promotion of eleanliness and general order, and propriety in the erection of new buildings, which cannot be begun without the consent of this body. The commission has power to remove all nuisances affecting the publie health, and has already done much for the city in the way of ventilation. The exemption, however, of church lands, or property belonging to mosques, from all liabilities of any kind, even the interference of the sovereign not excepted, has been found a great hinderance to progress of improvement. There is a naval hospital in the city, intended for the special benefit of that serviee, but to which other persons are admitted on an order from the governor. There arealso a school for the marine, and a board composed of naval officers, for examining into the merits of candidates for appointments in the navy. The most remarkable evidence, however, of Mehemet Ali's liberality of sentiment, is to be found in the cireumstance of his having lately granted a plot of ground in Alexandria, for the site of a Protestant clapel (begun to build in 1847), for the use of the British community there. There is a slave market in the town, but it is not always open; and, in such cases, the slaves are paraded through the streets, and are stopped and examined like beasts of burden.

Alexandria has two ports, one on the E. side, called the New, or Asiatic liarbour ; the other on the W., ealled the Old port (ane. Eunostos). The entrance to the latter is difficult, there being nany shoals on which there is not sufficient water to float vessels of large size, and firstrate line-ofbattle ships are obliged to take out their guns, to enable them to enter with safety. Once in, however, they have good anchorage, with ample depth of water. The deepest part,
due W. and due N. of the catacombs, is from 10 to 11 fathoms; within 200 ft . of the shore, it is from 4 to 6 fathoms: and immediately under the town, a cable's length off, 3 and 4 fathoms. The Old port might be made one of the finest in the world; and if the improvements which have been going on for some time be continued, it is probable it will become so. The New harbour is greatly inferior to the latter, being much less, with a foul and roeky bottom, besides being exposed to the N . winds.

The trade of Alexandria is considerable. The principal articles of export are cotton, beans, pease, rice, wheat, barley, gums, flax, hides, lentils, linseed, mother-of-pearl, sesamum, senna, ostrich feathers, \&c. The chief imports from Great Britain are manufaetured goods, coals, iron goods, olive oil, indigo, earthenware, hardwares, sugar, cloth, drugs, machines, liquors, pitch, \&c.

The total exports for the following years, were:-

| 181-3................1,801,96 | 1850.............. £3,153,576 |
| :---: | :---: |
| 1817............. 2,434,249 | 1851........ .... 3,258,046 |

| 1819............ 2,030,56i | 1833.............. 3,472,000 |

The imports in $1847,18.52$, and 1853, amounted to-1847, $£ 1,393,406 ; 1852, £ 1,714,743 ; 1853, \mathfrak{2} 2,670,000$.

Great Britain, France, and Anstria are the largest impor ters from Alexandria. In 1853 the value of the goods they received from that port were:-Freat Britain, $£ 1,787,546$; France, £491,000; Anstria, £389,000. The same year Alexandria inported from Great Britain goods to the value of $£ 1,153,000$; France, $£ 242,000 ;$ Austria, $£ 310,000$.

The following are the quantities of the prineipal articles exported to Great Britain in the years 1850-1853:-

The nnmber of vessels that left the port of Alexandria with cargoes in 1852 , was 1708 , of which 382 were British.

The monopolizing spirit of the late l'asha, Mehemet Ali, operated most ruinously for the country, threatening its general trade with entire annihilation. In 1842, he locked up in his own stores all the cotton in Egypt, and from these stores alone was the demand of foreign countries supplied, amounting, in that year, to 110,296 bales. Not less injurious to the interests of the country than his own immediate monopolies, was a practice, largely adopted by Mehemet Ali, of farming the privilege of selling particular commodities, such as wine, spirits, vinegar, salt, \&c., the price of such privilege leing 1200 purses, or $£ 6000$. In 1838, a treaty was entered into by Great Britain with Mehemet Ali, wherein a great many impositions and exactions, affecting the trade between the two countries, were removed or modified, and the right of selling trading privileges resigncd. But, in practice, matters remained much as they were, the lasha evading or misconstruing every clause except those favourable to himself. Since the death of Mehemet Ali, a more liberal and eulightened policy lias been pursued. Alexandria possesses a considerable transit trade, in consequence of being the principal station on the Overland route from Europe to India. Steamers sail to and from England, Marseilles, Trieste, and Constantinople, regularly, and goods, passengers, and mails pass thence to Cairo, then across the desert to Suez, and thence by the Red Sea and Arabian Sea to Bombay, Calcutta, China, \&e.

The climate of Alexandria is, on the whole, salubrious, and was considered eminently so by the ancients; but plague is of frequent occurrence, and singnlarly destructive. In March, 1835, 4250 persons died of plague, besides many whose deaths were not recorded, out of a population not exceeding 30,000 . Two and twenty years previous to this, namely, in 1813, 7000 persous are said to have died of plague, out of a population then not more than 12,000 . The source of these dreadful visitations is to be tound, chiefly, in the miserable condition of the lower class of the inhabitants, who live in extreme poverty and wretehedness, filthy in their persons and their abodes. 'The most strange, the most disgusting sight in Alexandria,' says Hemniker, 'is this-the eyes and months of all the children are literally embanked with dlics. Their mouths are beset as if they were the mouths of honey bottles; their eyes are too filtly for description.'

The population, as elsewhere remarked, is mixed, consisting of native 'Turks and A rabs, of Armenians, Greeks, Smyrniotes, Syrians, Moghrehins, Maltese, Jews, and Europeans, the foreigners greatly outnumbering the natives. There is liitle social intereourse between the natives and the Franks, in eonsequence of each adhering to their peeuliar habits and customs; these, being irreconcilable, have the effect of keeping them almost entirely apart. The women are deseribed, by a modern authoress, as being generally not merely ugly, lnt hideous.

The municipal govermment of the city, at the licad of which is a governor, is good in itself, and well conducted, securing
the most perfect order, and freedem frem riot and crime. The eity is divided into quarters, each of which is presided over by a sheikh, who is responsible to the gevernor. There is also a chief police magistrate, called the bashaga, whose duty it is to maintain the quiet of the eity. The military act as police, having orders to take all riotous and disorderly persons into custody, and have them conveyen to one of the numerous guard-houses distributed all over the city. If the offender be a native, he is immediately punished; if a Frank, lie must be sent to his consul, to be dealt with according to the laws of his own eountry.

Ancient IIistory.-The first inhabitants of Alexandria were a mixture of Egyptians and Greeks, to whom must be addel numerous colonies of Jews transplanted thither in 336, 320, and 312 B.c., to increase the population of the eity and country, who, becoming familiar with the Greck language and learning, were called Ifclenists. It was they who, by order of Ptolemy Philadelphus, made the well-known Greek translation of the Old Testament under the name of the Scptuagint. Under the liberal sway of the Ptolemies, Kings of Egypt, Alexandria attained to great eminence as a seat of learning, beemming not more famous for the extent of her commerce and wealth than for her philosophy and literature. The first ealamity that befcll the city was inflieted by the tyrant Ptolemy Physcon, who, without provocation, let his guards loose on the inhabitants, with permission to them to rob and murder at pleasure; the eonsequence was the almost entire depepulation of the city. Physcon had afterwards influence sufficient to induce strangers from the neighbouring countries to take up their abode in Alexandria, and it was thus soon again repcopled; but on the new inhabitants making some complaints of his tyramy, Physcon repeated his former atrocity, ordering that all the young men in the eity should be put to death, which order was carried into effect. The next event of importance was the capture of the city by Julius Cæsar, after an obstinate resistance by the Alexandrians. The city scems after this to liave fallen into decay. It was restored by Adrian A.D. 141, but was again depopulated A.D. 215, by Caracalla, who, having been made the subject of some satirical eflinsions, ordered a general massacre of the inlabitants without distinetion of age or sex. Caracalla having been murdered shortly after, the eity soon recovered its former splendour. Towards the middle of the sixth century, Amron, a general of the Caliph Omar, took Alexandria by storm, after a siege of 14 months, and with a loss of $23,000 \mathrm{men}$. From this period it fell into deeay, till its ruin was completed by the discovery of the passage to India by the Cape of Good IIope.

The most remarkable objects in ancient Alexandria were the Pharos-one of the seven wonders of the world, and the libraries. The former, which was used as a lighthouse, was a square building of white marble. It was built by order of Ptolemy Philadelphus. The site of the ancient Pharos, which is no longer in existence, is oecupied by an old lighthouse.

The first of the famous libraries of Alexandria was estab. lished by Ptolemy Soter, as was also the Museum, a sort of academy, in which men of learning and seience pursued their inquiries. It was maintained at the public experise. At the time of the second Ptolemy's death, the library contamed 100,000 volumes, afterwards increased to 700,000 ; of which number, 400,000 were in the library of the museum, in the quarter of the eity ealled the Bruchion; the remaining 300,000 were in a library attached to the temple of Serapis, a structure of surpassing beauty. The former were accidentally destroyed by fire during the war with Julius Cosar, and the latter by command of the Caliph Omar, whe, in ordering their destruetion, said, that if they agreed with the Koran, they were useless, and need not be prescrved; if they did not, they were pernicious, and ought to be destroyed. And thus was annihilated the most magnificent collection of books in the world-a loss which the learned have not yet ceased to deplore. 'The population of modern Alexandria,' says Wilkinson, 'had till latterly been on the decline, and is reported to have been reduced at one time to 6000 ; but, under the goverument of Mchemet Ali, it had greatly recovered, and is computed at present to amomit to 80,000 , including the garrison of 6000 or 8000 men, and the sailors of the fleet, reckoned at 12,000 ; leaving 60,000 for the population of the place.'

ALEXANDRIA, a tn. and district of Russia in Europe; the former on the left barik of the Inguctz, gov. Kherson, 175 m . N.N.E. from the town of that name. It is the cap. of the district, and contains a pop. of 2500 . -The district is extensive, but heathy and sterile, excepting the banks of the rivers, which are more fertile. Pop. about 21,000 .

ALEXANDRIA, the name of various townships and other places, U. States, America, the principal of which is Alexandria, a scaport, and cap. of Alexandria co., a district of Columbia, 7 m . S. Washington. It is finely situated on the right bank of the Potomac ; is regularly laid out, the streets crossing each other at right angles. It has considerable shipping, there being sufficient depth of water to admit vessels of the largest class to its wharfs; the tonnage, in 1840, amounting to 14,470 ; the principal exports being wheat, flour, maize, and tobacco. It enjoys inland communication by a canal, which joins the Chesapeake and Ohio Canal at Georgetown. Pop. in 1840, 8459.

ALEXANDRIA, a pleasantly-situated vil., Scotland, co. Dumbarton, on the W. bank of the Leven, $4 \mathrm{~m} . \mathrm{N}$. Dumbarton. The inhabitants are nearly all employed in the extensive cotton printing works in the vicinity. There is a spacious church here, and an Independent chapel. Pop. 3039.
aLEXANDRINA LakE. See Australia.
ALEXANDROVKA. See Aleksandrovka.
ALEXANDROVSK, a tn. Russia in Europe, gov. n $饣$, and 6 m . S.E. St. Petersburg, on the river Neva. There is a royal villa here, with a magnificent garden; a sugar refinery ; a large tannery; and, at a short distance from the town, the imperial manufactory of porcelain.

ALEXISBAD, a resort for mineral waters, in Anhalt Bernburg, 2 m . W. Harzgerode, in the valley, and on the left bank of the Sclke. There are here three wells, named, respectively, Selkenbrum, Alexisbrunn, and Ernabrunnall of which are chalybeate; the first being by far the strongest, and only used externally; the other two are used internally.

ALEYBEH, a vil., W. Africa, near the left bank of the Senegal ; lat. $16^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $14^{\circ} 4^{\prime} \mathrm{W}$. It is a large and populous place. The people are a spirited race, and often at war with the Moors and neighbouring tribes.-(Raffenel's Afrique Occilentale.)

## ALEYOR. See Alayor.

ALFAQUES PUERTO DE LOS, a small port, Spain, prov. Catalonia, on the Mediterranean, and belonging to Tortosa, with which it is connected by a navigable canal, from 15 to 20 ft . in depth; lat. $40^{\circ} 37^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $0^{\circ} 35^{\prime} \mathrm{W}$. (r.) The bay in which it lics affords good and safe anchorage, in 3 to 4 fathoms depth, and yields large quantities of salt, which constitutes the principal article of export. There is no good water in Alfaques. The needful supply of this necessary of of life is obtained from the neighbouring town of San Carlos de la Ropita; where, moreover, the custom house is situated.

ALFARO, a city, Spain, Old Castile, prov. of, and 34 m . E.S.E. from Logroño, on the right bank of the Ebro; having six capacious squares, and several wide, clean, and well-paved streets; two handsome churches, and a chapel; a large hospital, three cndowed schools, townhall, prison, a castle, fine barracks, theatre, and extensive storehouses. Manufactures: -Cloth, hats, saltpetre, brandy, and leather; and there are several corn and oil mills at work. The vicinity produces grain, wine, oil, flax, hemp, silk, and abundance of fine fruits. Sheep, goats, mules, horses, and horned cattle, are reared; for the sale of which, and other merchandise, a fair is held in August. Pop. 4084.-(Madoz.)

ALFELD, a tn. Hanover, prov. of, and $12 \mathrm{~m} . \mathrm{S}$. W. from Hildersheim, at the confluence of the Warne with the Scine, which is here crossed by three bridges. It is walled, and has four gates, a massive townhouse, a Lutheran Gothic church, a normal school, and two small hospitals. Some trade is done in linen and yarn; and tile making, lime burning, beer brewing, and tanning, are carried on. In the vicinity, flax and hops are cultivated; and there are corn, oil, paper, and saw mills. Pop. 2709.-(Huhn's Lex. Deutschland.)

ALFOLD, or Awfold, a par. England, co. Surrey; area, 2610 ac . ; on Arun and Wey Junction Canal. Pop. in 1841, 519.

ALFORD, a district and par. Scotland, co. Aberdeen, the former comprising 14 parishes, with a pop. altogether Vol., I.
of 12,091 . It is nearly surrounded by hills and mountains ; is watered by the Don, and has a good climate. The parish contains 8000 Scottish acres, and a pop. of 1037. In this parish, a battle was fought on July 2, 1645, between the covenanting army under General Baillie, and the royalists under Montrose, when the former was defeated. About the middle of the last century, the body of a man in complete armour, on horseback, supposed to have perished in the above engagement, was dug out of a moss in this parish.

ALFORD.-1, A par. and township, England, co. Lincoln ; area, $1410 \mathrm{ac} . ; 24 \mathrm{~m}$. N.N.E. Boston. It has a handsome church, several charities, and two annual fairs for cattle and sheep. A rivulet and a canal traverse this parish. Pop. in 1841, 1945.-2, A par., co. Somerset ; area, 710 ac ; 1 m . S.W. Castlecary, on the river Brue. Pop. in 1841, 90.

ALFORJA, a tn . Spain, Catalonia, prov. of, and 15 m . W. by N. from Tarragona ; built on rising ground, surrounded by old walls, with four gates. It is well and openly built; has some spacious squares, a parish church, some schools, an hospital, a poor asylum, and an excellent fountain. The inhabitants are employed in distilling brandy, and in cultivat ing corn, wine, oil, fruits, and vegetables. Pop. 2230.

ALFORT', a hamlet, France, dep. Seine, about 5 m . S.E. Paris, upon the left bank of the Marne, which separates it from Charenton; celebrated for its royal veterinary school, the largest establishment of the kind in the kingdom, instituted in 1766, having a special library; a cabinct of comparative anatomy, and one of pathology; with hospitals for the sick horses; a botanic garden; chemical laboratory, \&c. Pop. 700.

ALFRETON, a small market tn. England, co. Derby, 12 m . N.N.E. Derby ; supposed to have derived its name from Alfred the Great. The inhabitants are chiefly occupied in the manufacture of stockings and brown earthenware, and in the neighbouring collieries and iron works. The town is irregularly built, and many of the houses are very old. A mile and a half to the W. of the town, the North Midland Railway passes. Pop. in 1841, of tn., 1774 ; of par., 7577.

ALFRISTON, a par. England, co. Sussex ; area, 2120 ac. Pop. in 1841, 668.

ALGARINEJO, a tn . Spain, Andalusia, prov. of, and 26 m. W. from Granada; extremcly well built, with broad streets, and good houses, a handsome square, two churches, several schools, a public granary, numerous fountains, a theatre, and a prison. The inhabitants are employed in weaving, distilling brandy, making soap, expressing oil, and cultivating grain, fruits, and vegetables. Sheep, goats, pigs, mules, and asses, are reared, and game is plentiful in the vicinity. Pop. 4383.-(Madoz.)

ALGARKIRK, a par. England, co. Lincoln; area, 6050 ac. ; 8 ml . N.N.E. Spalding; statue of Edgar, Earl of Mercia, who obtained a victory over the Dancs here in 870, but was slain next day. Pop. in 1841, 754.

ALGARROBO, a tn. Spain, Andalusia, prov. of, and 18 m. E. by N. from Malaga, on rising ground near the coast of the Mediterranean. It is ill built, mean, and irregular ; but has a square, a church with a clock tower, a chapel, and an elementary school. The inhabitants are chiefly engaged in farm labour, mule driving, cotton weaving, and manufacturing earthenware. Pop. 2954.-(Madoz.)

ALGARVE, or Alqarva, a maritime prov., once a kingdom, Portugal, the smallest and most S . of the Portuguese provinces, bounded, N. by Alemtejo, E. by Spain, and S. and W. by the Atlantic Ocean ; 90 m . in length, about 20 m . in breadth; divided into three comarcas or districts, and containing four cities, 12 towns, 60 villages, and 67 parishes, cap. Faro. Its N. boundary is composed of the Monchiquc hills, none of whose summits rise higher than 2500 ft . above the sea level; these, with the Figo, Calderão, and Foia hills (the last the highest in the province, some of the summits being nearly 4000 ft . high), belong to the system of the Morena, the most S . branch of the Pyrenean range. They yicld oak, and pasture for goats. On the S. coast are many excellent bays and harbours, as Lagos, Faro, Tavira, and Castro Marim. The surface of the province is mountainous; but the soil of the valleys is fertile, though shallow and little cultivated, and not bearing corn sufficient for its own population. Excellent oil, wine, figs, almonds, and olives, are produced and exported. The fisheries, chicfly of tunny and sardines, are very productive, but the coral fishery has long since been
abandoned. At the S. W. extremity of the province lies Cape st. Vincent, memorable tor the victory won over a Spanish fleet, by Admiral Sir Jolin Jervis, afterwards Lord St. Vincent, Feb. 14, 1797. The coast people are considered the best sailors in Portugal, and most of the Lisbon boatmen are uatives of Algarve. Pop. of prov. in 1835, 135,260.

ALGATOCLN, a tn. Spain, in Andalusia, prov. of, and 46 m. W. by S. from Malaga, on a skirt of the sierra Tajo de la Cima. It has a small square, and several narrow, steep, and unpaved streets; a parish chureh, townhall, prison, sehool, and a fine fountain. The inhabitunts are engaged in agriculture and feeding cattle; and in manufacturing soap, brandy, and oil. Pop. 2348.-(Madoz.)

ALGAYDA, a tn. Spain, isl. Majorea, 13 m . E. by S. l'almas, on a rising ground, irregularly built and ill paved. It has a parish ehureh, two schools, a consistory, public prison, and abattoir. Manufactures :-Brandy, four, and iron. The neighbourhood is extremely fertile, producing corn, wine, figs, and other fruit, which are sent to the markets of Palmas. Pop. 2860.

ALGECIRAS, or Algesiris [The island], a tn. and seaport, Spain, in Andalusia, prov. Cadiz, on the W. side of Bay of Gibraltar, 7 m . N. W. Point Europa, and 5.4 m . S.E. Cadiz, in lat. (mole) $36^{\circ} 8^{\prime}$ N., and lon. $5^{\circ} 26^{\prime} \mathrm{W}$. (R.) The modern town occupies an acclivity rising pretty rapidly from the sea, opposite the Islat Verde, on which stood the older town, once so strong as to be considered the key of Spain, but now little better than a mere ruin. Algeciras has no walls, but is defended by a fort on a neighbouring hill; it is well built, with wide, paved, and elean streets, and has three squares, one of which, at the top of the town, is elevated 220 ft . above the bay, and is very handsome, planted with trees, and, in the centre, it has a large ornamental fountain plentifully supplied with water; another of the squares is used as a market place, and occasionally also as a bull ring. The public buildings and establishments comprise two churehes, one of which is handsome, and of modern construction; three chapels; a wellendowed charity school, which boards as well as educates upwards of 1000 clildren, a townhall and courthouse, a military hospital with 160 beds, a civil hospital and foundling asylum in the same building, cavalry and infantry barracks, a theatre, large prison, and an agreeable alameda, bull ring and campo-santo, or burial ground, outside the town. The public fountains are supplied by means of a fine modern aqueduct, which conveys the water from springs on the neighbouring hills, over a double series of arches, about 6 furlongs in length, rising 45 ft . above the small river Miel. The town is well supplied with neat cafés and hotels, and the warehouses are elegant. A reeent German traveller says the people are venal and deceitful, their character being much deteriorated by the extensive smuggling transactions carried on from this port. The employment of the inhabitants is divided between navigation and trade. Algeeiras has considerable manufactures of coarse linen cloth and eotton fabries, sombrero hats, gloves, brown and stained paper, and playing cards, copper utensils, earthenware, and tiles, with four tameries busily employed in preparing morocco leather. Its exports consist of charcoal, leather, rough and prepared cork, tiles, and sweet potatoes, prineipally to Cadiz and Malaga, and provisions to Centa, averaging in yearly value about $£ 60,429$; while it receives, chiefly for its own consumption, corn, wine, oil, cloth, colonial produce, and other articles, including brandy obtained by barter from the rural inhabitants of the interior, the whole annually valued at $£ 40,255$. The average number of vessels, mostly engaged in the coasting trade, that annually leave the port is 504 , of an aggregate tonnage of 31,338 tons; and of those that enter, 572 , of an aggregate tonnage of 56,373 tons. The port is not approachable by vessels drawing more than 12 ft . water. The mole is situated abont $\frac{1}{2} \mathrm{~m} . N . W$. the Isla Verde, and runs out eastward; the small river Miel debouching southward, and capable of receiving small vessels at high water. Shoals and reefs render the navigation difficult in making Algeciras. There is also a small dockyard. Algeciras, which was built by the Moors, and taken from them by Alonzo X., in 1344, after a 20 months' siege, is memorable in British naval history, as the scene of a gallant victory achieved, June 9, 1801, by Alhniral Saumarez, over the combined French and Spanish fleet. It is thought by some to have been the Carteia of Koman geography, and the

Melcarth of the Phenicians, celebrated for its long-lived king Arganthonius; but this is a mistake, as an amphitheatre and other ruins of the Carteia, saeked by Scipio Africanus, 1.c. 171, are still to be seen at El-Rocadillo, between Algeciras and Cibraltar. Pop. 11,080.-(Maloz; Ford's Spain-Sailing Directions; Willkomın's Zwei Juhre in Spaみín.)

ALGEMESI, a tn. Spain, prov. of, and 20 m . S. by W. from Valencia, on the W. bank of the Jucar, having spacious and regular streets, with four well-built squares, a laudsome elurch and some chapels, three schools, a small townhall, several couvents, and an hospital. The people are employed chiefly in grinding oil, wheat, and rice, and in distilling brandy. The surrounding eonntry, which is flat and argillaccous, though not particularly fertile, yields a considerable quantity of rice, and a good number of mulberry trees, on which the silkworm is fed, the rearing of which insect constitutes a considerable branch of indnstry to the inhabitants of Algemesi. Pop. 4500.

ALGERIA, or Algerie, a territory of N. Africa, once the Turkish regency or pash. of Algiers, but, since 1830, a French colonial prov. ; bounded, N. by the Mediterranean Sea, E. by the regency of Tunis, S. by the great Sahara desert, and W. by the empire of Morocco; being comprised between lon. $2^{\circ} \mathrm{W}$. and $8^{\circ} 45^{\prime} \mathrm{E}$. ; and between $37^{\circ} 5^{\prime} \mathrm{N}$. lat. seaward, and an irregular line stretching S. as far as the 34th N. parallel. Its greatest length from E . to W . is about 600 m ., its greatest breadth about 160 or 170 m ; ; and its superficial area has been vaguely estimated at $90,000 \mathrm{sq}$. m., much of which, however, is ouly nominally under the dominion of the French. The country, under the Turks, was divided into the four provinces of Algiers, Oran, Constantina, and Titterie; but, since 1843, the French have comprised it within the three of these first named. Algiers is subdivided into four departments, Oran into four, and Constantina into three. The zone, or stripe of cultivated land lying between the mountains and the sea, is called the Tell; it varies in breadth from 50 m . in the provinces of Oran and Titterie, to 120 m . in the province of Constantina.

Mountains, Ilains, dec.-The Algerian territory is mountainous, consisting principally of the ridges or slopes of Mount Atlas, which ramifies throughout Algeria, enclosing several plains and valleys, sloping towards the Mediterranean Sea. The principal of these are the Wanaslirees, in the province of Oran, and the Jurjura, S.E. of Algiers; both of which are eapped with snow in winter, the claain of the lesser Atlas, which terminates W. of Bona, being the extreme slope of the last longitudinal terrace of the N. Atlas. A few peaks of the greater Atlas rise between 9000 and $10,000 \mathrm{ft}$., whereas the highest peak in the lesser Atlas, Mount Gagerat, is only 6800 ft . Several low plains lie between the lesser Atlas and the coast, the longest being that of Blida, or Metidjah, S. of Algiers; it is nearly 44 m . long and 16 broad, and rises towards the Atlas range from a sandy flat eovered with grass and brushwood, to the beautiful green slopes of the mountains diversified by incadows, fields, and woods, closely resembling the scenery of Europe. S.W. of Oran is a sandy plain, which becomes it kind of salt marsh in winter. In the S. province are some rich level tracts, watered by the IIamma, or Hamsa. The coast line, which is about 600 m . in length, consists nearly of an uninterrupted suecession of cliffs.

Fivers, Lakes, Marshes.-None of the rivers of Algeria, most of which flow into the Mediterranean, are navigable for any great distance above their embouchure. The country is everywhere intersected by water courses, which, although dry for a part of the year, bring down, during the rains, a quantity of water, which floods and fertilizes the plains. These streans are divided by the Atlas range into those which flow N. to the Mediterranean, and those that run S., and are lost in the lakes, swamps, or sands of the Saliara. One of the principal rivers is the Shellif, which rises on the S. of the Jebel Wanashrees, from a number of sources, ealled 'The 70 fountains, and, flowing first E. and then N., in the course of which it forms the lake and swamp of Titterie, falls inte the Mediterranean 80 m . N.E. Oran. Another considerable stream is the Aduse, which receives during its course various other appellations, passes N.E. along the S. base of the Jebel Jurjura, and, after being joined by a pretty large affluent, called the Ajebby, about 15 m . from the sea, falls into the latter a little to the E. of Cape Carbon. The other streams worth naining, that fall in.to the Mediterrancan, are the Scibus, the

Kibir, the Isser, and the Wedjer. There are, besides, various small rivers that discharge their waters into the swamp, of Al-Shott; and the large united streams of the Adjedi and the Abiad are lost in the salt marsh of Mclgig.

Geological Features.-The primary formations, which are found chiefly on the ranges of Mount Atlas, comprise gneiss, and micaceous schist, with smaller patches of granite. The secondary rocks consist of lias and calcarcous beds, coutaining few organic remains; and those of the tertiary period are chiefly $\rho f$ a yellow gray limestone, or sand, and tertiary clay, enclosing beds of gypsum, iron, and salt. It liad long been supposed that Algeria had no volcanic rocks; but travertine is found at Oran; and at Calle, as well as elsewhere, are distinct traces of ancient volcanoes. As regards mineral products, iron is most abundant, especially in the province of Oran. Copper is found also in considerable quantities; and there are rich lead mines in the Jebel Wanashrees, and near Mascara, which are said to yield 80 per cent. of pure metal. Cinnabar, also, is wronght in small quantities; and there are extensive quarries of nitre, salt, talc, and potter's clay. Salt and thernal springs are numerous.

Climate. - The climate of Algeria, on the table lands of the lesser Atlas, is salubrious and temperate, being unhealthy only near the marshy plains, or on the coasts at the outlets of flooded valleys. The average annual temperature may be stated at $50^{\circ}$ or $60^{\circ}$ Falı. ; but, luring the hot season, it frequently rises to $100^{\circ}$; and during the cool season, it lalls as low as $36^{\circ}$. The barometer varies but little amidst all the changes of the weather; and the annual average fall of rain at Algiers may amount to 28 inches. The prevailing winds are N., varying from due N. to N.E. and N.W., which materially temper the claracter of the climate. At certain seasons, the khausin, or hot wind of the Sahara, blows for a few days in succession, considerably increasing the temperature, and even blighting vegetation. It also injures the liuman constitution, the dust with which it is charged producing ophthalmia. The Tell of Algeria, however, is greatly sheltered by the elevated ridge of the greater Atlas; and even the sandy Sahara contains many verdant spots, refreshed by the winter rains, and well protected from the scorching blast of the descrt. The mild season begins in March and ends in June; the heats lasting from July to November, and the rains from December to February. At the base of the Atlas chain, the trees are evergreen, except in December; and, by Fcbruary, vegetation is in full vigour, the harvest being ripe in May.

Vegetable Productions and Cultivation.-When duly irrigated, the soil of Algeria is as fertile as in the S. territories of Europe. Many of the hills are clothed with wood to the summit, the forests forming, indeed. a chief portion of the natural wealth of the country. Down to the year 1841, the French anthorities were but imperfectly aware of their extent or value ; since which, nearly 200,000 square acres have been appropriated for the benefit of the state, besides what had been previonsly ascertained and turried to account; and, in 1845, a head inspector, and 67 officers, were employed in the Algerian woods. The custom of firing undergrowth, in order to enrich the pasture grounds, has denuded many hitherto thickly-wooded tracts of their finest timber. The fig tree, of which there are numerous varieties, is a native of the country, and in some districts is cultivated to a great extent. The pomegranates are abundant, and, when coverch with its scarlet flowers, is a most beautiful object. From the fruit of the jujube tree, which is very common, an agrecable kind of cider is made. The orange and lemon groves are very extensive, and have a splendid appearance, particularly in April, when they are covered with both flowers and fruit. The tree is generally about 30 ft . in height. The carob, or locust tree, is found wild on the hills; its wood is considered imperishable, and the fruit is sold in the shops. Cherry trees are also met with in the wild state. The date palm is cultivated in the interior of the country only. The black mulberry, and wild olive trees, are the largest in the country, and tle $e$ latter is amongst the most common, especially in the vicinity of Algiers. Vines are grown in several places, from the produce of which good wines are made; but the culture of the grape is not extending, the French colonists being onwilling to run the risk of planting, as the vine does not yield fruit for thrce years. The principal cereal crops are barley and red wheat; the former cut in May, and the latter in June.
A. little rye is also cultivated by the French colonists. In reaping the corn, the ear only is cut off, the straw being left for the cattle. There is no preparatory tillage of the ground before sowing ; the grain is thrown on the ground and ploughed in by a very simple plough, drawn by oxen or horses, and sometimes by a horse and a cow yoked together. The furrows run in all directions, and, by their frequently crossing one another, leave sometimes small triangular spaces unploughed. The sugar cane has been tricd, but without success, owing to the winter frost. With indigo and cochineal the result has been more favourable. Tobacco has been tried, and witl such success as to lead to the hope that it may become a staple articlo of produce. But one of the most useful vegetable productions of the country is the dwarf paln, which covers large districts. Its leaves are made into baskets, cords, fans, sacks, sleeping mats, \&c., and the tender foot stalks of the leaves, and the young flowers, form a principal article of food for the Arabs. The culinary vegetables coniprise pease, beans, potatoes, artichokes, onions, carrots, lettuce, gourds, cucumbers, parsley, basilic, sweet savory, chervil, fennel, mint, marjoram, \&c., all of which are in great demand. The flora of Algeria is nearly identical with that of the S. of Spain, and of Andalusia in particular.-(Mag. of Nat. Hist., No. 24.) The French Government has done much to improve the agriculture of the country, and early established a model garden, orchard, and nursery, at Algiers, which has now several dependent establishments in other parts.

Zoology.-Besides the animals common to the opposite S. regions of Europe, the lion, lcopard, jackall, and hyena, are occasionally seen in the fastnesses of the upper Atlas. There are also antelopes, jerboas, \&c., and a few monkeys; and near the Sahara, vultures and ostriches are met with. There are some chameleons, and a few scorpions and serpents, but most of the latter are harmless. Locusts occasionally visit the country, and are sometimes destructive to the harvests. The coasts abound with fish, including fine tunny.

Native Population.-The indigenous population comprises Kabyles, Moors, Arabs, Turks, Kolonglis, and Jews. The Kabyles (called also Berbers) form nearly a half of the whole; they inhabit the mountains lying towards the desert of Sahara, where they live in small villages. They are athletic, well formed, and possessed of great powers of endurance; but they are mostly robbers, crucl and faithless, yet practising hospitality. Although ostensibly shepherds, they occupy themselves much in hunting, in which they exhibit much boldness and dexterity. The mountain shepherds dwell in caves, like the ancient Troglodytes. The Berbers, however, are the most ancient inlabitants of N. Africa. The Moors are a bastard race, formed by the intermixture of various races; the majority of their ancestors being invaders, or inmigrants from Morocco or other regions of the W. Indeed, men even of Arab blood are sometimes called Moors, if dwelling in towns; whilst pure Arabs, on the other hand, who live in tents, are called Bedouins. The latter are tall and muscular, with spirited, handsome countenances, large piercing black eyes, aquiline noses, regular white teeth, full strong beards, and black hair. The complexion of the people northward is light brown; darkening southward, till at last it is black, though withont the negro physiognomy, which first shows itself in Soodan. The Arabs are a more or less nomadic race, dwelling in tents, in bodies of from 10 or 12 , to 100 families; every family under a sheikh, who is at once priest, legislator, and judge. They constantly war, and in the most savage mauncr, either with the Berbers, each other, or the French, that being their regular business, and most of their income plunder. They universally hate Christians, but are not less dissembling than the Moors and Berbers, their hospitality being never available to Christians, except within their little encampments. The Arabs are originally Asiatics, and have preserved their distinctive habits for perhaps 30 centurits; but it is probable that, at one period, they lave greatly intermixed with the Berbers. The Turks, during three centuries masters in the land, have dwindled to a handful since the French conquest. The Koloughs, or children of soldiers, are a mixed race, from Turkish men and Moorish women. There are likewise many Jews, especially in Algiers and Oran; and carrying on a considerable foreign trade. Although treated with contempt by the Moslems previous to the French occupation, without protection for property or even life, and obliged to live in a
separate quarter, apart from the other inhabitants, they were the organs of nearly all tho business of the country. Their treatment by the French, however, has been much ameliorated, and their habits and creed are held in respect. The nature of the religion of tho Kabyles is nearly unknown; but Islamism is the ereed of all the other native races, except the Jews. The general language of the country is Arabic, adulterated by foreign words, and others from the Berber or Kabyle dialect.

Population.-The total indigenous population of Algeria is estimated by some at about $2,000,000$, and by others at double that amount; but the exact number cannot yet be satisfactorily ascertained. The progress of the increase of the European population, as will be seen from the following figures, has been rapid:-

| In $1810 . . . . . . . . . . . . . .28,736$ |
| :---: |
|  |  |
|  |  |
|  |  |

$$
\begin{array}{r}
\text { In } 1814 . . . . . . . . . . . .75,420 \\
1851 . . . . . . . . . . . .96,190 \\
18+7 \ldots . . . . . . . . .103,893 \\
1849 \ldots . . . . . . . .112,607
\end{array}
$$

The native town population, in 1849, amounted to 84,133 .
Religion and Education.- In 1845, there were 12,000 R. catholics in Algeria, having 24 churches, and 23 chapels; with a bishop, and 55 priests, performing religious duty not only in churches and chapels, but also in the hospitals and prisons. The Protestants, also, have consistories at Algiers and Oran. The Moslem and Jewish town population amount to about 82,000. In 1845, the French Government disbursed for public worship as follows :-

|  | Francs |  | ¢ |
| :---: | :---: | :---: | :---: |
| Roman Cathol | 135,500 | r | 420 |
| Protestants (five pastors) | 11,000 | " | 410 |
| Moslems (six muftis and scven imans) | 15,00 | " | 600 |
| Jews (six rabbis)......................... | 10,000 |  | 00 |
| Total state stipends for four ministri of worship, $\qquad$ | $\overline{171,500}$ | or | 686 |

The public education is under an inspector, appointed by the French Minister. A college at Algiers has 15 professors, who give instruction in Arabic and French, as well as mathematical and practical science, to about 150 students. Oran, Bona, Philippeville, and Bougia, have also their respective schools, attended by about 1600 pupils, of whom three-fourths are European, and one-sixth Jews; and in all the leading towns are communal and primary schools. The ignorance of the natives, however, is deplorable; and hitherto, owing partly to indolence, partly to religious prejudice, they have rejected all attempts at their mental improvement. Algiers has likewise a theological seminary, and a college for Arabs of high rank. Nuns, also, of several orders, have formed schools for the natives in various districts.

Trade, Manufactures, \&c.-The trade of Algerta continued for many years in a very backward state, the imports being very materially in excess of the exports. Thongh the balance is still greatly to the side of imports, yet rapid approaches are making towards an equilibrium, as will be seen from the following returus:-

|  | 1 Imporss. | Exports. |
| :---: | :---: | :---: |
| 1810. | £2,200,120 | £101,570 |
| 18.4 | 3,201,770 | 324,550 |
|  | 2,911,520 | 1,231,303 |

The exports of 1853 exceeded those of 1852 by $£ 369,122$, a sum greater than the amount of the total exports in 1844.

Tobacco, grown in the country, is an important article of export; and in 1853 there were, in the provinces of Algiers, Constantina, and Oran, 3277 plantations of this vegetable. The produce of this article in 1855 was estimated at $9,086,000$ lbs.; in the first half of that same year, $6,464,037$ lbs. were exported to Marseilles alone. The Algerian tobacco excels that of Egypt, Macedonia, and Greece, and approaches in flavour that of IIungary and Maryland.

The produce of silk has likewise increased greatly. In the province of Algiers, in 1850 , there were only 89 cultivators of the silk-worm; but, in 1853, they had increased to 335 , producing a total of 31,000 lbs. cocoons of excellent quality. Algerian madder, also, is muel esteemed, being reckoned equal to that produced in Cyprus.

The cultivation of cotton, long only attempted in limited experiments, inereased tenfold in 1853, and promises important results; and the dwarf paln (Chamerops humilis), once almost a scourge to the agriculturists, is now likely to become
a most important vegetable product, in conscquence of recent researches having showu its fibre to be suited for various economical purposes.
The exports of wool, a staple Algerian product, rose from 7,137,750 lbs. in 1852, to $9,579,878$ lbs. in 1853. In the same year, argentiferous lead, to the value of $£ 82,714$, was exported, and the produce of the white marble quarries increased considerably. The coral fisheries employ 156 vessels, obtaining, on the average, 506 lbs . coral each-value about $23 s$. per lb.

The principal imports are cotton, woollen, and silk goods, and refined sugar. A ready sale is always found among the natives for calicoes of all descriptions, ordinary manufactured stuffs, common cloths, muslins, turbans, silken and woollen girdles, cotton thread, coral for chaplets and necklaces, antimony for dyeing the eyebrows, English dyewoods, spices, spectacles, hardware goods, arms, carbines, tea, mirrors, glass ware (including beads and rings), and Spanish piastres, the latter exchangeable in the Soodan for their weight in gold. The manufactures of Algeria are exceclingly backward, owing alike to the indolence and ignorance of the natives. The Jews take the ligher branches of handicraft, as jewellery, watchmaking, tailoring, \&c.; the Arabs are employed principally as carpenters and tanners; the negroes as masons, bricklayers, \&c.; and the Kabyles manufacture gunpowder, and work in the iron, lead, and copper mines. The chief manufactures comprise linen, woollen, and silk fabrics; saddlery, carpets, firearms, lardware goods, coarse pottery, and gumpowder.

Means of Communication.-The roals, previous to the conquest, were execedingly defective; indeed, there was not a regularly formed road in the whole territory. It appeared, however, by the documents accompanying the French general budget of 1845 , that the Government engineers had completed, up to the close of the 15 th year of occupation, 4500 m . of substantial roadway; much of which was effected by the enforced labour of soldiers under penalty for infractions of law and discipline. Since the above date, many new lines have been furmed, with armed posts, in outlying districts, at medium intervals of 50 miles.

Government.-Algeria, whic'. is divided into the three provinces of Algiers, Oran, and Constantina, was, before 1830, under a Turkish dey, or pasha, of absolute authority, clected by, and ruling over the army ; but it is now under the supreme power of a governor-general, appointed by the French Government; and under him are a secretary and intendant, the latter of whom is termed the director of Arabian affairs. The governor occupies also the post of commander-in-chief. There is likewise a council of management, composed of three members, the director of the interior, the naval commandant, military intendant, attorney-general, and director of finances, nominated by the Government, who advise upon and confirm the acts of the governor general. There is also a council (conseil des contentieux), formed of a president and four other members, who take cognizance of minor criminal and eivil offences. All the civil provinces, besides, have their mayors, justices of peace, and commissaries of police. In Algiers, also, there is a tribunal of commerce. The pecuniary cost to France of Algeria as a dependency has been very diversely estimated. By a reference to the French budgets for recent years we find a total avowed average expenditure, on account of this important possession, of fully $£ 1,200,000$ annually. In 1853 , the sum allocated for public works (civil) alone was $£ 242,800$, being an angmentation in that item for the previous year of about $£ 24,000$. On the other hand, while the value of Algerian jroduce exported to France in 1852 was but $£ 200,000$, in 1853 it amounted in value to $£ 640,000-$ an increase of 206 per cent. Much of the money sjent in the country is necessarily placed at the disposition of the military authorities, the army of oceupation being so numerous, and is entered, under various heads, in the special budget of the French war department.

Militury Force.-Inder the Turks the dey maintained a force of 10,000 infantry and 6000 cavalry, which latter consisted chiefly of Arabs and Kabyles. The military force kept up by the French comprises about 70,000 men, onetenth of whom are natives; and the princijal military posts are at Algiers, Bona, Calla, Guelma, Misserghin, and Masagrain; besides which, there are garrisons of French troops, to overawe the ratives, in all the larger towns.

History.- 'The country now ealled Algeria,'says the Chevalier de Tapies, in his exeellent work, Statistique Morale de la France, et de l'Angleterre, 'after having reached an extraordinary degree of prosperity and greatness under the Carthaginians for 700 years, and again under the Romans for 600 , fell afterwards into the power of the Vandals, and after these came the Arabs. These last, newly converted to Mahometanism, and commanded by skilful leaders, had formed, in 1068, a vast empire, which, in the sequel, was broken up into petty monarchies; and then the province of Algiers made part of the kingdom of Telesmsan, or Tlemsen.
'In after days, the brothers Moudji and Kain-ed-din, noted corsairs, who were the terror of mariners, aided by a band of Turkish pirates, established themselves as sovereign masters of the city of Algiers; and, from that time (A.D. 1506), it became the seat of Barbary piracy, and so continued for more than three centuries, to the disgrace of all Christian nations.
'The Turkish military at no time exceeded a total of from 13,000 to 18,000 , in the region of Algiers; at all times they dwelt apart, as an alien caste, disdaining to intermarry among the people of the country. This collective body chose a pasha, who, in his turn, appointed six subordinates, ealled beys, who administered the affairs of the provinces in his name. All natives were exeluded from superior military, political, and administrative functions. Finally, an auxiliary corps of Arabian cavalry, about 6000 strong, completed this system of armed compression, organized by the suceessors of the pirate brothers.
' In the city of Algiers alone, in the year 1576 , it was ascertained that there were 25,000 Christian slaves held in rigorous bondage. Several powers of Christendom had in vain endeavoured to extirpate these pirates; for no sooner were the hostile squadrons sent to chastise them drawn off, than they recommenced their depredations. Finding it in vain to attempt to subdue them by foree of arms, the Christian powers gradually adopted the less troublesome expedient of paying a regular tribute to the pasha (now ealled dey) of Algiers, to enable their subjects to traverse the European seas in peace.'

Matters remained in this state till 1655, when Adiniral Blake, by a well-administered castigation, taught the Algerines, for the first time, to entertain a due respeet for the British flag; and he was followed about half a century later, by Admiral Matthews, who compelled them to submit to humiliating terms, and to pay a heavy fine. These people, however, continued to a mueh later period to be the terror of the Dutch, Danes, Swedes, Italians, and even Russians, hundreds of whose sailors these pirates captured, and sold into slavery. In 1815, the Americans captured an Algerine frigate, and compelled the dey to renounce all exactions, and to pay an indemnity of $\$ 60,000$. But to Lord Exmouth, and the British fleet, was reserved the honour of effecting the entire abolition of Christian slavery in the Barbary states. This was aecom. plished, July 26, 1816, by bombarding the town and port of Algiers, with 13 English and six Dutch ships, when the fleet and arsenal of the Algerines was utterly annihilated, and the liberation of 1008 captives effected, together with the repayment of ransom to Sicily and Sardinia, amounting to $\$ 383,500$. Besides this, the dey was compelled to sign a treaty, by which the practice of enslaving Christians was abolished. Eleven years after this period, an insult offered by Hussein Pasha, the last dey, to the French consul, whom he struck in a moment of irritation, induced the Government of France to send an expedition against Algiers. This armament consisted of 102 vessels of war, great and small, with 500 transports, in which were embarked 34,184 soldiers. The vessels contained a vast amount of materiel, and abundance of stores for the troops, and fodder for their horses. General Bourmont was chosen to command the army, Admiral Duperré the fleet, Capt. Hugon the eonvoy. All set sail from Toulon, May 25, 1830; they shortly after touched at Palma, in Majorea, where they remained a few days, and arrived, June 13, on the coasts of the Algerian territory. On the 14 th, the troops landed at Sidi-Feruch, 15 m . W. from the city of Algiers. After some fighting, in which the French had always the advantage, Algiers opened its gates, July 13, when the dey gave up lis city, government, and treasure ; the latter estimated at $48,000,000$ franes, nearly $£ 2,000,000$ sterling-exclusive, it may be added, of what was taken away privately, or hidden from the French.'

The following statement of the spoil taken from the Algerines at the conquest, is from the Statistique Française Uni-verselle:-

Francs.
In coined money and precious metals........48,681,527 $\stackrel{2}{1,917,40}$
Other stored public property, including wool $3,000,000$ 120,000 160,000 $55,684,527$ or $2,227,400$
The war expenses of the invasion, to January 1831, had amounted to $25,000,000$ franes ( $£ 995,000$ ), not including those of the eo-operative marine force, which amounted to about $23,000,000$ franes ( $£ 919,000$ ), making a total outlay of about $48,000,000$ franes, or $£ 1,914,000$. A few years after the nominal conquest of Algeria-for it was little else, in reality, for many years subsequent to that event-a formidable enemy to the French arose in the person of Abd-el-Kader, the Bey of Mascara; who, placing limself at the head of all the refractory Arabs in the W. parts of the country, kept the French at bay for upwards of 14 years-now defeating them, and now himself discomfited-but still keeping the field, and appearing after each defeat but the more vigorous for the reverse. In 1845, and during this protracted warfare between Abd-elKader and the French, the latter barbarously destroyed 500 or 600 Moors, by suffocating them with smoke in the cavern of Dahra, in which they had taken refuge. In retaliation of this dreadful atrocity, Abd-el-Kader, in the following year, put to death 300 French prisoners. Latterly, the war in Algeria had been carried on by the French against the person of Abd-el-Kader alone, who now resided entirely in the mountainous traets of Moroceo. Ilere, hemmed in by the French, and by the forces of the Emperor of Morocco, who was in the French interest, and exliausted by numerous reverses, Abd-el-Kader at length surrendered (Dec. 22, 1847) to the French General, Lamorieiere, and thus terminated the war, leaving the conquerors in quiet possession of their conquest, and at full liberty and leisure to follow out those plans for the civilization and general improvement of the country, which they seem to have earnestly entertaincd. One important proceeding in this direction is manifested in the form of geographical inquiry, in which they have been at once extremely zealous and successful. Through the exertions and ability of the Frenel ${ }_{1}$ engineers, we are every day becoming better and better acquainted with Algeria- a territory of which comparatively little was known before. Since their acquisition of this country, the French have published a map of it, remarkable for its accuracy; they have also surveyed the Bays of Algiers and Bona, and the entire coast line from the former to Cape Spartel, a distance of about 500 m . Other maps are now in progress, based on a triangulation made by French officers, so that there can be little doubt that our geographical knowledge of this portion of Africa will soon be very complete, and greatly surpassing that of any other part of that eontinent Hitherto, the investigations of the French have been, for the most part, limited to the territory of Algeria, and to the more northern parts of the Sahara; but it is probable that the latter will ultimately attract a large share of their attention, and lead to disclosures regarding that unknown region of great interest and importance.-(Hist. Pittor. de l'Afrique Française, pp. 143-195; Voyages Nouveaux en Afrique, vol. ii. pp. 131-160; Quétin, Guide du Voyageur en Algérie, passim, \&e.)

ALGEZARES, a tn. Spain, prov. of, and 4 m . S. from Murcin, on the side of a ridge 6 m . S.W. Mount Cabeso Gordo ; tolerably built, and having a parish church, chapel, and endowed sciool. The inhabitants are chiefly eugaged in agriculture, and raise grain, fruits, and vegetables, which they export to Gibraltar. Pop., including the hamlets of Garres and Sages, added in 1836 to this town, 2117.(Madoz.)

ALGEZIRAH, or El-JEzireh, a district, Asiatic Turkey, comprehending the N.W. and greater portion of the aneient Mesopotania-the country 'between the rivers,' with which the modern appellation nearly corresponds in meaning. This district is slightly elevated above the sea, traversed by chains of hills, well watered and fertile, and possesses mincs of precious metals.

ALGEZUR, or Aljezun, a small tn. Portugal, W. coast, prov. Algarve, at the mouth of the small river of same name, 23 m . N.N.E. Cape St. Vincent. It has a church, and an ancient castle, represented in the arms of Portugal. Pop. 1735.

## ALGHA

86

## ALGIERs

ALGHA, or ATGHA, one of the Aleutian Islands, ncarly in the centre of that chain; lat. $51^{\circ} 30^{\circ} \mathrm{N}$. ; lon. $174^{\circ} \mathrm{W}$.

ALGHEIRO, or AlGHEki, a th. and seaport on the W. side of the isl. of Sardinia, gov, of, and 15 m . S.S.W. from Sassari ; lat. (cathedral) $40^{\circ} 33^{\prime} 30^{\prime} \mathrm{N}$.; lon. $8^{\prime} 19^{\prime} 15^{\prime \prime} \mathrm{E}$. (rc.) It is well fortified, especially towards the sea, but is commanded by two eminences in the vieinity. The port is insignificant, and capable of admitting very small eraft ouly; but, at the distance of 7 m . is l'orto Conte, the best, safest, and most commodious harbour in the island. The town is the seat of a bishop, suffragan to the Arehbishop of Sassari, and possesses a handsome cathedral, several convents, and a college. The air is salubrious, and the neighbouring lands fertile. In 1804, the cultivation of indigo was introduced with tolerable success. Alghero has a considerable trade in grain, wine, oil, grapes, skins, butter, cheese, tobacco, and coral. The town is supposed to have been founded by a colony of Barcelonians. Pop. 7000.

ALGlERS [Arabie, Al-Djezair-The islands], a seaport and city, N.W. Africa, on the W. side of a bay of the same name, on the Mediterranean Sea; lat. $36^{\circ} 47^{\prime} 18^{\prime \prime}$ N.; lon. $3^{\circ} 4^{\prime} 30^{\prime \prime}$ E. (R.) It was once the capital of the regeney or pashalic of the same name, long nominally dependent on tho Ottoman empire; but, since 1831, has been the capital of the French colonial province of Algeria. It is built on the $N$. slope of Mount Boujarin, which rises about 500 ft . above the bay; and the houses are arranged am-phitheatre-wise, terminating in the esplanade, on which stands the Kasbuh, or old citadel. It is wholly enclosed by an embattled wall, 12 ft . thick and 30 ft . high, the strength of which is vastly increased by four castles, and casemated batteries; and it is entered by five gates, two of which are seaward, two landward, and one leading to the citadel. The external aspect of the city is exceedingly imposing, owing not only to its form and position, hut also to the dazzling whiteness of its houses, which are visible at a great distance. The streets are mostly narrow,

A STREET IN ALGIERZ, From Borbrugser, Algrie.
tortuous, and extremely dirty, as in all Moorish towns; but there have been recently construeted, to connect the principal quarters of the town, three long thoroughfares, which are tolerably wide, and comprise the princijal bazaars and markets. These improvements are constantly progressive; and Algiers, which has already three well built, open squares;
bids fair to have its character wholly changed, and to be one of the handsomest cities on the Mediterraneau. The houses, whether of stone or brick, are annually whitewashed; and in consequence of the earthquakes, they are seldom built of more than one story above the basement, each tenement being flat roofed, and provided with a tank at the top, to eateh the rain water; besides which, Algiers has numerous fountains, supplying an abundance of water from the aqueducts and reservoirs above the town. Among the public buildings and establishments, are 10 large mosques, a handsome cathedral, several R. eatholic clurches, a Protestant chapel, and some Jewish synagogues, six colleges, and some convents used as girls' schools, a Government house, exehange, bank, four courts of justice, a bishop's palace, public library, and musenm, observatory, several hospitals, and most extensive barraeks for catvalry and infantry; and Algiers is the residence of the governor-general, and all the leading officers in the Algerian colony. There are likewise several handsome hotels, bazaars, and shops; and, on the whole, the European portion is highly ereditable to its new possessors. Indeed, Sir Grenville Temple's description is true, as well as striking: - Algiers is daily assuming a more European aspect-hats are nearly as often seen as turbans, cigars have replaced the long pipes, and the Moorish bazaars give way to the glazed windows of French shops. Upwards of fifty merchants have established counting houses; and numerous mechanies and tradesuen, including, of course, a full proportion of tailors, modistes, and perruquiers, are thickly scattered about. Eleven grand cafés, with billiard tables; four [now nine] grand hotels; several restaurateurs; 100 cating houses; several cabinets littéraires; a circus, cosmorama, \&c., have becn established; and omnibuses and cabriolets fly through the town, and run to and from the suburbs. [The Guide en Algerie, 1847, states that there are 170 omnibuses and cabriolets, exclusive of the voitures sous remise.] The Kasbah is a little town itself, containing, with several other houses and gardens, the late dey's palace, which, however, has suffered much from the French soldiery, who, on first occupying it, pulled up the pavement, tore down the glazed tile coating of the rooms, and otherwise committed great injury in their eager search after treasure. The marble fooring; the arehed galleries, supported by graceful inarble pillars, which surrounded the open courts; the elegant fountains, which scattered coolness around; and the latticed shahme-sheens, still, however, remain to repay the fatigue and trouble of the visitor's ascent. The corps de garde, with the gate and the syeamores, banana trees, and vines surrounding it, together with the inixture of French uniforms and Moorish costumes, formed altogether a beautiful little picture; as also did a wine shop, shaded by a vine-covered pergola, under which wero seated groups of solliers.' Civilization, likewise, is rapidly extending; wide streets, lined with pretty houses and villas, are gradnally stretching into the surrounding country; good roads have been constructed in various directions, and railways are now in operation, or in course of construction. The Moslem, or upper part of the town, however, has still its narrow, dark streets, with square-shaped, heavy-looking houses, betraying few signs of internal animation; while the lower town near the water, abounds with dark alleys, and cul-de-sacs-fit receptacles of filth, disease, profligacy, and erinie; nor, perhaps, will they ever be removed, except by a conflagration even more extensive than that whiell occurred in 1840.

The harbour of Algiers is a work of inmense labour, first formed by Barbarossa in 1530, having a mole 580 ft . in lengtls by 140 in width, extending from the mainland to an islet, or which are a strong eastle with batteries, and a lighthouse,
exhibiting a revolving light. The bay offers no safe anchorage against the severe weather of winter; for nowhere can shelter be found from the $N$. winds; indeed, at the mouth of the port, and even inside of it, ships have been severely damaged by the heavy surf and rollers, which have there the violence of a tempest. The extensive jetty, or breakwater, however, which is to be 2400 ft . long, and was commenced in 1836, has already produced a sensible alteration for the better; and, when finished, ships may lie iu perfect safety inside, or at the end of the mole. There is anchorage, in fine weather, about 1 m . from the shore, in about 20 fathoms; and also, during E. and N.E. winds, on the N.E. side of the bay, in about 11 fathoms.- (See Norie and Hobbs's Sailing Directions fur the Mediterranean Sea, p. 81.)

The commerce of Algiers, which was wholly insignificant in the time of the regeney, has risen to great importance; and it has become the entrepot of four-fifths of the trade with France and other European countries, as well as with Blidah, Milianah, and other towns of the province. For the imports and exports of the port, which are included in those of the government, see Algeria. The eity comprises, according to the recent aecount of Quétin, 2065 licensed traders (marchands patentés), about 300 of whom are bankers and merehants, having well-organized establishments, and doing an extensive business both with the interior and foreign countries. There are also about 50 official brokers, who divide among them the functions of money changers, shipbrokers, and sworn interpreters. A discount banking company, and insurance company also, have recently been established; and, on the whole, the town and port displays an amount of activity that may soon place it almost on a level with the commercial ports of France and Spain. A chamber and tribunal of commerce, formed of of 11 members, hold audiences likewise thrice every week, to settle commercial disputes, and regulate the proceedings of trade. As respeets steam navigation, it is strictly regulated by law; and certain boats are ehartered and provided by the Government, for the free conveyance of French emigrants and soldiers to the colony. These vessels leave Toulon and Marseilles three times each month, and the passage is performed in 48 or 50 hours. Steamers, also, frequently run between Algiers, Bona, Oran, Buugia, and Philippeville.

The trade carried on by the natives would be quite insignificant but for their connection with the French. The Jews, however, are pretty actively concerned in retail trade, and carry on some of the higher branches of handicraft. The native manufactures are inconsiderable, comprising a few silken and woollen stuffs, haïeks, burnouses, fez-caps, saddlery, trinkets, \&c. A pretty accurate notion of the condition and character of the native traders, may be gained from the following short account of a visit to the bazaars of Algiers, by Capt. Kennedy :-' One day was occupied in making the round of the Moorish bazaars and shops, which are generally of the meanest description, both inside and out. A few trifling
articles of gold and silver embroidery from Morocco, a dozen or two of ornamented pipesticks, with otto of rose and jasmin, red caps and inforior silk scarfs from Tunis, form the sumtotal of the ornamental wares of the native shopkeepers. Some of the more wealthy are, however, beginning to imitate their Christian rivals, and have fitted up their shops in a transition style between French and Algerine, with their most tempting artieles exposed in the wandows; and the shopman, instead of apathetically smoking his pipe, seated crosslegged on the counter, stands behind it, and shuffles slip-shod about, recommending his wares to a stranger's notice, with as much pertinacity as the smartest slopmen of London or Paris. In the little back streets and narrow lanes, forming the upper part of the city, the shops frequented by the lower orders are merely square boxes inserted in the wall, with the side towards the street wanting.'

Most conflicting accounts are given of the elimate and healthiness of Algiers. The mean annual temperature of Algiers, as of the rest of the littorale, averages about $68^{\circ} \mathrm{Fah}$. , but rises to $98^{\circ}$ during the siroccos. In a report, however, by Dr. Boudin, read before the Académie de Medicine, it would appear that, in the French population of Algiers (all adults in the prime of life), the average mortality amounts annually to 1 in $27 \cdot 5$, whereas, in Paris generally, the deaths amount only to 1 in 42 , or 24 to every 1000 persons. Algiers, too, is the healthiest of all the eitics in the colony.

The latest returns (1846) state the population to amount to 94,600 persons ; of whom 45,000 are Europeans, and the rest natives and Jews.

Algiers is thought to occupy the site of the ancient Icosium. To its Roman occupants succeeded the Vandals, and to them the Moslem Arab invaders of the 8th century; the town itself dating from the 10th century. In 1510, King Ferdinand the eatholic, the conqueror of the Moors in Spain, sent an expedition to seize the island in front of Algiers, then held by the Moors, and built a fort upon it. The Moors, thus menaced, called to their aid the pirate Barbarossa; who drove out the Spaniards, but kept both fort and town, of which he then became the lord and tyrant; offering, at the same time, for his security in this usurpation, to beeome tributary, with his fellow-corsairs, to the Porte of Constantinople. The locality thus secured in impunity, became an organized seat of piracy, on such a seale as to be an object of terror to all European nations; which were either obliged to wage open war with the Algerines, or else consent to become their tributaries. As early as 1541 , the Emperor Charles V. failed in the first attempt against Algiers. In 1683-4, it was bombarded by the French admiral Duquesne. In 1775, the Spaniards, under O'Reilly, were repulsed in an attack upon it. In 1815, the Americans humbled the Algerines; as did the British, under Lord Exmonth, the year after. For details of this and more recent portions of its history, see Algeria.

ALGOA BAY, S. Africa, 410 m . E. by N. Cape of Good Hope, district Uitenhage. It is of great extent, but it is only in the W. and N.E. parts of the bay that ships may anchor and find shelter. The points forming the entrance into it are Cape Woody on the N.E., and Cape Recife on the S. W.; the distance between them being $33 \frac{1}{2} \mathrm{~m}$. The centre of the bay is in lat. $33^{\circ} 53^{\prime}$ S.; lon. $25^{\circ} 46^{\prime} \mathbf{E}$. It is the only place of resort where a distressed slip could find shelter from the violent N.W. gales which prevail on the Agulhas Bank. The common anchorage off the landing place is in $6 \frac{1}{3}$ or 7 fathoms, sandy bottom, at the mouth of the Baakens river, Port Elizabeth (which see). The usual landing plaee is on a small beach close to the N. of the river just named, the mouth of which is generally closed with a dry sandy bar. Water is abundant. Bullocks and sheep, good and plentiful, and fish, may be caught in great quantities. Oysters are also to be had at low water.

ALGODONALES, a tn. Spain, Andalusia, prov. Cadiz, 14 m. N.W. Ronda, on a slope of the Ronda mountains, and prettily built anong gardens, laving a fine chureh, two endowed schools, several fine fountains, a consistory, and a small prison. The people are engaged chiefly in tillage, but also in grinding corn; and the manufacture of linen, soap, oil, and esparto wares; they export oil and fruits; and import wearing apparel and other requisites. Pop. 3340.-(Madoz.)

ALGONQUINS, a nation of Canadian Indians, who, on the first settlement of the Europeans, possessed an extensive
domain along the $\mathbf{N}$. bank of the $S$. Lawrence, about 300 m . above Trois Rivieres. 'They were once a powerful tribe, and are of mild aspect and gentle manners. They subsisted entirely by lunting, considering the cultivation of the soil beneath the dignity of man. They were attacked by the Iroquois, and would have been eventually exterminated but for the interposition of the Freneh. The principal tribe of the Algonquin nation at present is the Chippewas, who chiefly reside on the Assiuiboin, or Rainy Lake, and Prairio de Portage. There is a R. catholic church in their territory, but the exertions of the priests have hitherto had little effeet on their morals. They are in the general practice of polygany, and much given to the use of intoxicating liquors. Small patches of land here and there are cultivated in an inefficient way by their women, the men being occupied in fishing and liunting. Like most of the other Indian tribes, the Algonquins are rapidly disappearing, their number now not exceeding 600 .

ALGUADA, or Agoada Point, on the coast of Malabar, forming the N. extremity of Goa Bay; lat. $15^{\circ} 29^{\prime} \mathrm{N}$.; lon. $73^{\circ} 50^{\prime} \mathrm{E}$. It is a level headland of moderate height, with an old lighthouse on it, and a small fort; but the principal fort is situated close to the sea, on the S.L. side of the headland, where is a well of excellent water. The common anchorage is abreast of the fort, in $4 \frac{1}{2}$ or $4 \frac{3}{4}$ fathpms at low water. On a bluff headland, between 2 and 3 m . to the S.E. of Alguada, is a large, white monastery, which forms an excellent landmark for vessels making for Goa Bay.

AL-MADIIR, an anc. city, Asiatic Turkey, prov. or nash. Bagdad, 190 m. N.W. by N. the city of Bagdad, and $40 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. by S. Mosul ; lat. $35^{\circ} 47^{\prime} \mathrm{N} . ;$ lon. $42^{\circ} 35^{\prime} \mathrm{E}$. Al-Hadhr was the IIatra of the Romans, and seems to have been deserted after their fall. Latterly, even its site was unknown to any excepting the wandering Arabs who frequent the surrounding deserts. In 1836 and 1837, the remains of this city were visited by Mr. Ross, surgeon to the British resideney at Bagdad; and, subsequently, by Mr. Ainsworth, Mr. Rassam, and others. It seems to have formed nearly a perfect circle, upwards of 3 m . in circumference, and is completely surrounded by a strong wall, now in ruins, but still exhibiting the remains of 32 square bastions, with portions of the intervening curtains. It had, apparently, four gates; but of these, the E. alone can be distinctly traced. Exactly in the centre of the town are the remains of the prineipal building, either a temple or a palace, which consisted of a series of vaulted chambers or halls, of different sizes, all opening to the E., and placed in regular suecession from $N$. to S . The whole was enclused by a wall, with bastions like those of the city wall, and forming a square 1360 yards in circuit; the sides facing the city gates, and apparently connected with them by paved roads. To the E., a canal intersects the city from N. to S.; and the remainder of the space, on all sides of the central edifice, is occupied by the ruins of tombs and other buildings, now chiefly a heap of long mounds and hillocks. Al-Hadlır is entirely built of a coarse gray granular limestone abounding with marine shells, and said to have been procured from the Sinjar hills. The stones are well hewn and adjusted, but present no appearance of cement; and each is marked with a character, generally a Chaldean letter or numeral.

ALIIAMA, a city, Spain, Andalusia, prov. of, and 26 m . S.W. from Granada; on a promontory of limestone, which forms an inclined plane from W. to E. The old town is bounded S. and E. by a cleft in the rock, at the bottom of which runs the streain Marehan, or de Alhama; and is inaccessible except from the $N$. and W., on which side are the ruins of an old wall and castle, entered by two gates called Granada and Malaga. The new town stretches to the W. in continu* ation of the old; and, with it, comprises two squares, and numerous irregular and mostly steep streets, few of which are paved; a parish church, three conventual churches, town and court houses, a large prison, three schools, a friendly society, an hospital, a theatre, and the ruins of a Roman aqueduct, which supplied the castle with water. The manufacture of soap and earthenware, distilling brandy, manufacturing oil, and weaving, employ the inhabitants; who also cultivate and export grain, fruits, and vegetables. Sheep, goats, pigs, and a few mules, are reared in the vicinity; and game abounds. The name Alhama is derived from the
ancient mineral baths, about 1 m . from the town. The prineipal bath is a Moorish edifice, and is exactly as the Mostems left it; the smaller is curcular, used by the poorer classes, and probably a IRoman erection. The waters, anong other chemical constituents, contain a large proportion of nitrogen gas ; the existence of which was first ascertained by Dr. Daubeny, in 1843. They are esteemed useful in cases of rheumatism, dyspepsy, and cutaneous affections; and are resorted to in the season by the inlabitants of the circumjacent towns. The town was taken by the French on February 2, 1810; when, in consequence of the resistance offered, a great many of the inluabitants were put to death. Pop. 6284.-(Madoz; Widdrington's Spain, \&c.)

ALHAMBRA, a small river, Spain, Aragon; which, taking its rise in the heights of the sierra de Gudar, prov. Teruel, flows in a N.W. direction for about 20 m ., when it runs S.W. by S., and unites with the Guadalavia at Teruel, after a course of about 50 m .- A small vil. of same name is situated on the right bank of the above, 12 m . N. Teruel. Pop. 584.-(Madoz.)

ALHAMBRA, the name of a celebrated palace in the city of Granada, Spain, erected early in the 13th century, by the Moors. See Cranaila.

ALHAMILLA (Sierra de), a clain of hills, Spain, in Andalusia, prov, of, and about 18 m . N.E. from Almeria; extending from the sierra de Filabres E. to the sierra Segura, and S. about 20 m . to Cape Gata, with an elevation, at the culminating point, of 1800 ft . above the sea level. Parts of the sierra contain marble, limestone, and granite; and some small veins of copper and oxide of iron. The medicinal baths of Alhamilla are situated on the S. side of the sierra, near the promontory of Cape Gata, facing the sea, within an edifice in the form of a parallelogram, and of solid construction. The water contains carbonic acid, oxygen, and nitrogen, carbonate and hydrochlorate of magnesia, lime, and soda. The baths are esteemed efficacious in paralysis, epilcpsy, asthma, and St. Vitus' dance, and are much visited in the season.(Madoz.)

ALIIANDRA, a small th. I'ortugal, prov. Estremadura; on the right bank of the Tagus, with a safe anchorage, and a fishery; 18 m . N.N.E. Lisbon ; lat. $38^{\circ} 57^{\prime}$ N. ; lon. $9^{\circ} 2^{\prime} \mathrm{W}$. It has a manufacture of cloth, with a number of brick and tile works. Pop. 1580.

ALHAURIN DE LA TORRE, a tn. Spain, Andalusia, prov. of, and 8 m . W. from Malaga; in a plain N. of the sierra de Mijas. It comprises two squares, and several clean and mostly paved streets, a townhouse, prison, endowed scbool, and two chapels. The inhabitants are engaged in tilling the fertile soil of the vicinity, and expressing oil; but many are likewise employed in the mines of antimony and lead, and in the quarries of gray and white marble which exist hard by. Pop. 2717.-(Madoz.)

ALHAURIN EL GRAND, a tı. Spain, Andalusia, prov. of, and 20 m . W. from Malaga; on the N. side of the sierra de Mijas, between the river Faala and the brook Gonzalez. The streets are spacious, well built, and paved. There are four squares, two clurches, a townhouse, public store, hospital, prison, two schools, numerous fountains, a cemetery, and some remains of an Arab fortification, and of a Roman aqueduct. The people are ehicfly employed in working the marble, freestone, and granite quarries, in the vicinty; in agriculture and mule driving. Some are also employed in the lead and antimony mines situated in the adjacent hills. In the neighbourhood, grain, fruits, and vegetables, are grown; and sheep, goats, pigs, and black cattle reared; in all of which a little trade is done. Pop. 5514.

ALHENDIN, or Algendin, a th. Spain, Andalusia, prov. of, and 6 m. S. from Granada; on the left bank of the Dilar. It has a church, townhouse, two schools, a prison, a public store, and a cemetery. The inliabitants are employed in tillage and cattle feeding. In the vicinity, grain, vegetables, and a little fruit, are grown; shecp, goats, and cows, are fed; and game is plentiful. Pop. 2275.

MLI, a small tn. Sicily, prov. of, and 15 m . S.S.W. from Messina. It has two mineral springs. Pop. 1300.

ALiA, a tn. Spain, New Castile, prov. Caceres, 18 m. S.W. Logrosan, on a gentle slope. It has a parish church, townhall, hospital, prison, endowed school, and public granary. The inhabitants manufacture hemp and linen fabrics, and are

## ALIASK.

much engaged in acriculture, and rearing sheep, goats, and cattle. The productions of the vicinity are grain, fruits, vegetables, honey, wme, and oil. The last three articles are largely exported. Pop. 3122.

ALIASKA, Alaska, or Alascha, a peninsula on the N.W. coast of America, in the Russian territory; between lat. $54^{\circ}$ and $59^{\circ} \mathrm{N}$. It stretehes in a S.W. direction, and is about 700 m . in length. At the N.E. extremity of this peninsula, in about lat. $60^{\circ}$, there is an active volcano of $14,000 \mathrm{ft}$. in height; and at the $\mathrm{S} . \mathrm{W}$. end are several cones of great elevation, which have been seen in eruption, and which are covered, for two-thirds of their height downwards, with perpetnal snow. The summit of the lofticst peak is truncated, having fallen in during an eruption in 1786.

ALICANTE [anc. Lucentum], a city and seaport, Spain, Valencia, cap. prov. of same name; at the head of an extensive bay, having Cape la Huertas at its N.E. extremity. and Cape S. Pola on the S., 12 m . apart. It lics in lat. $38^{\circ} 20^{\prime} 42^{\prime \prime} \mathrm{N}$.; lon. $0^{\circ} 26^{\prime}$ W. (r.), at the base of a roeky eminence 400 ft . high, surmounted by a strong castle which overlooks it, and commands the bay. It is surrounded by walls; entered by four gates; is well built; has clean, well-paved strects, and lofty and substantial stone houses, provided with terraces and verandalis; it comprises four handsome and spacious squares, with several of smaller extent; a fine promenade, named the Paseo de la Reina, ornamented with trees and a eentral fountain; and without the gates are two delightful alamedas. The publie edifices consist of two parish churches, one collegiate, of Doric architecture; a ehapel of case; large townhouse and guildhall, with prison attached; three general hospitals; a military hospital; lying-in hospital; orphan asylum, and house of mercy; a college, having a small library; a museum and gallery of pictures, by the best Spanish masters Alicante likewise possesses schools of navigation, agriculture, and botany ; economie, literary, and artistic societies, and numerous elementary schools; a theatre; several extensive storehouses; public baths, and eight fountains; but the water is not good, being impregnated with the salts of magnesia. Manufactures :-comparatively insignificant, consisting chiefly of esparto cordage, and matting; much reduced, however, of late years, owing to the unmanufactured rushes exported, being sent back in a manufactured state. Government has hicre a cigar manufactory which employs more than 2200 women; and a British company has established, in the neighbourhood, at the foot of Mount Molinett, works for smelting and refining the ores from the mines of Murcia. Though this city is considered the chief commercial port of Valencia, and has many French and English resident merchants, its trade has greatly deelined of late, in consequence of the high import duties, which have given rise to an extensive system of smuggling, connived at even by the authorities. The exports are wine, brandy, oil, soap, salt, wool, silk, linen, esparto, raisins, almonds, figs, and barilla, \&c., to the amount of $£ 1,958,333$. The imports, linen, eotton, salt fish, corn, timber, and other requisites, to the amount of $£ 3,906,870$. The harbour of Alicante, in which there is no perceptible tide, is only a roadstead in a deep bay, small vessels alone being able to approach the quay; the mole has been greatly extended, and a fixed light was placed on the mole head in 1844, visible at 15 m . distance. To the S . of this light, vessels may anchor in six or eight fathoms. Pop. 19,021.(Madoz, Diccio. de España.)

ALICANTE, a prov. Spain, eap. Alicante, in the S. of Valencia, and extendıng a small distance into the E. side of Mureia; hounded, N. by prov. Valeneia, N. and N.W. by Voí. I.

Murcia and Albacete, and S. and S.E. by Murcia and the Mediterranean. It is about 73 m . long, and 68 m . hroad, with an area of $2911 \mathrm{sq} . \mathrm{m}$. The surface of this province is much varied; to the N. it is rugged and sterile, and chicfly of limestone formation; in the S. it is nearly level, with rich and fertile valleys, and enjoying a mild and salubrious climate; the winters being without severity, and the summer heats being tempered by refreshing sea breezes. The mountains are, in some parts, clothed with pine, rock roses, and holly; though gencrally barren. Along the coast, southward, there are many salt marshes; the miasma arising from which is extremely injurious to health. There are also mineral springs, containing sulphurous, ferrnginous, and calcareons constituents, in various parts of the province, that are much esteemed for their sanatory qualities. The plains and valleys are abundantly fruitful and are well watered, partly by numerous natural streams, and partly by artificial irrigation; the inhabitants being extremely industrious, and careful agriculturists. Wheat, maize, barley, lentils, rice, oats, rye, and sugar cane; grapes, olives, hemp, flax, esparto, barilla, oranges, almonds, dates, and various other tropical fruits and vegetables, are extensively cultivated; bees and silkworms are reared; and carob trecs are aloundant. The quantity of wines made is considerable; the bost are the Tent and Alogue,esteemed throughout Spain; the inferior kinds are sent to France to be mixed with thin claret and Medoc wines for the British markets. Cattle rearing is not much attended to. The mineral wealth of Alieante comprises six mines of lead, 17 of copper, three of iron, and 15 of coals; and several marble quarrics on Mount Rollo. The inhabitants are engaged in the manufacture of silk, linen, woollen and cotton fabries; esparto cordage and mats; hats, earthenware, soap, \&c. ; and in brandy distilleries, tamneries, oil and corn mills ; and many are also employed as carriers. On the coast are productive fisheries of the tunny, anchovy, and other fish. Alicante exports agricultural produce, wine, oil, esparto, barilla, brandy, soap, salt, silk, and wool ; and imports linen, cotton, stuffs, tobaceo, salt fish, and timber. The state of education is far from satisfactory; and, owing, in great measure, to the extensive smuggling carried on, theft, and even murder, is frequent. Pop. 363,219.-(Madoz, Diccio. de España.)

ALICATA, or Licata, a seaport tn. Sicily, at the month of the Salso, prov. of, and 24 m . S.E. from Girgenti ; lat. $37^{\circ}$ $4^{\prime}$ N.; lon. $13^{\circ} 56^{\prime}$ E. (r.) ; situated on the slope of a rocky hill, and defended by two forts. Its port is shallow, and cannot be entered by large vessels, which generally anchor about 1 m . S.W. of the town, where they load. It has, however, a considerahle trade in grain, maccaroni, pistacia nuts, almonds, sulphur, and soda. On Mount Serrato, in the vicinity, may be seen the ruins of Gela. Pop. 13,480.

ALICE, a lately erected and rising $t n$. in the extreme E. of Cape Colony, division or district Victoria, on the left bank of a small affment of the Chumie, 41 m . N.E. Graham's 'Town; about lat. $32^{\circ} 48^{\prime} \mathrm{S} . ;$ lon. $26^{\circ} 52^{\prime} \mathrm{E}$. It lies in a fertile district, the population of which is rapidly increasing; and has a Free church, eapable of aecommodating a congregation of 200 , opened the end of 1849 . About 6 m . N. from Alice lies the missionary station of Chumie; and 4 m . E., that of Lovedale; and about 1 m . E., the Lovedale Free Church Educational Seminary.

ALICUDI, one of the Lipari Islands, off the N. coast of Sicily; lat. $38^{\circ} 32^{\prime} 42^{\prime \prime}$ N. ; lon. $14^{\circ} 16^{\prime} 30^{\prime \prime} \mathrm{E}$. (R.) It is of a conical form, and rises abruptly from the sea. The snrface is extremely rugged and barren, and presents many marked indications of its voleanic origin, the traces of the lava streams 12
which, in former ages, descended from its crater, still retaining their sterile and repulsive appearance, although the subterranean fires of the mountain have been so long extinguished, that there is no record of any eruption. Every spot capable of producing anything is carefully cultivated; and barilla, flax, capers, pulse, and wheat of a peculiarly tine quality, are prodnced. The coasts are so rugged, that there are only two landing places on the island, and both are diffieult of access in rough weather. The climate is remarkably healthy, hardly any disease being known amongst its inhabitants. Alieudi was called Ericusa and Ericodes by the Greeks, from the heath whieh grows on it. Pop. abont 260 to 300.

ALIFE [anc. Allipha], a th. Naples, prov. Terra di Lavora, $16 \mathrm{~m} . N . N . E$. Capua, remarkable for its insalubrity. It is the chief town of a diocese, mited to that of (creto etTelese, the bishop of which resides at Piedimonte. It is a place of great antiqnity, having been a military colony of the Romans. On the fall of the Roman empire, it was burnt by Count Celano, a greneral of the Emperor Frederick II. It is still surrounded with walls; and has a cathedral, three churches, and a mont-de-picté. Pop. 1643.

ALIGIIUR, a district and tn., N. W. Hindoostan, prov. Mcerut, between the Ganges and Jumua. The N. portion of the district is extremely barren, consisting almost wholly of low, dark jungle, with scarcely a single tree; but the S. is fertile, and in good cultivation. The whole superficies is estimated at $1,135,580 \mathrm{ac}$., of which $901,405 \mathrm{ac}$. are under cultivation. The principal towns are Alighur (the capital), Coel, Hatras, Moorsaun, and Anopsheher. Alighur is situated in lat. $27^{\circ} 56^{\prime}$ N., and lon. $77^{\circ} 59^{\prime}$ E., about 53 m . N. from the city of Agra, and 770 m. N.W. Calcutta. More correctly, Alighur is a fortress, the town being Coel, distant about 2 m. , and comnected with Alighur by a beautiful avenue. It was anciently a place of importance, being mentioned as such by Abul Fazel in the Ayeen Alkerry, and was more recently one of Dowlet Kow Sindia's principal depôts for military stores. The fort is square, with round bastions, a ditch, and glacis, and a single entrance, protected by a strong ravelin. It was taken, in 1803, by the British forces unler Lord Lake, when the whole district was added to the British possessions. Since that time the fort has been much improved, and the town made the station of a civil and judicial establishment. Pon. of district, 766,161.-(Hamilton's East India Gaz.; Jour. Stut. Soc., 1847.)

ALIKE ISLANDS, three small islands in the Strait of Macassar ; lat. $3^{\circ} 41^{\prime} \mathrm{S} . ;$ lon. $116^{\circ} 54^{\prime} \mathrm{E}$.

ALIMENA, a small th. Sicily, prov. Palermo, district of, and 23 m . S. from Cefalu. Pop. 3376 .

ALIMU太JID, a fort, Khyber Pass, Afghanistan, abont $\gamma \mathrm{m}$. from its E. cutrance, and so called from a small ruincd mosque in its neighbourhood. The width of the pass here is about 150 yards, the elevation above the sea 2433 ft . The fort is built on a rock alout 600 ft . high, nearly isolated, and with alnost perpendieular sides. It was the scene of some rather remarkable exploits during the Afghan war. It was taken by the British in July 1839, and, in 1841, was unsuccessfully assailed by the Afghans. In January following, it was evacuated by the British, with a loss of 32 men killed, and 148 wounded; and, in 1842, it was aqain garrisoned by General Pollock, and, on the final evacuation of the country, in November of the same year, it was entirely destroyed by General Nutt.

ALINE LOCH, a small arm of the sea, Argyleshire, Sound of Mall, district of Morven, Scotland, about $3 \frac{1}{2} \mathrm{~m}$. long, and $\frac{1}{2} \mathrm{~m}$. broad. The sides being steep and covered with wood, give a singularly pieturesque appearance to this beautiful inlet. The entrance is narrow, and at certain periods of the tide, which runs there with great rapidity, somewhat shallow, hut it is a well-sheltered harbour, and the ground good. There is a kind of bar at the entrance, having 12 ft . water, and towards the S . ouly 6 ft . at low water, spring tides.

ALINGiSAS, or Alingsoes, a small to. Sweden, lin or district of Elfsborg or Wenersborg, prettily situated npon the small rivers Sufvo and Lillin, near their junction with the Lake Mjörn, about 30 m . S. Wenersborg. Founded in 1619 , it was for some time a place of considerable mannfuctures in wool, cotton, \&c. Some little is still done in the namufaetare of cloth and stockings, ald in dyeng. Alströmer,
the father of Swerlish manufactures, was a native of Alingsics. I'op. 1221.-('Tnneld's Geografi ijfeer Sverige.)

ALIO AMBA, a market tn. Abyssinia, kingdom of Shoa, 5271 ft . above the level of the sea, 5 m. E. Ankobar, upon the crest of a steep mountain. It is mach frequented by the inlabitants of the adjacent villages, who resort to it on stated days to purelase their weekly supplies of necessaries. On these oceasions, it is crowded by traders from all quarters, offering their various commodities for sale, provisions, horses, eattle, cloths of all descriptions, are exposed, with gay assortments of beats, metals, coloured thread, and glass ware. Every month, during the fair geason, caravans arrive here from Hoossa and Tajoora.

Alil'EE, or Allapee, a small seaport th. Hindoostan, state of Travancore ; lat. $9^{\circ} 30^{\prime}$ N.; lon. $76^{\circ} 24^{\prime}$ E. (Horsburgh); 30 m. S. by E. Cochin. It carries on a considerable trade in teak timber, betel nut, coir, and pepper. The land has encroached considerably on the sea here during the last 20 years. Fop. about 13,000 .

ALISE, or Salnte-Reine [anc. Alesia], a vil. France, dep. Côte d'Or, 7 m . N.E. Semur, situated at the foot of Mount Auxois, near the site of the aneient Alesia, which was taken and destroyed by Cæsar, as deseribed in his Commentaries (vii. 687). Vestiges of wells, aqueducts, broken tiles, coins, and the like, prove the former existence of the city. At the foot of the ancient citadel (now Mount Auxois), stands the modern village of Alise, which has some trade in grain, wool, chaplets, \&c. In the neighbourhood are several iron mines, and two cold acidulated mineral springs, at which an hospital, containing 40 beds for patients, was founded in 1778, by three wealthy citizens of Paris. I'op. 776 .

ALIWAL, or Alleewal, a vil. in the Punjab, on the left bank of the Sutlej, about 20 m . W. by N. Ludheeana. Formerly a place of no note, it has beeome celebrated by its name having been given to a great battle fought in its vicinity, Jan. 28, 1846, between the Nikhs and a British army, the former commanded by Sirdar Kunjeet Sing, and the latter by Sir Harry Smith. The Sikh force amonnted to 24,000 men and a park of artillery of 68 guns, the British to 12,000 men and 32 guns. The battle, which lasted three hours, or from 10 A.M. to $1 \mathrm{P} . \mathrm{M} .$, ended in the total defeat of the Sikhs, who lost between 5000 and 6000 men , together with their whole park of artillery.

## ALeJEZUR. Sce Ataezur.

ALJUBARROTA, a th. Portugal, prov. Estremadura, $15 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Leiria, on the summit of a mountain. It has mannfactures of stoneware. In the neighbourhood, John I. of Portugal, surnamed the Grcat, obtained a signal vietory over John I., King of Castille, August 14, 1385, when 12,000 Castillians were slain. Camoens, in the fourth canto of the Lusiud, minntely describes this battle, which, with that of Campo de Ourique, established the independence of I'ortugal. In memory of this victory, John the Great founded the church and monastery of Batallia, at some distance from the field of battle; and the anniversary of the day is still celebrated by the Portuguese. Pop. 1684.

ALJUSTREL, a tn. Portugal, prov. Alemtejo, 54 m . S. Wr. Evera, and 77 m. S.E. Lisbon. It is neatly built, and in the vicinity there is a mineral spring. Pop. 1304.

AL-KALSEERIA, a tn., N.W. part of Morocco, not far from Al-Ksar. It is a dull and decaying place, but presents appearanees of having been formerly more populous and flourshing than now. It contains a few mean shops, and its only commerce consists in a little trade in salt, procured from the neighbouring hills, Pop. about 8000 , of which 500 are Jews.

ALKER'TON, or Awnemington, a par. England, co. Oxford; area, 650 ac. Lydiat, the mathematician, born and buried here. Pop. in 1841, 190.

ALKHAM, a par. Englant, co. Kent; area, 3190 ac.; $4 \mathrm{~m} . W$. by N. Dover ; ancient churel. Pop. in 1841, 595.

ALKMAAR [Latin, Alcmatia], an old and important tn. Holland, prov. N. Holland, cap. of the arrond. and canton of the same nane; 20 m . N.N.W. Amsterdam, and about the same distance N.N.E. Haarlem; 5 m . from the sea, on the great Amsterdam Canal, by wheh it eommunicates with the capital, with l'urmerende, the llelder, and the N. sfa; lat. $52^{\circ}$ $37^{\prime} 54^{\prime \prime} \mathrm{N}$. ; lon. $4^{\circ} 45^{\prime} 15^{\prime \prime} \mathrm{E}$. ( t .) Alkmaar is a clean, well and regularly built town, intersected by various gruchten, or small canals, the banks of which are planted with trees, in frent of
the straight lines of houses on either side. It is of an oval slape, and was formerly fortified, and still has seven gates, but its ramparts have been converted to the unwarlike but agreeable purpose of elegant puble walks. It is the seat of a court of first resort, and of a tribunal of commerce; and possesses a highly decorated Gothic townhouse, founded 1509 ; a weighhouse, which is an elegant structure; an arsenal, exeise office, mont-de-piété; a beautiful fish market, abundantly supplied with sea fish; a linen and yarn market, and a neat theatre. Its churches are two Calvinistic, one Lutheran, one Remonstrant, one Mennonite, four R. catholic, and one Jewish synagogue; the only one of which worthy of special notice is the Calvinistic chureh of St. Lawrence, a large handsome building of the 16 th century. Alkmaar has an hospital for old men and women, a Calvinistic and a R. Catholie orphan hospital, an infirmary, house of correction, society for relieving neeessitous trades-women, and various other institutions of less note. It is also well supplied with educational and scientific institutions, lhaving, besides common sehools, a Latin sehool, a drawing school, a school of clinical medicine, a natural history and literary society, a society of science and art, \&c. Alkmaar possesses a roomy haven, snitable for vessels winter ing in, and carries on a considerable export trade in butter and cheese. It is, indeed, for eheese, the greatest mart in Holland, or even in the world, the quantity sold annually in the town being upwards of 4000 tons, nearly equal to the half of the whole quantity made in the kingdom. This cheese is exported to all parts of Europe, to the W. Indies, and S. America. The manufactures of Alkmaar consist of salt, some of which, in the refined state, is exported, soap, vinegar, earthenware, leather, parchment ; and it has four saw and three corn mills. It has a roomy market place, and weekly markets for grain, in which a very considerable amount of business is done; for fine seeds, such as mustard and canary seed, and for fine flowers and plants, cultivated extensively in the vicinity, it is the principal market. It has also leather markets twice each year ; an extensive cattle and pig market in autumn, and an annual horse fair.

Alkmaar appears to signify al-meer, that is, all lake, and was so named from the number of lakes in former times in its vieinity, from which much of its strength, as a fortified place, was derived, but which are now, however, converted into arable land. It is often honourably mentioned in Duteh listory, and notices of it are to be met with as early as A.D. 924. It frequently suffered from the floods to which Holland is subject, and also from the wars which have been waged in the country. Perhaps the most remarkable fact in its listory is its suceessful defence against the Spaniards in 1573 , which, as being the first cheek they recoived, gave rise to the saying, 'Victory begins at Alkmaar.' Various eminent men were natives of this town, of whom may be named Cornelius Drebbel, the inventor of the thermometer; he died in 1634. In 1595, damask weaving was invented here by Paschier Lammertyn. Pop. abont 9000.-(Van der Aa's Nederlanden.)

AL-KOSH, or EL-kosir, a walled fortified market tn . Turkey in Asia, pash. Bagdad, on the Tigris, about 30 m . N Mosul. Its vaulted one-story houses are built on the slope of a hill of the Soti range. It has a large church and lihrary, rich in Hebrew MS.; and is the seat of the Nestorian patriarch, who, however, resides in Mosul. On a rock above the town, to the N.E., in a very imposing position, is the convent of Rabban Hormutz. The inlabitants are firmly built, supposed to be a Kurdish race, but resembling somewliat Jews or Arabs, and are very independent. Al-Kosh is supposed to be the birthplace of the prophet Nahum, and his grave is likewise pointed out. Pop. about 3000.

AL-KSAR, a tn. Morocco, about 60 m . S. Tangier, and 21 m . S.E. El-Araish ; lat. $34^{\circ} 58^{\prime} \mathrm{N}$.; lon. $5^{\circ} 55^{\prime} \mathrm{W}$. ; on the N. bank of the river L' Khos, or El-Kos, a rapid yellow stream. It is surrounded by orchards, and gardens of orange, pomegranate, and palm; and is encircled by an old ruinous brick wall, of about $1 \frac{1}{2} \mathrm{~m}$. in length, having battlements, loopholes, and small square towers, 50 paces apart. The strects are narrow, and at intervals arehed across. The houses lave ridged roofs of tile. It contains a great number of spacious mosques. Al-Ksar was founded about the end of the $1^{12}$ th century, and is connected in history with the wars of Granada.

ALLAGNA DI SESIA, a small th. Sardinian States,
prov. Valsesia, 15 m . W.N.W. Varallo, and 56 m. N.N.L. Turin. It has productive copper mines. Pop. 2000.

ALLAHABAD, one of the N.W. provinces, and also a distriet, Hindoostan, gov. Agra. The prov. lies between Agra on the W. and Benares on the E., and is divided into five districts, the names of which, with their area, population, \&c., will be seen from the following table:-

|  | $\begin{aligned} & \text { Nn. of } \\ & \text { Town. } \\ & \text { Tuisps. } \end{aligned}$ | $\begin{array}{\|c\|c} \text { Aren } \\ \text { In geo. } \\ \text { sq. } \end{array}$ | Ana in | $\begin{array}{\|c} \text { Land } \\ \text { Revinne it } \\ 185-6 . \end{array}$ | Total Pop. | No. of per-geo. m . |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Cawnpoor.. | 2,279 | 1756 | 1,480,101 | 2202.285 | 550,505 | 313.5 |
| Futtehpoor. | 1,614 | 1193 | 1,010,380 | 142,992 | 380,086 | 318.6 |
| Hunseerpoor | 1,083 | 1701 | 1,439,282 | 147,121 | 316,558 | 186.1 |
| Banda............ | 1,252 | 2176 | 1,843,451 | 164.734 | 480428 | $220 \cdot 8$ |
| Allahabad | 4,004 | 2113 | 1,790,243 | 212,515 | 719,276 | $340 \cdot 4$ |
| Total. | 10,232 | 8939 | 7,571,457 | 869,647 | 2,416,853 | 2737 |

According to another column of the same table from whieh the above has been extracted, and which was read by Colonel Sykes before the Statistical Society in 1847, it would appear that the land tax on the total cultivation is abont $4 s .6 d$. per acre. The N. part of the province is low, and chiefly composed of a flat sandy loam. The S. part is an elevated table land, diversified with hills of considerable height. The climate of the flat region is sultry, and subject to hot winds. The elevated portion is more temperate and healthy. The province is watered by the Ganges, Jumna, Goomty, Caramnassa, and their affluents, and other less considerable streams. It is reckoned one of the richest and most productive provinces of Hindoostan. It exports diamonds, sugar, cotton, indigo, cotton cloths, opium, and saltpetre; and imports salt, and varions other articles. The diamonds, now become scarce, and remarkable for their smoothness and purity, are found in the mines of Pannal,, in the hilly region. In the time of the Emperor Akbar, the mines were wrought to the extent of $£ 100,000$ sterling, of annual value. In 1775, the Bengal Government acquired a part of this province, by treaty, from a Nabob of Oude; and in 180I, the city of Allahabad and the adjacent districts were ceded to the same power. In 1803, the remainder of the province was exchanged with the British by the Peshwa of the Malırattas, for an equivalent tract in Gujerat and the Carnatic.-The pistrict, the area and pop. of which will be seen from the foregoing table, is chiefly composed of the environs of the city of Allahabad. It is intersected by the Ganges and Jumna, is remarkably fertile, much of its soil being composed of a rich sandy loam, and yields good crops of wheat, barley, pease, and oil seeds. Irrigation has to be resorted to during the dry season. A few snall sheep, with coarse black wool, or rather hair, are reared; and in the towns, cotton eloth of various kinds is manufactured to a limited extent.-(Hamilton's East India Gaz.; Jour. Stat. Soc., 1847.)

ALLAMABAD, an ancient city, Ilindoostan, cap. of the above prov., situated near the junction of the Ganges and Jumna ; lat. $25^{\circ} 25^{\prime} 26^{\prime \prime} \mathrm{N}$. ; lon. $81^{\circ} 51^{\prime} 1^{\prime \prime} \mathrm{E}$. (L.) ; $450 \mathrm{~m} . \mathrm{N}$. by W. Calcutta, and 70 m. W. Benares. In 1765 it was taken by the British under Sir R. Fleteher; was subsequently restored to the Nabob of Oude; and it again reverted to the East India Company in 1803. The town was originally built of brick, but now consists prineipally of mud houses raised on the foundations of the old buildings. Its antiquity and former extent are attested by the fact, that for several miles around the fort, the soil consists of mortar, broken pottery, and brick dust. The only remarkable buildings are the fort; the Jumma Musjid, or principal mosque; the serai of the Sultan Khusro ; and the imperial tombs, or mansoleums. The fort, or Chalees Satoon, so named from a dome and cupolas supported by forty pillars, is a triangular, lotty, am extensive structure, situated on the point of land formed by the junction of the rivers, and washed by the waters of the Jumna. It completely commands the navigation, and, on account of its favourable site, has been selected as the chicf military depôt for the upper provinces. The Government house and barracks within the fort are spacious and handsome; and connected with the fort there are military cantonments, amongst the most beautiful and pieturesque in India, and a gunpowder manufactory. The Jumma Musjeed, a stately, but not an ornamental building, on the banks of the Jumna,
is in good repair. The serai, or hotel, of Khusro, though much dilapidated, is still a noble quadrangle, with four Gothic gateways and an embattled wall. The garden adjoining is now remarkable only for three mausoleums which it contains, and which were crected for several of the imperial tanily. These are large terraeed structures, each having vaulted apartments bencath; in the central one of which is a small tomb, or stone cottin, riehly carved. Above, there is a circular apartment, the roof of which is formed by a dome, beautifully sculptured without, and painted within. Apart from the fort and cantomments stand the houses of the civil functionaries. Although from its mean appearance the town is named Fakecrabad, or 'Beggar abode,' yet its site at the junction of the Ganges, the Jumma, and the imagined subterranean Screswati, constitutes it one of the five brahminical prayagas, sunguins, or sacred confluences. Bathing in the united stream at the point of junction, which is considered equal to bathing separately in the three, and haviug the hair previously shaved, so that each hair may fall into the water, acquire for the devotee, according to the sacred writings, a million of years' residence in heaven for every hair. For permission to bathe, a tax of 6 s . is exacted by the Government. Allahabad is the seat of a superior court of justiee, and has a school, established by some English gentlemen in 1825, in which native pupils are taught Persic, Hindoostanee, and several cominon branches of education. Pop. in 1832,64,785; of which 20,669 were Mussulmans, and 44,116 Hindoos.(IIeber's Journal; Hamilton's East India Gaz. ; Historical Account of British India; Martin's East Indies.)

## ALLAII-sHEHR. See Ala-Shehr.

ALLAN (Bridge of), a flourishing village and watering place in Scotland, co. Stirling, on the high road from Stirling to l'erth, 3 m . N. the former, and about 31 m . N.W. Edinburgh, on the banks of the river Allan, which are here remarkable for their sylvan beauty. The village contains a Free church, and a United Presbyterian church, with an excellent school belonging to the former. There are here a cormmill, a sawmill, a paper mill, and a bleachfield. But the village is indebted for its prosperity chiefly to the Airthrie mineral wells in the vicinity, which are much frequented during the summer months. There are two excellent and well-conducted inns for the accommodation of visitors; and a place of recreation, called M'Farlane's Institution, where a collection of statuary, engravings, paintings, \&c., is at all times open to inspection, free of charge. Close by the village is a station of the Scottish Central Railway. Some years sinee, the skeleton of a whale, 73 ft . long, was found near the village, embedded in clay, 20 ft . higher than the surface of the lighest tide of the river Forth at the present day. From the situation of the Roman station and causeways at a small distance from the spot, it is concluded that the whale must have been stranded there at a period prior to the Christian era. Pop. in 1841, 561.

ALLANCIIE [anc. Alantia], a small tn. France, dep. Cantal (Auvergne), 10 m . N.N.E. Murat. It is clean, well built, and has a public fouutain, which is very copious. The parish church, an old structure, well decorated, and the old castle of Cheyladet, are the only important buildings. It has manufactures of lace, and rears a good many cattle and mules. Its trade is in grain, wine, leather, and cattle. Pop. 1215.

ALLAPUTTY, a small ist. off Jaffna, N extremity of Ceylon; lun. $80^{\circ} 2^{\prime}$ E. ; it has a loose and sandy soil, and abounds in palinyra trees. Fish is plentiful on the coast, and, when dried, form an article of export. The inhabitants are Malahars, and profess the Siva religion. Pop. about 1800. - (Ceylon Gazettecr.)

ALLARlZ, a tn. Spain, Galicia, prov. of, and $11 \mathrm{~m} . \mathrm{S}$. by E. from Orense, pleasantly situated on the N. slope of the sierra de Penagache, and the left bank of the Arnoya, a tributary of the Minho; crossed here by two bridges. It is a cheerful-looking town, surrounded by walls overlooked by a eastle, and well built, having two squares, three parish churches, a college, two primary schools, a townhall, hospital, consistory, cemetery, and prison. The inhabitants are chiefly enployed in agriculture and cattle rearing. Pop., including two rural suburbs, 2756.

ALLASSAC, a sinall tn. France, dep. Correze, on the left bank of the Vezere, 15 ml . W. Tulle. In the neighbour-
hood are numerous vineyards; and good red vin ordinairo is made, and some trade in cattle carried on. Pop 1551.

ALLASS STRAIT, a channel between the Islands of Lombock and Sumbawa, in the Malay Arehipelago. The passage is safe, and much frequented. The sumbawan side of the strait consists of high rugged land; the opposite side is composed of stecp cliffs facing the sea. The former is in about lat. $9^{\circ} 2^{\prime} \mathrm{S} . ;$ lon. $116^{\circ} 42^{\prime} \mathrm{E}$. The whole length of the strait is about 50 m . ; and its breadth, at the narrowest part, 9 m .

ALLAUCH [anc. Allaudium], a tn. France, dep. Bouches-du-Rhône (Provence), about 7 m. E.N.E. Marseilles. A series of acclivities clad with pines, gradually ascend to the hill on which the ancient town was built, and where a double rampart, flanked with towers, one of them still in good preservation, points out its position. Overtopping these ruins the church is seen to rise; while below, on a rock, with a considerable slope, stands the modern town, in the form of an amphitheatre. In the background are the peaks of a range of ferruginous hills, and higher still the chain of Gardelaban. In the neighbourhood a luscious wine is made, and there are lime kilns and gypsum quarrics. Pop. 1666.

ALLAYAK-KA-'TANDA, a tn. Sinde, 20 m . E. Hy derabad; lat. $25^{\circ} 21^{\prime}$ N. ; lon. $68^{\circ} 40^{\prime}$ E. The manufacture of cotton and dyeing is carried on here to some extent. Pop. 5000.

ALLCANNINGS, a par. England, co. Wilts ; area, 7630 ac.; 4 m. E. by N. Devizes. Pop. in 1841, 1148.

ALLE, a river, E. Prussia, having its sources in some small lakes on the S. borders of Polish Prussia, in lat. $53^{\circ} 40^{\prime}$ N., from which point it flows in a N. and N.N.E. direction, till it falls into the Pregel, near Wehlan, 27 m . above Königsberg. Its whole length, exclusive of minute sinuosities, may be about 100 m ., but as its course is very tortuous for about 12 m . before it falls into the Pregel, its entire development may reach 110 or 115 m .

ALLEE BLANCHE, a valley, Sardinia, in Piedmont, which owes its name to the decp snow with which it is always covered, more or less, even in the greatest summer heats. It extends in a S.E. direction, nearly parallel to Chamouni, along the range of which Mount Blane forms the culminating point, and is bounded in part by that mountain, whose S. base rises abruptly from its bosom to a vertical height, which, as the valley itself is only 4000 ft . above the sea, cannot be less than $11,700 \mathrm{ft}$. The lake formed in the valley by the magnificent glacier of the Allée Blanche is nearly filled up by alluvial matter, but its former bed is indicated by an extensive flat, across which an important feeder of the Doire tumbles in a foaming rapid.

ALLEGHANY, the name of various counties, towns, and townships, in the U. States, America.

ALLEGHANY, a river, U. States, America, rising in Pennsylvania, near Condersport, about lat. $41^{\circ} 40^{\prime} \mathrm{N}$.; lon. $78^{\circ} \mathrm{W}$. It winds N. through part of New York, and again S.W. through Pennsylvania to Pittsburg, where it unites with the Monongahela in forming the Olio, 1138 ft . above the sea level, after a course of about 300 m . The Alleghany is navigable as far as Hamilton in New York, 260 m . from Pittsburg. Its chief tributaries are the Kiskiminetas, French Creek, and Toby's Creck.

ALLEGHANY, or Appalachian Mountains, an extensive mountain system in the U. States, America. Commencing in the N. parts of Alabama and Georgia, it traverses the states of Tennessee, N. Carolina, Virginia, Maryland, and Pennsylvania, to New York, at a distance from the Atlantic -to which it runs nearly parallel-of 50 m . to 130 m . It extends through 11 degrees of lat., and is from 50 to 200 m . broad. The various ridges of which the system is composed are known by the names of the Blue Ridge, North Mountain, Jackson's Mountain, Laurel Mountain, Cumberland Mountain, \&e. Between these ridges, which are for the nost part wooded to the summit, are some fertile valleys, although the country they enclose is generally rocky and barren. Their mean elevation is about 2500 ft . ; but in Yancey county, N. Carolina, some of the peaks attain an clevation of 6000 ft . The Alleghany Mountains divide the waters that flow into the Atlantic from those that fall into the Mississippi. They are composed mainly of granite, gnciss, mica clay-slate, and primary limestone, and are generally clothed with a luxuriant vegetation;
their W. slope is considered one of the finest countries in the U. States. The chanacter of the seenery is at onee picturesque and peaceful. The vegetation is different on the two sides; the locust tree, Canadian poplar, Hibiscus, and Hydrangea, are most common on the W. side; the American shestnut and Kalmias are so numerous on the Atlantic side, as to give a distinctive eharacter to the flora.

ALLEGRANZA, one of the smallest of the Canary Islands, and the most northerly of the group; lat. $29^{\circ} 31^{\prime} \mathrm{N}$.; lon. $13^{\circ} 35^{\prime} \mathrm{W} . ; 20 \mathrm{~m}$. N. the Island of Lancerota. It has the appearanee of being an extinet voleano, the edge of the erater, whieh is two-thirds of a mile in diameter, being well defined. The island rises to a height of 939 ft . above the sea, and is so preeipitous as to present only one landing place, which is on the S. side, where a cavern runs for about 500 paces, slanting from the sea, and terminates in a little sandy bay, open above. On the W. side, the cliffs rise perpendicularly to a height of 700 ft . The inhabitants-a mere handful-are chiefly employed in collecting arehil, which, like that gathered in the other Canary Islands, is reckoned of the best quality.

ALLEGRE, a tn. France, dep. Hante Loire (Auvergne), 13 m . N.W. Le-Puy; lat. $45^{\circ} 12^{\prime} \mathrm{N}$.; Ion. $3^{\circ} 50^{\prime} \mathrm{E}$. It stands on the S. slope of a lofty hill, which is overtopped by the far loftier dome of Bar-a remarkable volcanie mountain, of a conical slape, standing isolated, and terminating in a magnificent crater 500 yards in diameter, and 40 yards in depth. The inhabitants traffic in grain, wool, and cattle. Pop. 2048.

ALLEMOND-EN-OYSANS, a vil. France, dep. Isère (Dauphiné, in a beautiful valley on the right bank of the Romanche, abont 18 m. S.E. Grenoble. In its neighbourhood are found cobalt, niekel, copper, and zinc. Pop. 1546.

ALLEN, the name of two small rivers, and of several streams, in England:-1, A river in Cornwall, whieh, joining the Kenwyn at the quay of Truro, forms the creek of that name.-2. A small strean in Dorsctshire, which unites with the Stour 10 m . below Blandford.-3, Two streams, respectively named E. and W. Allen, which have their source in the S. parts of Northumberland, at a place ealled Allen Heads, 1400 ft . above the level of the sea; they unite near Whitfield, and subsequently fall into the Tyne at Beltingham, 4 m . E. Haltwhistle.

ALLEN, the name of several counties and townships, U. States, America.

ALLEN (Boc or), the general name applied to a numerous series of bogs in Ireland, and not, as very generally supposed, to one continuous morass of great extent. They are dispersed, often widely apart, with extensive tracts of dry eultivated soil between, over a broad belt of land stretching across the centre of the country, from Wicklow Head to Galway on the S., and from Howth Head to Sligo on the N., having thus a breadth of about 27 m . at the $\mathbf{E}$. end, and of 80 at the W. extremity. The bogs, however, all lie on the E side of the Shannon, and are, for the most part, of that kind called red bog.

ALLEN (St.), a par. England, co. Cornwall; area, 3610 ac.; $4 \frac{1}{2} \mathrm{~m}$. N. by W. Truro. Pop. in 1841, 652.

ALLENDALE, a tn. and par. England, co. Northumberland. The town is 33 m . E. Carlisle, on an aeelivity, right bank of the E. Allen. It is irregularly built, but contains some good houses, and a spacions market place. The inhabitants are employed principally in the lead mines in the vicinity; market day, Friday. I'op. 1217.-The Parisir comprises $45,810 \mathrm{ac} .$, and contains several chapels of ease, and places of worship for Wesleyans and the Society of Friends, to nearly all of which sehools are attached. The parish is hilly and sterile, but rich in minerals. Pop. in 1841, 5729.

ALLENDORF.-1, A tn. Hesse-Cassel, in a pretty valley on the right bank of the Werra, where it reeeives the Altehainsbach, 24 m. E. Cassel ; lat. $51^{\circ} 16^{\prime} \mathrm{N}$. ; lon. $10^{\circ} 5^{\prime}$ E. It is eneircled with a double wall, with three gates, and has an hospital and a handsome church. The neighbourhood is covered with orcliards and woods, and there is good fishing in the Werra. Some wine and silk are produced, and a good deal of tobaeco is raised and manufaetured. On a strong salt spring in the vicinity are saltworks. Pop. $3200 .-2$, A tn. Hesse-Darmstadt, 9 m . N.E. Giessen, has meal and oil mills, linen cloth and earpet weaving. Pop. 1150.-3, Allendorf
is likewise the name of four vils. in Hesse-Cassel, of three vils. in Hesse-Darmstadt, and of 10 others in Prussian 1Ianover, Nassau, \&e.

ALLEN LOUGH, a lake, Ireland, co. Leitrim, about 7 m . long, and varying from 1 to 4 m . in breadth. The river Shamon flows through it. A few small islands are scattered over its surface, upon one of which the ruins of a small monastic strueture are still visible.

ALLEN'S ISLE, a small isl. at the head of the Gulf of Carpentaria, in N. Australia; lat. $17^{\circ} 5^{\prime} \mathrm{S}$. lon. $139^{\circ} 25^{\prime}$ E. It is spoken of in Stokes' Discoveries in Australia (vol. ni. p. 277), as beng more fertile than any other part visited in the gulf, being clothed with rich grass, and with small trees and shruhs of a very green appearance.

ALLENSMOOR, a par. England, co. Hereford; area, 1930 ae.; 4 mi . S.W. Hereford. Pop. in 1841, 668.

ALLENs'TEIN, a tn. E. Prussia, gov. of, and $65 \mathrm{~m} . \mathrm{S}$. from Königsberg, at the jmetion of the Nen Pisch with the Alle; lat. $53^{\circ} 46^{\prime} \mathrm{N}$. ; lon. $20^{\circ} 27^{\prime} \mathrm{E}$. It is the cap. of a circle of same name; and has a eastle, three churches, two chapels, and an almshouse; with manufactures of leather, linen, farn, earthenware, and potash; and 12 markets, 6 of them for eattle Pop. 3350 .- The checle has an area of 3800 geo. sq. m. It is well wooded and watered, being not only traversed by the Alle and Passarge, but possessed of numerous lakes. The soil is not well adapted for agrieulture, but grazes large numbers of sheep and cattle. A good deal of attention is paid to the rearing of bees. Pop. 36,000, of whom only 2000 are Protestants.

ALLENTON, or Allwinton, a par. and township, England, co. Northumberland; area, 31,940 ac.; on the river Coquet. Pop. in 1841, 812.

ALLER, a vil. and par England, co. Somerset. The vil. lies at the foot of a hill, $6 \frac{1}{4} \mathrm{~m}$. W. by N. Somerton, and 2 m. N.N.W. Langport. It consists but of one irregular, in-differently-kept street, though the supply of water is ample. It eontains a chureh, an Independent chapel, and a day school. The par. eomprises 4290 ae. Guthrum, the Danish chief. was baptized at this place, under the sponsorship of Alfred the Great, after the battle of Ettandune, in which the Danes were defeated by the latter. Aller Moor was also the scene of a battle between the Royalists and the Parliamentarians in 1644. Pop of vil. and par. 559.

ALLER, a river, Germany, rising about 20 m . W. Magdeburg, in Prussian Saxony. Flowing N.W. it enters Ilanover, and, after receiving several important tributaries, among which may be named the Oker, the Fuse, and the Lachte, it becomes navigable at Celle, where, still proceeding W., it receives the Leine, not far to the S. of Hudemühlen, and falls into the Weser near Verden. Total course, exclusive of windings, about 120 m .

ALLERDALE, the name of two of the five wards into which the co. of Cumberland, England, is divided, and called, respectively, Allerdale-above Derwent, and Allerdale-belowDerwent. Together, they form the W. division of the co., and, as sueh, return two members to the House of Commons. Allerdale-above-Derwent comprises $275,970 \mathrm{ac}$., with a pop. in 1841, of 41,621. Allerdale-below-Derwent, 170,400 ae. pop. 29,896.

ALLERSTON, a par. England, co. York, N. Riding; area, $9110 \mathrm{ac} . ; 4 \mathrm{~m}$. E. by S. Pickering. P . in 1841, 414.

ALLERTHORPE, a par. England, eo. York, E. Riding; area, $2050 \mathrm{ac} . ; 1 \mathrm{~m}$. N.L. Wakefielt. Pop. 199.

ALLERTON C'IIAPEL, a par. England, co. Somerset area, 1490 ac.; $4 \frac{1}{2} \mathrm{~m}$. S.W. by S. Axbridge. Pop. in 1841, 331.

ALLERTON MAULEVERER, a par. England, co. York, W. Riding; 5 m. E. by N. Knaresborough; 2300 ac. Pop. in 1841, 277.

ALLESLEY. a par. England, co. Warwick; area, 3950 ac.; 2 m . N. Coventry. Pop. in 1841, 963.

ALLESTAR, or Allistar, a populous $t n$. peninsila of Malacea, kingdom of Queda or Keddah, four hours' pull up the Queda river. It was at one time the residenee of the king. The inhabitants consist of Chuleas, Malays, and Chinese, the latter having a temple. In 1823 it contained 2000 houses.

ALLES'TREE, or Allestiey, a par. England, co. of, and 2 m. N. W. from Derby; area, 990 ac. 1'op. in 1841, 507.

ALI.EVARD, a tn. France, dep. Isère (Ianphiné), 23 m. N.E. Grenoble, upon the Ozeins; in a fertile and wellwooded valley, which, thongh little more than 3 m . from that of the Iserc, is more than 900 ft . above it. In the vicinity are numerous iron mines, which supply several blast furnaces, yielding about 4460 tons of iron yearly. A good deal of it is melted in foundries on the spot; part is used at the cannon foundry of St. Gervais, and part is converted into steel, for which it is said to be well adapted. Sulphor is found in the neighbouring mountain of Ja Tnille; and in a vale below are two mineral springs, which, though lying near each other, are of a totally different nature. At a short distance from the town are the ruins of the Chateau Bayard, the birthplace of the celebrated chevalier of that name. Pop. 1666.

ALLEXTON, or Amixton, a par. England, co. of, and 14 m . S.E. from leeicester; area, 1010 ac . Pop. in $1841,81$.

ALLHALLOWS.-1, A par. England, co. Cumberland; area, 1860 ac. ; 2 m . S. Maryport and Carlisle Iailway; intersected by the river Ellen; freestone quarry, lime kilns, and collieries. Pop. in 1841.235.-2, A par. Fngland, co. Kent; area, $2460 \mathrm{ac} . ; 7 \frac{1}{2} \mathrm{~m}$. E. Rochester. Pop. in 1841, 268.

ALLI, a small river, Naples, Calabria Ultra; it rises in Mount Calistro; lat. $39^{\circ} 10^{\prime}$ N. ; lon. $16^{\circ} 31^{\prime}$ F.; flows S.S.E., passes Simmari, and, after a course of abont 18 m ., falls into the Gulf of Squillace, 5 m . W. Petrizzi.

ALLIEI [anc. Elarer], a river, France, which gives its name to a department. It is the most impertant tributary of the Loirc. It rises in the forest of Mercocur, at the foet of Mount Lozère, belonging to the chain of the Cevennes. After a course in the main N.N.W., watering the departments Lozère, Upper Loire, Puy-de-Dôme, and Allicr, and separating the departments Cher and Nièvre, it joins the Loire, on its left bank, about 4 m . W. Nevers. Its whole length is about 200 m ., for a third of which it is navigable.

ALLIER, a central dep. France, so called from the river of that name, which traverses it from N. to S.; comprehending the greater portion of the old province of Pomrbonnais; bounded, N. by the departments of Nievre and Cher, F. by those of Saône-ct-Loire and Loire, S. by that of Puy-de-Dôme, and W. by those of Creuse and Cher. Besides the Allier, the department is watcred also by the Cher, and other streams, The surface is undulating, and the soil in general fcrtile, producing more grain than is consumed. Agriculture, however, is in a very backward state, the rural part of the population being unwilling to abandon their old customs for modern improvements. Small proprietors here, as well as throughout France, have much increased since the first Revolution. In 1844, the number in this department rated to the Contribution Foncière, amounted to 66,829; the properties being divided inte 2,759,992 parcels. The cultivation of the vine is not much attended to, though some estecmed white wine is made at Saint-Pourcain and one or two other places, the greater part of which is exported. Large numbers of cattle, sheep, and goats are reared; also, horses of a strong breed. The woods are principally of oak, furnishing a good supply of timber for shipbuilding. The ponds and lakes are numerous, covering nearly $14,826 \mathrm{ac}$.; and, as well as the different atreams and rivers, abound in fish, whieh, with the leeches found in the former, form a considerable article of trade with Paris. Various mines of coal, iron, and antimony, marble and granite quarrics, and porcelain clay pits, are worked in the department. There are mincral springs at Vichi, Bourbonl'Archambault, and Neris. Cutlery is made at Moulins, the capital; porcelain and earthenware at Lurcy-Levy, and soda and glass at Commentry and Souvigny. The department is crossed by one of the great roads from Paris to Lyons, and by two canals; and is within the jurisdiction of the Crimiral Court of Riom. Top. in 1846, 329,540.-(St. Fargeau; Dic de la France; Guibert, Dic. Geo. et Stat.)

ALLIGATOR RIVERS (Souti and East), two rivers of N. Australia, both of which flow into Van Diemen's Gulf, at a distance from each other of about 20 m . The scenery on the banks of the latter is said by Dr. Lcichhardt to be extremely picturesque.

ALLIGATOR SW AMP, a marsh in N. Carolina, U. States, between Albemarle and Pamlico Sounds, or between lat. $35^{\circ} 20^{\prime}$ and $35^{\circ} 52^{\prime} \mathrm{N}$. It comprises $75,000 \mathrm{ac}$., and was included in an extensive project for draining such
marshes, entertained some years ago by the U. States' Government. The lands of this swamp are said to be naturally very fertile.

ALLIGNY, a market th. France, dep. Nière, arrond. of, and 12 m . N.E. from Chatcau-Chinon. It has five pretty large cattle fairs. Pop. 234.

ALLINGE, a vil. with a small haven, Denmark, on the N.E. coast of the isl. of Bornholm. Its inhabitants are engaged chicfly in acriculture and fishing. Pop, about 600.

ALIINGT()N, several pars. Eng.:-1, Dorset; 960 ac. Pıp. 1545.-2 (East), Devon; 3646 ac. Pop. $640 .-3$ (West), Devon; 4110 ac. Pop. 1008.-4, Kent; 612 ac . Pop. 49.5 (East and Hest), Lincoln; 2070 ac. Pop. $396-6$, Wilts; 4.50 ac . Pop. 94.

## ALILsTAR. See Allestar.

ALLOA, a river-pert tn., burgh of barony, and par. in Scotland, co. Clackmannan. The tn. lies on the N. bank of the Forth, 6 m . E. Stirling, and 25 m . N. W. Edinburgh; lat. $56^{\circ} 7^{\prime} \mathrm{N} . ;$ Ion. $3^{\circ} 46^{\prime} \mathrm{W}$. ; and is irregularly built, particularly the more ancient parts; but in the principal streets, most of the old houses have been replaced by handsome new buildings. They contain also many elegant shops. The streets are well paved, well lighted with gas, and kept in excellent order. The most spacious is John Street, leading to the harbour; it is 80 ft . wide, and terminates in a beautiful gravel walk, having a row of fine lime trees on each side. The church is a handsome structure, in the Gothic style, with a spire 207 ft . high. There are, besides three meeting houses of I'resbyterian dissenters, an Independent meeting house, and an Episcopal chapel; the two last are neat strnctures, the latter being in the Gothic style. There are several branch banks in the town, an assembly room, large and commodions; a select subscription library; a number of schools, including the Alloa academy-a celebrated seminary; a granmar school, two public reading rooms, a mechanies' institute, and several friendly, benefit, and religious societies. The manufactures comprise several brewerics and distillcrics, the produce of the former being much esteemed; glass works, bricks, tiles, and other carthenware. There are also woollen manufactories, an iron foundry, and some pretty extensive establishments for shipbuilding and rope making. Alloa has a very considerable forcign and coasting trade; the imperts, through the former, consist chicfly of timber, battens, deals, hemp, oak bark, and bones for agricultnral purposes; through the latter, of corn. wool, fuller's cartl, and groceries, wines, teas, \&c. The exports consist of coals, pig iron, woollen manufactures, glass, alc, whisky, leather, fire bricks, tiles, and common bricks. The number of vessels belonging to the port, in 1847, was 111-tonn. 15,913. The number that entered inward, in the same year, was 213 -tonn. 10,984 ; outwards, 646 -tonn. 35.267 . The harbour and quays are commodious; the depth of water 16 ft . at neap tides, and from 22 to 24 ft . at spring tides. The latter are here attended by a singular phenomenon, ealled double or ']caky tides,' chiefly olserved at high and low water, which consists in a second ebbing and flowing, to an extent of from 12 to 15 inches, after the tide has apparently reached its utmost height and lowest ebb. There is a dry dock a little above the harbour. Close by the town there is a remarkable antique tower, called Alloa Tower, built towards the end of the 13th century; it is square, 89 ft . high, with walls 11 ft . thick. It was the place of residence of several successive Scettish princes, while receiving their cducation ; and here a portion of Qucen Mary's infancy was passed. David Ramsay, the celebrated painter, was horn in Alloa, 1744. Pop. in 1841, 5434. Area of par. 74 sq. in.; pop. exclusive of the town, 1071.

ALLONBY, a small fishingtn. and chapelry, England, co. Cumberland, on the Solway Frith, 20 m . S.W. Carlisle. There is a Quakers' meeting house in the town, a free school, and two other schools. The inhabitants are chiefly occupied in the herring fishery, when herrings are on the ceast ; but their visitations are uncertain, sometimes years intervening between the periods of their appearance. Cod are also taken in considerable quantities during the winter. Allonby is much frequented in the summer season for sea bathing. D'op. of chapelry in 1841, 811.

ALORIC, a large tn., W. Africa, Guinea, territory of Yarriba, E. of the Kong Mountains, 40 m . S.s. W. Katunga, and 180 m . N.E. Lages ; lat. $8^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 46^{\prime} \mathrm{E}$.

ALLOWAY, a par. Scotland, co. Ayr, now united to Ayr parish. It contains the house in which Robert Burns, the Seottish poet, was born; and its old roofless chureh, famed under the name of 'Kirk Alloway,' the imaginary scene of the incidents described in his poem of 'Tham o' Shanter.' In the neirhbourhood of Kirk Alloway a monument has been erected to the memory of Burns, somewhat similar to that on the Calton IIIll, Edinburgh; it contains several interesting relics of the poet, and the statues of 'Tam o' Shanter and Souter Johnny, by Thom.

ALS SAIN'TS... 1, a par. England, Suffolk; 1150 ac. Pop. 224.-2, a var. Ireland, Donegal; 9634 ac. Pop. 4280.

ALL SAIN'TS' BAY ['ortuguese, Bahia de tudos os Santos], a bay on the coast of Brazil, prov. Bahia; lat. $13^{\circ} 10^{\prime} \mathrm{S}$. ; lon. $38^{\circ} 50^{\prime} \mathrm{W}$. It has two entrances, the principal of which, 8 or 9 m . wide, is formed, on the E., by the promontory of えt. Antonio, on which is situated the town of São Salvador or Bahia; and on the W. by the island of Itaparica; The least breadth of the channel here is little less than $4 \frac{1}{2} \mathrm{~m}$. ; but the half of this space only, that nearest to the L. side, is navigable by large ships. The other entrance, called Liarra Falsa [false bar], is less than 2 m . in width. The bay, takeu in its whole extent, forms a very deep gulf, which bears the name of Reconcaro, and is from 90 to 100 m . in circuit. The largest fleet may ride in it in safety, having exeellent loolding ground, and security from the winds. Several considerable rivers fall into the bay.

ALLs'ADT, or Allstedt, an old tn Germany, duchy of Saxe-Weimar, on the Rhone, 42 m. W.N.W. Leipzig; lat. $51^{\circ} 25^{\prime} \mathrm{N} . ;$ lon. $11^{\circ} 22^{\prime} \mathrm{E}$. It has an ancient church, and a castle occupying a height which commands the town. It has manutactures of eloth and potash, several mills, numerous orchards, and four yearly markets, chiefly for horse and cattle. Pop. 2086.—The Bailiwick-area, 40 geo. sq. m.-is generally fertile, with exception of a moorish district, called the desert. Agriculture is the principal employment. Pop. 7150.

ALMACHAR, a th. Spain, in Granada, prov, of, and 18 m N. by W. from Malaga, on the sile of a stecp hill between two others, called Carnache and Portichuela. The town is composed of several miserable, crooked, and very steep streets; and has a parish church, a school, three fountains, and a cemetery. Mannfactures:-Linen and woollen fabrics. In the environs, grapes, olives, figs, and pulse, are cultivated. Pop. 2081.

ALMADA, a tu. Portugal, prov. Vstremadura, on the left bauk of the estuary of the Tayus, opposite Lisbon. It is built upon a height, in a well-cultivated country, and has long been celebrated for its figs. It has a strong castle on a rock, an hospital for British seamen, a Latin school, several depôts of wine, and a mineral spring. Near it is the fort of San Sebastian, which defends the entrance to the Tagus. I'op. 4538.

ALMADAGH [ane. Amanus], a range of mountains in Asiatie Turkey, a branch of the Mount Taurus system, forming the N. boundary of Syria. The direction of the rance, generally, is S.S.W., till its termination a little to the S.E of Cape Khynzyer, on the S. side of the Bay of lskenderoon. Its whole length is about 160 m .; width, 30 m . The mountains composing this range are very precipitous, and ean only be traversed by beasts of burden in a few places. The most frequented road runs from Aleppo due N. to Aintab, and thence over the Aln:adagh to Kaisariyeh and Angora. They are well wooded, being covered in many parts with large cedars, firs, and juniper trees.

ALMADEX, a mining tn. Spain, in New Castile, prov. of, and 66 m . S.W. from Ciudad Real, on an elevation in the sierra Morena. It is, on the whole, well built, and consists chicfly of one long, regular, paved, and clean street, the houses of which are smaller than are usually to be met with in Spain, occupying the summit of a ridge, with the sides scarped away into rather deep ravines. It has several squares, in one of which, la plaza de la Constitucion, are the townhall and municipal offices; and in another, named la Nueva, the market is held. The finest building in the town is the prison; after which comes the mining academy, in which is kept a collection of minerals and other objects useful to the students. There are likewise in the town five ordinary and two Latin schools, an hospital for miners, one for wandering houseless poor, and one for foundlings and destitute women, In the
middle of the town is a rising ground, surrounded by the ruins of a Moorish castle; and the only other noteworthy building is the large storehouse conneeted with the mines. Alnaden has no parish chureh, it laving been demolished during the war of independenee, but in several hermitages Divine service is performed. The country around is far from being fertile, and little attention is paid to agriculture, the main occupation of the people being in connection with the mines. Pop. 8645.

The quicksilver mines of Almaden, which are a Government monopoly, are among the most important of the kind in the world, and from them are supplied a large quantity of the metal used in the American and Austrian mines for separating gold and silver from their ores by amalgamation. The mines are in three sections; the principal one being just outside the town to the S.E. ; the next a little further on, in the same line; and the third at Almadenejos, still further on, and about 5 m . from Almaden. The great mine, the adit of which is hard by the town, consists of three nearly parallel veins, called, respectively, San Nicolas, San Francisco, and San Diego. They are wrought in a perpendicular direction, and have attained a depth of about 900 ft ., the metal inereasing in quantity, aurl improving in quality, the deeper down it is obtained. The supporting arches inside the mine, and other permanent walls, are all of stone, and executed in a truly regal manner. The storehouses and magazines, chiefly cut in the solid rock, are in a corresponding scale of magnificence. The furnaces for suhlimation being heated with aromatic herbs, send forth a delicious smell. About 5000 men are employed in and about the mines, and those who work below are only occupied six lours each day. The health of many suffers; but, perhaps, less than might, in the circumstances, have been expected. No work is done during the summer months from want of ventilation in the mines, and during this season the miners reeruit their strength. The great vein is in a bed of fine quarzite, one of those numerous beds which pervade the great slate formation of this part of the country. Associated with the veins are gray conglomerate, chiefly of fraginents of slate, of a light blue or gray colour. Though the principal vein apparently rests against, yet it does not seem to run into, the slate, the beds of which are, in general, highly inclined, or nearly vertical. The average amount of quicksilver produced from these mines of late years has been $2,027,168 \mathrm{lbs}$ (Madoz, Diccio. de España; Widdrington's Spain.)

ALMADEN DE LA PLATA, a tn. Spain, in Andalusia, prov. of, and 26 m . N. by W. from Seville, near the left bank of the river Cala. In the vicinity are three mines of silver, now abandoned; and marble is quarried to some extent. Pop. 485.

ALMADIA ISLETS, a ledge of black rocks running ont from the extreme point of Cape Verde, some of which rise 8 or 10 ft . above the sea. The westermnost has the form of a die, and stands in lat. $14^{\circ} 44^{\prime} 30^{\prime \prime} \mathrm{N} . ;$ lon. $17^{\circ} 35^{\prime} \mathrm{W}$. (к.) It is said that there are one or two openings through the ledge.

ALMAGRERA [SiemRA de], a dry, barren, clay-slate mountain range of Spain, in the E. of Andalusia, bounding with Murcia, celebrated for its mines of silver and lead. It lies in the prov. of Almeria, 6 m . E. from Vera, runs in a N.E. direction, and on its S. side is washed by the Mediterranean Sea. The mineral wealth of the locality was first discovered by a goat herl, so late as 1830 , and now the whole mountain range, and its valleys are filled with busy labourers extracting the various minerals, silver, lead, copper, zinc, alum, \&c. The hills being very dry, the miners are not in their operations hindered by water; and as the diggings do not require to be decp, the mining is easily managed. The mines and their propnietors are very numerous. Of the former, nearly 200 in number, those of Esperanza, Carmen, and Observacion, are the most productive ; the value of their amual output being, in lead, $£ 32,174$; and in silver, £354,014.-(Willkomm's Zwci Jahre in Spunien; Madoz, Diccio. de España.)

ALMAGRO, a city, Spain, in New Castile, prov. of, and 12 m . E.S.E. from Ciudad Real. It is situated on a liigh, arid, and exposed plain; is extremely well built; has spacious, well-paved streets, and a fine square, and public walk, planted with trees, ealled the Clorieta; two parish ehurches, and a dismantled ehurch of beautiful architecture, decorated with columns and balustrades of alabaster and jasper, formerly
belonging to the monks of St. Bernard, St. Franeis, and St. Dominic. Almagro has also a townhall, two hospitals, a barrack, formerly the palace of the grand masters of Calatrava; Latin, normal, and primary schools, a large storehouse, abattoir, and cemetery. The inhabitants are engaged in distilling brandy, manufacturing soap, gypsum, and earthenware, and in making lace for the markets of Madrid and Paris; this last trade oecupying no less than 8000 females in this and the neighbouring towns and villages. The country around is eelebrated for its mules, whieh are reekoned the lest in Spain, and are sold in great numbers at the annual fairs in A pril and August, which last is also a great fair for lace. Pop. 12,600. - (Maloz. Diccio. de España.)

ALMAGUER, a th. New Granada, prov. Los Pastos, 40 m. S.s. W. Popayan, on a height in the middle of a heautifnl plain, abont 7000 ft . above the sea level; lat. $1^{\circ} 54^{\prime} 29^{\prime \prime} \mathrm{N}$. ; lon. $76^{\circ} 54^{\prime} 58^{\prime \prime} \mathrm{W} .(\mathrm{L}$.$) It enjoys a mild, pleasant elimate;$ the vieinity yields wheat and barley plentifully, and coutains some gold mines. It was founded in 1543 by Alonza de Fuen Mayor.

ALMAlIADIA, Mahadiah, Mehedia, or Afuica, a tn. Tunis, E. coast, on a eape or peninsula of the same name, about 110 m . S.E. the eity of Tunis; lat. $35^{\circ} 32^{\prime} \mathrm{N}$; lon. $11^{\circ} 6^{\prime} 13^{\prime \prime} \mathrm{E}$. (1..) ; said to have been founded so carly as the 9th century, by one of the Fatimite Khalifs. It seems to lave been a place of great importance during the Middle Ages, and, in 1550 , sustained a long and rigorous siege from the forces of Charles V. All, however, that now remains to attest its former greatness are a few defaced fragments of aneient masonry. Its harbour, formerly good, is now sanded up. Pop. 3000.

ALMALEE, or Almald, a large town, Asiatie Turkey, pash. Anadolia, sanjak Meis, on the right bank of the small river Myra, 25 m . from its junction with the sea, and 57 m . W.S. W. Adalia; lat. $36^{\circ} 47^{\prime}$ N.; lon. $29^{\circ} 50^{\prime}$ E. It is beantifully situated in a littlo valley, or natural amphitheatre

of the Massacytus mountains, at the N.F. end of an extensive flain, elevated 5000 ft . above the sea. The mountain peaks that rise above the town attain great heights; the highest summit of the range to which they belong reaehing 10,000 feet. The whole appearance of the town is execedingly pleasing and pieturesque, being at onee finely set off and relieved by numerous tall poplars and lofty ininarets; and further adorned by gardens, with whieh it is surrounded. The houses are built of unburnt brieks, and roofed with thin deals of cedar wood, obtained from the forests on the neighbouring mountains, which also supplies the odoriferous fuel nsed by the inhabitants. The town contains altogether about I500 houses, and has several mosques, a bazaar, and a market on Thursdays. It is well supplied with water, having suffieient not only for domestic purposes, but for the propulsion of numerous mills, and the aeeommolation of several tan yards, dye works and factories. Many Frank merehants resort to this eity to make purchases, which they generally forward to Makry, 40 miles W., for exportation. A number of the inhabitants of Almalee are employed in enltivating the extensive and tertile plains which stretch away from the town, and which are inhabited by an industrious and thriving people, as
is sufficiently evident from the superior neatness and eomfort exhibited in their honses and apparel, and from the exeellent condition in which their fenees, roads, and bridges are kept. There are no traces of antiquity here. Pop. abont 20,000.(Jour. Geo. Soc.)

ALMANSA, a city of Spain, in Murcia, prov. of, and 37 m. E. from Albacete. It is a flourishing plaee, situated on a large and exposed plain, and is ill built, unpaved, and without any spacions squares-so common all over Spain. It has a parish chureh and chapel, several sehools, a chapter house, an hospital, a eapacious prison, and a eemetery outside the town. Mannfaetures :-Linen, cotton, and hempen fabries, whieh are supplied to the neighbouring provinees; brandy, leather, and soap. The Vega, or plain, near the town, is irrigated hy the Pantano (reservoir) of Alfera, which is an element of ineredible fertility, under the almost Afriean sun of this place. Almansa has obtained an historical celebrity from the faet of its having been the scene of an inglorions vietory, gained April 25, 1707, by 30,000 Freneh, under the English Duke of Berwiek, over a mueh inferior foree of British and Spanish troops, under the command of Henri de Ruvigny, Earl of Galway. Pop. 8736.

ALMANSOR, a river, Portugal, prov. Alemtejo, an affluent of the Tagus, which it joins 24 m . N.E. of Lasbon, on the left bank, after a course of 24 m .

ALMANZORA, a river, Spain, in the F. of Andalusia, prov. Almeria. It rises in the sierra Baza, near the town of Serron, takes an E.S.E. course for about 50 m ., when it falls into the Mediterranean, 5 m . N.E. from Vera. During smmmes it is an insignifieant stream.

ALMARAZ, a small tn. Spain, in Estremadura, prov. Caceres, on the N. bank of the Tagus, erossed here by a fint bridge, 135 ft . in span; 29 m . N.N.E. Truxillo; mean and ill built, having a small parish ehureh, townhall, prison, and 500 inhabitants, and only worthy of mertion as having been the scene of a snccessful surprise of the French, on May 17, 1812, by the British under General Ilill. The towers and other works, set up by the former, were destroyed; their stores, ammunition, provisions, and boats burned; and more than 250 prisoners eaptured, including 17 officers. The British lost only about 180 men and two offieers. The rapidity with which the whole was done, formed the chief element of llill's snecess.-(Napier's Peninsular War, vol. v. p. 19.)

ALMAS.-1, A vil. Brazil, prov. (loyaz, 60 m . E. eity of Natividade. It is situated in a hollow, and eonsists of a few irregular strects. The houses are built of large unburnt bricks, made of clay, mixed with chopped grass, and dried in the sun; they are low, and have a mean appearance. It has a chureh in a ruinous condition. The country around is well adapted for plantations, but the extreme indolence of the inhabitants prevents it being turned to any aecount. The latter are mostly blacks and mulattoes, and amount to abont 800.-(Gardner's Brazil.)-2, A river of the same name in the S. of the same prov., falls into the Maranhão, about lat. $14^{\circ} 22^{\prime} \mathrm{S}$. , after a course of about 90 mn .-(Dic. Geo. Imp. Brazil.)

ALMAS, a large market tn. Inngary, co. Bachs, about 22 m . 1. of the Danube; lat. $46^{\circ} 7^{\prime} \mathrm{N} . ;$ lon. $19^{\circ} 23^{\prime} \mathrm{J}$. I'op., ehiefly R. catholies, 8500 .- Almas, either singly or with various prefixes, is the name of not fewer than 39 places in Hnngary, and of numerous places in Siebenburgen or Transylvania.

ALMAZAN, a walled tn. Spain, in Old Castile, prov of, and 20 m . S. from Soria, on the Duero, here crossed by a stone bridge. The streets are generally well built, and paved with pebbles, though uneven. The square contains the townhall, session house, prison, hospital, and.a spacions palace belonging to the Counts of Altamira. Alnazan has six parish churches, three chapels, three convents, and a fine cemetery. The walls are of great solidity, and have six gates; subterranean passages, well arehed, communieate with the river and with the extramural convent of San Franeisco. Mannfactures:-Earthenware, baize, and woollen and linen fabries. Pop. 2400.

AldMAMRRON, or Mazzaron, a tn. and port, Spain, prov. of, and $30 \mathrm{~m} . \mathrm{S}$. by W. from Mureia, and 20 m . W. Cartagena. It is well built, with wide though erooked and steep strects, and comprises two parish ehurches, a convent, school, town and session house, prison, several stora houses.
and a cemetery. The people are empioyed in mining, fishing, ! the preparation of carbonate of soda, saltpetre, alum, and ochre; in smelting metals, preserving capers, the manufacture of esparto eordage, in tillage, and as muleteers. Grain, fruits, especially figs and vegetables, are raised in the vicinity; shecp, goats, and mules, are reared; and mines of iron, copper, argentiferous lead and zinc, are wrought. As a port, the trade of Almazarron is small, being chiefly coasting; the average number of vesscls that entered and sailed from it in the years 1844-5, was 555 , of which 517 were coasting; aggregate tonnage, 61,299. Pop. 6814.-(Madoz, Diccio. de España.)

ALMAZORA, a tn. Spain, in Valencia, prov. of, and 4 m . S. from Castellon de la Plana, in a plain on the left bank of the Mijares; in lat. $39^{\circ} 56^{\prime} \mathrm{N}$. ; lon. $0^{\circ} 5^{\prime} \mathrm{W} . ; 4 \mathrm{~m}$ from the sea. The town comprises several spacious and wellpaved squares and streets, and contains an ancient parish church, a respectable courthouse, an endowed school, hospital, and prison. Manufactures :-Linen and woollen fabrics, bass mats, and paper. The country around is fertile, and produces wheat, barley, maize, wine, oil, figs, oranges, with many other fruits and vegetables, especially capsicums, of unusual sizo and weight; sheep, goats, and cattle are reared, and some fishing earried on. Pop. 3636.-(Madoz.)

ALMEBY, or Almerhey, a par. England, co. Ifereford; area, 3630 ac.; $5 \frac{1}{4} \mathrm{~m}$. W. Weohly. Pop. in 1841, 642.

ALMEIDA, a tn. Brazil, prov. Espirito-Santo, agrecably situated on a height fronting the sea, at the mouth of the Reis-Magos, about 20 m . N. of the town of Victoria of EspiritoSanto. It possesses a church, an extensive market place, and a large edifice erectel by the Jesuits, who founded the town in 1580, and which is now used as the townlall, the jail, and the curate's dwelling house. The inhabitants, chiefly Indians and half breeds, are on the increase, and employ themselves in fishing, in raising the necessaries of life, in felling building timber for export, and in manufacturing earthenware. The women cultivate and spin cotton. Some export trade is carried on in these products of industry with Vietoria and Kio de Janeiro. Pop. 4000.-(Dic. Gco. Imp. Brazil.)

ALMEIDA, a fortified tn. Portugal, prov. Beira-alta, 58 m . S.E. Lamego, on an elevated plain on the right bank of the Coa, within 8 m . of the Spanish frontier; lat. $40^{\circ} 43^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 52^{\prime} \mathrm{W}$. ; and containing an hospital, nionastery, chureh, and poor's house. It is one of the strongest, and, from its position near the Spanish fronticr, one of the most important fortresses in Portugal. After the convention of Cintra, in 1808, Almeida was surrendered by the French, and the garrison marched to Oporto. For a while after, it remained in possession of the lritish; but, on the night of Aug 27, 1810, it again fell into the hands of the French, under Massena, being retaken by the English in May 1811, and restored to Portugal. Pop. 1150.-(Napier's Peninsular War, vol. iii. p. 517 ; Taboa Geografico Luzitana.)

ALMEIRIM, or Alameyrim, a tn. Portugal, prov. Estremadura, 5 m . S.E. Santarem. The town, built ly Jolin I., in 1411, has a royal castle, church, hospital, and workhouse. Pop. 1382.

ALMELO, a tn. Holland, prov. Overijssel, cap. of arrond. and canton of same name, 25 m . S.E. Zwolle, and 22 m. N.E. Deventer, on the Almelosche Aa , on an afluent of the Regge, by means of which it has water communication for track boats with Zwolle . It is a comfortable trading town, and possesses a handsome townhall, a Calvinistic and a Baptist church, a Jewish synagogue, two ordinary schools, and one for Latin and modern languages. Formerly, a considerable business was done here in weaving and bleaching linen, which has, however, decreased, in consequence of the more general use of cotton. The inhabitants are chiefly employed in preparing yarn and cotton goods; and they carry on a good trade in corn. The town has likewise a steam cotton spinnery, a gin distillery, a brewery, snuffinill, three cormmills, smithies, soapboilery, calenders, \&c. Pop. 3000.-(Van der Aa's Nederlanden.)

ALMENDRALEJO, a tn. Spain, in Estremadura, prov. of, and 28 m . S.E. from Badajos, on a gentle slope in the midst of a fertile plain. It comprises one grand square, with numerous, generally well-construeted, paved, and clean streets, ornamented with areades and water courses. In the square is a handsome promenade lined with aeacias, and adorned with
a fountain of excellent water. The parish chureh, townhouse, five schools, a capacious prison, an extensive bull ring, and a theatre, are the chief public edifices of the town. The inlabitants are employed in agriculture, weaving, expressing oil, and distilling brandy on an extensive scale. The commerce is confined to the importation of colonial requisites, and the export of considerable quantities of wheat, barley, oats, and a small quantity of beans and pease. A considerable number of sheep, horses, and mules, and a few goats, are reared in the vieinity. Pop. 5810.

ALMENNO SAN SALVATORE, a tn. Venetian Lombardy, cap. of district of same name, prov. of, and 7 m . N.W. from Bergamo, on an eminence near the foot of Mount St. Bernard, on the right bank of the river Brembo, formerly crossed by a handsome stone bridge with eight arches, of which the piles only now remain. The town is well built, and comprises several churelies; a noble townhouse, adorned with numerous fine paintings; an hospital, and a castle. The inhabitants are chiefly engaged in the cultivation of grain and fruits, espeeially grapes, and rearing sheep, cattle, \&c. An annual fair is held in February. Pop. of town, 1772; of distriet, 14,302.-(Dizio. Univ. Italia.)

ALMER, a par. England, co. Dorset; area, 1520 ac.; 6 m . S.S.E. Blandford. Pop. in 1841, 189.

ALMERIA, a maritime prov. Spain, in Andalısia, and forming a part of what onee was the kingdom of Granada. It is bounded, N. by Jaen and Mureia ; E. and S. by the Mediterranean Sea, from San Juan Ferreros to the river Adra; and W. by the provs. of Granada and Malaga ; area, 3906 sq . m. Its whole surface is covered with mountains of greater or less elevation; but it presents also numerous, and sometimes extensive, valleys, spreading out into open plains, wheh are as fertile as the mountains are larren. The principal sierras are, in the W., some offsets of the sierra Nevada, among which may be named the sierra Sador, whose culninating peak, 6575 fi . high, is covered with snow three quarters of the year ; in the $\mathbf{N}$., the limestone chain, under various names, forming the bonndary between Almeria and Granada, and its offisets, sierra de Maria, sierra de Oria, and sierra de la Estancias ; S. of the last named sierra lies the gneiss range, the sierra de Filalres, whose culminating point, Cabeza de Maria, is 6270 ft . high; S. from this chain lies the limestone range of sierra Aljamilla, terminating at the sea in the trachytie and basaltic eliffs of Cape Gata. The province is rich in mines of silver, leal, iron, copper, and antimony; nitre, jasper, and marble, are also obtained; and large quantities of salt are procured from salines, or salt pools. The soil of the valleys, as alrcady alluded to, is good, and produces maize, sugar, grapes, and southern fruits abundantly; and depastures cattle, which are somewhat famed. Besides agriculture, the principal occupation is connceted with the extensive mining operations carried on. (See Almagrera.) Esparto cordage, matting, and baskets, white lead, soap, soda, and carthenware, are mannfactured; the produets of the soil, and of the mines, esparto, barilla, and soap, are exported; and mannfactured cloths of various kinds inported. Education in this provinee is in a low state; and crimes are numerous, though in this respect it contrasts favourably with Alicante and Ciudad Real. Pop. 292,334.-(Madoz, Diccio. de España.)

ALMERLA [ane. Murgis], a city and port of Spain, in Andalusia, on the Mediterranean, cap. of a prov. of its own name, near the mouth of the river Almeria, and on the gulf of the same name, 104 m E. Malaga; lat $36^{\circ} 50^{\prime} \mathrm{N}$.; lon. $2^{\circ} 32^{\prime}$ W. (r.) It stands $\$$. of the sierra de Euix, in an extensive and fertile plain ; it is in great part enelosed by Moorish bastioned walls, about 2 m . in cirenit, and is defended seaward by the two forts of Trimilad and Tiro. The streets are narrow, tortuous, and ill built, but tolerably well paved and clean, lined chiefly with houses erected round small internal squares, forming court yards. It has five squares, one of which, the Plaza de la Constitucion, contains the town and provincial halls, and some Government offices, and likewise serves as a market place. The other public establishments are a Gothic eathedral, founded in 1524, and four parish charehes; a theological college, attended by 80 students; a college for classical and other literature (colegio de lumanidades), attended by about 50 students; a ladies' college, and seven primary, and five advanced schools, under a provincial junta, or patriotıc society of the 'Amigos del pais;' a charitable hospital, eus-
tom louse on the quay, theatre, and small, incommodious, and unhealthy prison. On a hill rising 240 ft . above the sea, is an old Moorish fort, called the Alcazaba, about 1560 ft . in length from E . to W ., and abont 300 ft . in breadth. Leaving the town N.E. is a prettily-planted alamedit, $2 \cdot 10 \mathrm{yds}$. long, and in the suburb of las Huertas is another, 500 yards long. The port of Almeria is without a mole, though it is proposed to ereet one. In the bay, however, there is good and safe anchorage in 12 and 14 fathoms. The port is one of the second class. A bout 130 Spanish, and about 355 foreign vessels, of anaggregate tonn. of about 130,000 tons, enter and leave the port annually ; besides which, the port has between 700 and 800 coasters. The export trade consists principally in lead, esparto, and barilla, large quantities of which are raised on the plain adjoining the town. The average value of the exports amounts to $£ 248,298$. Its imports comprise coal, fire bricks, woollen, cotton, and silk fabries, \&e., to an annual average value of $£ 247,9 \times 6$. The internal industry of the town, whieh at present is quite inconsiderable, comprises the preparation of soap, with manufactures of coarse linen and woollen fabries, sombrero hats, earthenware, bricks, saltpetre, and esparto mats and cordage. Pop. 17,800.-(Matoz, Diccio. de España.)

ALMERIA (Gulf of), Spain, in Granala, having Cape Gata on the E., and Point Elena on the W., about 25 m . in width at the entrance, and in depth inland about 10 m . ; lat. $36^{\circ} 51^{\prime} \mathrm{N}$. ; lon. $2^{\circ} 32^{\prime} \mathrm{W}$.

ALMERODE (Gross), a tn. Hesse-Cassel, $23 \mathrm{~m} . \mathrm{W}$. Cassel ; lat. $51^{\circ} 17^{\prime} \mathrm{N}$. ; lon. $9^{\circ} 45^{\prime} \mathrm{E}$. ; has considerable inanufactures of the well-known Hessian crucibles, pipes, billiard balls, china, and earthenware, with alum and vitrol refineries, and some coalworks. Pop. 2107.

ALMIRANTE, a bay, Veragua. See Boca del Toro. ALMISSA [Sclavonic, Olmisch], a small tn. Austria, prov. Dalmatia, on the coast of the Adriatic, near the mouth of the Cettina, about 14 m. S.E. Spalatro. The vicinity affords good timber for shipbuilding, which is shipled at the port of Almissa for the neighbouring islands of Brazza and Curzola. Pop., which seems to be deereasing, nbout 730.

ALMKERK, a vil. Holland, prov. N. Jrabant, 8 m . N.W. Heusden, and 7 m . N.E. Geertruidenberg, on the right bank of the Alm, whence it derives its name. It has a Calvinistic chureh, a school, and an annual horse fair, held in June. Pop. 1100.

ALMO1OOVAR, a small tn. Portngal, prov. Alemtejo, 13 m. S.E. Ourique, on the high road between that place and Faro. 1'op. 2428.

ALMODOVAR DEL CAMPO.-1, A tn. Spain, in New Castile, prov. of, and $18 \mathrm{~m} . \mathrm{S}$. by W. from Ciudad Real, on the summit of the ridge of St. Briget, an offset of the sierra Morena. The town comprises a square, and several wellarranged, clean, and commodious, though badly-paved streets, with exception of a few on the hill called del Castillo. The publie buildings are a parish church, with a tower eontaining the town elock; a courthouse, school, prison, two publie fountains, the ruins of an ancient castle, and a convent, used as an hospital in the eivil war, now appropriated to the ineongruous purposes of a theatre and oilmill. The inhabitants are chiefly employed in agrieulture, rearing cattle, grinding corn, and manufaeturing oil, for which latter purposes windmills are used. The women manufacture blonde, stuffs, and other materials for wearing apparel. Pop, 5020.-2, At-
monovar-Dec-Rio, atn. in Andalusia, prove of, and $15 . \mathrm{m}$. W. by S. from Cordova. Pop. 1292.-3, Almodovar-del-Pinar, a tn. in New Castile, prov. of, and 28 m . S.E. from Cnenca. Pop. 934.-(Madoz, Diccio. de Eszaña.)

ALMOGIA, a th. Spain, in (iranala, prov. of, and 15 ml . N. by W. from Malaga, at the base of a mountain, about 2 m . to the right of the river Campanilles. The town comprises abont 443 houses, and contains a pa. rishehureh, town hall, ruinous casthe, two schools, a storehonse, and a prison. Manu-factures:-Hardware, wax, soft soap, woollen fabries, oil, and brandy. Grain, wine, oil, fruits, and vegretables, honey and wool, are produced in the surrounding country Pop. 4068.

ALMOGUERA, or UCERO, a river, Spain, in Old Castıle, rising in the sierra Umbria, near San Leonardo, prov. Soria, and after pursuing a winding S . course of about 40 m ., it falls into the Duero.

Al.MOHARIN, a tn. Spain, in Estremadura, prov. of, and 32 m . S.S.E. from Caceres, at the S. base of the rocky ridge of St. Cristobal, by which it is proteeted from the N. wind. The streets are narrow, tortwous, and most of them unpaved; in the square are the parish ehurch, townhouse, prison, public granary, and an endowed sehool. Manufae-tures:- Wine, oil. flour, and linen and woollen fabrics. Many of the inhabitants are engaged in husbandry. Pop. 2191.

ALMONASTER LA REAL, a tn. Spain, in Andalnsia, prov. of, and 32 m . N. from Huelva, on an elevated ridge near the brook Nogales. Its streets are inconveniently steep, but well arranged, pavel, and clean. The town eontains a parish chureh and a chapel, situated in the square; a ruinous castle, endowed school, public fountain, and cemetery. Sheep and goats are reared, and exported to Cadiz and Sevilla; and grain and wine are imported from Estremadura and Niebla. Pop. 2007.-(Madoz.)

ALMOND, or Ason, the name of two rivers in Scotland, one wholly in Perthshire, and the other having its souree in Lanarkshire. The former rises in the hills, abott midway between Loel, Farn and I.och Tay, flows in a S.E. direction, and falls into the river Tay near Scone, or about $2 \frac{1}{2} \mathrm{~m}$. above l'erth. It is a bold and rapid stream, abounds with trout and salmon, and presents, at numerous points, scenery of the most picturesque and beautifnl deseription. Its entire course is about $25^{\circ}$ to 30 m . in length. - The latter rises in the high grounds in lanarkshire, flows in a N.E. direetion, forming, during a part of its course, the boundary between the counties of Edinburgh and Linlithgow, and finally falls into the Forth at Cramond, about 5 m . alove Leith. It is erossed at two different points, within a short distance of each other, by the aqneduet of the Glascow Union Canal, and the viaduet of the Edinburgh and Glasgow Railway, both noble structures. The entire length of its course is about 25 m .

ALMONDBURY, a large vil., township, and par. in England, co. York, W. Riding, wapentake Agbrigg. The village lies on the river Calder, $2 \mathrm{~m} . \mathrm{S} . \mathrm{I}$. . Iluddersfield, and 35 m. S.W. York. The parish ehurch is a neat strueture of pointed architecture, with a tower and six bells. There is here a free grammar school founded by James I., a Wesleyan school, and a national sehool. The prineipal manufactures of the village and township are faney goods, whieh are produced in great variety, chiefly eloths for waistcoatings; but shawls, and broad and narrow cloths, are also manufactured to a considerable extent. Thie weavers of these fabries generally
work at home, having most of them one or more looms in their houses. Of the former there are, altogether, about 2000 in the township. Almondbury is a place of great antiquity, and is said to have been the residence of some of the Saxon kings. It is also supposed to be the Cambodunum of the fiomans. The inhabitants of hoth the village and parish are chefly employed in cotton, woollen, and silk mills, of which there are several in the parish. Area of par., 30,140 ac. Pop. in 1841, 37,315; of tuwnship, 8828.

ALMONDSBURY, a par. England, co. Gloucester ; area, $6950 \mathrm{ac} . ; 6 \mathrm{~m}$. N.E. Bristol. Pop. 1584.

MLMON'E, a river, Spain, in Estremadura, formed by the union of three streans rising in the sierra de Guadaloupe, in the neighbourhood of Logrosan, prov. Caceres. It takes a N.W. and somewhat zigzag course, and falls into the Tagus, after receiving the Megasca and numerous other affluents. Its entire length is about 75 m .

ALMONTE, a tn. Spain, in Andalusia, prov. of, and 22 m. E. from Huelva, on the side of a gentle slope, surrounded by plantations of olives and pines. It consists of a square, and several inconvenient and dirty streets, rendered yet more filthy by the impurities conveyed into them by pipes from the houses, most of which are mean and confined. The town contains two churches; a mmieipal house, supported by arehes and thick marble columns; an endowed school, a wretehed prison, and a cemetery. In the vicinity are four windmills, one water mill, and eight oilmills. Oil, wine, and live stock are exported. Grain, thongh in insuffieient quantity for local use, and abundance of oil and wine, are produced; 2000 or 3000 mileh cows, and 500 brood mares, are kept ; and considerable numbers of sheep, goats, and pigs, reared. Pop. 3779.

ALMORA, a tn. and fortress, IIindoostan, cap. distriet of Kumaoon, 170 m . E.N.E. Delhi; lat. $29^{\circ} 35^{\prime} 30^{\prime \prime}$ N.; lon. $79^{\circ} 38^{\prime} 38^{\prime \prime}$ E. (L.) ; on a hill or ridge 5400 ft . above the sea. In 1790 it was taken by the Goorkhas, who were expelled in 1815 by the British, to whom the whole province was at that tume ceded. The town is compactly built, and consists chiefly of a single street, 6 furlongs in length, and 50 ft . wide; having a natural pavement of roek, with a gateway at each end. The houses are of stone; the lowest stories, open in front, with square pillars, are used as shops; and the upper projecting stories are faced with wood. The sloping roofs are slated and neat, but the piles of straw, or hay, with which they are covered by the inhabitants for winter provision to theircattle, greatly disfigure the appearance of the town. In airy situations around, there are a number of bungalows, or low stone cottages, built by Govermment for eivil and military invalids. On the E. extremity of the ridge of Almora stands the old Goorkha fort, built of stone; and to the E. of it are several martello towers. The new citadel, named Fort Moira, erected on the W. extremity by the British, is a parallelogran, with six bastions, but, from its situation, is ineapable of a lengthened defence; and, being composed of the friable material of the hill, is fast going to decay. The natives of Alnora are described as honest and peaceful, but little advanced in civilization; the surrounding country is bleak, and subject to trequent earthquakes; the climate temperate, and by no means unhealthy.- (IIamilton's East India Gaz.; Heber's Journal.)

ALMORADI, a tn. Spain, in Valencia, prov. of, and 28 m. S.S.W. from Alicante, on the left bank of the Segura; having a square, and several tolerable streets, a parish church, an endowed school, and a small hospital. Brandy distilling, soap making, dyeing, oil expressing, and flour griuding, are carried on. Wheat, maize, barley, and various fruits and vegetables are raised. Pop. 3095.-(Madoz.)

ALMORITIA, or Ballymoran, a par. Ireland, eo. Westmeath; arca, 2205 ac. Pop. in 1841, 700.

ALMSFORD, a par. England, co. Somerset ; area, 920 ac. ; near Wells. Pop. in 1841, 293.

ALMUNECAR, a small city and seaport, Spain, in Andalusia, on the Mediterranean, prov. of, and 38 m . S. from Granada; lat. $36^{\circ} 47^{\prime} 50^{\prime \prime}$ N.; lon. $3^{\circ} 25^{\prime} 10^{\prime \prime} \mathrm{W}$. (c.) The town, formerly Moorish, is in general well built, and has clean streets. Its public buildings comprise a parish chureh, chapel of ease, townhall, prison, three schools, public storehouse, and the remains of a citadel. The inhabitants are veeupied in agriculture, and in the manulaeture of sugar, earthenware, ard cotton fabrics; their trade, onee flourishing,
is now insignificant, and is solely in fruits and colonial requisitos. The port is only adapted for small vessels, being mueh exposed to dangerous E. winds. The vicinity produces grain, fruits, vegetables, and wine of superior quality; and all kinds of domestie cattle are reared. 1'op.5000.- (Madoz.)

ALMUNIA DE IUNA G()DINA (LA), a tu. Spain, in Aragon, prov. of, and 24 m . S.W. from Saragossa, pleasantly situated on a plain near the small river Cirio. It is surrounded by decayed walls, in which are three gates, and is tolerably well built. It contains a spacions central square, parish chureh, and chureh of the Knights of St. Juhn; some sehools, a handsomely-built consistory, storehouse, asylum, and abattoir. The inlabitants are chiefly occupied in preparing soap and distilling brandy. Pop. 2560.

ALNE, a par. England, co. York, N. Riding; area, 10,250 ac.; 4 m . S.W. by S. Easingwold. Pop. in 1841, 1703.

ALNEMOU'TII, or ALEMOUTH, a small seaport, England, co. Northumberland; partly on the slope of a low hill, at the mouth of the river Alne, 4 m . E.S.E. Ahwick. The houses are part stone and part brick, and but indifferently built; the streets crooked, and not very well kept. There is some trade in exporting corn and other farm produce, and in importing timber and general mereliandise, from the Netherlands. There is also a considerable tishery. Pop. in 1811, 480.

ALNESS, a par. Scotland, co. Ross; extreme length, about 20 m .; average breadth, 5 m . Pop. in 1841, 1067.

ALNEY (Isle OF), a small isl. in the river Severn, England, about 1 m . W. the town of Gloucester. John Olney, a charterhouse monk in the reign of Edward III., the anthor of a few of the old Miracle Plays, was born here.

ALNHAM, a par. England, co. Northumberland; area, 10,360 ac. Pop. in 1811, 256.
$\Lambda L N O ̈$, an isl., about 9 m . long, by 4 m . broad, in the Gulf of Botlmia, S . of Hernosand, on the coast of Sweden; lat. $62^{\circ} 25^{\prime} \mathrm{N}$. ; lon. $17^{\circ} 20^{\prime} \mathrm{E}$. ; with iron mines, claalk quarries, and herring fisheries.

ALNWICK, a market tn. and par. England, eo. Northumberland, Coquetdale ward, E division. The town is pleasantly situated on the deelivity of a hill sloping down to the river Alne, from whieh it derives its name; 25 m . S.E. Berwick, and 32 m. N. Neweastle. It is connected by a short branch, of about 5 m . in length, with the Berwick and Newcastle Railway. The streets are in general spacions, well paved, and lighted with gas, and the town throughout abundantly supplied with water. The houses are mostly of freestone, many of them handsome, and nearly all of modern erection; few of the ancient buildings now remaining. The market place, a large area or square, occupies the centre of the town. On one side is the townhall, an extensive building surmounted with a square tower, ereeted in 1731 ; containing, with other conveniences, a large and elegant hall, in which fashionable assemblies were occasionally held in former times. Un another side of the square stands a beautiful modern structure, erected in 1827, by the Duke of Northumberland, the lower part of which is occupied as markets, the upper by a handsome assembly room and reading room. The parish chureh is a large Gothic structure with a neat tower. The R. catholic chapel is also a handsome edifice. There are, besides, several meeting houses for dissenters, a number of excellent schools, a dispensary, and several charities ; a mechanics' institute, with library and philosophical instruments attached. But the object of greatest interest in Alnwick is its ancient eastle, one of the seats of the Dukes of Northumberland. This magnifieent specimen of the old baronial residence-for many centuries a fortress of great strength, and as such celebrated in Border history-stands on an eminence which rises from the S. side of the river Alne; opposite to the town. It is believed to have been founded by the Iiomans; at any rate, it has been ascertained that the site was previously occupied by Roman buildings. About the year 1830, the eastle was repaired and restored at an expense of nearly $£ 200,000$, and is now in appearance preciscly what it was in the days of border chivalry, ingeniously combined with modern elegancies and conveniences. The avenue forming the approaeh to the mansion is superb; while the grounds, which are 5 m . long, and throngh which flows the Alne, ex hibit every speeies of natural and artificial beauty. A cross, ealled Malcolm's Cross, marks the spot where Malcolin III. is said to have been killed by a soldier, who, on pretence of
delivering him the keys of the eastle, which he presented on the point of a spear, thrust the weapon into his body.

Alnwick possesses but few facilities for cither trade or manufactures. There are, however, several tameries, brewcries, and brick and tile works in the town; and a considerable business is done in the produce of the fertile cometry aromud, chiefly corn, pork, and eggs, which are sent to Alemonth or Annemouth, the port of the town, at the mouth of the river, where they are shipped for the London market. The corporation consists of a bailiff, nominated by the Duke of Northme berland; 24 common councilmen, including four chamberlains. The quarter sessions for the county are held here, in turn with Newcastle, Hexham, and Morpeth; and there is a county court monthly for the recovery of small debts. Area of par., $16,250 \mathrm{ac}$. Pop. in 1841, 6626.-(Correspondent in Alnwick.)

Alonia, or Lisian Pasia [ane. Hulone], a small isl. Asiatic Turkey, in the Sea of Marmora, whose inhabitants are employed in wine growing, and rearing silkworms. It has a capital of the same name, the residence of a Greek metropolitan bishop.

ALORA, a city, Spain, in Andalusia, prov. of, and 24 m . N.W. from Malaya, occupying a mountainous and exposed site near the foot of the sierra del Hacho. It has two squares, which, with the two principal streets, are well built and paved; the remaining part of the town is very irregular and hilly. The grand square contains the parish church, parts of which are good specimens of Ionic architeeture. The other public buildings consist of an hospital, prison, several schools, almshouses ; three convents, with churches attached; and the remains of an ancient Gothic castle. Agrieulture, expressing oil, and the mamufaeture of soap and sulphate of soda. are the chief employments. Grain, fruit, vegetables, and superior wine are raised in the vieinity, and some sheep and cattle are reared, for the sale of which a fair is held in August. Pop. 6794.

ALOST, a tn. Belgium, prov. E. Flanders, near the confines of S. Brabant; 15 m . W.N.W. Brussels, and 3 m . S. the Audegem station of the Ostende and Brussels Railway. It is surrounded with walls, whieh have five gates; and is traversed by the Dender, which has been converted into a canal, from Alost to its junction with the Scheldt at Termonde or Dendermonde, 8 m . below. The finest building in the town is the church of St. Martin, said to be by the architect of the cathedral of Amiens. It is either unfinishel, or has been partially destroyed; but the part existing forms one of the largest and finest churches in Belgium, and is adorned by a celebrated pieture by lubens-st. Rockl beseeching our Saviour to stay the plague of Alost. Within the churel is the mansoleum of Thierry Martens, a native of the town, who introduced the art of printing into Belgium A.D. 1475. The inseription states, with some ambiguity, and without much regard to accuracy, that he was the first printer of Germany, France, and the Netherlands. The only other buildings worthy of notice are the townhonse, which was founded A.D. 1200, and has been recently rebuilt; and the college, which is a handsome strueture. The chief public institutions, beside the college, are the bospital, the academy of design, the chamber of commerce, and the horticultural society. Both the trade and manufactures of Alost are of considerable importance. The former is in corn, oil, and particularly hops, whieh are extensively grown in the neighbourhond. The latter are chiefly lace, cotton goods, hats, leather, glue, chicory, tobaeco, and the various products of numcrous brewerics, distilleries, salt refineries, flax and cotton mills, bleachfields, printfields, dyeworks, copper and iron foundries. Alost, of which the earliest mention in charters is A.D. 870 , was anciently the capital of what was called imperial Flanders. The French, under Turenne, took it in 1667, but were obliged to abandon it after their signal defeat by Marlborough, at Ramelies, in 1706. Several Roman ceins have been found in the neighbourhood. Pop. 15,000.-(Meert, Dict. de la Belgique.)

ALOU'1'A. See Aluti.
ALOZAYNA, a tn. Spain, in Andalısia, prov. of, and 26 in . N.W. from Malaga, on the N. side of a ridge of rock. $1 t$ is, on the whole, respectably built, though inconvenient from the steepness of the hill, and has a good ceatral square, a parish chureh, and some schools ; a consistory, hospital, prison, and several public fountains. The inlabitants are principally employed in husbandry, in grinding corn and oil, and in making hardware, earthenware, and tiles. Pop. 2920.

ALIPERA, a tn. Spain, in Murvia, prov. of, and 28 m . S.E. from Albacete, sitnated on rough, uneven, ground, in an exposed, momitainous situation. It is clean, and has three gond squares, a parish church, and some schools; a townhall, old ruined palace, storchouse, and prison. The inhabitants carry on some trade in cattle, but are chiefly agricultural. Pop. 2430.

ALPES (BAsses) [Lower Alps], a frontier dep. in the S.E. of France, on the W. slope of the Alps mountains, forming part of aneient Provence, with the aldition of the rich valley of Barcelonnette, formerly in Dauphine; bounded, E. by Piedmont, W. by the deps. Vaucluse and Drôme; s. by that of the Var, and N. by that of the Hautes Alpes; area, 1,686,127 a..; only about a fourth part of which is arable land, while nearly one-half is covered with heather and moss, and about a sixth with wood. The whole department is of a decidedly mountainous eharacter, being traversed and intersected almost throughout by a ramification of the Alps, several of whese summits attain ulevations from 7000 to 9000 lt ., and are never free of snow. The slopes of the mountains are generally covered with wood, but not unfrequently yield a rich pasturage, on which numerous flocks of sheep, brought hither in spring after having been wintered at Arles, are said to thrive remarkably. Between the mountains, numerous valleys, some of them of considerable extent, intervene. They are generally very fertile, yielding on the higher levels rich herbage, and in the plains good crops of grain, and large quantities of fruit. The inhabitants of the more sheltered distriets cultivate the olive, the mulberry, the plum, the fig, and the almond. In several communes the vine also is carefully cultivatel, and yields a wine of tolerable quality for home consumption. Bees are reared in censiderable numbers; and among the articles exported are honey, dried fruits, \&c. The horses are small in size, and few in number, mules and asses being preferred to them. Goats are game, and wild animals are numerous. The chamois is common on the mountain steeps, and the wolf not unfrequently makes his appearance. Lead, calamine, copper, and iron, with some coal, are among the mineral productions of the department. The manufaetures, not important, cousist principally of hats, coarse woollen stuffs, some silks, leather, paper, earthenware, and brandy. During a part of the year, many of the poorer inlabitants emigrate into other provinces in quest of employment. Salt springs are found near Castellane, and mineral waters at Greoux. Pop. in 1846, 156,675. -(Irict. de la France; French Official Pupers.)

ALPES (Hautes) [Upper Alps], a dep. France, forming part of the S.E. of Dauphiné, and a small part of Provence, lying on the W. slope of the Alps; bounded, E. by the Sardinian states, W. by the dep. of Drôme, N.W. by that of the Isère, and S . by that of the Basses Alpes; arca, 1,366,561 ac., of which nearly one-half is occupied by moors, heaths, and waste lands, while not a fourth part consists of arable land, meadows, and vineyards. Like the department of the l3asses Alpes, it is covered almost throughout by enormous masses of mountains, several of which are among the lofticst of the Alpine range. Mont Pelvoux, the highest mountain in France, is in this department, and its culminating peak, called the l'ointe des Arsines, or des Eerines, is $13,442 \mathrm{ft}$. above the level of the sea. The height of Mont Genèvre is $11,788 \mathrm{ft}$. The scenery is described as being wild and savage, but imposing. The mountains, on their S. side, are almost arid and bare; but on the N. side, are covered with forests, which ascend almost to the limits of vegetation. The climate presents all the vicissitudes and sudden changes of a mountain regionviolent hurricanes, storms of hail, heavy falls of rain and snow. In general, however, the air is clear, and not mueh subject to the unwholesome fogs with which districts of the same deseription are frequently visited. Winter, in the higher valleys, prevails for eight months, during which the inhabitants are shut out from all conmunication with tieir neighbours. The department contains several lakes. The chief streams are the Durance, the Guil, the Bucch, the Aigues, and the Drac. Though nearly half the surface is uneultivated land and barren rocks, the principal oecupation of the inhabitants is agriculture and the rearing of cattle. In the narrow valleys the snow lies long, yet the erops are seldom insufficient for local consumption. Potatoes, flax, and hemp, are grown in considerable quantities; and among the fruit trees cultivated are the chestnut, the walnut, and the mulberry. The vines
produce annually about $1,510,000$ gallons of wine, some of which is much estecmed. The slopes supply abundant pasture for sheep and goats. A great number of aromatic and medicinal herbs and plants grow here. All sorts of game abound, and birds of prey are numerons, particularly the great eagle. In the mountains are found granite, marble, lithographie stone, copper, lead, zine, iron, antimony, coal, \&e. ; and among the manufactures are cutlery, woollen and cotton goods, nut oil, hats, agricultural implements, brandy, leather, nails, tiles, \&e. The exports include most of these articles, with eattle, wool to a large extent, woollen goods, wood, eheeses, and chestnuts. More than 4000 of the inhabitants yearly enigrate to other parts of France in search of employment. Gap is the capital, and other principal towns are Briançon and Embrun. Pop. in 1846, 133,100.-(Dict. de la France.)

ALPHAMSTONE, a par. England, co. Essex ; area, 1440 ac.; 6 m . N.E. by E. Halstead. Pop. in 1841, 314.

ALPHEN, the name of three villages in IFolland :-1, A vil., prov. S. Holland, 7 m. S.E. Leyden, and 20 m . S.W. Amsterdam, on the left bank of the old Rline, over which there is here a drawbridge. It is a comfortable and prosperous village, and one of the largest in Holland, having always a considerable stir in it, from the numerous boats which pass it, plying up and down the Rhine. It has a Calvinistic and a R. catholic chureh, three schools, an orphan hospital, and a royal posting establishment. Pop. about $2700-2$, A vil., prov. Gelderland, arrond. of, and 16 m . S.W. from Nijmegen, on the right bank of the Maas. It has a Calvinistic and R. eatholie church, and a school. Its inhabitants, 800 in number, are employed in agriculture and rearing cattle. -3 , A vil., prov. N. Brabant, arrond. of, and 12 m. S.E. from Breda, about 3 m . from the Belgian frontier. It is mentioned in history as early as A.D. 711 ; and has a R. eatholic church, and 350 inhabitants, chiefly employed in agriculture.

ALPIIETON, a par. England, co. Suffolk ; area, 2250 ac.; 6 m. N. by E. Sudbury. Pop. in 1841, 321.

ALPHELS, a river, Grecee. See Roumina.
ALPHINGTON, a par. England, co. Devon; area, 2720 ae. ; traversed by the river Exe. Pop. in 1841, 1286.

ALPHONSE, an isl. in the Indian Ocean; the N. point of which is in lat. $6^{\circ} 59^{\prime} 30^{\prime \prime} \mathrm{S}$. ; lon. $52^{\circ} 41^{\prime}$ E.; but the mean of four other (ships') observations places it in lat. $7^{\circ} 4^{\prime}$ S.; lon. $52^{\circ} 49^{\prime}$ E. It is low, of considerable extent, and exhibits some small trees or shrubs. It is surrounded with reefs, which are fast rising into an island of greater extent than Alphonse. About 12 m . $\mathbf{S}$. from the latter lies a sandy isle, or bank, called South Alphonse, a little above water, with a reef of high breakers surrounding it, and extending N.E. and S.W. five or six miles. There are no soundings within a mile of the sand. Dangerous reefs nearly unite the N. and S. islands; there is a passage through them, but it is intricate and perilous, and the eurrents are strong and nneertain.(Horslourgh's East Indian Directory.)

ALPINGTON, a par. England, co. Norfolk; area, 630 ac. ; 6 m. S.E. Norwich. Pop. in 1841, 197.

ALPNACH, or AlpNacht, a vil. Switzerland, canton Unterwalden; about $1 \frac{1}{2} \mathrm{~m}$. from that part of the Lake of Luzern called Lake Alpnach, at the foot of Mount Pilatus; 8 m . S. Luzern, and $5 \frac{1}{2} \mathrm{~W}$. by S. Stanz. It is chiefly remarkable for its famous 'slide,' a kind of wooden trough by which the spruce firs of Mount Pilatus were at one time conveyed to the lake, from a height of 2500 ft . to a distance of nearly 8 m. , which was aceomplished in six minutes from the time the tree was launched. A stream of water kept the trough continually moist, to prevent friction, and thas facilitate the descent of the timber. It is not now in use, the timber being brought down by carriages drawn by horses and oxen. Alpnaeh has a fine ehurch, the steeple of which is the lighest in the canton. Pop. 1500.

ALPS [Celtic, Alp-White Mountains], a name, with various affixes, given to many mountain ranges. It is, however, more particularly employed to designate that great group of leights containing the highest peaks of Enrope, culminating in Mont Blane, and covering the greater part of Switzerland, and part of France, N. Italy, Bavaria, Austria, and Turkey, forming the central portion of the great mountain system of S. Europe, which, in a manner more or less connected, extends from Cape Finisterre on the Atlantic to the Black Sca. Descriptively, the Alps nay be said to originate
on the shores of the Mediterranean Sca, between Lyons and Nice, when, separating the basin of the lihone from the affluents of the Po, the chain stretehes across Switzerland and the Tyrol to the sources of the Drave and the Salzach, where it bifurcates. The N. branch covers the country round Salzburg, Styria, and Austria, and proceeds N.E. to Brody, in Galicia; whilst the S. branch, after having separated Carinthia from the Venetian territory, subdivides on the frontiers of Illyria into two branches, including the basin of the Save, and appears to terminate at the head of the Gulf of Quarnero and the banks of the Kulpa. From this river, however, a chain stretches S.E. through Dalmatia and Bosnia, lowering down at the river Narenta (an affuent of the Adriatie), which is now conventionally assumed as the S.E. boundary of the Alps. This great congeries of mountains may be said to be included between lat. $44^{\circ}$ and $48^{\circ} \mathrm{N} . ;$ and lon. $5^{\circ}$ and $18^{\circ} \mathrm{E}$. The culminating peak of the whole system is Mont Blane, $15,732 \mathrm{ft}$. high, though the true centre is St. Gothard, or rather the mountains between the sources of the Rhone and the Inn, and the Swiss cantons Valais, Bern, Uri, and Grisons, on the N. ; and canton Tessin, and Lombardy and Sardinia, on the S. It is a curious fact, that its great central mass is nearly equidistant from the pole and from the equator. From its slopes flow, either direetly or by affluents, the great rivers of central Europe, the Danube, Rhine, Rhone, and Po. From the Jura mountains the Alps are separated by the narrow gorge through which the Rhone passes below Geneva; the point of separation from the Appenines is assumed to be tho valley of Savona, E. from the Col de Tende.

Divisions.-According to their altitude, the Alps are sometimes divided into Low, Middle, and High. In the first of these divisions are inelnded all from 2000 to 5500 ft . high; in the second, those from 5500 ft . to 8000 ft ., where the snow line commences; and in the third, those trom 8000 ft . to $15,000 \mathrm{ft}$., whose summits are covered with perpetual snow. A better known, and more precise, division is that adopted by geographers into 10 great ranges.

1. The Maritime Alps [Latin, Alpes Maritıma], consisting of 14 branches, commencing at the valley of Savona, the junction of the Alps and the Appenines, running N.W. to the valley of Barcelomette, thence N. and N.E. to Mont Viso, separating Piedmont from Provence, a total distance of about 100 m . The culminating peak is the Col de Larget, 10,345 ft . high; and the principal rivers rising in the chain are the Bormida, Stura, Var, and Verdar.
2. The Cottian Alps [Latin, Alpes Cottic, from Cottius, a prince who resided at Susa], consisting of nine branches, from Mont Viso to Mont Cenis, laving a general direetion, first, of S. to N., then to N.W., and latterly to N.E. Their total length is about 60 m. ; their highest peak, Mont Olan, 13,819 ft . ; and the prineipal rivers rising in them are the $\mathrm{P}_{0}$ and the Durance.
3. The Graian, or Grecian Alps [Latin, Alpes Graice, so named by the Romans, from the supposition that Hercules crossed them when returning from Spain], comprising six branches, between Mont Cenis and the Col de Bonhomme, about 50 m . They include a great part of the mountains of Savoy, which province they scparate from l'iedmont. Their direction is N.E. and E., as far as the Rocea Melone, then N. to Mont Iscran, from which point they run N.W. to the Allee Blanche. Their highest peak is Mont Iseran, $13,272 \mathrm{ft}$; the Little St. Bernard forms part of the range; and the principal river rising in it is the Isere.
4. The Penuine Alps [Latin, Alpes Peunince, from Celtic, Pen, an clevated olject], including 12 branches, and having a direction S.S.W. to E.N.E., from the Col de Bonhomme to Monte Rosa, about 60 m . Their highest pcaks, as well as of the whole Alps, are Mont Blane, 15.732 ft .; Monte Rosa, $15,152 \mathrm{ft}$. ; and Mont Cervin, or Matterhorm, $14,837 \mathrm{ft}$. In this range are found the greatest glaciers of Europe; still no large stream has its sonrce in the Pennine Alps, their waters mingling with those of the Rhone and the Po, before acquiring any considerable volume.
5. The Helvetian, or Lepontine Alps [Latin, Al pes IIelreticre, or Lepontince, the latter name being derived from Lepontii, the name of the ancient inhabitants of the country in which rise the Rhine, the Rhone, and the Tessin or Ticino], comprising 11 branches, inclute the heights between Monte Rosa and Monte St. Bernardino, a distance of about 50 m . They
follow a general direction of S.W. to N.E., but E. of the Luckmanier, the mountains that surround the Val Blegno incline S., towards Monte St. Bernardino. This is the most considerable range of the wholesystem, with glaciers in extent only second to those of the Peunine range. Itz branches cover all Switzerland W . of the Rhine; the principal one being the Bernese Alps, forming the N . wall of the canton Valais, and cqual in height to the main chain. Its highest peak is the Finster-Aar-IIorn, 14, III ft., besides which it includes the Jungfrau, Mönch, and other lofty mountains.
6. The Rhetion Alps [Latin, Alpes Rhatica], with 14 branches, forming tha $A l p$ of the Grisons, part of the Alps of Tyrol, and covering a portion of ancient Rhetia. They extend from Monte St. Bernardino, generally E.N.E., to the Dreyhernnspitz, or Pic des trois Souverains, about 145 m . The principal branch follows the course of the Inn, from its source to its mouth. In its W. part, N. of Bludentz, this branch is called Arlbery and Vorarlberg; and an offset from these mountains, covering the country between the Lech and Lake Constance, is callod the Alps of Algau. This range has numerous glaciers; its culminating peak is Monte Cristallo, $12,961 \mathrm{ft}$. high; and within its bounds rise the Iller, Lech, Inn, and Isar, tributarics of the Danube, and the Adda, 0 Olio, and Adige.
7. The Noric Alps [Latin, Alpcs Norice, from Noricum, a Roman prov.], having 10 branches, and extending from the Dreyhernnspitz E. towards IIungary, culminating in the Gross-Glüekner, $12,776 \mathrm{ft}$. high. The loftiest branches tend N.E. to Vienna, which may be said to be the termination of their range, a distance of about 205 m. E. and N., however, it is further comnected with the mountains of Galicia. The Noric Alpls are composed of two main ranges; the S. separating the valley of the Mur from that of the Drave, and forming part of the Styrian Alps; the N. following the left bank of the Emins in its course from W. to E. Below this river are the Cetische Gebirge, which join on to the Wienerwald, which terminate above Vienna in woodless hills, named, on account of their bareness, Kahlrnberg. All the streams flowing from the Koric $\mathrm{Al} \mid \mathrm{s}$ fall into the Danube; those of the N. by the Salzach, Enns, and Trasen; those of the E. by the Leitha and the Raab; and those of the S. by the Drave.
8. The Carnian Alps [Latin, Alpes Carnicue, from the country of the ancient Carni S. of the Noric Alps], comprising six branches, lying S. from the Noric and Rhetian Alps, and extending from the sources of the Drave to the Col de Tarvis, about 108 m . between Carinthia and Venetian Lombardy. Their highest peak is la Marmolata, $11,510 \mathrm{ft}$. high; from their N. slope flow the A viso, an affluent of the Adige, and the Gail, a small affluent of the Drave, and from their S . slope the Brenta, Piave, and Tagliamento, to the Gulf of Venice.
9. The Julian Alps [Latin, Alpes Julice, from the name of the ancient town Forum Julii], comprising eight branches, and extending from the Col de Tarvis S.E. to Mont Kleck, near Zengg, in Croatia, a distance of about 142 m . They lie chiefly in Carniola, E. of Tarvis; the main range separates into two branches, bounding N. and S.W. the basin of the Save. From the Sehneeberg, near Lake Zirknitz, the S.W. branch subdivides into two offsets, of which the one proceeds W. towards Fiume, and the other E. to the river Kulpa. The Julian Alps are remarkable for the number of their caverns; among which are the celebrated caves at Adelsberg (which see). The highest peak of the Julian Alps is Mont Terglou, 10,863 ft . high; and their principal stream is the Save.
10. The Dinaric $A l_{p s}$ [Latin, Alpes Dinarica], extending from Mont Kleck to the river Narenta, a distance of about 161 m . They are chiefly in Croatia, Dalmatia, and Herzegovina; their culminating peak is Mont Dinara, 7458 ft . high; and their general direction N.W. to S.E., and in different parts of their course they receive the names of Kleck, Bitorai, and Wellebitsch, or Vellebitsch, which last is the Maritime branch, bordering the Canale della Morlacea.

The following is a list of the principal heights of all the 10 divisions of the Alps, arranged according to their altitude :-

| Names. | Ranges. N. lat. E. lon | Feet. |

Geology and Mines.-Considered generally, the Alps will be found to belong to the granite, schistous, and calcareous formations; that the main chain, or centre, is granitic; that on the S. and E. slopes, the primitive rocks descend to the plain of Italy; while to the W. and N. the mountains are almost all calcareous, as well in Provence and Dauphiné as in Switzerland, the Tyrol, and Austria. The great mass N. of canton Valais, in canton Bern, is granitic, from the St. Gothard to the Lötschenthal; but W. of that valley, the chain which is prolonged from N.E. to S.E., between the Wetterhorn and the Dent de Morcle, is composed of very ligh calcareous mountains, the horizontal strata of which rest on schist, gneiss, and granite. The S. flank of the Rhetian and Noric Alps exhibit only schistons and calcareous rocks; and of this last formation, along with new rell, or variegated sandstone, is constituted almost the whole mass of the Carnian and Julian Alps. The Carnian Alps likewise present to some extent rocks of igneous origin; and basaltic mountains are to be met with in S. Tyrol, and near Verona, in two small ranges of hills called Monti Berici, and Monti Euganæi, lying S. of Vicenza. The mountains of Lower Provence, also, exhibit traces of ancient volcanic fires. Mining is not carried on to an extent proportionate to the magnitude of the mountain range. Iron and lead, however, are found in considerable abundance; Styria, Carinthia, and Carniola, yiehl annually about 30,000 tons of iron. The mines of Pesey and Macol, in Savoy, yield likewise a considerable quantity; and the Bleyberg (lead mountain) mine, in Carinthia, furnishes the purest lead in Europe. Rock salt is abundant towards the N. of the chain; and the salines of Bex in canton de Vaud, of Hall in Tyrol, of Hallein and Berchtesgaden in the vicinity of Salzburg, are of note. Mercury exists chiefly in the E. part; the richmess of the mine of Idria, N.W. of Trieste, is well known. Besides those principal products, gold, silver copper, zinc, alum, and coal, are wrought to some extent.

Valleys.- The great valleys of the Alps generally run in the direction of the main range, or nearly so. Some run transverse to it, the most remarkable of which is the valley of the Adige, ruming S.S.W. from the Brenner, and having a total length of 96 m ; the other transverse valleys are much shorter. Among the longitudinal valleys none can compare with that of the Drave, which, supposing it to terminate to the E. of Warasdin, has a length of 193 m . The valley of the Im, from Lake Sils to Kupfstein, is 133 m . long; and the Swiss longitudinal valleys, such as those of the Upper Rhine, the Valteline, and Valais, have a length of 48 m . to 60 m . in their most direct line.
Lakes.-Sinall lakes frequently oceur in the Alps, at great altitudes, and of considerable depth. They are to be met with near the summit of many of the cols or passes, at the top of the water sheds, and forin the natural sources of streams; and sometimes sending their waters in opposite directions. Such
are the lakes on Mont Genèvre, Cenis, Great St. Bernard, St. Gothard, Bernardino, \&e.

Climate.-As might be expected, the climate of the Alps is exceedingly various. In the lower valleys of its S. slopes we meet with Italian warinth; in elevated regions, such as the canton Bern, the temperature assimilates to that of Britain, while higher up, on the Alpine heights, the climate assumes an aretic character. In the lower valleys, the mean temperature ranges from $50^{\circ}$ to $60^{\circ}$. Half way up the Alps it averages about $32^{\circ}$-a height which, in the snowy regions, it never reaches. But even where the temperature is lowest, the solar radiation produced by the rocks and snow is often so great as to raise the photometer to $120^{\circ}$, and even higher. The exhilarating and invigorating nature of the climate in the upper regions of the Alps, during summer, have been acknowledged by all who have perambulated these romantic scenes. The freshness of the breeze, as it comes from the snowy peaks, tempered by the rays of a southern sun, enable the traveller, withont weariness, to perform distances on foot that at home he would have shrunk from attemptiug. Notwithstanding, however, the invigorating nature of the climate, the inhabit ants of the higher valleys are afflicted with two grievous dis-eases-goitre and cretinism ; and so strongly is taste directed by external circumstances, that, in some localities, the former is reckoned a point of beauty in females, and appreciated in proportion to its excess.

Botany and Zoology.-In a climate so varied, the vegetable productions are in like manner necessarily equally so. In the same region, though of course at different altitudes, are to be met the vine, the walnut, and chestnut; and the Rhododendron ferrugineum, the Campanula barbata, the Silene acaulis, and Salix herbacea. But the varied vegetation of this region will be more clearly apprehended from the following list of lieights attained in the Alps by different plants:-

| Name. | Helght above the rea. | Name. | Helaht above the sea. |
| :---: | :---: | :---: | :---: |
| Orange, Olive, and | .... 939 it. | Alder, Yew | ....4474 |
| Vine ................ | ....1598 | Becch.... | 1 |
| Chestnut, Walnut | . 2877 | Scotch Fir | . 5103 |
| Cherry | .3069 | Maple. | 5432 |
| ITazel | 3516* | White Birch | 5613 |
| Oak | . 3835 | Siherian Ceda | \} |
| Elm, Ash | .4155 | cembra)...... | \} 63 |

* At thus lieight cereals may be cultivated.

To these trees succeed heaths, and rich pastures, called $A l_{p s}$, which extend to the snow line, 8000 ft . above the sea level. But this is not the upper limit of vegetation, for lichens are found on the highest rocks; and Saussure, at the height of $11,382 \mathrm{ft}$. on Mont Blane, and $11,509 \mathrm{ft}$. ou Mont Cervin, or Matterhorn, gathered Aretia helvetica, Geum montanum, and Saxifraga bryoildes. At this great elevation are found two species of quadrupeds, the bouquetin or wild goat, and the chamois, which delight in heights inaccessible to man. The bouquetin, which bas become very rare, scales the most elevated peaks, while the chamois is generally found rather lower, but is never seen in the plains. In smmmer, the high mountain pastures are covered with large flocks of cattle, shcep, and goats, which are, in winter, removed to a lower and warmer level. The marmot, and white, or Alpine hare, inhabit both the snowy and the woody regions. Lower down are found the mole, the wild cat, the fox, the lynx, the bear, and the wolf; but the last two are now extremely rare. The vulture, eagle, and other birds of prey, frequent the rugged Alpine rocks, and 'the snowy ptarmigan' seeks food and shelter among the diminutive plants that border upon the snow line. Other kinds of game, including the moorfowl, woodcock, and partridge, abound in their usual localitics, from the upper limit of the wood to the more level and habitable parts below. Several kinds of water fowl frequent the higher lakes, where excellent trout and other fish are found; but those situated at the greatest elevation are, from their low temperature, entirely destitute of fish.
Passes.-The passes of the Alps, called by the French cols, that is, depressions, are the roads by which communication is effected between districts on opposite sides of the mountains; and in no countries are these essential requisites to profitable industry so supremely important as in Alpine regions. The j 'asses of the Alps may be divided into three classes:- 1 . Those practicable for wheeled carriages. 2. Those practicable for horses or mules. 3. Those suited only for foot passengers.

Of the first class, by far the most ficquented is the Mont Cenis, forming the principal route from France to Italy; the Simplon, from Vallais into Piedmont; and the Spliugen and Bernardino, from the Grisons into Lombardy. The Simplon and Stelvio passes-the latter in the Rhetian Alps, leading from Tyrol into Lombardy-are among the greatest triumphs of modern engineering. The former, which was constructed by command of Napoleon (1800-1805), at the joint expense of France and the then existing kinglom of Italy, is ahout 38 m . long, and averages 9 yards in width, the rise being only $1 \frac{1}{4}$ inches per yard: it runs mostly between bold and almost perpendicular rocks, which have been tunnelled at different places, bridges having been also thrown across where chasus and precipices interrupt the continuity of passage. 'To give a notion of the colossal nature of the undertaking, it may be mentioned that the number of bridges, great and small, constructed for the passage of the road between Brieg and Seste, amounts to 611 , in addition to the far more vast and costly constructions, as terraces of massive masonry; miles in length; of 10 galleries, either cut out of the living rock, or built of solid stone; and of 20 houses of refuge to shelter travellers and lodge the labourers constantly employed in taking care of the road.'-(Murray's Handbook.) While some of these galleries are of great extent, and, as that of Gondo, present to the traveller pictures of savage wildness and sublime grandeur, others are little more than simple archways of rock, forming highly picturesque features in the route. Of this class is the gallery of Isella, the last but one on the Italian

the gallery of isella. - From Bazera , Lettrea sur la suisse.
side; near the village of the same name, $8 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Domo d'Orsola. The Stelvio, which is a military road constructed by the Austrian Government, and completed in 1824, is the highest pass in Europe practicable for carriages, being 9174 ft . above the sea, and is a very remarkable specimen of human industry and skill. 'The galleries, cut for many miles through the solid rock, along the margin of the Lake of Como; those higher up, built of massive masonry, strong enough to resist the fall of avalanches; the long causeways carried over morasses; the bridges thrown across roaring torrents; the long succession of zigzag terraces, carried up) with the most gentle slope, but which, neverthcless, surmount one of the highest ridges in the Alps; these are works which, without exaggeration, deserve to be called stupendous.'-(Murray's Ilandbook.) This road, on which so much skill, labour, and treasure have been expended, is seldom passable except from June to October, owing to the fearfnl ravages committed by storms and aval-
anches, which eanse a large annual onthay for repairs. Of the seeond class, which is very nmmerous, may be named the Little and Great St. Bernard, the Col de Balme, the Grimsel, the Gemmi, \&e. Some of these are cut along ledges of rock having enormous eliffs above, and yawniny gults heneath; or they are in the form of rough stairs, as part of that of the Gemmi; to the mpractised eye apparently more suitable to be climbed by monkeys, than hy four-footed animals. Sueh passes are always picturesque, and seldom dangerous, though those unaceustomed to them are at times apt to have their nerves severcly tried when wending their way along the gidlly brink of a huge preeipice. Of this class of pass, the accompanying ent conveys a good idea. It is that over the Grimsel, in canton Bern, and one of the grandest and most

tuik grimski pass - From Barnards sketches in Swilzeriund.
interesting passes over the Alps. Its summit is 8400 ft . above the sea.
The third elass, those that ean be traversed only on foot, is still more numerous than either of the foregoing. Many of them are known only to the natives of the loealities in which they exist ; are never to be traversed excepting in the summer season; and some are not practicable for years in suecession. Those least frequented, and most difficult of access, appear to have been used prineipally by contraband traders, and by persons flying from dauger. Some of them rise far above the line of perpetual cougelation, aseending the valleys of torrents, crossing dangerous ravines and snow-eovered glaciers, rendered dangerous by frequent crevasses, that is, large rents, sometimes of considerable width, and hundreds of feet in depth. Of these, the highest are the Col de Géant, at the head of the Mer de Glaee, $11,172 \mathrm{ft}$; and Mont Cervin, $11,096 \mathrm{ft}$. The following table exhibits the heights of the prineipal passes of the Alps. Those marked * are practicable for wheeled earriages, and those unmarked for mules or pedestrians only:-

| Names | Ranges. Fee | Vames. | Ranges. | Fret. |

Avalanches.-The traveller in the Alps is frequently exposed to dangers of no ordinary deseription. The electric currents, attraeted and moved in every direction by the inmumerable lofty peaks, which render the winds at once fickle and violent, the melting of the snow, or its accumulation upon deelivities, or on the edge of preeipices which do not allow of its resting, all contribute to the perils that beset him; besides which, his progress is eften interrupted by the tempests called tourmentes by the French, and guxen by the Gernans, and the still more destructive avalanehe. The former arisus suddenly and with great violence, often accompanied by thunder and lightning, and tossing the snow in cldying elouds around the
traveller, blimhing his eyes, irritaling his slin, and compelling him to seek shelter. The avalanches [French, Lavanches or Lavangrs; German, Lawine or Lauwine] sometimes accompany the tourmentes, to which, in that ease, they owe their formation; but they oceur also at different seasons, unaccompanied by tempests. They may, in general, be deseribed as enormous masses of snow, whieh, detaehed by varions eanses from their original position, roll with tremendous noise and force over roek and precipice, down to the plains below, overwhelming man and beast, forest and dwelling, in one common destruetion. A touch of the foot, or the slightest motion of the air, even that produced by the sound of a small bell, or other instrument, is often sufficient to set the avalanche in motion; firearms are sometimes used to aseertain the distance or nearness of such danger. The most destructive are those whieh are composed of hardened snow, ant whieh, rolling or sliding down from the mountains, earry all before them. From the frequent oceurrence of avalanches, some parts of the Alps are entircly uninhabited: and in others, larese patelies of the tallest and strongest trees are left standing. In order to arrest their progress, houses are built under the shelter of rocks, and all other available means atlopted, to avoid the effeets of these destrnetive visitants.

Glaciers.-These are to be met with in various Alpine regions, but those of the Alps have been more minutely investigated than any others. They eonsist of masses of snowiee, formed in valleys above the line of perpetual congelation, whose prolongations extend to those lower down, reaching frequently to the borders of cultivation. They present the appearance of a frozen torrent, frequently several miles in length, traversed by deep rents ealled erevasses, and are composed of snow melted by solar heat, and frozen into granular ice, constituting a compound of ice and water, more or less yielding, aceording to the state of wetness or infiltration. The upper part of the glaeier, where the snow is in a transition state from a loose and powdery consistence to ice, is ealled névé in French, and firn in German. Professor Forlscs says, a glacier is 'an imperfcet fluid, or viscous body, which is urged down slopes of a certain inclination by the mutual pressure of its parts.' Glaciers are eonsequently sulyject to the laws of fluids, and, therefore, by no means stationary, exeept probably during winter, but continually moving; their rate of progression during summer, as has been aseertained by observation on the Mer de Glace, being 18-24 inches in 24 hours; thongh possibly their ratio of advance may vary, some of them reposing on almost horizontal surfaces, while others are inclined at a very considerable angle. On their surface they bear large quantities of stones, some of them of enormous size, brought down from the mountain recesses where the glaciers originate. These heaps are ultimately deposited at the foot of the glacier, and form terminal moraines, presenting the geologist with exeellent materials for studying the strueture of the monntains whence they have been derived. The term moraine is likewise applied to the lines of stones and mud fonnd on the surface, caused by the union of two or more glaciers, which frequently happens, from several glacier-filled valleys converging into one. In sueh eases they are called lateral or central moraines, according to their position. In thickness, glaciers vary from a few feet to several hundreds. In mild seasons their bulk is mueh relneed in size, and in cold seasons they are much enlarged. In the winter of 1818-19, some Siwiss glaciers inereased so greatly, and eame so far down into the lower valleys, as to sweep away whole villages. During the heat of summer their upper surtace is melted, and the waters tumble down the crevasses and mingle with waters below, formed by the melting of the under-surface glacier, in ennsequence of the higher temperature of the earth on which it rests. These aceummlated waters flow down to the lower end of the glacier, and issue from a natural arch, frequently of considerable height, formed in the iee, in a muddy stream, as if enloured with pipcelay, arising from the quantity of pomuled granite or limestone held in mechanieal solution ; for, as the enormons mass of iee rubs its way down the valley, it grinds to powder stones beneath it and at its sides, anil thus diseolours the waters that flow from it. Such an arch, varying in size aecording to the season of the year, may be seen in the Glacier des Bois, the termination of the Mer de Glace, in the valley of Chamouni, from which arch flows the Arveyron, the source of the Arve, whose muddy strean pollutes the
limpid blue waters of the Rhone, into which it falls below Geneva. Of the numerous glaciers interspersed thronghout the Alpine valleys, la Mer de Glace is at once the most extensive, pietmresque, and easily accessiblc. It terminates in the Glacier des Bois, in the valley of Chamouni, a little way E. of the Prieure, and of Mont Blanc. "This great ice river has near its origin two divided streams, derived from different sources. The W. branch, denominated the Glacier du Géant or du Tacul, has its rise in a vast basin immediately to the E. of Mont Blanc, confined between the upper ridge of the Alps, extending to the Col de Geant on the S., and the chain of Aiguilles of Chamouni on the N., and terminating with that of the Charmoz, round whose E. foot the Mer de Glace sweeps. The other branch, called the Glacier de Léchaud, has its origin at the foot of la Grande Jorasse, one of the bighest mountains of the chain which separates the Val Ferret from that of Chamouni. This glacier is smaller than its neighbour, although it is swelled, before their junction, by the tributary ice of the Glacier du Talefre, which falls in upon its right bank from a detached basin, encireled by inaccessible pinnacles of roek, in whose centre is the spot called the Jardin, now so frequently visited.'-(Forbes' $A l p s$.) This glacier is 7 m . in lengtly, dircet distance, and seldom exceeds two-thirds of a mile in breadth, but is generally less. Its last slope, into the valley of Chamouni, has a vertical height of 1800 ft. ; and, in appearance, it is as if an enormous eataract or rapid had suddenly been congealed. The accompanying view will serve to convey a distinct idea of the grandeur and barren magnificence of the scene presented by this glacier. The combination
place, and utterly demolished its old walls; they, however, subsequently restored part of its fortifications, though very slightly. Pop. 2356.

ALI'UJARRAS, a momntain district, Spain, in Andalusia, extending about $50 \mathrm{~m} . \mathrm{W}$. to E., nearly parallel to the coast of the Mediterrancan. From Motril to Almeria the mountains ramify N. to S. about 35 m . from the great clain of the sierra Nevada to the coast, and form the subordinate ranges of the sierras Bermeja, de Gador, \&c., whose highest peaks, about 6575 ft . high, are covered with snow three-fourths of the year. These monntains in gencral are rugged and bare, and, exceptiag some valleys, such as that of Andarax, little susceptible of cultivation, though in some parts abonnding with vines, olives, and other fruits; and in others, clothed with forests of oak, beech, pine, and other liardy trees. The district is watered by the Almeria, Adra, and numerous smaller streams. Some wheat, barley, rye, lıemp, \&c., are grown; and a few horned cattle, slieep, goats, and mules, are reared. Here also are mincs of various metals, now little wrought, except the lead mines of the sierra de Gador, and the quarries yiclding alabaster, which is of the finest quality.--(Madoz, Diccio. de España.)

ALRESFORD, a market tn., and name also of two pars. England, co. Hants (Southampton). The town is situated on the main road between London aud Winchester, 55 m . S.W. the former, and 7 m . N.E. the latter. The river ltchin passes at a short distance to the W.; and close by, in the same direction, is a fine sheet of water called Alresford l'ond, covering about 200 ac., formed in the reign of King John, witlı the view of improving the navigation of the river. The trade of the town has much fallen off from what it was formerly, the only manufacture now remaining being that of linseys. Alresford has been a borough and market town from a very remote period, and at one time sent a member to the House of Commons, its population being then much greater than it is now. The town is governed by a bailiff and cight burgesses; and petty sessions are lield here by the county magistrates. Three fairs annually, chiefly for sheep. The town was nearly destroyed by fire three times ; first in 1690, agaiu in 1710 , and a third time in 1736.The parishes are called, respectively, Old Alresford, and New Alrestord. The former is in the hun. of Fawley, and contains 3660 ac ., and 502 of a pop.; the latter, in which the town is situated, is in Alton division, and contains 1250 ac. ; pop. 1578 . Total pop. in 1841, of the two parishes and town
of ice, pile upon pilc, as it rises up the valley, green pastures, beautiful flower plants, lofty snowy peaks, and enormous bare monoliths with perpendicular sides many thousand ft. high, forms one of the most striking natural pietures the eye can jest upon. The cavern of the chapeau from which the view is taken is near the lower end of the Glacier des Bois, which is the part of the glacier here shown. In the valleys above the glaciers, deep lakes are sometimes formed, which, at times bursting their larriers, rush down the gorges and lower valleys with destructive fury. For an account of a bursting, or débacle, of this kiud, see Bagnes (Val de).- (Orographie de l'Europe; Forbes' Travels through the Alps of Suvoy; Murray's Handbook; Private Notes.)

ALPS (Swabian). See Alb.
ALPUENTE, a tn. Spain, prov. of, and 48 m . N. W. from Valencia, between the mountains del Castillo and San Cristobal. It is very irregular, from the inequality of the ground on which it stands; but the strects are for the most part well coustructed, paved, and clean. It has a sinall plaza, a townhall, prison, and an endowed school; a parish chureh, Iospital, cemetery, and the ruins of an old Roman castle. The troops of Don Carles burnt a considerable part of the Yol. I.
2088.-Alresford is also the name of a par. in co. Essex, hun. Tendring; area, 1640 ac. Pop. in 1841, 289.-(Correspondent in Alresford.)

ALREWAS, a par. England, co. Stafford; area, 4350 ac. ; 5 m . N E. by N. Litchfield. Iop. in 1841, 1658.

ALROE, an isl. Denmark, at the mouth of IIorsens-fiord; lat. $55^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $10^{\circ} 5^{\prime} \mathrm{E}$. It is separated from the mainland by a fordable channel, and is $3 \frac{1}{4} \mathrm{~m}$. long and $2 \frac{1}{2}$ broal. It contains a village called Alroë-By, which, whth the district around, forms the Danislı parish of the same name. Pop. 300.

ALSENO, a small tn, and com. Italy, ducliy of P'arma, $18^{\circ} \mathrm{m}$. E.S.E. Yiacenza. The inhabitants are agriculturists; the productions grain, hay, and timber; wine and oil. Pop., th. and com. 4175 .

ALSACE [German, Elsass; Latin, Alsatia, Alesatia, or Elesatia], a former prov. of France, now forming the deps. of the Upper and Lower Rhinc.

AS.SALIH, a small tn. on the S. coast of Arabia, 10 m . N.E. by E. Aden, and about 2 m . from the sea; lat. $13^{\circ}$ $12^{\prime} \mathrm{N}$. ; lon. $45^{\circ} 30^{\prime} \mathrm{E}$. It consists of about 200 houses, some of which are of stone. The country around is well watered and cultivated. Pop. about 500.

ALSEN, an isl. Denmark, duchy of Schleswig, situated on the Little lelt, and separated from the coast by a narrow channel named $A l s$-sumu; length, 20 m .; breadth, from 5 to 7 m .; lat. $54^{\circ} 56^{\prime} \mathrm{N} . ;$ lon. $9^{\circ} 52^{\prime}$ E. It contains several villages, and two considerable towns, Sonderborg and Norborg, the former of which has a good harbour, with a jop. of 3000 . It is one of the finest islands in the Baltie, being diversified with forests, lakes, well-cultivated fields, and oreliards. Fish is abundant in the lakes, some of which, particularly the Nordburger See, the Bund See, and the Wester See, are of considerable extent. The produce of the soil consists of wheat, rye, potatoes, rape, flax, and anise scell, the last of which is much nsed in Demmark as seasoning. A great part of Alsen belongs to the Duke of Augustenborg, whose seat, a castellated building, in modern style, stands near the centre of the island, on the wooded bank of a sinall arm of the Augustenborg-fiord. Sonderborg has the remains of an old castle; in one of the towers of which Christian II., of Denmark and Norway, was coufined from 1532 to 1549 . Pop. of isl. 22,500.-(Baggesen's Dänische Staat.)

ALSFELD, a tn. Hessen-Darmstadt, prov. Upper Hesse, on the left bank of the Schwalın, 25 m . N.W. Fulda, 31 m . N.E. Giessen; lat. $50^{\circ} 46^{\prime} \mathrm{N}$. ; lon. $9^{\circ} 15^{\prime} \mathrm{E}$. It is one of the oldest towns in Hessen, is walled, and has five churehes, und a grammar sehool. Linen is manufactured to a trifling extent, but the staple mamifacture is woollen. There are also six dye works, three tobaceo factories, several bleachfields, and a large distillery. Pop. 3700.-The distriet of AlsFELD, lying along the chain of the Vogel, has rieh eultivated lields. It contains 28 parishes, and has a pop. of 10,100 , chiefly employed in weaving linen and other fabries.

ALSII LOCH, an arm of the sea in co. Ross, Scotland; lat. $57^{\circ} 17^{\prime} \mathrm{N}$.; lon. $5^{\circ} 34^{\prime} \mathrm{W}$. It forms the common entrance to Loch Duieh and Loch Loung; the former is well sheltered, and eapable of holding a great number of vessels. Loeh Loung is a long and narrow inlet, the entrance to which is shallow, with about 6 ft . at low water.

ALSLEBEN, a walled tn. Prussian Saxony, gov. Merseburg, on the left bank of the Saal, 15 m . N.N.E. Lisleben; lat. $51^{\circ} 44^{\prime} \mathrm{N}$.; lon. $11^{\circ} 43^{\prime} \mathrm{E}$. The inhabitants live by agriculture, the rearing of cattle, and commerce. A good deal of caraway seed is raised in çardens. It has an hospital, a chureh, and a castle, belonging to the Duke of Anhalt bessau. Pop. 1850.

ALSTAHOUG, a vil. Norway, prov. Nordland, on the S. shore of the Island of Alsten, 186 m . N.N.E. Trondheim. It is the seat of the Bishop of Nordland and Finmarken.

ALSTEN, an isl. Norway, prov. Nordland. The N. central point is in lat. $66^{\circ} \mathrm{N} . ;$ lon. $13^{\circ} \mathrm{E}$. The island is mountainous; its most remarkable peaks being the Seven Sisters, one of which attains an elevation of 4379 ft . On this island is the village of Alstahoug.

ALSTER, a river, Denmark, prov. Holstein, rising in a moorish country about 20 m . N. Ifamburg. It takes a S. course, passes throngh the city of Ilamburg, after forming the basin of the Binnen Alster, and falls through dock gates into the Elbe.

ALS'TON, or Alston Moor. See Aldstone.
ALSTONEFIELD, a par. England, co. Stafford; area, 21,860 ac. ; on the river Dove. It has several charities, lead, copper, and coal mines. Pop. in 1841, 4701.

AL'TAI [more correctly Alta-yín-úla, golden mountain], is the name of a group of mountains projecting into the plains of Siberia, from the N.W. angle of the elevated table land of Central Asia, and lying between the sources of the Irtish on the W., and the Yenisei on the E. The literal appropriateness of the name borne ly a group of mountains so distinguished at the present day for its mineral riehes, is probably but accidental. The eountry in question was formerly the seat of the Mongolian tribe called the Golden Horde (orda, a tent), and it is consonant with their usages to suppose that they dignified, with the title of golden, the residence of their chief, or the locality in which he fixed his camp; and that the name Alta-yín-ala, or golden monntain (Alta signifies 'gold' in Mongolian), wheh denoted, at first, only the court or royal residence, came at length to be applied to the whole territory of the tribe. At the present day the name Altaï is given, exelusively, both by natives and Russian settlers, to the country actually oceupied by the Kalmuks, and is thus con-
fined, in its application, within comparatively narrow bounds. European geographers, on the other hand, lave hitherto used it as a general denomination for a supposed chain of mountains extending continuously from the upper waters of the Irtish W. to Lake IBaikal; and some have even carried the generalization so far as to include, under the same name, the several mountain chains-the Stanovoi, Khrebet, Aldan, \&c. which stretch N.E. from Lake Baikal to the Sea of Okhotsk. But, in reality, the broad belt of momintanous country interposed between the table land of Central Asia and the low plains of Siberia, is broken into mumerous ranges of mountains, bearing different names, forming independent groups, and rarely striking from W. to E.

The Altaï mountains, taken aecording to the widest acceptation of the name at the present day, extend through $6 \frac{1}{2}$ degrees of latitude, viz., from the vicinity of Tomsk, at the N . foot of the Alatou, or from lat. $56^{\circ} \mathrm{N}$. to the neighbour hood of Bukhtarminsk, at the confluenee of the Bukhtarma and Irtish, in lat. $49^{\circ} 30^{\prime} \mathrm{N}$.; and through 7 degrees of longitude, from the mountains of Kolyvan in the W., lon. $82^{\circ} \mathrm{E}$. to the Sayan chain in the E. The several ranges embraced within these limits are, proceeding from N. to S., and from W. to E., as follows :-The Alatou, winding very irregularly from N.W. to S.E., and sending down copious streams botl $l_{1}$ to the Obe and the Yenisei ; the chain of Salair, separated from the Alatou by the valleys of the Tome and the Inya to the $S$. and $W$. of these mountains lies the wide valley of the Obe; beyond which, S., we find the following Alpine ranges, viz., the Bashalatsk, Cheehuliha, 'Tegeretsk, and Kolyvan mountains, all striking nearly N.W. and S.E.; then the Alps of Korgone, Koksu, Ubinsk, Turgusune, Ulbinsk; and bordering, on the left bank of the Katmya, the Alps of Ursíl and Terektinsk; on the right bank, the chains of Kholsune, Katunya, and Arghyte; S. of these, the Shehebenala chain, above the right bank of the Bukhtarma, presents, to the N., a concave outline prolonged towards the N.E., and this direction of the mountain chains becomes more frequent on the E. of the Katunya; the Saljar, Kurai, and Toboshok Alps still stretch from N.W. to S.E., but the Karagai, and Múngán-taïga chains, and part of the Sayan, extend in a S.W. to N.E. direction.

The mountainous region thus described occupies an area of about 40,000 geo. sq. m., which is nearly equal to that of England; is all comprised in the government of Tomsk, with the exception of the valley of the Abakan, towards the N.E. which belongs to the government of Yeniseisk. The S.W slopes of the Ubinsk, Ulbinsk, and Turgusune ranges, pour some streams into the Irtish; while the N.E. face of the Alatou range contributes to swell the Yenisei ; but, with these few exceptions, the waters of this extensive region, the rivers of wheh are large as well as numerous, all flow into the main branch of the Obe. The line of demarcation between the Russian and Chinese empires erosses the Irtysh about 7 m . N. of the 49 th parallel of lat. ; runs in an E.N.E. direetion along the Narym, which joins that river, and then passes to the Bukhtarma, which it follows to its sources; it turns N.E. and N.N.E. through the heights of Karagai and Mungun-taïga, and follows the Sayan ehain N.W. and N.F., till it reaches the mountains named Shabina Dabahan. In the remainder of its eourse E., this boundary line passes for the most part along the $N$. side of the mountainous region; so that the Altail mountains are broadly distinguished from the other mountainous groups which follow them on the E., by the circumstance that, while the former are well known, the latter form a terra incognita to European geographers.

The Altaï group has been deseribed by a geological writer of great authority, as 'a vast promontory, connected on the S. with the mainland of primitive rocks, and surrounded on the other three sides by an ocean of diluvial deposits.' This opinion requires some modification, perhaps, as far as regards the E. district of the Altaï, of which only the N. portion presents to view diluvial formations. The Neptunian rocks belong chicfly to the elasses which lie furthest apart in the geognostic series, namely, palæozoic and diluvial. The stratified rocks, which, from the absence of fossil remains, cannot be easily elassified, form the largest portion of the Altaï. Clay slate, and ehlorite slate, passing, in the neighbourhood of granite, into iniea slate, are the prevailing rocks in the elevated districts. Throngh these the plntonian rocks, gram-
ite, gnciss, syenite, \&c., have forced their way, heaving up the clay slate in many instances, so that its strata stands in a vertical position. Among these eruptive rocks must be mentioned porphyry and greenstone. Limestone holds the next rank in respect to extent; though, like the clay slate, it is seldom found analtered by the influence of plutonic rocks; but, from its appearance in some places where it has undergone least metamorphosis, and is characterized by containing Calamopora polymorpha, geologists think it likely that the limestones of this region, altered as they now are by fire, were originally of the devonian system. The roeks belonging to this system are easily recognized by their organic remains. In the Altail they lie in three districts, or zones, nainely, Smeyef (an abridged form of Smeïnogorsk), Tomsk, and the Yenisei. The carboniferous limestones, also, are widely distributed in the Altaï, though the coal formation itself has not yet been discovered within the mountains. The sandstones accompanying them are particularly rich in palacontologic treasures, containing, among other things, the trunks of Araucarites, apparently of the same species as the Araucariæ which now flourish in New Zealand and Norfolk Island. The diluvial formation encompasses the Altaï, as has been alrealy stated, nearly on three sides. In this formation, and in the rocks of the devonian and silurian systems, lies nearly all the mineral wealth of this favonred region.

The physiognomy of the Altaï mountains in their W. and
S. divisions, is generally grand and interesting. The rivers which are very numerous, flow rapidly with full streams; and the various forms of the stratified and metamorphosed rocks of the limestones, porphyry, and granite, with the Bielki (white or snowy mountains) in the distance, lend to the scene the charn of perpetual novelty. The banks of the Katunya, in the leart of the mountains, present a landscape of the most inpressive character; an immense wall of rock extending from W. to E., supports fields of perpetual snow and glaciers, from the midst of which rise numerons rocky points, pyramids, and truncated cones; while in the distance are seen the two towering peaks named the Pillars of the Katanya. These peaks, which are supposed to be the highest summits of the Altaï mountains, stand on a wide and elevated table land, lying between the sources of the Katunya, the Bielaya (falling into the Chuya), and the Berell, which joins the Buklitarma. Glaciers, spreading from the bases of the Bielukha, or snowy cones, supply the fountains of these thrce rivers. The absolute height of the Pillars lias been estimated, by Dr. Gebler, at $11,723 \mathrm{ft}$., or, by Tchihatcheff, at $12,790 \mathrm{ft}$. 'To the E. of these pillars, the peaks of Chenunc-ouzoune and Arhhite increase in number, and present forms still more deeply serrated. In the course of all my long wanderings, I do not remember ever to have admired a scene more grand or more magnificent.'-(Tchihatcheff.) The accompanying view of these mountains is taken from the N. summit of the plateau of

AIPS OF CHENUNFROUZOUNR, KATUNYA, AN! ARHIIITF - From Tchihateheff. Voyaur daus l'Altai Orlental.

Saldjar, a branch of the chain of the same name. In the E. part of the Altaï, where the clay slate predominates, the aspect of the country is more monotonons; the mountains lose all variety of form, and assume the character of long ridges. It is on these mountains of slaty structure that the most disagreeable characteristic of the Altaï is chiefly developed, namely, the great extent of decp bog and morass, through which a horse crossing the hills must wade belly-deep even in the middle of summer, and not without the danger of hreaking his legs, if he gets entangled in the boughs of the trees which lie buried beneath. The principal heights of the Altaï are situated, as might be supposed, at the points of intersection of the ranges which strike in different directions. Few of them have, however, been as yct measured, and the following list of points, the elevation of which has been determined by barometrical observation, may be presumed to contain the most accessible summits, rather than the highest :-

The arca covered by perpetual snow in the Altai is very considerable; but the height of the snow line, which is very irregular, does not appear to lave been yet ascertained for any locality by exact observation. It is supposed to be relatively high; owing, probably, to the great mass of the high land and the contiguity of the mountains, as well as to the peculiar condition of the atmospliere; and, in the S. and more clevated portion of the Altail, its general clevation does not perhaps fall mueh short of 8000 ft . The glaciers of the same region oecupy a large extent, but they never descend
far below the snow line; and it is a remarkable fact, that though in the granitie districts of the Altaï, valleys are to be found strewed over with blocks of granite, which in some places oceur in great numbers, even on the erests of the mountains, yet boulders, properly so called-the distribution of which is generally ascribed to the ageney of glaciers-are never met with either in the Alpine regions of the Altaï, or the phains surrounding them. This fact strikes forcibly the traveller from the Russian shores of the Baltic, where so wide àn area is overspread with houlders of Finnland or Scandinavian grante. The limited extent and physical agency of glaciers in the Altaï may be assigned, with much probability, to two canses-1. The relative dryness of the air; for if the climate of Barnoul, on the river Obe (lat. $\left.52^{\circ} 27^{\prime} \mathrm{N}.\right)$, be compared with that of St. Gothard on the Swiss Alps, it will be found that snow falls at the former place but 66 days in the year, and at the latter 116 . 2. The winter is in the Altaï the dry season; most of the snow falls during the summer months, and little after November. These elimatic conditions explain why the line of perpetual snow lies high, and why there is so little accumulation of glacier ice. The stern winter of the high lands is kept effectually within bounds by the heat of a short summer. The frost does not disappear till the middle of May; and sledge travelling, on the newly-fallen snow, frequently begins in the mildle of September. In the mountains, the ice of the lakes may be crossed on horseback in the middle of June. But the prevalence of cold indieated by these circumstances, is counterbalaneed by the gencral serenity of the atmosphere; and the town of Fykalka, on the S. slope of the Shehebenukha range, near the Bukhtarma, standing at a height of 4300 ft . above the sea, is yet inhabited all the year round; nay, the ficlds adjacent to, and even above it, are cultivated with success, yielding barley, rye, oats, millet, and summer wheat, besides garden vegetables.

The vegetation of the Altaï is varied and abundant, and often vigorous. The local Flora, to which ample justice has been done by the labours of Drs. Ledebour and Bunge, assumes the Asiatic character; the European type prevailing from the Ural mountains to the banks of the Irtish. The mountain forests are composed of birch, alder, aspen, acacia, willow, larel, fir, and the Siherian stone pine (Pinus cembra). This last tree flourishes at an absolute height of nearly 7000 ft ; and at an elevation of 6000 ft ., where the snow rarely disappears before the end of May, it attains a great size, often measuring 14 ft . in circumference. The highest limit of the birch is about 4800 ft .; the dwarf willows, and other underwood, eease totally about 1000 ft . higher.

The Altai mountains, and the adjoining ranges to the E., are the native home of the wild sheep (Ovis argali), which wecupies the crags and most inaecessible rocky heights, leaving the hill sides and elevated valleys to several kinds of deer, Cervus elaplus, C. alces, C. migargus, \&e. A marmot, peculiar to these regions, abounds in the vieinity of the snow. These animals are preyed on by the glutton and the bear. The royal tiger prowls through the steppes on the S., and haunts particularly the reedy shores of Lake Balkhash; it is not unlikely, therefore, that his predatory incursions sometimes extend into the Altaï.

It is related by Tehilhatcheff, in the interesting and instructive account of his journey through the Altai, in 1841, that he found, near the sources of the Chuya, and in some other elevated districts, extensive tracts covered with the skulls, horns, or antlers, and other remains of the argali, elk, and deer of various kinds. Sometimes whole skeletons lay exposed; but more gencrally they were at least partially buried, only the skull and antlers rising above ground, and frequently the latter alone protruded, slowly gathering little mounds about them, by arresting the loose drift. Here, then, was to be seen, in course of formation, the growing monuments of future palxontology. The Kalnuks, when questioned respecting these appearances, ascribed them to the increasing severity of the winter, the destructive effects of whieh, they said, had lieen felt by the deer and argali for some years. In like manner, Dr. Ledebour states that he often saw in the Altaï, above the present limits of arborescent vegetation, withered trimks and other incontestable proofs that trees had once flourished higher up. But notwithstanding all this, how are we to belicve that a considerable change is taking place in the climate of the Altaï monntains, destroying life, and narrowing
the limits of vegetation, without heing perecptible in the adjoining inlabited towns, or depressing the thermometer, or manifesting itself otherwise than by merely local effects? As to the limit of arborescent vegetation, may it not be liable to periodical changes, owing to the exhaustion of the ground? In thick woods, when trecs die, they are soon replaced by other trees of a different species; but on the borders of vegetation where few species will grow, the chance of a rapid snceession is proportionally diminished. With respect to the destruction of the deer, it appears to us that an adequate and very probable explanation of it may be found in the inerease of peat bog, and that inordinate extension of morass and quagmire, which all travellers in that region describe as its most annoying feature. Nearly all the destroyed deer seen by Tchihateheff were sunk, their heads excepted, in a morass. These animals are confined by their habits to certain regions. If they venture into the low lands, they are attacked by flies and mosquitoes, and driven back to their haunts in the neighbourhood of the snows. But there they find cold, iuhospitable sloughs, continually encroaching on their domains, depriving them of pasture, and at last engulfing them. It is obvious that the growth of peat makes a change in the surface of the ground, which is capable also of destroying trees.

The Altaï mountains owe their reputation and importance chiefly to their mineral treasures-rieh silver, copper, and iron ores-to which gold has been recently added. It was in 1725 that Nikiti Demidoff first opened a silver mine in this region, at Kolyvan. A few years later, the Government took the business off his hands, and Sehlangenberg [in Russian, Smeïnogorsk-a name now abridged into Smeyef] became thie centre of operations. 'This branch of industry has been wonderfully developed in the Altail; but we cannot, in this place, do more than indicate the towns in which the metallurgie operations are chicfly earried on; these are Jarnonl, Smeyef, Salairsk, Ustkamenogorsk, Semipolatinsk, Riddersk, and Syränovsk, which last possesses, at present, the richest silver mines of the Altaï. The valuable ores are all found in the devonian system, or in the carboniferous limestone, and always in the vicinity of porphyry or greenstone. The gold oecurs lower down, in the diluvial strata, associated with remains of the nammoth and rhinoceros, and generally in the vicinity of dioritie rocks; taken collectively, it belongs to the plains; yet, in consequence of the investigations of Tehihatcheff, an expedition was sent, in 1843 , to look for gold in the granitic district in the heart of the Altaï, near the sources of the S'emia, which joins the Katunya; and gold was indeed found in some of the places indicated, but not in sufficient quantity to encourage the prosecution of the search. A varicty of porphyry, commonly styled jasper, which is formed in the lathe into handsome vases, and takes a fine polish, may be enumerated among the valuable minerals of the Altaï.

The Kalmuks inhabiting the Altaï are extremely weak, poor, and inoffensive. They are distinguished by the Russians into obedient (i.e., lussian subjects), and double-taxed, or paying tribute to China as well as to Russia, though living beyond the Chinese frontiers. They are governed by their Kaizanes, or native chiefs, the Russians never interfering with them, except to collect the yasak, or tribute of furs. (Tchihatcheff, V'oyage dans l'Altaï Oriental; Ledebour, Altä̈ Reise; Rose, Reise in Altaï; Humboldt, Asie Centrale.)

ALTAMIRA, a th. Mexico, state Tamanlipas, on the N. bank of a lake formed at the mouth of the 'Tampico or Panueo river ; $10 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Tampico. The town consists of a few tolerable houses in a square, a chureh, and a number of thatched cottages. Its vicinity to swamps and lagoons reuders it unhealthy, bilious fevers being very prevalent.

Al'TAMUKA, a tn. Naples, prov. Terra di Bari, at the foot of the $\Lambda$ pemuines, 119 m . E. Naples, and 29 m . S. W. Bari. It is one of the most beautiful towns in the province, surrounded by walls, and adorned hy several elegant structures; the principal of which is its cathedral, a magnificent building founded by Frederick II. It contains, besides, an hospital and a eollege, both founded by King Charles of Bourbon. It was sacked by the royalists in 1799 . A number of ancient Grecian vases, of exquisite workmanship, and other antiquities, have been dug up in the neighbourhood, corroborative of the opinion that it is built on, or near, the site of the ancient Lapazia. It is the residence of a royal governor. The country around is fertile, and abounds in rich pastures. The

## ALTENBURG

vine and olive are the chief productions of the soil. Pop. 14,949.

ALTAVILLA.-1, A tr. Naples, prov. Principate Citra, district of, and 9 m . S. from Campagna, situated on a hill in a healthy locality. It was founded by the Normans. Becoming alterwards a sanctuary for the insurgent subjects of Frederick II., that monarch caused it to be destroyed. It was subsequently rebuilt by the inhabitants. Pop. 3684. $-2, \Lambda \mathrm{tn}$. prov. Principato Ultra, district of, and $7 \mathrm{~m} . \mathrm{N}$. from Avellino. Pop. 2956.

ALTCAR, a par. England, co. Lancaster; area, 3580 ac.; intersected by the river Alt. Pop. in 1841, 490.

ALTDAMM, or Damm, a fortified city, Prussia, prov. Pomerania, gov. of, and 4 m . E.S.E. from Stettin; situated at the point where the river Plöne flows into the Lake Damm; lat. $53^{\circ} 24^{\prime} \mathrm{N}$. ; lon. $14^{\circ} 41^{\prime} \mathrm{E}$. It has two suburbs, a church, two schools, an hospital, a poor's house, and manufactures of eloth and cotton stuffs ; but agriculture, the rearing of cattle, and fishing, form the chief employments. Pop. 2419.

ALTDORF, or Altorf [Old village], the name of several towns and villages:-1, A tu. Switzerland, cap. can. Uri, near the Lake of Luzern, and 21 im . S.E. from the town of that name. It is beautifully situated in the midst of garlens and orchards, at the termination of the great route over the St. Gothard, on a plain intersected by the mountaiu streams Schächenbach and Reuss, I483 ft. above the sea level, and is well built and elcan; has a townhouse, church, gymnasium, and school; and in the middle of the town an ornamental fountain, crected 1567. It derives its chicf interest from its association with the Swiss patriot Willian Tell, whose memorable exploit of splitting an apple on his son's head with an arrow, is said to lave been performed here. An old tower, ornamented with rude paintings of Tell and the Austrian tyrant Gesner, stands near the spot. Tell is alleged to have been born in the neighbouring village of Biirglen, which is regarded as the cradle of Swiss liberty. The town was nearly destroyed by fire in 1799. Pop. 1903.-2, A small tn. Bavaria, on the river Schwarzach, in a beautiful and fertile country, 13 m . E.S.E. Nuremberg. It has an old palace, several breweries, and a considerable manufacture of wooden toys of all kinds, exported in large quantities, and wood charcoal. Altdorf was of some inportance as early as the 13 th century; was once the seat of a university, which, however, merged in that of Erlangen in 1806, and has still a normal seminary for Protestant teachers. Pop. 2700.-3, A tn. Wiirtemberg, cirele Danube, 2 m . N.N.E. Ravensburg, having manufactures of straw chairs. At a short distance is the castle of Weingarten, formerly a celebrated abbey of lienedietines. Pop. 2407 (R. catholiss).-4, 4 vil. grand dnehy of Baden, in a fertile district, on the ligh road from Offenburg to Freiburg. It las a fine palace, with a good library, possessing a collection of coins and valuable MSS. It has also two breweries, a distillery, and a vinegar work. A good many cattle are reared, and in the neighbourhood some wine is made, and a great deal of chicory grown. Pop., chicfly 1 . eatholics, 1478. - Altroore is likewise the name of numerous other localities, all unimportant.

ALT'E, or Alta, a vil. Portugal, prov. Algarve, N. from Loule, in a basin-like valley, on the border of a mountain ridge. Its inhabitants are very poor, and subsist chiefly by mining, making elarcoal, and gathering and manufacturing esparto. Its only importance is derived from the rich copper mines, about 2 m. S.W. from it. These lave only recently been opened; they do not require to be wrought to any great depth, and the water which accumulates in the diggings is easily carried off. The ore is rich, plentiful, and easily obtained.-(Willkomm's Zwei Jahre in Spanien und Portugal.)

ALTEA, a maritime tn. Spain, in Valencia, prov. of, and 30 m . N.E. from Alicante, on the Mediterancan Sea; lat. $38^{\circ} 37^{\prime} \mathrm{N}$. ; lon. $0^{\circ} 3^{\prime} \mathrm{W}$. ; at the head of a bay, and built on a rising ground, on the r. bank of the Alga, overlooked by an old fortress. It is cheerful-looking; has spacious but steep streets, a church, Latin and other schools, and a townhall. The inhabitants are chiefly engaged in tillage, but also in manufacturing soap, linen fabries, ropes, and gypsum. In the vicinity, grain, fruits, and vegetables, are grown; and pigs, sheep, goats, and mules, are rearch. About 300 of the inhabitants are engagel in seafaring. Pop. 5502.-(Madoz.)

ALTEN, a river, Norway, prov. Finmarken, rising in two sources S. from Kautokeine, in the mountains that separate Finmarken from Lapland. It flows N., and falls into the Altenfiord at Altengaard, after a course of about 50 m .

ALTEN, or Altengaird, a small tn. Norway, prov. Finmarken, on the river Alten, at its cmbouchure into the Altenfiord; lat. $69^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $23^{\circ} 4^{\prime} 23^{\prime \prime} \mathrm{E}$. (L.) It is said to be the most N. point of the globe where cultivation is attempted; the produce is potatoes and barley. Two distinct lines of upraised ancient sea coast, one above the other, are distinguishable here. They are not parallel, and both of them imply, that within a distance of 50 m ., a considerable slope can be detected, in such a direction as to show that the ancient shores have undergone a greater amount of upheaval in propertion as we advance inland.-(Quar. Jour. Geol. Soc., No. IV. p. 534.)

ALTENA, a tn. Prussia, eap. cirele of same name, gev. A rensburg, in a deep valley on the r. bank of the Lenne, where it is joined by the Nette, 40 m . N.N.E. Cologne; lat. $51^{\circ} 18^{\prime}$ N.; lon. $7^{\circ} 38^{\prime}$ E. It has an old palace, three churches, several courts of justice, and a workhouse in a building which once formed the residence of the Counts of Mark. On a tengue of land stand large manufacturing works driven by water power, and containing machines for making needles, pins, thimbles, and smaller articles of iron ware. The value of the artieles amually produced exceeds $£ 75,000$ sterling. Altena has also numerous common weaving and stocking looms.- The circle has an extent of about 200 geo. sq. m. It is hilly, and not well adapted for agriculture, but a good many cattle are reared. The hills, one of which (the Nordhelle) is above 2000 , and another, near Altena (the Breloh), is 1500 ft . high, furnish the supply of numerous streams. In particular, the Wupper has its rise within the cirele. Pop. of the tn. 4200 ; of the circle, 33,000, who, with the exception of 150 Jews , and 659 Ji . catholies, are all I'rotestauts.

ALTENAU, a small tn . Hanover, mining dist. of, and 4 m . E. from Klaustlhal, in a narrow valley on the Ocker, in the 11 arz mountains, and at a height of nearly 1500 ft . above the level of the sea. Its mines produce annually 7816 marks silver, nearly $£ 5200$ sterling ; about 5000 tons lead, and three tons copper. Iron is likewise produced to the extent of 5000 tons. A good many of the inhabitants are employed in making lace. Pop. 1757 . - A litenau is also the name of three vils. in Prusssa, and one in Bavaria.

ALTENBERG [Old hill], the name of mmerous towns, villages, and districts throughout Germany, of which the only one wortly of being named is in Saxony, circle of, and 20 m . S. from Dresden, cap. bail. of same name. It is the seat of local conrts of justice; has a royal storehouse for tin, an hospital, several mills propelled by water power, and in its vicinity are the most extensive tin mines on the Continent. Pop. 1950 -The bailiwick has an area of 40 geo. sq. m. The chief emplogments are mining of tin, cattle rearing, and straw plaiting. I'op. 3740.

AL'TENBURG, or Saxe-Altenbura [German, SachsenAltenburg], a duchy of W. Germany, consisting of two divisions, which are separated from each other by the interposition of Reuss-Gera. The E. division, formed by the distriets of Altenburg and Romneburg, is enclosed on the N.E. and S. by the kingdom of Saxony, and has Prussian Saxony on the N.W., and Reuss-Gera on the W. The W. division consists of the cirele of Saal-Eisenberg, and has Reuss and Gera on the E., Prussian Saxony on the N., Weimar on the N.W., the district of Rudal on the S.W., and Meiningen and Weimar on the s. The area of the divisions is nearly equal ; that of Altenburg centaining about 180, and that of Saal-Eisenberg nearly 200 geo. sq. m .; but the population of the former tar exceeds that of the latter, the one being 81,000 , and the other only 45,000 . The difference of population is accounted for by the different characters of the surface of the countrics. Altenburg is one of the most fertile and best-cultivated distriets in Gernany; while Saal-Eisenberg, particularly in the S.E., is covered with mountains and forests. In the E. of Altenburg, however, towards the frontier, the first slopes of the Erzegebirge begin to risc. They are composed chiefly of a reddish claystone and porphyry, and contain considerable seams of brown coal, or lignite. The chief employment of the inhabitants of both divisions, exclusive of those engaged in agricnlture, is spin ning and weaving. In the towns, the woollen manufacture has

## ALT-OFEN

the pre-eminence. Among the products may be mentioned wooden utensils, potash, pitch, roofing slates, lignite, ghe, liqueurs, poreclain, and exeellent stones. In the W. livision there is a considerable traffic in corn and timber. The inhabitants, originally a branch of the Sclavonic family, have lost the language; but still in dress, and several other respeets, retain many of the old enstoms handed down by their forefathers. By the constitution given to Altenburg in 1831, it is a limited monarchy; the legislative assembly consisting of 12 delegates, elected every five years, and a president nominated by the Duke. As a member of the Germanic confelleration, it is united with the other Saxon duchies, and has the 12 th vote. Its military quota consists of a battalion of infantry, numbering 982 men. In 1672 , the larger portion of Altenburg was vested by suecession in the family of Saxe-Gotha; and in 1825, by virtue of an exchange with the Duke of Meiningen, Altenburg, with the exception of a few small distriets, fell to the Duke of Saxe-llildburghausen. Pop. 126,000.-(IIuln's Lex. Deutschland; Real Encyklopädie.)

ALTENBURG [Old eastle].-1, A city, Germany, eap. dueky Saxe-Altenburg, and of circle of its name; about 2 m .W. from the l. bank of the Pleisse, 26 m . S. Leipzig, with which it is conneeted by a railway, opened in 1842, now connected with the Bavarian lines; lat. $50^{\circ} 56^{\prime} \mathrm{N}$.; lon. $12^{\circ} 27^{\prime} \mathrm{L}$. It is walled, and, though irregularly built upon several hills, has some fine streets, and many handsome edifiees, besides five considerable suburbs, named after the former city gates. It is the seat of the higher courts and Govermment offices, and contains seven churches, a gymnasium, a considerable library, a foundation for educating Protestant young ladies of rank; a normal school, with a deaf and dumb institute attached, and several other clucational establishments; also, a house of correction; three hospitals, one of them for orphans, and other two charities; an association for promoting trade and industry, a philosophical society, a horticultural society, a historical and antiquarian society, a drawing aeademy, a theatre, \&c. The palace, which is surrounded by extensive gardens, lies N.E. of the town, on a hill of porphyry, from which a fine view is obtained. The Magdalena, or Lutheran female endowment, which stands in a garden E. of the town, is a handsome turreted building. The principal manufactures are of linen, ribbons, gloves, worsteds, brushes, vincgar, brandy, and liqueurs; stareh, sealing wax, playing cards, paint, porcelain, stoves, tobacco and snuff, optical instruments, \&c. A considierable trade is carried on in cattle, corn, wood, and wool. Carriage building is also prosecuted to some extent. Pop. 13,697.

2, Altenburg [IIungarian, Magyar Ovar], a market tn. Ilungary, 20 m . S.S.E. Presburg, and 47 S.E. Viemna; in a inarsh, on an island of the Leitha, at the point where it unites with the r. arm of the Danube. It is surrounded with deep ditehes, and fincly-watered gardens; has wide streets, and a number of handsome buildings; among others, a gymnasium, a Piarist college, an agricultural institution, and an old eastle, now used as a corn magazine. The inhabitants, Germans and Ilungarians, trate in black cattle, grain, and fruit. In 1605, and again in 1683 , the Turks, in their progress towards Vienna, burnt this town to the ground. Pop. 3400.-At least 48 plaees in Germany have the common name of Altenburg.

AL'TENDORF [Old village], the names of numerous villages in Germany, in Bavaria, Jessen, Hanover, Holstein, Austria, Prussia, and Saxony. They are all small. The largest is a vil. in Moravia, on the l'odelskybache, near Olmütz. It has a chureh, school, paper mill, lead mill, and two wire-drawing works. In its vicinity are lead and silver mines. I'op. 2020.

ALiTENGAARD. Sce Alten.
AL'TENHEIM, a vil. grand duchy of Baden; situated in a rich ehampaign country, on the road from Kehl to Freiburg, I m. from the Rhine. It is a very old place, mentioned as early as A.11. 883. The inhabitants, mostly Protestants, are engaged in agrieulture and cattle breeding. Pop. 1500.

ALTENKIRCHEN [Old churehes], a small fortified tn., eap. circle of same name, Prussia, prov. Lower Rhine, gov. of, and 16 m . N. from Coblentz on the Wied; lat. $50^{\circ} 37^{\prime} \mathrm{N}$.; lon. $7^{\circ} 36^{\prime}$ E. $\Lambda$ griculture, the rearing of eattle, linen manufactures, and the production of various artieles of iron ware,
form the chief employment of the population, amounting to 1100. An obstinate battle took place here between the Austrians, $11 n d e r$ Prince Ferdinand of Wiirtemberg, and the French, under General Kleber, in 1796.-The circle of Altenkirehen has an area of about 180 geo. sq. in., and is rugged and mountainous. Some of the hills are of basalt: and the cup-slaped summits of some of them have all the appearance of old eraters. Not mueh grain is produced, but a great number of cattle, sheep, goats, and swino are reared. The cows, amounting to 9400 , prove that the dairy is not neglected. Within the circle, at Hamm, are a furnace for making rough steel, another for smelting copper, and a powder mill. In other parts of the cirele, varions mining operations are earried on, and there are several iron furnaces. Pop. 34,000 , nearly divided between R. catholies and Protestants. -There are several other places in Germany named Altenkirchen.

ALTENMARKT [Old market], the name of mumerons unimportant places in Germany.

A L'TENS'TAD'T [Old town], the name of seven unimportant plaees in Bavaria, two in Hessen, one in Wiirtemberg, and one in Austria.

ALTENSTEIG, or Altenstaig, a tn. Würtemberg, eirele Black Forest, on the slope of a steep hill, near the Nagold, 29 m. S.W. Stutgarlt. It lias tanneries, with woollen and linen manufactures, and a work for making salt of sorrel. Pop. 2000.

AL'TER-DO-CHÃO, a tn. Portugral, prov. Alemtejo, $15 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Portalegre, on the river Avis. It is enelosed within old walls, and has a poor's house, and the ruins of a castle. Pop. 2000.

ALTERNON, a par. England, eo. Cornwall; area, 13,840 ac. $7_{4}^{3} \mathrm{~m}$. W.N.W. Launceston. Pop. in 1841, 1334.

AL'THORNE, a par. England, co. Essex; 2000 ae. I'op in 1841, 418.

ALTHORPE, a par. England, co. Lincoln; 5460 ac. Pop. in 1841, 1184.

ALTIN, a lake, Siberia, gov. of, and 330 m. S.S.E. from Tomsk ; 77 m . long, and 52 m . broad. It has a rocky bottom, and gives rise to the Byia river, which, after its union with the Katunya, receives the name of Obe. In winter, the N. part is sometines frozen so as to be passable on sledges, but the S. part is never covered with ice. The Russians call Altin Lake Teletskoe Osero, from the Teletsi, a Tartar tribe, who inhabit its borders, and who give it the name of Altin-Kul. By the Kalmuks it is called Altin-Nor. The water in the lake, as well as in the rivers which run through the adjacent country, is inereased during summer by melted snow; lience it appears of greater or smaller extent, according to the period of the year at which it is seen by different travellers.-A neighbouring branch of the Altaï mountains is also called Altin.

AL'TKIRCH [Old ehureln], a small manufacturing $t n$. France, dep. Hant-Rhin (Alsaee), 17 m . W. Basel. It is sitnated upon a height, at the foot of which flows the Ill, near the forest of Ilart; and is divided into the upper and lower town, between which are the ruins of an old eastle, the residence of the Arelidnkes of Austria, when they visited Alsace. It is the seat of a tribunal of primary jurisdietion, and of a communal college. The manufaetures are principally of earthenware, cotton, and various kinds of implements. There are also breweries and tanneries in the town, and, in the ncighbourhood, excellent quarries of stone and gypsum. A considerable trade is carried on in grain, wine, and hemp; and a cattle market is held once a montl. Pop, in 1846, 3316.

AL'TMÜHL [Lat. Alemannus, Alimonia], a river, B:svaria, an affinent of the Danube, from the left, rising 16 m . N. W. Anspach, and 8 m . N.E. Rothenburg; about lat. $49^{\circ} 26^{\prime}$ N.; lon. $10^{\circ} 18^{\prime}$ E.; whence it runs S.E., past Pappenheim and Eichst:̈dt, about 132 m ., to Kelheim, where it joins the Danube, $12 \mathrm{~m} . \mathrm{S} . W$. Regensburg. The Ludwig, or MaynDanuhe Canal, from Bamberg on the Regnitz to Dietfurt on the Altmïhl, unites the German Ocean with the Black Sea by the centre of Europe.

AL'T-OETTING. See Oetting.
AL'T-OFEN, a munieipal tn. Hungary, forming almost a suburb of Ofen, or Buda, from which it is separated merely by a barrier. It is supposed to occupy the site of Sicambria of the Romans. Pop. 9150.

## ALTSTRELITZ

ALTOMONTE, or Altamont, a tn. Naples, prov. C'alabria Citra, 12 m. S.W. Cassano, situated on an eminence. In the neighbourhood are mines of gold, silver, and iron; and a salt spring. l'op, 4600.

AL'TON.-1, A market tn. and par. England, co. Ilants. The town is about 16 m . N.E. Winchester, and 46 m . S.W. London, on the main road from the latter to the former, and near the river Wey. It consists of one principal street, about half a mile long, three small streets, and a spacious market place, all clean and well kept. The houses are respectable, and many of them well built; mostly of brick, although there are quarries of good building stone in the neighbourhood. It is amply supplied with excellent watcr, and lighted with gas. The ehurch is a handsome building, with a square embattled tower and spire. There are, besides, several dissenting places of worship; a number of schools, including a free school, and a British school ; several benevolent and charitable institutions; and a mechanic's institute, having a library containing 1000 volumes. Bombazines were formerly manufactured here to a considerable extent, but the trade is now entircly extinct. Sacking and hop bagging-both to a small amount-are the only manufactures now carried on here; but there is a considerable retail trade in domestic necessarics. There are also some large breweries, the ale from which is much esteemed. The town is under the jurisdiction of the county magistrates; and the petty sessions for the division of N. Alton are held herc. It is one of the polling places for the county; has weekly corn and cattle markets; and two fairs annually; one in April, for sheep and lambs; the other in September, for cattle and toys. Area of par., 3910 ac.; pop. of tn . and par. in 1841, 3139.-(Correspondent in Alton.)-2, Alton is also the name of a division, co. Hants; and of a hamlet, co. Worcester.-3, A tu., U. States, in Illinois, on the E. bank of the Mississippi, near the junction of the Illinois with that river, and 180 m. W. Washington. Its strects are spacious, and regularly laid out. There are five squares, and six churches, belonging to various religious bodics; some of the latter are large and handsome buildings. It is favourably situated for commercial purposes, and has the best landing for steam vessels on the E. bank of the Mississippi. There are here three printing offices, and two weckly newspapers. Рор. 2340.

ALTONA, the second city in the kingdom of Denmark; and though the most recent, yet the largest and most populous in the duchy of Holstein. It is a river port, on the r. bank of the Elbe, a little below Hamburg, with whose suburb of St. Pauli its E. side is almost in immediate proximity; while, on the W., it is joined by the populous villages of Ottensen and Neumiihl; lat. (observatory) $53^{\circ} 32^{\prime} 42^{\prime \prime} \mathrm{N}$.; lon. $9^{\circ} 56^{\prime} 42^{\prime \prime} \mathrm{E}$. (R.) It stands higher, and is hence said to be more healthy, than Hamburg. It is in general well built, but does not possess many objects of interest. Its finest street is the Palmall, which is long and broad, is lined with good houses, and has a fine shady walk in the centre, formed by a double row of lime trees. Of its six churches, the only one deserving of notice is the high church, which has two towers, and is considered the fincst in the duchy. Among the other buildings may be mentioned a gymnasium, with a library of 12,000 volumes; an orphan hospital, and large infirmary. In the cemetery beyond the town, are the tomb of Klopstock, who died in Hamburg in 1804, at the age of 80, and a monument to the Hamburgers who fell during the siege of 18131814. The trade and manufactures of Altona are extensive, and have been carefully fostered by the Danish Government, which has endeavoured, by special privileges and immunities, to attract to it part of the extensive commerce previously monopolized by IFamburg. The success has been comparatively limited. Notwithstanding of the rapid, and, for an European continental town, almost unprecedented rise of Altona, Hamburg maintains it pre-eminence; and has even converted the former into a kind of suburb, where the merchants of the latter reside, not to carry on, but to retire from business; thus almost justifying the vulgar pun, which, playing upon the name of Altona, derives it from the Low German words, 'al-to-nah' (all too nigh), as indicating its unhappy proximity to Hanburg. Perhaps the most important manufacture of Altona is that of tobacco. One single factory employs 120 persons, and works up 600,000 lbs. In 1844 , of $1,100,000 \mathrm{lbs}$. of raw tobacco used, 110,000 were made
into snuff, 64,000 into cheroots, and 64,000 into cigars. The other public works are soap and oil works, dyeworks for woollen goods, a chemical work, a vinegar work, a type foundry, an extensive linen and cotton printfield, roperies, tanneries, and breweries, famous for their beer. The railways recently completed in the neighbourhood have added greatly to the importance of Altona, both in a commercial and military point of view; in the former, by the railway to Kiel, which connects it with the Baltic; and in the latter, by a branch of the same railway, which connects it with the important fortress of Rendsburg. Altona has four dockyards. Its harbour is only a winter haven of the third class, having a depth of water from $7 \frac{1}{2}$ to $14 \frac{3}{4} \mathrm{ft}$; but the largest merchant vessels once over the bar of Blankenese, can unload at the warehouses on the bank of the Elbe, especially at the W. end of the town, where the ordinary depth of water in the river is from 15 to 25 ft . The number of vessels belonging to Altona is 238; and that of the vessels of all kinds, including fishing-boats, by which its port was visited in 1853 , was 3825 ; tom., 186,680. Pop. of Altona proper in 1845, 32,200; but, including Otteusen and Neumühl, which ought to be regarded as its suburbs, 37,000 .-Other three places in Molstein, and 11 in different parts of Germany, have the name of Altona. -(Baggesen's Dänische Stıat; Huhn's Lex. Dcutschland.)

ALTON-BARNES, a par. England, co. Wilts; area, 250 ac. ; $4 \frac{1}{2} \mathrm{~m}$. W. by N. Pewsey. Pop. in 1841, 167.

ALTON-IANCRAS, a lar. England, co. Dorset; 1370 ac.; 2 m . E. Cerne Abbas. Pop. in 1841, 248.

ALTRANSTÄD'T, a vil. Prussian Saxony, gov. of, and 9 m . E. from Merseburg. In its ancient castle, the treaty of peace was concluded between Charles XII., King of Sweden, and Augustus, elector of Saxony, September 24, 1706.

AL'TRINGIHAM, or Altrincilas, a small th. and chapelry, England, co. Chester. The town lies $8 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Manchester, and 25 m . E. Liverpool ; is remarkably neat and clean, on which account, and the salubrity of its air, it is much resorted to by invalids from Manchester. There are, besides the parish church, several dissenting places of worship, some schools, and a few small charities. Thread and woollen yarn are manufactured to some extent, but the chicf employment of the labouring classes is agriculture and gardening; the fruit and vegetable markets of Manchester being chiefly supplied from this neighbourhood. The Duke of Bridgewater's canal passes near the town, and contributes largely to its prosperity. Fairs for cattle and drapery, in A pril, August, and November. Pop. in 1841, of th. and chapelry, 3399.

ALTSOL, or ZoLium, an old imperial free th. Ifungary, $72 \mathrm{~m} . \mathrm{N}$. Pesth ; on the bank of the Gran, where it is joined by the Szalatua. On a rocky height are the remains of a castle, supposed to have been built in 1457 , once the favourite hunting seat of King Mathias I., called by the Hungarian peasants 'the good king Matlias,' now principally used as a prison. In the neighbourhood is an acidulated spring of some celcbrity, and hemp is cultivated to some extent. Pop. 2000.

ALTSTETTEN.-1, A small tn. and par. Switzerland, can. of, and $9 \mathrm{~m} . \mathrm{S} . E$. from the town of St. Gallen, situated on the slope of a mountain in the midst of a fertile and well-cultivated district. It has a fine church, a townhouse, narrow streets, and mostly high stone houses, some of which are handsome. The houses of the suburbs are of wood. It sustained a siege of three weeks from the Austrians in 1410, and suffered at various times from fire. In the beginning of the Reforma tion, Carlstalt was some time a preacher here. In the vicinity is a Franciscan nunnery, and an clegant bathhouse attached to the cold sulphurous spring on the E. side of the town. Pop. of tm . and par. 6429.-2, A vil. and par., can. of, and 3 m . W.N.W. from the town of Zirich. Pop. 992.

ALTSTRELITZ, a walled tn. Mecklenburg, circle Stargard, in a plain near the Mühlenbach, which here forms a lake, 58 m . N.N.W. Berlin ; lat. $53^{\circ} 19^{\prime}$ N.; lon. $13^{\circ} 5^{\prime}$ E. It has three gates and as many squares, but the louses are for the most part paltry. In the environs are numerous gardens, and a promenade called the Fasanerie (pheasantry), much frequented. Altstrelitz was at one time famed for its horse markets, but the chief employments of the inhabitants now are agriculture and cattle rearing. There are also carried on manufactures of leather, linen, straw hats, mats, and waxtapers. Pop, of whom 390 are Jews, 2943.

AL'TUN-KUPRI [Golden bridge], a small tn. Asiatie Turkey, in Koordistan, pash. Bagdad, on an island in the Altun-su, or Little Zab river, which is here erossed by two bridges of brick work, 60 m . S.E. Mosul, and 26 m . S.E. Arbel or Lirbil; Colonel Shicl says, 'about 40 m .,' but, being much fatigued, he may have over-estimated it, and the probability of his having done so is the greater that he states the distance to Kirkook, which is further away, at 25 m . The pop, was formerly about 8000 , but has since been mueh reduced by plague and famine.

ALTURA, a th. Spain, in Valencia, prov. of, and 23 m . W.S.W. from Castellon de la Plana, near the r. bank of the Palancia; tolerably built, with a church, chapel, and two sehools. The inhabitants are principally oceupied with agriculture, making wine and oil, and rearing domestic cattle and silkworms. l'op. 1905.-(Madoz.)

AL'TWASSEL, a vil. I'russia, gov. of, and 35 m. S.W. from Breslan, on a slope of the Vogel-koppe, belonging to the chain of the Mittelgebirge, 1200 ft . above the level of the sea, and overlooking an extensive valley of great beauty. There are several alkaline and chalybeate springs here, and the baths which have been established at them are mueh resorted to. Pop., exelusive of bathers, 1590 .

ALUMPOOR, a tn. Hindoostan, in the Decean, 1. bank of the Kistna; lat. $15^{\circ} 54^{\prime} \mathrm{N}$. ; lon. $78^{\circ} 10^{\prime} \mathrm{E}$.

ALUSHTA, a tn . Russia, on the S . coast of the Crimea, beautifully situated on an isolated schistous hill, forming a spur from the Taurus chain, bathed on the E. by the Temirdshi, and on the W. by the Ulit, 22 m . S.E. Simferopol. It appears to have been anciently a place of considerable importance. The first mention made of it is in the 6th century, when its castle, which bore the name of Alouston, was repaired by the Emperor Justinian. The ruins of the castle still crown the rock on which the town is built, and advantage has been taken of them by the inhabitants, who, in many cases, have built their houses against them. These houses are of a very peculiar construction. They are half sunk in the ground, and, by means of roughly-hewn stones, cemented by a kind of greasy earth, rise a sliort way above the surface, and support a flat roof, whieh serves as a terrace walk, and oceasionally as the platform from which the next honse in the ascent is entered. Alushta still contains the remains of several Greek churches; and one of them, from bearing some resemblance to a cathedral chureh, seems to indicate that the town was onee the seat of a bishop.-(Montpereux, Voy. Autour du Caucase.)

ALUTA, Alt, or Alouta, a rapid river, Transylvania; it rises in the W. Carpathian mountains, on the Moldavian frontier, about lat. $46^{\circ} 38^{\prime}$ N.; lon. $25^{\circ} 46^{\prime}$ E.; flows S. to 11 yefalva, thence N. to lat. $46^{\circ}$, whence S.W. and S. Crossing the E. Carpathian by the pass of Rothenthurm, it enters and crosses Wallachia, and falls into the Danube at Nicopoli, after a course of about 270 m . It is said to contain some gold.

ALVA, a vil. and par. Scotland, co. Stirling. The vil. is 7 m . N.E. Stirling, pleasantly situated on nearly level ground at the base of a hill called Craigleith. It consists of two principal streets, ruming nearly parallel to each other, both straight and well kept. The houses are generally built of the native whinstone, but a few are of red sandstone, obtained from an adjoining coal field. On an eminence a little to the E. of the village, stands the parish church, built in 1632. There are also a Free church, and a United Presbyterian church. The parish school loouse, situated in the centre of the village, is a neat building, and capable of accommodating upwards of 100 seholars. There are, besides, a subscription school, an infant school, and a seminary for the education of female children, supported chiefly by private benevolence. Woollen goods, particularly slawls and plaids, are mannfactured here to a very considerable exteut, and have been so for upwards of a century and a half. Spiming and throwing of woollen yarns is also carried on largely, the whole employing about 1800 hands. Glasgow is the principal market for these manufactures, althongh quantities are sent also to Stirling, Perth, and Edinburgh. Pop. of vil. in 1841, 2092, par: 124. 'Total, 2216. There has been an inerease of the population since 1831 of 916 , attributed to the success of the woollen manufactures.

ALVAH, a par. Scotland, co. Hanff; arca, 11,133 ac. lop. in 18:1, 1407

MLVAR, Alvur, or Alwur, a principality, Upper Hindoostan, chiefly in prov. Agra, between lat. $27^{\circ}$ and $28^{\circ}$ N.. N.W. the dist. of Agra, and S.W. that of Delhi ; area, 3000 sq. m. In Mahometan historics it is sometimes called Mewat, and its inhabitants Mewatics. The greater part of the country is hilly, and covered with wood; but it eontains also welleultivated valleys and plains. The natives are singularly savage and brutal, and are noted for predatory incursions on the surrounding territories. Previously to 1780 , it was subject to the rajalh of Jeypoor, but is now governed by the rajah of Macherry, with whom a treaty was, in 1803, coneluded by Lord Lake, taking him under the protection of the British Government ; since which event, kind treatment has so far ameliorated the character of the natives, that the rapine of the Mewaties is now seldom heard of. The principal towns are Alvar, the eap.; Macherry, from which the rajah derives his title; and Rajghur. -(IIamilton's liast India Gaz.; Walker's Map of India.)

MLVAR, or Alwur, a tn. Hindoostan, in Ajmeer, cap. principality of same name, 85 m. S.S.W. Delhi; lat. $27^{\circ} 30^{\circ}$ $\mathrm{N} . ; \operatorname{lon.} 78^{\circ} 0^{\prime} \mathrm{E}$. It is strongly fortified, and lies at the base of a steep hill, on the summit of which there is another fort, well supplied with water. Alvar is the usual residence of the rajal of Macherry.-(Hamilton's East India Caz.; Walkcr's Map of India, 1850.)

ALVARADO.- 1 , A small tar. and port, Mexico, state of, and 40 m. S.E. from Vera Cruz; lat. $18^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $95^{\circ}$ $43^{\prime} \mathrm{W}$. (r.) The town stands in an unhealthy situation, on the point of a small promontory, which forms the N.W. enltrance into the harbour, or lagoon. The latter is a bar harbour, eapable of admitting vessels of 12 and 13 ft . draught, which, within the bar, on which there is 9 ft . depth at low water, lie sheltered from every wind. There is a dockyard at Alvarado-2, A river, formed by the union of several streams, rising in the mountains of the state of Oaxaca. It flows E.N.E. through the state of Yera Cruz, forms a lake of its own name, and falls into the Gulf of Mexico, through the lagoon or harbour of Alvarado, after flowing a direct distance of 120 m . from the junction of the head streams.

ALVAYAZRRE, a tn. Portugal, prov. Bcira baixa, 31 m . S. Coimbra. Pop. 1343.

ALVECIIURCH, a par. England, co. Worcester ; area, 6820 ac. Pop. in 1841, 1633.

ALVEDIS'TON, a par. England, co. Wilts; 2400 ac. Pop. in 1841, 263.

MLVELEY, a par. and township, Fugland, co. Salop 7640 ac.; on the E. bank of the Severn. I'op. in 1841, 1062. ALVERCA.- 1, A small tn. Portugal, prov. Estremadura, 12 m . N.N.E. Lisbon, upon a height near the r. bank of the Tagus, with a small fishing port. The neighbouring hills are covered with olive trees. A well-frequented annnal fair is held. P'op. 1275.-2, A town, prov. Beira-alta, 10 m. S.E. Trancoso. Some tanning is earried on. Pop. 780.

ALVERDISCOTT, a par. England, co. Devon; area, 1390 ac. ; 5 m . S.E. Brideford. Pop. in 1841,332.

ALVERNIA, a vil. Tuscany, on a monntain of its own name, 2 m. N. Chiusi. Its monastery, foundel A.D. 1218 , by St. Franeis d'Assisi, was the cradle of the Franciscan order.

AlNERS'TOKE, a par. Fingland, co. Hants; 4010 ac. Pop. in 1841, 13,510.

MLVES, a par. Scotland, co. Elgin, on the Moray Frith. Pop. in 1841, 798.

ALVESCOT'I, a par. England, co. Oxford; 2690 ac.; 5 m . E. Burford. l'op. in 1841, 357.

ALVESTON, two parishe3, England:-1, Co. Cloucester ; area, 2470 ac.; 9 m . N. by E. Bristol. Pop. in 1841, 841.2, Co.Warwick; area, 4300 ac . ; 2 m . N.E. Stratford-on-Avon. Pop. in 1841, 793.

AlveTon, or Alton, a par. England, co. Stafford; 7470 ac. Pop. in 1841, 2390.

ALVIE, a par. Scotland, co. Inverness ; area, 41,660 ac. Pop. in 1841, 572.

ALVigNANO, or Avionano, a tu. Naples, prov. Terra di Lavora, dist. of Piedmont, 11 m . N.E. Capua, pleasautly situated on the deelivity of the (apravian hills. Pop. 2092.

ALViNC'Z, or Alvinez, also called Alvintz, Vincza, Binstum, Winzermone, a in. Austria, in Transylvania, W. hank of the Maros, 7 m . S.W. Karlsburg; with a R. catholic, a l'rotestant, aud a Greek church, and a Franciscan convent. P'ol., almost entirely Magyars and Bulgarians, 3500.

ALVINGHAM, a par. England, eo. Lineoln; area, 1940 ac. ; $3 \frac{1}{2} \mathrm{~m}$. N.E. Louth, on the Navigation Canal. Pop. in 1841, 313.

ALVINGTON, three pars. Eng.:-1, par. Glouecster; 1550 ac. Pop. 340.-2, Alvington (East), par. Devon ; 4220 ae. Pop. 729.-3, Alvington (West) ; 3840 ae. Pop. 998.

ALVITO.-1, A small tn. Naples, prov. Terra di Lavora, dist. of, and 8 im . S.E. from Sora, on the declivity of a hill. It has an hospital, and several monts-de-piété for the marriage of poor young women. Pop. 3500.—2, A smalltn. Portugal, prov. Alemtejo, $18 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Beja, with an old castle, on the small river of the same name, an affluent of the Sado. Pop. 1570.

ALVOR, a tn. Portugal, prov. Algarve, on a streamlet of the same name, 8 m . N.E. by E. Lagos, abont 2 m . from the S. coast of the provinee. It is well built, and exports excellent salt. Pop. 1260.

ALVORNINHA, a tn. Portugal, prov. Estremadura, 54 m. N. Lisbon. Pop. 1530.

ALWALTON, par. Eng. Huntingdon; 1040 ac. P. 329.
ALWINGTON, par. Eng. Devon; 5330 ac. Pop. 392.
ALYTH, a vil. and par. Scotland, cos. Perth and Forfar. The vil. is pleasantly situated on the rising ground on the N . side of the valley of Strathmore, 17 m . N. Dundee, and is intersected by the streamlet Alyth. It consists of four principal streets, all rather narrow and crooked, but tolerably well kept. The houses are of red sandstone, roofed with blue slate, and substantially built. Excellent water, bronght in pipes from a distance, is abundant, and the town is well lighted with gas. The parish ehureh, which was erected about 10 years since, at a cost of about $£ 7000$, is a handsome building, with a very elegant spire. The ruins of the old parish church, eonsisting of three arches, which stand conspicuously on an eminence in the centre of the town, and are said to have been built by a bishop of Dunkeld, are still entire, and in good preservation. There are also a Free church, a United Presbyterian church, an Episcopal chapel, the parish school, the Free chureh sehool, two female schools, and a private school. The manufacture of coarse linens, chiefly for exportation, affords employment to the majority of the population. There is also a small factory for carding and spinning wool. Considerable quantities of shoes are likewise made here. Alyth is the market town for an extensive agrieultural district. It was ereeted into a burgh of barony in 1488 , by James III., and is governed by a baron bailie, who holds a court on the first Tuesday of every month. The par. is about 12 m . in length by 3 in breadth. The scenery in the vieinity is exceedingly beautiful. Pop. of vil. in 1841, 1846 ; of par. 2910 - (Correspondent in Alyth.)

ALZANO MAGGIORE, a tn. Venetian Lombardy, eap. dist. of same name, prov. of, and 4 m . N.E. from Bergamo, r. bank of the Serio. It is handsomely built, with wide clean streets, and has a magnificent church, adorned with rare paintings and seulpture. Manufactures:-Linen, woollen, cotton and silken fabries, paper, and lace. Pop. 2154.-The distuct, comprising the S. extremity of the Val Seriana and its aljacent hills, is extremely pieturesque and productive. Grain, wine, oil, fruits, and vegetables, are raised in vast quantities, and of superior quality. The mnlberry tree is also mueh enltivated, and the hill sides covered with forests of oak, pine, and chestnnt. Pop. 13,032.-(Dizio. Univ. Italia.)

ALZENAU, a market tn. Bavaria, on the Kahlbach, 10 m . N. Asehaffenburg, and 20 m . E. Frankfort-on-the-Maine. It is the seat of a loeal court, and has a royal castle, some mills, and manufactures of hats. Pop. 1041.

ALZEY [anc. Altiaia], a tn. Hesse-Darmstadt, cap. bail. of same name, on the Salze, in the centre of a valley eneircled by hills, 18 m. S.S.W. Mainz. It is walled; has three churches, two Protestant, and one R. Catholie; a handsome market place, briek works, and manufaetures of leather, linen, and stockings. Its common and cattle fairs are of considerable importance. In the neighbourhood are the ruins of the castle of the aneient Burgraves, destroyed by the French in 1689. Pop. 4300. $\qquad$ The ballawick produces corn and rye, chiefly the latter, and some excellent wine. Pop. 20,000 .

AMACUSA, or Amakousa, an isl. in the Japanese empire, off the W. coast of the Island of Kiousiou, or Kiusui. The centre of Amaeusa is about lat. $32^{\circ} 20^{\prime} \mathrm{N}$.; lon. $130^{\circ} 15^{\prime}$ E. Its extreme N.W. point is 18 m . S.E. Cape Nomo.

Vol. I.

AMADIYAII, atn. Asiatic Turkey, in Koordistan, onee cap. of an independent prineipality of the same name, 75 m . N.W. Mosul. It stands on a rocky terrace of limestonc, and is of considerable size; but is now nearly in ruins, not more than a third of the houses being halitable, while a fourth part only of the bazaar can be made use of, the remainder being in a state of decay. It is entered by two gates, and is defended at various points by guard houses, towers, and irre-gularly-constructed bastions, and by a castle, in which a garrison is maintained. The town contains a solitary minaret, and the residence of a pasha, the lower part of which is built of stone, the upper of mud. The Jews, who are the most numerous body in the town, oceupy 70 dwellings, and have three synagogues.-(Ainsworth's Visit to the Chaldeans.)

AMAGER, sometimes erroneously called Amak, an isl Denmark, separated from the isl. of Secland and city of Copen lagen merely by the harbour of the latter, part of which, in deed, and the suburb of Christianshavn, are built on it; area, about $20 \mathrm{sq} . \mathrm{m}$. It is flat, well cultivated, and may be regarded as the kitehen garden of the capital, with which it is connected by means of bridges across the harbour. Its inlabitants, exelusive of Christianshavn, about 6500, are descended chicfly from 24 Dutch families, who settled down here from N. IIolland in 1516. Lime burning, and the manufacturing of nitrie acid, saimiac, soap, and patent manure, are carried on.
 Wenersborg, in Dalsland, advantageously, bnt not beantifally, situated on the N. W. shore of Lake Wener ; lat. $59^{\circ} 3^{\prime} 39^{\prime \prime}$ N.; lon. $12^{\circ} 41^{\prime} 56^{\prime \prime} \mathrm{E}$. (L.) It is intersected by a small stream, is built with tolerable regularity, and has a rather handsome chureh. The harbour is convenient; and the inhabitants, 1457 in number, are chicfly occupied in boat traffic on the lake, in retail trade, and agriculture.

AMALFI, a city and seaport, Naples, prov. Principato Citra, on the Gulf, and 9 m . W.S. W. from Salerno ; lat. $40^{\circ} 38^{\prime} \mathrm{N}$. ; lon. $14^{\circ} 37^{\prime} 10^{\prime \prime} \mathrm{E}$. (c.) The city, whose position is extremely picturesque, extends over the summits of a series of lofty rocks, still erowned with embattled walls and ruined towers-memorials of its former greatness. The public buildings are noway remarkable. Amongst them is a large eathedral,

of Byzantine arehitecture, dedicated to St. Andrew, whose body was deposited here in 1208. The eity has an arsenal, some paper mills, several manufactories of serge, and an iron work. Its trade, which, at one time, comprehended that of all the Levant, has now almost entirely disappeared ; and with it, the greater proportion of the population, which has fallen from 50,000 to less than 4000 . Amalfi rose early into importance, having attained the height of its prosperity during the 11th century, at which time it was the great mart for all kinds of Eastern merchandise. It assumed the form of an independent republic, and continued to retain its rank as a commercial and maritime city for several centuries, when it fell into a decay
from which it never afterwards recovered. Amalfi took an active part in the crusades ; and, for its zeal on that occasion, was honoured with the title of Defender of the Faith, by Leo IV. At this period the Amalfitans founded, in Palestine, the hospital of St. Jolin of Jerusalem; from which arose the famous military order of Malta. Amalfi was twice captured and plundered; first, by Robert Guiscard, the Norman conqueror, in 1075; and again, in 1130, by the Pisans, on which occasion the latter found a copy of the Pandects of Justinian. It is the birthplace of Flavia Gioja, to whom the invention of the mariner's compass has been assigned, though his merit is limited to that of having greatly improved it ; and of Masaniello, the fisherman of Naples. Pop. 3439.

AMALLAl'OORAM, a th. llindoostan, in the Cirears, on one of the mouths of the Godavery, 65 m. E.N.E. Masulipatam. Its inhabitants, who execed 5000 , are engaged in weaving cotton fabrics.

AMAMBAIII, or Amambay, a momain range and river, S. America. The mountain range stretches from the serra Galhano, Brazil, in the S. of prov. Matto-Grosso, in a S. direetion into l'araguay, till it meets with the Cordillera de Maracayu, running E. and W. It is about 200 m . long; forms the waterslied between the Parana and the Paraguay rivers, and from its E. slope flows the river of the same name, E . to the Parana, which it joins about lat. $23^{\circ} 15^{\prime} \mathrm{S} . ;$ lon. $54^{\circ} 20^{\prime} \mathrm{W} .$, after a total course of about 100 m . direct distance.

AMANA.-1, A river, Venczucla, prov. Cumana, rises a little W. Urica ; lat. $9^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $64^{\circ} 18^{\prime} \mathrm{W}$. ; from which it flows, first in a S.E. direction, then N.E., and falls into the Gulf of Paria, lat. $10^{\circ}$ N. ; its entire course being about 140 m . -2 , A lake, Brazil, formed by a bifurcation of the Tijuaca, itself a stream flowing out of the Japura, an affluent of the Amazon from the N. It lies in lat. $2^{\circ} 35^{\prime} \mathrm{S}$.; lon. $64^{\circ} 38^{\prime} \mathrm{W}$., and is about $20 . \mathrm{m}$. long by 10 m . broad. Abuut 8 m . N . from the lake is a vil. of the same name.

AMANAPOOR, a military station in the isl. Ceylon, standing partly on the top, and partly at the foot, of a steep mountain, 2000 ft . high; in lat. $7^{\circ} 15^{\prime} \mathrm{N} . ;$ lon. $80^{\circ} 45^{\prime} \mathrm{E}$.

AMANCE, several places, France:-1, [anc. Amantia,] A th. and com., dep. Haute-Saône, 16 m. N.N.W. Vesoul ; has potteries, tile works, and pits of white sand, used in glass making. Pop. 1032.-2, A vil. and com., dep, Aube, 12 m . from Bar-sur-Aube; manufactures good pottery. Pop. 550. -3, [anc. Ementia, A vil. and com., dep. Meurthe, 37 m . N.W. Nancy; formerly a fortified place. Pop. 5.19.-4, A small river, dep. Aube, rising a short way above the village of Amance, and falling into the Aube below Basse-Fontaine.

AMAND (St.), several villages and communes, France:1, A vil. and com., dep. Manehe, 9 m . from St. Lo. Pop. 1402. -2 , A vil. and com., dep. Marne, 6 m . from Vitry le Français. Pop. 1260.-3, St. Amand-de-Coly, a vil. and com., dep. Dordogne, 15 m. from Salut. Pop. $1071 .-4$, St. Amand-en-Puisaie, a tn. and com., dep. Nièvre, cap. can.; manufactures of pottery. Pop. $1845 .-5$, St. Amand-Magnaziex, a vil. and com., dep. Haute-Vienne, 17 m . from Bellac. Pop. 1302.-6, St. Amand-sur-Sivre, a tn. and com., dep. Deux Sevres, 15 m . from Bressuire. Pop. 1491.——Besides these there are several others, all small.

AMAND (St.), or St. Amand-Montrond, a tn. France, dep. Cher, on the Marmande, a tributary of the Cher, near the junction of these streams; cap. can. and arrond. of same name; 24 m . S.S.E. Bourges. It is neatly built ; the seat of a tribunal of primary jurisdietion, and of a communal college. There are here manufactures of wooden clogs, and of chamois and other kinds of leather; and in the neighbourhood are iron forges, cannon foundries, and porcelain works. A lively trade in grain, winc, chestnuts, timber, iron, staves, hemp, leather, goat skins, and the cattle of the district, is also carried on. A branch of the Canal du Cher conncets St. Amand with Montluçon, and the coal mines of Commentry. At no great distance are the ruins of the Castle of Montrond, originally fortified by the Duke of Sully, the celcbrated minister of Henry IV., and formerly regarded as one of the strongest places in the kingdom. Pop. 6943.-The arrond. contains 11 cans. and 115 coms. Pop. in 1846, 103,723.

AMAND-LES-EAUX (St.), an anc. tn. France, dep. Iu Nord, l. bank of the Scarpe, cap. can., 7 m . N. W. Valencieunes. It has a communal college, and is the centre of the flax-growing district ; and possesses manufactories of poree-
lain, lace, thread, leather, soap, linseed oil, woollen stockings, cotton coverlets, and chicory, with several distilleries and tanneries, and some boatbuilding yards. A considerable trade is carried on in oil, wine, brandy, soap, thread, cotton and woollen goods, lace, \&c. About 3 m . from the town are mineral waters and mud baths, which have been celebrated for two centuries, and still continue to be well frequented. The water is clear, and not very unpalatable, but has a strong smell of sulphuretted hydrogen. It is said to be very efficaeious in paralytic and nervous affections. The walks in the vicinity are finely wooded. A Benedietine abbey, founded here, in 634, by St. Amand, was destroyed at the Revolution; and all that now remains of it is the stecple, which was built in 1636 , and lias a height of 300 ft Pop. 6312.

AMAND-ROCDE-SAV1NE (ST.), a tn. and com. France, dep. Puy-de-Dôme, cap. can., 9 in. S. Clermont. In the vicinity are clialyboate springs and lead mines. Pop. 2276.

AMINS (St.), several towns, villages, and communes, France:-1, A vil. and com., dep. Aveyron, cap. ean., 14 m. from Epalion. Pop. 1331.-2, St. Amans-lu-Bustide, a t11. and com., dep. Tarn, cap. can., on the Thoré, which separates it from the town of St. Amans Valtoret. Manufactures:Cloth, bonnets, wool, and clina ware, and brick. It has a Protestant chureh, and is the birthplace of Marshal Soult. Pop. 2686.-3, St. Amans Valtoret, a vil, and eom., dep. 'Tarn, on the Thoré, 17 m . from Castres. Yop. 1850.-Besides these there are several others, all small.

AMANTEA, a seaport th. Naples, on the Mediterranean, prov. Calabria Citra, dist. Paola, 14 ml S. W. Cosenza; lat. $39^{\circ} 15^{\prime} \mathrm{N} . ;$ lon. $16^{\circ} 20^{\prime} \mathrm{E}$. It is surrounded with walls, has an old eastle, four parish churehes, several convents, and a high school founded by Ferdinand IV. There are some hot springs in the vicinity. The town is believed to be built on the site of the ancient Nipesia. Pop. 2814.

AMARANTE, an anc. th. Portugal, prov. Entre Douro e Minho, on the Tamega; crossed here by a handsome stone bridge, 34 m . N.E. Oporto; pleasantly situated in a fine district, and forming the resilcnee of several noble families. It is well built, and has two ehurches, a Latin school, an hospital, and poor's house ; but is a dull, decaycd place. Pop. 1500.

AMARAPURA, or Amraroora, a city, Burmah, formerly cap. of the empire, on the l. bank of the Irrawady, 10 m . N.E. Ava; lat. $22^{\circ} 0^{\prime}$ N. ; lon. $96^{\circ} 18^{\prime}$ E.; founded, in 1783 , by the Burmese monareh, Mindarajee Praw, and made the eapital instead of Ava-the ancient, and recently again the capital. The city lies about three-fourths of a mile from the Irrawady, and consists of a large fortress, with extensive suburbs, stretching for about 4 m . along the river. The houses are generally of wood, with tiled roofs; but some have mats and bamboos, eovered with shingles, or thateh; and a few, chiefly belonging to the royal family, are of brick and mortar. Those of the ehief persons are surrounded by a wooden enclosnre; and along the ridges of every house are ranyed earthen pots, fillerl with water, to be used in case of fire. The fortress is a square, the sides of which are about 2400 yards, having large bastions at the angles; and along each side 11 smaller ones, and three gates. The whole is of brick, surrounded by a diteh 50 ft . wide, and 15 deep, crossed by causeways leading to the gates. lt is deemed impregnable by the natives, but would soon yield to the force of artillery. In the N.W. angle is placel the royal library, the books being kept in about 100 wooden chests, curiously ormamented. Throughout the city there is a great number of temples and pagodas, which, from the expensive gilding of their roofs, have a very splendid appearance. In 1800 , its population amounted to 175,000 ; but the seat of government having been removed back to $A$ va in 1819, it has greatly fallen off, and does not now execed 30,000.-(Crawfurd's Embassij to Ava; Hamilton's East India Gaz. ; Asiatic Journul.)

AMARGURA, an isl. and voleano, S. Pacific Ocean, one of the Friendly Islands; lat. $17^{\circ} 58^{\prime} \mathrm{S}$. ; lon. $174^{\circ} 16^{\prime} \mathrm{W}$. (2.) The volcano, which is 1600 ft . in height, has only recently become active.

AMARIBO, or MANA, a river in French Guayana, rises about lat. $3^{\circ} 35^{\prime} \mathrm{N}$. ; and, after a course, nearly due N., of 146 mm . falls into the Atlantic $20 \mathrm{~m} . \mathrm{R}$. the ambouchure of the river Marony, or Marawina.

A MASREII, Amaseraif, or Amastra [anc. Amastris], a th. Asiatic Turkey, on a rocky peninsule on the Black Sea, 188 m . E.N.E. Constantinople; lat. $41^{\circ} 48^{\prime} \mathrm{N}$. ; lon. $32^{\circ} 20^{\prime}$ E. Here are Grecian, Roman, Byzantine, and Genoese remains. The town overlooks the sea to the N., but its greatest exterior fronts S. Pop. nearly 1000.

AMASIA [anc. Amasiyah], a tri. Asiatic Turkey, cap. sanjak of same name, r. bank of the Irmak [anc. Iris], 60 m . from its embouchure at Cape Telerchenibeh, on the Black Sea, 31 im . N.N.W. Tokat; lat. $40^{\circ} 38^{\prime}$ N.; lon. $36^{\circ} 15^{\prime} \mathrm{E}$. It is pirturesquely sitnated in a deep valley, overhong by lofty precipitous rocks, through which flows the Irmak; crossed within the limits of the city by four bridges, one of which is very old, and apparently of Roman construction. The streets, like all those of eastern towns, are narrow and tortuous; the principal are lined with Saracenic buildings, cither in ruins, or used as mosques. Many of the houses are built of stone, but nearly all of them have a mean appearance. The bazaars are small and ill supplied. 'One of the most disagreeable and yet striking sights frequent in this town, is presented by the number, and horrid tameness of the large white vultures, which perform, with alacrity and zeal, the disgusting office of strect sweepers and scavengers.'-(Hamilton.) The castle and Acropolis are situated on the snmmit of a lofty rock on the opposite side of the river, the banks of which are fringed with gardens, wherever its waters could be raised for the purposes of irrigation. Of the Acropolis

AMASLA.—From W. J. Hamilton's Asia Minor.
nothing now remains but a portion of the walls and towers, and an ancient subterranean passage of 300 ft . in depth, at the bottom of which is a well of clear cold water. In remote times, a flight of steps led to this subterranean fountain; but these are now either entirely worn away, or filled up with mud. On the highest point of the rock on which the Acropolis stands, are some remains of two Hellenic towers, of heantifnl construction. The other objects of greatest interest in this ancient city, are the tombs of the kings, described by strabo, who was born here. They are five in number, and consist of excavations in the steep face of the rock on which the castle is built, about 100 ft . above its basc. Three of thesc caverns face W. and E.; the former are very accessible, being approachable by an open gallery scooped out of the perpendicular face of the cliff, and protected by a low parapet of rock which has been left. The import trade of Amasia is insignificant, but a considerable traffic is carried on in wine, grain, madder, cotton, and particularly silk, the quantity of which, produced in $18+1$, was 132,000 lbs. European agents exported about $14,000 \mathrm{lbs}$. the same year. The raw silk of Amasia was long badly prepared, and thought unfit for the English market; the quality has lately much improved. Nothing is known of the early history or foundation of Amasia, beyond the information imparted by its ancient coins, that after the conquest of Asia Minor by the Romans, and during the whole continuance of the empire, it bore the title of Metropolis of Pontus. On the earlier coins, the name is spelled Amasseia; and on those struck under the early Roman emperors, Amasia. As already mentioned, Strabo, the ancient

Greck geographer, was born in this city, of which he gives a very lively and graphic account, much of it applicable to its present condition. The number of houses in the town are about 4000 , of which 350 are inhabited by Armenians.(IIamilton's Asia Minor.)

AMATAKA. Sce York Island.
AMATITLAN, or Amititan, a tn. and lake, Central America, state Guatimala. The town, about 15 m . S. the city of Guatimala, lat. $14^{\circ} 30^{\prime} \mathrm{N} . ;$ lon. $90^{\circ} 17^{\prime} \mathrm{W}$., is irregularly built; and none of the houses have more than the ground story; and are principally constructed of mud, beaten hard with a wooden mallet, atter being put into a wooden box of the dimensions of the walls, which box is moved from place to place till the desired height, length, and breadth are attained. Each house has a large yard, and a plantation of cactus attached to it, the leaves of which are cut and ranged in long narrow sherls to preserve the cochineal insect in the winter scason. The wells in the town are all brackish; and most of those in the vicinity, particularly in low situations, boiling hot, but perfectly clear and free from impurities. Amatitlan is a place of some antiquity, having been one of the principal seats of the Jesuits, who had large sugar estates in the vicinity. The inhabitants, nearly all mulattoes and sambos, are active, industrious, and enterprising. Pop. from 10,000 to 12,000 . -The LAKE is close by the town, to the S.E. It is about 11 or 12 m . in lengtl, between 2 and 3 m . in breadth, and is of great depth. Immense quantities of pumice stone may generally be found floating on its waters, and lying on its shores. In many places around, springs of boiling water gush out, some of them emitiing large volumes of steam. Two streams enter the lake, and one larger than both united, runs out of it. It contains a great abundance and variety of fish, including a species of small size, of exquisite flavour.-(Dunlop's Central America; IIassel's Guatimala.)

AMATRICE, a tn. Naples, prov. Abruzzo Ultra II., $21 \mathrm{~m} . \mathrm{N} . \mathrm{N} . W$. Aquila, on a hill close by the sonrce of the Tronto. It las five parish churches, two monts de-piété, a ligh school, and manufactures of blankets. Pop. 5000.

AMAXICIII, or Asakiukir, a tr., cap. Santa Maura, one of the Ionian Isles, on its N. coast; lat. $38^{\circ} 50^{\prime} \mathrm{N} . ;$ lon. $20^{\circ} 40^{\prime} \mathrm{E}$. It stands on a sandy, fertile plain, in the neighbourhood of unwholesome salt marshes, and is subject to frequent earthquakes. It has one wide street; houses generally of wood; and a square, in which is the governor's house, and an ancient marble statue. It is the seat of a Greek bishop, and has numerous clurches, two harbours for small vessels, manufactories of cotton and leather, and a considerable trade. At the distance of about $1 \frac{1}{2} \mathrm{~m}$. from the town, on a low sandy peninsula, is the castle of Santa Maura, which was taken by the British in 1810, and is now generally occupied by a British garrison. A few miles from the town, are still to be seen some remains of the ancient Leucas. Pop. 6000.(Murray's Mandbool; Balbi, Abrégé de Géographie.)

AMAXURA, a river, Florida, U. States, having its somree in the Seminole swamps; lat. $28^{\circ} 15^{\prime} \mathrm{N} . ;$ lon. $81^{\circ} 57^{\prime} \mathrm{W}$. It flows first in a N.W. direction, then S.W. and W., till it falls into the Gulf of Florida, about 4 m . S. from Green Island: lat. $28^{\circ} 30^{\prime} \mathrm{N}$. Its whole course is about 80 m .

AMAY, a rural can. Belgium, prov. Liege, on the road from Liege to Namur, traversed $\mathrm{F}_{\text {. }}$ to W. by the Meuse. The inhabitants are principally brickmakers, and in spring leave their homes in hundreds to ply their trade in distant quarters, returning in winter. The canton has alum works, and some trade in wood and dried fruits. Pop. 2848.

AMAZON, Marañon, Orellana, or Solimoes, the various names given to a large river in S. America, but better and more generally known by the first. It rises in the Andes, on the W. coast of S. America, traverses the entire breadth of that vast continent from W. to E., and falls into the N. Atlantic Ocean, about lon. $50^{\circ} \mathrm{W}$. ; a distance, including the windings of the strean, of 4000 m . It drains an area, according to some authorities, of two millions and a half, and, according to others, of one million and a half of square miles ; is navigable for 2200 m . from the sea, and is 96 m . wide at its mouth. It is thus the largest river on the globe as regards the volume of its waters, which is so powerful as to force its way into the ocean, without mingling with the latter, to a distance of 300 m. ; but, according to Berghaus, it is inferior to the Missouri-Mississippi in the length of its course, when
taken by the windings, although greater when taken in a direet line. The numbers given by lim are-Amazon, direet course, 1781 ml ; winding, 3548 ; Missouri-Mississippi, direct, 1681 m. ; winding, 4096 m . Some geographers assume the sonree of the Anazon to be the Tunguragna or Upper Marañon; and others, the Ueayale and Ipurinac; the former originating in the Lake Lauricacha, Pern; lat. $10^{\circ} 30^{\prime} \mathrm{S} . ;$ lon. $76^{\circ} 25^{\prime}$ W.; the Apurimae, the prineipal head stream of the Ueayale, rising in lat. $15^{\circ} 38^{\prime} \mathrm{s}$; ; lon. $75^{\circ} 0^{\prime} \mathrm{W}$., abont 90 m . W. the Lake of 'Titicaca. From the junction of the Tunguragua and Ueayale, which takes place near St. Joaquim de Omagnas, after their laving been increased by numerous large tributaries about lat. $4^{\circ} 25^{\prime} \mathrm{s} \cdot$; lon. $72^{\circ} 30^{\circ} \mathrm{W}$., to the junction of the Rio Negro, the river is frequently ealled the Solimoes; and trom the junction of the latter strean to the ocean, it bears the name Amazon or Amazonas. The course of the river may be described generally as W. to E. from the junetion of the Ueayale and Tunguragua, though not without oceasional and sometimes wide deviations. Ifuring its course, it is joined by various tributaries from both the $\mathbf{N}$. and S., some of them very large streams. Of this class is the Rio Negro, which flows from the N., and falls into the Amazon in lon. $60^{\circ} \mathrm{W}$., after a course of 1400 or 1500 m .; and the Madeira, not greatly inferior in size to the Amazon itself, from the S., which joins the latter in abont lon. $58^{\circ} 30^{\prime} \mathrm{W}$., after a course of about 1800 m . The head strean of this affuent, the Ris Grante, or Guapai, which unites with the Beni in forming the Madeira, rises $心$. of the Andes of Cochabamba, in the sane platean from which flows the Pileamayo, an affuent of the Paraguay ; and the sourees of the (iuapore, an E. branch of the Madeira, flow within 3 m . of the waters of the Aguapehi, one of the head streams of the Paraguay; by so narrow a watershed are the waters of the Amazon and La Plata at these localities partel. Two other large tributaries are the Coqueta or Japura, which, flowing from the N., falls into the Amazon in lon. $65^{\circ} \mathrm{WV}$; and the Napo, which, proceeding also from the N., joins it at $71^{\circ}$ $30^{\prime} \mathrm{W}$. At this point, which is about $12 \overline{\mathrm{~J}} \mathrm{~m}$. from the junction of the Tunguragua with the Ucayale, its breadth is 900 fathoms, and its depth more than 100 . Between the confluence of the Negro, lon. $60^{\circ} \mathrm{W}$., and the Madcira, lon. $58^{\circ} 30^{\prime} \mathrm{W}$., its breadth is about 3 m ., extending occasionally to twice that breadth, where islands are numerous, as they are, indeed, throughout the whole course of the river. The width of the river gradually inereases towards its embouchure, until its opposite banks can hardly be discerned. Its general depth from the sea to the Lio Negro, or from lon. $50^{\circ}$ to $60^{\circ}$ W., abont 750 m. in a straight line, is nowhere less than 30 fathoms ; higher up, it varies from 10 to 12 ; and is navigable by the largest vessels up to the junction of the Tunguragua and Ucayale. Beyond this point, none drawing more than 5 or 6 ft . water can proceed with safoty. The Ucayale, which flows through the Pampas del Sacramento, is so obstrueted by rapids and cataracts, as to render navigation far above its junction with the Tunguragna quite impossible. The navigation of the Amazon is in many places not without danger, from numerous shoals, from the narrowness of its channels, and, in the lower part of its eourse, from floating trees brought down by the Madeira. In 1848, a steamer ascended the river as far as the Rio Negro. The rapidity of the stream is considerable, especially during the rainy season, when it is
subject to great floods, being, on an average, about 23 m . per hour ; in some places it is 4 m . per hour ; in others less than the lowest velocity named. In the last 700 m . of its course it falls but 12 ft ., or one-fifth of an inch per mile. In the dry season, its rapidity is greatly diminished. The river is pereeptibly affeeted by the tides as far up as the town of Obidos, or about 400 m . from its mouth. The simgular phenomenon, known by the name of the bore, oecurs at the mouth of the Amazon two days before, and two days after the full moon. 'This is the rushing of the waters of the ocean into the river, in the form of huge waves, of from 10 to 15 ft . perpendienlar height, three or four of which follow each other in succession, with irresistible force. This great river' traverses a region thickly covered with dense and lofty forests, inltabited by wild animals and numerous small tribes of savages. It abounds in fish and in turtle, and large alligators are frequently seen lying motionless on its muddy banks. The Amazon being navigable, as already remarked, for 2200 m . from the sea, and having a communication with the Orinoco by the Cassiquiare, the S . arm of its bifureation, which falls into the Rio Negro, presents, in conjunction with its principal tributaries-all of them also navigable for great distances from their junction with the main stream-a system of inland water communication more extensive than is to be found on any other part of the globe.

Tributaries.-The known tribvtaries of the Amazon worth noticing, besites those already named, are the Hyabary, or Juvary, which joins the Amazon at lon. $69^{\circ} 30^{\prime} \mathrm{W}$. ; the Jutay, at lon. $67^{\circ} \mathrm{W}$. ; the Jurua, at lon. $65^{\circ} 30^{\prime} \mathrm{W}$. ; the Tefe, at lon. $65^{\circ} \mathrm{W}$. ; the Cavary, at lon. $64^{\circ} \mathrm{W}$. ; the Mania, at lon. $63^{\circ} \mathrm{W}$. ; the P'urn or Purus, at lon. $60^{\circ} 30^{\prime} \mathrm{W}$. ; the Tapajos, at lon. $55^{\circ} \mathrm{W} . ;$ and the Xingu, the last of the large tributaries, at lon. $52^{\circ} \mathrm{W}$., all proceeding from the S . From the N., the only river of note that joins the Amazon, so far as is known, besides those mentioned elsewhere, nomely, the Napo, the Japura, the Negro, is the Putumaya, which falls into it at lon. $68^{\circ} \mathrm{W}$., after a course of about 1000 m . All these rivers unite with the Amazon below the junction of the Ueayale with the Tunguragua.

The month of the Amazon was discovered in the year 1500, by Viscount Yanez Pinçon; but the first European who descended its strean was Francis d'Orellana, a Spaniard, who, in 1539 , sailed from the Rio Napo to the embouchure of the Amazon. It was this adventurer who first reported the existence of a community of female warriors on the banks of the river, who were without the
 right breast, which tley had removed while young, in order to permit of a frce nseot the bow, and lience the name Amazon, whieh signifies, 'want ing a breast, 'now the popular name of the stream. The name Orel lana, by whieh it is also known was derived from the Spanish adventurer above spoken of. The origin of its third name, Marañon, is uncertain, bnt is believed to be derived from that of an Indian nation, by which some parts of its banks was inhabited.-(Som merville's Physical Gcography; Lyell's Geology; Lieut. Sinyth's Account of the Rivers Amazon and Negro; E. Poppig's Travels in Chili, Peru, and on the Amazon River; IIumboldt's Aspects of Nature; \&e.)

AMAZUMA, a large tn. W. Africa, 1. bank of the Niger; about lat. $5^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 10^{\circ} \mathrm{E}$. It is beautifully situated,
and has a elneerful and cleanly appearance.-(Allen's Niger Expedition.)

AMBABICOI, a vil. Lower Egypt, 58 m . N.W. Cairo ; lat. $30^{\circ} 17^{\prime} \mathrm{N} . ;$ lon. $30^{\circ} 21^{\prime} \mathrm{E} . ;$ in the Natron valley.

AMBALEGA, a tn., isl. Madura, Indian Archipelago. It lies near the centre of the island, is surrounded by fine wood, has a temple, and 4000 inhabitants.

AMBATIKI, an isl., S. Pacific, one of the Feejee group, of a dome shape, and rising to a height of 750 ft .; lat. $17^{\circ} 47^{\prime} \mathrm{S}$. ; lon. $179^{\circ} 11^{\prime}$ W. (1.) 1t has little wood, but produces yams, and other edible vegetable productions, in abundanee. Pigs are alse numerons, but the natives do not willingly part with them. When visited by Commander Wilkes, of the U. States' Exploring Expedition, there were 500 inhabitants on the island; whom that offieer represents as being civil, letting them have taro and yams in plenty.

AMBATO, or Hambato (Asiento d'), a tn. Eeuador, 100 m . S.E. Quito. It was destroyed in 1698 by an eruption of the volcane of Cotopaxi. It was rebuilt shortly afterwards, and soon became more flotrishing than before. It has some good buildings, and an aetive trade in grain, sugar, and cochineal; the latter being produced in the vicinity in abundance, and of exeellent quality.

AMBAU, or Ambow, a small isl., S. Pacific, one of the Feejee group, connected with a larger island by a coral reef, fordable at ligh water; lat. $16^{\circ} 30^{\prime} \mathrm{S} . ;$ lon. $178^{\circ} \mathrm{E}$. It is only 1 m . in length, and about half a mile in breadth; but is of importance from having a large town of the same name, from its being the seat of a kind of sovereign authority, and from its ehiefs having obtained a political ascendancy over the neighbouring islands. The town entirely covers the island. The inhabitants, like those of the Feejee Islands gencrally, are savage and treaeherous; and have, on more than one oecasion, murdered the captains and crews of vessels visiting the island, previously throwing them off their guard by professions of friendship.

AMBELAKIA, or Ampelakia, a tn. European Turkey, prov. Thessaly, or Trikhala, on the S. slope of Monnt Ossa, above the pass of Tenıpe, 15 m . N.E. Larissa. Ambelakia was at one time famous for its cotton yarn spinning, and dyeing; but the former has been nearly amihilated by the cheaper productions of England. The trade was, at the time above alluded to, carried on upon joint-stoek principles, the work people sharing in the profits; but misunderstandings anongst themselves, failures abroal, and the successful rivalship of Britain, put an end to the prosperity of the town. The town is still, from its romantic site, and the fine scenery around, a place of interest to the traveller. The lieights in the vicinity are eovered with vineyards, from the produce of which an exeellent wine, resembling elaret, is producel. The pop. in 1798 was 4000 ; it rose to 8000 ; and has now sunk below 3000. Many of the inhabitants are said to be Germans, though all wear the Eastern dress.

AMBER, or Ambieer, a th. IIndonstan, the ane. cap. of the Jeypoor territories in Ajmeer; lat. $26^{\circ} 57^{\prime}$ N.; lon. $75^{\circ} 40^{\prime}$ E.; about 5 m . N. by E. Jeypoor, now the capital. The town lies on the bank of a sinall lake surronnded by steep mountains. It is now in ruins, and nearly depopulated; but its former grandeur is attested by its lofty pagodas, large reservoir, and numerous arelies and pavilions, through whieh a narrow winding street leads to a second steep aseent, paved with granite, and condueting through several Gethic gateways to the ancient palace of the rajah, still in good preservation. The stone and marble sculpture, and other ornaments of the interior of this edifice, are surpassed only by those of the celebrated Taje Mahal, at Agra. Higher up the hill stands a grim-looking castle, formerly used as the publie treasury, but now as a state prison. The reyal gardens occupy a small island in the lake, and part of its E. bank.-(IIamilton's East India Gaz. ; Heber's Journal.)

AMBER, Ambre, or Ambro (Cape), Madagascar, of which it forms the N. extremity; lat. $11^{\circ} 57^{\prime} 30^{\prime \prime} \mathrm{S} . ;$ lon. $49^{\circ} 19^{\prime} \mathrm{E}$. (r.) It is a low point of land, terminating in a ledge of rocky islets, laving 15 fathems close to them, and 20 or 25 fathoms about half a mile distant. The currents set generally strong to the W. all the year from this point.

AMBERG, a tn. Bavaria, formerly eap. of Upper Palatinate, on both sides of the Vils, whieh divides it into the upper and lower town; 35 m . E. Nuremberg. It is enelosed
within a denble wall, now used as a public walk; is well built, and has broad and clean streets; and contains a lycemm, gymnasium, theolorical seminary, normal sehool, public library, several well-endowed hespitals, 10 cluurches, convent for noble ladies, theatre, and house of correction. Among the prineipal buildings are the palace royal, aı senal, salt magazine, chureh of St. Martin, and the guildhall. It has a royal mannfactory of arms, which produces yearly from 10,000 to 20,000 muskets of the best quality; and also manufactures of cotton stuffs, hats, playing cards, tobaceo, and stoneware; with a considerable trade in salt. The prineipal glassworks of Bavaria are here ; but the town is ehietly indebted for its prosperity to its iron mines, which annually produce about 8000 tons of ore. In the vicinity there is a seam of coal, and both percelain clay and fuller's earth are found. INere, on August 24, 1796, the Archduke Charles defeated the rearguard of the French army under General Jourdan. Pop. 11,000.

AMBLRGRIS ISLAND, an isl. off the coast of Honduras, and in the bay of that name, 30 m . N.N.E. Belize. The E., or Reef point, is in lat. $18^{\circ} 6^{\prime} \mathrm{N} . ;$ and lon. $87^{\circ} 50^{\prime} \mathrm{W}$. (x.) ; the N. end admitting a passage for boats between that and the main. It is about 20 m . in length, and 3 broad, running N.N.E. and S.S.W.

AMBERLEY, a par. England, co. Sussex; 3030 ac. Pop. in 1841, 722.

AMBER'T, a tn. France, dep. Puy-de-Dôme (Auvergne), on the Dore, cap. arrond., $36 \mathrm{~m} . \mathrm{S} . \dot{\mathrm{E}}$. Clerment. It is, in general, well built, but the streets are narrow and erooked, and have rather a dull and gloomy appearance. Ambert is rather a stirring place. It is the seat of a conrt of primary jurisdiction, and one of commeree, and has a communal college, a chamber of inanufactures, and an agricultural society. Manufactures:-Woollen stuffs, flag bombazine for ships, blankets, serges, ribbons, lace, linens, pins, and playing cards. Above 60 factories are employed in making fine printing paper. Ambert is the principal mart for Auvergne cheeses, which are much esteemed in France. In the neighbourhood are the cold mineral waters of Talaru. The arrond.-area about $170 \mathrm{sq} . \mathrm{m}$.-contains eight eans. Pop. arrond. 92,940; tn. 3658.

AMBLANGODDE, a large vil. Ceylon, about $23 \mathrm{~m} . \mathrm{S}$. Caltura, and 19 N . Calle. The houses are mostly covered with tiles. The inhabitants are employed in fishing, and in the coasting trade between Ceylon and the eoast of Coromandel. There is a school here belonging to the W'esleyan mis-sionaries.-(Ceylon Gaz.)

AMBLAU, a small isl. Indian Arehipelago, one of the Moluceas, $12 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. Booro, and 45 m . S. W. Amboina; lat. (N.E. point) $3^{\circ} 49^{\prime} \mathrm{S}$. ; lon. $127^{\circ} 10^{\prime} \mathrm{E}$. (r.) It is egg-sbaped, hilly, intersected by various streamlets, and is the most unfruitful island in the Dutel government of Amboina. On its shores and coasts, shell fish and various kinds of sea fish are found, but the poor inhabitants derive the prineipal part of their food from the neighbouring island of Booro. It was at one time populous, but now contains only about 2000 inhab-itants.-(Van der Aa.)

AMBLESIDE, a market tn. and chapelry, England, eo. Westmorland. The town is 11 m. N.W. Kendal, picturesquely situated on the steep deelivity of a hill, near the head or N. extremity of Lake Windermere. It is very old, and is irregularly built; but in the immediate vicinity there are many handsome houses and villas, with beautiful gardens attached; and in the town are a chureh, rebuilt in 1812, and a free school, founded in 1721 . Woollen eloth is manufactured here to a considerable extent; and petty sessions are held in it. It is also one of the polling plaees for the county. Market day, Wednesday; two fairs annually for horned eattle and slieep. A number of Roman remains lave been found here at various times. Pop. in 1841, 1281.

AMBLESTON, a par., S. Wales, co. Pembroke; 8 m . N. by E. llaverfordwest. Pop. in 18+1, 605.

AMBLETEUSE, a small seaport tn. France, formerly of some importanee, but now mneh decayed, dep. Pas de Calais, 5 m . N. Boulogne-sur-mer. In 1804, Napoleon, during his threatened invasion of England, made much use of Ambleteuse for his flat-bottomed boats; and he gave orders for the improvement of the harbour, but the aecumulations of the sand rendered the attempt fruitless. James II., on his flight from England in 1689, landed here. Pop. 573.

AMBLEVE, a river which rises in the Prussian prov. of the Lower Rhine, 5 m . S.S.E. Butgenbach, flows W., and enters Belgium by prov. Liege, and falls into the Ourthe at Donflanme, 10 m . S. Lieqe. It has a course of about 50 m ., of whieh the last 7 are navigable.

AMBOINA, or Amborna [Malay, Ambun-dew], an isl. Indian Archipelago, the most important, though not the largest, of the Moluecas, cap. of same name, lying S. of Ceram, and E. of Booroo; lat. (Allavy point) $3^{\circ} 46^{\prime} \mathrm{S}$. ; lon. $127^{\circ} 59^{\prime}$ E. (n.) It is the seat of the Duteh governor of the residence or government of Amboina, which includes, besides the island of Anbbeina, Booroo, Amblau, Ceram, Manipa, Kilung, 13onoa, llarookoo, Ilonimoa or Saparooa, Noosa-laut or Ilila, in all of which are under governors, and military posts. The island of Amboina is composed of two seetions, the N.W. and larger Hitoo, and the S.E. Leitimor, united by the narrow isthmus of Bagoovala, not more than half an hour's walk across. Between these two peniusulas is a deep bay, forming the roadstead of the capital, Amboina. The island is about 30 m . long, by 10 m . in breadtl, at its broadest part, though generally it is not above 5 or 6 m .; area, $282 \mathrm{sq} . \mathrm{m}$. It is

subject to earthquakes, and of primitive formation, granite in some localities rising even to the summits of the mountains, while in others it underlies serpentine and recent calcareous deposits; in the valleys the soil is a reddish elay, mixed with sand. The island is rocky and hilly; some of its heights are rounded, and covered with a rich verlure; some, of medium altitude, have the tops bare of vegetation, and others are only covered with briers; but the dark valleys, and the shore traets, have a rich and vigorous vegetation. The size of the island does not admit of large rivers, but there are numerous brooks and torrents, and good water for cnlinary purposes is plentiful. Stiil, the island is not very fully cultivated; in fact, when compared with Java, the cultivated traets nay be said to be as rare as in that fertile island are those that are uneultivated. This state of things probably arises from several causes. Though the valleys of Amboina are rich, and capable of growing almost all tropical plants, yet a great part of the island is arid and rocky, unsuited for general agriculture, thongh admirably adapted for raising the elove tree; to the cultivation of which the small energies of the native population have been in a great measure exclusively dirceted by the Dutch Government, at one time even by compulsion. Cloves, consequently, are the staple produet of the island, the annual quantity produced being about 500,000 to 600,000 lbs. The tree (Caryophyllus aromaticus) from which this valuable spice is obtained, is about 30 to 40 ft . high; branehes not much spread; leaves small, oblong; bark dirty white; and does not yield the clove till 15 years old. The average annnal produce of a tree is varionsly stated at 2 to 6 lbs., gathered in October and November. Another reason for A mboina not being more extensively cultivated is the ease with which the people obtain sago, their favourite food, from the palm, which grows plentifully in the woods. The pepper plant grows on the island; and coffee, cotton, indigo, and cinnainon, are cultivated with success; rice has been neglected, and is imported from Celebes. Among the trecs of Amboina are ebony, ironwood, casuarina, samar, nani, cocoa nut, sago; yet building timber is
scarce, and has to be imported from Java. The fauna of the island is poor. It has no earnivorous animals; the rodents are only the Mus decumanus and one allied species; edentata there are none; pachyderms, only the wild hog and the horse; the deer represents the ruminants; the dugong, the antarctic and sperm whale, the cetaceæ; and there are no monotremata. Birds are more abundant than mammiferous animals, thought by no means numerous in species. The most remarkable is the megapodins, a small gallinaceous fowl found also plentifully in Australia. Inseets are numerous, the elass lepidoptera being more especially rich in species, of the most brilliant hues. The seas around the island teem with mollusea, in thes shells of some species of which a considerable trade is carried on. The animal world of Amboina has been supposed to be much more varied than it really is, from specimens in European collections loaving that island ascribed to them as their habitat, while in reality obtained from other localitiesthey have merely been bronght to Amboina, and shipped there. The climate of this island is healthier, and more agreeable, than the generality of intertropical localities. The natives, of Malay race, are of medium stature; mild, though very proud; easily led, though querulous; and generally very sober; capital crimes are rare. They make good soldiers, and are fond of military life. In costume, they resemble the Malays of Java. Many of the natives have been converted to Christianity, under the eare of the Duteh, and are distinguished from the Malımetan population by a peculiarity in their dress. Considerable attention is paid to edueation, of whieh Amboina is the head quarters for all the surreunding islands. Native indolence and apatly, however, present strong barriers to rapid progress either in religion or education. The Mahometan religion was established in Amboina in 1515 , the year in which the island was diseovered by the Portuguese, who took possession of it in 1564, and introduced the R. catholic faith. In 1605 the Dutch coveted the island, and expelled the Portuguese, and introduced Protestantism. In 1796 it was captured by the 3ritish, and was restored to the Dutch in 1801, at the peace of Amiens; but was again taken in 1810, and finally restored to IHolland in 1814, at the treaty of Paris. Besides Amboina, the capital, there are several villages, and two or three forts on the island. Pop. in 1841, 29,592.- (Temminck, Coup d'ceil sur l'Inde Neerlandaise; Van der Aas Nederlanden; Moniteur des Intes; Crawford's Indian Archipelago.)

AMIBOINA, or Ambovna, cap, isl, above named, and of the Duteh residence or government of Amboina, Moluccas ; lat. (Fort Victoria) $3^{\circ} 41^{\prime} 7^{\prime \prime}$ S. ; lon. $128^{\circ} 10^{\prime}$ E. (R.); on that part of the island ealled Leitimor, S.E. side of the Bay of Amboina. It is of a triangular form, and is clean, neat, and regularly bnilt, with straight and wide streets, intersected by numerous streams, planted on either side with slirubbery. The houses, built in the Duteh fashion, are generally of one story, on account of the frequeney of carthquakes. It has a governor's palaee, townhouse, two Protestant churches, one for European, the other for native Christians; an orphan hospital, theatre, and a large covered market place. A public garden is attached to the town; and a range of houses, adorned by a double row of nutmeg trees, and oceupied by the prineipal inhabitants, terminates in a long esplanade, leading to the citadel of Fort Vietoria, an irregular hexagon built by the Portuguese, which, besides the usual appurtenances of such strongholds, has stores for the annual produce of the clove plantations. The population of Amboina is composed of Malays, Europeans, and Chinese. The latter reside prineipally on the W. quarter, where there is a large and wellstocked market, supplied with most of the luxuries and necessaries of the climate.-The bay of Amboina is about 20 m . long, by 2 to 7 broad; the roads secure and commorlious, and the anchorage good; vessels may moor close to the wooden jetty on which goods are discharged, in from 20 to 45 fathoms. The outer bay has neither shallows nor reefs dangerous to vessels, and everywhere it has a depth of about 50 fathoms. Pop. of th. (which seems to be decreasing) in 1841, 8966.(Moniteur des Indes; Van der Aa; \&e.)

AMBOISF [ane. Ambacia], a tn. France, dep. Indre-etLoire, 12 m . E. Tours, on the railway between that th. and Orleans, 1. bank of the Loire, whose bed is here divided by a long narrow island, conneeted with the opposite banks by two bridges, one of them a handsome wooden structure, with stone

## AMBOISE

119
AMBROSE (St)
piers. The town, though picturesquely situated at the foot of a considerable acclivity, crowned with an antique castle (the site, it is said, of a fort built by Julius Cesar), is not well built, and has rather a dull appearance. The castle, already mentioned, which is the most remarkable building near Amboise, was the residence of several successive kings; it stands in a terraced garden, about 90 ft . above the level of the town, and is flanked by two enormous towers. It was in
beautiful, Mondoleh, is about half a mile in length; it rises abruptly from the sea to a height of about 200 ft ., and is steep on all sides. It is covered with a rich soil of decomposed basalt, and with very little labour yields yams, plantains, cocoa nuts, \&c.; magnificent trees of bombay, African oak, camwood, ironwood, \&c., also abound in it. There are likewise several springs of water. Notwithstanding these advantages, the island is but thinly peopled. Abobbi, or Pirate Island, is a mere accumulation of huge fragments of rock piled upon each other in the wildest confusion; but numerous clusters of native huts, nestling in the ereviees, or perched on open spaces, overhung by cliffs crowned with beautiful foliage, give it a singularly picturesque appearance. Capt. Allen's account of his landing on this wild rocky islet is amusing. Having previously propitiated the chief with a bottle of rum, the captain, accompanied by two officers, landed on a small pebbly bay. 'Ilere,' he continues, 'we looked in vain for a path leading to the summit, or inhabited part, which was already covered with black heads, anxiously watching our progress. Two kings met us, and showed a narrow ledge, which seemed to be perfectly inaccessible, except to goats. They were desired to lead the way, and we followed up what appeared to be the edge of a basaltic dyke, where hands were as much in requisition as feet. We scrambled up, however, as fast as their more practised Majesties, to the great
this castle that the unhappy Huguenots, engaged in what is known as the Conspiracy of Amboise, met their doom. So great was the carnage, that the stench of the dead bodies, which hung as headless trunks on the castle walls, or lay scattered along the river, drove away the court. In a cliff a little above the castle, near the old Convent de Minimes, are two caverns, called C'æsar's granaries, hewn out of the rock. They have each four stories, access to which is obtained by means of a stone stair, and are all regularly paved and vaulted with stone, and carefully plastered over with fine cement. The belief is, that Cæsar, having fortified a camp on the cliff above, employed these caverns as storehouses. Within the town, the only building worthy of notice is the parish church of St. Denis, which was built by St. Martin; and in the cemetery of which there is a very singular allegorical group, consisting of seven standing figures, in eastern costume, apparently representing the solemn scene of our Saviour's burial, but said to be exact likenesses of some of the worst charafters, male and female, that figured in the licentious court of Francis I. The manufactures of Amboise are drabs, drugget, and bombazine; also files, rasps, and blistered steel, which last bears a high name. The chief commerce is in wine, brandy, and vinegar. It was in this town, in 1560 , that the Calvinists first were called Huguenots, a word of German origin, and intended as an epithet of contempt and disgrace, but which merely signifies confederates. Pop. 4859.

AMBOISES BAY and ISLANDS, on the S.W. coast, Africa, bight of Biafra. The BAY is about 17 m . N.W. the mouth of the Cameroons river, and directly opposite the N.E. extremity of the island of Fernando Po; lat. $4^{\circ} 0^{\prime} \mathrm{N}$. ; lon. $9^{\circ} 12^{\prime} \mathrm{E}$. The district in which it is situated is extremely mountainous; one isolated peak near the bay rising to a height of about 5000 ft ., while the highest summit of a range a little further N . attains an elevation of $13,760 \mathrm{ft}$.
'The peak of this mountain,' says Capt. Allen, 'which the natives call Monga-ma Lobah, or God's Mountain, from its great height, and from its having been seen, as they assert, to emit fire, was often lighted up most brilliantly by the morning sun, while the deep shadows thrown across its base involved all the lower part in gloom, hiding the deep ravines which furrow its rigged sides.' The hills are clothed to within a third of their summit with beautiful forest trees, and are intersected by valleys covered with the richest soil. The entire region around the bay is evidently of voleanic origin, although it appears to have been in a state of repose for ages. The salubrity of this particular part of the African coast is spoken of by ('apt. Allen in strong terms of commendation. -The IsLands in the bay are all small, but the appearance of some of them is exceedingly picturesque. The largest and most admiration of the crowd on the summit. It was rather a, nervous feat, as one false step would have dashed us to atoms.' The congregated huts were found to be swarming with childree, goats, dogs, pigs, \&c. The people are robust and healthy looking, having, apparently, abundance of the necessaries of life; they chiefly subsist by fishing, exchanging the produce of the sea for vegetables, bananas, yams, \&c., with their neighbours on the mainland. The other principal island is called Dameh. The habitations of the people here are superior to those of Abobbi, or Pirate's Island. They oceupy the centre and highest part of the island, the sloping sides affording browsing to numerous goats. There is no cultivation, and but a poor supply of water. The inlabitants are civil and inoffensive, and live also chiefly by fishing. Previous to 1833, no European intercourse existed with these islands.(Allen's Niger Expedition.)

AMBOLO, or Amboule, a rich and beautiful valley, with a tn. and stream of the same name, isl. Madagascar, prov. Anosy. The valley produces, in great abundance, rice, manioc, sugar cane, coffee, citrons, cloves, and other spices, besides grazing numerous herds of cattle. It contains also hot springs, of a high temperature, and medicinal quality; and mines of iron. The town lies in lat. $24^{\circ} 15^{\prime} \mathrm{S} . ;$ lon. $47^{\circ} 0^{\prime} \mathrm{E}$.

AMBOLON, one of the smaller Philippine Islands, $\mathrm{S} . \mathrm{W}$. Mindoro; lat. $12^{\circ} 9^{\prime} \mathrm{N}$. ; lon. $121^{\circ} 12^{\prime}$ E. (1.)

AMBRIERES, a small th. France, dep. Mayenne, and 21 m. N.N.E. Loval ; well built, and pleasantly situated on the Mayenne. It has some manufactures of calicoes, and possesses excellent market halls, formed out of the buildings of an old castle, which itself is not without interest. Pop. 1221.

AMBRIZ (Cape and Bay), Africa, W. coast. The eape is in lat. $8^{\circ} 2^{\prime} \mathrm{S}$.; lon. $13^{\circ} 10^{\prime} \mathrm{E}$. The bay lies to the N. of the cape; it is difficult of entrance, but affords good anchorage within.

AMBROOK ISLAND, a small isl. Russia, prov. Livonia, in the gulf of that name in the Baltic, about 21 m . N.E. Domesnes Point.

AMBROSDEN, a par. England, co. Oxford ; area, 5210 ac. ; 2 $\frac{1}{2}$. S.E. by S. Bieester. Pop. in 1841, 892.

AMBROSE (St.), an isl., S. Pacific Ocean, about 500 m . W. from Chili, and 12 or 14 m . F. the Island of St. Felix; lat. $26^{\circ} 21^{\prime} \mathrm{S} . ;$ lon. $80^{\circ} 60^{\prime} \mathrm{W}$. (r.) At a distance it appears like two small islands, but on a nearer view the two parts are found to be connected by a reef. About 4 m . to the N . is a large roek called, from its appearance, the Sail Rock. Seals, crabs, and craw fish, abound on the island, on which traces of volcanic cruptions are visible.

AMBROSETOWV, a par. Ireland, co. Wexford; area, 2197 ac. Pop. in 1841, 690.

AMBRYN, or Amberm, an isl. New Ifebrides, S. Pacific, about 35 to 40 m. E. the Island of Mallicollo or Manicolo; lat. $16^{\circ} 14^{\prime} \mathrm{S}$. ; lon. $168^{\circ} 24^{\prime} \mathrm{E}$. (n.) This island is the seat of an active volcano, forming one of the Australian volcanie series. It is fertile, and contains a fair proportion of inhabitants.

A MBUKO1, a vil. Nuhia, l. bank, Nile; lat. $18^{\circ} 4^{\prime} 31^{\prime \prime}$ N. ; lon. $31^{\circ} 34^{\prime} 46^{\prime \prime} \mathrm{E}$. (L.) ; about 8 m . W. from which is a waste named Haagbarlak, the superfieial stratum of which is coarse sandstone, containing many silicious fossil trees; parts of which are splintered off by the peasantry and used as gun flints. The trees appear to be the doum paln ;Cucifera Thebaïca).

AMED, Amd, Emin, or Kara Amin, that is, Black Amid, a name sometimes given to Diarbekr (which see).

AMELAND, an isl. Molland, prov. Friesland, from the N. shore of which it is about 6 m . distant, and 3 m . E. the Island of Schelling; lat. (beacon) $53^{\circ} 27^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 42^{\prime}$ E. (n.) ; length, 13 m .; greatest breadth, 3 m . It is a flat island, subject to inundations, that of 1825 carrying away 140 head of cattle. It is not well cultivated, though rye, barley, wheat, beans, pease, and potatoes, are grown, rye affording the best return. It has good pasture land, on which cattle and horses for export are reared; but the major part of the population subsist chiefly by fishing and sea faring. Ameland has threc Calvinistic and one R. catholic church, and five places of meeting for Baptists, who constitute nearly the half of the whole population. It has also four schools, an hospital, three storehouses for stranded goods, a royal breeding stud, and two cornmills. The inlabitants are a healthy, stout, affable race; and the females are famed for their beauty, by some being reputed the best looking in Holland. Most of the young women, when they attain the age of 16 , proceed to the inainland as domestic servants, and return after a few years; their neat dress, slim figures, and blooming countenances, insure them ready employment. The island has three villages, Hollum, Ballum, and Nes. Pop. about 2100.

AMELIA, or Ameria, a small tn. Papal States, delegation of, and 22 m . S.W. from Spoleto, upon a small hill; the see of a bishop, erected in 344; having a cathedral, three churches, and some convents. It was the ancient Amcria, one of the oldest cities of Umbria, and the birthplace of Roscius, the celebrated Roman actor, so frequently mentioned, and so much admired by Cicero. In the neighbourhood are grown the best grapes in Italy, known by the name of pizotello. Pop. 5500 .

AMELIA, an isl. in the Atlantic Occan, E. coast of U. States, Florida, co. Nassau, at the mouth of St. Mary's River ; lat. $30^{\circ} 42^{\prime} \mathrm{N}$. ; lon. $81^{\circ} 36^{\prime} \mathrm{W}$. (к.) It is 15 m . long, and 4 broad. The capital is Fernandina, formerly also the capital of the county. The soil is fertile.

AMELIE-LES-BAINS, or Artes-heg-BAins, a vil. France, dep. Pyrenées-()rientales, 3 m . W. Ceret, l. bank of the Mondoni, famous for well-frequented thermal springs, of a high temperature, strongly impregnated with sulphuretted lydrogen. Pop. 467.

AMENI, or Ameny, one of the Laccadive Islands; lat. $11^{\circ} 6^{\prime} \mathrm{N} . ;$ lon. $72^{\circ} 41^{\prime} \mathrm{E}$. (18.) ; it is of a circular form, 1 or $1 \frac{1}{2} \mathrm{~m}$. in diameter, and surrounded by roeks to a small distance, close to which, on the W. side, there are soundings.

AMERICA, one of the great divisions of the globe, and, with exception of Asia, the largest. It stretches from Ioint Barrow, lat. $71^{\circ} 24^{\prime} \mathrm{N}$. (ir.), to Cape Forward, the most N . point of the contment, on the Straits of Magallamen, lat. $53^{\circ}$ $53^{\prime} 7^{\prime \prime}$ S. (R.) Horn 1sland, on which Cape Horn is situated, and the other islands forming the Archipelago of Tierra del Fuego, and which are considered as forming part of S. America, streteh between 2 and 3 degrees further S. It consists of two vast peninsulas, called respectively, North and South Amcrica, connected by the isthmus of Panama or Darien, which, at its narrowest part, is only 28 m . in breadth; its general width being about 40 m . The near approach to entire separation between the two peninsulas is effected by the Gulf of Mexico, and the Caribbean Sea, which appear like vast exeavations in the ceutre of the continent. The whole length of the American continent, in a straight line, is about 9000 m . Its greatest breadth, S . of the equator, is between

Cape St. Roque in Brazil, and Cape Parina in Peru, between lat. $4^{\circ}$ and $7^{\circ} \mathrm{S}$., where it is more than 3250 m . wide. N. of the equator, the greatest breadth is near the parallel of $45^{\circ}$, between Cape Canso in Nova Scotia, and Cape Lookout, where it is more than 3100 m , in width. It is bounded on the E. by the Atlantic Ocean, N. and S., which separates it from Europe and Africa; and on the W. by the Paeific Ocean, N. and S., which divides it from Asia and Australia. From Asia, however, it is separated by a narrow ehannel only, called Behring's Straits, not more than 48 m . ini width at the narrowest part. The physical features of this great division of the globe are on the most gigantic scale. Here are the largest rivers and lakes in the world, the largest valley, and the loftiest mountains, with exception of the Himalayas, which, however, they greatly exceed in length; the most extensive forests, and the tallest trees. Here, also, is exhibited the greatest development of volcanic phenomena, the chain of the Andes furnishing the most magnificent example of linear voleanocs of any region in the world. Out of 270 active volcanoes, the estimated number of all in that state on the surface of the globe, 190 are on the shores and islands of America, being upwards of two-thirds of the whole. The climate of America is said to be colder than that of the opposite continents of Europe and Africa, the difference, it is alleged, being equivalent to about 8 or 10 degrees of latitude. In bodily conformation, the aboriginal tribes of America present remarkable similaritics; but their languages, though presenting many roots in common, are exceedingly varions, amounting in number to no fewer than 600. Though differing considerably in general contour, the two great peninsulas present some remarkable points of resemblance. Both taper towards their S. extremities, and the form of both seems to have been in a great measure determined by a range and by a system of mountains; on the W. by the Andes, and their continuations the Rocky or Oregon Mountains, stretching from Tierra del Fuego to near the Aretic Occan; and on the E. by the mountains of Brazil and the Alleghany or Appalachian Mountains; the former in S., the latter in N. America. Both also are, to a great extent, composed of three great river basins; N. America by those of the Mississippi-Missouri, the St. Lawrence, and the Mackenzie S. America by those of the La Plata-Parana, Amazon, and Orinoco. Many other points of resemblance between the two peninsulas could be named, but it is thought unnecessary to do so here, as both their corresponding and distinctive features will be noticed nuder their respective heads.

Besides the two grand divisions of America above spoken of, namely, N. and S , a third, called Central America, is recognized, comprehending those countries which lie between the 8th and 18th parallels of N . lat., and between $82^{\circ} 30^{\prime}$ and $94^{\circ} 0^{\prime} \mathrm{W}$. lon. To avoid perplexity, this division will be found treated of as a subhead, following N. America, to which it properly belongs.

Nortil Ameraca lies between the 20th degree of N. lat. and the Aretic Ocean. It is of more irregular form than S. America, but of greater and more uniform breadth, and, consequently, of larger area. It is also more decply indented with gulfs, bays, and inlets. Two extensive mountain chains run near and parallel, the one to its E., the other to its W. coast. Between these lies a vast plain, the largest in the world, stretching N. and S., from the Gulf of Mexico to the Arctic Ocean. In this plain are situated the great lakes of N. America, and over its level surface flow its majestic rivers, including the Mississippi, the Mackenzic, and the St. Lawrence; the one forming a S., the other a N., and the third an E. outlet for its superflnous waters. The more remarkable of its coast indentations and inlets are Baffin's Bay, Hudson's Bay, and the Gulf of St. Lawrence, on the E. coast; the Gulf of Mexico, on the S.; and the Gulfs of California, Georgia, and Cook's lnlet, on the W. Owing to its irregular form, the coast of N. America is very extensive; its length, from II udson's Straits to the Florida Channel, being about 4800 m .; and from the latter, along the inland sea to Panama, about 4500. The whole length on the Pacific side to Behring's Straits, inclading the Gulf of California, has been computed at $10,500 \mathrm{~m}$. Of the extent of the N. and N.E. shores no conjecture has yet been hazarded, but it cannot, probably, be less than 3000 m. The cntire extent will thus be, perhaps, about $22,800 \mathrm{~m}$. Amongst the more reuarkable physical characteristics of N .

America are its sandy deserts, treeless steppes, marshes, and prairies; the first stretch along the base of the Rocky Mountains to the 41 st degree of N. lat., having an average breadth of 400 to 600 m . The steppes form another cheerless and extensive region in the N . parts of the continent, being parched in summer by scorching heat, and frozen in winter by intensely cold winds from the Rocky Mountains. The marshes of N. America occupy a large space, those towards the mouth of the Mississippi extending over 35,000 sq. m. The prairies or savannahs, peculiar characteristics of N. America, occur chiefly in the Mississippi valley. They consist of extensive, elevated, and generally irregular tracts, without trees, though sonetimes capable of producing them, covered in the spring with long grass, intermingled with fragrant flowers. They are often, however, entirely barren, and may be traversed for many days without a shrub being met with, except on the banks of streams. Vast tracts are also occupied by forests, comprising, probably, not less than from 600,000 to 800,000 sq. m. Notwithstanding these large deductions, millions of acres of rich and fertile soil remain for the subsistence of man.

Mountains.-Of these there are four principal systems in N. America. The Oregon or Rocky Mountains-a continuation of the Audes, the Sea Alps of California, the Sea Alps of the N.W. coast, and the Alleghanies or Appalachian Mountains on the E. coast. The Oregon Mountains stretch along the W. coast at a distance varying from 50 to 300 m . from the sea. The highest part is between lat. $42^{\circ}$ and $53^{\circ} \mathrm{N}$., where several peaks rise far above the snow line. Of these, Mount Hooker attains an elevation of $15,700 \mathrm{ft}$., and Mount Brown $15,990 \mathrm{ft}$. Further N., they decrease to 4000 and 2000 ft . The Sea Alps of California, and those of the N.W. coast, run parallel to the Oregons, but nearer to the sea, and are connected with the latter by transverse ridges, the principal of which are the Snowy Mountains, said to equal the highest part of the Rocky Mountains in elevation. The Alleghanies or Appalachian Mountains stretch along the E. coast. They consist chiefly of four separate groups, crossing the country in the same general direction, from N.E. to S.W. Their mean elevation does not exceed 2500 ft . To this chain belongs the group of the White Mountains, in which is situated Mount Washington, 6620 ft . high, the culminating point of the entire system. Their whole area is computed at $2,000,000$ sq. m.

Rivers and Lakes.-The principal rivers are the MissouriMississippi, and the St. Lawrence. The first is the largest river in N. America, and one of the greatest in the world, occupying, with its tributaries, the whole of the S. portion of the great central basin of this continent. It has its origin in the junction of streams from the Lakes Itaska and Ussawa, on the declivity of the Rocky Mountains, between lat. $42^{\circ}$ and $43^{\circ} \mathrm{N}$., and falls into the sea in the Gulf of Mexico in lat. $27^{\circ} \mathrm{N}$. Its whole course, which is from N. to S., reckoning the Missouri as the principal branch, is calculated to exceed 4400 m . It has obtained its double name from the Missouri forming about two-thirds of its earlier course. The St. Lawrence rises under the name of the St. Louis, in lat. $47^{\circ} 45^{\prime}$ N. ; lon. $93^{\circ}$ W., flows N.E. by N., and falls into the Gulf of St. Lawrence at Gaspés Point, by a mouth more than 100 m . wide. The other rivers ranking next in point of magnitude are the Arkansas, Red River, Ohio, and Mackenzie, all, excepting the last, tributaries of the Mississippi, and having their sources in the Rocky Mountains. The Mackenzie issues from the Great Slave Lake, from which it flows nearly due N., and falls into the Aretic Sea about lat. $69^{\circ} 10^{\prime} \mathrm{N}$. In the number and magnitude of its lakes, N. America is uncqualled by any other quarter of the globe. They form one of its grandest natural features, and, in conjunction with its rivers, present a mediun of commercial intercourse which no other country enjoys. The principal lakes are Lake Superior, Michigan, Muron, Ontario, and Erie, which together cover an area of $90,700 \mathrm{sq} . \mathrm{m}$. The largest of these is Lake Superior, the mean length of which is 400 m .; mean breadth, 80 m . The deepest are Lakes Michigan and Huron, the mean depth of which is 1000 ft ., or about 167 fathoms. Following the chain of lakes which crosses the country in a N.W. direction, there occur Lakes Winnipeg, Woolaston, Deer Lake, Athabasca, Great Slave Lake, and Great Bear Lake. There are, besides these, many smaller, yet consider-

Vol. I.
able lakes, such as St. Clair, midway between Lakes IIuron and Erie; and the Lake of the Woods, between Lakes Superior and Winnipeg.

Islands.-In the Atlantic Ocean, the principal are Newfoundland, Anticosti, Prince Edward's Island, and Cape Breton, all at the mouth of the St. Lawrence; the Bahamat Islands, off the peninsula of Florida and the Gulf Stream; and the W. India Islands, Cuba, Hayti or St. Domingo, Jamaica, Porto Rico, Santa Cruz, Antigua, Guadaloupe, Martinique, St. Lucia, Barbadoes, St. Vincent, Tobago, Trinidad, and several others. On the N.W. coast, the principal islands are Vancouver's Island, with an area of $30,000 \mathrm{sq}$. m. ; further N., Queen Charlotte's Island; then King George II I.'s Archipelago, which contains, besides a number of small islands, l'rince of Wales Island, Sitka Island, and Admiralty Island Next follow the Aleutian Islands, stretching W. from the peninsula of Aliaska. In Belring's Straits are the group of Pribylof and Nounivok, belonging to Russia. In the Arctic Ocean, there are a vast number of islands of which little comparatively is yet known. Besides these, there is a multitude of small islands and rocks scattered aiong the W. coast, particularly between Port San Francisco and Cape St. Lucas.

Geology, Mineralogy, \&c.- A remarkable analogy exists in the structure of the land in N. Ainerica and Central and N. Europe. Gnciss, mica schist, and granite, prevail over wide areas in the Alleghanies; on the Atlantic slope, and the N. latitudes of the American continent, and in the high and middle latitudes, the silurian strata extend over 2000 m . Crystalline and silurian rocks form the substratum of Mexico, for the most part covered with plutonic and volcanic formations and secondary limestone. The Rocky Mountains are mostly silurian, except the E . ridge, which is of stratified crystalline rocks, amygdaloid, and ancient volcanic productions. The coast chain has the same character, with immense tracts of volcanic rocks, both ancient and modern, especially obsidian. In N. Amcrica, volcanic action is entirely confined to the coast and high land along the Pacific. The principal minerals are gold, silver, copper, iron, lead, and coal. The first three are found in greatest abundance in Mcxico, where there are nearly 3000 mines of gold and silver alone. Since 1848, however, the great field for gold gathering has been California, where large quantities have been obtained with little trouble; and both silver and quicksilver have, in the same quarter, been found to abound. The silver supplied by the Mexican veins is extracted from a great variety of minerals, pure or native silver being of comparatively rare occurrence. Previous to the revolution of 1810 , the annual average produce of the American mines amounted to $£ 5,100,000$; after the revolution, the amount fell to $£ 2,337,500$, the exports of specie falling, of course, in proportion. The principal deposits of gold in the U. States, besides in California, occur in the primary rocks between the river Rappahannock in Virginia, and the Coosa in Alabama but it has also been found as far $\mathbf{N}$. as Somersct in Vermont. The gravel is washed by negroes, who collect each about five pennyweights a day. The gold sent from this district to the mint of the U. States, between 1823 and 1836, amounted to $\$ 4,377,500$; but the actual produce was estimated at twice this amount. The coal fields of N. America are of prodigious extent; the Appalachian stretching, without interruption, 720 m ., with a maximum breadth of 280 , and occupying an area of $63,000 \mathrm{sq} . \mathrm{m}$. The Pittsburgh seam, 10 ft . thick, exposed on the banks of the Monogahela, extends, horizontally, 225 m . in length, and 100 in breadth, and covers an area of $14,000 \mathrm{sq} . \mathrm{m}$. The coal is generally bituminous, similar to British; but anthracite is also met with. Besides the coal fields nained, there are various others of great extent in different parts of N. America, including New Brunswick, Nova Scotia, and Vancouver's Island. Iron, also, is worked in many parts of the States from Connecticut to S. Carolina. Salt is likewise widely diffused throughout great part of this continent.

Climate.-The predominating character of the climate of N. America is intense cold; although, in some parts, an oppressive heat prevails during a portion of the summer. In Ihitish America the thermometer rises, in July, 20 degrees liigher than in London. Again, above the 50 th degree of lat., the cold is so severe as to render the country all but uninhabitable; while frosts occasionally occur as low duwn
as the 30 th degree of lat. In winter, a keen and piercing N.W. wind prevails throughout all N. America, adding greatly to the natural rigour of the N. climate, and carrying its chilling influence into the more southerly regions. The transitions from cold to hot, or from winter to summer, are very sudden, especially in Canada, where there is little or none of the intermediate season of spring. The principal causes assigned for the greater degree of cold prevailing in N. America than in corresponding latitudes in other countries, are its immense chains of mountains with their coverings of perpetual snew ; its prodigious forests, which prevent the solar rays from reaehing the earth; and to the great breadth of that portion of it that lies within the Arctic circle. The sudden and extreme transitions from hot to cold, for which the climate of N. America, gencrally, is remarkable, is not, perhaps, so easily aecounted for. These transitions, bowever, are said to be healthful. Inence Lower Canada, where the contrasts are greatest, is more healthy than Upper Canada; and the latter than the U. States, where they are least, though still sufficiently marked. In the S. portions of N. America, some of which are within the tropics, the heat is occasionally excessive; but even there the ehilling influences of the N. regions are manifest, keen frosts being often experienced between $15^{\circ}$ and $25^{\circ} \mathrm{N}$. lat. As luaving, probably, some connection with climate, the singular fact may be mentioned, that all over America the teeth are subject to early decay.

Vegetation.-The forests of N. America are of vast extent, and the individual trees of the most magnificent dimensions; some of the former eovering an area of $60,000 \mathrm{sq} . \mathrm{m}$.; and many of the latter attaining a height of 200 and 300 ft ., with a circumference of 80 . The forests of Canada consist chiefly of pines, oak, ash, hickory, red beech, birch, and the lofty Canadian poplar. Those of the UT. States, of sycamore, chestnut, black walnut, hickory, maple, white cedar, wild cherry, red birch, locust tree, oak, ash, \&ce., and the tulip tree, the pride of the American forest. The arctic flora of America has much the same character with that of Europe and Asia.

Maize, or Indian corn, the only important farinaccous plant peculiar to the new world, has a very extensive range in N . America; although a strong heat, of considerable duration, is necessary to its suceessful cultivation. Millet, cocoa, pimento, vanilla, copäiba, cinchona, jalap, sassafras, nux vomiea, tobacco, and the cochineal plant (Cactus cockinilifcr), \&e., are also indigenous. So likewise is the potato, now so widely diffused throughout Europe. Wheat, barley, oats, pease, and rice succeed well throughout large portions of the continent. So also do various kinds of fruit trees, such as oranges, peaches, lemons, and apples; but the native fruits are mostly of the nut kind. Sugar, coffee, and cotton, are amongst its staple vegetable productions. The vine and tea plant have been tried, but hitherto without success.

Zoology.-The largest and most powerful of N. American beasts of prey are bears ; of which it possesses, besides those common to Europe, a species peculiar to itself, called the grizzly bear (Ursus ferox). This is the most formidalle animal of the N. American continent. It is of such strencth, that it can drag, with ease, the careass of a buffalo of 1000 lbs . weight. It is of a fierce and vindictıve disposition, and will readily attack any one who comes in its way. When irritated, it rears itself on its hind legs, emitting a loud, lıarsh, and rapid sound. It is said to extend as far S. as Mexico, and is known to inlsabit the Rocky Mountains and their eastern plains, at least as far as lat. $61^{\circ} \mathrm{N}$. The white, or polar bear, though not peculiar to America, is found in great numbers on its northern coast, attaining a higher latitude than any other known quadruped. It is rarely scen at any distance from the sea, and seldom or never further S. than about the 55 th parallel. The bison, or American buffalo (Bos Amcricanus), the largest native quadruped of the new world, is distributed over a great portion of the temperate regions of America. Its chicf liaunts, however, are the prairie lands of the Rocky Mountains, where they lave been seen in herds of 10,000 . They are, on the whole, inoffensive animals, though dangerous when roused. The bull has sometimes attained a weight of 2000 lbs ., but the average weight is from 12 to 14 ewt . It measures about $8 \frac{1}{2} \mathrm{ft}$. in length, and above 6 ft . high at the fore quarter. The flesh is juicy and well flavoured, and the tongue and hump considered delicacies. The musk ox (Ovibos moschatus) is a
small-sized animal, weighing only about 300 lbs ., exclusivo of effal. It inhabits a great extent of barren land $N$. of the 60th parallel. The flesh is well flaveured, resembling that of rein deer, but cearser in the grain, and smelling strongly of musk. The hair or wool is remarkably fine. Several species of the deer tribe are found in N. America. Of these, some inhabit marshy forests, some the wooded shores of rivers, or the sea, and others the bleak sides and barren valleys of mountain districts. The most remarkable are the inoose deer or elk (Cerous alces), a gigantic animal when full grown, 6 ft . in height, with bread solid antlers, a single one of which has been known to weigh 56 lbs ; and the rein deer, the most nertherly of all the ruminating animals. On the Rocky Mountains are found a race of sheep, and another of goats, peculiar to these elevated regions. The former, the Rocky Mountain sheep, is much larger than the largest varieties of the domestic breeds; hair short, fine, and flexible; and flesh said greatly to excced in flavour the finest English mutton. It dwells amongst the most elevated and craggy ridges. The Rocky Mountain goat also inhabits the highest and least accessible summits. Its flesh is hard and dry, and rendered masavoury by a strong musky flavour. It is covered with long hair, but beneath that there is a coating of wool, of the finest quality. The wolves and dogs of America are numerous, and some of them peculiar. The former are there, as everywhere else, savage and ferocious, especially when pressed by hunger. They will run down and devour deer and foxes; and have been known to break into huts, and to kill and carry off the dogs they found there. The prairie wolf (Canis latrans) hunts in packs, and is an animal of great swiftness. It occurs on both sides of the Rocky Mountains, but is most numerous in the plains of the Missouri and Saskatchawan. On the banks of the latter river, great numbers of the prairie wolves are seen to start from holes in the earth on hearing the report of a gun, being on the look-out for the offals of the slaughtered animal. Of the domesticated tribes of the canine race, there are several remarkable varieties in the northern regions of America. Amongst these are the well-known Newfoundland dog, and the Mackenzie river dog, a small, slight animal, of a playful and affectionate disposition. All the others are large and fierce. Foxes are also numerous, and of a great variety of species. The most worthy of notice are the American red fox (Canis fulvus), which inhabits the woody districts of the fur countries, and from which about 8000 skins are aunually imported into England; the kit fox, and the Arctic fox. Beavers, otters, racoons, opossums, hares, musk rats, marmots, squirrels, and poreupines, are amongst the smaller quadrupeds of N. America. The elephant and camel are unknown here, and monkeys are confined to the southern regions. Beasts of prey are few, and, with exception of bears, far from being formidable. Reptiles, however, are numerous, especially in the U. States, and some of them dangerous. The noost noted of this class is the rattlesnake (Crotalus). The longest attain a length of 6 ft. ; their bite is fatal to the largest animals, and to man also, unless a remedy is immediately applied; and even in this case, the bad effeets of the wound are said to be felt for life. The only animal secured against them is the hog, which feeds upon them. The pike-muzzled cayman (Crocodilus lacius), is a native of the southern States, and is found in the Mississippi. It grows to the length of 14 to 16 ft . Frogs and toads are also numerous; the former include the bull frog, from 6 to 8 inches long, and so voracious that it will swallow young ducks and goslings whole; the latter, the Salamander gigantea, or gigantic salamander, measuring from 15 to 18 inches long Tortoises also abound in various parts of the U. States ; and sea turtles are found on the warmer parts of the coasts.

The birds of this continent are very numerous, there being 471 species in N. America, of which number 371 are peculiar to that country. The list includes a varicty of the cagle tribe, vultures, hawks, and owls. Wild turkeys are found in vast flocks in the woods of both Americas. Fish also abound in the N. American rivers, but none of them are sufficiently remarkable to require any special notice here. They include the well-known kinds, sturgeon, salmon, trout, pike, and char.

Races of Men.-- The origin of the American race is wholly unknown, although there has been no want of conjecture on the subject, most of it more plausible than satisfactory. This, however, is certain, that America was inhabited by a people
who lived long antecedent to the present races or tribes by which the soil is occupied, and regarding whom neither history nor tradition have preserved any record; although many evidences remain (see Autiquities, in articles Mexico and Yucatan) not only to prove the fact of their having existed, but to show that they had attained a degree of civilization altogether unapproached by the present native inhabitants. Amongst these evidenees are stone walls, of regular masonry, and hearths of briek, found in digging the Louisville Canal ; medals of eopper and silver, swords, and implements of iron. The Indian tribes of America, with exception, perhaps, of the more westerly Esquimaux, have all so strong a resemblance to each other in physical formation, and also, though in a less obvious degree, in intellectual charaeter, as to leave no doubt of their being of one family, and their having a common origin. They are, with the exception just made, of large size, robust, and well proportioned; of a bronze or reddish complexion-hence the name 'red men,' whieh they have bestowed on themselvesblack hair, long, coarse, and slining; thin beard, low forehead, high eyebrows, prominent cheek bones, nose a little flattened, but well marked. IIead of a square shape; face broad, and tapering towards the chin; featurcs, viewed in profile, prominent, and deeply sculptured. Their moral eharaeter has been variously represented, sometimes better, and sometimes worse, than it really is. Excepting extraordinary powers of cndurance, they seem to possess precisely the virtues and vices common to all savages, along with some good qualities, more rare, perhaps, amongst uncivilized tribes. They are grateful, hospitable, and capable, sometimes, of a savage magnanimity; but they are also vindictive, cruel, and treacherous. Amongst their vices, of a more venal nature, is an unquenchable passion for spiritnous liquors. An idea very generally prevails that they are singularly grave and taciturn. Washington Irving gives them a very different character, as will be found in the following quotation from his Tour to the Prairies, the interest and novelty of which will be a sufficient apology for its length :- 'They (the N. American Indians) are taciturn only when in eompany with white men, whose good will they distrust, and whose language they do not understand; and that, when among themselves, there cannot be greater gossips. Half their time,' he goes on to say, 'is taken up in talking over their adventures in war and hunting, and in telling whimsical stories. They are great mimies and buffoons also; and entertain themsclves excessively at the expense of the whites with whom they have associated, and who have supposed them impressed with profound respect for their grandeur and dignity. They are curious observers, noting everything in silence, but with a keen and wateliful eye; occasionally exchanging a glance or a grunt with each other when anything partieularly strikes them, but reserving all eomments till they are alone. Then it is that they give full scope to criticism, satire, mimiery, and mirth. In the course of my journey along the frontier, I have had repeated opportunities of noticing their excitability and boisterous merriment at their games; and have oecasionally noticed a group of Osages sitting round a fire, until a late hour of the night, engaged in the most animated and lively conversation, and at times making the woods resound with peals of laughter.' During the war in which we were engaged with the French in Canada, about the middle of last century, and during the contest of the AngloAmerican colonies for their independence, Britain adopted the poliey of securing the Indian tribes as allies; and, with this view, created a department called the 'Indian department, the duties of which were to maintain the friendly relations between Great Britain and the former, by distributing presents, rewarding serviees, and providing for the disabled, and for the widows and children of the slain. Previous to 1816, $£ 150,000$ a year had been distributed in this way amongst them; chiefly in artieles of personal comfort and utility, such as blankets, the most useful of all articles to an Indian, sheeting, \&c. The sum is now reduced to about $£ 20,000$ a year; the number of claimants, some of whom come from a distance of 1600 m . to receive these pledges of our friendship, being between 18,000 and 19,000. Nor is the gratification of female vanity overlooked in the selection of these gifts. In a list of articles, contained in a Report to Parliament regarding our colnneetion with the N. American Indians, are 5398 pairs of silver 'ear-bobs,' 7186 silver brooches, 93 dozen looking glasses, 9162 horn, ivory, and box combs, 702 silk
handkerchiefs, 5324 yards of ribbon, and 2387 ounces of vermilion.

The Indians of N. America lave been considered an inferior race, intellectnally, and they have not, perhaps, made advances in general civilization, or in the arts, commensurate with their opportunities; but to change the habits and modes of life of an unenlightened people, not from one stage of refinement to another, but from an original state, or state of nature, with its freedom and its excitement, to a faetitious one, with its constraints, its monotony, and, to the Indian, incomprehensible motives of action, is not the work of a day, nor of a century. Yet manifestations of advancement are not wantirg. A portion of the Mohawks, who separated from their tribe many years ago, have become tolerable farmers, and some of them have assumed the dress of Europeans. The Chippewas and Mississiquas have also evinced a strong desire to adopt the habits of eivilized life. In Upper Canada, the Mohawks and Six Nations have retained 260,000 acres of good land, on which they raise Indian corn, beans, and potatoes, and some of the more industrious several kinds of English grain. They have, besides, considerable numbers of horses, cows, oxen, sheep, and swine, and in some of their villages there are schools in which their children are taught reading and writing. The Cherokees, a numerous nation, are making still more satisfactory advances in the right direction. In 1831, about 200 of that nation had attained a very complete English education, and 500 children were in progress learning English. About the same time, the Gospel of Matthew and a collection of hymns had been printed in Cherokee, and a newspaper published in the same language, of which the charaeters bad been invented by a native named Guess.

A large portion of N. America is still in pessession of the aboriginal tribes, comprising the N. parts of Spanish America, the W. parts of the U. States, and the N.W. parts of British Ameriea. Their entire numbers are supposed to amount to rather more than half a million, of which 313,000 are in the territory of the U. States. The language of the Chippewas is the most prevalent among the Indian tribes, and is spoken in most of their general councils and negotiations.

Political Divisions. - The great political divisions of N. America, exclusive of Central America, are the U. States, 13ritish America, Russian America, and Mexico, which is included between lat. $15^{\circ} 30^{\prime}$ and $34^{\circ} 0^{\prime} \mathrm{N}$., bounded, W. by the Pacific, and E. Iy the Gulf of Mexico. The territory of the U. States extends from the British possessions to the Gulf of Mexico, and from the Atlantic to the Pacific Ocean. The S. boundary line of the U. States' territory now ineludes the whole of Upper California, the line coming as far S. as lat. $32^{\circ} 30^{\prime} \mathrm{N}$.

British America comprises Upper Canada and Lower Canada, New Brunswick, Nova Scotia, Cape Breton, Prince Edward's Island, Newfoundland, Labrador, and the island of Anticosti.

The boundary of Russian America, as settled by treaty in 1825, commences at the S. extremity of Prince of Wales Island, in lat. $54^{\circ} 40^{\prime} \mathrm{N}$., and about lon. $132^{\circ} \mathrm{W}$. All the American coast lying $N$. of this point, and all the islands off that coast, are recognized to be Russian territory

Discovery of $N$. America.-In the department of discovery, N. Anerica has a history of its own, wholly distinct, in all its circumstances, from that of S. America, the scene of the discoveries of Columbus, and to which, so far as regards this continent, they were entirely confined. The first discoverer of N. America was John Cabot, a native of Venice, who resided in England in the reign of Henry VII., under a patent granted by that monareh, and which ineluded Cabot's three sons ; Sebastian, then in the 19th year of his age, Louis, and Sanchez. John Cabot, the father, accompanied by his son Sebastian, sailed from Bristol ; and about five o'eloek on the morning of the 24th of June 1497, came in sight of N. America, the coast, it has been conjectured, of Labrador. This was a year before the discovery of S. America by Columbus, which took place in May 1498. In the summer of 1498 , Sebastian Cabot sailed from England with two ships, fitted out at his own and his father's expense; and, directing his eourse by Iceland, reached Newfoundland, which he called Terra de Baccalaos, from the great quantities of fish, so named by the natives, by which the surrounding seas were filled; quantities so immense, says the old historian. Peter Martyr,
that they actually impeded the sailing of the ships. The next adventurer who reached the $N$. American shores was Gaspar de Cortcreal, a Portuguese nobleman, who sailed for, and subsequently surveyed between 600 and 700 m . of, the coast of Labrador in the year 1500. He returned to America shortly after; lut having excited the enmity of the people, by having carried off, on his first voyage, a number of natives as slaves, it is supposed that he and his ships' crews were destroyed, as they were never again heard of. A similar fate befell his brother, who sailed in search of him in the following year; and in 1503 another expedition, fitted out by the King of Portugal to ascertain the fate of the brothers, shared the like destiny. Cortereal, who was a bold and determined inan, eager to distinguish himself, had been ineited to his enterprise by the achievements of Cabot. He sailed on his expedition from Lisbon with two ships, touched at the Azores, and, as already related, arrived on the coast of Labrador, which was subsequently called Terra Cortcrealis, afterwards elanged by the Portuguese slave merchants to Terra de Laborador, in consequence, as has been conjectured, of the superior qualities of the natives as labourers, and of whom they expected to make large profits by selling them as slaves. The Portuguese affected to consider the Cortereals as the first discoverers of Newfoundland and the adjacent coasts of N . America, and attempted to establish a elaim to these territories on that ground, but the evidence of their having been anticipated by the Cabots was sufficiently elear to render the attempt unavalling.

In 1512, Nebastian Cabot sailed again for America, with a small squadron under the command of Sir Thomas Pert, fitted out by Henry VIII.; but a mutiny on board his vessels, together with a want of resolution on the part of the commander, compelled him to return before more had been accomplished than a visit to Hudson's Bay. In the same year Florida was discovered by Ponce de Lcon. The next name that occurs in the history of American diseovery is that of Giovanni Verazzano, a Florentine navigator of great skill and celebrity, who was sent out by Francis I. of France, in the year 1524 , and who surveyed upwards of 2000 m . of coast, comprising the whole of that of the U . States, with a large portion of that of British America. Verazzano gave the name of New France to the region he had discovered. In a subsequent voyage, he and his party were surrounded by the savages, and put to death. Ten years afterwards, Jacques Cartier, an enterprising seaman of St. Malo, sailed from the latter place for Newfoundland, the N. coast of which he surveyed and minutely deseribed. IIe performed several voyages afterwards, in one of which he entered the St. Lawrence, being the first European who had done so, and ascended the river as ligh as Montreal. An attempt was afterwards made by the Sieur de Roberval, a nobleman of licardy, to form a settlement in America, but the attempt was unsuccessful, the only result being a fort which the French erected near the present site of Quebec, and named Charlesbourg. This fort, however, was the first European settlement formed in that part of America. Roberval and his brother sailed on another voyage of discovery some time after, and perished; neither they, nor their ships, having ever been agair heard of. Previous to this, the Spaniards had conquered Mexico, and a desire to extend their dominion in a N. direction led to further discoveries in N. America. The coast of California was diseovered by Ximenes, a pilot, who, with Mendoza, a captain, whom the former murdered during the voyage, had been despatched by Cortez on a voyage of discovery. In 1539, the Gulf of California was first entered by Francisco de Ulloa, another adventurer, also sent out by Cortez, who spent a year in examining its coasts and havens. The Spaniards performed several voyages afterwards, but they were unattended by any results worthy of notice till the years 1596 and 1602, when Sebastian Viscaino proceeded along the coast as far as the river Columbia. These discoveries were followed by those of Davis in 1585 , Weymouth in 1602, Knight in 1606, IIudson in 1610, Button in 1612, Bylot and Baffin in 1615, from the latter of whom Baffin's Bay has been named. The first in point of time among the more modern voyagers to the shores of N. America were Capt. Behring, and Tchirikow his lieutenant, both natives of Russia, who were sent out in 1725 by the Empress Catherine to survey the N. coasts. They made several important dis-
coveries, besides setting at rest the disputed point whether Asia and America were two separate continents. The clams of Russia to the American coast N. of lat. $55^{\circ} \mathrm{N}$. is founded on the voyages of these two enterprising seamen. In 1776, Capt. Cook, accompanied by Capt. Clarke, surveyed the N.W. boundaries of America, tracing the coast from lat. $50^{\circ} \mathrm{N}$. till he came to Cape Prince of Wales, when he steered a N.E. course, till arrested by ice islands in about lat. $70^{\circ} \mathrm{N}$. The remaining names associated with American maritime discovery are, Meares, Vancouver, Kotzebue, and, more recently, Loss, Parry, Franklin, and Beechy; inland travellers and discoverers, Hearne, M‘Kenzie, Back, Rae, and Simpson; most of whom lave published accounts of their discoveries.

Central America is the narrow tortuous strip of land which unites the continents of N. and S. America, extending from about lat. $7^{\circ}$ to $18^{\circ} \mathrm{N}$. ; but as different limits are assigned to it by various authorities, these cannot be said to be exaetly determined. Its entire length may be about 800 or 900 m ., with a breadth varying from between 20 and 30 m. to 300 or 400 . Taking the limits above stated, Central America will be found to comprise the Isthmus of Panama, Guatimala, British Monduras, and parts of Mexico ; some authorities include also Yucatan. It is bounded E. and N.E. by the Caribbean Sea, and W. and N.W. by the N. Pacific Ocean. It is traversed throughout its whole length by a chain of mountains, which connects the Andes of S. America with the mountain ranges of Mexico, and the Rocky Mountains of the U. States. This ehain is divided into three groups; the Costa Rica group, the Honduras and Nicaragua group, and the group of Guatimala. The Costa Rica group traverses the Isthmus of Panama. Some parts of this range, towards the S., attain an elevation of 9000 ft ; and the volcano of Irasu rises to $11,478 \mathrm{ft}$; but there are others said to be of still greater height. The more general elevations, however, are from 3000 to 5000 ft . The Honduras and Niearagua group is scparated from the former by the Lake of Nicaragua, and the river San Juan. On the N. side of the lake, the border of the plateau forming its W. limit rises suddenly to a height of 8200 ft . The Guatimala group is remarkable for containing, with exception of the island of Java, the greatest number of active volcanoes, known to exist within similar limits, on the surface of the globe. The highest in Central America is Agua, which is said to attain an elevation of $15,000 \mathrm{ft}$. The others vary from 1000 to $11,000 \mathrm{ft}$.; but a few only of these heights have been ascertained. The volcano of Agua has obtained its name from its emitting torrents of water and stones, instead of fire. The mountains of Central America do not, generally, attain an elevation equal to those of the two adjoining continents, with exception of the volcanoes. The coasts are generally narrow, and in some places the mountains and high lands come close down to the water's edge. The rivers of this territory are small, and have necessarily, from the narrowness of the land, short eourses, the longest not exceeding from 200 to 300 m ., while many of them are not more than 50. Of the latter, are those that fall into the Paeific; of the former, those that join the Atlantic, both laving their sources in the mountainous regions of the country, the one flowing N.E., the other S.W. The largest river is the Usumasinta, which falls into the Gulf of Campeachy. There are about 30 other rivers worth noting, many of which are navigable for several miles into the interior. The principal lake is that of Nicaragua, which is upwards of 100 m . in length, and about 50 m . in breadth. The other considerable lakes are those of Managua or Leon, Golfo Dolce, Golfete, Peten, Atitlan, Amatitlan, Guija, and Cojutepeque.

Climate. -The climate is exceedingly various, owing to the inequality of its surface. The plains on the coast of the Cariblean Sca are exposed to violent tropical heats, and are very unhealthy; but on the table lands, any temperature, according to altitude, may be obtained all the year round, with a salubrious climate. The dry season lasts from October to May; the rest of the year is called the wet season, although the rain falls during the night only, the days being fair and cloudless, and the air pure and refreshing. In March and A pril, the thermometer sometimes rises to $86^{\circ}$, but usually ranges between $74^{\circ}$ and $82^{\circ}$ in the middle of the day.

Vegetalle Productions.-These are as various as the climate. On the higher parts of the table land, the grains, fruits, and vegetables of Europe are raised. There are here, likewise,
plantations of a kind of aloe, called maguey, from which a spirituous liquor, named 'pulque,' is extracted. The lower and warmer districts produce, in great abundance, Indian corn, sugar cane, bananas, mandioca, all sorts of tropical fruits, including the cherimoya, said to be the most exquisite of fruits; and sweet potatocs, indigo, cochineal, tobacco, and cotton. The forests, which are very extensive, produce mahogany, pimento, sarsaparilla, vanilla, and the black balsam, commonly called Peruvian balsam, from having been brought to Europe by way of Peru, together with various other drugs, gums, and valuable woods, including logwood and lignum vite. The forests of Panama contain at least 97 different kinds of trees, which grow luxuriantly in its moist hot climate, fatal to animal life.

Zoology. -The zoology of Central America differs little from that of the other countries of America. The only animals peculiar to it are the manati, found at the mouth of the Rio Juan; the winged squirrel, and various kinds of quadrumana. Amongst the birds, the most remarkable are humming birds; the quezal, whose feathers are of a bright emerald green; the great macaw, and several others of the most splendid plumage. Serpents are numerous, some of them dangerous, especially on the thickly-wooded coast of the Pacific. Two species of locusts are known here, a brown and a green; the former is particularly destructive. The rivers, lakes, and seas abound with fish.

Geology, Minerals, \&c.-Of the geology of Central America little is known. Granite, gneiss, and mica slate, form the substrata of the country; but the abundance of igneous rocks bear witness to strong volcanic action, both in ancient and in modern times. Gold, silver, iron, lead, and mercury, are found; but the first three only are worked. Jasper and marble are worked in Honduras; and brimstone is collected near the volcano of Quezaltenango. There are also many salt springs; and salt is procured in large quantities on the shores of the Pacific.

Inhabitants.-The population of Central America consists of three classes-whites and creoles; mestizoes, or the offspring of whites and Indians; and aboriginal natives. The proportions of this population have been estimated at one-twelfth whites, four-twelfths mixed races, and seven-twelfths Indians. Morality is at the lowest ebb among all classes, especially the whites and creoles; while ignorance, vice, and superstition prevail to an extent unsurpassed in any other part of the world.
History.-In 1502, Columbus visited the E. coast of Central America, passing along the shores of Honduras, the Mosquito territory, Costa Rica, and Veragua, when the clanours of his crew, the fierce resistance of the natives, and the crazy state of his ships, compelled him to return. In 1503, two or three years after the conquest of Mexico, Cortes despatched Pedro Alvarado, one of his most distinguished officers, to subdue Central America, which he effected in two years. From that period it remained subject to Spain till 1823, when it was formed into a federal republic, and became independent. The confederacy comprised the states of Guatimala, Nicaragua, Honduras, Salvador, and Costa Rica. It existed till 1839, when it was dissolved.

The commerce of Central America is very trifling, and the value of its exports has declined since the revolution. Trade, however, is perfectly free in all the states, and foreigners possess all the privileges enjoged by natives. The ordinary revenue in the different states is derived from duties on inports, a duty of 5 per cent. on the transfer of real property, and a monopoly of the sale of spirits and tobacco.

The idea of opening a passage for vessels through the Isthmus of Panama, thus connecting the Atlantic and Pacific Oceans, and thereby avoiding a dangerous and circuitous navigation round Cape Horn, is so obvious, that it excites no surprise to learn that it has been entertained for upwards of three centuries. During all that time, however, no attempt was made to accomplish this desirable object; but there is now every probability of its being effected. Already a railway is being laid across the isthmus from Chagres on the E. coast, to Panama on the W.; and three lines of water communication are at present ( 1850 ) under consideration-one across the isthmus, from Chagres or Puerto Bello to Panama; a second from Port San Juan, in the Caribbean Sea, across the Lake of Nicaragua to Realejo, on the Pacific; and a third from the mouth of the river Coatzacoalcos to Teliuantepec.

South America is a vast peninsula of a triangular form, with its apex S., extending in length from lat. $12^{\circ} 30^{\prime} \mathrm{N}$. , to Cape 11 orn, in lat. $55^{\circ} 59^{\prime} \mathrm{S}$. (r.) Its greatest length, from N. to S., is 4800 m. ; its greatest breadth, from E. to W., 3230 m . About three-fourths of it lie between the tropics, the remainder in the temperate zone. Its coast lines, particularly the W., are comparatively little broken or interrupted by indentations, excepting towards the S. extremity, where considerable inequalities occur on both E. and W. shores. Here, also, is a group of mountainous islands, forming the archipelago of Tierra del Fuego. They are penetrated in every direction by bays and narrow inlets of the sea, or fiords, ending often in glaciers formed from the snow on the summits of mountains 6000 ft . ligh. Peat mosses cover the higher declivities of these mountains, and dense forests their flanks. The mountainous and elevated tracts of this continent are chiefly limited to the borders of the Pacific and Atlantic Oceans; the intervening space being occupied by a wide, low, and level plain, or rather series of plains, which reaches from one extremity of it to the other, so low and flat that a rise of 1000 ft . in the Atlantic Ocean would sabmerge the greater part of the entire contincnt.

Mountains and Volcanoes.-There are four monntain systems in S. America; the most remarkable of which is the Andes, that stretch along the W. coast from S. to N., in one continued chain of 4180 m . in length, in a straight line, and 4360 when measured along the highest part of the system, commencing at the Straits of Magellan or Magalhaens, to the Isthnus of Panama. They are of inconsiderable width, but attain great elevations, ranking in this respect next to the Himalaya mountains; the highest of the former, Aconcagua, $23,910 \mathrm{ft}$; the highest of the latter, Kunchinginga, being $28,178 \mathrm{ft}$. The second system is that of Parime or Parima, also called the Highlands of Guayana, consisting of numerous irregular groups of mountains scattered over a table land not more than 2000 ft . above the sea, which extends 600 or 700 m . from E. to W., separating the plains of the lower Orinoco from those of the Rio Negro and the Amazon. The principal group extends from the parallels of lat. $3^{\circ}$ to $8^{\circ} \mathrm{N}$.; and from the meridians of lon. $58^{\circ}$ to $65^{\circ} \mathrm{W}$. The mean direction of the range is $\mathrm{N} ., 85^{\circ} \mathrm{W}$., and the separate chains follow, generally, nearly the same direction. The culminating points of this system are the Maravaca, abont 10,500 ft . high, and the Duida, 7149 ft . high. The third system is known under the general name of the Coast Chaill of Venezuela; the N. chain of which contains the culminating pointthe Silla de Caracas-which attains an elevation of 8600 ft . The fourth is that of Brazil, which consists of two great ranges running parallel to the coast, at various bat not very great distances from the sea, and of numerous branches stretching far into the interior, and crossing the country in different directions. The higher mountains of Brazil extend, generally, like the Andes, from S. to N.; those of the interior form a ridge, whose chief direction is from E. to W. The culminating point of the highest chain of mountains in Brazil is Itambe, 5960 ft . high.

There are altogether upwards of 30 volcanoes in S. America in a state of activity. They all belong to the Andes, and consist of three separate and distinct series; the series of Chili, of Peru and Bolivia, and of Quito. The loftiest of these burning mountains in Gualatieri or Sehama, one of the Peru and Bolivian series; lat. $20^{\circ} 13^{\prime} \mathrm{S}$.; lou. $69^{\circ} 17^{\prime}$ W.; height, $22,000 \mathrm{ft}$. The heights of the others vary from 13,000 to $18,000 \mathrm{ft}$. The latest eruption occurred in 1831, with the volcano Pichincha, one of the Quito series; lat. $0^{\circ} 12^{\prime} \mathrm{S}$.; lon. $78^{\circ} 50^{\prime} 30^{\prime \prime} \mathrm{W}$.

Plains.-The plains of S. America are, as elsewhere mentioned, of vast extent; stretching for many hundreds of miles without exhibiting the slightest perceptible inequality. In the rainy season they display a surface of beautiful green, but in the dry season assume the appearance of a desert. Then the grass crumbles into dust, the surface of the soil is rent ; the crocodiles and larger serpents remain imbedded in the dried-up mud till the first showers of spring arouse them from their torpidity, when, says Humboldt, on the authority of the aborigines, "the moistened clay on the margin of the swamps is sometimes seen to blister and rise slowly in a kind of mound; then with a violent noise, like the outbreak of a small mud volcano, the heaped-up earth is cast high into
the air, and forth issues a gigantic water-suake or a scaly crocodile.' The great plains of S. America are variously designated the Pampas of Buenos Ayres, the Silvas of the Amazons, and the Llanos of the Orinoco and Venczucla. The Pampas of Buenos Ayres are about 900 m . in breadth; occupy a surface of $315,000 \mathrm{sq} . \mathrm{m}$. ; and lie about 1000 ft . above the sea. Marked by its vegetation and other characteristics, from E. to W., it has four distinct regions. The first, which extends 180 m . W. from Buenos Ayres, is covered with thistles and lucerne of the most vivid green, so long as the moisture from the rain lasts; the second, extending 450 m ., is covered with long grass, intermixed with gaudy flowers; the third is a tract of swamps and bogs ; the fourth a border of thorny bushes and dwarf trees, reaching to the Andes. The grassy plains of this level territory are occupied by thousands of wild cattle and horses, who find there inexhaustible supplies of food. The thistles of this region attain an extraordinary size, shooting up to a height of 10 and 11 ft ., with stems so strong, and armed with prickles so formidable, as to form an impenetrable barrier. The Silvas of the river of the Amazons, lying in the centre of the continent, form the second division of the S. American lowlands. They are covered with wood (hence their name), and so densely, that the country can be penetrated only by sailing up the river or its tributaries. They extend 1500 m . along the Amazon ; varying in breadth from 350 to 800 m . The heat is suffocating in the deep and dark recesses of these primeval forcsts, where not a breath of air penetrates; while a death-like stillness prevails from sunrise to sunset, when the forest suddenly resounds with the loud and wild cries of the animals by which it is inhabited. At midnight a profound silence again prevails, and continues till dawn, when the discordant uproar recommences. The Llanos of the Orinoco and Venezuela form the third division of S. American lowlands. They occupy $153,000 \mathrm{sq} . \mathrm{m}$. between the deltas of the Orinoco and the river Coqueta, and are so perfectly flat that frequently there is not an eminence a foot high in $270 \mathrm{sq} . \mathrm{m}$. They are nearly destitute of trees, excepting the banks of the Orinoco, which are thickly wooded. The Llanos present very different aspects at different seasons of the year. Soon after the termination of the rainy season in October, and the subsidence of the swollen rivers, they are clothed with fine grass, affording abundant pasturage to the countless herds with which they are covered. But in tho dry season, namely, between November and February, they are converted into desolate wastes; all vegetation is destroyed, the waters are dried up, and the earth is rent in deep and wide crevices-a result, however, proceeding rather from the absence of moisture than from excessive beat, which, although very intense, is not so great as during the wet season.

Beside these three great tracts of level country, there is the desert of Patagonia, occupying $1,620,000 \mathrm{sq}$. m., the most barren of all the plains of S. America; being, for the most part, composed of sandy sterile dunes, intermixed with stones and gravel; occasionally diversified by huge boulders, tufts of brown grass, low bushes arned with spines, brine lakes, incrustations of salt white as snow, and by black basaltic platforms. The climate of these plains is very cold, especially S . from lat. $45^{\circ} \mathrm{S}$., and is subject to great and sudden changes of temperature.

Rivers.-The principal rivers of S. America are the Amazon, the Orinoco, and the Plata. The first is the largest river on the globe. It rises on the table land of Pasco, in Lake Lauricacha, and, after a course of 4000 m. , falls into the Atlantic at the equator, in about lon. $51^{\circ} \mathrm{W} . ;$ and is 96 m . wide at its mouth. It is navigable for about 2200 m . from the sea. The Orinoco rises nearly in the centre of the Parime Mountains, but its source has not yet been visited by any European, although Humboldt has explored the greater part of its course. Its length is estimated at 1380 m . The affluents of the Orinoco are numerous, and some of them very large streams. The latter river is connected with the former through one of its affluents, the Rio Negro, by a natural canal, called the Cassiquiare, presenting, in this connection, one of the most remarkable phenomena of physical geography. The Plata (Rio de la Plata) is not so much a river as an estuary formed by the confluence of the rivers Parana and Uraguay. It is about 185 m . in length; and, at its junction with the sea, between Punta del Este and Cape San Antonio, its width is about 130 m . Its navigation is difficult, owing to its
shoals and strong irregular currents. Its waters are so turbid that they tinge the sea visibly for 200 m . from the embouchure. There are a number of other rivers in S . America, which, though not so large as any of those above named, are equal, if not superior in size, to most of the greatest rivers of Europe. Amongst these are the San Francisco, the R1o Negro, Colorado, Essequibo, \&c. The water' in some of the rivers in equatorial America is white; in others it is of a deep coffee colour, or dark green, when seen in the shade; and, when ruffled by a breeze, of a vivid green.

Lakes.-The lakes of S. America, of any considerable size, are few, and, with exception of the Lake Titicaca, are rather vast morasses than lakes; the large inland water in Colombia, called the Lake of Maracaybo, being a mere inlet from the Caribbean Sea, and not a true lake. The Lake Titicaca is situated near the N.W. frontice of Bolivia or Upper Peru; it covers an area of above $4000 \mathrm{sq} . \mathrm{m}_{\mathrm{o}}$, is elevated $12,795 \mathrm{ft}$. above the sea, and is said to be 120 fathoms deep in many places. Some of the temporary lakes, alternately inundated and dry, or in a marshy state, cover, when flooded, vast tracts of country; that of Xarayos, on both sides of the Paraguay, and nearly in the centre of the continent, extending over $36,000 \mathrm{sq} . \mathrm{m}$. In the elevated mountain valleys ard table lands of the Andes, there are many small lakes, of the purest blue and green colours, and some of them intensely cold, being near the line of perpetual congelation.

Climate.-There are no parts of S. America so hot as we should be led to expect from its geographical position-a result produced by the operation of the trade winds, atmospherical influcnces of the huge chain of the Andes, and other physical causes. The lrurning heats of the plains of Arabia are unknown on the new continent. In the steppes of the Caraccas, the hottest region of S . America, the temperature of the air, during the day, is only $98^{\circ}$ in the shade; while it rises to $112^{\circ}$ in the sandy deserts around the Red sca. Throughout the whole basin of the Amazon, which comprehends between 2,000,000 and $3,000,000$ sq. m., the climate is neither very hot nor unhealthful, though under the cquator. This arises from its being shaded by lofty woods, and from the prevalence of a cool easterly brceze, a branch of the trade wind, which ascends the chanrel of the Amazon, following all its windings nearly to the foot of the Andes. Brazil, and the country extending westward from it, enjoys also an equable and temperate climatc. At Rio Janciro, the mean temperature is only about $74^{\circ}$. At Lima, the temperature varies from $53^{\circ}$ to $82^{\circ}$, but the mean for the whole year is only 72 $2^{\circ}$. At Buenos Ayres, the mean annual heat is $68^{\circ}$; and, in the Straits of Magellan, the temperature of the warmest month does not exceed $43^{\circ}$ or $46^{\circ}$, while snow falls almost daily. The narrowness of tho continent towards the S ., the immense tracts of ocean which lie on cither side of it, and its exposure to the rigours of the polar regions, sufficiently account for this inclemency. On the $W$. coast, there is a rainless district of nearly 1000 m . in length, from N.W. to S.E. It lies between lat. $7^{\circ}$ and $32^{\circ} \mathrm{S}$., and lon. $65^{\circ}$ and $68^{\circ} \mathrm{W}$. The various elimates, which so large a continent must necessarily possess, will be treated of more in detail in the articles on the various countries of which it is composed.

Geology and Mineralogy.-Granite forms the base of the whole continent, having gneiss here and there associated with it, but mica schist is the most common of the crystalline rocks. Quartz rock is much developed, generally mixed with mica, and rich in gold and specular iron. The Pampas of Buenos Ayres are entirely alluvial, the deposit of the Plata-Parana. Granite prevails, to the extent of 2000 m ., along the coast of Brazil; and, with syenite, forms the base of the table land. The superstructure of the latter consists of metamorphic and old igneous rocks, sandstone, clay slate, limestone, in which are large caverns, with bones of extinct animals; and alluvial soil. Porphyry and red sandstone abound all over the Andes. As Mexico is the principal seat of the mineral wealth of $N$ America, so is Peru that of the S. continent. Chili, of which the former is but a continuation, is also famous for its mines of gold, silver, and copper. The province of Minas Geraes, in Brazil, is likewise, as its name implies, exceedingly rich in mines. Several of the most valuable gold mines here arc wronght by an English mining company, organized in 1825. Besides the mines, there are some valuable gold and silver washings in Brazil, and other parts of S. America. The last
returns, of any anthority, which have been given of the produce of the American mines, are nearly half a century old, and can, therefore, no longer be depended upon; particularly as they precede the revolutionary struggles of 1810 , which totally altered the state of the mining interests of the country. The entire produce of the gold and silver mines of S. America has been recently estimated at between $£ 3,000,000$ and $£ 4,000,000$ sterling, but it is impossible to say how correctly. 13razil produces more diamonds than any other country.

Vegetation.-Extending through so large a space, and possessing, in consequence, so great a variety of climate, no special character can be given to the vegetation of S. America. As in the case of N. America, the most distinguishing feature of the former is its prodigious forcsts, which cover about twothirds of the whole continent; a large portion of them so dense, and so choked up by twiners, shrubs, and sharp-edged grasses, that a hatchet is necessary at every step to clear the way. These forests are, in several remarkable particulars, wholly different from those of the Old World. The trees are tnuch more various, more graceful, and have more distinctive characters; and many of them, even the largest, are adorned with the most brilliant flowers; scarlet, purple, blue, rosecoloured, and golden yellow, are blended with every possible shade of green. Throughout the whole of tropical America, vegetation is on the grandest scale, combined with great beauty and fruitfulness. In those regions where there are due proportions of heat and moisture, the magnitude of the trees, and the splendour of the flowers, are extraordinary. 'Individual plants,' says Humboldt, 'langnishing in our hot houses, can give but a very faint idea of the majestic vegetation of the tropical zone.' Fruits also abound, including oranges, limes, cocoa nuts, pine apples, mangoes, bananas, pomegranates, mammoons, goyabas, jambas, araças, mangabas, and many others. Southward of the line are found the quassia bitter, the fragrant tinga bean, the beauteous rosewood, and the cinchona tree, the rind of which is what is called Jesuits' bark; and indigo, coffee, sugar cane, maize, and the cacao tree, from whose seeds chocolate is prepared, are amongst the products of S. Amcrica. The cultivation of tea also has been attempted in Brazil, though hitherto with little success; but the capitalists engaged in it are still in hopes that they shall be able, ultimately, to compete with China, even in foreign markets. Further S., in Patagonia, vegetation gradually loses its tropical character, and finally assumes the aspect of northern vegetation.

Zoology.-The most formidable beast of prey peculiar to S. America is the Felis onca or jaguar. It is larger and stronger than the panther, but inferior in size and ferocity to the Bengal tiger. The puna or American lion is found in both N. and S. America. Apes and monkcys abound in the tropical forests of the latter, but are an inferior race to those of the Old World. Amongst the winged mammals is the vampire, an enormous bat, which lives on blood; attacking the largest animals, and even man, when aslecp. These dangerous creatures are, fortunately, not numerous, and are almost wholly confined to Guayana, Colombia, and Brazil. In the marshes and swamps of tropical America, the boa constrictor is found, of enormous size. Immense centipedes, scorpions, and spiders also abound in these regions. Ants, termites, and locusts also swarm ; the latter to a frightful extent, especially in Buenos Ayres, and some of the ncighbouring provinces, sometimes covering the ground for a distance of 200 m ., devouring every green thing, even the grass, to the very roots. During a visitation of these destructive insects, 'all the gardens,' says Miers, 'consisting of extensive plantations of maize, pumpkins, melons, and water melons, beans, and other vegetables, had been completely swept off the surface of the earth.' They cnter the houses, and devour every edible thing they contain; even curtains, clothes, and furniture are attacked by them, and much iujured, if not rendered wholly useless; and, in one night, gardens, on which much pains and expense have been bestowed, are utterly destroyed by these rapacious creatures. The mosquito is also a grievous infliction in many parts of S. America, especially in Venczuela, and along the banks of the Orinoco. The chigoc, another much dreaded insect, abounds in the same localities.

Of the birds of S. America, the most remarkable, for size, is the condor, a species of vulture. The largest specimen yet met with measured somewhat less than 14 ft . between the
extremities of the wings, though they rarely exceed 11. The body of the largest individuals is generally from 3 to $3 \frac{1}{2} \mathrm{ft}$. in length, from the tip of the beak to the extremity of the tail. They inhabit the most inaccessible parts of the Andcs. Ridiculously exaggerated accounts of the size and power of these birds were current, until their falsehood was detected and exposed by Humboldt and Bonpland. S. America possesses, in common with other countries, eagles, vnltures, falcons, and other birds of prey. It also possesses many birds of exquisite plumage; amongst these, the tiny humming bird, and the graceful couroucoui (Trogon pavoninus), with its splendid robe of green.

The seas, lakes, and rivers of S. America abound with fish of various kinds; and many of the latter, in the tropical regions, with enormous lizards and alligators. The electric eel is found in the lakes of the Caraccas.

Amongst the domesticated native animals of S. America are the lama and pacos; both used as beasts of burden. The liorse, ass, ox, sheep, goat, and pig, were all conveyed from the Old to the New W orld, none of them being indigenous to the lattcr. Horses and cattle, however, have now so increased in all parts of America, that the former may be bought for from $24 s$. to $32 s$. each, and the latter are valued principally for their hides and tallow, the meat being comparativcly of little account. The slaughter of oxen for the hide alone, is a principal business of many extensive provinees, more especially in La Plata, Uruguay, Paraguay, and Brazil.

Races of Men.-As elsewhere remarked, there exists a very striking general physical resemblance between the native inhabitants of America throughout the whole of both continents, from Cape Horn to Behring's Straits. They are almost all of a reddish brown or copper colour, with long black hair, deep-set black eyes, aquiline nose, and often of handsome slender forms. In S. Ainerica, many are half civilized, but a greater number are still in a state of utter barbarism. The aboriginal population of Indian Chili, known generally by the name of Araucanos, are more advanced in civilization than the Indians of the Pampas. They associate in small communities, have fixed residences, cultivate the ground, and subsist chiefly on the produce of their labour. They excel in the art of weaving, and produce a woollen cloth, says Dr. Leighton, 'which, for fineness of thread, evenness of weaving, durability, brilliancy of colours, and elegance of pattern, is superior to anything of the kind I have ever seen.' The arts of spinning, weaving, and dyeing, are practised solely by the women. Both men and women are hard workers, but the latter are by far the more industrious. They are a well-disposed people, have few of the vices of other savages, and possess firmness and courage in a remarkable degree. They are, however, fond of spirituous liquors, and manufacture a kind of spirit called chicha, by fermenting different fruits, but chiefly apples. They possess no written language, nor any other means of putting ideas on record; their language itself is poor, harsh, difficult to pronounce, and inexpressive. Like all the other Indians throughout S. America, they have been long acquainted with the art of working in metals, especially gold and silver.

The Pampas Indiaus are of a very dark complexion, with long, thick, coarse black hair, which generally hangs loose over their shoulders. Their eyes are black, animated, scowling, and are placed widely apart; foreheads low and broad; faces flattish; liigh cheek bones and large jaws; they have no beard, are of rather low stature, and ill made, but muscular and athletic. They are expert horsemen, and can slip round and suspend themselves under their horse's belly when at full speed, merely clinging by their hands and feet, and can regain their seat at pleasure, without checking the animal's speed. They are still in a very savage state, subsisting on raw animal flesh, and leading the roving life of hunters. They do not cultivate the ground, nor apply themselves to any sort of labour. In manner they are boisterous, and in disposition cruel and ferocious, settling their disputes with the knife, in the use of which they are singularly expert.

Of the Indians that inhabited the province of Brazil, there are said to have been no fewer than 200 distinct tribes. A few of these may be named, and their principal physical and moral characteristics alluded to. The Tapuyas, robust, well made and copper coloured; long, sleek, black hair; paint themselves, and pierce the under lip for the purpose of intro-
ducing a ring or other ornament; the greater part of them said to have been cannibals. The Tupis or Tupinambas inhabit chiefly the coast from the river Camama to that of San Francisco. They also paint their bodies. The Cafusos, a mixture of Indians and negroes, remarkable for an extraordinary peculiarity in the hair of the head, which rises perpendicularly from the forehead to the height of a foot or a foot and a half, giving them a very strange and disagreeable appearance. The Puris, the most revengeful and vindictive of all the Indian races of Brazil. The Botocudos, another cruel and savage race, inhabiting the territory lying between the Rio Doce and the Rio Pardo. The Indians of Brazil are generally of a short or middle stature, and mostly of a robust broad make. They all paint; complexion darker or lighter copper ; skin fine, soft, and shining.

South of lat. $38^{\circ} \mathrm{S}$, we have the buge Patagonian. The stature and bulk of this race, however, though still remarkable, have been much exaggerated. Their average height is about 6 ft . ; heads and features large, hands and feet small, colour dark copper brown; lair black, lank, and coarse. They lead a nomadic life, living in tents formed of poles and skins, and subsisting on the animals they kill.

Political Dirisions.-S. America comprises the following states:-Columbia, now divided into the republics of New Granada, Venezuela, and Ecuador; Guayana-British, French, and Dutch ; republics of Peru, Bolivia, and Chili ; the united provinces of La Plata, the empire of Brazil, Paragnay, Banda ()riental or Uruguay, Patagonia, Tierra del Fuego, and the Falkland Islands. Of these states, Paraguay is the smallest, comprising only 74,000 sq. m., and a pop. of 300,000 ; and Lrazil the largest, its area being $2,743,380 \mathrm{~m}$., with a pop. of 4,170,229.

Discovery.-The first discoverer of the continent of S . America was Christopher Columbus, a native of the city of Genoa, where he was born in the year 1435. On August 3, 1492, he sailed from Spain with an expedition fitted out at the expense of Isabella, Queen of that country, on the first of those voyages of discovery which have rendered his name immortal. On the 12 th of October following, Columbus reached an island in the New World, one of the Bahamas, on which be bestowed the name of San Salvador, and of which he took formal possession in the name of the Castillian sovereigns.* Having explored this island, and taken in a supply of wood and water, he sailed in quest of further discoveries, and soon after found himself amongst a number of beautiful islands, three of which he visited-Santa Maria de la Concepcion, Fernandina, and Isabella, with the scenery of all of which he was enraptured. Prosecuting his adventurous voyage, he came in sight of the island of Cuba on the 28th of October. Of this island he also took formal possession, giving it the name of Juana, in honour of Prince Juan. From Cuba, he procceded to Hayti or St. Domingo, to which he gave the name of Española, from an idea that the features of the country resembled those of Spain. Having left several of his crew here at their own request, Columbus set sail for spain on January 4, 1493. The illustrious navigator was received by Ferdinand and Isabella with every mark of honour and respect. A second voyage was proposed and cagerly seconded by the court of Spain. An expedition, composed of 17 sail, large and small, of which Columbus liad chief command, left the Bay of Cadiz on September 25, 1493. In this voyage, the principal discovery was the island of Jamaica. On May 30, 1498, Columbus set sail from Spain with a fleet of six vessels, on his third voyage, and now added the island of Trinidad to his former discoverics. From thence he proceeded to the mouth of the Orinoco, where he landed, and thus achieved the honour of being the first discoverer of the continent of S . America. With a mind singularly susceptible of the liveliest impressions from a contemplation of the beauties of nature, Columbus expresses his admiration of that which the New World revealcd to him in the following beautiful and simple language:- 'The beauty of the new land far surpasses the Campiña de Cordova. The trees are bright, with an ever-verdant foliage, and are always laden with fruit. The plants on the ground are high and flowering. The air is warm as that of April in Castile, and the nightingale sings

[^1]more melodiously than words can describe. At night the song of other smaller birds resounds swectly, and I have also heard our grasshoppers and frogs. Once I came to a deeply-cnclosed harbour and saw a high mountain that had never been scen by any mortal eye, and from whence gentle waters (lindas aguas) flowed down. The mountain was covered with firs and va-riously-formed trees adorned with beautiful blossoms. On sailing up the stream which empties itself into the bay, I was astonished at the cool shade, the clear crystal-like water, and the number of the singing birds. I felt as if I could never leave so charming a spot, as if a thousand tongues would fail to describe all these things, and as if my hand were spell-bound and refused to write.' In 1502, he undertook a fourth voyage, but it was unattended by any remarkable results. IIe reached the coast of IIonduras, and, subsequently, the Gulf of Darien; from which he returned to Spain, where he died four years afterwards, namely, in 1506 . The adventurer who followed next in the tract of Columbus was Alonzo de Hojeda, a young, bold, and enterprising Spanish cavalier, who, inspired by a similar spirit with that which animated the great navigator, and partaking, in some degree, of his genius, fitted out, at his own expense, an expedition of four ships, with which he pursued the course taken by Columbus. Having reached the continent of S . America, near the equator, lie passed the mouths of the Essequibo and Orinoco, examined the whole coast of Venezuela, as far as Cape Vela, and thus ascertained that the land alongst which he sailed was part of a continent. Hojeda was accompanied in this voyage by Amerigo Vespucci, a native of Florence, an experienced mariner, and a man of considerable talents and acquirements. On the return of the latter to Spain, in the year 1500, he published an account of his voyage, and, it is said, claimed the merit of being the first discoverer of the continent of S. America. $\dagger$ IIs book was read with all the interest and avidity which its extraordinary disclosures were so well calculated to excite, and the author's name silently but indelibly affixed to the New World-an injustice to the memory of Columbus which it would have been gratifying to have seen repaired, but which it is now too late to attempt.

Brazil was discovered in 1500 by Vincent Yancz Pinçon, who had accompanied Columbus in his first voyage. Steering N., he explored the mouths of the Amazon, and noting with amazement the immense body of water which it poured into the ocean, correctly inferred that so mighty a strcain could be found only in a continent of great extent. Towards the close of the year above named, Roderigo de Bastedas explored the coast from Cape Vela, the point at which IIojeda's progress terminated, to Puerto del Reterte, where that of Columbus closed, and thus connected the intervening continent. In 1507, Pinzon, and Juan Diaz de Solis, an able navigator, were sent out by the Spanish Government to explore the W. coast of S. Anerica. Arriving on the shores of Brazil, beyond which discovery had extended but a little way, they followed the coast towards the S., as far as the 40 th degree of S. lat., landing at various points, and taking possession of the country for the crown of Castile. Several adventurers of smaller note than those named, sought to earn wealth and reputation by making discoveries in the New World, but without success.

The pop. of America, North, Central, and South, and including the islands, has bcen estimated at between $44,000,000$ and 46,000,000.- Murray's IIistorical and Descriptive Account of British America; Nicol's History of the U. States; Tytler and Wilson's N. Coast of America; Humboldt's Travels and Researches in America; Kidder's Sketches of Brazil; Mier's Travels in Chili anl La Plata; Washington Irving's Tour to the Prairies; Do. Life and Voyages of Columbus; Norman's Rambles in Yucatan; Catlin's N. American Indians ; Penny Magazine; Penny Cyclopedia; Bell's Geography; Geography of America; London Geographical Journal, vol. v.; Sommerville's Physical Geography; Lyell's Geology; Humboldt's Aspects of Nature; Vo. Cosmos.)

+ Humboldt repels this imputation on the honour of Vespucci, and says, that after a careful study of eertain documentary evidence bearing on the question, he las ascertained that the charge is devoid of foundation; and 'that the name of Anerica has originated in a distant region (as, for instance, in France or Germany), owing to many concurrent circumstances, which appear to remove all suspicion from Vespucci.'(Iluabboldt's Cosmos, vol. ii. p. 680, note.)

AMERKOTE, or Omerkote, a tn. and fort, India, in Sinde, 90 m . E. Hyderabad; lat. $25^{\circ} 19^{\prime}$ N. ; lon. $69^{\circ} 47^{\prime}$ E., in the E. desert. It was at one time cap, of the independent principality of Dhat, and in 1813 was taken, by the Ameers, from the rajah of Judpoor. It is celebrated as the birthplace of the Emperor Akbar. The fort is about latf a mile from the town. It is a square of 500 ft ., with a mud wall 40 ft . high, defended by four round and six square towers, and has but one gate.

AMERONGEN, a vil. Holland, prov. of, and 21 m. S.E. from Utrecht. It is a nice-looking village, which has at various times suffered much from war. Its inhabitants are employed chiefly in cultivating tobacco and corn, and in rearing cattle. Pop. about 1500.

AMERSFOORT [Lat. Amisfurtum], a tn. Holland, cap. of arrond. and can. of same name, prov. of, and 12 m . N.E. from Utrecht; on the Eem, which is here formed by the confluence of several small streams, and is navigable throughout to the Znider Zee. Amersfoort is the seat of a court of first resort and of commerce; it was once fortified, and still has several gates, called poorts, but its fortifications lave been converted into public promenades. It is of an oval shape, and has one long street, running from end to end; and its houses, though good, are more remarkable for their size and projecting gables than for their beauty. It has a large quadrangular corn market place, called the great market, approached by seven streets; and a fisl, a vegetable, and a pig market. Outside the Koppelpoort is the harbour. The town possesses a Calvinistie church, built in the great market; one Lutheran, one Remonstrant, two R. catholic, and two Jansenist churches; and a Jewish synagogue, an orphan hospital, and a cavalry barracks. It has also a Jansenist seminary, a school of industry for carpenters, smiths, architects, \&c., a Latin school, and 10 common schools. It formerly had also the Pothouse, a benevolent institution, where a pot of warm food was kept always in readiness for distribution among the necessitous. A principal branch of business in Amersfoort is the trade in grain, for which there is a weekly market, more especially buckwheat, grown extensively in the neighbourhood. Tobacco, also extensively cultivated in the vicinity, is manufactured here, and exported to France and Italy, from which last country a considerable quantity is re-exported to Holland in the form of snuff. The manufacture of woollen goods, such as dimity, bombazine, \&c., is carried on to some extent; there is likewise a soapboiling establishment, and a good trade is done in red lierrings, which are rather famed. Besides the markets already referred to, an annual fair is held in October for horses, cattle, \&c. Amersfoort has suffered frequently from both fire and water, and is the birthplace of the celebrated statesman Johan van Oldenbarneveld, commonly called Barneveldt, grand pensionary of Holland, who, to gratify popular clamour, was beheaded in 1619, at the age of 72; and of Pieter Both, the first governor-general of Dutch East India. Pop. 12,000. -(Van der Aa's Nederlanden.)

AMERSHAM, a market tn. and par. England, en. Buckingham, 27 m . S.E. by S. town of Buckingham, and 25 m . N. by W. London, pleasantly situated in a valley traversed by a stream called the Misburne, an affluent of the Colne. It consists principally of one spacions, well-paved street, crossed by a smaller. The church, erected in the 16 th century, is a spacious building of brick, coated with stucco, and contains some handsome and interesting monuments. The only other buildings worthy of notice are the townhall, surmounted by a lantern and clock; and the Union workhouse, in the Elizabethan style. There are places of worship for Baptists and Quakers; a grammar school, with writing school attached; a Sunday school, national. British, and infant schools, and an almshouse for six poor widows. Manufactures:-Silk, crape, black lace, cotton, straw plait, and wooden chairs. Amersham was a Parliamentary borough by prescription, but was disfranchised by the Reform Bill. The par. contains 7855 ac. , and is in general hilly. Pop. in 1841, 3645.

AMESBURY, a market tn. and par. England, co. Wilts, hun. Amesbury. The town lies in a narrow valley on the Avon, 78 m . W.S.W. London, and 8 m . N. Salisbury. It is ill built, and consists of two streets only. Near it are the remains of an ancient encainpment, called Vespasian's Camp, although evidently not of Roman origin. At the parsonage house of Milston, in the vicinity, Addison was born in 1672.

Vol. I.

The rudiments of his elucation were acquired iu Amesbury. Area of par., 6060 ac . Pop. in 1841, 1171.
$A M G A$, a river, Siberia, gov. Yakutsk; it rises in the offshoots of the Yablonoi Krebet mountains, about lat. $59^{\circ} 0^{\prime}$ N.; lon. $126^{\circ} 30^{\prime}$ E.; flows N.E., and falls into the Aldan in lon. $135^{\circ}$ E., after a course of about 466 m . At Amginsk, where it flows between steep rocks 30 ft . in height, it is 3000 ft. broad. In winter it is frozen over, the ice forming a bridge even for heavily-laden rehicles.-(Erman's Travels.)

AMGINSK, a vil. Siberia, gov. Yakutsk; lat. $61^{\circ} \mathrm{N}$. ; lon. $132^{\circ} \mathrm{E}$. ; on the l. bank of the Amga, which is liere about 3000 ft . wide. It is a posting station and ferry, on the way between Yakutsk and Okhotsk. The dwellings are yurts or huts, of the Yakutian model ; but the inhabitants are Russians, and have built here a Greek church.-(Erman's Travels.)

AMHARA (Kingdom of), formerly a prov. of Abyssinia (which see), now an independent kingdom. Its boundaries do not seem to be well defined, but it may be said generally to lie between lat. $10^{\circ}$ and $14^{\circ}$ N., and lon. $35^{\circ} 10^{\prime}$ and $38^{\circ} 30^{\prime}$ E., having part of the country of the Gallas on the S., the country of the Shangalla negroes on the N., Tigré on the E., and Abu Ramla and other little-known territories on the W. Nearly in the centre of the kingdom is the great lake of Tzana or Dembea, and along its S. limit flows the Blue Nile. The plains in this province, as of several others in Abyssinia, contain a large portion of good soil, which yields abundant crops of barlcy, and rich pasturage. The principal plains are those of Dembea, Biegemider, and Miecha. The first, which lies around the lake of the same name, has been called, as elsewhere mentioned, the granary of the country, on account of its fertility and the blandness of its climate. In the vicinity of the lake the land is wholly in pasture, and is covered with numerous herds of cattle. The plain of Biegemider lies on the E. side of the Lake Tzana, and is also, in great part, under pasture; but excellent grapes are grown on the declivities of the mountains. The plain of Miecha stretches to the W. of Lake Tzana. The botany, zoology, \&ce, is the same as mentioned in the general article, Abyssinia. The capital of the kingdom is Gondar (which see).

AMIIERST, a seaport tn. India beyond the Ganges, prov. same name, the most N . of the Tenasserim provinces (which sec) ; lat. $16^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $97^{\circ} 33^{\prime}$ E. (r.) ; on a triangular peninsula, on the E. side of the Gulf of Martaban, 31 m . S. Moulmein. When the town of Martaban was restored to the Burmese, agreeably to treaty, at the conclusion of the war, the spot on which Amherst is built, and which was then covered with jungle and fruit trees, was chosen by the British, April 5, 1826, as a military and commercial station, and also as an asylum for intending native emigrants. On the ligher grounds are the fortifications, governor's house, and other public buildings, and the houses of the Europeans and Chinese, the lower being assigned to the natives. The harbour, which is spacious and secure, though it has a dangerous bar, with only 6 ft . of water at neap tide, is described as being perfcetly calm for two hours both before and after high water, and well suited for wet docks, having at no time a less depth than 3 fathoms, while vessels may safely anchor within 100 yards of the shore. The town and vicinity are well supplied with good water, which is readily procured within 6 ft . If the surface. Pop. in $1838,5000$.

AMHERST, a tn., U. States, Hampshire, Massachussets, 82 m . W. Boston. It is the seat of Amherst college, a flourishing institution, founded in 1821, and incorporated in 1825. It has a president and 10 professors, or other instructors. The whole number of alumni is 613 . It has 15,000 volumes in its libraries, a very complete set of philosophical apparatus, and a cabinet of natural history, including mineralogy. There are, besides, in the town, an academy with 87 students, and eight schools with 586 scholars. Pop. 2550 --Amierst is the name of a county, a township, and of several post townships in the U. States.

AMHERST ISLES, a group lying W. of the S.W. extremity of the Korean Peninsula, and distant from it about 60 m . ; lat. $34^{\circ} 25^{\prime}$ N. ; lon. $126^{\circ} 0^{\prime}$ E.-_There is another island of the same name off the S.W. coast of Arracan, between the island of Cheduba and the mainland; lat. $18^{\circ} 45^{\prime}$ N. ; lon. $94^{\circ} 0^{\prime}$ E.-In the Tong IIai or Eastern Sea, off the coast of the Chinese province of Kiang, there is a dangerous ledge called Amherst Rocks, in lat. $31^{\circ} 10^{\prime} \mathrm{N}$.

AMHERSTBURCH, a garrison tn. Upper Canada, w. dist., Essex co., l. bank, Detroit, 5 m . above its junction with Lake Erie, 225 m. W.S.W. Toronto ; lat. $42^{\circ} 7^{\prime} \mathrm{N}$. ; lon. $83^{\circ} 9^{\prime} \mathrm{W}$. Its streets are generally narrow ; and the town contains a courthonse, five places of worship, Episcopalinn, R. eatholic, Presbyterin, Methodist, and Baptist; a reading room, and a market place. Two annual fairs are held in virtne of a charter obtained in 1845 . It has a good harbour with $3 \frac{1}{2}$ fathoms water. Nimerons steamers touch here. lop. (1852), 1880.-(smith's Canadian Gaz.)

AMICU, or Amucu, a lake, S. America, in Veneznela, prov. Cumana; situated $m$ a level tract, between the rivers Rupmoony and Tocuto. It is of small extent in the dry season, being searcely three m. in length, and almost eovered with rushes; but after the rains, it inundates the adjacent low districts. The comntry in which this lake is sitnated was the El 1)orado of the days of Queen Elizabeth, and was then known as 'the Great Lake with golden banks;' and within a few niles of it was supposed to stand the far-famed 'imperial and golden eity of Manoa,' the object of the unfortunate expedition of sir Walter Raleigh.

AM1ENS [anc. Somarobriva, Ambiani], a tn. France, cap. dep. Somme, on the railway from Boulogne to Paris, in the centre of a pleasing and fertile district, and traversed by the Somme, which, within the town, is subdivided into 11 canals, and affords great facilities for its numerous manufactures. It was once a place of strength, and still possesses a regular citadel, but its other fortifieations have been dismantled, and the ramparts have been replaced by boulevards, lined with trees, which, encireling the town, have a circumference of about 3 m. , and form not the least important of its decorations. Amiens is clivided into the upper and the lower town. The former has wide and regular streets, lined with houses with few exceptions built on an uniform plan, and generally of two stories. The latter has narrow streets, houses old, without being properly ancient, and is throughout so intersected by the ranifications of the Somme and the numerous bridges over them, as to have made Louis XI. give it the name of his little Venice. The most magnificent edifice of Amiens is its eathedral, of European fame. It was founded in 1220, and not completed till 1288. Its W. front, which is said not to have been finished till a century later, is flanked by two quadrangular towers, and is decorated in the richest Gothic style. The spire, of a light and airy form, is 420 ft . high. The entrance is by three magnificent porches covered
visible. The entire length of the edifice from E . to W. is 415 ft .; length of the transept from N . to $\mathrm{S} ., 182 \mathrm{ft}$.; breadth of the nave, with its aisles, 78 ft .9 inches; breadth, of the transept, 42 ft .9 inches. Among the other buildings of note are the IIotel de Ville, with the painted areades which line its base, and the large council hall, allorned with numerons pietures; the royal college, formerly the abbey of St. John; the lIotel Dien or general hospital, in the Rue St. Len; the grand seminary, with its magnificent stair and columned chapel ; the Cliatean d'Lau; Malmaison, oceupied by the exchange and school of design; the theatre; and the Bibliotheque Communale, a handsome edifice, with a peristyle of Doric columns, containing 40,000 printed, and 400 MS . volumes. Amiens having an opening to the sea by the Somme, which is navigable for vessels of 40 or 50 tons, is well sitnated for trade, and has numerous important manufaetures. From 70,000 to 80,000 pieces of cotton velvet-the particular species of it ealled velvet of Utrecht alone employing 400 lonms-and 130,000 pieces of fine kerseymere, with considerable quantities of serges, plush, drugget, cambrie, tapestry, and other eotton, linen and woollen stuffs, in great variety, are annually produced. The spinning of flax and worsted also is one of the great staples of Amiens. The former employs 3000 looms, while the wool worked up by the latter amounts to 450 million kilogrammes, equal nearly to 1000 millions English lbs, or 40 million packs. Among the miscellaneous works, in which numerous hands are employed, may be mentioned dye, soap, and beet-root sugar works, bleachfields, and paper mills. One peculiar product for which Amiens has long been famous is duck pies, known by the name of Patés de Canard, and largely exported to all quarters. Among historical recollections may be mentioned that here St. Louis gave judgment, as arbiter, in the quarrel between IIenry III. of England and his barons, relative to the statutes of Oxford; and that here, during the struggles to regain the IIoly Land, the kings of England, France, Aragon, Navarre, and Bohemia, met to concert a new crusade. Here, too, to come down to more recent times, was signed, in 1802, between Great Britain and France, the short-lived peace which bears the name of $A$ miens. Pop. 47,000 .

AMIRANTLis, a group of sinall islands, Indian (eean, S.W. from the Seyehelles, between lat. $4^{\circ}$ and $6^{\circ} \mathrm{S}$., and lon. $54^{\circ}$ and $56^{\circ}$ E., about 300 m . N.N.E. the isl. of Madagascar. They differ little from each other, being generally from $1 \frac{1}{2}$ to $2 \frac{1}{2} \mathrm{~m}$. in length, situated on coral banks, and seloom exceed 20 or 25 ft . in height, but they are erowned with trees. They are thinly iuhabited, and insufficiently cultivated, but the eoasts abound with fish, and the islands furnish vessels in passing with water, cocoa nuts, huffaloes, sheep, and turtle. By digging 12 or 14 ft ., water may generally be obtained. Calms, and uncertain currents, with the want of good anchorage, make it desirable not to approach these islands with large ships. The group has belonged to Great Britain since 1814.

AMISUS, an ane. seaport, Asia Minor, on the Black Sea; lat. $41^{\circ} 18^{\prime} \mathrm{N}$. ; lon. $36^{\circ} 20^{\prime} \mathrm{E}$. Few vestiges of it now exist. The prineipal are the remains of its ancient pier, composed of large blocks of a volcanic conglomerate, some of which measure 19 ft . by 6 or 8 inches in thickness.

AMJERAIF, a tn. Ilindoostan. prov. Malwa, $56 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Oojein, and 12 m . W. Hhar; lat. $2 \vartheta^{\circ} 23^{\prime} \mathrm{N}$. ; lon. $75^{\circ} 13^{\prime} \mathrm{I} \cdot$; situated in a large valley, 1890 ft . above the sea. It has good bazaars, plentifully supplied.

AMlAJ, or Ambia, one of the
with numerous bas-reliefs, on which seriptural and allegorical subjects are admirably represented. This magnifieent structure, at once light and bold in design, is in the form of a cross, composed of a nave and choir in the one direction, and a transept in the other. The broad and lofty windows are ranged in two tiers, and so elosely that hardly any wall is

Alcutian 1slands, Fox group; lat. (E. point) $52^{\circ} 6^{\prime}$ N.; lon. $172^{\circ} 50^{\prime} \mathrm{W}$. (22.)

AMI,WCH [pronounced Amlook], a bor, scaport, and par., N. Wales, N. coast isl. Anglesey. The town lies on a rising ground on the sea-shore, 14 m . W. by N. Bangor, about 14 m. N. E. by E. Holyhead, and 56 m . W. by N. Liverpool ; lat.
$53^{\circ} 24^{\prime} \mathrm{N} . ;$ lon. $4^{\circ} 19^{\prime} \mathrm{W}$. It consists of one main street, about a mile in length, and of several diverging lanes and alleys. The houses are generally well built of stone, which abounds in the vieinity. The principal buildings are the church, the national school, and the seientific hall, all plain edifices, without any pretensions to architectural elegance. There are, besides the church, two Calvinistic chapels, one Independent, one Baptist, and two Wesleyan. The most inportant school is the national school, in which (March, 1850) about 300 children are educated. There are also three day schools, and an excellent literary and scientific institution, with a library and museun attached. The staple article of conmerce is copper ore, obtained in the neighbonring Parys motutains, the working of which gives employment to about 1000 persons, though not so flourishing at present as formesly. The shipping interest of the place is in a more thriving condition. At the head of the pier, which is of stone, there are 20 ft . at spring, and 13 ft . at neap tides; within there is a dock capable of holding several vessels. A small white lighthouse stands at the end of the N. point, exhibiting a fixed light, which may be seen, in clear weather, 4 m . off. Amlweh unites with the Beammaris district in returning a member to the House of Commons. Pop. of the tn. in 1841, 1243; of the par. 4974.-(Correspondent in Amlweh.)

AMMAN, or Amson [the Rabbah of Scripture, and Philadelphice of the Greeks], a ruined and deserted city, Syria, pash. Damascus, 16 m. E.s.E. Szalt, and 58 m . N.E. Jerusalem; lat. $32^{\prime} 5^{\prime} \mathrm{N}$.; lon. $36^{\circ} 20^{\prime} \mathrm{E}$. Its ruins are scattered along the N. bank, and near the source of a small stream, called Moie Amman, a tributary of the Terka or 'Turka [ane. $J a b b o k]$, and sufficiently attest its former grandeur. There are the remains of a spacious chureh, several temples and columns, a high bridge over the river, on each side of which there are walls like quays, and whose chamel is paved; and a castle, on a hill N. of the city. South of the river stood a large theatre, 304 ft . in diameter, with forty-two tiers of seats, built on the declivity of a hill, and partly excavated in the solid rock. The whole plain on which the city stood, 1 m . long, by $1 \frac{1}{2} \mathrm{~m}$. broad, is covered with the remains of all kinds of edifices, cxlibiting traces of different eras, and composed of a calcareous stone, ill suited to resist the action of the elements. -(Burekhardt's Travels in Syriu; Kitto's Physical ('eography of Palestine ; \&c.)

AMMER, a river, Bavaria; it rises at the head of Graswang valley, on the frontiers of Tyrol; flows in a crooked course N.E.; forms, about 22 m . S.W. Munich, the Ammersee (Lake Ammer), 10 m . long, by $2 \frac{1}{2}$ broad; and falls into the Isar, near Mosburg, after receiving the water's of several affluents. Total length, about 100 m .

AMMERSCHWIIIZ, or Ammersweyer, a small tn. France, dep. Haut-Rhin, about 5 m . from Colmar. Both red and white wines, of excellent quality, are made in the vicinity. Pop. 2169.

AMMITOK, an isl., N.E. coast of Labrador, between 70 and 80 m. S.E. the entrance into Hudson's Straits ; lat. $59^{\circ} 28^{\prime} \mathrm{N} . ;$ lon. $63^{\circ} 0^{\prime} \mathrm{W}$.

## AMMOO, a river, Persia. See Oxus.

AMOAS, or Auwas [anc. Emmaus and Nicopolis], a small tn . or vil. Palestine, on a conical bill, about 10 m . N.W. Jerusalen. It was at one time a bishop's seat. Both this and Al-Kubeibeh, a village about half the distance of Amoas from Jerasalem, have been confounded with the Emmaus of Seripture, the site of which is now unknown.-There is another village of Palestine named Einmans or El-hamam, beside the lake, and near the town of Tiberias, celebrated, from remote antiquity, for its hot springs, which are of a high tem perature, and possess medicinal qualities. This place, and its vicinity, exhibit the remains of many ancient buths, from which it lias received its name. Over the springs has been more recently erected, by Ibrahim Pasha, a large eircular bathing house, with a dome, similar to the baths of Constantinople.(Robinson's Biblical Researches; Kitto's Palestine; \&c.)

AMOL, a tu. Persia, the third in importance in prov. Mazunderan, 27 m . W.S.W. Balfroosh; lat. $36^{\circ} 30^{\prime} \mathrm{N} . ;$ lon. $52^{\circ} 23^{\prime}$ E.; on the Herauz, a full and rapid stream, about 12 m . above its embouchure, in the Caspian Sea. Annol, which is without walls or defenees, was formerly a flourishing blace, as extensive ruins in the neighbourhood testify, among which is the once splendid masoleum of seyed Quwam u

Deen, once Sovereign of Saree and Amol, who died in 1378, erected by Shah Abbas, one of lis descendauts. In the suburbs are a grand palace, which belonged to Shah Abbas; and three towers, said to have been temples of the ancient Guebres, or fire worshippers. The number of houses altogether is between 4000 and 5000 . The bazaars are large, and well supplied; but beyond mere local tratfic, there is little or no trade. The inhabitants cultivate rice and cotton, or are employed in the iron forges and camon foundries of the district. In summer they retire to their yeylaks or summer houses, in the inountains, which approach to withun 5 or 6 m . of the town on the S . In winter, when it is fullest, Amol is supposed to contain a population of from 35,000 to 40,000 .

AMONEBURG, a tn. Hesse-Cassel, 11 m. E.N.E. Marburg, on a basalt hill, in which are numerous springs. It is partly surrounded by a wall, with towers, and by a ditch; is irregularly and badly built ; and las a church, and a spacious market place. Pop. 1143.

AMOOR, Amur, or SAGhalien, a large river, Asia, in the Chinese prov. Manchooria. It is formed of the rivers Shilka and Argun, which unite in lat. $53^{\circ} 30^{\prime}$ N.; lon. $122^{\circ}$ E., on the fronticrs of Russia and (hina. The former of these is formed by the Ingoda and the Onon, the latter being the main stream; and rising about lat. $49^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $110^{\circ} \mathrm{E}$. ; in the Khentai Khan, a branch of the mountains S.E. Lake Baikal, called Khing-Khan-oola by the Chinese, and Yablonoi Krebit by the Russians. Its sources are in the Russian gov. Irkutsk, but it crosses the Chinese frontier, and again returns to Siberia, in which it continues with a N.E. course till it joins the Argui on the frontier, under the nane of the Shilka, as already stated. The Argun-in the early part of its course named the Kerulen, Kerlon, or Lu -Khiu-rises about 30 m . S.E. from the sources of the Onon; and in the sane mountain range that gives rise to that stream, follows a N.E. course, about lat. $49^{\circ} \mathrm{N} . ;$ lon. $116^{\circ} \mathrm{E}$. , forms Lake Kulon; and from 25 m . N.E. of that lake, till it unites with the Shilka in forming the Amoor, constitutes, for 300 m ., the boundary between Russia and China. The Amoor, from the junction of these two streams, flows S.E. to Tehan, where, from the S., it receives the Sungari, lat. $47^{\circ} 45^{\circ} \mathrm{N}$. ; lon. $131^{\circ} 40^{\prime} \mathrm{E}$. ; thence it flows N.E. to its embouchure in the Gulf of Sagalin or Saghalien, opposite the N.W. end of the island of the same name, lat. $5 z^{\circ} 8^{\prime} \mathrm{N}$. ; lon. $140^{\circ} 0^{\prime}$ E. Besides the Songari, the Amoor receives from the S . the Ousouri, lat. $48^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $134^{\circ}$ $25^{\prime}$ E.; and from the N., the united waters of the Tehikeri and Silimpdi, near Sagalin-oola, lat. $50^{\circ} \mathrm{N}$.; lon. $126^{\circ} 30^{\prime} \mathrm{E}$. It has likewise numerons smaller affuents. The whole course of the Anoor, including its windings, is estimated at 2380 geo. m .; and the area of its basin, 582,880 geo. $\mathrm{sq} . \mathrm{m}$, It is a rapid stream, navigable from the junction of its two head streams, and is annually frozen over. Its navigation, long kept strictly by the Chinese to themselves, was, in 1847, opened up to Russia, to whom was then conceded the right to trade in its waters.

AMOORANG, or Asourasg, a bay, and vil. same name, isl. Celebes. The bay is on the N.W. coast; lat. $1^{\circ} 11^{\prime} \mathrm{S}$.; lon. $124^{\circ} 36^{\prime}$ E. ; it is about 14 geo. m. long inland, and about 6 geo. m. broad, shaped something like an open-mouthed bag, and having anchorage for large vessels -The vil. lies at the head of the bay, 25 geo. m. S.W. Menado.

AMORBACII, a tn. Bavaria, circle Lower Main, at the confluence of the Mudau and Bilbach, 44 m . S.S.E. Frankfort-on-the-Main; lat. $49^{\circ} 38^{\prime} \mathrm{N}$. ; lon. $9^{\circ} 12^{\prime}$ E. It has a palace, in which the Prince of Leiningen resides, and which was onee a richly-endowed abbey of Bencdictines; two churches, a school of design, infirmary, and almshouse. Manufactures:Linen, paper, gunpowder, flour, and oil. It has two saw, and two tulling mills. Pop. 2900.

AMORGO [anc. Amorgos], an isl. Grecian Archipelago, between Naxia and Stampalia, about 22 m . long, by 5 m . broad; lat. $36^{\circ} 50^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $25^{\circ} 55^{\prime} 42^{\prime \prime} \mathrm{E}$. (R.) It is mountamons and rocky, but its valleys are fertile, producing grapes and olives. It lias a town of the same name, with a castle; and a large harbour, called Santa Ama. Near it is a Greek convent, built on a steep rock overhanging the sea, and aceessible only by ladders. Amorgo was formerly a populous island, with some considerable towns, and was the birthplace of the poet Simonides. Its present population, of whom a consider. able proportion are F'rench and English, amounts to 2500 .

AMORGO-POULO, a small isl. Crecian Archıpelago, S. of Amorgo, lat. $36^{\circ} 36^{\prime} 54^{\prime \prime} \mathrm{N}$.; lon. $25^{\circ} 42^{\prime} 45^{\prime \prime} \mathrm{E}$. (r.) almost uniohabited.

AMOU, or Amou-Daria. Sce Oxus.
AMOUR (St.) - $1, ~ A \mathrm{tn}$. France, dep. Jura, $19 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Lons-le-Saulnier. It has sawmills, driven by water power, for eutting sandstone and marble; iron mills, forges, tanneries, nailworks, and potteries; and some trade in wines, cattle, horses, and poultry. The remains of an old castle, which belonged to the family of Choiscul, and hat extensive fortifications, are found here. Pop. 1939.-2, A vil., dep. saône-et-Loire, 7 m . from Macon. Pop. 792.

AMOY, a seaport tn. China, on an island of the same name, prov. Fokien; lat. (eitadel) $24^{-} 23^{\prime}$ N.; lon. $118^{\circ} 4^{\prime}$ E. (i.) nearly opposite the centre of the island of Formosa. The name is a corruption of the Chinese word IIcamun, pronounced by the natives Ha-moy. It is situated at the S. end of th3

island, at the mouth of two united rivers, one of which communicates with the eity Chang-chaw-foo, containing, it is said, upwards of 800,000 inhabitants, and of which Amoy, though itself a large and populous city, is considered merely the port. Amoy is built on a deelivity sloping to the harbour, and, including its suburbs, is supposed to be about 9 m . in eireunference. The streets are narrow and dirty, but many of the buildings are of extraordinary size. In one, the residence of the under governor, an entire British regiment was quartered; and another, with its staff, found ample accommodation in the Admiral's office. The town is at once protected and commanded by a citadel, the walls of which are castellated, and from 15 to 30 ft . high, with an inner rampart all the way round. It has four gates, and is a mile in cireumference. A range of hills, about 600 ft . high, with broken and abrupi emineuces, surround the city. The bay and harbour are safe and commodious, of easy access and egress, and of such depth of water, that vessels anchor within 50 yards of the houses. The entrance to the inner harbour is by a channel of 675 to 840 yards width. Amoy is well situated for both foreign and native trade, and being the emporium of the province, both are considerable; although, from the imperfect manner in which the trade returns are made u1, their preeise extent cannot be ascertained. The total amount of British and foreign trade for the three years ending 1848, is stated as follows:-

|  | 271,441 | " | 186,896 |  |
| :---: | :---: | :---: | :---: | :---: |
| 1818 | 212,416 | " | 97,373 |  |

Smuggling is carried on to a great extent. No foreign merehants reside at Amoy. The city is divided into distriets, over each of which a sort of petty governor or tepro preshles, who colleets the taxes, and is expected to maintain peace and good order in his district. The houses are again divided into three elasses; the first, paying 10 s . amually; the second, $6 s .6 d$. ; and the third, $4 s$. The reeognizad taxes are a bouse, poll, and a land tax. The native imports are rice, sugar, and camphor from Formosa and Fuh-chow; glum and cotton from shanghai; and grain, pulse, oileake,
and a coarse description of cotton goods, from the northern ports. The foreign imports are Bengal and Bombay cotton, English cottou goods, cotton yarn, iron, lead, steel, betel nut, liquid indigo from Manilla, pepper, ratans, rice, and grain, beche-de-mer, sharks' fins, buffalo and deers' horns. The native exports are eamphor, sugar, sugar eandy of the fincst quality, earthenware, paper umbrellas, paper, joss paper, joss stick, \&c. The current coins are Spanish and Mexiean dollars, and rupees; doubloons and guilders are also in frequent use. The island being extremely barren, the inhabitants are dopendent on the neighbouring island of Formosa for almost all the necessaries of life.

The merclants of Amoy are distinguished for their enterprise, and are considered amongst the wealthiest in the Chinese empire. They own upwards of 300 junks-some of them 800 tons burden - with which they earry on an extensive trade with Borneo, Manilla, Macassar, Java, the Soo-loo Islands, Singapore, \&e.

The municipal govermment of Amoy is marked by all the vices that everywhere distinguish Chinese rule, being as weak and inefficient as it is vieious and corrupt; bribery, fraud, and extortion, prevail in every department, and riot and bloodshed go uncheeked and unpunished. Nor is the morality of the inhabitants in a better condition ; robbery and assassination are frequent, and the murder of female infants, by their parents, so common, amounting, it is said, to 40 per cent., as to attract hardly any attention, exciting no remorse on the part of the unnatural perpetrators, and no indignation on that of the populace. It is, however, but justice to add, that the Chinese Govermment has here, as elsewhere, made an attempt to arrest the progress of this particular species of crime, by erecting a foundling hospital; but with so little effect, that in a pond hard by the hospital at Amoy, the bodies of several infants, sewed up in mats, were discovered by the 3ritish soon after their oceupation of that town. A system of the grossest immorality also prevails.

On the British taking possession of the island of Amoy, on which the town stands, they found a battery 1100 yards long, mounting 90 guns and construeted with extraordinary skill. There were several other smaller forts and batteries, one of which mounted 42 guns. Amoy was captured by the British on August 26, 1841, and by the treaty of Nanking, dated August 29,1842 , that port, with others, was opened to our trade, and a British consul established there. A supplementary treaty, dated October 8,1843, estahlished a tarití of exports and imports, and admitted other foreigners to the same privileges as British subjects. Shortly after the occupation of Amoy by the British, the native superintendent of trade represented to the Emperor, that most of the great mercantile establishments there had been ruined by the war, and that the duties had fallen to little more than one-third of their former amount. The remittances from Amoy for foreign and English manufactures, are chiefly in tea and silk. Opium is sold in every part of Amoy, and is hawked through the streets. The consumption is estimated at 150 chests per month, the average value being $£ 170$ sterling per ehest. The population-mostly employed in the coasting trade-amounts to about 250,000 to 300,000.- GGutzlaff's Journal; Martin's China; The Midalle Kingdom.)

AMPANAN, Ampinan, or Ampunan, the primeipal trading port in the isl. of Lombok, Indian Arehipelago. It lies in the Strait of Lombok, lat. $8^{\circ} 30^{\prime} \mathrm{S} . ;$ lon. $116^{\circ}$ E., in an open roadstead, in the midst of rice fields, and surrounded by a few cocoa and other fruit trees; but unsheltered from the S.E. monsoon when it is very hot. Few vessels visit Ampanan without leaving one or more of their crew in the 'white man's grave.'-(Jour. Indian Archipelago, vol. iii.)

AMPAZA, a seaport tn., F. Africa, coast of Zanzibar, eap. of a small kingdom of the same name, tributary to the Porturuese. It has a eonsiderable trade in slaves, gold dust, and ivory.

AMPFING, a vil. Bavaria, 6 m . N.W. Miihldorf; and 39 m. E.N.E. Munieh. In 1322 , Ludwig, Emperor of Bavaria, here took prisoner Frederick the Beantiful, Emperor of Austria; and here, in 1800, Moreau comneneed his fanous retreat before the superior forces of the Archduke John. I'op. 476.

AMPHILA, a bay, Red Sea, N.E. coast of Abyssinia, laving twelve islands, one of which is named Safety Island,
and another Amphila. The centre of the bay is in lat. $14^{\circ} 43^{\prime}$ N.; lon. $41^{\circ} 4^{\prime} \mathrm{E} . ;$ and the islands are chiefly composed of madrepores, corals, and echinites; they generally rise about 30 ft . above the sea level, and are covered mercly with a thin layer of soil. The bay is tolerably deep; and from Amphila Point on the S., to its most N. point, is about 15 m . across. It is frequented by numerous kinds of fish, by pelicans, herons, and other aquatic birds; its shores are covered with jungle, and yield good firewood.

AMPHINOME SHOALS, Australia, N.W. coast; lat. $19^{\circ} 41^{\prime}$ S.; lon. $119^{\circ} 22^{\prime} \mathrm{E}$. (8.)

AMPHITRITE ISLANDS, a part of the group known by the name of the Paracels, in the China Sea, lying to the S.E. of the island of Hainan. The Amphitrites are in two groups, to the N.N.W. and S.S.E. of each other, and having a deep water channel between them. The N. group consists of five low, narrow islands, connected by a reef of rocks that projects 2 or 3 m . beyond their extremes. The S . group consists of two islands, called, respectively, Woody and Rocky Islands, lying near each other. The first is in lat. $16^{\circ} 50^{\prime} \mathrm{N}$.; lon. $112^{\circ} 18^{\prime} \mathrm{E}$. (r.) and is about 3 m . in circumference, covered with small trees; the second, Rocky Island, is in lat. $16^{\circ} 52^{\prime} \mathrm{N}$. . lon. $112^{\circ} 20^{\prime} \mathrm{E}$.

AMPLEFORTH, a par. England, co. York, N. Riding; 2270 ac.; 4 m . S. W. by S. Helmsley. Pop. in 1841, 446.

AMPLEPULs, a tı. France, dep. Rhône, 21 m . W.S.IV. Villefranche. Manufactures:-Cotton cloth, ginghams, muslins, and calicoes. It has also several cotton mills, driven by water power, and bleachfields. Pop. 1961.

AMPNEY, the name of four parishes, England, all in co. Gloucester:-1, Ampney-Crucis, area, 2660 ac. $; 3 \frac{1}{2} \mathrm{~m}$. E. Cirencester. Pop. in 1811, 591.-2, Ampney-Down, 2470 ac ; 5 m . S.E. Cirencester. Pop. in 1841, 425.3, Ampmey (St. Mary), 1170 ac.; 4 m. E. by S. Cirencester. Pop. in 1841, 121.-4, Ampney (St. Peter), 860 ac. ; adjoining the above. Pop. in 1841, 196.

AMPORT, a par. England, co. IIants; 3460 ac.; 4 m . W. by S. Andover. Pop. in 1841, 771.

AMPOSTA, a tn. Spain, in Catalonia, prov. of, and 46 m . S.W. from Tarragona, l. bank of the Ebro, 13 m . from its mouth. It is partly walled, overlooked on the N. by a castle; and has two squares, two churches, a large, well-conducted school, and is the N. terminus of the Ebro Canal, which enters the Mediterranean at Port Alfagues. Manufactures:-Soap, gypsum, and oil. Exports:-Grain, with which the vicinity abounds. Imports:-Rice and salt fish. Pop. 1674.

AMPTHILL, a market th. and par. England, co. Bedford ; the former pleasantly situate, partly noon, and partly between two gentle acclivities, $40 \mathrm{~m} . \mathrm{N}$. by W. London. It is neat, clean, and regularly bnilt, and contaius many good houses, with an excellent market-place. The church is an ancient edifice, with a tower at tho E. end. There are places of worship also for Wesleyans, Independents, and the Society of Friends. Besides other charities, there are alnnshouses near the church for 12 widows, and at a little distance from the town are almshouses for nine men and four women. There is also a charity school for 10 boys and 14 girls, and varions other schools, of which the national school is the most important. With exception of an extensive brewery, and a little lace and straw-plait working, there are no manufactures in Ampthill. Market-day, Thursday; two cattle fairs annually in May and November. Petty sessionsare held by the county magistratcs. The Ampthill station on the Bedford Branch of the London and North Western Railway, is $2 \frac{1}{2} \mathrm{~m}$. N. W. the town, and a little W. is Ampthill house, formerly the residence of Lord Holland. Area of par. 1928 ac. Pop. (1841), 2001.

AMPTON, a par. England, co. Suffolk; 870 ac.; 4 m. N. Bury St. Edmunds. Pop. in 1841, 147.

AMIPUDIA, a tn . Spain, in Leon, prov. of, and 18 m . S.W. from Palencia. It possesses a small but convenient square, some ill-built and narrow streets, a parish church, townhouse, hospital, granary, and two schools. Pop. 1836.

AMRAN, a th. Arabia, in Yemen, cap. dist. same name; 25 m. N.W. Sana, and 108 E.S.E. Lohcia; lat. $15^{\circ} 32^{\prime}$ N.; lon. $43^{\circ} 52^{\prime} \mathrm{E}$.; at the foot of a lill, in a fertile country, in the midst of coffec plantations. Pop. estimated at 2000.

AMRAN MOUNTAINS, a range in the S.E. part of Afghanistan, the highest summits of which attain an elevation of about 9000 feet. It is traversed by the Kojuk Pass,

7457 ft . high. These mountains bound the table lands of Shawl and Pisheen on the W.

AMRAWU'TTY, or OmRAUTTE, a tn. India, jrov. Berar, 90 m . W. by S. Nagpoor, and 30 m. S.E. by. E. Ellichpoor; lat. $20^{\circ} 54^{\prime} \mathrm{N} . ;$ lon. $77^{\circ} 57^{\prime} \mathrm{E}$. It is a large and populous town, and has a considerable inland traffic.

AMREE, a vil. Sinde, r. bank, Indus, 18 m. S.S.W. Sehwun. It was formerly a large town, but portions of it have been swept away by the river, and it is now greatly diminished in size.

AMRITSER, Asritsar, or Umritsir, a large and populous city of the Punjab, in the Barri Doab, 40 m . E. Lahore; lat. $31^{\circ} 40^{\prime} \mathrm{N}$.; lon. $74^{\circ} 56^{\prime} \mathrm{E}$. It is of a compact circular form, about 9 m . in circumference, and comprises 19,015 dwelling houses; those of the upper classes are lofty and commodious, but the greater portion are confined, filthy, and crowded into narrow and dirty streets. There are 8272 shops, 399 Hindoo, and 49 Mahometan places of worship. The shops and bazaars exhibit, in great abundance, the richest products of India. An ample supply of excellent water is obtained from 650 wells. Amritser has been long celebrated as a holy place, in consequence of its possessing a sacred temple, situated on an island in the centre of a reservoir or tank, of about 150 paces square, constructed in 1581, by order of Ram Das, the fourth Ciuru or spiritual leader of the Sikhs, who gave to the work the name of Amrita Saras or 'Fount of Immortality.' The water of the tank, supplied, apparently, by natural springs, is extremely pure; and the temple, which is dedicated to Vishnu, is profusely adorned with gold, and costly curbellishments. In the latter, the Guru of the Siklis sits to receive the homage and offerings of his followers, attended by 500 or 600 Akalis or priests attached to the temple. But the most remarkable object in the town is the large fortress of Govindghur, built by Runjeet Singh, surrounded by a deep ditch of about 2 m . circuit. It is abundantly supplied with water, but is in other respects exceedingly incommodious, and is, besides, unhealthy. A canal was constructed by the same chief, from Amritser to the Ravi, a distance of about 30 m .; but it is little used. The staple manufactures are shawls, inferior silks, and woollen and cotton cloths. The shawls, which are in imitation of those of Cashmere, are made of wool obtained from Thibet and Bokhara. In contrast to the Sikh inhabitants gencrally, who are noted for their cleanliners, the shawl weavers are represented as filthy in the extreme, and wan and emaciated in appearance. Amritser las also an extensive transit trade with varions parts of India, and is in turn an emporium for many of their productions, including large quantities of rock salt, brought on camels from a mine $120 \mathrm{~m} . \mathrm{N}$. Lahore. East of the city there are numerous large gardens, stocked with orange, lime, lemon, peach, apple, and other fruit trees. The soil in the vicinity is very fertile, and the mode of cultivation superior to what is found in most parts of India. The crops are wheat, barley, maize, sugar cane, turnips, carrots, pumpkins, \&c. P'op. of the town, 115,000 , of which 9000 are sikhs, the rest being Hindoos and Mahometans.-(Asiat. Soc. Transactions; Jaquemont's Letters from India; Moorcroft; Hügel; \&e.)

AMlomi, Amron, or Ammum, a crescent-shaped isl. Denmark, duchy Schleswig, in the German Ocean, about 17 m . from the mainland; lat. $54^{\circ} 40^{\prime} \mathrm{N}$.; lon. $8^{\circ} 20^{\prime} \mathrm{E}$. It contains a few villages, inhabited chicfly by fishermen and sailors, and constitutes a parish of Denmark, named St. Clement. Pop. 600.

AMROOAH, a considerable tn. Hindoostan, nearly in the centre of prov. Delhi, 85 m . E. by N. the city of that name; lat. $28^{\circ} 51^{\prime}$ N.; lon. $78^{\circ} 31^{\prime}$ E. It contains a neat mosque; in the vicinity, there is an extensive garden, and, at a greater distance, large plantations of sugar and cotton; bet the country around is generally poor, and thinly inhabited.

AMROTH, a par., S. Wales, co. Pembroke, 7 m . S.E. Narberth. Pop. 779.

AMsTEL, a small stream, Holland, one of the many mouths of the Rhine. It takes its rise from the Old lhine in N. Ilolland, and forms a continuation of the Aar and the Drecht. It takes a N.E. course along the Lake of Haarlem, traverses the city of Ainsterdam, and there falls into the Zuider Zee. It is canalized, and rendered navigable for vessels of considerable size.

## AMSTERDAM

AMSTELVEEN, a vil. Holland, prov. N. Holland, 5 m . S. Amsterdan, in a moorish conntry betwixt the Amstel and the Lake of Ilaarlem. It eonsists of one long street, and has a neat church, is sehool, a poor's house, and an anmual horse market. Pop. about 2500.-(Van der Aa.)

AMNTERDAM, furmerly Amstelnedamme, or Aemsteliedamme, and also Amstelidam [The dike or dam of the Amstel; Latin, Amstelodumum], an important commercial eity, cap. kingdom and prov. Holland, at the contluence of the Amstel with the $Y$ or lj [pronounced Eye], an arm of the Zuider Zee connecting with the Lake of IIaarlem; lat. (steeple) $52^{\circ} 22^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $4^{\circ} 53^{\prime} 15^{\prime \prime} \mathrm{E}$. (R.) It is the largest and most important town in IOolland, constitutionally its capital, and in it the ceremony of coronation is performed; but the seat of govermment and residence of the sovereign is at the Hagne. Amsterdam lies on soft wet morass ground, under which, at a depth of 50 ft ., is a bed of sand; into this sand the piles are driven on which buildings are reared. Below the sand is a stratum of hard clay. The sea front of the city forms nearly a direct line along the $Y$, flanked at either end by extensive docks; and near the centre intersected by the Dam-Rak, the principal mouth of the Amstel, which, entering the city on the $\mathrm{N} . \mathrm{E}$. , takes a windmg course through it, dividing it into the old and new side (Oude en Nieuve Zijch), and falls into the $\mathbf{Y}$ by this and mumerous other courses. Towards the land, the walls of the city form a semicircle, surrounded by a ditel 30 yards wide, bordered by a row of trees. The ramparts have been pulled down, and on the eight and twenty bastions lave been erected as many windmills, for grinding corn and other purposes. In the walls are eight handsome stone gates, named from the towns to which they lead, Utrecht gate, Haarlem gate, \&c. Outside the walls, the city is surrounded by grassy meadows, and to the W. are upwards of 50 sawmills. Towards the sea, and ou both sides of the Amstel, the streets are narrow and irregular, but behind this portion there are five main lines of streets following the direction of the walls, and thus describing a semicircle. Of these the principal three, Heeren, Keizer, and Prinzensgraacht, for length, breadth, and general elegance, may vie with the streets of any capital in Europe. In the centre of each, as in most of the streets in Amsterdam, is a canal, either side of which is lined with broad brick-paved quays, planted with rows of trees. The minor streets run at right angles aeross these like the radii of a wheel, and many of them are very narrow; those in which are the houses of some of the first merchants not being over 17 ft . wide; all are paved, well lighted, and kept very clean. The honses are mostly constrncted of brick, almost all approached by flights of steps; mauy are six and seven stories high, pointed at the top with the gable toward the street, and decorated above with a forked chimney stalk; and their curious appearance is further heightened by the numbers that, more especially in the business streets, are painted in a garish and tasteless style, and by many being swayed from the perpendicular, partly by the sinking of the foundation, and partly from the peculiar method of construction adopted, many being narrower at the bottom "than at the top. The city is cut up into 90 islands by the canals, over which there are 250 bridges, mostly of stone, generally proviled with a drawbridge in the centre. The vessels to be scen in all parts of the city loading and unloading, and passing to and fro along the canals, the lifting and lowering of drawbridges, the transit of merchandise on sledges, and the general stir of lonsiness, give the streets of Amsterdam an exceedingly lively and cheerful appearance.

Amsterdam has no fine public squares, though it has 13 open places; and notwithstanding, that, as a whole, it is well built, it cannot be said to have any pretensions to architectural beauty; even its public buildings will not bear comparison with those of many other European capitals-a fact scarcely to be wondered at, considering the physical difficulties the Dutch have to encounter in the erection of extensive fabrics, from the sinking of the piled foundations under the superincumbent load. In 1822, an event of this description occurred; the corn storehouses, built originally for the Duteh E. India Company, having actually sunk in the mud and disappeared, from the foundation giving way. At the time they sunk, they were loaded with upwards of 70,000 ewt. of corn.

Public Building8. - The more remarkable buildings in Amsterdam is the palace, formerly the townhall. It stands in an
open square, called den Dam, at the head of the Dan-Rak, and is a stone edifice, in form of a parallelogram, 262 ft . long, 206 ft . broad, and 108 ft . high (roof inclusive), resting ou 13,659 piles, driven 70 ft . into the ground. It was ereeted by Jakob van Campen and Daniel Stalpart; begun in 16-18, and completed in 1655 ; nearly destroyed by fire in 1762 , and again in jeopardy from the same element in 1806. At first

the dam-rak. and dam-rak palace, amsterdam From hatty's Views of the Cities of Eurore.
it was oceupied by the magistracy of the city for local courts; but in 1808 it bceame a royal palace, for which, indeed, it was originally constructed. It is chiefly remarkable for the great hall, 111 ft . long, 52 ft . wide, and 90 ft . high, lined with white Italian marble; an apartment of great splendour. From the tower, which rises 50 ft . above the roof, a fine view of the eity is obtained. In the vaalts below the palace were formerly kept the treasures of the Amsterdam bank. The present townhall (stadhuis), formerly tho Admiralty, is a large and commodious building, said to have been founded in the 14th century. The Justiciary IIall, next to the palace, is the finest building in the city. It is a modern erection, in imitation of a Grecian temple, and was opened in 1836. Other public buildings are the exchange, a plain but stately tile covered building of freestone, capable of containing 4500 persons ; the poor's house, house of correction, the weighhouse, the general storehouse, formerly the Admiralty magazine; the Orange-Nassan barracks, capable of accommolating 3000 men; the city theatre, \&e. Besides these, may be noticed the post office, colonial office, houses of the E. and W. India eompanies, and varions offices and storehouses for public and private purposes, and the three towers, named, respectively, Regulierstoren, founded 1672 , as a wateh tower ; Schreijerstoren, or Mourner's tower, so named from the women eoming here to weep for their lusbands as they passed by to go on shipboard to the wars, and now used as the office of the dock master ; anl Mont-Albaanstoren, founded, it is supposed, as early as 1520 . Of the numerous bridges in the city, the most important is the Amstel Bridge, 600 ft . long, and 60 ft . broad. It had originally 35 arches; but in 1822 the two centre ones were taken down, and the space supplied with a drawbridge, so that masted vessels might be allowed to pass.

The churches of Ainsterdam are generally characterized by plaimess and simplicity of structure. The finest in the city, and, according to the Dutch, one of the finest in Europe, is the New church (Nieuwe kerk), N. of the palace, founded 1408. It is 350 ft . long, by 210 ft . wide across the transepts ; the upper part rests on 52 stone pillars, and the ehurch is lighted by 75 large windows, some of which are furely painted. It contains the tombs of Admiral de Ruiter, who sailed up the Medway, and burued the English fleet at Chatham; of the famous Dutch poet Vondel, and of various other notable individnals. In this chnrel the constitution was taken, March 29, 1814, and the following day the king was crowned as a sovereign prince. The (Oll church (Oude kerk), founded in the 14 th century, is only remarkable for three fincly painted windows, and for containing the tombs of several Dutch admirals, and au organ, said to be second only to that of Hatar-
lem. Besides these two, the Calvinistic, reeognized as the State church, possesses eight other ehapels and churehes. The Evangelical Lutherans, numbering about 32,000, have two churches. The Scotch Presbyterians, Free Church of Scotland, and the English Episcopalians, the Moravians, Baptists, Friends, and Greeks, have their plaees of worship. The R. eatholics, numbering about 45,000, have 16 chnrehes; and the Jews, numbering in all about 21,500 , have two prineipal, and seven subsidiary, synagogucs. Of these, one belongs to the Portuguese Jews, about 2500 in number, and the remainder to the Duteh Jews.

Within the city there are eight churehyards (kerk-hof), of whieh one, St. Peter's, is chiefly used for the poor, more especially for those who die in the poor's house. The mode of sepulture being somewhat remarkable, we extract the following description of it: The clurehyard, usually adjoining the chureh, is 'surrounded by a wall to the height of 12 or 14 ft . The coffins are placed in rows, one above another, till they are nearly level with the top of the wall; a little sand is then spread over them, and the hof is elosed thll the bodies are sufficiently decayed to be removed. The process is hastened by exposure to the atmosphere, but the nuisance to the neighbourhood is intolerable. When Holland was in possession of the Freneh, an attempt was made to do away with some of these disgusting cemeterics, and to provide more suitable places for the reception of the dead; but the burgomasters pleaded the expense, as the soil being so marshy, it would require immense quantities of sand to make it solid enough for the purposes of interment, and strong embankments to protect it from the floods; and ultimately sueceeded in maintaining the old method. When the hof has remained closed several years, while another has been filling, it is again opened; the coffins are broken up, and the fragments tied up and sold as firewood; the furniture is collected and sold to dealers in old iron; the remaining bones are wheeled away in barrows, and thrown into a vanlt beneath the chnreh; and the rest is sold to farmers for manure. The hof is then swept out, and ready to receive new inmates.'-(Saturday Mag.)

Charitable and Denerolent Institutions, \&.c.-Amsterdam is remarkable for the number and excellence of its benevolent and eharitable institutions. There are above forty of them, many possessing buildings of considerable elegance. Among these are hospitals for the poor, the infirm, the aged of both sexes, orphans, widows, foundlings, the insane, \&e., and institutions for the blind and for deaf mutes. Many of these being devoted to the members of one religious commonity, the result is several hospitals of the same deseription; thus the Calvinists, Lutherans, and Baptists, have each their hospital for old men and women; the R. catholics have various similar institutions for their own members; and the Jews, in like manner, have hospitals for the sons of Israel. Other benevolent institutions are the humane society, for saving drowning people, founded by Jakob de Clereq in 1767, and the first of its kind in Europe; the N. and S. Hollant society, for saving shipwrecked people; the society for the moral improvement of prisoners; the cowpock institution, \&e. Besides these, there are a Bible and two tract societies; a society for further ing religious edueation among foundlings and orphans, and one for the promotion of religious education among the slaves and people of colour in the colonies; the Magdalene asylum, and the spinhuis or workhouse, a department of which was formerly appropriated to the reformation of domestie offenders. Extravagant wives were sent here by their alarmed hnsbands, to acquire more sober and thrifty habits; ill-condueted husbands by their indignant wives, to learn better manners; and undutiful daughters, to be taught obedienee to parental authority; some of the latter, it is said, being often of high families.

Educational, Litcrary, Scientifie, and Artistic Institutions. - Amsterdam possesses numerous and excellent primary schools and other educational institutions, both of a general and special kind. Like the benevolent institutions, some of them are for particular religious denominations. Among the most important may be named the Athencum illustre, with library, botanie garden, and school of anatomy, and chairs of art, law, medicine, and theology; the city Latin sehool; the seminaries for educating preachers belonging to the Remonstrants, Evangelical Lntherans, Baptists, and I)uteh Israelites;
and the medical and clinical seliool. Of institutions of literature, science, and art, there are the royal academy of the fine arts, founded 1820 , and having 450 pupils; the musie sehool, founded 1784; the naval school; the royal Duteh institution for science, literature, and the fine arts; the socicty of literature and finc arts, called Felix Meritis, from the first words of a Latin inseription upon the front of the building. This last society has 400 members, all merchants and citizens, and is divided into four sections: 1, Literature, commeree, navigation, agriculture, and arehitecture; 2, Natural history; 3 , Drawing and design; 4, Music. Besides these, there are several other societies of a similar kind, but the most important one of the whole is the society for the promotion of the public weal (de Maatschappij; Tot N'ut van t'Algemcen), established, in 1784, by J. Nieuwenhuyzen, a Baptist minister at Monnikendam, and having 13,000 members, and branch soeieties in almost every town in Holland. It has for its object the moral and religious improvement of the working classes, and their instruction in sueh branches of education, \&c., as seem neeessary for enabling them to play the part of good citizens; the improvement of sehool books, the establishment of Sabbath schools, savings' banks, public lectures. \&e. Last, but not least, must be named the museum of pictures, founded 1798 , by a person named Trip, from whom the building is called Trippenhuis. It contains a fine collection of the works of the Dutch masters, and one of the most remarkable collections of prints in Enrope, oceupying 200 portfolios.

Amusements.- For in-door amusements, there are three theatres, and various other places of entertaimment ; and for out-door recreation, there are the Plantaadje, or Plantation, in the E. end of the city, not far from the dockyards; the banks of the Amstel, outside the Utrecht gate; and the dikes round the docks, all of which are mueh resorted to in good weather. A favourite amusement, likewise, is boating on the Amstel and the $Y$.

Markets and Watcr.-Amsterdam has three fish markets, the great sea, the river fish, and the Jews' market. In the first, as its name imparts, sea fish are sold; in the seeond, the produce of the Amstel and other streams brought there by the peasants (Boeren), and hence called sometimes the Bocrenvisclmarkt; while the third, or Jodenmarkt, is for the supply of the Jews' quarter. There are likewise in the city a cattle and sheep market, a pig, a butter, and various other markets, called by special names. A marketable article of great importance in this city is fresh water, which is very scarce. From the nature of the soil, none ean be obtainet from wells. The inhabitants are, therefore, supplied either by rain water collected in cisterns, or by water carriers, whose boats lie in the eanals, and who fetch it from the river Vecht, or from springs at Utrecht. Arising from this state of mat. ters, the quantity of Selzer water, mixed with Rhenish or Bordeaux wine consumed, is very great.

Manufactures and Commeree.-Amsterdam has long been, and still is, famous for its banking establishments, and for its insurance companies; the amount of business done in both branehes being very considerable. Its manufactures, though not very extensive, are still important. They eonsist chiefly of linen, woollen cloths, and cotton to a limited extent; thread, calico printing, dycing, tobaceo, soap, oil, eanvas, cordage, the refining of salt, sugar, and other substances, glass blowing, brewing, distilling; gas, commenced in 1846; steam engines and machinery, and tools of various kinds, boilers, iron steamers, and other kinds of iron vessels and shipbnilding. Amsterdam, however, ranks much higher as a trading, than as a manufaeturing town.

The quantities of the ehief articles imported in 1851-53 are shown in the following table:-

The exports consist of refined sugar (in 1853), 9,038,983 lbs., raw sugar (in 1853), $36,699,912$ lbs.. coffee, spiees, thread, cheese, butter, oil, dyes, colours, corn, and meal. The countrics chiefly traded with are Britain, the IIanse towns, U. States, 1 taly, Prussia, Russia, Norway, Denmark, Hanover, Franee, Dutch India, E. and W. The largest exports are to Germany and along the Lhine, amounting to nearly one-third of the whole; but from these localities the imports are very limited. The following table gives a condensed return of the shipping cleared inwards and outwards, by the customs authorities of the port, in four recent years: -

| Arrivais | Vessels. | Tonnage. | Sathinges | Vessels, | Tonnage. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| In 1850 | 2028 | 312,083 | In 1850 | 1856 | 325,78.3 |

| 1853 | 1848 | 320,412 | 1853 | 1887 | 339,476 |

The port of Amsterdam is about a mile and a half long, and is

defended from the eneroaehments of the Y by a double row of piles driven into the ground, and connected by horizontal beams. At either end are the E. and W. docks, capable of holding 1000 vessels. The approaeh to the port by the Zuider Zee being impeded with sandbanks, a canal, called the Nieuwe Diep, was completed in 1825, leading from Buiksloot, on the opposite side of the Y, to the N. Sea at the IIelder, a distance of 50 m . This immense canal is 125 ft . broad at its eurface, 36 ft . at the bottom, with a depth of 20 ft .9 inches. It is on the level of the high tides of the sea, from which it derives its supplies of water.

Means of Communication.-By the Amstel, the Zuider Zee, and various canals, Amsterdam has water communication with all parts of Holland; and by railway it communicates on the one side with Haarlem, the Ilague, and Rotterdam; and on the other side with Utrecht, Aruheim, and Prussia.

IIealth.-The eanals by which the city is intersected in all directions, however convenient as highways of business, and however picturesque in general appearance, exhale damp vapours, making the atmosphere very moist. These canals are the receptacles of all kinds of filth. The water in them is stagnant, and generally of an olive-green colour. It is

Fencrally 8 or 9 ft . deep, and below it are 5 or 6 ft . of mnt, which, being stirred up by every vessel that passes, exhales mephitic odours. Great care is taken to cleanse these canals and the town generally. The water in them is, as far as possible, discharged into the $Y$, and supplied anew from the Amstel as frequently as possible; but the level of the latter being only $1 \frac{1}{2} \mathrm{ft}$. above the level of the lowest tide of the furmer, this mode of elcansing must neeessarily be imperfect. In some of the canals, to prevent stagnation, the water is kept in motion by mills, that, at the same time, draw of large quantities of mud, which is sold for manure. With all these disadvantages, few towns possess more healthy and robust inhabitants than Ansterdam. Whatever effeet, therefore, the damp and fetid vapours may have upon strangers, they do not appear to act in a prejudicial manuer on the health of the natives.

Government.-The government is vested in a senate or council of 36 members, and 12 burgomasters. The members of the council sit during life, and fill $u p$ the vacancies that oceur in their own number by their own suffrages. The burgomasters, who are chosen by the citizens, out of a double number first nominated by the council, sustain the active magistracy of the city in rotation; the government of each lasting only three months, and the four who are to preside during the year being annually appointed burgomasters regent. These magistrates have the keys of the bank deposited with them. There is also a court of burgomasters which decides all criminal causes; but in civil causes there is an appeal to the provincial council. The police is under excellent regulations, and street robberies and house breaking are seldom heard of. Very few beggars are seen in the streets, and these are generally the aged and infirm.

Ifistory.-Early in the 13 th eentury, Amsterdam was a mere fishing village, with a small castle, the residence of the lords of Amstel. Towards the middle of that century, it was constituted a town, and in 1296 was wrested by William IlI., Count of Holland, from the lords of Amstel. In 1340, William IV. bestowed on it a municipal constitution, and 40 years afterwards it became a place of some importance. In 1482, it was walled and fortified; it was subsequently attacked by the Gelderlanders, who burned the suburbs, and a number of vessels in the port. A party of Anabaptists, headed by a shoemaker called John of Leyden, attempted, in 1525 , to surprise and take posscssion of the town during night, but they were repulsed. Its career of real prosperity commenced about the year 1578 , when it becamo a part of the United Provinces, although previously to that period it had nearly monopolized the trade of the Baltic. Additional privileges were granted it by the Prince of Orange in 1581, while the siege and consequent deeline of Antwerp in 1585, and the shutting of the navigation of the Scheldt in 1648, were the means of raising Amsterdam to the rank of the first commercial city in Europe. Although its prosperity was cheeked by the ravages of a pes tilence, which, in 1602, eut off about 60,000 of its population, by the wars of Cromwell in 1653 , and by other disasters, it continued to flourish till the stormy period of the first French revolution. During its time of prosperity, the burgomasters had acquired such authority in the assembly of the States, as to rival that of the stadtholder himself; the reputation of its merchants for honesty and frugality had greatly eontributed to the establishment and increase of its trade; its harbour was always filled with ships, laden with all the productions of the E. and W. ; and the city had become the wealthiest in Europe. But the French Revolution, and the compulsory alliance and complete incorporation of Holland with France, had almost annihilated the commeree of Amsterdam, both foreign and domestic. After the ehanges which took place in 1813 , it began to revive, and has since steadily improved. Among the numerous famous individuals to whom Amsterdam has given birth, may be named the philosopher Spinosa, the naturalist Swammerdam, the painters Adrian and Willian Van de Welde, and John and Michael Van Hnisum, and Admiral de Ruiter. Pop. (1850), 22.4,235; of which above 20,000 are Jews.-(Van der Aa's Nederlanden; Overzigt van den handel van Amsterdam, in 1817, ingelevert by de Leden der Kamer van Koophandel, en Fabrijken aan Meeven Burgemeester en Wethonderen der Stad Amsterdam; Family Tour through S. IIolland; Dict. Geo. et Stat.; Murray's IIanulbook; Saturday Mag.)

AMSTERDAM.-1, A small volcanic isl. Indian Ocean; lat. $37^{\circ} 52^{\prime} \mathrm{S}$.; lon. $77^{\circ} 35^{\prime}$ E. (r.) ; discovered by Van Vlaming, a Dutchman, in 1696. It is 2760 ft . high, about $4 \frac{1}{4} \mathrm{~m}$. long, and $2 \frac{1}{4}$ broad; but a great portion of its area is occupied by a basin, about 2 m . in circumference, formed by the sea in the extinct crater of a volcano. The sides of the basin rise, at an angle of $65^{\circ}$, to the heigbt of 700 ft . above the water, which, in the centre, is 174 ft . in depth. The only access to the island, is through the opening made by the sea, about 200 ft . wide. From the sloping sides of the basin issue several hot springs, of a temperature from $196^{\circ}$ to boiling heat. The soil of the island is entirely volcanic; its only vegetation moss and a few grasses, and its oniy inhabitants several species of aquatic birds. The surface, in various parts, contains swamps and pools of a temperature from $80^{\circ}$ to $130^{\circ}$. The sea around abounds with fish, and numberless seals resort to the coast.

2, A small isl. India, in Palk's Strait, off the N.W. extremity of Ceylon; about 5 m . long, and 2 broad; lat. $9^{\circ} 40^{\prime}$ N. ; lon. $80^{\circ} 0^{\prime}$ E.-3, A small isl. Arctic Ocean, W. coast, Spitzbergen ; lat. $79^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $10^{\circ}$ E.- 4, Several places in the Dutch foreign possessions:-A small isl. Indian Archipelago, N. coast, Java, out from the roads of Batavia; inhabited only by a few fishermen.-A fort, isl. Amboina.A fort, isl. Celebes.-A fort, Surinam ; lat. $5^{\circ} 48^{\prime}$ N. ; lon. $55^{\circ} 9^{\prime}$ W. (r.)-A fort, W. Indies, isl. Curaçoa; lat. $12^{\circ} 6^{\prime} 18^{\prime \prime} \mathrm{N}$. ; lon. $68^{\circ} 54^{\prime} \mathrm{W}$. (R.) ; near which is anchorage for large vessels. -A fort, W. Indies, isl. St. Eustatius, near the town of Oranje. -A fort, Upper Guinea, on the Gold Coast, E. part, kingdom of the Fantis.- (Van der Aa.)

AMSTERDAM (New), a tn. and port, British Guaiana, near the mouth of the Berbice river, along the E. bank of which it extends about $1 \frac{1}{2} \mathrm{~m}$.; mmediately above the junction of the Canje; lat. $6^{\circ} 15^{\prime} 2^{\prime \prime} \mathrm{N}$. ; lon. $57^{\circ} 21^{\prime} \mathrm{W}$. (r.) ; cap. of the colony of Berbice. It was begun in 1796, and is built in the Dutch style; and intersected by numerous canals, which communicate with the sea. Each house, mostly of wood or bamboo, has an allotment of $\frac{1}{4}$ ac., which contains a garden; and is completely separated from the neighbouring houses by a trench or ditch, filled and emptied with the tide; which, preventing the accumulation of impurities, tends much to the preservation of the public health. The town has English, Scotch, and Dutch churches; R. catholic and Wesleyan cbapels; a free school, established in 1829; eight private schools, a courthouse, and barracks; with many commodious wharfs and warehouses, and two commercial banks. The entrance to the river is defended by three strong batteries; and the passage to the harbour is obstructed by a sand bar across its mouth, over which there is only 7 ft . water at low tides. Though intricate in its access, the harbour is good. Pop. about 3000 .

AMTSCHITKA, one of the most westerly of the Aleutian Islands (which see) ; lat. $51^{\circ} 43^{\prime}$ N.; lon. $178^{\circ} 45^{\prime}$ E. (r.)

AMUCHTA, or Amoughta, one of the Aleutian Islands, Fox group ; lat. (centre) $52^{\circ} 33^{\prime} \mathrm{N}$. ; lon. $170^{\circ} 45^{\prime} \mathrm{W}$. (n.) It contains an extinct volcano.

AMULGAWEIN, a small tn. and harbour, Arabia, W. coast of the promontory of Maceta or Musendom, at the entrance into the Persian Gulf; lat. $25^{\circ} 35^{\prime}$ N. ; lon. $55^{\circ} 42^{\prime}$ E. The town was at one time a place of some importance, but is now deserted. About $2 \frac{1}{4} \mathrm{~m}$. N.E. from the town, is a large quadrangular tower, in ruins, surrounded with straggling date treas.

AMWELL (Great), a par. England, co. Herts; 2510 ac. ; $1 \frac{1}{2} \mathrm{~m}$. E. by S. Ware. Pop. in 1841, 1545.

AMYUN, a tn. Syria, pash. of, and 10 m . S.S.E. from Tripoli; lat. $34^{\circ} 20^{\prime} \mathrm{N} . ;$ lon. $35^{\circ} 50^{\prime}$ E.

ANABARA, a river, Siberia, gov. Tobolsk; it rises in about lat. $66^{\circ} 30^{\circ} \mathrm{N}$. ; lon. $107^{\circ}$ E., and falls into the Arctic Ocean, lat. $72^{\circ} 40^{\prime} \mathbf{N}$. ; lon. $112^{\circ} 30^{\prime}$ E. The Anabara is joined, at its embouchure, by the Olen or Olia, which runs nearly parallel with it for between 200 and 300 m . The entire course of the former is about 400 m .

ANACAPRI, a tn. Naples, isl. Capri, Gulf of Naples, dist. Castel a Mare, on the N. side of Mount Solaro, the higher of the two lofty masses of calcareous rock into which the island is divided, and standing nearly 2000 ft . above the level of the sea. The town can only be reached by a flight of 552 steps, cut into the living rock, called la scalinata. It contains a church and convent. In the neighbourhood are Vol. I.
the remains of several ancient structures, some of them said to have been built by the Emperor Tiberius. It is affirmed that the inhabitants are so much attached to their beautiful place of residence, that many of them have never descended the steps that lead to it. Pop. 1458.

ANACIIUANA, a vil. and bay on the N. coast of the Isthmus of Panama; lat. $6^{\circ} 41^{\prime} \mathrm{N} . ;$ lon. $77^{\circ} 38^{\prime} \mathrm{W}$.

ANACLACHE, a nevado or snowy peak of the Bolivian Andes, supposed to be upwards of $18,500 \mathrm{ft}$. high. I\& forms a rugged ridge, of considerable length, in the direction of the axis of the cordillera; and is in lat. $18^{\circ} 12^{\prime} \mathrm{S} . ;$ lon. $69^{\circ} 20^{\prime} \mathrm{W}$.

ANACLOAN, a par. Ireland, co. Down; 6544 ac. Pop. in 1841, 3423.

ANADIA, a small tn. Brazil, prov. Alagoas, 45 m . E. the city of that name. It lias a church, townhall, and prison; and carries on an active trade in cotton, brought from the interior. Its inhabitants are chiefly employed in the cultivation of the necessaries of life, and of cotton, which is exchanged for European goods, \&c. Pop. 1200.

ANADIR, or ANADYR, a navigable river, Siberia, rising in Lake Ivashka; runs W. and then E., traverses the country of the Tchuktchi tribe, and falls into the Gulf of Anadir, S. of Behring's Straits; its whole course being about 540 m .

ANADIR (Gulf of), N. Asia, S. of Behring's Straits; having Cape Tchukotski or Anadir Nos on the N., and Cape St. Thadeus on the S. Width, at the entrance, about 200 m .; lat. $65^{\circ} 0^{\prime} \mathrm{N} . ;$ lon. $177^{\circ} 0^{\prime} \mathrm{E}$. The upper part of the gulf is called the Bay of St. Croix.

ANADOLIA, or Anadoli. See Anatolia.
ANAGNI [Lat. Anagnia], a wretched small tn. Papal States, delegation of, and 12 m. N.W. from Frosinone; on a hill near Mount Cassin; the birthplace of Boniface VIII., and the seat of a bishopric erected in 487 . Pop. 5500.

ANAGOUNI)Y, a tn. Hindoostan, Nizam territory, prov. Becjapoor, 1. bank, Toongabudra, a branch of the Kistna, 128 m . W.S.W. Kurnool ; lat. $15^{\circ} 22^{\prime}$ N. ; lon. $76^{\circ} 32^{\prime}$ E.; opposite the fine ruins of Bisnagar or Vidyanagarah, once the capital of a large kingdom embracing a large portion of the Decean. A ruined bridge still connects these towns.

ANAH, a tn. Asiatic Turkey, pash. Bagdad, r. bank, Euphrates, 160 m . W.N.W. the city of Bagdad, on a fringe of soil between a low ridge of rock and the river. The site of the ancient city of Anatti is upon the opposite bank, a little below the present town. Situated in a district fertile in rice, corn, fruit, wine, and cotton, Anah forms a convenient resting place for the caravans which traverse the great desert of Mesopotamia. It is, however, exposed to the desert winds, locally termed fatul (whirlwind), which blow with great violence. During the Euphrates expedition, in 1836-7, the ship Tigris was lost in one of these hurricanes. In 1807, Anah was sacked and burned by the Wahabites. The pop., chiefly a branch of the Ommiades or Beni-Ommaiyah, is estimated at 3000 or 4000.-(Jour. Roy. Geo. Soc., vol. vii.; \&c.)

ANAHILT, a par. Ireland, co. Down; 6777 ac. Pop. in 1841, 3551.

ANAJAZ, a river, Brazil, isl. of Joannes or Marajo, between the mouths of the Rio Para and Amazon. It rises a little E. from Salgado, and, after a W. course of about 80 m ., falls into the estuary of the Amazon, in lat. $0^{\circ} 52^{\prime} \mathrm{S} . ;$ lon. $51^{\circ} 30^{\prime} \mathrm{W}$.

ANAKLIA, or ANAKı1A, a fortified tn. and port, Russia, in Mingrelia, E. coast of the Black Sea, l. bank, Engura, and near its embouchure ; lat. $42^{\circ} 22^{\prime} \mathrm{N}$. ; lon. $41^{\circ} 28^{\prime} \mathrm{E}$. It contains a custom house, and carries on some trade with Turkey.

ANAK-SOONGI, a small state, W. coast, isl. Sumatra, between the rivers Manjoota and Urei. Its cap. is Moco-moco.

ANALATIVOE, a small isl., W. of Jaffina, Ceylon, formerly known by the name Donna Clara, having belonged to a lady of that name in the time of the Portuguese. Its soil is sandy, but productive in palmyra trees, plantains, and cotton, the latter of which is largely cultivated. Pop. about 1000 ; formerly considerably more.-(Ceylon Gaz.)

ANAM, or AN-NAM (Empire of), a country of S.E. Asia, occupying the E. portion of a great promontory N. E. the Malay Peninsula, from which it is separated by the Gulf of Siam, between lat. $9^{\circ} 40^{\prime}$ and $23^{\circ} 22^{\prime} \mathrm{N}$. ; and lon. $102^{\circ}$ and $109^{\circ} 30^{\prime} \mathrm{E}$. It is 965 m . in length, N. to S.; breadth irregular, being, at the narrowest part, which is in the centre, only
abont 85 m ., expanding N . to upwards of 400 m ., and S. to about 270 m . It comprises three distinct territories, and a part of a fourth. These are Tonquin, which occupies the whole N. part of the empire; Cochin China l'roper, Champa, and the E. portion of Camboja, together occupying the centre and S. extremity. It is bounded, W. by Lao or Laos, and Siam; N. by China, and on all other sides by the sea. The whole of the coast is considerably indented, especially at the mouths of the rivers, where it afforls many safe and commodious harbours; and the view which the country presents from the sea is that of a varied landscape, composed of bold headlands, picturesque valleys, well-cultivated slopes, extensive downs, and low plains, frequently terminatiug in sand hills, with a background of rather lofty mountains in the distance. Along the coast there are numerous groups of islands.

Toxquin is mountainous on the N., but in the E. is nearly level, terminating towards the sea in an alluvial plain. It is generally fertile, yielding good crops of rice, cotton, fruits, ginger, and spices, with a great variety of varnish trees, areca palms, \&c. The principal river is the Song-ca, which flows from the interior in a S.E. direction, and falls into the Gulf of Tonquin by several outlets. It has numerous tributaries, and several branches are joined together by canals, both for irrigation and commerce. Its periodical overflowings fertilize the rice fields within the reach of its waters. The other principal streams are the Koa-gok or Tonquin, and the Rokbok, the former N. from the Song-ca, and the latter S. The climate rescmbles that of Bengal, but participates in the oppressive heat and very disagreeable cold of China. It is reculiarly subject also to typhoons, which sweep the land with inconccivable violence. The inhabitants of Tonquin are a short, squat, ill-favoured people, but extremely industrious and good tempered. Those living on the coast are cbiefly employed in fishing, and hunting the alligator, which is used as food, the flesh being sold in the shambles. 'It is by no means uncommon,' says Dr. Gutzlaff, 'to see five or six of these monsters in the courtyard of a fisherman's hut, with their mouths gagged.' The fishermen are a thrifty, hardworking race; and, though exposed to all surts of hardships and sufferings, are always cheerful. Their customary diet is the refuse of the fish which they catch, with a little rice and salt. Their females are agly, and of filthy habits. Tonquin is the only part of the empire that is rich in metals, producing large quantities of gold, silver, copper, and iron. A great deal of gold is found also in the sands of the rivers, thousands of people being employed in collecting it. The principal town or capital is Kachao, on the r. bank of the Song-ca, about 100 m . N.W. from the Gulf of Tonquin.

Cocirn China Proper, lying between lat. $12^{\circ}$ and $18^{\circ} 30^{\prime}$ N., and averaging about 90 m . in breadth, is bounded on the W. by a range of lofty barren mountains, hitherto unexplored by any European. The country is, for 10 m . inland, a complete descrt, and is generally sterile, but contains many fertile spots; its sandy soil also bears productions peculiar to this region, including the eagle wood, which attains greater perfection here than anywhere else. In the more favoured districts, grain, leguminous plants, and all the articles of sustenance used by man, are produced in great abundance, including sugar and cimnamon, the latter of superior quality. The coast is beautiful and grand, being indented with numerous bays, backed by mountains which rise to a height of several thousand feet, and are broken into imumerable valleys and ravines. There are a number of rivers, but none at all considerable. Cochin China is destitute of metals, so far as yet known. Its principal foreign trade is with the Chinese. The pcople of this territory are of small stature, not very dark, and of agile frame. The women are well formed, have fine eyes, and beautiful jet black hair. The dress of both sexes consists of trowsers and a coat, which reaches to the ankles with women, and with workmen to the knees. The men rarely shave or cut their hair. Their principal food is fish and rice; milk, butter, and cheese, they hold in abhorrence. They are cheerful, open, and kind hearted. Their dwellings consist of mud or bamboo huts, with straw roofs, low, uncomfortable, and filthy. The cap. of the prov. is IIué, on the l. bank of a river called by the natives Phu-thua-thien; by foreigners, Hué or Sum-1Iué. It is well fortified, but most of the houses are mean. In the neighbourhood, which is romantic and beautiful, there are several palaces, summer residences, and
royal retreats. The pop. of the city, including the military,
is estimated at 50,000 . is estimated at 50,000 .

Cambosa, or Kambodia; about one-half only of this territory is within the limits of the empire of Anam, the other portion being in Siam. The former is a continued flat of rich alluvial soil, full of navigable rivers, one of which, the Mekon (which see), is amongst the largest in S. Asia. Agriculture is much behind here; yet such is the fertility of the land, that Camboja is considered the granary of Cochin China. It produces vast quantities of rice, betel nuts, aniseed, and cardamoms, all esteemed of the best quality. The areca palm, teak tree, and various dye and hard woods, also grow here; some of the latter susceptible of a beautiful polish. Gamboge, and a varicty of sweet-smelling resins, are peculiar to this country. Sticklac, a substance used in dyeing red, is also amongst the products of Camboja. The mulberry tree is in some regions extensively cultivated, to furnish food for the silkworm, the management of which is well understood by the natives. The climate is in general temperate, excepting during the rainy season-May and September-when it is often very sultry. From October to January the weather is extremely boisterous, and typhoons occasionally occur, but are neither so frequent nor so violent as in Tonquin. The inhabitants of Camboja are below their neighbours, the Siamese, in point of civilization; their features are coarse, and their complexion dark. The men go half naked, and the women also dress very sparingly; they are moderate in their diet, and capable of enduring much fatigue, though inclined to indolence. They are patient under oppression, and have a slavish veneration for their superiors. They are persevering agriculturists, but have no manufacturing skill. The animals of this territory are the buffalo, bullock, horse, both of the latter small; the rhinoceros, elephant, a formidable species of tiger, the leopard, monkeys innumerable, and pigs.

Cinampa occupies the southern extremity of the empire. It is extremely sterile, consisting, in great part, of sand hills, without any vegetation; peaks, with stunted shrubs, granite formations of every description, and a reddish, disintegrated mass of stones. Its coast, however, abounds in excellent harbours, and it yiclds, at least, one valuable production-the eagle wood (Alïexylum Agallochum) - which is much esteemed all over Asia for its pungent fragrancy, and is, on this account, in constant use in burning incense to idols. N. W. of Champa, and between Cochin China and Camboja, is a bleak and wild mountainous tract, inhabited by the Moi, a savage race, who live chiefly on wild fruits and roots, and mostly sleep in trees; some, however, construct rude huts, and live in small communities, but there are no large villages. They are a hardy and muscular race, and are on this account often captured by their neighbours, and sold as slaves.

Geology.-The geology of Anam presents little variety, its prevailing formations being primitive, and consisting mainly of granite or sienite, with the occasional occurrence of quartz, marble, limestone, and hornblende. As elsewhere mentioned, iron, gold, and silver, are found in considerable abundance in Tonquin, but in no other part of the empire. There, also, great masses of beautiful white marble, with blue streaks, are found. The singular mountain at Cape Varella, in Cochin China, one of whose peaks has the appearance of a huge broken and falling column, is supposed to contain some veins of silver; and at about half its height there is a thermal spring, of very high temperature. The alluvial soil of the country consists of clay, loam, or sand, which alternates or is mixed with gypsum and ferruginous matter; and the sand, in many parts, accumulates extensively upon the coast, and forms large lagoons and dangerous shoals.

Manufactures.-The principal branches of industry practised by the natives, are spinning of cotton and silk, the weaving of these into coarse fabrics, the preparation of varnish, the manufaeture of lacquered ware, the smelting of iron, the manufacture of fircarms, and the construction of ships or junks.

Commerce.-The internal trade is conducted chicfly on the rivers of Tonquin and Camboja, along the sea coast, or by the lagoons skirting the latter, which form a kind of natural canals, and furnish a means of communication for about 200 m . Goods are conveyed in junks, which are well constructed and managed, and average 40 or 50 tons burden. The trade between II ué and Tonquin, as well as a great portion of the
foreign trade, is in the lands of the Chinese. The latter is chiefly with China, Siam, and the British settlements on the Straits of Malacea, from the ports of Kang-Kao and Saijun in Camboja, Kecho in Tonquin, and Ya-trang or Aha-trang, Phuyen, Quinhon, Faifo, and Hué, in Cochin China. The exports to China consist chiefly of cardamoms, areca nuts, cocoa-nut oil, sugar, fancy woods, eagle wood, ebony, cotton, silk, rice, sticklac, ivory, peltry, hides, horns, deers' sinews, feathers, cinnamon, swallows' nests, dried fish, varnish, gold and silver bullion; the imports- wrought silk, tea, opium, cloth, porcelain, dried fruits, confectionery, and toys. Exports to British settlcments-rice, salt, sugar, and raw silk ; importsopium, gambier, catechu, iron, fire irons, woollens, and cottons. Exports to Siam-gamboge, cardamoms, ivory, hides, horns, dried venison, salt fish, mats, and silk, raw and wrought; imports-Chinese, European, and Indian goods, iron, wrought and unwrought; tobacco, and opium. The importation of opium, and the exportation of coin, bullion, copper, eagle wood, rice, salt, men, and women, are prohibited by law; but the prohibition is in most cases evaded by the dexterity of the Chinese merchants; and rice may be exported by special license. There remains every year for exportation more than 100,000 peculs ( $119,047 \mathrm{cwt}$ ) of rice, $83,333 \mathrm{cwt}$. of sugar, a great portion of which finds its way to the N. ports of China; 71,428 cwt. of cotton, 4762 cwt . of cinnamon, 3571 ewt. of betel nuts, and 1190 cwt. cardamoms. There are, besides, large exportations of cocoa-nut oil, sticklac, gamboge, and eagle wood, the last of which is a royal monopoly. Fish, also, to the amount of about $£ 21,666,13 s$., are exported.

Coins and Measures.-The coin is made in imitation of the Chinese, but of baser metal. The gold and silver pieces are mostly of an oblong form, like Chinese ink, and bear the name of the reign in which they were cast ; the measures of length and capacity are nearly the same as in China.

Government, Military.-Although nominally patriarchal, the government of Anam is actually despotic, even the nobility deriving their name and power from the sovereign. There are two classes of mandarins-civil and militarydivided into 10 orders, two of which compose the king's council. The general administration is conducted by that council as supreme, and six ministers of state, namely, the minister of ceremonies and religion, the keeper of the records, the minister of war, the treasurer, the minister of justice, and the minister of woods and forests. There are, besides, three superior officers called Kun, one being the viceroy of Tonquin; another viccroy of Camboja; and the third termed minister of elephants, acting both as prime minister and minister of foreign affairs. Each province is governed by a mulitary mandarin, and two civil mandarins as deputy and sub-governor; and is divided into three departments termed kuyen, each of which is subdivided into several districts named tou, and comprehends an indefinite number of villages. The system of jurisprudence is that of China, but not so well or so mildly administered as in that country. Every superior, whether natural or official, has the power of inflicting corporal punishment on his inferiors; the most usual methods being with the bamboo and the canque or wooden collar. Fathers and mothers punish their children; husbands their wives; superior officers their inferior; and these the soldiers. Capital punishment, besides being the penalty of higher offences, is inflicted for robbery, adnltery, and sometimes for malversation and corruption. In military affairs, the Government claims the service of every male inlabitant from 18 to 60 years of age. The guards consist of 36,000 men, divided into 40 regiments, of 10 companies of 60 men each, classed in five brigades. There are, besides, 25 regiments, which, with the former, constitute the actual force of the empire. As the horses are indifferent, there are no cavalry, but 800 elephants are substituted, some being attached to every regiment. The entire army consists of about 60,000 men ; but has occasionally amounted to more than double that number. The soldiers all wear uniforms-a red tunic; but the officers wear the ordinary dress. The former are well armed, and perform their manœuvres with great regularity and precision. They are badly paid, receiving only about $2 s .2 d$. a month. A lieutenant gets only double, and so on in proportion in the ligher grades; nowhere, however, above a bare subsistence. For the protection of the coast, marine regiments are formed, to act as sailors and soldiers on board the men-of-war. These
consist of rowing boats, which sail with great rapidity, and are admirably worked with 40 to 100 oars. They have also galleys that sail and row, carrying from 4 to 16 cannon; vessels half junk and half ship, from 10 to 24 cannon; and sloops of war according to our model. The discipline of the navy, as well as army, is according to European principles. The revenue is principally derived, as in China, from the land. There is also a poll tax of a little more than $2 s .2 d$. for each adult male subject not employed in the king's service; with sundry other contributions from the industry or consumption of the inhabitants. The land tax is partly paid in kind, and the produce hoarded up in the granaries of the capital.

Religion, Ceremonies, Language, Literature, dec.-The mass of the people do not care for supernatural worship, and are subject to the most abject superstition. The doctrines of Buddha are professed by a few, but they have hardly cither any temples or priests. Vencration for the departed dead is general, and the temples containing their tablets are the most sacred spots of worslip. This reverence for the dead is manifested by an interminable series of solemnities and observances, and a reckless expenditure. A remarkable instance of this propensity occurred on occasion of the death of the late king, 'thiêu Tri, who died on November 3, 1847. The funeral ceremonies on that occasion were of the most sumptuous description. When the body was deposited in the coffin, into which quantities of gold, silver, and other precious articles, together with provisions, had been previously placed, it was carried to a richly ornamented house, constructed expressly for the purpose, and there lay in state for seven months; the coffin being hermetically closed to prevent the exhalation of offensive smells. During this period, numerous sacrifices were made of bullocks, swine, and other animals, and the king's son came every day clothed in mourning to prostrate himself before the body of his father. Every day, also, wax candles were lighted, or incense burned. The road along which the body was conveyed to the river by which it was to pass to the place of interment, was covered with mats, carpets, and Indian tapestry of silk. The banks of the river, also, were adorned with silks, and lined with soldiers; and, at frequent points of the progress, there were large altars, on which were burned wax tapers and perfumes. The bark in which the coffin was deposited was of the most magnificent description; and, when the latter was placed in the tomb, large quantities of gold and silver, and other precious articles, were shut up along with it. After the interment, the royal barge, a splendid vessel, into which a number of valuables had been previously placed, was burnt; as were also two superb palaces of wood, with rich furnishings, and in all things similar to the palace which the deceased monarch had inhabited. So solemn and slow was the progress of the funeral procession, and so encumbered was it with tedions ceremonial, that it was three days in reaching the place of interment, though only 9 m . distant from the city. The language resembles the Chinese, from whom, as they have no national literature, they receive all their books. It is without inflection, and shows a great mass of monosyllabic words. It is by no means mellifluous, and is spoken with extraordinary rapidity by the natives. In writing, they use the Chinese character; with considerable difference, however, in some of their combinations. A complete dictionary of the Anamitic language was composed by the Bishop of Adran, with explanations in French. Marriage is a matter of traffic; the price of a wife being usually from $£ 8,13 \mathrm{~s}$. to $£ 10,16 s$.; but sometimes, among the lower classes, $£ 2,3 s$. to $£ 4,6 s$. ; and among the higher, $£ 21,12 s$. to $£ 43,4 s$. Among the former, the usual age for marriage is, with males, 20 , or sometimes 30 ; and with females, 17 to 20 ; but the rich often marry as early as 15 . Polygamy is allowed, but the first esponsed is considered the wife. Although adultery is punishable with death, and marriages are indissoluble except by mutual consent, breaches of chastity or conjugal fidelity are not considered as crimes ; and both before and after marriage, women lave more liberty than in other E. countries. They are, however, in many respects, the mere drudges of man; performing all kinds of household and outdoor work, and acting as shopkeepers, brokers, \&c., and are generally treated with rigour and neglect. Men are, in a great measure, supported by female labour; and such is the anomalous state of
the marriage relation, that women are said to prefer strangers, especially Chincse, as husbands.

History.-Aecording to the historical records of China-the only sourecs of information on the subject, Anam was conquered and colonized by the Chinese, b.c. 214. After a series of revolts against their conquerors, the Cochin Chinese, in A.D. 263, regained their independence, but remained tributarics to China. In 1280, the Tartar Khans of the latter ineffectually attempted again to possess theniselves of the Cochin Chinese territory. In $1 \cdot 106$, the Chinese occupied Tonquin, but abandoned it in 1428; and in 1471, the Tonquinese made the conquest of Cochin China. In 1540, Tonquin became a tributary lordship of the celestial empire; and in 1553, Cochin China threw off the yoke of the former, and again became independent. From that time till 1748, Tonquin was nominally under a sovereign of its own, termed a Dova or Boua, but was actually ruled by the Choua or prime minister. In 1748, the sovereign recovered his authority, but a period of anarehy succecded, and was terminated only by an insurrection which broke out in 1774, and completely revolutionized the kingdom. The great agents in this revolution were three brothers called Taysons [western mountaineers], of the province of Qui-nhor, who, having been driven to a robber's life by the oppression of the Government officials, and having soon collected numerous adherents in a country already ripe for revolt, defeated the armies both of Anam and of China, put to death their king and his eldest son, and made themselves masters of the whole country, with exception of some of the S. provinces. Gia-long, the king's second son, placed limself under the protection and guidance of Pigneaux de Behaim, Bishop of Adran, a French Franciscan missionary, at that time stationed in the country. In 1781, he attempted to regain possession of the throne, but being defeated by his rebel countrymen, and deceived by the King of Siam, he trok refuge in the island of Quadrol; and in 1787, sent his son to France along with Pigneaux, to ask the assistance of Louis X VI. The latter sent over some French officers, whose experience enabled the king to organize an army, construct forts, and finally reinstate himself in all his dominions. The succession to the throne was lately disputed by two rival elaimants, but was settled in 1842 by the instalment of the rightful heir. The population of Anam is supposed to be between $12,000,000$ and $15,000,000$.-(Crawfurd's Embassy to Siam and Cochin China; Hamilton's East India Gaz.; Guibert, Dict. Geo. ct Stat.; Dr. Gutzlaff in Jour. Roy. Geo. Soc., vol, xix.; Jour. Ind. Archip.)

ANAMBAS, a group of 15 islands, China Sea, of the E. coast of the Malay peninsula, and belonging to the kingdom of Johore. They lie between lat. $2^{\circ} 30^{\prime}$ and $3^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $104^{\circ}$ and $110^{\circ}$ E., and are usually divided into N., Middle, and S. Anambus, names unknown to the Malays, who call them Siantan, Jumijah, Sarasan, \&e. Sarasan is that which lies nearest Borneo, in lat. $2^{\circ} 30^{\prime} \mathrm{N}$., and is sometimes called S. Natuna. The largest island is Domar, in the middle group, lat. $2^{\circ} 44^{\prime} \mathrm{N}$. ; lon. $105^{\circ} 20^{\circ} \mathrm{E}$. (R.) All the islands are hilly, and appear sterile. They are inlabited by pure and poor Malays, who support themselves by the cultivation of rice, maize, sago, and cocoa nuts, and fishing trepang. The larger islands abound with tropical fruits and vegetables. The natives are said to be treacherous. Pop. about 1500.(Ritter's Erdliunde; Horsburgh's East India Directory.)

ANAMIRAPUCU, a river, Brazil, prov. Para. It is formed by the junction of the rivers Wahoui and Amana; the latter having its sources in the mountains forming the $S$. boundary of French Guaiana, the former in the serra Velha. The junction of these streams takes place in lat. $1^{\circ} 9^{\prime} \mathrm{N}$.; lon. $53^{\circ} 18^{\prime} \mathrm{W}$., from which point the Anamirapucu flows in a S.E. direction, and falls into the estuary of the Amazon, in lat. $0^{\circ} 15^{\prime} \mathrm{S}$.; lon. $50^{\circ} 55^{\prime} \mathrm{W}$. Its whole course is about 200 m .

ANAMOOI, or Ayabiour (Cape), the most S . point, Anatolia, coast of Karamania, opposite Cyprns; lat. $36^{\circ} 0^{\prime} 48^{\prime \prime}$ the Black Sea; lat. $44^{\circ} 54^{\prime} 6^{\prime \prime \prime}$ N.; lon. $37^{\circ} 18^{\prime} 30^{\prime \prime}$ E. (к.) leeing on one side quite inaccessible, while the other is fortified by a castle and outworks, extending from the summit of the cape to the level of the sea. Near it are the remains of a town, supposed to be the ancient Anemurium, remarkable for the number of its dilapidated tombs. The modern castle of Anamoor, the residence of a Turkish Aga, is on a small roeky eminence, close to the sea, about 5 or 6 m . E. of the cape.

ANAPA, a seaport and fortified tn . Russian Circassia, on the Black Sea ; lat. $44^{\circ} 54^{\prime} 1^{\prime \prime} \mathrm{N} . ;$ lon. $37^{\circ} 18^{\prime} 5^{\prime \prime} \mathrm{E}$. (r.) The port is tolerably good for small vessels, but the outer road is unsheltered, and is safely accessible only in the fine season. The fort was constructed in 1784 by the Turks, when the Rassians took possession of the Crimea and island of Taman. In 1791, the Russians carrled it by storm. It was afterwards restored to the Turks, who strengthened the fortifications. By a subsequent treaty the Russians again acquired possession of it, and have retained it till now (1850). The exports are grain, tallow, hidcs, honey, and wax. The iuhabitants, Circassians, Tartars, Greeks, Turks, Jews, Armenians, Russians, \&c. ; and the pop., exclusive of the garrison, about 3000 .

ANAPHI, or Nauphio, an isl. Grecian Archipelago ; lat. $36^{\circ} 23^{\prime} \mathrm{N}$.; lon. $25^{\circ} 47^{\prime} \mathrm{E}$. (n.). It is about 7 m . long, and from 1 to 2 broad. It is composed chiefly of rocky barren mountains, and it has no port. There are some level tracts, but they are far from being fertile, a little wheat and oil being their sole productions. Wax and honey are, however, obtained in considerable quantities. Partridges abound, and it has some springs of excellent water. The inhabitants, who are miserably poor, amount to about 1500 , the greater part of whom reside in a village ou the S . coast. A few miles S. of Anaphi is the island of Anaphi Poulo, surrounded by a group of barren rocks.

ANAPLI, correctly Nauplia (which see).
anarajapura, Anarajapoora, or Anoorammapura. See Anuradhapura.

ANASTASIA. -1, An isl., U. States, E. coast, Florida ; lat. (light, N. point) $29^{\circ} 52^{\prime}$ N.; lon. $81^{\circ} 25^{\prime} \mathrm{W}$. (r.) It is about 18 m . long, by $1 \frac{1}{2} \mathrm{~m}$. broad. -2 , Anastasia (Santa), a vil. Naples, dist. of, and 6 m . E. from Naples. Pop. 6451.

ANATOLIA, or Analolia, a pash. Turkey in Asia, forming the W. portion of the peninsula called Anatolia or Asia Minor. Like other Turkish pashalies, its extent is indefinite; varying with the caprice of the sultan, or the energy and cupidity of the governing pasha. Generally speaking, it may be described as comprehending the tract from the Blaek Sea to the Mediterranean, bounded, W. by the Grecian Archipelago, and E. by an irregular sinuous line drawn from the Black Sea, about lon. $35^{\circ}$ E., to the Mediterranean, about lon. $31^{\circ} 30^{\prime} \mathrm{E}$. It thus extends over about a half of Anatolia or Asia Minor ; in the description of which the physical featnres, products, \&c., of the pashalic are included (see the following article). It is the largest and richest provmee in the empire, and the most populous in Asia. Its valleys are fertile, but ill cultivated; its mountains produce excellent timber, in large quantities; and its climate, in the low countries, is mild and genial. The capital is Kutaya. Anatolia comprehends the old provinees of Bithynia, Paphlagonia, Galatia, Phrygia Epictetes, Mysia, Phrygia Minor, Aeolis, Lydia, Ionia, Lycia, Caria, Perea, and parts of Phrygia Major and Pisidia.

ANATOLIA, Anadolia, or Natolia [Greek, 'Aıarodńthe East, or Levant], the peninsular-shaped W. extremity of Asia, identical with Asia Minor-an inappropriate term, of uncertain, but comparatively modern date, and unknown both to the Greeks and Romans. It eomprehends the Turkish pashalics of Anatolia, Itshili, Karamania, Marash, Sivas or Room, and Trebizond. Anatolia is included between the 36 th and 42 d N. parallels, and between the 26th and 41st E. meridians; being bounded, N. by the Blaek Sea, Sea of Marmora, and the Daĩdanelles; W. by the Grecian Archipelago; and S. by the Mediterranean Sea; while its E. boundary, which is more arbitrary, is usually defined by a line connecting the Alma-dagh, near the Bay of Iskenderoon, with the Euphrates, and thence up to its source, whence it runs down the Tchorak to the Black Sea. Its greatest length, from the Gulf of Adramyti E. to the Euphrates, somewhat exceeds 700 m. ; and its greatest breadth, from C. Anamoor, in Karamania, to C. Kerempe, in Anatolia, is about 420 m. ; supposed area, ahout $270,000 \mathrm{sq} . \mathrm{m}$. The N. coast, facing the Black Sea, which presents few striking irregularities, is bold and steep, with very deep water close to the shore eastward, but gradually falls as it approaches the Bosphorus. The W. coast, from the Bosphorus downwards, presents an outline as jagged and irregular, with cliffs nearly as high and precipitous, as almost any coast in the world; including the Gulfs of Adramyti, Fouges, Smyrna, Scala-nuova,

Mandelyah, and Kos, within which, however, there are Iow alluvial shores. While the S. coast presents a bold irregular outline, with steep and lofty rocks elosely approaching the shore; its chief bays or indentations being the Gulfs of Makri, Phineka, Adalia, and Iskenderoon. The prineipal headlands N. are Capes Indjelı and Kerempe; W., Capes Baba, Karabournou, St. Mary, Arbora, Arkyalla, and Cris; and S., Capes Aleppo, Ghinazi, Seven-eapes, Toogh-bournou, Khelidonia, Anamoor, Cavaliere, and Karatash.

Mountain Chains and Platcaux.-The surfaee of Anatolia, which is extremely irregular, may be termed an elevated plateau, supporting still higher clevations, dotted with salt lakes, and enelosed by two ranges or offshoots of the Armenian mountain system, the Taurus and Anti-Taurus, running E. and W., not far from the shores of the Levant and Blaek Sea, respectively. The S . range, or Taurus, commenees elose to the Euphrates, about lat. $38^{\circ}$ N. ; lon. $39^{\circ}$ E., where Akjahdagh reaches an elevation of about $10,000 \mathrm{ft}$, and running W., with a very irregular course through Karamania and the S. part of the pashalie of Anatolia, generally speaking, parallel to the Levant, terminates in the islands of the Grecian Arehipelago. It has numerous offsets both N. and S., which, as well as various portions of the main range, are known by speeial names, as Allah-dagh, Bulghar-dagh, Jebel-kurin, \&e. \&e. The N. or Anti-Taurus range stretehes from the Tchorak W., parallel to the Black Sea, and at no great distance from its shores, and terminates at the Bosphorus, an offset tending S.W., comprising Mount Olympus ( 8800 ft .), and terminating in Mount Ida ( 5400 ft .) at the Gulf of Adramyti. Between these two main ranges there are many smaller ones, some of which attain a great elevation; and, indeed everywhere, lofty nountain masses, more or less eonneeted, are to be met with. Of the loftier summits may be named the volcanic peak of Erjisch-dagh ( $13,000 \mathrm{ft}$. ), the highest in Anatolia, situated about 13 m . S. Kaisarieh or Kasaria; besides which there are various others attaining an elevation of 7000 to $10,000 \mathrm{ft}$. The centre of this peninsula is an extensive platean, independently of the mountains on it, averaging about 5000 ft . in height, about 250 m . in length from N.E. to S.W., and about 160 m . in breadth; partly drained by the rivers flowing into the Black Sea, but covered also with salt lakes, marshes, and rivers having no visible outlet.

Lakcs and Rivers.-'The great number of salt and fresh water lakes is the most remarkable feature in the geography of Anatolia. The largest of these is the Touz-Ghieu] [anc. Tatta-palus], about 70 m . N.E. Konieh, and, according to Hamilton, about 55 m . long, and from 9 to 15 m . in breadth; it is shallow, and nueh reduced in summer by evaporations. Its waters are briny, and the inerustations on its shores supply the surrounding distriets with salt. The other principal lakes are, the Kara-hissar, Ak•Shehr, Egerdir, Bey-Shelır, Soghla, Chardak, and Buldur, all between $37^{\circ}-39^{\circ}$ N. lat.; and $30^{\circ}-35^{\circ}$ E. lon. Besides these, there are the Lakes Manyas and Abullionte, near the shores of the Sea of Marmora, and a few others of smaller extent. The largest rivers of Anatolia flow into the Black Sea; but their courses have been very imperfectly explered. The largest is the Kizil-Irmak [anc. Malys], which is supposed to rise about 40 m . E.N.E. Siwan, and, after a most tortuous eourse, first W. and then N.E., entering the Black Sea, at lat. $41^{\circ} 48^{\prime}$ N.; lon. $36^{\circ} 0^{\prime}$ E. ; total length at least $600 \mathrm{~m} . \quad$ E. is the Jeshil-irmak [anc. Iris], a much smaller river, flowing W.N.W., and entering the sea about $18 \mathrm{~m} . \mathrm{E}$. Samsoom. In the N.W. of Anatolia is the Sakaria [anc. Sangarius], rising in the table land, not far from Angora, flowing W. as far as Shughut, and thence N. into the Black Sea, whielı it enters, after a supposed course of about 300 m ., about 80 m . E. the Bosphorus. The only important rivers flowing towards the Grecian Arehipelago, are the Bakir-chai [anc. Caicus] ; the Gedis-ehai [ane. Hermus], once a famed auriferous stream, flowing into the Gulf of Smyrna, after a course, W. by S., of about 200 m .; and the Bojuk Mender-chai [ane. Maxander], after a most tortuous course, S. W. by W., of more than 300 m ., joining the sea close to the ruins of the once famous Miletus. On the S., facing the Levant, and proceeding E., are the Doloman-chai [ane. Calbis], Kodja-chai [ane. Xanthus], Ak-Ś́, Kopru-Su [anc. Eurymedon], the Ghïk-Sú [ane. Calycadnus], the Tersuschai [ane. Cyduus], but now a mere torrent, the Sihoon-ehai [anc. Sarts], and the Jyhoon-chai [anc. I'yramus]; though
none of them are of any considerable size, except the last two, which have a length, respectively, of 260 and 180 m .

Geology, Minerals, de.-It may be said, generally, that granite, serpentine, and sehist form the substance of the upper, and limestone of the lower, regions of Anatolia; trachytic rocks being also found E., which are suceeeded W., and partly overlaid by black voleanic breceia, interspersed with angular blocks of traelyyte; while the extreme W. part of the peninsula, and its S. eoasts, consist almost wholly of caleareous rocks belonging to the ebalk formation. The most curious feature, however, in the geology of this country, is the vol-
 between lat. $38^{\circ}-38^{\circ} 40^{\prime} \mathrm{N}$.; and lon. $28^{\circ} 30^{\prime}-29^{\circ} 10^{\prime} \mathrm{E}$. ; whieh is thus deseribed by Mr. IIamilton:-- West of us, a black dome-shaped hill of seoriæ and ashes, the Karadevlit or "blaek inkstand," the volcano of Koula, rose about 500 ft . above the plain, and was so steep, that to ascend its slope of einders seemed wholly impossible. In front, a black and rugged stream of lava extended from right to left; the surface of which, broken up into a thousand forms, looked like the breakers of a sea converted into stone amid the fury of a gale, and forming, as it issued from the base of the cone, a striking contrast with the rich plain througln which it seemed to flow.' -(Researches in Asia Minor, vol. i. p. I36.) These voleanic cones, and other unquestionable traces of igneous aetion, extend over a consideratble space; and earthquakes still oecasionally oecur, sueh as those that destroyed Laodicea, Apamea Cibotus, Sardis, and other eities of antiquity. Anatolia contains also numerous thermal and sulphurous springs ; those near Erekli, in lat. $37^{\circ} 40^{\prime} \mathrm{N}$., and lon. $34^{\circ} 5^{\prime} \mathrm{E}$., are found in a low ridge of calcareous hills, on the summit of which are narrow craeks or fissures, whence the springs issue. In many places, little conical hills have been raised by the gradual deposit of the earthy matter held in suspension by the water, but speedily solidified by evaporation. The expansive power of the confined water and gases is indieated by its bubbling underground, where there is any obstruction to its escape. Some of these springs deposit pure salt round their orifices, others pure sulphur, and others sulphate of lime or gypsum. There is also much difference in the heat of the springs, some being quite cool, and others nearly $160^{\circ}$ (Hamilton's Researches, vcl. ii. p. 308). Mining is not earried on to any great extent. Copper mines, however, are wrought at Bakir-Kurelisi, Tireboli, Tokat, and a few other places. Iron and rock alum are wrought near Unielı; and lead, with silver, at Denek, a little E. of the Kizil-Irmak. Nitre is got at Karabunar, about 60 m . E. Konich; and rock salt, everywhere plentiful, is especially so in the traet near Angora. Marble exists in great abund ance; an advantage which the sculptors and builders among the early Greek colonists turned largely to account. Coal also has been found lately along the coast of the Black Sea; but has not hitherto been worked to advantage, owing, in part, to the unskilfulness of the Turkish miners.

Climate. - The climate of Anatolia, so mueh lauded by the ancients, admits of no general description, owing to the diversity in the elevations of its surface, which presents winter and snmmer within one day's journey. The W. shores have been celebrated in all ages for their genial warmth; the thermometer in summer ranges from $84^{\circ}$ to $100^{\circ}$ Fah.; rain falls but rarely; but this defect is in some measure supplied by heavy dews. The eoast facing the Black Sea is almost equally favoured as to temperature, and enjoys the additional advantage of frequent rains. The elevated plains of the interior, which rise about 3000 ft . above the sea, exclusively of mountains towering some thousand feet yet higher, are extremely cold in winter, but salubrious. Summer here is of short duration, and the snow lies pretty deep for about four months in the year. The elimate of Karamania, unlike that of the N. part, is oppressively hot in summer; very little rain falls; and hence, from April to November, the inhabitants have little water, except what is preserved in tanks and cisterns. The cold, in the passes of the Taurus, is intense.

Vegetable Productions.-The N. slope of the eentral plateau so abounds with forests of oaks, bceches, planes, ashes, and almost all other building timber, that the Turks have called one of its forests the Agatch-Degnis or 'Sea of trees.' It is 120 m . long, by 40 m . in breadth, and is the chief, and all but inexhaustible souree of supply to the Turkish navy. The trees here are of larger growth than in most other countries
nnder the same parallel, especially in the sheltered valleys of the S.W. On the coast there are entire woods of walnut, quince, mulberry, pomegranate, peach, apricot, plum, and cherry trees, especially the last, to the celcbrity of which the ancient Cerasus, now Keresoun, owed its name. The plains bordering the Kizil-Irmak, Sakaria, and Mendere, afford excellent pasture. The burning coasts of Karamania have a similar vegetation with the coast of Syria; and rich gums exude from the trees, among which is the styrax, yielding the storax. The Taurus mountains comprise numerous kinds of forest trees, including a great variety of pincs, amongst which is the stone pine. Thousands of fine trees, of the pine tribe, are annually destroyed by having fire applied to them, to quicken the flow of turpentine. In the more elevated districts, pine splints have been long used in lieu of lamps and candles. Sugar canes grow in Pamphylia, but do not ripen to crystallization, a portion of them being used as a vegetable, and the pith as a sweetener; and wine, olives, and figs, are abundantly raised in the S. valleys, especially throughout Lycia, which plentifully supplies the markets of Smyrna with figs, olives, and raisins. The poppy also is grown in very large quantitics, with a view to the opium trade, which, however, is strietly a government sinecure: the preparation of the opium requires great care, and is chiefly conducted by females. The flora of W. and S. Anatolia, in all the valleys, is extremely beautiful, and will bear comparison $w$ ith that of Sicily and S Spain. Shrubs and evergreens are abundant; the latter, including the myrtle-which here attains an immense size-bay, daphne, laurel, and a varicty of holly. In strong contrast with all these countries, are the vast and frigid plains of the intcrior, which produce only stunted shrubs, saline plants, wormwood, sage, and some of the ferns. There are other tracts, the only vegetation on which is two species of broom. The wheat of Anatolia is of the bearded kind. Oats are seldom seen; the grain supplied to horses and other animals is usually barley. Maize is raised to some extent.

Animals.-Anatolia has few large beasts of prey, except a species of panther, called kaplan by the Turks. Jackals are very common in the less frequented regions; and there are a few bears, wolves, and wild hogs. Buffaloes are used for dranght, especially in tillage; and the female supplies the place of the cow, which is scaree, in furnishing milk. The horses are strong and well shaped, and the asses fleeter and larger than usual; but in the transport trade of this, as of other Eastern countrics, the camel is mostly employed. The long-haired or shawl goat was once peculiar to this country; but it has travelled east, and is known equally in Persia and Upper India. The sheep are nsually of the broad-tailed species. Among the more common birds are the eagle, hawk, hooded crow, bustard, stork, and heron, quail, partridge, and others known to Europeans. Land tortoises, lizards, frogs (including the Rana arborea or trec frog), are more or less common in various parts; and leeches are so plentiful, that they form an important article of the export trade to France and Italy, through smyrna. The coast abounds with many varieties of fish, especially the cuttle fish. Butterflies of innumerable varieties, and of uncommon and very gaudy colours, are to be scen in great numbers.

Ethnography, \&.c.-The Ottoman Turks, who form about nine-tentlis of the population, are not only the original branch of the Turkish family, but also the largest and most civilized; nor lave they, for many centuries, varied to any considerable extent from their primitive type. There are many thousands, however, of so-called Turks, who are not so really, but descended from Greck ancestors. About onetwentieth part are Grecks, an unprineipled, dishonest race; and the remainder comprise Jews, Armenians, Kurds, and some few Zingari or Gypsics, the last of whom are itinerant jobbers and tiukers, as in many countries of Europe. The total population cannot be exactly ascertained, but it has been estimated to be about $4,500,000$. The true Ottoman Turks are settled mostly in the country, and devote themselves to agriculture, many leaving their houses during summer, and leading a nomadic life in tents. The Kurds, also, and the Y ïrukhs, lead an almost wholly pastoral life, and are found, for the most part, in the lilly districts. Polygamy is rare, and the women commonly spend their time in spinning wool, and working it and camel's hair into carpets, shawls, \&c. In the rural districts they throw off the veil, which is always
worn in towns. The Anatolian Turks are personally handsome, well-manncred, and scrupulously cleanly; the latter habit being induced, perhaps, by their religious practices. As respects character, all allow them the virtues of hospitality and generosity; and Sir C. Fellows gives them additional credit for downright honesty, singleness of heart, and contentment of disposition. But the vices of avarice and artfulness, with which they are almost universally charged, would scem hardly compatible with these virtues. Their carelessness, too, has become proverbial. Unlike the Turks of other countries, however, they are a social people, fond of gossiping, dancing, and singing, with less of religious prejudice than prevails in European Turkey.

Agriculture, as a practical art, is wholly unknown. Irrigation, manuring, and cropping, are little practised; and all the implements of husbandry are in the most rude and primitive state. Notwithstanding these drawbacks, however, nature has been so bountiful to the lower lands in Asia Minor, that, with exception of the cereal products, its agricultural returns may vie with those of Greece and European Turkey. Grazing forms a staple employment, and large flocks of sheep and goats are to be found on the lofty plains of the interior, whose wool and hair form an important article of commerce between Smyrna and Angora.

Manufactures and Trade.-The principal indnstry of Anatolia consists in growing wine and oil, and in weaving carpets, shawls, and making fez caps, \&c. The trade will be best discussed in the articles Smyrna and Trebizond.

Roads and Caravan Routes.-Asia Minor was so well known to the Romans, that it was traversed by them in almost every direction. Of these roads, however, by far the most important were the two that led into Syria:-1, By Ancyra (Angora) and Tarsus to Antioch; and, 2, That through Casarea Mazaca to Comana of Cappadocia, and Samosata to Zeugma on the Enphrates. There was a well-frequented road, likewise, by Nicomedia (Ismid), and past Boli to Sinope, Trebizond, and Sivas, to Bagdad; and another led S., near the shore of the Propontis, and across the Troad to Smyrna, Ephesus, \&c. In all these lines there are ruins, bridges, \&c., clearly marking their former existence and consequence. As respects the present time, roads, as understood in Europe, are wholly unknown; but relays of horses are maintained, as in the days of Xerxes, at distant intervals, and are stationed at the large towns of the leading routes. The most frequented road is that from Smyrna to Constantinople which passes by way of Magnesia, Ak-hissar [anc. Thyatira]. and Moukalitsch; another goes by Mudaniel, Brusa, the Olympus range, Kutaya, Afinm-Kara-Hissar, Konich, Karaman, and Gulnar; and a third route, proceeding in the same direction from the Bosphorus, takes at Eski-Sher a direction exactly due E. to Angora, and thence to Ooscat and Kaisarieh. Besides the above routes, a pilgrim road leads from Constantinople S.E. through the peninsula; and there are two principal caravan routes-one through Ala-Shehr, Afium-Kara-Hissar, and Koniel ; the other by the Ak-dagh or White Mountains to Adalia, and the other S. provinces.

The principal cities of Anatolia are Smyrna, Trebizond, Iskenderoon, Adramyti, Angora, Sivas, Sinope, Samsoom, Kionieh, Kaisarieh, and Afium-Kara-IIssar.

Anatolia or Asia Minor was the seat of "The Seven churches which are in Asia'-Ephesus, Smyrna, Pergamos, Thyatira, Sardis, Philadelphia, and Laodicea. These were all places of great note in apostolic times, though only some of them are so now, and that only in a modified sense:1, Ephesus was long the metropolitan see of Asia; its ruins lie two short days' journey S.E. Smyrna, and still include some magnificent Grecian and Roman remains.-2, Smyrna, a city of Ionia, is situated upon the shore of the Agean Sca, at the mouth of the Meles, 38 m. N. Ephesus. The modern city, called Izmir by the Turks, contains scarcely any traces of the ancient. - 3 , Pergamos was an important city of the Greater Mysia, on the river Caicus, about 20 m . from the sea. The modern Bergamo is built on or near the site of Pergamos; it is a large place, and has some antique remains.-4, Thyatira is completely obliterated, though many architectural fragments are strewn around. The modern Turkish town of d hissar, built on or near its site, is a large place.- 5 , Sardia was the once flourishing capital of aneient Lydia, situated at the foot of Mount Tmolus, in a fertile plain, watered by the
golden-sanded Pactolus; it is now a heap of ruins. A miserable Turkish village, called Sart, partially preserves in its name, and entirely in its walls, relics of the splendour of ancient Sardis.-6, Philadelphia stood about 25 m . S.E. Sardis, in the valley formed by the Kodus. Hard by its site is the Turkish Ala-Shehr.-7, Laodicea was the capital of the Greater Phrygia; its site, now deserted, was near the rivers Lycus, Asopus, and Caprus, tributaries of the Mæander. No trace of it remains.-(Leake's Asia Minor; Sir C. Fellow's Rescarches in 1838-40; Ainsworth's Papers in Jour. Stat. Soc., London; Dictionnaire des dates; Hommaire de IIell's Survey of the Bluck Sca; Beaufort's Survey of the S.W. Coasts; Hamilton's Researches in Asia Minor.)

ANATOLICO, a tn. Greece, in Atolia, Bay of Anatolico, off the Gulf of Patras, 8 m . N.W. Mesolonghi; lat. $38^{\circ} 24^{\prime}$ N.; lon. $21^{\circ} 18^{\prime}$ E.; built on piles on a low island. The surrounding water of the bay, or rather lagoon, is extremely shallow, rarely exceeding 3 or 4 ft . in depth.

Anava, or Guanahau, a river, Brazil, Portuguese Guaiana, a tributary of the Branco or Parima. It rises in the serra Aricua or Acary, the S.W. boundary of British Guaiana, about lat. $2^{\circ} 0^{\prime} \mathrm{N}$; ; lon. $59^{\circ} 20^{\circ} \mathrm{W}$.; whence it flows W.S.W., till it falls into the Branco at lat. $0^{\circ} 50^{\prime} \mathrm{N} . ;$ lon. $61^{\circ} 50^{\prime} \mathrm{W}$. Its whole length is about 200 in .

ANAVELHANA, a river, Brazil, Portuguese Guaiana, an affluent of the Rio Negro. It rises in about lat. $0^{\circ} 10^{\prime} \mathrm{N} . ;$ lon. $59^{\circ} 50^{\prime}$ W., flows nearly due S., and falls into that river near Toroma; lat. $3^{\circ} 0^{\prime}$ S.; lon. $60^{\circ} 15^{\prime}$ W. The length of its course is about 220 m .

ANAZO, a considerable river, Abyssinia, formed by the junction of the Mclee and the united streams of Ancona and Sabalatte. The junction occurs in about lat. $12^{\circ} 0^{\prime} \mathrm{N}$.; lon. $40^{\circ} 55^{\prime}$ E.; from which point the Anazo flows nearly due E., taking the name of the Yasso, latterly, till it comes within 10 m . of the Sea of Bab-el-Mandeb, when it sinks into the sand.

ANÇÃ, a tn. and par. Portugal, prov. Douro, dist. of, and about 8 m . from Coimbra. It possesses a spring remarkable for its copiousness; and valuable quarries of a finc stone, partly pure white, and partly bluish, which admits of being sawed, and has, for a long period, been exten-

ancona, from the urfak water - after Th. du Moncel

ANCIORITES, a group of small islands, S. Pacific Ocetn, about 280 m . N. New Guinea. The centre isl. is in lat. $0^{\circ}$ $50^{\prime}$ S. ; lon. $145^{\circ} 50^{\prime} \mathrm{E}$.

ANCIAENS, a tn. Portugal, prov. Tras-os-Montes, 73 m. E.N.E. Oporto de Moncorvo. It is walled, and has a castle, and sulphurous mineral waters. Pop. 1900.

ANCIAO, a small tn. and par. Portugal, prov. Douro, dist. of, and 13 m . S.S.E. from Coimbra, on a hill near the river of the same name. Pop. 1240.

ANCOLAN ISLANDS, a group of small islands in the N. Pacific Occan, off the N.W. coast of the S. end of Suzon, one of the Philippine Islands. They lie close together about 12 m . from the shore, in about lat. $14^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $123^{\circ} 20^{\prime}$ E.

ANCONA, one of the most important maritime cities of the Papal States, on the Adriatic, 132 m . N.E. Rome; lat. $43^{\circ} 37^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $13^{\circ} 30^{\prime} 30^{\prime \prime} \mathrm{E}$. (r.); cap. delegation of same name; built on the slope of a hill, in the form of an amphitheatre, between two hills, on one of which stands the citadel, and on the other the cathedral. It is divided into two partsthe Citta Vecchia, and the Citta Nuova; the former ocenpies the higher ground, and is inhabited by the poorer elasses; the latter is situated along the shores of the gulf. The streets, with one exception, are narrow, dirty, and irregular. Ancona is the seat of a civil tribunal, of a tribunal of primary jurisdiction, of a court of appeal, and of a bishop, and is governed sively exported. Pop. 1626.

ANCASTER, a par. England, co. Lincoln ; arca, 2800 ac.; 6 m. N.E. Grantham. Pop. in 1841, 530.

ANCENIS [anc. Andenesium], a tn. France, dep. Loire Inferieure, r. bank, Loire, here spanned by an elegant suspension bridge, 20 m . N.E. Nante3, cap. can. and arrond. of same name. It stands on a flat, subject to the inundations of the Loire, surrounded by vine-clad hills, and overlooked by a gothic castle, which commands the river. Principal build-ings:-its handsome college and the barracks, formed out of a convent of Ursuline nuns. Manufactures :-Salt of tartar. Its port, which, in the 15 th and 16 th century, is said to have been reached by the tide, and to have had depth of water sufficient to allow ships of war to be built at it, is now chiefly used as an entrepot and station for the boats plying on the river. Its trade is in corn, wine, vinegar, coal, iron, timber, and cattle. During the revolutionary war in La Vendée, Ancenis was the theatre of some severe and exterminating contests. Pop. 3296.-The arrond. is divided into 5 cans. and 27 coms. Pop. $47,397$.

ANCERVILLE.-1, A sinall tn. France, dep. Mense, 12 m. S.W. Bar-lc-Duc. The chief trade is in Kirsch-wasser, a spirit distilled from cherries, of which a considerable quantity is made here. Pop. 2208.-2, A vil., dep. Moselle, 12 m. from Metz. Manufactures:-Haircloth. Pop. 566.

ANCHOLME (Isle of). See Lincolnshire.
ANCHOR ISLAND.- $1, \Lambda$ small isl. New Zealand, $N$. side of the entrance into Dusky Bay, S.W. extremity of New Munster ; lat. $45^{\circ} 46^{\prime}$ S.; lon. $166^{\circ} 12^{\prime}$ E.-2, Two islands off the E. coast of Brazil, prov. Rio Janciro, 3 m . E. Cape Frio.
by a delcgate who is a prelate of the Roman church. It has a college, two hospitals, 10 churches, 16 convents, and a lazaretto. Among the most remarkable buildings are the government palace, the townhouse, the merchant's hall, the cathedral, built on the site of an ancient temple of Venus; the exchange, a stately building in the Gothic style; and, on the mole, the triumphal Corinthian arch of Trajan, built of Parian marble. In 1732, Ancona was declared a free port, and, with exception of Venice, it has a larger trade than any other port on the same coast. In 1843, its exports, consisting of wool, skins, silk, sail cloth, tow, grain, alum, sulphur, fruit, and Venetian soap, amounted to $£ 428,219$. The imports of the same year amounted to $£ 1,020,770$, consisting of manufactured goods, hardware, porcelain, stoneware, glass, yarn, cloths, tobacco, wax, spirituous liquors, timber, coals, metal goods, hides, leather, meal, and biscuits. Of these, imports to the value of $£ 271,473$ were from Britain ; and of the exports $£ 28,666$, mostly oak for slippuilding. The number of vessels that sailed from Ancona, in 1843, was 1249 ; tonn., 84,750 ; the number that arrived, 1234 ; tonn., 82,783 . In 1846, the number of vessels that arrived at Ancona was 1455 ; tomn., 103,970 ; value of total imports, $£ 980,585$; exports, $£ 447,608$. Of the imports, $£ 355,306$ were from Britain, and $£ 381,806$ from Austria. Of the exports, $£ 92,162$ were to Britain, and $£ 116,941$ to Austria. Considerable quantities of British manufactures, which compose about one-half of the imports from this country, find their way into Austria through Ancona. Ancona is an entrepot for European goods for the Levant, and the chief point for
the steam communication between the latter and the Adriatic. The port, which is the only good one on this side the Adriatic, between Venice and Manfredonia, is formed by a mole and a breakwater. The former runs out from the N. part of the city, nearly 2000 ft ; it is 68 ft . high, and 100 ft . broad; on its extremity there are a battery and a lighthonse; the latter runs out from the lazaretto abont 2100 ft ., and the total space enclosed measures about 3000 ft . by 2700 ft .

Three or four frigates may lie, well sheltered from all winds, inside the lighthouse, moored head and stern; but nowhere can large vessels swing at their anchors. A new beacon was erected, in 1842, on the Volpe, or Wolf Rock, near the entrance to the harbour. Wood, provisions, vegetables, \&c., are plentiful, cheap, and good.

Ancona is supposed to have been founded by a Doric colony, or by a band of Syracusan patriots, who fled from the tyranny of Dionysius, about 400 B.c. It subsequently fell into the hands of the Romans, being taken possession of by Cæsar. The Emperors Trajan and Clement XII. improved and beautified the harbour. In 1798, it was taken by the French, and in the following year it surrendered to the allied Russian, Turkish, and Austrian army, after a long resistance. In 1832, it was again taken possession of by the French, who did not evacuate it until 1838. All religious sects enjoy here complete toleration. Pop. 36,000.

ANCRE. See Albert.
ANCRUM, a par. and vil. Scotland, co. Roxburgh; area, 8316 ac. In this parish was fought the battle of Ancrum Moor, in 1544, between the Scotch and English, in which the latter were defeated. Pop. in 1841, 499.

ANCYRA. See Angora.
ANDAD KHAN, or Andejan, a considerable tn. of Independent Tartary, territory of Kokan, on the 1. bank of the Sihoun ; lat. $41^{\circ} 20^{\prime}$ N. ; lon. $71^{\circ} 27^{\prime}$ E. ; 50 m . E.S.E. the city of Kokan, situated in the midst of gardens.

ANDAIA. See Andaya.
ANDALUSIA [Spanish, Andalucia], a dist. in the S. of Spain, celebrated for its fertility and picturesque beauty, between lat. $36^{\circ} 0^{\prime}$ and $38^{\circ} 40^{\prime} \mathrm{N}$.; and between lon. $1^{\circ} 40^{\prime}$ and $7^{\circ} 25^{\prime}$ W.; bounded, N. by Estremadura and New Castile, E. by Murcia, S by the Mediterranean Sea, and W. by Portugal. Length from E. to W., 320 m. ; average breadth, 140 m . ; estimated area, $27,221 \mathrm{sq} . \mathrm{m}$. It comprehends the ancient Moorish kingdoms of Cordova, Sevilla, Granada, and Jaen, and the modern provinces of Scville, IIuelva, Cadiz, Jaen, Cordova, Granada, Almeria, and Malaga. It is of very uneven surface, being traversed through its whole extent by mountain ranges. The sierra Morena runs along its N. confine, and in the S.E. rise the mountains of Granada and Ronda, including numerous sicrras which run $E$. to the mouth of the Guadalquivir. Many summits of the latter ranges are covered with perpetual snow, the Mulahacen rising $11,483 \mathrm{ft}$., and the Picacho de Veleta $11,385 \mathrm{ft}$., above the sca; on the former of these is the Lake of Caldera, 10,112
ft. above the sca. The great road from Madrid to Seville and Granada cuts the sierra Morena at the pass called the Des-peña-perros, 7560 ft . high. The geological features of AndaIusia exhibit a great prevalence of mica slate, gneiss, aud other primary and transition rocks on the elevated tracts, both in the N. and S., with tertiary and more recent formations in the large intervening river valley. All the mountains abound witl mineral wealth, yiclding silver and lead, antimony, copper, iron, vitriol, sulphur, coal, and marble. The prinejpal river of Audalusia is the Guadalquivir, which rises in the E. part of prov. Jaen, near Cazorla, and thence flows S.W. by W., and below Seville, S.S.W., for about 320 m., entering the Mediterranean at San Lucar; its principal affluents being the Guadalimar, Guadiato, and Xevil, and the whole basin covering an area of $15,040 \mathrm{sq} . \mathrm{m}$., or considerably more than half Andalusia. The rivers S. of the sierra Nevada are quite insignificant. The vegetation is of the character peculiar to the extreme $S$. of Europe and the N. districts of Africa; the mastic (Pistacia lentiscus), myrtle, olive, palm, banana, \&c., grow abundantly in the valley of the Guadalquivir, which are replaced S. of the sierra Nevada by saffron, cotton, and the sugar cane. Wheat, maize, barley, many varieties of fruit, and different kinds of grapes, grow here, almost spontaneously; besides which, honey, silk, and cochineal form important articles of culture; but the arts of husbandry are in the most backward state, and the metayer system of letting land combines with the people's natural indolence to prevent any improvement. The accompanying view of a farm steading near

ANDALUSIAN FARMSTEAD.
From Baron Taylor, Voyage Pittoresque en Espa弓na.
Puerto Santa Maria, 6 m . N.E. Cadiz, will convey an idea of the appearance of buildings of this kind in Andalusia, and the S. of Spain generally. Situated, as it is, inside a fosse covered with a strong defence of prickly aloes, the features it presents are more likely to attract the eye of the painter than to please that of the skilful agriculturist. By far the largest portion of the soil is left for pasture land, or abandoned uninhabitable wastes. The horses are the best breed in the peninsula, partaking very much of the Arabian character; the bulls of Andalusia are sought after over all bull-fighting Spain; sheep (trashumantes) are reared in vast numbers, and bear an abundance of good, but not fine, wool; and the hogs reared on the acorns of the mountain forest furnish hams and bacon unsurpassed in any part of Europe. Wolves and bcars are only now and then found, and there are no venomous reptiles. Game, including deer, hares, rabbits, partridges, bustards, and plovers, is abundant. The chief manufactures of this extensive tract, which depends almost exclusively on the soil for its wealth, are woollens, silk, and leather, which are by no means extensive. The Andalusians are descended in part from the Moors, of whom they still preserve the leading types, being dark in complexion, black eyed, of exquisitely rounded shape and stalwart figures, with quick wit, ready repartee, and love of exaggeration. They are eminently superstitious and imaginative-gasconading, fawning, cowardly, and cruel ; and their intellect and energy wither under the perpetual calling on patron saints and men to do their work for them. The dress, both of males and females, is gaudy and picturesque. Education is in a low state, and smugglers and robbers
abound. Pop. ©.745,858.-(Wildrington's Spain; Ford's Handbook for Spain; \&c.)

ANDAMAN ISLANDS, or ANDAMANS, a chain of islands on the E. side of the Bay of Bengal, consisting of four principal islands, and a number of smaller; the former called, respectively, North Audaman, Middle Audaman, South Andaman, and Little Andaman; the latter sejarated from the others by a channel of about 45 m . in width, called Duncan's Passage. The three first-named islands are separated by straits so narrow, that they are often considered as one. The whole chain extends from lat. $10^{\circ} 29^{\prime}$ to $14^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $92^{\circ} 23^{\prime}$ to $94^{\circ} 13^{\prime}$ E. In this extent, N. and S., are included the island of Prejaris, uninhabited, except by sea fowl, squirrels, and apes, and the islands of the Cow and Calt; which, by some, are excluded from this group. The largest island, Middle Andaman, is from 55 to 60 m . in length, and from 15 to 20 in breadth; N. Andaman, 48 m . in length, and 15 in breadtl; S. Andaman, 50 m . in length, and varying from 10 to 20 in breadtli; these three forming an all but continuous island of upwards of 150 m . in length. Little Andaman is about 30 m . in length, by about 18 to 20 m . in breadth. In the centre of the largest island there is a mountain, called Saddle Peak, about 2400 ft . high. These islands are mountainous, and form the continuation of the volcanic line N. from Sunatra. The only active volcano, however, in the group, is on Barren 1sland, which is uninhabited, and sparingly covered with shrubby vegetation. It is 1700 ft . high; and its last recorded eruption took plaee in 1792.

There are no rivers in any of the isiands, but only brooks, which in the rainy season are swollen into torrents, and in the summer season are quite dry. Wells, however, are numerous. The chief riches of the group consists in wood, with which about nine-tenths of their surface is covered. Teak, dammar, red wood, iron wood, ebony, the turpentine tree, catechu, cotton, melons, aloes, bamboos, ratans, and vast quantities of cocoa nuts, whence two of the islets are named, constitute the most important vegetable productions. There are few wild animals; the principal are the rat, the snake, the guana or lizard, and a number of diminutive swine. Birds are neither numerous nor in great variety; the Hirundo esculenta builds in the sea cliffs its edible nests. Fish are very abundant, more especially during the N.E. monsoons, and constitute, along with shell fish, the prineipal food of the inhabitants, who are true iehthyophagi, resorting to wild fruits, roots, rats, snakes, and lizards, only when fish are scarce. The natives do not eat their animal food raw, but roast it on the coals. They are of the Papuan race, generally about 5 ft . in height, of a dcep black complexion, with woolly hair, Vol. I.
flat noses, thick lips, small red eyes, and protuberant bellies. They wear no covering; live in the rudest habitations, composed of four poles intertwined with ratans, their bed a heap of dried leaves; they have no implements of iron, their spears and arrows being pointed with fish bones, or wood hardened in the firc. They carry bows 4 or 5 ft . long; and, to protect themselves from insects, smear their bodies daily with mud, which, added to the red ochre with which they bedaub their hair, gives them a most hideous appearance. The canoes with which they fish, and which they manage with dexterity, are made of bamboo; but when visiting the islands they use small rafts. In 1791, the English effected a settlement near the S. extremity of the Great Andaman ; but in 1793, removed it to Port Cornwallis, on the 1. side, and near the N. extremity. The object of the undertaking was the procuring of a good larbour to shelter ships dnring the N.E. monsoon, and to receive conviets from Bengal ; but in 1796, the situation was abandoned as unhealthy. All thee attempts then or subsequently made to establish any kind of intercourse with the natives proved ineffectual, as, on every oceasion, they manifested the most hostile disposition. The pop. of the entire group does not exceed 3000 .

ANDAYA, or ANmain, a river, Brazil, an afflnent of the Franciseo, prov. Minas Geraes, rises in the sierra Matta Gorda, about lat. $19^{\circ} 10^{\prime}$ S. ; flows N.E. by N., and falls into the Francisco at lat. $18^{\circ} 10^{\prime} \mathrm{S}$.; its whole course being about 120 m.

ANDAYE, or IIendaye, a small scaport th. France, dep. Basses-Pyrénées, $12 \mathrm{~m} . \mathrm{S}$. W. Bayonne, on r. bank, Bidassoa, a little above its embouchme. It has a small fort and several distilleries, in which excellent brandy is produced. It was near this place that the Duke of Wellington erossed the Bidassoa in 1814, and gained the first permanent footing in the Frencli territory. Pop. 470.

ANDEER, atn. Switzerland, can. Grisons, l. bank, Rhine, 14 m .S.S.W. Coire. It stands about 3400 ft . above the level of the sea; has a prettily situated parish ehureh, and mineral springs, at which a bathing establishment has been erected. The springs are very copious, but not much frequented. A very large landslip or bergfall occurred above Andeer in 1835. I'op. 549.

ANDEJAN. Sce Andad Khan.
ANDELFINGEN, a vil. Switzerland, ean. of, and 18 m. N. from Ziirieh, cap. bail. of same name, l. bank, Thur, over which is a covered bridge. It is the seat of a civil court. The inhabitants are chiefly oceupied in agricultural pursuits. Several engagements took place in the vicinity, in 1790, between the Austrians, Russians, and French. Pop., including that of some adjacent hamlets, 2400 .-The Bail., which lies on both sides the Thur, and borders on Schaffhausen and the Rhine, is well cultivated, fruitful, and produces good grapes, grain, and hemp. Pop. 14,580.

ANDELLE, a small river, France, dep. Seine Inferienre. It rises near Forges, and falls into the Seine a few miles below Pont de-l'Arche, after a course, from N. to S., of about 30 m .

ANDELYS (Les), two tns. France, called Le Grand and Le Petit Andely, distant half a mile from each other, dep. Eure, r. bank, Seine, 19 m . S.E. Konen, and 4 m . from the Paris and Rouen Railway, eap. arrond. of same name. Grand Andely was formerly fortified, and part of its defences still exists. Its houses are ill bnilt, and its streets narrow; but its chmreh is one of the finest in the department. Petit Andely, which lies nearest the Seine, here spanned by a suspension bridge, owes its origin to Richard Cour de Lion, who, in 1195, bnilt here, on his return from Palestine, the chateau Gaillard, in its time one of the strongest fortresscs in France, and in which David II., King of Scotland, found an asylum in 1334. This interesting building is now wholly a ruin, it having for a considerable time been used as a quarry whence to obtain stones for bailding eonvents. Manufactures:- Fine cloth cassimeres, cotton net, linen, earthenware, woollen and cotton thread. Trade in grain, wool, eattle, linen, \&c. Pop. 3456.

ANDENNE, a tn. Belgium, cap. ean. of same name, prov. of, and 13 m. E. Namur, r. bank, Meuse. It has a chureh, five chapels, and a townhouse; lout none of them buildings of note. The great staples are delft ware, porcelain, and tolaeco pipes, for all of which Andenne is famous. It has also a paper mill and a cotton mill, both driven by steam; a
printfield, several bleachfields, tile works, a work for making minium (red lead or vermilion), and a blast furnace. In the neighbourhood are beds of pipe clay, quarries of marble, and mines of lead, iron, and a kind of coarse coal called terrehouille. The railway from Namur to Liege passes near Andenne. Pop. 4885.

ANDERAB, or Inderals, a th. Tartary, in Budakslian, about 85 m . N.N.E. Cabool ; lat. $35^{\circ} 43^{\prime}$ N. ; lon. $74^{\circ} 55^{\prime} 15^{\prime \prime}$ E. (c.) It lies at the junetion of the rivers Anderab and Kiasin, at the foot of a hill, and surrounded by fine gardens, fruit trees, and vineyards. It is a populous place; and contains the storelouses in which are kept the silver brought trom Hariana and Bendjehir, supposed to be a mine, or mines. -(Ritter's Erdlkunde.)

ANDERAV1A, or Ixderabia, a small isl. Persian Gulf; lat. $26^{\circ} 41^{\prime} \mathrm{N}$. ; lon. $53^{\circ} 39^{\prime} \mathrm{E}$. (R.) It is 4 m . long, low, level, and narrow; separated from the mainland by a strait $1 \frac{1}{2} \mathrm{~m}$. broad, the navigation of which is very dangerous. Vessels are supplied here with fresh water.

ANDERBY, a par. England, co. Lincoln; 1080 ac.; 5 m . E. Alford. Pop. in 1841, 243.

ANDERMAT'T, or Ursern, a vil. Switzerlaml, can. Uri, 20 m. S. Altorf, on an elevated plain, 4500 ft . above the sea level, on the great route over the St. Gothard into Italy. It has a pretty eliurch, two ehapels, a convent of Capuehins, and a townhall. Cattle rearing and the transit trade are the chief oceupations. The cheese produced here is highly esteemed, but from its softness is incapable of transportation. Though a mere village, Andermatt is much visited by strangers, on accomt of the interesting scenery of the valley. But the principal object of attraction is the eelebrated Dcvil's Britge, which spans a fearful chasm, at the bottom of which the Reuss rushes down wards with great violence. The old narrow arch, said to be a construction of the 12 th century, rises 75 ft . above the stream. This rugged pass was, in 1799 , the scene of some desperate skirmishes between the Austrians, liussians, and French. Pop, 663.

ANDERNACH [ane. Antoniacum, or Anthencthum], a tn. Prussia, prov. Lower Rhine, gov. of, and 10 m . N.W. from Coblentz, in a plain, l. bank, Rhine. It is surrounded by a strong wall, with massy gates, which give it an air of great antiquity, bnt its streets are narrow and dirty. It is of Roman origin, Drusus Cæsar having encamped on the spot before the Christian era, and built a bridge over the Rhine. In 355 , it was pillaged by the Alemanni, and, four years after, was restored by the Emperor Julian. The bnilding most deserving of notice in Andernach is the Dom, or parish church of the 13th century, highly ornamented with basreliefs, and interesting specimens of seulpture. In the interior is a Roman tomb. The Coblentz gate is an elegant Gothie strueture. Near it, on the Coblentz road, are the ruins of the eastellated palace of the Arehbishops of Cologne; and not far off', close to the river, stands an old gateway, supposed to have been built by the Romans. Andernaeh has long been famous for the production of two peculiar artieles-millstones and trass or cement. The former were used by the Romans and are still exported to all parts of the world. They are composed of a species of basaltic lava, which is easily cut into large slabs, and used as door posts, lintels, \&c. The trass is a speeies of tufa, whieh is chiefly found in the neighbouring quarries of brohl, and is supposed to have been formed cither by a torrent of volcanic mnd, or showers of pumice and ashes, which, falling into a lake, have then mixed with the materials deposited by it, and been converted into stone. To prepare it for use, it is ground to powder by mills, and then possesses the property of hardening under water. The ancients used it in the solid state for sarcophagi ; and in the quarries of Brohl, votive tablets, with Roman inseriptions, have been discovered. In addition to the millstones and trass, Andernach has a variety of products-paper, leather, potash, earthen pipes, wood charcoal ; and mineral water resembling seltzer, but still more effervescent, obtained from a spring in the neighbourhood. Near Andernach, various rafts of timber which descend the Rhine are collected into one great float, 1000 ft . long and 90 ft . wide, destined for 1 ordrecht in Holland. Pop. 3200.

ANDERLECII'T, a suburb of Brussels (which see).
ANDEROT. See Underoot.
ANDERSON, a par. England, co. Vorset; 750 ac. ; 7 m . S.W. Blanilford. Pop. in 1841, 43.

ANDERSON, the name of several places, U. States :-1, A dist. and vil., S. Carolina.-2, A co. Kentucky.-3, $\Lambda$ co. Tennesse.-4, $\Lambda$ township, Ohio.- 5, A township, Iowa.

ANDERSON (Cape), the E. point of the island of St. Lawrence, at the entrance of Belring's Straits ; lat. $63^{\circ} 0^{\prime} \mathrm{N}$. : lon. $168^{\circ} 30^{\prime} \mathrm{W}$.

ANDERSON'S INLET, Anstralia, S. Bass's Straits, between Capes Liptrap and Patterson. It is full of mud banks, and available for boats only.

ANI)ES (The), a range of mountains, of sueh vast extent and altitude, as to render them one of the most remarkable physical features of the globe. It commences at a point about $50 \mathrm{~m} . \mathrm{N}$. of the Straits of Magalhaens, and about the same distance E . from the shores of the Paeific. From this point it proceeds in a connected line along the W. coast of S. America, at a distance from the sea varying from 20 to 160 m. ; the former oceurring in Bolivia, about lat. $18^{\circ} \mathrm{N}$; the latter in Chili, between lat. $35^{\circ}$ and $40^{\circ} \mathrm{S}$. Passing through Peru, it enters Colombia, where, about lat. $2^{\circ} 28^{\prime}$ N.; lon. $76^{\circ} 31^{\prime}$ W., near Popayan, it throws off two branches, taking a N.E. direction towards the Caribbean sua. The main range, continuing its $N$. course, but now presenting much lower altitudes, traverses the Isthmus of Panama or Darieh, the state of Nicaragua, (inatimala, Mexico, and passing throughout the entire Jength of N. America from S. to N., under the names of the Oregon or Rocky Mountains, terminates at Point Barrow on the Aretic Ocean, about 200 m . N. W. from the month of the Mackenzic river; their whole length, thus considered, amounting to about $10,000 \mathrm{~m}$. 'The name Andes is, however, usually restrieted to that part of the chain belonging to S. America. It does not, however, consist of a single ridge, but of a series of ridges, running more or less parallel to each other, between which are several elevated plains or table lands. These mountains are known, also, in several places in S. America, by the name of the Cordilleras; but a striet and well-defined appropriation of these names has not yet been made, they being called indifferently by the one and tho other, and hence a good deal of confusion and inaccuracy. A late intelligent traveller, J. J. von Tschudi, suggests that the name Andes should be restrieted to the E. chain, and that of Cordillera to the W., or that nearest the Pacific.

The Andes extend through so great a space, and present such a variety of aspeets and conditions, that, in order to deseribe its ranges with more accuraey, it has been customary to divide this immense chain into four portions-the Patagonian, Chilian, Peruvian and Bolivian, and the Colombian Andes, from the names of the countries through whieh they pass.

1. The Patagonian Andes, whieh extend about 800 m. , are generally considered to commence in Tierra del Fuego, on the insulated Cape IIorn (3000 ft.) in lat. $55^{\circ} 59^{\prime} \mathrm{S}$. ; and lon. $67^{\circ} 21^{\prime} \mathrm{W}$. The mountains of this insular grou], how ever, scem to be distinet from the continental chain, which, aecordingly, we reekon as extending from lat. $48^{\circ}$ to $42^{\circ}$ s. The range presses close on the Pacific Occan; and the average elevation searecly execeds 3000 ft ., though several summits rise sone thousands of feet ligher, namely, Mount Melimoyn (7400 ft.), Yanteles (8030 ft.), and the voleanoes of Corcobado ( 7510 ft. ), and Minehinmadom ( 8000 ft .) The lower portions of the W . slope are elothed with dense forests. Of the other sile we have no knowledge, although the width of the ehain scareely reaches 40 m .
2. The Chilian Aules commence opposite the N. end of tho island of Chiloe, and extent N. about 1250 mm ., to lat. $24^{\circ} \mathrm{S}$. witl an average width of about 130 m . They form a single chain as far as the 35 th S . jarallel ; N. of which, at the voleano of Peteroa, a double range may be traced, a portion of which is called the Paramilla range, running parallel to the main eliain, and separated therefrom by the longitudinal valley of Aspaltata, a barren district only 15 m . wide, but extending about 160 m. N., as far as the river San Juan. This chain seems to be commected, further N., with the Famatima rancre, E. of which is the sierra Velaseo, province of Rioja, in La Plata; and also in the provinees of Catamaraca and Nalta there are numerous offshoots and parallel ranges. The prineipal peaks, proceeding N., are the voleanoes of Antuco ( $16,000 \mathrm{ft}$. ), Маури́ ( $15,000 \mathrm{ft}$.), and Tnpungato ( $15,000 \mathrm{ft}$.); but the culminating point, not only of this portion, but of the cntire range of the Andes, is the giant porphyritic Nerado of Aconcrigua, whieh rises, according to Capts. Fitzroy and

Beechy, $23,910 \mathrm{ft}$. above the sea, and is distinctly visible from Valparaiso, 100 m . distant. The line of perpetual snow, in these latitudes, is about $14,000 \mathrm{ft}$. above the sea. The Chilian Andes, under the 35 th S. parallel, are about 150 m . from the Pacific; but this distance decreases to about 80 m . in the latitude of Valparaiso. Between the Andes and the shore are extensive plains, clevated from 1000 to 1500 ft . above the sea; and these are mostly clothed with forest trees, and a rich vegetation; but the more elevated mountain regions are rocky, and almost wholly without plants.
3. The Pervvian and Boliviun Andes comprise that portion of the range which, from the 24th to the 6th S. parallels, include a length of 1250 m . From its S . end to the Cerro Chorolque, in lat. $21^{\circ} 7^{\prime} \mathrm{S}$.; lon. $65^{\circ} 40^{\prime}$ W., which is about 95 m. S. by W. Potosi, the Andes form one grand and continuous chain; but $N$. of this point the range bifurcates, intercepting a lofty table land or longitudinal valley of the Desaguadero and Lake Titicaca. Both these parallel cordil-leras-the W. or coast range of which is called the cordillera of the coast, the other or E. the cordillera of Bolivia or Ancu-ma-are of very great elevation, and were once thought to comprise the highest summits of the whole range; lut Mr. I'entland's observations in his second survey (1836-38) have proved this conclusion erroncous.

The following list comprises some of the principal summits on each side of the range, together with their position and altitude as given by that gentleman:-

Hence it will be seen that, even in this district, the lighest are W., not E. of the Desaguadero and Lake Titicaca, as was long thought by the most eminent geographers, and, among others, by Humboldt, and by Pentland himsclf. (Sce his paper on the Bolivian Andes, Gco. Jour., vol. v. pp. 70-89.)

These parallel cordilleras, however, the united breadth of which nowhere exceeds 230 m ., are united in various points by enormous transverse groups or mountain knots, or else by single ranges crossing between them like dikes. The descent to the Pacific is exceedingly steep; the dip is also very rapid to the E., whence offsets diverge to the level plains. The table land of the Desagualero, thus enelosed, has itself an absolute altitude of $12,900 \mathrm{ft}$., a length of 400 m ., and an area of $150,000 \mathrm{sq} . \mathrm{m}$. A large E. offset, the sierra de Cochabamba, leaves the E. cordillera under the 17 th parallel, bounding the rich plain of Cochabamba N., and ending nearly under the 63 d W. meridian, at Santa Cruz de la Sierra. The two main cordilleras once more unite in the group of Vilcañota, in lat. $15^{\circ} \mathrm{S} .$, about 120 m S.E. of Cuzco, which is itself 8370 ft . above the sea; and the united range then runs about 280 m . N.W. to the town of Huanaco, whence it runs N.N.W. in two ridges, enclosing a plateau $11,000 \mathrm{ft}$. high, named Pasco or Huanuco, in lat. $10^{\circ} 40^{\prime} \mathrm{S}$., where the Andes scparate into three nearly parallel shains-the E., Central, and W. cordilleras, which enclose between them the rivers Huallaga and Upper Marañon; the W. or coast cordillera rmming N. as far as the group of Loja, ncar the S. extremity of Ecuador.
4. The Colombian Audes, or 'Andes of Quito.'-This portion of the range may be considered as commencing in $6^{\circ}$ lat. S., opposite the Point Aguja, where it takes a course nearly due N., forming, as in Chili, a single mass or rocky plateau, 80 m . broad, covered with a double series of highly-clevated summits, enclosing longitudinal valleys, one of which, that of Cuenç, in the group of Assouan, is 15,520 ft. high, or nearly within the region of perpetual snow. N. of this point the chain again divides, the W. range comprising Mounts Chimburazo ( $21,424 \mathrm{ft}$. ), Iliniza ( $17,380 \mathrm{ft}$ ), and Pichincha ( 15,924
ft.) ; while on the E. range are the volcanoes Sangay ( 16,138 ft.), Tunguragua ( $16,424 \mathrm{ft}$.$) , Cotopaxi ( 18,875 \mathrm{ft}$ ), Autisana ( $19,137 \mathrm{ft}$.), and Mount Cayambe ( $19,535 \mathrm{ft}$.$) Shortly after$ entering New Granada, crossing the equator, the chain, in lat. $1^{\circ} 5^{\prime} \mathrm{N} .$, again meets in the knot or platean of Los Pastos, on which are the volcanoes Cumbal ( $15,620 \mathrm{ft}$.), and Chiles, but, a little N. of the city of Pastos, it onec more bifurcates, enclosing the mountain plain of Almaguer, comprising the volcano of Purace ( $17,034 \mathrm{ft}$.) on its E. branch ; and finally, somewhat N. the town of Iopayan, the Andes separate into three distinct ridges-the sierra di Choco, running N. to the Isthmus of Panama; the sicrra di Quindiu, running E. of the river Cauca; and the sierra Somma Paz, extending E. of the Magdalena to Lake Maracaybo and the city of Valencia in Venezuela. N. of the 5 th N. parallel, the only summits within the snow line on these cordilleras belong to the E. chain, which also is very precipitous on its E. slope. The plain of Bogota lies at an clevation of 8730 ft . On the Quindiu or central chain is the volcano of Tolima ( $18,020 \mathrm{ft}$. ), in lat. $4^{\circ} 46^{\prime} \mathrm{N}$.; lon. $75^{\circ} 37^{\prime}$ W. The Choco or coast chain is of comparatively small elevation, its lighest point not exceeding 9000 ft . The mountains of I'anama, which join the Andes N., may be considered as a continuation of the sicrra di Choco.

Passes and Roads of the Audes.-This gigantic mountain chain is traversed in its different parts by numerous roads or passes, at heights almost equal to those of the extreme summits of the European ranges. Most of them are narrow, rugged, steep, and sometimes slippery and dangerous, passing through gorges, across yawning chasms, and up nearly perpendicular rocks; nor can they be attempted with success, except by the active and well-practised native, or the enterprising, eourageous, and well-provided traveller. It is worthy of remark, likewise, that nearly all these roads cross the ridge, run transversely and direct, not, as is sometimes the case in the Alps, by a circuitous course through the longitudinal valleys. Subjoined is a list of most of the known mountain passes, with their position, connected localities, and highest elevation, commencing with the Andes of Chili, those of Patagonia leing as yet quite unknown:-

Colombian
Assuay the Paramo de Andes. (Roadover the Quindiu Pass
from Alausi to Cnenca.
do. do. to Cartago.
Besides th runs longitudinally along the Andes the whole distance from Truxillo, lat. $8^{\circ} 5^{\prime} \mathrm{S} .$, to Popayan, lat. $2^{\circ} 25^{\prime} \mathrm{N}$., in the valley of the Cauca, not much less than 1000 m . It runs by Loja ( 6770 ft .), and by a pass over the Paramo de Assuay to Cuenca and Quito ( 9543 ft ), whence it proceeds by the Paramo de Bolicha ( $11,500 \mathrm{ft}$. ), to Pasto and Almaguer ( 7440 ft. ), and Papayan ( 5720 ft .) Six roads are reported to cross the sierra di Choco, but they are difficult and steep, practicable only by carriage on the backs of the natives. Those most used are from Cali on the Cauca to Port Buenaventura, from Cartago to Novita, and from Antioquia to the Rio Atrato. Many of these roads are excecdingly difficult to traverse, not only from the great height to which they ascend, but likewise from their roughness, unevenness, and narrowness, windiug as they often do along brinks of enormous precipices, and presenting so limited a pathway, that frequently it becomes necessary to re-adjust the burdens on the mules' backs, lest, being left an inch or so too broad, the poor animal may be driven over into the gulf below. Suljoined is a view of the pass near Tacora, a village in the Bolivian Andes, on the road between Arica and La Paz, and situated $13,690 \mathrm{ft}$. above the sea level. The pass itself is understood to be $14,400 \mathrm{ft}$. above
the sca, though Lieut. Ashe, R. N., made it, by the boiling point of water, $18,000 \mathrm{ft}$. The nearest truncated peak is the volcano of Chipicani, $19,710 \mathrm{ft}$. high. These paths lead across quebradas or ravines, bridged sometimes by frozen snow on which

Sea, and some tributaries to the Orinoco; and in the S. the rivers Colorado, Negro, and some smaller streams. All these rivers flow towards the Atlantic Occan. The mountain chain pressing so close upon the Pacific Ocean, no streams of importance flow from its W. slopes. The number of lakes interspersed throngh this vast mountain system is not great ; in this respect presenting a striking contrast to the Swiss Alps. The largest and most important, and only one worthy of notice, is that of Titieaca, on the Bolivian plateau. It is $12,850 \mathrm{ft}$. above the sea level, about 115 m . long, by 35 broad, surrounded by lofty mountains. On its banks are some considerable towns, and its waters are navigated.

Goolog!, \&e.-In considering the geology of the Audes, the first fact that strikes the observer is the vast development of voleanie force along the whole length of the chain, and even continued N . through Guatimala and Mexico. These voleanic vents seem to occur in linear groups, the most S . of which is that of Chili, extending from the 42d to the 331 parallel, and comprising, besides, more than a dozen extinct voleanoes, 21 still in a state of ignition; the more remarkable of which are Tupungato ( $15,100 \mathrm{ft}$.), Antuco ( $13,000 \mathrm{ft}$.), and Minchinnadom ( 8000 ft .) From the 30 th to the 27 th parallels, no volcanic action is to be found ; but in the Bolivian Andes, and principally W. of
the mules cross. At times also progress is completely impeded by the large masses of rock that fall down and bloek up the path, frequently preventing for a time the passage of mules. In such eases, or where the road has been swept away, or where the path is inaccessible to four-footed animals, burdens are borne by the cargueros or carricrs, who not only transport baggage from one valley to another, but also, in a chair strapped to their back, carry the traveller likewise: an easy mode of locomotion, and not dangerous, though the carguero generally takes the steepest declivities, when, were the traveller not to lie back in his chair, both he and his bearer might be precipitated to the bottom. The accompanying view is of a remarkable pass between Tacora and Lake Titicaca. It is about 10 m . long, and the river which has formed it has, at the same time, cut the rocks into curious eastellated forms. The pathway is blocked up by a fallen mass of rock. The difficulty of travelling in these

ANGOATURA PAB8- From 5 Skiteh by Lieut, Asie, R.N.
regions presents a scrions ohstacle to the progress of commerce and of general improvement, and tends much to preserve the primitive habits of the people, by shutting them out in a great measure from intercourse with the external world.

Rivers and Lakes. - From the Andes rise two of the largest water systems of the world-the Amazon and its affluents, and the La Plata and its affluents. Besides which, in Whe N., from its slopes flow the Magdalena to the Caribbean

Lake Titicaca, are eight active craters, among which may be mentionel Gualatieri ( 22.000 ft .), A tacama ( $18,000 \mathrm{ft}$. ), Chipicani ( $19,740 \mathrm{ft}$. ), and Arequipa ( $18,400 \mathrm{ft}$. ) Further N., as far as the 2 d S . parallel, there are no active volcanoes; but here we arrive at a district of highly volcanie eharacter, comprising other eight lofty summits, now in an igncous state-Sangay, Tungaragua, Cotopaxi, Antisana, Imbabura, Cumbal, Pasto, and Purace. As respects the geological formations of this gigantic range, granite, which is abundant in Tierra del Fuego and Patagonia, seems to be the base of the whole; but it comes so rarely to the surface in the N. parts of the chain, that, according to 11 umboldt, a person might travel for years in the Andes of Peru without meeting this species of rock; and he never saw any at a greater absolute elevation than $11,500 \mathrm{ft}$. Gneiss is sometimes found in connection with the granite; but mica schist is by far the commonest of all the crystalline rocks. Quartz is likewise extremely abundant, generally mixed with mica, and rich in gold and specular iron. Vast tracts of red sandstone, with gypseous and salifcrous marls, occur near Quito, and not only on various parts of the main range, but in E. Colombia and Venezuela they spread over immense tracts, here and there associated with coal. as in the Andes of Pasco in Peru. Porphyry and grcenstone abound all over the range at every elevation, both on the slopes and extreme ridges; and trachyte is almost as abundant as porphyry, hoth in Pern and Chili, great masses of it, from 14,000 to $18,000 \mathrm{ft}$. thick, being visible on Chimborazo and Pichincha. Basalt, of columnar structure, enclosing olivine, and overlaid by thick beds of elay, is found on the table land of Quito, near Popayan, and on the W. bank of the Cauca. As respects voleanie products, the W. face of the Andes presents immense quan tities of lava, tufa, and obsidian, none of which are found on the E. side; this remark applics especially to that part of the ehain lying between Chili and the equator. Fossil remains are by no means common; but in the limestone strata of the coast, towards the $N$. extremity of the range, Humboldt found wany marine shells, of the silurian period, about 30 m . from the coast; and Pentland observed others of the same cra, at a height of $17,500 \mathrm{ft}$., on Mount Antakawa, in Bolivia, as well as in several other parts.

Earthquakes.-Many of the volcanoes, as before observed, are in a state cither of constant or occasional action; it eannot, therefore, be inatter of surprise that there should be frequent and violent carthquakes. All the districts of the Andes system, but Chili especially, have suffered more severely from these oscillations than any otber part of the world; and antons
the towns either destroyed or greatly injured by these visitations may be mentioned Bogota, Quito, Riobamba, Lima, Callao, Valparaiso, and Concepcion. In 1819, Copiapo was entirely overturned, not a house being left standing. Conecpecion was twiee destroyed-in 1730 and 1751 ; and on Nov. 21, 1822, an earthquake was felt on the same day, not only there, in lat. $37^{\circ}$ N., but at Lima, in lat. $12^{\circ}$ N., more than 1700 in. distant; it was on this oceasion that Valparaiso, Melipella, and Quillota, were all but completely annihilated. This earthquake, too, had the remarkable etlect of upheaving the land on the coast, upwards of 100 m . in extent, to the height of 3 or 4 ft ., and elevating a portion of the shore above highwater mark. These shocks continued at brief intervals till the autumn of 1823 ; and since that time the voleanoes of Maypu, until then for many years quiescent, have had frequent eruptions. In fact, earthquakes, slight or more serious, are of yearly occurrence, and faint oscillations of the soil are regarded with scareely more attention than a hail storm in the temperate zone. When they assume a serious and destructive charaeter, however, they strike natives, as well as travellers, with impressions of awe and dread, which no familiarity with their oecurrence can at all weaken. The native, when aroused from sleep by the shock, rushes forth in terror into the open air; and the traveller, although he may before have treated the matter with levity, and mocked at the fears of those around him, is in turn panic-stricken. and involuntarily seeks safety in flight (Tschudi's Pern, pp. 169-172).

Mineral Produce.-The Andes are richer in the precious metals than any country in the world, excepting the platean of Mexico, and the rivers of California; but, however great the supplies that have been obtained from them, there can be no question that the produee of the mines would be immensely increased, if a rational and scientifie method of operation were substituted for the present rude and clumsy morle of working. In Chili, the largest gold diggings are in the districts of Pe torea, Coqnimbo, and Copiapo; the richest in Pern are in the provinces of Pataz and II uailas, and on the banks of the 'lipuani, E. of the Lake Titicaca; and in New Granada, the most productive lavaderos or washings are in the provinces of Antioquia and Choco, in the valley of the river Cauca; and on the Pacific, in the district of larbacoas. The largest piece of gold ever found in New Granada weighed 25 lbs.; hut, near La Paz, one has been found of nearly double that weight. As respects the annual produce of this metal, no very exact estimate can be formed, but it probably somewhat exceeds in value $£ 1,200,000$ sterling. Wilver occurs in Chili, on the Cerro de Uspallata, $24 \mathrm{~m} . \mathrm{N}$. by W. Mendoza, where the ore yields about 50 per cent. of pure silver. The Peruvian Andes have numerous silver mines scattered over their whole extent, from the province of Caxamarea S. to the confines of Chili; but incomparably the richest are the mines of Lauricacha, in the Cerro de Pasco, which have been worked upwards of two centuries. The returns fluctuate exceedingly, but they may average annually about $2,500,000 \mathrm{oz}$; which, at 4 s .6 d . per oz., are valued at $£ 512,500$. The mines of Chota likewise, whieh are situated on Mount IItalgayoe ( $13,300 \mathrm{ft}$.), are productive. The ore, which is rieher even than that of Pasco, lies either on or very near the surface; and the returns may average annually aboit 670,200 oz., of the value of $£ 184,300$ sterling. Close to the Paeific, at IIuantajaya, in the district of Arica, are several mines celebrated for the quantity of virgin silver found therein, sometimes in masses of great weight. But of all the mines of S. Anerica, the most famed are those of the Cerro de Potosi, lat. $19^{\circ} 36^{\prime} \mathrm{S}$., which is perforated, in all direetions, by thousands of opeuings, some of which are within 100 ft . of the summit ( $16,000 \mathrm{ft}$.) In order to drain the lower mines of Potosi, an adit has been constructed, $1 \frac{1}{4} \mathrm{~m}$. long, and 14 ft . in height and width. In New Granada, likewise, there are rich veins of silver; but no mines have as yet been opened whose products pay the expense of working. As respeets the entire amount of silver in all the distriets of the Andes, it is not possible to arrive at any exact statement ; but it will not probably be far from the truth to estimate it as equal to $£ 950,000$ sterling, less than one-half of its amount half a eentury ago! If this be correct, the grand total value, annually, of the precious metals, gold and silver, produced in the Andes, S. of the Isthmus of Panama, may amount to $£ 2,140,000$; nearly one-third less than it was, as estimated by Humboldt, in 1804. Subjoined is a statement of the estimated produce
of all the gold and silver mines in 1840 ; and probably thesa numbers are not far from being correct as regards the present time:-

|  | Dols. | . |
| :---: | :---: | :---: |
| Peruvian mines | .5,210,000 | 1,042,000 |
| Bolivian mines . | .3,000,000 | 600,000 |
| Chilhan mines... | .2,500,000 | 500,000 |
|  | 10,710,000 | 2,142,000 |

It must be recolleeted, however, that a very considerable quantity of gold and silver is exported by eontraband traders, without being sent to the mint to be coined; this may amount to one-fifth more, making the total equal to $£ 2,570,000$.

Quicksilver is found in several parts of the Andes, but impure; in combination with sulphur forming the red sulphuret of mercury, eommonly known as cinnabar. Near Azogné, 15 m . N. by E. Cuença, the ore is found in an immensely thick bed of quartzose sandstone, containing fossil wood and asphaltum. Formerly the quicksilver mines of Mount Santa Barbara ( $12,300 \mathrm{ft}$. high), near Iuanvelica, were in high repute for their amazing produetiveness: they were situated in a compact sandstone resting on a bed of magnesian limestone, and were said to yield, on an average, $600,000 \mathrm{lbs}$. of the metal ammally. In 1789, however, the mine was destroyed throngh the ignorance of a stupid manager, who ordered its pillars of support to be dug away; and the roof consequently fell in, and closed it. Copper is found both in the E. and W. cordilleras of Peru; but the E. chain is too far from the eoast to admit of mines being profitably worked. The mines of Chili are the most valuable. They are situated ehicfly in the N . provinces of Coquimbo and Copiapo, but also in the district of Arancana, and the total produce may average annually about $14,000,000$ lbs., which are exported to the U. States, Cbina, and many parts of Europe. Tin also, wrought in Chili, forms an article of export; but lead and iron, though plentiful, are not wrought.

Climate and Meteorology.-Snow of course never falls between the tropics, except on the tops of very high mountains. In the Andes, near Quito, the lowest level of perpetual snow is $15,795 \mathrm{ft}$. above the sea; and from this it varies very irregularly both N. and S. Under the 18th N. parallel, in Mexico, it descends to $14,772 \mathrm{ft}$., while on the S. it rises to $18,000 \mathrm{ft}$. in some of the N. cordilleras of Bolivia, owing to the extensive radiation from the plains and valleys beneath. Both Pentland and Pöppig, however, found the snow line generally between $11^{\circ}$ and $17^{\circ} \mathrm{S}$. to be at an elevation of about 17,000 ft . It sinks to $13,800 \mathrm{ft}$. at Copiapo ; to $12,780 \mathrm{ft}$. near Valparaiso; it is only 8300 ft . at the S . extremity of the Chilian Andes; and finally, is only at a height of 3400 ft . in the straits of Magellan (Sommerville's Phys. Geog., vol. ii. pp. 60, 61). Notwithstanding, however, the great number of snow-clad summits, glaciers are of rare oceurrence in the Andes, being found only, and then of but small extent, in the narrow ravines which furrow the sides of some of its giant summits. It is wortlyy of observation also, that Mr. Darwin, in crossing the Portillo in the Chilian Andes, found the Protococcus nivalis or red snow, so well known from the account of Arctie navigators (Advent. and Deagle, vol iii. p. 394). On the W. side of the range, little or no rain falls, except at the S . extremity; and seanty vegetation appears only on spots, or in small valleys, watered by streans from the nountains; while, on the opposite slope, excessive heat and moisture combine to give the range a thiek covering of tangled forest trees and dense brushwood. Currents of cold W. and N.W. winds blow nearly all the year from the ice-topped cordilleras, on the plateal beneath, daily accompanied, during four months, by thunder, lightning, and snow storms. The thermometer during the cold season (here called summer) ranges from $53^{\circ}$ at midday, to $21^{\circ}$ during the night; whereas, in winter, the mercury rarely falls, even in the night, below freezing point, and ascends at noon only to $48^{\circ}$. The mean temperature, however, cannot be precisely determined; for the heat, within a few hours, will often vary from $40^{\circ}$ to $45^{\circ}$, and the cold is the more sensibly felt from being usually accompanied by sharp, biting winds, so keen as to cut the skin on the face and hands. Currents of warm air are also occasionally found on the crest of the Andes; they usually oecur two hours after sunset, being both local and narrow, like the hot hlasts in the Alps, not exceeding a few fathoms in width. They run parallel to each other, and so eloscly thet five or
six of them may be passed in a few hours. They blow chiefly from S.S.W. to N.N.E. and are especially frequent in August and September (Tselndi's Peru, p. 305). Dr. Pöppig, in crossing the Chilian and Peruvian Andes, twice observed a curious kind of earth light, an indescribable reddish light, not seen in winter or on sumy days, and aseribed by him to the dryness of the air, which is, from the same cause, singularly transparent and highly eharged with electricity. 'My flamel waistcoat,' says Mr. Darwin, 'when rubbed in the dark, appeared as if it hal been washed with phosphorus; every hair on a dog's back erackled, and even the linen sheets and leathern straps of the saddle, when handleel, emitted sparks.'-(Vol. iii. p. 398.)

Fegr tution.-In the low, burning plains that flank the bases of the Andes reign the Danana, eycas, plantain, Theobrome cacao; jutropha, producing the eassava and manioc, whence comes tapioca; the cotton tree, indigo and collee plant, and sugar cane, all of which are extensively and profitably grown below the altitude of 4000 ft . Maize is likewise plentiful, and may be said to form the bread of the l'eruvians; it is of three different kinds, and, aceording to Ifumboldt, is cultivated 7000 ft . above the sea. Within the same limits also are fomnd, cither wild or enltivatel, the pine apple, pomegranate, shatlock, orange, lime, lemon, peach, apricot, the delieious cherimoya, butter-like palta, the granadilla, tuna, and pacay, together with olives, aji or pepper plants, tomatas, and sweet potatoes, and gum opal, copaiiba balsam, carana, dragon's blood, sarsaparilla, and vanilla. To these groups suceeed, in the humid and shaded elefts on the slopes of the cordilleras, the tree ferns, and cinchona or cascarilla, from which we derive the febrifuge bark and quinine. Between the heights of 6000 and 9000 ft ., is the climate best suited for the European cereals. Wheat, on the Peruvian and Colombian Andes, will seldom form the ear lower than 4500 ft ., or ripen higher than $10,000 \mathrm{ft}$. of absolute height; but barley and rye, being more able to bear the cold, rise 2500 ft . higher. 'The agriculture of the sierra is wholly consigned to the natives, who enther labour on their own account, or on very low wages for the half' eastes or mestizoes: the ground is ploughed and sown in September and Uetober, the erop being reaped in April or May. The barley, however, grows as folder grass, even higher than lucerne, which is not found above $11,200 \mathrm{ft}$. To this may be adkled the quinoa (Chenopodium Quinoa), a most useful production for domestic uses. In this region also, and a little above it, grow the potato (indigenous to Chili, and thence introduced into Europe), and its tuberose congeners, the maca, ullneo, oca, and mashua, all of which are pretty extensively used as food; and here likewise grow the ehick pea, broad bean, cabbage, and other liuropean vegetables. Within the cereal limits are fonnd the oak, clm, ash, and beech, whieh never descend lower than 5500 ft , and seldom rise higher than 9200 ft . above the sea. Above this level the larger forest trees, except the pine, begin to disappear ; and on the Andes of Quito, the escallonia mark the highest limit of trees, at a level of $11,600 \mathrm{ft}$. The bejarias, the highest of shrubs, terminate at $13,400 \mathrm{ft}$. above the sea, above which, in rich and beauteous verdure, rises the zone of the grasses, 'one vast savama, extending over the immense mountain plateaux, and reflecting a yellow, almost golden tinge to the slopes of the cordilleras. Where the naked trachyte rock pierces the grassy turf, and penetrates into those higher strata of air whel are supposed to be less charged with carbonic acid, we meet only with plants of an inferior organization, as lichens, lecideas, and the brightly-coloured, dust-like lepraria, scattered around in circular patches. Islets of freshfallen snow, varying in form and extent, arrest the last feeble traces of vegetable development, and to these succeeds the region of perpetual snow.'-(1l umbollt's Cosmos, vol. i. p. I4.)

Zoology. -The fauna of the Andes is still very imperfectly known. Among the carnivorous animals, the principal are the jaguar, puna, ounce, ocelot, and wild cat. There are also bears, tapirs, racoons, wild hogs, foxes, and otters, with both red and roc deer. The characteristic animals of the Andes, however, are the llama and its different congeners-the guanaca, vicuña, and paco or alpaca. They are the chief beasts of burden on the Andes; and, especially in the silvermines, they are of the most important service, as they frequently carry the metal from the mines, in places where the declivities are so steep that neither asses nor mules can keep their footing. The burden carried by them should not execed 125 lbs ., for
otherwise they will lie down and refuse to carry it, and their daily journey must not be more than eight or nine miles. The alpaca is smaller than the Ilama, and of more elegant shape, but differs little in habits and nature. Its fleece is peeuliarly soft, and very long, sometimes exceeding four inches; and of this wool the Indians make blankets and ponehos. It is also largely exported to Europe, and is now in great use as a material of dress. The guanaca is the largest of the American eamelidæ, but has coarse wool, and is with difficulty trained as a beast of burden. Far more beatiful, however, than any other of the family is the vicuña, which, mlike the rest, has a beantifully soft, short, and curly wool; it runs wild in the momitains, and is regularly limited by the Indians. The forests of the warmer regions abound with marmosets, monkeys, and rabbits. Many varieties of serpents are foumd Jurking in the grass, or beneath the dead leaves, several of which are more or less poisonous; but the most deadly of all is a small viper, found in Pern, whose bite will destroy hmman life in two or three minutes. Bats are likewise exceedingly numerous, and of large size, some measuring nearly two feet across the extended wings. The vampire (edostoma, D'Orbigny) seeks its food in houses and stables; and it is frequently a source of great annoyance to the horses and mules, the injury being generally not so much owing to the loss of blood, as to the inflammation afterwards ensuing. The condor, a kind of large vulture, soars over the lighest summits of the Andes, and makes its nest among the highest and least accessible rocks. The turkey, vulture, and gallinazo are also frequently met with; wild curassows, turkeys, parrots, and perroquets are common in the woods; and there are many varieties of smaller birds.-(Tseludi's Peru; Voyage of the Jieagle; Humboldt's Cosmos and Researches; Pentland's Map of La Laguna di Titicaca; Sommerville's I'hysical Gcography; Jour. Roy. Gco. Soc.)

ANDEVOURANTE, or ANDEvomonto, a large vil. or th., E. coast, Madagascar, 1. bank, and near the embouchure of a river of the same name; lat. $19^{\circ} 0^{\prime} \mathrm{S} . ; \operatorname{lon} .49^{\circ} 0^{\prime} \mathrm{E}$. The town consists of about 500 honses, and the pop. about 2000. The inhabitants, both male and female, are of a lively and aetive disposition, neat and clean in their persons, and well clothed. Their houses, also, are more commodious than those in most other parts of the island. This prosperity they owe chielly to the fertility of their soil, which produces rice in great abmolance, and to an extensive intereourse with Europeans, who come there to purchase rice.

ANDlARY, the mame of two vils., W. Africa, Bondoo country; lat. $14^{\circ} 6^{\prime} \mathrm{N}$. ; lon. $13^{\circ} 0^{\prime} \mathrm{W}$. One of them is a large and thriving place, with neat honses. The people possess large flocks. In the environs palm trees abound.

AN1)KHOO, Ankкоul, or Ankos, a th. Independent Tartary, cap. of a small khanat of the same name, N. slope of the Iluzareh mountains, about 70 m . W. lalkh; lat. $36^{\circ} 54^{\prime} \mathrm{N}$.; lon. $66^{\circ} 23^{\prime} \mathrm{E}$. The khanat of Andkhoo consists of a small territory 30 m . square, ruled by a petty chicftain, who is generally dependent on (abool. The capital lies on the banks of a considerable stream, which rises among the IIuzarehs, and is lost in the plains of Bokhara. It is advantageously sitnated on one of the great commereial routes between Bokhara and Afghanistan, but the district is scantily supplied with water. The number of houses is about 4000 . Pop., composed of Soonee Mahometans, 25,000 to 30,000 .

ANDLAU, Andelahe, a tn. France, dep. Bas-khin, 10 m. N.N. W. Schelestadt ; on the Andlau, foot of the Vosges mountains, at the entrance of a narrow valley enelosed between hills planted with vines. Potash is made here. There are also flour and hark mills, and a mill for spimming worsted. l'op. 1486.

ANDO, or Andoen, one of the Loffoden lalamels, off the N.W. coast of Norway, 35 m . in length from S.E. to N.W., and about 10 in breadtli; lat. (N. point) $69^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $16^{\circ} 8^{\prime}$ E. (r.)

ANDOAIN, a small tn. Spain, prov. Biscaya, 6 m . San Scbastian, on the Oria, and near the point where the road from San Sebastian falls into the great line of road from Bayonne to Madrid. It is one of the stopping places of the French mail. The chureh is spacious, and constructed ehiefly of jasper, with curious painted statues of saints in wood. There is an iron foundry in the town. Pop. 1430.-(llughes' Spain and Portugal.)
andora, or Marina d'Andora, a tn. Sardinian States, territory Genoa, cap. dist. Albenga, on a hill near the sea, on the W. coast of the Gulf of Genoa; lat. $43^{\circ} 57^{\prime} \mathrm{N}$. ; lon. $8^{\circ} 10^{\prime}$ E.; 3 m . S.S.W. Alassio. Olives and vines are cultivated in the vieinity.

ANDORNO CACCIORNA, a tn. Sardinian States, prov. Biella, 13 m . N.E. Ivrea, on the Cervo. It lies in a valley which contains 10 villages, and 12,000 inhabitants, the greater part of whom are engaged in the iron, copper, and lead mines of the neighbouring mountains. It is the birthplace of the painter Cagliari.

ANDORRA LA VIEJA, the cap. of the neutral state of Andorra, 36 m . S. Foix in France, and 11 m . N. Urgel in Spain. It lies at the confluence of the torrents Embalire and Ordino, affluents of the Segre. Pop. 2800.

ANDORRE, or Andorra [Arabie, Aldarra, A place thiek with trees], a small independent neutral state, comprised in three mountain valleys, in the N. of Catalonia in Spain, on the S . side of the Pyrences, and S . of dep. Ariège in France, extending from N. to S. about 30 m ., and somewhat less from E. to W., with an area of about $191 \mathrm{sq} . \mathrm{m}$. This distriet, which is among the wildest in the Pyrenees, is watered by the Embalira, Ordino, and Os, affluents of the Segre, which is itself tributary to the Ebro. It comprises very little arable land, but extensive pastures; and the mountain sides are well clothed with building timber, which is floatel down the Segre and Ebro to Tortosa; at Caldes, also, there are thermal springs. Andorra is governed by its own eivil and criminal codes, and has its own courts of justice, the legislative power being vested in a council of 24 representatives, elected by the six communes into which this state is divided; and presided over by a syndic or procuror-general, who holds his office for life. The laws are administered by two viziers or judges, one of whom is ehosen by the republie of Franee, the other by the Bishop of Urgel in Spain, and both of whom aet on oecasion as supreme military commanders. All the male inhabitants are liable to military serviec, and provided with firearnis, each parish company being commanded by a captain and two subalterns. The commeree, whieh is wholly free from impost, is confined to a few necessary articles; and the Andorrians enjoy the additional privilege of anmally receiving from France, duty free, a certain quantity of cattle, shcep, hogs, horses, and mules, salt fish, corn, and cloth. Iron is wrought in several mines, its manufaeture into tools and implements being also conducted to some extent; but this, and every other branch of industry, is carried on in the rudest and most primitive manner. The inhabitants, all of whom are striet R. catholies, are extremely simple and austere in their manuers, ignorant of, and indifferent to, the luxuries of eities ; their wealth consisting either of eattle and sheep, or a share in the iron mines, and very few being owners of any land beyond a small plot adjacent to their cottages. Their elothing, too, is equally simple and rough, composed of coarse brown woollen cloth of home manufaeture. Each family has a chief, determined by primogeniture; and these always choose their wives from fanilies of equal rank with their own. The young men always reside with their parents until they marry; and, unless married, they are allowed no slare in the management of publie affairs. Education is at a low ebb; but in eaeh parish there is a school, in which the children are taught gratuitously. The common language of the people is a dialeet of the Catalan. In person, the Audorrians are strong and well proportioned, almost unaequainted with discase, and nearly equally so with crime. The total pop. of the state is estimated at 18,000 . This remarkable little republic owes its independence to Charlemagne, who gave the people the privilege of governing themselves with their own laws; and these rights were further confirmed by his son, Louis le Débonnaire, who, nevertheless, ceded the spiritual superintendence to the Bishop of Urgel. These rights have ever since been respeeted by the Freneh, whom they aceordingly hold in high esteen.

ANDOVER, a parl. bor., market tn. and par. England, co. Hants. The rown is beautifully sitnate near the Anton, $11 \frac{1}{3} \mathrm{~m}$. N. by W. Winchester, and $63 \frac{1}{2} \mathrm{~m}$. S. W. by W. London, on the great road from the latter city to Salisbury. It consists of three principal strects, is compactly built, well paved, lighted with gas, and amply supplied with water. The chureh, which was recently completed at a cost of nearly $£ 30,000$, is
a spaeious edifice, in the early English style. There are, besides, four Dissenting chapels, a free grammar-sehool, national and Britislı schools for boys and girls, an infant school, and almshouses for a certain number of poor people of both sexes. The townhall is a large handsome building, with a Grecian front, supportel by arches, under which a considerable coru market is held every Naturday. The chief business of the town consists in the manufacture of silk, which has superseded shalloon, the former staple; and the timber trade, which was formerly earried on to a considerable extent, has for some time been diseontinued. The town is governed by a mayor, four aldermen, and 12 councillors. It returns two members to the House of Commons. Registered electors (1850), 252. Three fars ammally, chiefly for horses, sheep, cheese, and leather. Near the town are several ancient encampments; and some beautiful specimens of Roman pavement have been diseovered in the neighbourhood. Andover gives the title of Viscount to the Earl of Suffolk. Area of jar. 7670 ac . Pop. (1811), 4941.

ANDOVER, a tn., U. States, Massachusetts, co. Essex, 23 m . N.N.W. Boston; beautifully situated on the r. bank, Merrimac. Its manufactures are considerable; but it is chiefly remarkable for two edneational institutions-P'Phillips' Academy, founded in 1788; and the Andover Theological Seminary, founded in 1807. Wach institution las about 130 students. The Theologieal Seminary is conducted by a president and four professors, and the libraries contain about 18,000 volumes. A normal seminary, for the training of teachers, was founded at Andover in 1830. A railway from Wilmington to Ilaverhill passes through the township, whieh is abont. $7 \frac{1}{2} \mathrm{~m}$. from the former. 1'op. in 1840, 5207 .(U. States' Guz.)

ANDRAlX, or Anhmacte, a th. Spain, isl. Majorea, W. side, 14 m . W. by S. Palma. The squares and streets are generally well constructed, clean, and spacious. In the town are a parish chureh, ehapel, endowed sehool, and enstom house of the fourth elass. The male inhabitants are chiefly occupied in fishing and agriculture; the women in spimuing wool and flax. Pop. 4609.

ANDRARUM, a tn. Sweden, prov. of, and 24 m. S.S.W. from Christianstad, 9 m . W. from the shores of the Baltic. The manufacture of alum is carried on here to a considerable extent, the annual produet being about 4167 bushels.

ANDRAVA BAY, Maalagascar, E. coast, alout 60 m . S.E. Cape Amber; lat. (Berry head) $12^{\circ} 50^{\prime} 48^{\prime \prime} \mathrm{S}$; ; lon. $49^{\circ} 56^{\prime} 30^{\prime \prime} \mathrm{E}$. (R.) It is about $1 \frac{1}{4} \mathrm{~m}$. in extent, of circular form, with an island in the middle of the entrance, having depths of from 4 to 6 or 9 fathoms on either side; but reelis project from the N. and S. extremities of these islands. This bay is open to N. and N.E. winds, but there applears to be good slielter from E. winds, in 4 or 5 fathoms, at the S. extremity of the bay.

ANDRE (ST.), with or without an aftix, the name of numerous places in France, of which may be named:-1, An-dré-de-Cubzac (St.), a in., dep. Gironde, 12 m. N.N.E. Bordeaux, near the r. bank of the Dordogne. It has an ancient ehurelh, and some trade in grain, flour, wines, poultry, and eattle. Pop. 1554.-2, A tn., dep. Herault, $19 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Montpellier. It has a considerable trade in truits and verdigris. Pop. 2079.-3, A th. and com., dep. Gard, 12 m . N.N.E. Vigan; among the momutains, on one of the branehes of the Gardon d'Anduze. 1'op. 1820.-(Murray's Handlook for France.)

ANDRE, or Endre (St.)-1, A market tn. Hungary, co. Pesth, r. bank, Danube, 11 m. N. Buda. It has a R. eatholie, and seven Greek churches, although the members of the latter do not exceed 1000. This originated in the immigration of the Servians under Leopold 1., when each sect founded its own place of worship. The inlabitants are prineipally oceupied in the cultivation of the vine, from which they produce excellent wites. Pop. 3000.-2, An isl. in the Danube, opposite to the town, 14 m . in length, and 1 in breadth; remarkable for its great fertility.

ANDREA (St.), a vil. Naples, prov. Principato Ultra, 3 m. S.E. Conza. Pop. 2200.

ANDREAs, a par. England, Isle of Man, 3 m . N.W. Ramsey. Pop, in 1841, 2217.

ANDREASBER(t, a th. Hanover, in the mining dist. of, and 16 m. N.E. from Klausthal; $13 \mathrm{~m} . \mathrm{S}$. W. Elbingerode; on
the deelivity of the Andreasberg, at the S. foot of the Brocken, 1936 ft . above the sea. It is the second in importance of the mountain towns of the Upper llarz, and owes its origin to the valuable mines of iron, silver, lead, copper, cobalt, and arsenie, which exist in the neighbourhood, and were first opened at the commencement of the 16 th ceutury. The silver furnace, whieh stands about $1 \frac{1}{2} \mathrm{~m}$. S.W. Andernach, on the sperr-Lutter, and at the foot of Mount Knicholz, produces annually 5273 silver macks (nearly $£ 3500$ sterling), 80 tons lead, and 3 tons copper. In 1728 , a piece of silver ore, weighing 80 lbs ., was found in one of the mines near the town, and was preserved in the cabinet of natural history at löttingen, till 1783, when it was stolen. The town is divided by the market place into the upper and lower towns, and las been much improved since 1796, when, after a great fire, it was rebuilt, with much wider and more regular streets. still, most of the houses are of wood, and have shingle roofs. The best buildings are the eliureh, the townhouse, the poor's house, and a school for boys and girls. Among the employments of the place may be mentioned the rearing of eanary birds, by the miners, while their wives spin yarn, and work lace. The elimate of Andreasberg is severe. In winter the snow lies long and deep. Considerable numbers of cattle are raised in the distriet; and though agriculture is not in an advanced state, crops of oats, barley, summer rye, and potatoes, are obtained. Pop. 4300.

ANDREEVA, or ENDerı, a tn. Russia, gov. Circassia, principality of Koumnke, $40 \mathrm{~m} . \mathrm{S}$. Kizliar. It is the chief place of a Tartar district, loosely governed by chiefs really or nominally subject to Russia. There is some trade in the place, including a traffie in slaves. There are here some Moslem seminaries for Cireassian youtlis. I'op. of th. about 12,000.

ANDRENOVIAN ISLANDS, a group of the Aleutian Islands (which see).

ANDIRES (SAN), a tn. Canary Islands, in a beautiful and healthy little valley in the E. of the island of Palma. A few of its houses are grouped together in the centre, but the remainder are seattered. It has a chureh, four hermitages, a school, and a mont-cle-piete; and in the vicinity, wheat, barley, maize, sweet potatoes, legumes, archil, grapes, and other fruits, are raised. Pop. 2635.

ANDRE'T'TA, a small th. Naples, prov. Principato Ultra, dist. of, and 5 m . E. from San Angelo de' Lombardi; prettily situated on a hill. Pop. 4609.

ANDREW (St.)-1, A par., S. Wales, co. Glamorgan, 5 m. S.W. Cardiff. Pop. in 1841, 497.-2, Andrew (St.) Minor, a par., S. Wales, Glamorgan, near Ogmore. I'op. 18. -3 A par. Ireland, co. Down; 12,907 ac. Pop. in 1841, 7586.-4, Andrew (St.) Ilketshall, a par. England, co. Suffolk, 3 m . S.E. Bungay. Pop. in 1841, 548.

ANDREWS (ST.), an ancient city and seaport, Scotland, co. Fife, on the German Ocean, between the mouths of the Friths of Forth and Tay; lat. $56^{\circ} 21^{\prime}$ N.; lon. $2^{\circ} 45^{\prime}$ W.; about 42 m. N.E. Edinburgh by sea, and about 31 m . direct. The eity is agreeably situated on a flat table land, about 60 ft . above the level of the sea; and, though presenting many unequivocal indications of decay, has a handsome appearance, the houses being all stone, generally well built, and of considerable height. It contains three principal streets, diverging from the cathedral; one of which, called south Street, is spacious, well paved, and about three fourths of a mile long. It is well lighted with gas, and is tolerably supplied with water, which, however, though of good quality, requires, or at least is the better, to be filtered after rain. From the number of its spires, pimaeles, and large public buildings, and the numerous gardens and shrubberies that surround and intermingle with its ancient walls and edifices, it presents, when viewed from a little distance, a singularly pleasing and picturesque aspect. It contains a number of interesting remains of antiquity, the principal of which are the ruins of the cathedral, situated at the 15. end of the town. This once magnificent structure, founded in 1160 , was destroyed at the Reformation. When entire, it was 370 ft . long, 65 ft . broad, with a nave or transept 180 ft . long. Its style was a mixture of Saxon and Gothic. The roof was covered with slieets of eopper. A lofty square tower, and a portion of a chapel standing elose by the ruin, are believed to be the most ancient remains of ecelesiastical architecture in Scotland. The castle
or Episcopal palace, situated on an eminence overhanging tho sea, was founded by Bishop Koger about 1200, and was originally a place of great strength. There are a number of

ST. ANDREWS CASTLE-Froma Shelch by D. O. Hill, K S A.
other ruins, of less note, in various parts of the town; and many ancient edifices, no longer in existence, are spoken of by listorians and topographers. The University of St. Andrews, the oldest in Scotland, was established by Bishop Wardlaw in 1413. It consisted at one time of three colleges, instituted at different periods-sit. Salvator's, in 1455 ; St. Leonard's, in 1512; and St. Mary's, in 1537; but in 1748 the first two were united, and the bnildings of st. Leonard's converted into dwellings. It has 34 bursaries, whose aggregate value is about $£ 1000$ a year, divided among 9.1 students. The prineipal of St. Mary's College must, as in the case of Edinburgh University, be a clergyman, as he leetures on systematie theology. This institution is appropriated exclusively to the study of theology, and has seven bursaries; aggregate value, $£ 200$; eujoyed by 17 individuals. The United College, which stands in a different part of the town, and is, excepting as regards a few cases, an entirely separate and distinet establishment, is appropriated to the study of languages, philosophy, and science. 'There is a library containing 45,000 volumes, common to both colleges. The two institutions have, together, 13 professors. Next in importance to the older colleges, as an educational institntion, is the Madras School, founded and cndowed by Dr. Bell of Madras, a native of the town, who bequeathed the sum of $£ 45,000$ for the noble purpose of affording gratuitous instruction to the poor, which is the principal object of the establislment, although small fees are taken from those who can afford to pay them. This sehool is attentled (Marel, 1850) by upwards of 800 young persons, of both sexes. There are also two boarding or day schools for ladies, an Episcopal ehajel, Hree chureh, Burgher, Independent, and Baptist places of worship, a subseription library, and two reading rooms. The harbonr, which is on the E. side of the town, is a very indiflerent one, being difficult of aceess, and dry at low water. Some attempts lave been made lately to improve it, but with no good result. There is no trade in the town, and no manufactures worthy of notice. It is the place of residence, however, both permanently and temporarily, of a number of genteel families of limitel means, who have been induced to resort to it on account of the cheapness of living, and of education; its society is thus, in general, more refined than is usnally to be met with in other towns of similar size. St. Andrews has been long famous for the pratice of the old Scottish game of golf, for which its downs are well adapted. Between 8000 and 9000 golf balls are manufactured in the city yearly, about half of which are exported, the other half being used on the spot. St. Andrews is of great antiquity; and its history, from a remote period, is blended with the civil and ecclesiastical annals of the kingdom. Its origin is uncertain; but it was constituted a royal burgh by David l., in 1140, having, however, been a place of religious celebrity long prior to that period. From the begiming of the 12 th
century, till the Reformation, it gradually increased in ecclesiastical dignity and importance, and finally became the metropolitan see of Scotland. Previous to the Reformation, which arrested its career of prosperity, it was one oỉ the most populous towns in Scotland. After that event it rapidly decayed, the revenues of its religious establishments being alienated to different purposes. This ancient city has been the scene, at various periods, of many remarkahle events, and is connected with the histories, more or less intimately, of a long series of the most remarkable men of their respective times. It was here that the scottish Parliament met to swear allegiance to Edward I., after the subjugation of Scotland; aud here the same body assembled a few years afterwards, to support the elaims of Robert Bruce to the Scottish throne. It was here that the earlier martyrs to the reformed religion, including Patrick Hamilton and George Wishart, suffered death; a fate which the celebrated George Buchanan barely avoided, by escaping from the castle of St. Andrews, in which he was eonfined, and in which the notorious Cardinal Beaton was shortly afterwards murdered. St. Andrews was the principal place in Scotland to whieh the first printed English New Testaments were secretly sent, in 1526, from Cologne, whither Tyndale, the translator, had fled. In 1645, the Scottish Parliament held its meetings here; and, amongst other proceedings, condemied to death Sir Robert Spottiswood, son of the archbishop of that name, and three other gentlemen who had been taken prisoners at the battle of Philiphaugh, and who were afterwards executed in the principal street of the city. Four years afterwards, namely, in 1679, James Sharp, Archbishop, of St. Andrews, was murdered on Magns Moor, near the W. extremity of the parish, by a party of Covenanters. Amongst the earlier persons of celebrity connected with St. Andrews, by residence or otherwise, were Andrew Wynton, author of a poetical chronicle of Scotland; and John Major, author of a history of Scotland, and of various theological works much esteemed in their time. The more distingnished names between the Reformation and Revolution, are those of Spottiswood, George Buchanan, Andrew Melville, Samuel Rntherford, Robert Blair, and James Gregory. Since the era of the Revolution, the more celebrated nancs are those of Thomas Halyburton, Principal Ladow, Principal Tullidoph, Professor Wilkie, Principal Watson, Professor Baron, Dr. Wilson, Dr. James Playfair, Dr. George Hill, Dr. Adam Ferguson, Dr. Andrew Bell, and the late Dr. Chalmers. With few exceptions, all these eminent persons were connected with the university, and all distinguished by their literary attainments. St. Andrews unites with the two Anstruthers, Crail, Cupar, Kilrenny, and Pittenweem, in returning a member to the IIouse of Commons. - The parisir is about 10 m . in length, with an average breadth of about 2 m .; the area comprehending a space of between 17 and 18 m . It has about 6 m . of sea coast. The ground nowhere rises to any great elevation, nor does it present any features of particular interest. Pop. of burgh in 1841, 3653 ; of par., exclusive of burgh, 1449.

ANDREWS (Sr.)-1, A seaport tn. New Brunswick, cap. Charlotte co., at the N.E. extremity of Passamaquodily Bay, on a narrow slip of low land fronting the sea, 60 m . W. by S. St. John, and 3 m . from the shores of the U. States; lat. (S. point, light) $45^{\circ} 4^{\prime} 1 \mathrm{~S}^{\prime \prime} \mathrm{N}$.; lon. $67^{\circ} 3^{\prime} \mathrm{W}$. (n.) It consists of two principal streets, which run parallel to each other, and of several sinaller crossing them at right angles. The houses are all of a substantial and respectable appearance. There are several churches, a courthonse, a jail, a grammar school, a chamber of cominerce, an agricultural and emigrant society, a savings' bank, a Bible society, a barracks, and many handsome private buillings. It is conveniently situated for commerce, and especially for the fishing trade, whieh is carried on here to a large extent. The lumber trade and shipbuilding are also actively proseented. It is abundantly supplied with provisions of every description. The harbour is commodions, but rather difficult of access. Pop. about 7000.

2, A vil. Prinee Edward's Island, British N. Anerica, S.E. part of the island, at the mouth of the little river Montague. The inhabitants of this and the neighbouring settlements, chicily emigrants from the W. of Scotland and the Hebrides, are principally employed in shipbuilding and in the exportation of timber. The soil around is good, and yields large crops of wheat, barley, \&e.

Vol. I.

ANDRIA, a tn. Naples, prov. Terra di Bari, 30 m . W.N.W. Bari. It is built on a plain; is the seat of a bishop; and has a fine cathedral, founded 1046, by ['eter Normanno, Count of Trani. It possesses also a college and three monts-de-piété; its supply of water is very deficient; and it has a good irade in ahmonds. Pop. in 1812, 21,852.

ANDRO [anc. Andros], an isl. Grecian Archipelago, cap. same name, about 25 m . long, and 6 or 7 m . in breadth; lat. (Mount Kovari, W. side) $37^{\circ} 50^{\prime} 1^{\prime \prime}$ N.; lon. $24^{\circ} 50^{\prime} 5^{\prime \prime}$ E. (r.) It is in general mountainous, rising in the centre to the height of 3200 ft . ; but it has many fruitful valleys. It is well watered, and altogether one of the richest and most productive islands of the Archipelago. The inhabitants rear cattle, bees, and silkworms; and cultivate wheat, barley, vines, olives, oranges, citrons, and pomegranates ; the produce of most of these forming the materials of a pretty extensive traffic. In Andro or Castro, the capital, situated on a hill on the E. coast, there are manufactures of silk and carpets; the former constituting the staple commodity of an active commerce. The town, which is defended by a strong castle, has a large port; suited, however, only for small vessels, and inferior to that of Gaurio [anc. Guurium], on the W. coast. It was for a considerable period subject to the Turks; but since the revolution, has formed, once more, a part of the kingdom of Greece. Pop. of isl. 15,000 ; of th. 5000 .(Guibert, Dict. Geo. et Stat.)

ANDROS ISLANDS, a group of islands belonging to the Malianas, lying between lat. $23^{\circ} 41^{\prime}$ and $25^{\circ} 10^{\prime} \mathrm{N} . ;$ lon. $77^{\circ} 30^{\prime}$ and $78^{\circ} 32^{\prime} \mathrm{W}$. The passages between these islands are intricate and dangerous. The principal island, Andros, which gave its name to the others, is about 70 m . long by 10 broad, at its broadest part. The interior of the largest of these islands is composed of extensive salt marshes and fresh water swamps, in which are islands valuable for their timber; consisting mostly of cedar of superior quality. The sea board only is habitable during the summer months; owing to the myriads of mosquitees and other insects that infest the low ground. The total amount of waste land in the Andros Islands amounts to $1,046,803 \mathrm{ac}$. In Andros Island there is a sehool, which was attended, in 1847, by 52 pupils; 27 boys, and 25 girls. The progress of the scholars is said to be slow. There is a teacher of needlework attached to the school. The soil is indifferent; but, when earefully cultivated, yields fair crops of cotton and coffee, which are exported to Lurope. It sends a member to the House of Assembly of the Irahamas. Pop. 759, nearly all coloured.

ANDIROY, a territory, Madagasear, occupying the S. extremity of that island. It consists of two countries, called, respeetively, the comntry of the Ampâtes and that of the Carembonles. The former is flat and covered with wood, presenting, however, extensive intervals of excellent pasturage, on which great numbers of wild cattle of a small size feed. The Ampâtes produce large quantities of silk and cotton, and make articles of commerce of the more valuablo barks of trees, and of apples. Water is so extremely scarce in this district, as to be considered one of the most precions of commodities, and, when obtained, is treasured up accordingly. Nature, however, has in part compensated the scarcity of this necessary of life, by furnishing the natives with a kind of root, the internal parts of which somewhat resemble a water melon. But not being in sufficient abundance to supply both the people and their cattle, the latter suffer severely, being always on a stated and very stinted allowance of water. The principal village, called Fangahe, consists of about 100 houses or more, with a pop. of about 600 , and is well fortified. The country, altogether, has a deserted appearance, there being few villages, and all of them small. The country of the Caremboulcs is much less fertile than the other portion of the district, and the inhabitants are little better than savages.- (Descartes, Ilist. et Geo. de Madagascar.)

ANDRYCIIOW, Andiychau, or Andizelow, a tn. Austria, prov. Galicia, 200 m . W. Lemberg. It has considerable manufaetures of damasks and other drapery, and important mines of sulphur, yielding annually about 9132 cwt . Pop. 3000 .

ANDUJAR, or Anduxar, a th. Spain, in Andalusia, prov. of, and 20 m . N.W. from Jaen, at the foot of the sierra Morena, in a wooded plain, r. bank, Guadalquivir, which is here crossed by an old dilapidated bridge. Its tolcrably regular and cheerful-looking houses form irregular streets

## £NGERMANLAND

and squares, paved with stones; in fragments of which are to he met various metals, marble of divers kinds, and some oralines and rock erystal, evidencing the proximity of a district rich in such productions. The finest building in the town is the municipal chambers; though the abattoir and the storchouse are not wanting in elegance. Andujar likewise possesses five churches, several convents, a Jesuit theological seminary, and six primary selools; an infirmary, a foundling hospital, an hospital for old men, and one for old women. A fine road lined with trees leads to the river, and in the vicinity are several alamedas. The manufacture of earthenware, soap, leather, tiles, and bricks, and various sorts of coarse woollens, is carried on to a limited extent; but agrieulture is the principal oecupation of the people, who raise wheat, barley, legumes, sumach, and a few fruits; produce exquisite oil, and rear cattle and bees. Some export trade is done in grain, fruit, and cattle, and in immense numbers of porous pitchers, bottles, and jars, for the purpose of cooling water. It is an unhealthy town, experiencing great extremes of heat and cold. Pop. 9353.-(Madoz.)

ANDUKE [Latin, Andusia], a tn. France, dep. Gard, 26 m. N.W. Nismes, r. bank, Gardon; from the violent overflows of which it is protected by a strong dike forming a fine quay, as well as an agreeable terrace and promenade; near the middle of which the river is crossed by a stone bridge. The town lies at the foot of the Cevennes, steep menacinglooking rocks on the one side, and hills planted with vines and olives on the other. It is on the whole ill built; its environs, which are cultivated like a garden, are delightful. The chief articles produced are silk thread, hats, bonnets, and stockings, all of silk; serge, drabs, swanskins, earthenware, leather, and glue. In the vieinity there is a beantiful grotto with stalactites. The majority of the inhabitants are Protestants. Pop. 4412.

ANEGA1)A, one of the Virgin Islands, W. Indies, be longing to Britain, 90 m . N.E. Porto Rico; lat. (W. point) $18^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $64^{\circ} 21^{\prime} \mathrm{W}$. (k.) Its greatest lengtlı is 10 m . reatest breadth, $4 \frac{1}{2} \mathrm{~m}$. The surface is, for the most part, a dead level ; but on the S.E. side the ground rises gradually to the height of about 60 ft . The whole N. side is exposed to an impetuous sea. The island contains numerous large salt ponds, which, when undergoing evaporation during a long course of dry weather, yicld an exceedingly offensive cflluvia. Great quantities of salt are subsequently obtained from the ponds. The island prodnces provision crops, and some cotton; and has great abundance of fresh water in almost every part, even in the immerliate vicinity of the sea, and surrounded by salt ponds. On the N. side of the island there is a range of shelfholes, varying from $2 \frac{1}{2}$ to 6 fathoms in depth, and from 10 to 25 inches wide, ealled 'the Wells,' filled with fresh water (Schomburgk's Remarks on Anegada, in London Geo. Jour., vol, ii. p. 159). There is a considerable trade, besides, in underwood, rendered valuable by the great quantity of gum it contains. But the ehief dependenee of the inhabitants is on the wreck of vessels, for which the island has an unhappy celebrity. The scene of these disasters is a reef extending from 10 to 12 m . in a $\mathrm{S} . \mathrm{E}$. and S . direction from the E. extremity of the island. The total number of vessels lost on this fatal reef, sinee 1811 , is 67 ; of which 21 were American, 17 W. Indian, 15 Spanish, 9 British, 2 French, 2 Swedish, and 1 Portuguese.

ANE'T [German, Ins; Latin, Insula].-1, A vil. Switzerland, can. of, and 16 m . W. by N. from Bern. It is built upon an eminence 4 m . N. Lake Morat, 3 m . N.E. Lake Neufchatel, and 2 m . S. that of Bienne; whence the name Insula [the island], from its position between the lakes; the whole surrounding district was formerly called Inselgan [the island district or meadow]. Anet commands a fine view of the surrounding scenery, and also of the distant Alps. The inhabitants cultivate the vine; and have a considerable trade in wine and corn. Pon. $1150 .-2$, A tn. and com. France, dep. Eure-et-Loir, 9 m. N.N.E. Dreux. It is situated in a highly picturesque valley, watered by the Eire, and contains the ruins of the superb castle built, in 1552 , by IIenry 11 . for IIana of Poitiers; and demolished in 1792, during the fury of the French levolution; when part of the facale was removed to Paris, and re-erceted at the Ecole des Beanx Arts. Anet lias some trade in grain, wine, and fodder; and in the neighbourhood are iron works and paper mills. P'op. 1409.

ANEY, a par. and vil. Ireland, co. Limerick; 9248 ac contains some interesting ruins. Pop. in 1841, 4939.

ANGar. See Angaum.
ANGARA, a large river, Siberia, which issues from Lako Baikal at lat. $51^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $102^{\circ} 45^{\prime} \mathrm{E} .$, and, passing the th. of Irkutsk, pursues a N. and W. course for about 750 m ., when it is joined by the river Tehadobetz in lat. $57^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $97^{\circ} 0^{\prime}$ E., at whieh point its name is changed to the Tunguska, by which it is known for about 320 m ., when it falls into the Yenisei at lat. $57^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $92^{\circ} 0^{\prime} \mathrm{E}$. It is navigable, but much obstructed by rapids. The scenery on its banks, particularly on the left, is described as extremely picturesque; the latter being adorned by magnificent forests of cedar and other trees.- Another small stream of the same nane falls into Lake Baikal at its E. extremity.

AN(:ARALS, a prov. Peru. Sce Iluancavelica.
ANGAUM, or Angar, an isl. at the entrance of the Persian Gulf; lat. $26^{\circ} 37^{\prime}$ N.; lon. $55^{\circ} 54^{\prime}$ E. (r.) It is from 5 to 8 m . long, and contains several fresh water wells, although formerly believed to have none. Extensive garden ground, and ruins of houses in different parts of the island, would indicate its having once been a more important and more flourishing place than it is now. At the N. part of the island are the remains of a considerable town, with 18 tanks or reservoirs for holding water ; about half of them are still arched over, and lined with brick, but filled with elay and sand. Wild goats are numerous.

ANGAZIJA, the native name of the isl. of Comoro. See Comoro Islands.

ANGEJA, a tn. and par. Portugal, prov. Douro, dist. Estarreja, $23 \mathrm{~m} . \mathrm{S}$. Oporto, on the Caima, at the extremity of an extensive fertile plain. It has a large church with aisles; and a monthly corn and cattlc market. Pop. 1560.

ANGELES LOS, a tn. Chili, prov. Coneepçion, 90 m . E. the town of that name, and about 15 m . N. the Biobio river ; lat. $33^{\circ} 1^{\prime} 54^{\prime \prime}$ S. ; lon. $71^{\circ} 41^{\prime} 30^{\prime \prime} \mathrm{W}$. Streets wide and regular.

ANGELN, or Anolen [Latin, Anglia Minor], part of the duchy of Schleswig, Demmark, included between the river Sley and the Gulf of Flensborg. The district is named from the ancient Angli or Angles, a German nation and tribe of the Suevi, who at a very early period migrated to Denmark. It is said that their assistance laving been asked by the Britons against the Scots and Picts, a number of them passed over, and, in course of time, gave the name of Angles (English) to the inhabitants, and of Anglenlande (England) to the country. The present inhabitants are distinguished among the Danes for bodily strength, independence of spirit, industry, and morality. Angeln is partly under good cultivation, but its roads are bad. Pop. about 30,000 .

ANGELO (SAN), the name of several towns and villages, $\| t a l y:-1, \Lambda \mathrm{in}$. Austrian Lombardy, on the river Lambro, $7 \mathrm{~m} . \mathrm{S}$. W. Lodi. Pop. 6000.-2, $\Lambda$ vil. Austrian Lombardy, 11 m. N.E. Padua. Pop. 2200.-3, San Angelo in Vado, a vil. Roman States, on the Metaura; 12 m. S.W. Urbino; the seat of a bishop. It has some woollen manufactures. Pop. 2500.-4, San Angelo de' Lombardi, a tn. Naples, prov. Principato Ultra; 22 m . E. Avellino ; the seat of a bishop. It has two ehurches and a college. In 1664, it was nearly destroyed by an eartliquake. Pop. 6400.-5, San Angelo Fasanella, a tn. Naples, prov. Prineipato Citra, 20 m . S.א.E. Campagna. Pop. 2688.-6, San Angelo di Brolo, a tn. Sicily, 5 m . W. Patti. Pop. 3641.

ANGERA, or Anglifra [Latin, Angleria], an anc. tn. Venctian Lombardy, cap. dist. of same name, E. shore of Lago Maggiore, prov. of, and 25 m . W. from Como. It is tolerably built, with a castle, church, and townhouse. Pop. of tn. 1963 ; of dist. 7598.

ANGERBURG, a tn. Prussia, cap. of its circle, prov. E. Prussia, on tire Angerap, 60 m . S.E. Königsberg. It has a handsome chureh, good schools, linen and woollen manufactures, a considerable traffic in wood and fish, and four annual fairs and cattle markets. The extensive Lake Angerburg or Mauer, famous for its eels, is in the neighbourhood. Pop. 3150.
$\AA N G E R M A N L A N D$, an anc. prov. Sweden, divided into N. and S. Ingermanland, comprehending 45 parishes, and now forming part of the liin or district of Wester-Nordland (which see).
$\AA$ NGERMANN- $\AA$, or $\AA$ naermann-Elf, a river, Sweden, which rises in Lappmarken, not far from the borders of Norway, and at first consists of two branches, which unite in lat. $64^{\circ} 50^{\circ} \mathrm{N}$. Thereafter, proceeding in a S.E. direction, it becomes the principal river, and gives its name to the district of Angermanland, and, forming a considerable estuary, falls into the Gulf of Bothnia, N. of Hernösand. Its chief affluents are the Fiellsjo and the Södra Adals, both of which it receives on its right bank. It has a course of about 150 m ., and is navigable for 60 m .

ANGERMUUNDE, a tn. Prussia, prov. Brandenburg, cap. circle of same name, on the Lake Mïnde, 42 m . N.E. Berlin. It contains three churches; and has manufactures of hats, cloth, woollen stuffs, and tobacco. Pop. 3607.

ANGERS, a large anc. and important city, France, cap. dep. Main-et-Loire, in the former prov. of Anjou, of which it was the capital; situated in a fertile plain, on both sides the Mayenne, a little below its junction with the Sarthe, and about 5 m . above its embouchure into the Loire; 150 m . S . W. Paris. It stands in the form of an amphitheatre, on the summit and declivity of a steep hill, and is divided by the Mayenne into the higher and lower town; the city proper being on the l. bank of the river, while a considerable suburb, termed the Doutre, occupies the r. bank. In the old quarters of the town, the strects are narrow and crooked, and many of them so steep as to be inaccessible to carriages. The houses generally are of wood, covered with slate. Many of them also are either faced with or built of slate; a circumstance which gives the town so dark and sombre a hue, as to have obtained for it the surname of Black Angers. The two principal edifices are the castle and the cathedral. The former, the ancient residence of the Dukes of Anjou, stands on a steep rock, the base of which is washed by the Mayenne. It consists of an immense parallelogran, surrounded by ligh walls flanked with 18 large round towers, which, bulged toward the top and bottom, and narrowed in the middle, and built of black slate, intersected horizontally by stripes of white, have a very singular appearance. It is now used as a prison, barrack, and powder magazine. The cathedral, finished in 1240 , stands on an eminence in the centre of the town, and is in the form of a Latin cross. Its portal, which is richly decorated in the Romanesque style, is surmounted by two lofty spires, which have each a height of 225 ft . The exterior consists of a single nave without aisles, and two transepts. The former, one of the largest in France, is, including the choir, 300 ft . long, 53 ft . wide, and 110 ft . high; the latter have each a length of 40 ft ., and nearly the same width. The windows-of painted glass, of the richest colours, and as ancient as the building itself-form one of its principal ornaments. Among the objects worthy of notice in Angers may be mentioned the pieture gallery, chiefly furnished by the modern French school; the museum; the tower of St. Aubin, now converted into a shot tower; and the extensive boulevards, planted with trees, and lined with elegant houses, occupying the site of the old walls of the town, and communicating with the Champ de Mars, which forms a spacious promenade.

The manufactures of Angers are numerous, and consist chiefly of sailcloth, camlet, scrges, handkerchicfs, hosiery, hats, leather, worsted and cotton twist, leathern goods, stareh, \&c., besides establishments for bleaching wax, and sugar refineries. A considerable trade is carried on in corn, wines, brandy, flax, hemp, wax, honey, flour, and dried fruits. In the neighbourhood are extensive slate quarries, from which
slates are exported to the value of $£ 62,500$ annually. The principal pit, called Le grand carreau, about 4 m . from the town, is nearly 400 ft . deep, and occupies an area of more than 4000 yards. Angers is surrounded by mumerous and extellsive nursery gardens and vineyards, and in the neighbourhood are mines both of coal and iron. The markets are well stocked with provisions, but there is a great deficiency of good water.

Angers is the see of a bishop, suffragan of Tours, and the seat of a Cour royale, for the departments of Main-et-Loire, Sarthe, and Mayenne; of a prefecture, and of several important law courts. It has an Académie Universitaire, a royal college or high school, th asylum for the deaf and dumb, a diocesan theological seminary, a secondary school of medicine, and a public library of 26,000 volumes, with some curious old MSS. ; a botanic garden, and an agricultural society. It has also five hospitals, one of which, the hospital of St. John, on the Doutre side of the river, is said to have leen built by Henry II. of England. There was formerly a military college here, at which Lord Chatham and the Duke of Wellington received part of their cducation; lint, about the end of last century, it was removed to Nanmur, and the building was converted into cavalry barracks. The university of Angers, which was tounded in 1246, and long continued to be one of the most renowned universities in Europe, was destroyed at the Revolution, as was also a royal academy of belles lettres, established by Louis XIV., in 1685. The castle was surprised by the Iluguenots in 1585 ; and, in 1793 , the city was attacked by the Vendéan army $, 90,000$ strong, when it became the scene of several sanguinary confliets. In the sicge that followed, the inhabitants endured many privations. An appalling accident happened here on April 16, 1850. While a reginent of Frenclı infantry were passing along the suspension bridge across the Basse Maine, the bridge suddenly gave way, when the greater portion of the men were precipitated into the river, and between 200 and 300 drowned. A railway, connecting Paris with Angers, las been completed. The population was, in 1670, about 50,000. After the revocation of the edict of Nantes, it gradually declined; and, in 1789, before the Revolution, was only 27,596 . Since 1815 its prosperity has revived. Pop. in 1846, 36,392.

ANGERSLEIGH, or Leigh-Militis, a par. England, co. Somerset; 4 m . S.W. Taunton. Pop. in $184 \mathrm{I}, 42$.

ANGHIARI [anc. Castrum Angulare], a tn. and com. Italy, in Tuscany, prov. of, and 8 m. E. by N. from Arezzo; on the slope of a hill, in a well-watered, fertile district, near the l. bank of the Sovarà. It has a chureh and municipal offices. Pop., tn. and com. 6358.-(Dizio. Univ. Italia.)

ANGHIARI, a tn. Austrian Lombardy, prov. Verona, r. bank, Adige, 3 m . N.W. Legnago. Pop. 1450.

ANGICOS, a tn. Brazil, prov. Nio Grande-do-Norte, near the Conchas, about 30 m . from its mouth. It has a churel, an initiatory school, a townhall, and a prison. Its inhabitants are engaged in the cultivation of cotton, rice, French beans, and mandioca, and in carrying on a little commerce in the first of these products. Pop., tn. and dist. 2000.

ANGISTRI, a small isl. Ginlf of Agina, 5 m . S. W. the island of that name; lat. $37^{\circ} 42^{\prime} \mathrm{N}$. ; lon. $23^{\circ} 20^{\prime}$ E. : about 3 m . in length, and 1 m . in breadth.

ANGLE, a par. and vil., S. Wales, Pembroke, near the entrance to Milford Haven. Pop. in 1841, 388.

ANGLEsEY, an isl. and co. England, N. Wales, in the Irish Sea, separated from the mainland by the Menai Strait. It is 20 m . long, and 17 m . broad, and contains 74 parishes;
srea, $2 \% 1 \mathrm{gq} . \mathrm{m}$. or $173,440 \mathrm{ac}$. It is divided into three cantrefs, and each of these into two cwmwds, equivalent to the English hundreds. The surface of the island is comparatively flat, and the climate, though milder than that of the adjoining coast, is unfavourable to the growth of trees. There are no streams of any importance, but the coast affords some natural harbours, the principal of which are at Beaumaris and Holyhead. The soil is various. The chicf agricultural products are oats and barley; but wheat, rye, potatocs, and turnips, are also grown. Cattle and sheep are the staple productions of the island; about 8000 of the former, and 5000 to 7000 of the latter being annually exported. Of minerals, Anglesey contains eopper, lead, and silver ore, limestone, marble, coal, and granite. The copper mines at larys and Mona (see AmbwCh), once so celebrated and productive, have now immensely decreased in value. The inhabitants carry on no manufactures but those of coarse cloths, \&c., sufficient for their own use. The prineipal road through the island commences at the Menai Strait, which is crossed by a magnificent suspension bridge, 580 ft . between the piers, and 100 ft . above high water mark, allowing the largest vessels which navigate the Strait to sail under it. The great Britannia Tubular Bridge, for the conveyance of railway trains across the Menai Strait, was opened for the first time, with great ceremony, on March 5, 1849. (For a more full account of this extraordinary work of art, see Menai Strait.) The ehief towns are Beaumaris, Holyhead, Llangefni, and Amlweh, which unite in returning a member to Parliament, while the county also returns a member. Beaumaris is the returning station for both. On the coast are several smaller islands, the chief of which are Holyhead, and Priestholm or Puffin Island. Anglesey [anc. Mona] was successively under the dominion of the Britons, Romans, W. Saxons, Normans, and English. It druidical relics, which are almost its only antiquities, sufficiently indicate the religion of its original inhabitants. Pop. in (1851), 57,327.

ANGMERING, a par. England, co. Sussex ; area, 3640 ac. ; 3 m . E.N.E. Little Ilampton. Pop. in 1841, 1002.

ANGOLA, a Portngucse colonial prov., W. eoast, Africa, cap. Loanda. This province comprehends all the Portuguese commercial entrepots and factories in Angola, Benguela. and Congo. Pop. estimated at 400,000 , of whom 12,000 are whites.

ANGOLA, formerly Dongo, or Ambonine, a country on the W. coast of A frica, commeneing about lat. $8^{\circ} 20^{\prime} \mathrm{S}$., and extending to the river Coanza, in lat. $9^{\circ} 20^{\prime} \mathrm{S} . ;$ lon. $14^{\circ}$ to $19^{\circ} \mathrm{E}$. Along the coast, the country is flat and sterile, but mountainous in the interior, though nowhere attaining any great elevation. It is copionsly watered by various rivers, with their numerous tributaries; amongst the former are the Coanza, the Bengo, and the Danda. Situated near the equator, the heat is very great, but not so oppressive as in other places of the same latitude, being tempered by the trade wirds. It is on this account considered more healthy than any other part of tropical W. Africa. The dry and rainy seasons, into which the year is usually divided in these regions, do not seem to maintain the same regularity in Angola, neither the periods of their ocemrence nor their duration being correctly ascertained. The nights are cool, and the dews sufficiently copious to promote vegetation. The soil of the plains on the sea shore is, as already stated, poor and meagre, and incapable of cultivation, but in the interior it is extremely fertile, yielding, in extraordinary abundance, and almost spontaneously, rice, millet, sugar canes, mandioca, yans, potatoes, and nearly every kind of tropical fruit known. In various parts of the country, iron is found; in others, gold and copper ; but the produce has hitherto been trifling. Here are met with specimens of nearly all the known wild animals of Africa, including lions, tigers, hyenas, elephants, rhinoceroses, hippopotami, \&c. The birds and reptiles are also the same with those found in other tropical regions, including several exceedingly venomous kinds of serpents. The waters on its coasts and in its rivers also teem with animal life, the former with whales, sharks, dolphins, \&e., and the latter with formidable crocodiles, and numbers of other creatures little known to Europeans. Amongst the native useful animals are hares, rabbits, antelopes, stags, goats, and hogs; the larger domestic animals, the cow, horse, and ass, lave been imported from Europe.

Angola has long possessed an infamous notoriety for the extent of its slave trade, which still appears to be as aetive as
ever, notwithstanding all the efforts that have been made for its suppression, many thousands of slaves heing shipped annually to Brazil. In 1840, no fewer than 70 to 75 vessels, each capable of carrying from 300 to 500 slaves, traded to this part of the coast, each vessel performing four or five voyages in the year. The natives, thongh black, are distinguished from the other negro races by their superior physical conformation, being well limbed and regular featured, with a marked general resemblance to the Portuguese, of whom great numbers are settled here. Besides the slave trade with l3razil, Angola carries on a large traffic with Lisbon in ivory and other native products; the imports from the latter in return are chiefly wine, brandy, oil, pork, and other provisions, with silks, linens, enttons, woollens, earthenware, hardware, \&c. The central or prineipal town of Angola is the I'ortnguese town of St. Paul de Loando, on the coast, lat. $8^{\circ} 48^{\prime}$ S.; lon. $13^{\circ} 8^{\prime}$ E., in which the Portuguese have a garrison, consisting of about 600 men, mostly convicts, with a corps of cavalry. At one time the force maintained at Loando consisted of a reyiment of the line, 1000 strong, 300 cavalry, and 200 artillery.

The coast of Angola was first discovered in 1486, by the Portuguese, who soon after began to form settlements on the Zaire, and at various points S. of that river. They still oceupy the country, having a number of forts and commercial establishments at different places, in some instances extending many lumdred miles into the interior, where the Portuguese colonists and natives meet for the purposes of trading. The religion is Fetichism. Pop. estimated at 2,000,000.

ANGOLLOLA, a tn. Abyssinia, kingdon of Shoa, 24 m . N.W. Ankobar; lat. $9^{\circ} 40^{\prime}$ N. ; lon. $39^{\circ} 37^{\prime}$ E. It lies at the confluence of two rivers flowing N.W., one of which, named Chia-Chia, is a considerable stream. Like other Abyssiman towns, it resembles a large village; and consists of circular huts arranged on two eminences, one of them being reserved by the king for his own use; on it he has erected for himself and his officers about 500 huts, surrounded and defended by six rows of palisades. Angollola is a new town, commenced in 1834, by King Sahlé-Sallassi.-(Harris's Mighlands of Ethiopia; Hēricourt, Voy. dans le Roy. de Choa)

ANGORA, or Engour [anc. Ancyra], a tn. Asiatie Turkey, 215 m. E.S.E. Constantinople; lat. $40^{\circ} 29^{\prime}$ N..; lon. $33^{\circ} 20^{\prime}$ E. (c.) It is surrounded with ruinous walls, and contains an old dilapidated castle. It is divided into 84 districts, each having its mosque or jami. There are 17 or 18 khans, three lamáms, and a market place, onee handsome, but. now in ruins; considerable remains of 13yzantine arehitecture belonging to the ancient city, and a few relies of carlier times, both Greek and Roman. Some of the latter have been tliought to be remnants of the Monumentum Ancyranum, raised in honour of the Emperor Augustus, who much embellished the ancient city. Angora is celebrated for the long-laired goats bred in its vicinity, called by the Arabs the chamal or eanel goat, meaning 'silky or soft.' The hair is abont 8 inches long, and is shorn twice a year. All the animals of this region are long haired, especially the dogs, cats, and rabbits; and it appears that all degenerate, and lose this peculiarity when removed to a distance. The quantity of goats' wool exported was estimated, by Mr. Ainsworth, at $1,250,000 \mathrm{lbs}$; of this only $500,000 \mathrm{lbs}$. were of the first quality. More recent accounts give much lower returns. The items of export next in importance are merino twist and goats' hides; dye stuffs, principally madder, and the yellow berries of the Rhamnus catharticus; mastie, tragacantl, and other grms; also honey and wax. British manufactures are imported to some extent; but there are few or no European houses here, the trade with the West, formerly more considerable than it is now, being mostly in the hands of the Armenians, who form an important section of the population. Angora is the seat of a Greek bishop. The pop. has been varionsly estimated, but is probably about 35,000 , of whom nearly 10,000 are Greeks and Armenians.

ANGORNOW, or ANGonxu, a large and populous tn., N.W. Africa, kingdom or territory of Bornoo, on the S.W. shore of Lake 'Tehad, 20 m . S.S.E. Kouka; lat. $12^{\circ} 36^{\prime}$ N.; lon. $14^{\circ} 30^{\prime}$ E. Various caravan routes pass through it from the N., S., and E.

ANGOS'TA or Angozima, a dist. and three islands, S.E. Africa, Mozambique Channel. The district is extremely fertile, and is watered by a river of the same name. The islands
lie a short distance off, and parallel to the eoast ; they are all of coral, more or less wooded, and abound in fish and turtle. as well as the most beautiful shells and corallines. The most W. is called Caldeira, in lat. $16^{\circ} 38^{\prime} 48^{\prime \prime} \mathrm{S} . ;$ lon. $39^{\circ} 46^{\prime} \mathrm{E}$. (r.) The most E., named Mafamele, is in lat. $16^{\circ} 20^{\prime} 30^{\prime \prime} \mathrm{S} . ;$ lon. $40^{\circ} 4^{\prime}$ E. (R.) Like the other islands, it consists wholly of coral, with a thin covering of sand, and is not more than 8 ft . above the level of the sea; yet it is covered with a grove of stately casuarina trees, some measuring about 10 ft . in circumferenee, most of them perfectly straight, without a branch for 30 or 40 ft . above the ground, and many 150 ft . high, rendering them visible from the mast liead, from a distance of 15 or 18 m . All the Angosta Islands are small, none of them exceeding 2 or 3 m , in extent, and usually surrounded by reefs.-(Capt. Owen; Horsburgh.)
angos'lúra, or Santo Tomas de la Nueva Gualana, a city, Venezuela, S. America, cap. prov. of Guaiana, at a narrow pass or strait (Angostura), r. bank, Orinoeo, about 240 m . from the sea; lat. $8^{\circ} 8^{\prime} \mathrm{N}$. ; lon. $63^{\circ} 55^{\prime} \mathrm{W}$. The streets are regular and well paved; and the houses in general good, being built, for the most part of stone, with terraces on the tops. There is here a college, an hospital, and a magnificent hall, in which the second congress, commonly called the congress of Angostura, was installed, Feb. 15, 1819, the ninth year of the independence of Venczuela. The pass in whieh Angostura lies is defended by fort San Rafell, situated on a hill across the river from the town. From the mouth of the Orinoco to this eity, the voyage oecupies 20 to 25 days; baek again, 5 to 15 days. Angostura exports eotton, indigo, tobacco, coffce, eattle, \&c. The average value of exports, 1840-43, amounted to $£ 100,203$; in 1844 , it was $£ 92,354$. The imports, $1840-43$, averaged $£ 68,160$; but, in 1844 , they fell off to $£ 22,793$. British goods are much in demand, and the exportation of eattle to British colonies is ineruasing. The elimate is warm, but healthy. Pop. in 1840, 8500.

ANGOULEME, a eity, France, cap. dep. Charente, and formerly of the prov. of Angoumois, l. bank, Charente, 60 mm . N.N.E. Bordeaux, and 235 S.S.W. I'aris. It stands on the summit of an isolated rocky hill, at the foot of which is the suburb Houmeau, through which passes the high road from Paris to Bordeaux. The town, though 221 ft . above the river, is now well supplied with fresh water, pumped up by maehinery. The air is pure and healthy, and the views from the fine terrace walks, formed on the site of the old ramparts, and nearly eneircling the eity, are extensive and beautiful. The old part of the town is ill built, and the streets are narrow and erooked; but in the new quarter the houses, of white stone, are well constructed, and the streets straight and spacious. In the market place, in the centre of the town, stands the old castle, once the residence of the ancient Counts of Angoulême; but what remains of it is now converted into a prison. Queen Marguerite of Navarre, sister of Francis I., the most accomplished princess of her day, and no mean writer, was born within its walls; and there, too, Marie de Medicis found a shelter after the assassination of her husband. The cathedral, dedicated to St. Peter, a curious old building, restored in 1120, suffered mueh at the Revolution. Among the modern structures wortly of notice are the Palais de Justice, the bridge over the Charente, and the column erected, in 1816, to the Duchess d'Angoulême, but since, in 1830, re-dedieated to Liberty (a la liberté.)
Angoulême is the see of a bishop, suffragan of the Archbishop of Borleaux ; and contains a court of assizes, a tribunal of primary jurisdiction, a royal college, a society of agrieulture and commerce, two hospitals, a depitt de mendicité, a lunatic asylum, and a house of correction; besides a publie library, with 16,000 volumes, and a museum of natural history. The royal naval sehool, established here in 1816, and suppressed in 1830, has been transferred to Brest; the buildings, which are very extensive, are now occupied by the royal college.

The staple manufacture is paper, made in numerons mills in the neighbouring valleys. In all, about 35 mills are at work, produeing annually, on an average, about 100,000 reams of paper, called 'papiers d'Angoulême,' and esteemed anong the best made in France. There are also manufactures of woollen stuffs, linen, and earthenware; brandy distilleries, sugar works, tanneries, tileworks, and iron forges. A considerable trade is carried on in wine, brandy, and iruits; and particularly in cherries, saffron, and salt. The port of

Angoulême, on the Charente, is the entrepot of the commeree of Bordeaux, and most of the S . departments. One artiele for which Angoulème is celcbrated is its pâtés de perdrix aux truffes-partridge pies with truflles. Pop. in 1846, 17,237.

ANGOUMOIS, a former prov. France, cap. Angoulême, comprehending the three distriets, Angoumois proper, Aunis, and Saintonge, now comprised prineipally in deps. Clarente and Charente Infericure.

ANGOZHA, or Angoxa. See Angosta.
ANGRA, a seaport tı. belonging to Portugal, S. side of Terceira, one of the Azores, of which it is the cap.; lat. (custom house) $38^{\circ} 38^{\prime} 54^{\prime \prime}$ N.; lon. $27^{\circ} 13^{\prime} 45^{\prime \prime} \mathrm{W}$. (r.) It is well-built and regular, and its situation beautiful. The streets are broad, and have flagged footways, but are much infested with pigs, every house having several of these animals. The houses are mostly three stories in height. There are here magrazines of stores for the use of the royal navy, and for merchant vessels in distress. The maritime affairs of the port are under the inspection of an offieer, who has a number of subordinates, including pilots, to conduet vessels into the harbour, and to execute the other duties connected therewith. Angra is the seat of the loeal government; of a bishop's court, whieh extends its jurisdiction over all the Azores; and is the residence of English, Freneh, and Dutch consuls; and may, therefore, be eonsidered the cap., not only of Terecira, but of all the Azores. The harbour in which it is situated, the only good one in the island, indeed of the whole group, is of the form of a creseent, and commanded at cither extremity, where the passage is very narrow, by a strong battery. It is, however, safe only in the fine season; in the stormy months being exposed to furious tempests, whieh render it so dangerous, that vessels on the least appearance of a gale run out to sea, there being no safety for them otherwise. Its chief exports are wine and grain. Pop. 10,000.

ANGRAB, a river, Abyssinia, taking its rise in Dembea, a little N. from Gondar, whenee it flows in a N.N. W. diree tion, and falls into the Tecazze at lat. $14^{\circ} 20^{\prime} \mathrm{N}$. Its whole course is about 120 m . in length.

ANGLA DE CINTRA BAY, Africa, N. W. eoast. The S. point of the bay is in lat. $22^{\circ} 55^{\prime} \mathrm{N} . ;$ lon. $16^{\circ} 30^{\prime} \mathrm{W}$. ; the opening into it is about 7 m . wide, and from 7 to 9 fathoms deep; its extent inland, about 4 m . It abounds with fish, whieh are taken in great quantities by vessels from the Canary Islands.

AN゙GRA DOS REIS, a seaport, Brazil, on a bay of the same name, prov. of, and 70 m . W. from Rio de Janciro, lat. $23^{\circ} 4^{\prime} \mathrm{S} . ;$ lon. $44^{\circ} 30^{\prime} \mathrm{E}$. It lies faeing the sca, at the foot of a kind of promontory, which, rising up behind it, limits in some degree its facilities for increasing in size. All its streets, with one exeeption, are narrow, erooked, and barly paved; some, indeed, are not paved at all. It has three churehes, a townhall, an hospital, a convent of Carmelites, and another of Capuehins, and a public fountain at the end of the only straight street in the town. The inhabitants are supplied with excellent water from springs in the hills behind. The port in front of the town forms a semicirele, the extremities of which are defended by forts; and the roadstead, which is shut in from the Atlantic by the llha Grande, afforls anehorage for the largest vessels. Angra dos Reis carries on an active trade with Rio de Janciro, principally in coffee. Pop. rather above 3000.-(Dic. Geo. Imp. Brazil.)

ANGRA DOS RLIIS, a bay, Brazil, prov. Rio de Janeiro, in that part of it called Ilha Cirande, from the island of that name, which shelters the bay from the Atlantic. It extends E. to W. about 75 m ., and has along its shores a number of small, eultivated, and partially inhabited islands. The bay is well sheltered from all winds, but more particularly from the S. and S.W. winds, which are especially daugerous on the coasts of Brazil. It affords anehorage for the largest vessels. -(Die. Geo. Imp. Brazil.)

ANGRA PLQQUENA [Little Bay], or Santa Cruz, on the S.W. coast of Africa, 150 m . N. by W. from the embouchmre of the Gariep or Orange River, lat. $26^{\circ} 38^{\prime} 24^{\prime \prime} \mathrm{S}$.; lon. $15^{\circ} 8^{\prime}$ E. (R.) It has from $3 \frac{1}{2}$ to 5 fathoms water; the best and deepest anchorage is on the E. side of the isles at its entrance, in 4 or $4 \frac{1}{2}$ fathoms, sheltered from all winds. Abont 70 m . to the $\mathrm{N} . \mathrm{E}$., on the r. bank of the Fish River, is the missionary station Betni.

ANGUILLA, or Sxake Island, the most N . of the Caribbee Islands, belonging to the British, due N. St. Martin's, from which it is distant about 5 m .; lat. (custom housc) $18^{\circ} 13^{\prime} 12^{\prime \prime} \mathrm{N}$. ; lon. $63^{\circ} 4^{\prime} 12^{\prime \prime} \mathrm{W}$. (r.) It is about 20 m . long, and 6 broad, but is so low and flat that it eannot be scen from a greater distance than 10 or 12 m . The soil is calcareous, and not very productive. A little sngar, eotton, tobacco, and maize are grown on it, but it is deficient both in wood and water. In the centre of the island is a saline lake, which yields a large quantity of salt, the greater part of which is exported to Ameriea. The elinate is healthy. The chief occupations of the inhabitants are breeding cattle and gathering salt. The town is situated on the E.side, and near the N.E. end of the island ; it is a small place, with little trade. Anguilla was first settled by the English, in 1659, and has since continued in their possession. It is governed by a magistrate elected by the eolonists, but subject to the approval of the goveruor of Antigua. The pop. is about 3131 ; of which 360 are whites, 320 coloured, and 2451 African.

ANGUILLARA, a tn. Austrian Italy, on the Adige, 23 m. S. I'adua. Pop. 2300.——This is also the name of a tn. in the Papal States, on the Lake Braceiano, 16 m . N.N.W. Roine. Pop. 700.

ANGUS, a co. Scotland. Sce Forfar.
ANHALT', a country of N. Germany, forming the three duchies of Anhalt-Bernburg, Anhalt-Köthen, and AnhaltDessau. It lies partly in the plains of the middle Elbe, and partly in the valleys and uplands of the E. lower Harz, and is bounded, N. by the Prussian prov. of Brandenburg; E. and S. by Prussian Saxony; S.W. by the Earldom of Mansfeldt; and N.W. by the territories of Brunswiek and the Prussian cirele of Magdeburg: area, 1018 sq. m.; greatest length, 60 m. ; breadth varying from 12 to 16 m . The soil throughout is fertile and well cultivated. All sorts of grain, wheat espeeially, are grown in abundance; also flax, rape, potatoes, tobaeco, and hops. Some madder is also produced. Garden fruit abounds, and in the valley of the Saale the vine is cultivated. The inlabitants are prineipally oceupied in agricultural pursuits, and in rearing cattle and sheep. In the vicinity of Bernburg are several mines and ironworks, the products of which are not very great. The manufaetures, which are not important, include worsteds, flannels, broad eloth, linen cloth, yarn, leather, tobaceo, sugar, wax, soap, candles, stoneware, \&c. The trade in raw materials and objeets of art las much increased since the opening of the two railways passing through Köthen-the one from Berlin, the other from Leipzig. The three duchies furnish a contingent of 1024 men to the army of the Confederation, and of that number Auhalt-Beruburg supplies 370 . The total revenues of the triple prineipality amount to $£ 149,600$, and their public debt to $£ 292,000$. Pop. 149,065 ; of which it is eomputed that Anhalt-Dessau has 61,793; Anhalt-Bernburg, 46,252; and Anhalt-Köthen, 41,020.

ANHANDUHY-MIRIM \& ANIIANDUHY-GUAZU, the names of two rivers in Brazil, prov. Matto-Grosso. Both rise in the serra Galhano, within 22 m . of each other, and flow E. Both fall into the Rio Vermelho; the former about lat. $20^{\circ} 30^{\prime} \mathrm{S}$. ; the latter in lat. $21^{\circ} 20^{\prime} \mathrm{S}$., or at a distance of about 60 m .; the course of the one being about 150 m . in length, the other abont 200 m .

ANIIID, a par. Ireland, co. Limerick; 981 ac. Pop. in 1841, 493.

ANHOLT.-1, A small isl. Denmark, in the Kattegat, about 7 m . long by $4 \frac{1}{2}$ broad, generally unfertile, and surrounded by sandbanks and dangerous reefs. One of these reefs stretches from the E. corner of the island, in an E. direction, for 7 m .; and a lighthouse, erected so early as 1542 , stands on that eorner, in lat. $56^{\circ} 44^{\prime} 18^{\prime \prime} \mathrm{N}$.; lon. $11^{\circ} 39^{\prime} 15^{\prime \prime}$ E. (R.) As an additional security, a floating light lies anchored in 18 fathoms water, about 1 mile $E$. of the reef, and continues there from the begrinning of March to the end of December. The inhabItants, amounting to 200 , live chiefly in the little village of Anholt-By, on the W. side of the island, and depend for their subsistence on fishitrg and the picking up of stranded goods. In 1800, the British took possession of the island, fortified the tower of the lighthouse, and erected casemates for a garrison of about 900 men. An attempt to dislotge them proved ineffectual, and they maintained possession, employing the place as a head station till the peace.- -2, A tn. Prussia, prov.

Westphalia, gov. Münster, 18 m . W. Borken, upon the Otd Yssel; cap. of the barony of Salm, and the residence of the I'rince de Salm-Salm. Pop. 2000.

ANIANE, a tn . France, dep. Heranlt, 16 m. W.N. W. Montpellier, in a lovely and fertile plain watered by the Herault. The first nucleus of the town was a monastery, which was founded by St. Benedict in 780, and riehly endowed. The church of the monastery is now the parish church, and the other part of the builling has been eonverted into a cotton mill. Beside the eotton twist thus produced, Aniane has manufactures of leather, cream of tartar, verdigris, black soap, perfumes, and other chemical products. It has also limestone quarries and lime kilns, and an annual fair for cattle, leather, and goats' skins. Pop. 2615.

ANIBA, a small river, Brazil, Portugnese Ginayana. It rises in the territory Aruaquis, about lat. $1^{\circ} 27^{\prime}$ s.; lon. $58^{\circ} 40^{\prime} \mathrm{W}$. ; and, after a course of about 100 m ., forms, with other small affluents of the Amazon, the island of Jamos, in lat. $2^{\circ} 36^{\prime} \mathrm{S}$.

ANICIIE, a $\ddagger \mathrm{n}$. France, dep. Nord, about 9 m . from Douay ; lies in the principal coal field which France possesses, and to this circumstance owes all its importance. The mines in the neighbourhood employ about 500 persons. The manufactures are beet sugar, and window and bottle glass. The chicf export is coal. Aniche onee enjoyed the singnlar privilcge of levying from every stranger who came to live within its bounds, the best article among his luggage. Pop. 1818.

ANICUNS, a small river, Brazil, prov. (royaz, rises in the serra Escalvada, about lat. $16^{\circ} 22^{\prime} \mathrm{s} . ;$ lon. $51^{\circ} 40^{\prime} \mathrm{W}$.; and, after a course of nearly 200 m . in a S. and S.S.W. direction, falls into the Curumba, lat. $18^{\circ} 51^{\prime} \mathrm{S}$. having beeu previously joined by the Pasmados.

ANiEH. See Anizer.
ANILORE, a small river, Brazil, prov. Para, rises in lat. $6^{\circ} 5 \mathrm{I}^{\prime} \mathrm{S} . ;$ lon. $60^{\circ} 10^{\prime} \mathrm{W} . ;$ falls into the Maderia, lat. $5^{\circ} 10^{\prime} \mathrm{S} . ;$ lon. $60^{\circ} 40^{\prime} \mathrm{W} .$, after a N.N.W. course of about 130 m .

ANIUJ, or Aniuy (Greater and Lesser), two rivers, N.E. Sibcria, eountry of the Tchuktehi ; the former rises about lat. $67^{\circ} 10^{\prime} \mathrm{N}$., and, after a W. course of 270 m ., falls into the Kolima by three outlets, at lat. $68^{\circ} 0^{\prime} \mathrm{N}$. The latter rises in lat. $66^{\circ} 30^{\prime} \mathrm{N}$. and, after a N.W. course of about 250 m ., also joins the Kolima, at nearly the same point with the Greater Aniuj; the two rivers gradually converging till they meet at their embouchnres. The banks of the larger stream present a dreary appearance for a considerable way from its outlets, but latterly begin to improve, the pastures presenting a more verdant appearance. The right bank is higher than the left, and consists of steep sand hills, 30 or more fathoms ligh, and held together only by the perpetual frosts which the summer is too short to dissolve. The cur rent is in some places very rapid, and the bottom is strewed with rough and sharp-pointed stoncs, very dangerous to craft navigating the stream. The Lesser Annuj, being a mountain stream, is subject to violent and sudden overflows, carrying away islands and forming new ones, and sometimes altering its eourse for many miles. 1ts fisheries are of little importance.
A.VIVA (Bay of, and Care), an isl. Naghalien, E. coast, Asia ; lat. $46^{\circ} 2^{\prime} \mathbf{N}$. ; lon. $143^{\circ} 3^{\prime} U^{\prime \prime} \mathrm{E}$. (r.) It is cnelosed by two projecting tongues of land, Cape Crillon and Cape Aniva, distant from each other 60 m . There is good anehorage at the N. extremity of the bay.

ANIZEII, a tn. Arabia, prov. Nedjd Proper; lat. $26^{\circ} 34^{\prime}$ N.; lon. $43^{\circ} 25^{\prime}$ E. ; beautifully situated in a valley. It is extensive, amply supplied with water, and well built. Being situated in the heart of Arabia, and at the junction of many prineipal earavan routes, including those of Bagdad, Damas cus, Basrah, \&e., towards the Persian Gulf-and Medina, Meeca, \&c., towards the Red Sea-it is a place of great commercial importance. Merchants, chiefly from the Gulf of Persia, asscmble at this place, bringing Indian rice and goods to the bazaars. It is the birthplace of Abd-ul-Waheb, founder of the sect of the Wahabees.
$\Lambda N J \Lambda R$, a sınall dist. and tn. Hindonstan, prov. Cutch. The district was eeded to the British in 1816, and is governed by a commissioner, deputed by the Bombay (iovernment. It is a dry, sandy tract, irrigated by wells or tanks. Anjar, the eapital, is situated on a slope, 10 m . from the Gulf of Cutch; lat. $23^{\circ} 3^{\prime} \mathrm{N}$. ; lon. $70^{\circ} 11^{\prime} \mathrm{E}$. 'The fortitications
form a polygon, and are 6 ft . in thickness, but have no ditch or outworks. In 1816, the town surrendered to the British under Col. East, and, in 1819, it suffered severely from an earthquake; the fort, with its towers and guns, having been hurled to the ground in one common mass of ruin, together with 3000 houses; 165 lives also were lost on this oceasion. In 1820, the pop. was estimated at 10,000.- (Hamilton's East India Giaz.)

ANJE-DIVA, or AnJadeepa, an isl. on the Malabar coast, llindoostan; lat. $14^{\circ} 40^{\prime} \mathrm{N} . ; \operatorname{lon} .74^{\circ} 5^{\prime} \mathrm{E}$. (R.) It is about 2 m . from the shore, and is about 1 m . in length; it appears on the outside barren and rocky, but has an attractive aspect on the side next the land, where it is fortified by a wall and some towers. Close to it, on the outside, the depths are 10 and 11 fathoms.

## ANJEII. See Abderi.

ANJENGA, or Anjutexga, a small seaport, S. Hindoostan, prov. Travancore, about 70 m. N. by W. Cape Comorin; lat. $8^{\circ} 39^{\prime} 54^{\prime \prime}$ N. ; lon. $76^{\circ} 45^{\prime}$ E. (к.) In 1684 , the East India Company obtained permission from the reigning princess to fortify Anjenga, and establish a factory; but, laving been found an unprofitable possession, it was abandoned in 1813. Its principal exports are coir cables, made of the filires of the Laccadive cocoa nut, pepper, coarse piece goods, coir, and a few drugs.

ANJER, Anjerie, or Anger, a well-known maritime tn. Java, in Sunda Strait; lat. $6^{\circ} 3^{\prime} 12^{\prime \prime}$ S.; lon. $105^{\circ} 57^{\prime}$ E. (n.) being the westernmost port on the island. It is populous, and well fortified. The natives of this town, and other places on this part of the coast of Java, drive an extensive trade in natural curiositics among the passengers of homeward-bound Indiamen. At Anjer, especially, says Capt. Belcher, a fair of the most remarkable character is held under the shade of a magnificent banyan tree, where, for a few dollars, may be purchased long-armed apes, hideous baboons, pigmy musks, Java finches, doves, perroquets, grackles, love birds, and splendid peacocks. Ships may be conveniently supplied here with water, and other refreshments, sueh as buffaloes, poultry, turtle, fruit, vegetables, \&c. 'In the canoes that venture alongside the ship with these supplies,' says the authority above quoted, 'amnsing monkeys may be seen sitting among heaps of fruit and vegetables, chattcring and making grimaces; and huge turtles lying bound at the bottom of the boats.' The canoes are occupied chiefly by women, who present a very singular appearance, their heads being protected from the sun by large hemispherical bamboo hats, and their long black slining hair streaming down their backs. The country around is extremely fertile, but too thinly peopled to do it justice. Col. Catheart, who died on his way to China as ambassador, in 1785, is interred here.-(Sir E. Belcher's Voyage of the Samarang.)

ANJOS, a vil. Brazil, prov. São-Pedro-do-Rio-Grande, beautifully situated on the Butucarali, an affluent of the Jacny. It has a chureh and some schools; the inliabitants live by fishing and agriculture. Pop. 2653.

ANJOU [Latin, Andegavensis], an ane. prov. France, now forming dep. Maine-et-Loire, and parts of Mayenne, Sarthe, and Indre-et-Loire.

ANKAPllLY, a tn. Hindoostan, N. Circars, $24 \mathrm{~m} . \mathrm{W}$. by S. Vizagapatam; lat. $17^{\circ} 41^{\prime} \mathrm{N}$. ; lon. $83^{\circ} 11^{\prime} \mathrm{E}$. It is a large place, nearly 1 m . in length, and wide in proportion, with a good bazaar, and thickly interspersed with trees.

ANKARA, a country or kingdom, N. end, isl. of Madagascar, extending on the E. side of the island, from Cape Amber to lat. $14^{\circ} 25^{\prime} \mathrm{S} . ;$ and on the W. side to the river Samberanou. The country is generally elevated, formed by small hills and plateaux, disposed like an amphitheatre, and cut up by decp ravines. A chain of mountains runs nearly equidistant from either coast, and terminates in the high mountain Ambouitch, a little way S. British Sound or Diego Soarez Bay. The sides of this chain and its offsets are covered with fine wood, among which are several species suitable for slip building, and some which yield turpentine and gums. From both slopes flow numerous, mostly rapid streamlets, in courses generally much inclined. On the W. coast are the little rivers Ankara, Mahavavi and Samberanou. The whole coasts are deeply indented with extensive well-sheltered hays. Those on the E. are Vohemare, Andrava, Manguervi or Leven, LoukezLingvaton or de Rigny, and Antombonk; those on the W. are

Ampanhaui or Jenkinson, Ambavaui-Bé or Port Liverpool, Ansatzé, Ampergue-Ara or Port Chancellor, and a great number of smaller inlets and creeks. On the W. coast are also several gronps of islets, of which may be named Nossi-Ara, NossiLava, Nossi-Mitsiou, Nossi-Fâli, Nossi-C'omba, and Nossi-Bé. Rice, manioc, maize, and battatas are cultivated, but not in sufficient quantity to admit of any being exported. From the sugar cane, which is also grown to some extent, a kind of agreeable fermented liquor, named bessa-bess, is obtained, by infusing the juice with certain bitter barks; severals kinds of palms, including the cabbage palin, abound. Cattle are abindant, and about 30,000 are exported annually to Bourbon and Mauritius, cither alive or salted.

In Ankara polygamy is practised, the most petty chief having three wives; the first being the wife proper, to whom is committed the charge of the house; the second is a kind of concubine, generally pretty, and liable to be dismissed when her beanty begins to fade; the third is commonly a slave, who receives her liberty as soon as slie becomes a mother. The men build houses and canoes, fish and make war. The women till the fields, and perform all other kinds of labour. During leisure hours, they make palm-leaf mats, weave a kind of cloth suitable for clothing, and for making canoe sails, and make earthenware. The religion of the inhabitants of Ankara (called Antankaras) is a mixture of l'olytheism and Fetichism, the belief in two principles called Zanabar and Angateh predominating. They pay great respect to their dead, and believe in the transmigration of souls. The country is now subject to the IHovas, and is almost depopulated; the shores and the banks of the streams being almust the only parts inhabited. The decrease in the number of the pcople has arisen partly from numerous intestine wars, and partly from emigration, many having left and settled in Nossi-Bé, an island on the W. coast taken possession of by the French.-(Guillain, Documens sur l'histoire, la gcographie ct le commerce de Madagascar.)

ANKASSGERRY, or Ankosgerry, a tn. Hindoostan, Mysore territories, 40 m . S.E. Bangalore; lat. $12^{\circ} 39^{\prime} \mathrm{N}$.; lon. $78^{\circ} 8^{\prime} \mathrm{E}$.

ANKLAM, a tn. Prussia, prov. Pomerania, gov. of, and 49 m. N.W. from stettin, cap. circle of same name, r. bank. Péene, which is here navigable. It is surromnded by an old wall with threo gates, leading to three suburbs, and has three churches, three hospitals, and a college. The manufactures are woollen clothes, cotton stuffs, hosiery, leather, soap, tobacco, and suuff boxes. It bas, besides, several breweries, some shipbuilding, and a brisk trade in corn, wood, and glass. In 1319, Anklam was admitted into the Hans Leagne, and it still possesses some important privileges; but never has a town been more frequently snbjected to the greatest calami-ties-fire, pestilence, and war, which make its history a succession of the most fearful disasters. From 1384 to 1696, fires seren times laid great part of it in aslies. It was five times vasited with pestilence. From 1626 to 1761 , it was besieged, sacked, and plundered by all parties successively - Danes, Imperialists, Swedes, and Russians. In 1762, on the peace which concluded the seven years' war, its fortifications were dismantled, and from this period its greatest prosperity may be dated. Its ships, many of them built within its own port, have rapidly increased. Pop. 7800.-The circle has an extent of about 190 geo. sq. m. and a pop. of 25,000 . It is watered by the l'éene, and contains nnmerous lakes. The surface is generally flat, and is in some places sandy, stony, and unfertile. It, however, produces all the ordinary grain and palse crops; also flax, potatoes, and good pasture.

ANKOBAR, or Ankober, a tn. Abyssinia, cap. kingdom of Shoa, built chiefly on the acclivitics of a steep conical hill 8200 ft . high, in lat. $9^{\circ} 34^{\prime} \mathrm{N} . ;$ lon. $39^{\circ} 35^{\prime} \mathrm{E}$. The houses are constructed chiefly of wood, with tapering thatched roofs, and are generally surrounded by a garden. The upper part of the town is hedged in with long stakes interwoven with boughs as palisades, and on the summit is the king's palace, an extensive structure, built of stone and mortar, with a thatched roof. The whole appearance of the town is singular, the conical thatched roofs of the honses making them resemble so many barns and hay cocks. The rich regetation, however, with which it is surrounded, together with the coolness and purity of the atmosphere, render it an exceedingly agreeable place. A market is held every Naturday, when
sheep, corn, and sometimes fat or suet, and other articles are sold; the market plaee is about 1 m . from the town. A good mule, aceording to Krapf, may be bought at Ankobar for 10 s.
which it bas communication by the Nipigon River.-6, A harbour on the E. side of Cape Breton, British America; lat. $46^{\circ} 21^{\prime} \mathrm{N}$.; lon. $60^{\circ} 27^{\prime} \mathrm{W}$. (i..)

ANNA (SANTA), the name, as in the above instance, of varions places in different parts of the world. The following are amongst the more in-portant:-1, Sunta Anua Isles and Bay. The former, three in number, are situated off the E. coast of Brazil, prov. Rio Janeiro, about 30 m . N. from Cape Busios; lat. $22^{\circ} 25^{\prime}$ S.; lon. $41^{\circ} 41^{\prime}$ W. They lie about 6 m . from the shore, affording shelter and good anehorage. The large bay in whieh they are situated, having Cape St. Thome on the N.E., and Cape Busios on the S.W., is called the Bay of Santa Amar- $2, \mathrm{~A}$ small isl. $N$. coast of Brazil, abont 20 m . from the shore, prov. Maranham; lat. $2^{\circ} 16^{\prime} \mathrm{s}$. ; lon. $43^{\circ} 41^{\prime} \mathrm{W}$. (r.) - 3 , An isl. Brazil, prov. Matto-Grosso, formed by the river Aragnaya, which, dividing into two branches at lat. $12^{\circ} 30^{\prime}$ S., reunites at lat. $9^{\circ} 30^{\prime}$ S., and thus forms what is called the island of Santa Ama or Bannanal. It is about 200 m . in length, and from 20 to 30 in breadth. -4 , One of the Solomon Islands, S. P'acific Ocean; lat. $10^{\circ} 50^{\prime}$ s.; lon. $162^{\circ} 3 y^{\prime}$ E. (1.)-5, Sunta Anna de ('luzos, a tn. and bay, isl. St. Thomas, Bight of Biafra, S.W. eoast, Africa; lat. $0^{\circ} 20^{\prime} 5^{\prime \prime}$ N.; lon. $6^{\circ} 43^{\prime}$ E. (r.) -6, An inlet of the sea, called a lake, in Mexico, prov. 'Tabasco, Gulf of Mexice, intersected to 50 s., and a grood horse for about 35 s. Pop. generally about 5000 ; but, when the court is there, it rises to from 12,000 to 15,000 .

ANKOV 1 , a kingdom, Madagasear, oceupying nearly the precise centre of the island, and the most powerful of all the states in it. It is destitute of wood; and is without roads, canals, or other means of eonveyance, rendering its capabilities unavailing, and eonfining the consumption of its produce, chiefly riee and eotton, to the inhabitants. Agriculture is thus neeessarily little attended to; and the less that rice is so abundant, raised with so little trouble, and disposed of with such diffienlty, that there is no inducement to exertion. A small extent of sugar cane is cultivated, from which a little sugar, of inferior quality, is obtained, by an imperfeet proeess. The air of this part of the island is considered very salubrious. The inhabitants, called Ovalis or Hovas, are a superior raee; in person they are tall and handsome, and of all shades of eolour, but chiefly copper, with long lank hair; and are supposed not to have belonged originally to the island. They are distinguished by their superior skill in manufaeturing silk and eotton dresses, to which they give a great variety of the richest colours; in forging iron, and in making silver and gold ehains. Their language is written in the Arabie eharacter, and their religion idolatry. In their conduct and dispositions, they exhibit a mingled magnanimity and ferocity ; and frequently cover sinister designs with an impressive politeness. Avarice is their prevailing vice. The principal town is Tananarivo, alnost the central point of the island. Thongh the chief place, however, there is nothing about it to indicate its rank; bemg little different, in any respect, from the other villages in the kingdom. It is built upon a hill, and takes its name from the nnmber of houses it was supposed to contain, tanan signifying a village, and arivo a thousand.-(Descartes, Mist. et Geo. de Medugascar.)

ANMER, a par. England, eo. Norfolk; 1420 ac. ; 6 m . N.E. by E. Castle. Pop. in 1841, 175.

ANN (Sr.), a name applied to a number of places in various parts of the worll. The best known and most worthy of notice are:-1, St. Ann Shoals, off the S. part of the coast of Sierra Leone, extenting fron Cape Shilling to Sherboro 1sland, a distance of between 30 and $40 \mathrm{~m} .-2$, St. Ann (Cape), the extreme N.W. point of Sherboro Island, coast of sierra Leone; lat. $7^{\circ}$ O4' N.; lun. 12 is W. (13.) having elose by a group of islands called Turtle Islands.-3, St Ann's, a tin., river, and bay, Janaica, on the N. coast ; the latter in lat. $18^{\circ} 26^{\prime} 24^{\prime \prime} \mathrm{N} . ;$ lon. $77^{\circ} 13^{\prime} \mathrm{W}$. (r.) - $-4, \mathrm{~A}$ cape or headland on the N.W. coast of Afriea, about $35 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{E}$. of S. Cape Blaneo, near Arguin, and within the bank of that name; lat. $20^{\circ} 30^{\prime}$ N. ; Ion. $17^{\circ} 0^{\prime}$ W.-5, A lake, Upper Canada, 20 m . long, and 20 broad, about 45 m . N. from Lake Superior, with
by the parallel $18^{\circ} \mathrm{S}$. ; it is about 15 m . in length, and 10 in breadth at the broadest part, and communicates with the Gult of Mexico by a narrow channel.-7, A tn., E. coast, isl. Marie Galante, one of the Leeward Islands, belonging to the French. - Santa Anna is also the nane of numerous villages and small towns in S. America.

ANNABERG, a th. Saxony, dist. Zwiekau, r. bank, Sehm, $45 \mathrm{~m} . S . W$. Dresden, and 7 m . from the frontiers of Bohemia. Its site is 1800 ft . above the level of the sca, among hills whieh eontain mines of silver, tin, cobalt, and iror. The ehief buildings are the lyceum, eellese, museum, and three churches, one of them eontaining several good pictures, and a eurious bas-relief in terra cotta. The manufactures are very important. A great number of ribbon makers, driven from Belgium by the tyranny of the Duke of Alva, found a new home in Ammaverg, and have made it the seat of a ribbon trade, whieh is carried on with all the scientific improvements which bave been reeently introduced; and notwithstanding of the competition of Lyons and other towns, which lave the same staple, is still understood to yield good returns. The ornamental gauze and flower ribbons are said to bear a high name, and to deserve it. Great quantities of laee, hand-wrought, were at one time made, but the introduetion of the English lace maehine has seriously interfered with that kind of labour. The only other manufactures deserving of notice are those of silk stutl's and oil eloth. Pop. 7300.-In addition to the above town, Annaberg is the eommon name of a great number of unimportant places throughout Germany, particularly Austria and Prussia.

ANNABON, or Annaboa. Sec Anmodon.
ANNABURG, a th. Prussian Saxony, gov. Merseburg, 2 m. N. Torgau, and 56 N.N.W. Dresden; situated near the Schwarze or Black Elster. It has a castle, built by Anna, eonsort of the elector Augustus; converted, in 1762, into a military sehoel, where 400 protestant boys, sons of I'russian soldiers, are educated, from their 11th to their 18thy year, and then appointed non-commissioned officers or musieians in the army. Besides the seven elasses for mental instruction, the younger boys are taught gardening, knitting, and other domestie branehes, while the elder ones acquire some useful trade. Most of them are taught musie ; and a few distinguished pupils devete their time to scientifie pursuits bearing upon military life. At the head of the academy are two eommissioned officers; besides these, a elergyman, a sehool inspeetor, nine teaehers, a plyysician, and a surgeon; four stewards, and numerous subordinate oflicials are regularly employed. 1'op. 1700.

ANNADUFF, a par. Ireland, co. Leitrim; 10,970 ac. Pop. in 1841, 6162.

ANNAGELIFFE, a par. Ireland, co. Cavan; 8200 ac. Pop. 3808.

ANNAGII, the name of two small islands, three parishes, a vil., and small lake, in Ireland:-1, An isl., W. coast, between the isl. of Achill and the mainland of the co. Mayo; lat. $53^{\circ} 58^{\prime}$ N.; lon. $9^{\circ} 39^{\prime} \mathrm{W}$. It is about 4 m . in circumference, and, though rugged, has good pasturage for sheep.2, A small isl. Lough Com, co. Mayo.-3, A par., co. Kerry, partly in the barony of Corkaguiny, and partly in that of 'Trughanaemy ; 13,735 ac. Pop. in $1841,3659 .-4$, , par., eo. Cavan, partly in barony Loughtee Lower, and partly in that of Tnllygarvey; $19,145 \mathrm{ac} .$, which includes 837 ac . of water. Pop. in 1841, 13,071.-5, A par., co. Mayo ; 20,315 ac. Pop. in 1841, 7904.-6, A small vil., co. Cork, between Charleville and Liscarrol.-7, A small lake on the contines of King's and Queen's counties.

ANNAGHCLONE, or Anacloan, a par. Ireland, eo. Down; 6544 ac. Pop. in 1841, 3423.

ANNAGIIDOWN, a par. Ireland, co. Galway ; 23,730 ac. Pop. in 1841, 7108.

ANNAGOONDY, a small dist. and tn. Hindoostan, prov. Bejapoor; the former lying along the 1. bank of the Toombudra, on which the town also stands. The surface of the country is wild and hilly, interspersed with much wood. Por some miles round the town, the soil is enenmbered with vast piles of granitic rock. The town is $110 \mathrm{~m} . \mathrm{W} . \mathrm{S} . \mathrm{W}$. Kurnool.

ANNAII, a tn. Asiatic Turkey, cap. sanjak, r. bank, Euphrates, where the river makes a slight bend to the N.E.; lat. $34^{\circ} 15^{\prime} \mathrm{N}$.; lon. $41^{\circ} 50^{\prime} \mathrm{E}$. It is on the caravan route from Bagdad to Aleppo, and is distant from the former about $160 \mathrm{~m} . \mathrm{N} . W$. , and from the latter 15 or 16 days' journey. It consists of a long narrow winding street on the bank of the river, and at the base of the hills which here line the Euphrates. There are two mosques in the town, and a beautiful minaret 80 ft . high; a manufactory of coarse eloth, and some flourmills. The number of houses is about 1800.

ANNALAND (St.), or Anneland, a vil. Holland, prov. Zeeland, on the isl., and about 9 m . N.W. the tn . of Tholen. It is the prettiest village on the island; and has a church and good haven, used at times by passing vessels as a place of refuge in stormy weather. The inhabitants are chicfly engaged in agricultnre. Pop. 1694.

ANNALONG, a vil. and fishing harbour, Ireland, E. eoast, co. Down, between Dundrum Bay and Carlingford Bay. It affords convenient shelter for small fishing vessels, and is, on this account, much frequented by them.

ANNAMAIBOE, a seaport tn., with a fort, Gold Coast, W. Africa; lat. $5^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $1^{\circ} 7^{\prime} \mathrm{W} ., 10 \mathrm{~m}$. E. from Cape Coast Castle. The town consists of houses irregnlarly haddled together, generally built round a court seven yards square; some having elay benches, in the form of sofas, running round the wall inside the court. It was at one time a principal mart for slaves; in traffieking in which many of its inhabitants becanc wealthy. A considerable trade in gold is now carried on here. The country around is thickly wooded, and the soil is excellent, but little cultivated; the natives depending for their subsistence upon eorn, yams, vegetables, \&c., bronght from the interior, and bought in exchange for fish, which are very plentiful on the coast at certain seasons. In 1808, the town was burnt by the Ashantees; on which occasion nearly two-thirds of the inhabitants were slain. The fort, however, which was garrisoned by some 30 or 40 soldiers only, resisted the efforts of the entire $A$ shantee force, consisting of 20,000 men, for several days, and, after receiving a small reinforcement by sea, compelled them eventually to retire. Pop. about 3000.-(Duncan's Travels in W. Africa.)

ANNAMALLAY, or Animalaya, a tn. IIindoostan, Malabar coast, 20 m. S.E. by E. Trichoor, and 70 m. S.E. Calient, 25 m . from the coast; lat. $10^{\circ} 35^{\prime} \mathrm{N} . ;$ lon. $76^{\circ} 55^{\prime}$ E. ; l. bank, Alima, amidst extensive forests of valuable timber, opposite the wide passage between the Ghauts of the Carnatic and the hills to the S. It derives its name, Animalaya [Elephant Ilill], from the great number of these anmals that inhalit the vicinity.

ANNAMOOKA, Namouka, or Rotterdam, one of the Friendly Islands, Paeific Ocean, about the centre of the grotup; lat. $20^{\circ} 15^{\prime} \mathrm{S}$. ; lon. $175^{\circ} 2^{\prime} \mathrm{W}$. (r.) It is of a somewhat triangnlar form, from 12 to 20 m . in circumference, and surVoi. I.
rounded by islets, shoals, and sunken reefs, which extend to at considerable distance from its shore. It exhibits some traces of volcanic action ; and has at its E. side a large lagoon, about 1 m . in cireumference. The island is well watered, and prodluces abundance of yams, pine apples, bananas, cocoa nuts, and bread-fruit. Its cultivation and artificial decorations display a tastefulness rarely found among savage tribes. Even when discovered in the 17th century, there were observed in the interior several pieces of cnltivated ground or garlens, in which the beds were regularly laid out into squares, and planted with different kinds of trees and shrubs, arranged in straight lines. Private property is exactly ascertained, and each possession is neatly fenced with a beantiful Chinese railing. Highways and roads leading to public places are bounded by suitable walls and hedges; and many of the houses have a handsome approach in the form of a gravel walk, lined with shrubbery tastefully planted. The inhabitants, lowever, who resemble those of Tonga, are described as ignorant, superstitions, thievish, and almost destitute of any kind of worship; but regarding with reverence snakes, flies, and other animals. They have a king or clief, but his power seems to be very limited. Theft is panished in various ways; but the most effective is slaving the delinquent's head, which exposes him to ridicule. Annamooka was discovered by 'lasman in 1643 , and by him named Rotterdam. The memory of the Duteh navigator, who supplied the natives with dogs and hogs, is still preserved by oral tradition. The island was visited in 1773 and 1777, by Capt. Cook. In 1791, Amnamooka was reaehed by Capt. Edwards in the ship Pandora. Since 1829, the inhabitants have been partly ehristianized by the efforts of British missionaries. Pop, about 2000.

ANNAN, a river, Scotland, formed by the union of the Moffat water, which flows from Loch skene, S.W., and the Evan water, which rises in the upper part of Lanarkshire, and flows S.E. These streams unite $3 \mathrm{~m} . \mathrm{S}$. Moffat, and, intersecting Dumfries-shire in a S. course, fall into the Solway Frith about 1 m. S. Annan. Total direct course from the junction of the Moflat and Evan, about 21 m .

ANNAN, a borongh, seaport tn., and par. Scotland, co. Dumfries. The town lies on the l. bank of the river of same name, near its confluence with the Solway Frith, 14 m . s.E. Dumfries. It is neat, elean, and well built, and contains many good houses, and handsome shops. The streets aro spacious and well paved, and the whole town presents a cheerful and thriving appearance. The public buildings are the parish church and townhouse, each of which lias a handsome spire; the academy, a remarkably fine structure; and a bridge over the river, of three arches, ereeted in 1824, at a cost of about $£ 8000$. Amongst the more conspicuous edifices are also some dissenting meeting-honses. There is a subseription library in the town, and several bencvolent and religious societies. The manufacture of cotton, rope-making, and shipbuilding, are carried on here, the first and last to a very considerable extent. There is also a pretty large trade in the curing of bacon and liams, for the Neweastle and London markets; and an extensive export of corn, fat cattle, and sheep. The harbour, a natural one, has been much improved by the construction of an embankment, extending about $1 \frac{1}{\text { a }} \mathrm{m}$. down the river, from the lower extremity of the town. At its lower termination, this embankment is 19 ft . high, and 120 ft . broad at the base. At the lowest tides there are 14 ft . water in the harbour, and in the lowest spring tides 22 ft . at high water; but the depths are often much greater, partieularly when a westerly wind has prevailed for a day or two. Yessels of 60 tons can proceed up as far as the bridge. Annan is governed by a provost, three bailies, a treasurer, dean of guild, and 15 councillors. It joins with Dumfries, Lochmaben, Sanquhar, and Kirkeudbright, in sending a member to Jarliament; constituency, 172. Pop. in 1841, 4409.—Area of 1PAr., $17 \frac{1}{2}$ sq. m., or $11,100 \mathrm{imperial}$ acres. Pop., exelusive of the town, 1062.

ANNANDALE, a dist. Scotland, Dumfries-shire, through which the Annan flows, and which gave the now extinct title of Marquis to the family of the Johnstones.

ANNA-PAROCHIE (St.), St. Annaburen, or St. Anna, a vil. Holland, prov. Friesland, 7 m . N.W. Lenwarden, and 8 m . N.E. Franeker. It consists of two double rows of houses, interseeting at right angles at the chureh, a handsome octagonal building, and has a large school, with school21
master's house attached. The vicinity consists of well-cultivated clay lands. Pop. 1800.- (Van der Aa.)

ANNA1'OLIS, or Port-Roxal.-1, A seaport tn., l. bank river of same name, Nova Scotia, 92 m . W. Malıfax ; lat. $44^{\circ} 40^{\prime} \mathrm{N} . ;$ lon. $65^{\circ} 30^{\prime} \mathrm{W}$. The harbour is commodious and safe, but the entrance is through a diffieult strait, ealled the Gut of Annapolis; lat. (Point Prim) $44^{\circ} 41^{\prime} \mathrm{N}$. ; lon. $65^{\circ} 45^{\prime}$ W. (n.) The shores on both sides of this strait are iron-bound for several miles, and rise to a great height, causing violent currents and gusts of wind. On entering the basin, much beautiful seenery is presented, and many thriving and extensive farms appear. Of late years, the herring fishery of Annapolis has risen to sueh consequenee, that the merchants of Halifax and St. Jolin give them a decided preference for foreign markets. There is a regular packet established from hence across the Bay of Fundy to St. John, in New Brunswick. This is one of the oldest European settlements in N. America, having been founded by the Freneh, in 1604, under the name of Port-Royal ; changed to Annapolis in compliment to Queen Anne, the province having been added to England during the reign of that princess. It was the eapital of the province till the foundation of IIalifax, in 1750 , when the seat of the provincial government was removed to that town. It is now a mere village, of not more than 60 houses. Pop. of township, ineluding a part of Dalhousie settlement, in 1827, 2578.-2, The eounty of Annapolis extends along nearly the whole coast of the Bay of Fundy. The soil is ehiefly marsh and upland; the former composed of fertile alluvial tracts on the rivers and bays, protected from inundation by dikes; the latter, long ridges of small hills, called by the natives momntains, the summits of which, when cleared of wood and cultivated, are very productive. Pop. of county in $1851,14,285 .-3$, The river of the same name rises in the township of Cornwallis, King's County, about 60 m . N.W. Halifax, and, flowing from the N.E., parallel with the Bay of Fundy, expands into a wido estuary, and falls into the sea at Annapolis, after a course of about 70 m . It is navigable 20 m . above its mouth for ships of 100 tons, and for about 10 m . for vessels of any burden. The tide flows between 30 and 40 m . up. -4 , A city and port of entry, U. States, eap. of the state of Maryland, 2 m . from the mouth of the Scvern, on its r. bank, and 31 m . E.N.E. Washington, with whieh, and with Baltimore, it is connected by railroad; lat. $38^{\circ} 58^{\prime} 7^{\prime \prime}$ N.; lon. $76^{\circ} 29^{\prime} 7^{\prime \prime}$ W. (r.) The streets, which diverge from the state-house and the episcopal chureh, are regularly laid out. The town contains several public buildings deserving notice; amongst these is the state-house, in which the American Congress held some of its sessions during the revolutionary war. It contains also a state library, county buildings, an Episcopal and a Methodist ehurch, a markethouse, bank, and theatre, several sehools and academies, ineluding a United States naval academy, established in 1845. St. John's College, a braneh of the miversity of Maryland, was established here in 1784. The trade of Annapolis has been injured by that of Baltimore. Pop. (1850), 3011.

ANNATOM, an isl., S. Paeific Ocean, one of the New IIebrides; lat. $20^{\circ} 11^{\prime} \mathrm{S}$; ; lon. $169^{\circ} 42^{\prime} \mathrm{E}$. (r.) ; about 240 m . E.N.E. Queen Charlotte's Point, New Caledonia. It presents undulating hills, but no remarkalle peaks or striking features. Productions-yams, bread fruit, and cocoa nuts.

ANNE (Sr.) - 1, A tn. and bay, isl. Nukahivah or NooaLeevah, one of the Marquesas, S . I'acitic Ucean; lat. $8^{\circ} 5 \overline{5}^{\prime} 1 \mathrm{~s}^{\prime \prime \prime} \mathrm{N} . ;$ lon. $140^{\circ} 6^{\prime} \mathrm{W}$. (r.) - 2, A small isl. near to, and on the E. side of the isl. of Mahé, one of the Seychelle Arehipelago; lat. $4^{\circ} 36^{\prime} 0^{\prime \prime}$ S.: lon. $55^{\circ} 33^{\prime} 45^{\prime \prime}$ E. (r.) - 3 , A riverandtn. Lower Canarla; the former joins the St. Lawrence about 50 m . W.S.W. Quebee; the latter is situated on the S. bank of that river; lat. $49^{\circ} 0^{\prime} \mathrm{N}$. ; lon. $66^{\circ} 25^{\prime} \mathrm{W} .-T h e r e ~ a r e ~ s e v e r a l ~$ other rivers of the same name in this territory. -4 , Mountains, Lower Canada, the N E. one in lat. $48^{\circ} 52^{\prime} \mathrm{N}$. ; lon. $66^{\circ} 49^{\prime}$ W. (в.); 3973 ft . high.-5, A mountain, France, dep. Orne, 8 m . from Alençon, on whieh is a chapel, frequented by great numbers of pilgrims.

ANNECY, a tn. Sardinia, in Savoy, cap. of the former prov. of Genevois, pleasantly situated at the N. end of Lake Annecy, 1472 ft . above the sea level, 21 m . S. Geneva. It has a cathedral, a clurch, 10 convents and monasteries, a library, and a college, a handsome episcopal palace, and hospital. Manufactures-cotton, silk, straw hats, earthenware,
glass, hardware, sulphate of copper, tinned iron, and steel. Four fairs are held annually. Annecy is overlooked by an old castle in a ruinous state, which was formerly the residence of the Counts of Genevois. Aneiently oceupied by the Romans, the name is said to have been derived from Anicius, one of the lioman governors of the province. It was once destroyed by the Goths, and twice by fire, the last time in 1559. Pop. 5700.

ANNECY (Lake), kingdom of Sardinia, in Savoy, between 8 and 10 m . in length, from 1 to $2 \frac{1}{2} \mathrm{~m}$. in breadth, and about 1400 ft . above the level of the sea. It is 20 m . S. Geneva, and is surrounded by mountain scenery of the finest deseription; and at its lower extremity there is a beautiful promenade, where fairs and public amusements are held.

ANNELAND. See Annaliand.
ANNESLEY, a par. England, co. Notts; 3360 ac. Pop. in 1841, 274.

ANNESTOWN, a vil. and seaport, Ireland, co. Waterford; 12 ac. Pop. in 1841, 149.

ANNE'I, one of the Scilly Islands, S.W. coast, England, off the Land's End, about $\frac{3}{4} \mathrm{~m}$. from the N.W. extremity of the isl. of St. Agnes. It is now uninlabited, but the foundations of ancient houses, which may be traced at low water, and other evidences, show that it formerly contained a pretty large population. Eneroachments of the sea are supposed to have been the cause of its desertion. It now supplies the other islands with fern and turf for fuel, and grazes a considerable number of sheep, but the latter are small, and in very indifferent eondition.

ANNI, Ani, or Anisr, an aneient and deserted tn. Turkish Armenia, about 20 m. E.S.E. Kars; lat. $40^{\circ} 33^{\prime}$ N. ; lon. $43^{\circ} 32^{\prime}$ E. It was built in a triangular form, on a rocky peninsula overhanging the Arpa-ehai, and was fortified by strong and massive walls, in some places 40 and 50 ft . high, defended by numerous round towers; the whole beautifully huilt, and curiously variegated with ornaments in blaek stone. The entire site of the town is covered with the ruins of privatio houses and public edifices, the latter chicfly elurehes and chapels. One of the former, a large Christian clurch, built in the form of a Latin eross, is still in good preservation. There are also the remains of an extensive building, whieh Mr. Hamilton supposes to have been the palace of the Kings of Anni ; it is of excellent masonry, and the gateway is in rich Saracenie style, while the walls are adorned with elaborate mosaic patterns, in various coloured stones. The history of this ancient city is imperfectly known, but, situated on the frontiers of Armenia and Georgia, it beeame, in the fiftly or sixth century, the capital of the Pakradian branch of Armenian kings. In the 11 th eentury it was taken, pillaged, and its inhahitants massacred, by the Tartars. Soon after, it was altogether abandoned, and has never since been oecupied by a civilized people.-(IIamilton's Asia Minor ; \&e.)

ANNIMALLAY. See Annamallay.
ANNIVIERS (VAL D') [German, Einfischthal], a valley, Switzerland, can. Valais, formed by two ranges of mountains branching off N.W. and N.E. from the Weisshorn, and abutting on the Upper Rhone, opposite the village of Siders. The valley is watered by the Usenz, a wild mountain-stream; it is about 12 m . long; presents wild and varied seenery; and its upper end is terminated by the snow-capped Weisshorn. The inhabitants, from 4000 to 5000 in number, said to be descended from a troop of Huns, are of powerful make, simplo habits, hospitable, and laborious; they eultivate the soil, which, in some parts, is fertile; but the chief source of support is cattle-rearing, and the making of butter and cheese.

ANNOBON, or Anno Bor, a small but beautiful isl. belonging to the Spanish, on the W. coast of Africa, S. of the Bight of Biafra, and about 190 m . W. Cape Lopez; lat. (N.W. point) $1^{\circ} 24^{\prime} 18^{\prime \prime}$ s. ; lon. $5^{\circ} 35^{\prime} 42^{\prime \prime}$ E. (R.) It is about 4 m . in length, and 2 m . in breadth, and rises abruptly from an unfathomable depth to a height of 3000 ft . Ono lofty peak shoots above all the rest, the ascent to which is difficult and dangerous from its extreme steepness, and the looseness of the stones witly which the slope is covered. The summit is flat and narrow, searcely exeeeding 10 yards in length, and the wind sweeps over it with great violence. At the base of this peak is a beautiful little circular lake, filling what appears to be the crater of an extinct volcano. The lake is about 9 ft . deep in the dcepest part, and the water
sweet. Capt. Allen speaks in the warmest terms of this little island. 'We coasted,' he says, 'along this bright isle, opening a succession of little valleys, with fine outlines of steep mountains, richly elothed witl wood, while every ledge and crevice gave nourishment to a rich luxuriance of parasitical and other foliage, and the precipitous surfaces were tinged with every variety of colour. Little villages appeared nestled in fertile spots, but these were few, and sometimes only guessed at by the gracefully-curling smoke.' At another place he says, 'At our last resting-place, in the lower part of the valley, we enjoyed a delieiously cool rill, under the shade of palm trees, the arehing and intersecting ribs of which formed a more exact representation of the Gothic arch, than any of the types that have been imagined by architects to be the original of that excellent style.' Vessels touch at Annobon for refreshments, of which the supply is abundant, including pork, mutton (whieh is small, but well-flavoured), goats, pigs, fowls, bananas, plantains, cassada, sweet potatoes, pines, and tamarinds. Guinea-fowl are particularly plentiful, and afford excellent amusement to the sportsman. The plumage of those found here is richer, the birds larger, and the flesh of a much finer flavour, than that of English game. Cassada, cotton, sugar-cane, \&e., are cultivated with care and success by the natives, the grounds appropriated to these productions being carefully enclosed and neatly fenced off. All articles are proeured much more readily by barter than for money; cheap tawdry handkerchiefs, old clothes, muskets, fish-liooks, cutlery, trinkets, rum, and tobaeco, being the objects chiefly coveted. Water is abundant, but in some places not easily procured by shipping, on account of the heavy surf on the shores. At others it is obtained more readiiy. The wood in most abundance on the island resembles in appearance the cotton tree, but is unfit for fuel, on account of its spongy nature. Near the N.E. point of the island is a considerable town, composed of several irregular streets or lanes of detached huts, the latter rudely constructed of rough unhewn boards, of grass, mud, \&c. The principal street, however, is tolerably straight, and leads through the town to the church, having crosses planted at intervals. Here is the only safe roadstead for shipping round the island. The bottom is rocky, and the bank of soundings is about one-third of a mile in breadth, and sheltered from all the prevailing winds, except during the tornadoes, against which the ehief preeaution is to ride with a chain, to prevent the cable being eut. In taking up a position, the rule is not to anchor in less deptli than 17 fathoms, with the highest summit of the island bearing S.S.W. $\frac{1}{2}$ W. (magnetic), when the distance from the shore will be little more than half a mile, giving room to veer to the strength of a tornado. The government, according to Capt. Allen, is an oligarchy, vested in five persons, who assume office by turns, strangely enough measuring its tenure by the arrival of ships, the ehicf magistrate holding his during the period of the arrival of ten. The natives are a harmless, inoffensive people, extremely poor, of which they are in the habit of making the most pathetic complaints to their visitors. The climate is represented by Capt. Allen to be extremely healthy, but a less favourable account has been given by others. The regular winds are from the S.W., excepting during the tornadoes. The rainy seasons are confined to April, May, October, and November. Besides the town already adverted to, there are a few villages, at other parts of the island. Annobon was discovered by the Portugurse in 1473, and was named from the new year. Pop. estimated at 3000.-(Allen's Niger Expedition; London Geo. Jour., vol. ii. p. 276, et seq.)

ANNOEULIN, a tn. France, dep. Nord, arrond. of, and about 11 m . from Lille. A good deal of flax is hand-spun in the town, which has also manufactures of leather and beetroot sugar; briek-works, an oil and a corn-mill. Pop. 3040.

ANNONAY [Latin, Annoneum, Annoniacum], a tn. Franee, dep. Ardeche, in the Vivarais (Languedoe), 30 m . S.S.W. Lyons. Its site at the confluence of the Cance and Deaume, which join the Rhone abont 6 m . below, is pleasing and picturesque. The best view of it is obtained from the top of St. Denis, a steep rock in the vicinity. The town, which is of a straggling and irregular form, lies immediately below, occupying the tops, sides, and intervening valleys of seven small hills. The most prominent object is the Gothic church of Trachi, with a fine lofty spire. Near it stands the
extensive and massy structure of the Ursuline nunnery. In another part is seen an old castle in ruins, once the residence of the Princes of Soubise. Belind, the Deaume pursues a rapid and noisy course along its roeky bed; and further off, in the same direction, the view is terminated by a mountain range. Withm the town, the most interesting object is a monumental obelisk to the celebrated aëronauts, Joseph and Stephen Montgolfier, natives, who made their first ascent here, in 1783 ; and have a still stronger claim on the gratitude of their townsmen for their celebrated paper-mills, which have made the paper of Annonay famous over Europe. The other buildings worthy of notice are the college, the townhouse, containing marble busts of the Montgolfiers, the publie library of 10,000 volumes, and the museum. Besides its paper, which it produces amually to the value of $£ 120,000$, and of which about a third is exported to foreign countries, Annonay can boast of numerous other manufactures, woollen cloth, worsted caps, refined wax, silk and cotton thread, and particularly tanned leather, made chiefly from the skins of unweaned kids, and partly also of lambs. These skins are imported from all quarters of the world. A large portion come from the S. of France, and the districts of the Alps; also from Spain and Italy, though the heat of these two countries is said to make the quality inferior. So important is this branch of manufacture, that it employs 1200 workmen, and yields a produce little short of $£ 700,000$ annually. The chief markets for the leather, which is used for the finer sorts of gloves, are Grenoble, Paris, and different towns in England. The surrounding district is covered with mulberry plantations, and produces large quantities of silk. Indeed, the greatest part of the very fine white silk which is employed exelusively in making blonde, comes from Annonay. Pop. 9893.

ANNWEILER, a tn. Bavaria, cap. of its dist., circle of the Rhine, in a beantiful valley of the same name, on the banks of the Queich, 8 m . W. Landau. It has a R. eatholic and two Reformed churches, an hospital, and grammar school. Its public works are tanneries, colour-works, brush manufactories, paper-mills, and distilleries of kirschwasser. On the top of a remarkable lill of sandstone, which overhangs the town, and is 1422 ft . above the level of the sea, stands the ruined castle of Trifels, which was at one time a place of great strength and importance, Frederick Barbarossa, and, indeed, many Emperors both before and after him, holding their court in it, and making it the depository of the regalia of the empire, and which still possesses a deep interest from containing the subterranean dungeon in which Richard Cœur de Lion was treacherously confined in 1192. The sandstone rocks in the vicinity of Annweiler possess, in their fantastic shapes and remarkable fissures, a peculiar attraction for the geologist. Pop. 2602.

ANOISHEHER, or Anapasmemer, a tn. Hindoostan, prov. Agra, l. bank, Ganges, 72 m. S.E. Delhi; lat. $28^{\circ} 23^{\prime}$ N.; lon. $78^{\circ} 10^{\prime} \mathrm{E}$. In 1800 it was a populous town, consisting of a mixture of brick and mud buildings, and surrounded by a mud wall, 20 to 30 ft . thick.

ANOTTA BAY, N. coast, Jamaica, co. Surrey, abont 30 m . from the N.E. end of the island. There is good hold-ing-ground in 7 fathoms water, about a quarter of a mile from the shore.

ANSE.-1, A tn. [anc. Ansa Paulini] France, dep. Rhone, in a lovely valley near the junction of the Azergue with the Saône, 13 m . N.N.W. Lyons. Under the Romans, in the time of Augustus, it had a garrison of four cohorts (about 2400 men ). The ruins of a palace of that Emperor, and traces of the Roman fort, still remain. In the 11 th and 12th eenturies, not fewer than six eouncils were held here. Anse possesses five fountains; four of them flow constantly; but the remarkable circumstance is, that the fifth is dry in wet, and begins to flow only in very dry seasons-a fact, it is said, whieh enables the inhabitants accurately to predict the nature of the coming vintage. The country between Anse and Villefranche is so rich and beautiful, as to have made a proverb of the doggrel stanza-
'De Villefranche ia Anse,
La plus belle lieue de France.'
Anse has some trade in cattle, eorn, hemp, and wine. Pop. 1750.-2, A tn., N. coast, Martinique, in a dangerous bay. Pop. 4500.-3, Les Anses d'Arlet, a vil. Martinique, S. of Fort Noya

ANSET-GLAIN, a tn. and com. Belgimm, prov. Liege, on the railway between Wareme and Liege, and rather more than 2 m. N.N.W. the latter town. The com. has an area of 1850 ac ; is watered by the Legie, vulgarly called Ri de Coq-Fontaine, and possesses two coal-pits, and several flourmills. Pop. 4071 .

ANSLEY, a par. England, co. Warwick; 3580 ac. Pop. in 1841, 701.

ANSON BAY.-1, A bay, Australia, N. W. coast, having Cape Ford on the S., and Chamel I'oint on the N.; width of entrance, 30 m . It is about 220 m . N.E. Cape Londonderry, and $90 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Clarence Strait.-2, A bay, W. coast, Korea; lat. $39^{\circ} 25^{\prime}$ N. ; lon. $124^{\circ} 30^{\prime} \mathrm{E}$. (r.) - $3, ~ A ~ b a y, ~ i n ~ T i n i a n ~ I s l e, ~$ Ladrones; lat. $14^{\circ} 58^{\prime} \mathrm{N}$. ; lon. $145^{\circ} 37^{\prime} \mathrm{E}$. (R.) In this bay water and refreshment3 for ships are to be had; but the anchorage is bad, and only for small vessels.

ANSON'S INLAND (Lomd), an isl., S. Paeific Ocean, ealled by the natives Bouka; lat. (most N. point) $5^{\circ} 0^{\prime}$ s.; lon. $154^{\circ} 34^{\prime}$ E.; separated from Bongainville's Island by a narrow strait. Shores rocky and precipitons, erowned with cocoa trees, dense groves of which extend to the centre of the island.

ANSPACII, or ANSBACH [originally Onolzbach], a tn. Bavaria, cap. circle of same name, and of gov. of Middle Franconia, prettily situated at the junetion of the IIolzbaeh with the Lower Rezat, 24 m . W.S. TH. Nuirnberg. It owes its origin to the monastery of St. Gunibert, which was founded in the cighth century, and in the church of which is the burialplace of the margraves of Anspach. It has one R. eatholic, and two Reformed churehes, a Jewish synagogue, several important cducational and charitable institutions, a picturegallery, and a publie library of 15,000 volumes. The building perhaps most worthy of notice is the old deserted palace of the margraves of Anspach, surrounded by gardens, which form an agrecable promenade, and in which is a monument to the poet Uz, who died here in 1796 . Its principal manufactures are of woollen, cotton, and silk stuffs, leather, hardware (including all kinds of cutlery, but particularly surgical instruments), eartlenware, white lead, tobacco, organs, parchment, and playing-eards. There is also a considerable trade in wool, flax, and grain. Pop. $14,500 .-$ Anspach gives its name to an ancient principality or margravate, which had an extent of nearly 1000 geo. sq. m., and, in 1806 , contained a pop. of 300,000. Charles F'rederick, the last margrave, sold his possessions, in 1791, to Prussia, and, marrying Lady Craven, took up his residence at Brandenburg Ilonse, near London, where he died in 1805. In 1806, Napoleon transferred the principality to Bavaria.

ANsTEY, the name of five parishes in England:-1, Co. Herts; $2170 \mathrm{ac} . ; 3 \mathrm{~m}$. S. Barkway. Pop. in 1841, 497. 2, Co. Warwick; 990 ae. Pop. in 1841, 22.4.-3, Co. Wilts; 840 ae. Pop. in 1841, 329.-4, Anstey (East), Co. Devon; $2170 \mathrm{ac} . ; 3 \mathrm{~m}$. W. Dalverton. Pop. in 1841, 240.-5, Anstey (West), Co. Devon ; 2820 ac. ; N. of the above. Pop. in 1841, 279.

ANSTON, a par. and township, England, co. York, W. Riding; 3110 ac.; 12 m. S.E. Sheffich. Pop. in 1841, 1102.

ANSTILU'TIIER (EAster and Wester), two small burghs and pars. Scotland, on the coast, co. Fife, mouth of the Frith of Forth. They unite with St. Audrews, Crail, Cupar, Kilrenny, and Pittenweem, in returning a member to Parliament. Anstruther Easter, the larger of the two, has a custom-house, a good harbour, and some trade in tanuing, fish-curing, brewing, rope and satil-making. It is the birthplace of Dr. Thomas Chalmers. Pop. of par. in 1841,997.Anstruther Wester has little trade. It is lighted, well paved, and drained. Pop. of par. 449, including 22 inhalitants of the island of May, which is elaimed also by the parish of Crail. The two burghs are connected by a handsome bridge over the small stream called the Ureal-burn, which forms the boundary between them.

ANTA.-1, A tn. Peru, prov. of, and 25 m . N.W. from Cuzeo; lat. $13^{\circ} 25^{\prime}$ S.; lon. $70^{\circ} 35^{\prime} \mathrm{W} .-2, ~ \Lambda$ small lake, lsrazil, prov. Rio de Janeiro, near Cabo Frio.

ANTA, or AHANTA, a small kingdom on the Gold Coast, Africa, abont 25 to 30 m . in length, and about 25 m . in breadth; lat. $5^{\circ} 0^{\prime} \mathrm{N}$. ; lon. $2^{\circ} 0^{\prime} \mathrm{W}$. On its coast are Axim, Cape Three Points, Aquirla, Seccondec, Dixcove, and Boutre, and many commodiuus havens and creeks. The
country is in general woody, well-peopled, and well-watered, and the soil is considered to be the most fertile on the Gold Coast, yielding rice, sugar cane, and all the tropieal plants of that region. Its climate is thought to be less fatal to Europeans than that of any other part of Guinea. Since the abolition of the slave-trade, the English have withdrawn the garrisons formerly stationed at Axim, Dixcove, and Seccondee, and the intercourse with that country has very much diminished.

AN'TAKIA [anc. Antioch], a celebratel city, Syria, 1. bank, Aazy [anc. Orontes], 20 m . from its embouchure in the Mediterrancan, 2 i m. S.E. Iskenderoon, and 50 m . E. Aleppo; lat. $36^{\circ} 12^{\prime} \mathrm{N}$. ; lon. $36^{\circ} 8^{\prime} \mathrm{E}$. (r.) It stands close upon the river which is here from 100 to 150 ft . wide, and is crossed by a snbstantial stone bridge of forr arches. Behind, and bordering close on it, is the N. termination of the monntains called Jebel Akra or Arsus. The honses are Turkish as to plan, but of inferior constrnction, usually of stone, thongh frequently consisting of a wooden frame, filled up with sun-lried bricks, and having a pent roof covered with red tiles. The streets are narrow, with a raised pavement on each side for foot-passengers. The city contains 14 mostly insignificant mosques, with low minarets. A considerable portion of the walls of ancient Antioch still remain, with some remnants of a Roman aquednct and a few catacombs. In the modern town the only objects worthy of notice are the chief bazaar, a few mosques, and a new palace, built for lbrahim Pasha, but which he afterwards converted into an hospital, and a large barrack, eapable of containing 8000 men. The manufactures of the place are trifling; they comprise silk and cotton stufis, leather, and coarse pottery. There is also some trade in silk tissues, goats' wool, bees' wax, and Turkey leather, and in the large cels caught in the Aazy, which are salted and exported in considerable quantities to various places.

Modern Antakia ocenpies but a small portion of the site of the ancient Antioch, which was 4 m . in circumference, and was considered one of the most flonrishing eities in the world, its inhabitants being, at the same time, celebrated for their luxury, effeminacy, and licentiousness. Here it was that the disciples of our Saviour were first called Christians. Few places bave undergone so many calamitics as Antioch. In 13.c. 65 , on the breaking up of the kingdom of Syria, it was captured by Pompey; and in A.D. 115 it was almost utterly destroyed by an earthquake; and in 540, and again in 574 , it was captured by Chosroes. In 638 , it fell into the hands of the Saracens, and remained in their possession till 966 , when it was recovered by the Greck Emperor; but it was in 970 arain taken by the Saracens, and remained with them till 1098, when it was captured by the Crusaders, who established there a principality which long survived their kingdom of Jernsalem. In 1268, it was wrested from them by Bibars, the Mameluke Sultan of Egypt, when 40,000 Christians were put to the sword, and twice that number made captives. Since that period it has remained in the hands of the Mathometans (Biblical Cyclopadia). In Angust 1822, Antakia was visited by a destructive earthquake, when walls, mosques, and houses, were thrown down in every direction, the streets filled with ruins, and between 4000 and 5000 persons destroyed.

Ancient Antioch was the capital of the Syro-Macedonian empire. It was composed of four distinct towns, bnilt at lifferent periods, and was founded by Seleucus Nieator, and greatly enlarged by Scleueus Callinieus, and by Antiochus Epiphanes. For several hundred years it was the residence of the Macedonian Kings of Syria, and afterwards of the lioman governors of that province. The valley in which the city stands abounds in olive, fig, and mulberry trees, and in vines. The rich allnvial lands on the borders of the Aazy are, however, but indifferently cultivated. I'op. in 1835, cxclusive of military, 5600. - (Bowring's Iieport; Paton's Modern Syrians; Chesney's Euphrates Ixpedition.)

ANTALO, or Antalow, a tn. Abyssinia, cap. prov. Enderta, in Tigré lat. $30^{\circ} 20^{\prime}$ N.; lon. $39^{\circ} 50^{\prime}$ E.; on the declivity of a hill, and commanding an extensive vicw of the country S. It contains about 1000 houses or huts of the usnal Abyssinian form, and the palace of the sovereign of Tigre, who, in order to check the incursions of the Galla tribes, has his residence occasionally here. The inhabitants manufacture spears, and have some trade in cattle, hides, butter, and salt.

ANTANG, a vil. and dist., E. end, isl. Java, prov. Kediri. The village lies in lat. $7^{\circ} 43^{\prime} \mathrm{S}$.; lon. $119^{\circ} 0^{\prime}$ E., about 2000 ft . above the sea. In its vieinity are numerous Hindoo antiquities, consisting of figures of Bralima, Ganessa, \&e. The distriet is a well-watered upland valley, surrounded with mountains clothed with dense forests; the lower borders planted with coffee, which is extensively cultivated. Riee is also grown. Pop. variously stated at 7627 and 10,000 .-(Jour. Indian Archipelago.)

ANTARCTIC OCEAN, the name given to the expanse of sea at and around the S . pole, within the limit of the antarctic circle, but frequently used in a more extensive sense, to designate the cold oceanic regions round the S. pole, without any very positive regard to the limits of the antaretic cirele. The mystery in which these all but wholly unknown latitudes were shrouded had invested them with an interest which prompted many a daring adventure, but, until recently, without any good result. It is now otherwise, although there is yet mueh to learn, a space equal to double the area of Europe being still unexplored. The expedition, composed of two ships, the Erebus and Terror, fitted out by Government in 1839, for purposes of discovery, and commanded by Captain, now Sir James Ross, has contributed a large amount of new and interesting information regarding these high S. latitudes. The highest point previously attained was in lat. $74^{\circ} 15^{\prime}$ S.; that reached by Sir James Ross was in lat. $78^{\circ} 4^{\prime}$ s., or within little more than 100 m . of the magnctic pole. Several islands had already been discovered by varions navigators within the antaretic circle, but it was reserved for Sir James to add to these an exteusive continent, which he named S. Vietoria, a discovery which confirms, in a remarkable manner, the sagacious conjecture of Cook-that the greater cold of the antarctic than the arctic regions, is attributable to the existence of a large tract of land between lat. $70^{\circ} \mathrm{S}$. and the pole. The interest attached to the discovery and description of Vietoria Land, which had never before been looked on by human eye, nor trod by human foot, will be best maintained by giving the language of the discoverer himself. 'On the morning of the 11th January 1841,' says Sir James, 'when in lat. $70^{\circ} 41^{\prime}$ S., and lon. $172^{\circ} 36^{\prime}$ E., land was discovered at the distance of nearly 100 m ., directly in the course we were steering, and, therefore, directly between us and the pole. Continuing our course towards this land for many hours, we seemed searcely to approach it. It rose in lofty mountain peaks of from 9000 to $12,000 \mathrm{ft}$. in height, perfectly covered with eternal snow; the glaciers that descended from near the mountain summits projected many miles into the ocean, and presented a perpendicular face of lofty eliffs.' Having taken formal possession of this land in the name of Queen Vietoria, Sir James proceeded to trace its coast line. 'Still steering to the S., early the next

Sir James traced Vietoria Land from lat. $71^{\circ}$ to nearly lat. $78^{\circ} \mathrm{S}$., when his further progress was interrupted by a barrier of ice, presenting a perpendicular face of 150 ft . in height, and far over-topping the ships' masts. This apparently endless and unbroken line of icy wall, is described as one of the most imposing objeets imaginable. Although the further progress of the ships was thus arrested, it was not until they had approached the pole more nearly by several hundred miles than any preceding navigator.* Sir James is of opinion that no vegetation exists in these high S. latitudes, no trace of it having been visible on Franklin Island, 12 m . long, and 6 broad, situated in lat. $76^{\circ} 8^{\prime} \mathrm{S}$.; lon. $168^{\circ} 12^{\prime} \mathrm{E}$. It would appear, also, that the seas are comparatively shallow in these regions, the soundings of the Erebus and Terror rarely exceeding 400 fathoms, and being more frequently about from 200 to 300. Amongst the more remarkable discoveries made by this expedition, is that of a permanently low barometric pressure in high S. latitudes over the whole Antaretic Ocean-a pressure inferior by more than an inch of mereury to what is found between the tropics. Another, and one of its most important objects, was to ascertain the position of the S. magnetic pole, which Sir James has placed in Victoria Land, in lat. $75^{\circ} 5^{\prime} \mathrm{S}$.; lon. $154^{\circ} 8^{\prime} \mathrm{E}$. It was the opinion of Capt. Cook, and is now ascertained beyond doubt, that the ice of the antarctic predominates greatly over that of the aretic region, that encircling the $S$. polo coming nearer to the equator by $10^{\circ}$ than the ice around the N. pole. The most distinguished explorers of these high S. latitudes are Capt. Cook ; Bellinglausen, who discovered Alexander and Peter's 1slands within the antaretic circle; Capt.Weddel1; Capt. John Biscoe, the discoverer of Enderby's Land; Capt. Charles Wilkes, Commander of the U. States' exploring expedition, who visited these regions in 1840 ; and loss and d'Urville, in 1841.
The extreme points which have been reached by these navigators, in their attempts to penetrate to the S. pole, are as follows :-

## -(Ross's Antarctic Expedition; Lyell's Geology.)

ANTAREE, a small vil., S.E. Africa, 1. bank Zambesi, which here becomes very narrow, not exceeding 20 or 30 yds .

ANTAS, two small rivers, Brazil:-1, In prov. São Pedro do Rio Grande, an afluent of the Taquari. It flows N.E. to S.W., and has a course of about $40 \mathrm{~m} .-2$, In prov. Goyaz, an affluent of the Araguaia, and flowing S.E. to N.W.

ANTAS, a tn. Spain, in Andalusia, prov. of, and 40 m . N.E. from Almeria, in a plain. It las crooked, unpaved streets; a square, in which are the council-house and

neaufort island and mount erebus.- From Sir James Ross's Antarclic Expedition. prison; and also a parish chureh, chapel, endowed school, and a cemetery. The pop., almost exclusively agricultural, is 2300 .

ANTEQUERA [anc. Auticaria], an important eity, Spaiu, in Andalusia, prov. of, and 29 m . N.N.IW. from Malaga, on the N. slope of the sierra Cabras. The eity, which is clean and well built, has eight squares of various sizes and degrees of elegance; in two of which, named Constitucion and San Sebastian, are situated tho municipal buildings. Antequera likewise possesses six churches, of which that of Santa Maria, a doric edifice, is the finest; an infirmary, poorhouse, foundling hospital, a general hospital; two collegiate schools, in which all branches of education are taught; a theological seminary, numerous convents, several hermitages, and an extra-mural cemetery. In the old town, which lies higher up the hill than the modern eity, there is a Moorish castle built on Roman
morning, the 28th, a mountain of $12,400 \mathrm{fL}$. above the level of the sea was seen emitting flame and smoke in splendid profusion. This magnificent voleano ( 1500 ft . higher than Mount AEtna) was called Mount Erebus, after one of the ships of the expedition. It is in lat. $77^{\circ} 32^{\prime} \mathrm{S}$., and lon. $167^{\circ} 0^{\prime} \mathrm{E}$.' A little further E., another, but extinct voleano was seen, 10,900 ft. high, and named, after the other ship, Mount Terror.

* In the Cape of Good Hope Shipping Gazette, of July 25, 1816, it is stated that the barque Fagoda, hired by the Colonial Government' for a seientifie expedition, and conmanded by Lieut. Moore, had retun ned to Simon's Bay, after having penetrated further to the $\delta$. than any other vessel lad yet done, completing the whole series of magnetic observations yessel liad yet done, conpleting the whole series of magnctic observations
left unfinished by Sir James Ross. Lieut. Moore confirms the existence ler the antaretic continent discovered, and called, by Sir James, Sonth
of the
Victoria.

Coundations. It is a quadrangular structure, which has been repaired and remodelled at various times, and presents few attractions of beauty. The city is well supplied with good

CALLE DE FSTEDA, ANTEQUERA.
From Baron Tuylor, Voyage Pittorebyue en Espagne.
water from numerous public fountains. The woollen trade is carried on here to some extent, there being eight watermills for spinning wool and weaving woollen fabrics, chicfly baize, in the manufacture of which numerous handloom weavers are also employed. There are, besides, in Antequera, 10 tanneries, an equal number of earthenware factories, several dyers; and silk hats, \&c., are manufactured to some extent. The larger number of the inlabitants, however, are agricultural. They wear the majo dress, and are very fond of green velvets, and gilt filigrane. They raise wheat and barley, some of which is exported; olives, and grapes; and rear a considerable number of sheep, goats, and pigs; of horses, mules, asses, and horned cattle. In the neighbouring plain is a salt lake whence salt is obtained. In 1410, the town was taken from the Moors by the Regent Fernando, who was hence called 'El Infante de Antequera.' Pop. 17,031. -(Madoz.)

ANTHEME (St.), a tn. France, dep. Puy-de-Dôme (Auvergne), 9 m. E. Ambert, and 44 m . S.E. Clermont, on the Ance. Pop. 1003.

ANTHONY (Cape St.), a cape, S.W. coast, Arabia, prov. Yemen, near the Strait of Sab-cl-Mandeb; lat. $12^{\circ} 41^{\prime} \mathrm{N}$.; lon. $44^{\circ} 10^{\prime}$ E. (r.) Its summit is 2772 ft . above the sea.

ANTIIONY (FAlls of ST.), a cataract and rapids in the Mississippi, U. States, America, about 2000 m . above the mouth of that river. It is 627 yards wide above the falls, and 209 yards below it. The perpendicular fall is 17 ft . high, with a rapid below of 58 ft . An island divides the river into two parts. The entire descent of the stream for three quarters of a mile is 65 ft . The falls and surrounding scenery, especially during the spring floods, are exceedingly picturesque.

ANTIIONY (ST.), the name of three parishes, England, co. Cornwall:-1, (In Meneage), 1410 ac.; S. by W. Falmouth. Pop. in 1841, 313.-2, (In Roseland), 710 ac.; S.W. Tregony. Pop in 1841, 144.-3, (St. Jucob), $2860 \mathrm{ac} . ;$ S.E. St. Germains. Pop. in 1841, 2894.

ANTIBES, or ANTinoul [anc. Antipolis], a flourishing port, France, on a bay in the Mediterranean, dep. Var (Provence), near the Piedmontese frontier, and 11 m . S.S.W. Nice, on the opposite side of the bay. It ranks as a military place of the third class; its fortifications, erected under Francis I. and Henry IV., and improved by Vauban under Louis XIV.
being of considerable strength. The harbour, though of small extent, and encumbered by a sandbank formed by the bar, has about three fathoms water, and is safe and of easy access. It is of a semicircular form, and along the quay is a range of circular areades. It is defended by a square fort, with four bastions, on a rocky islct at its mouth, and has two lights to guide the entrance; one small, on the E. extremity of the mole, and one of the first order on the adjacent promentory of the Galoupe. The only buildings deserving of notice are the parish chureh, which stands on a lofty rock overhanging the town, and occupies the site of an ancient temple of Diana, near which are two towers, which date two centuries B.C., and the townhouse, a handsome edifice. The environs are covered with gardens, vineyards, and orchards. The olive trees are very fine, and the oil which they produce is of superior quality. The figs are delicious and in high repute. Good tobacco also is raised; while orange trees, Spanish jasmines, various kinds of tuberous-rooted plants, and a profusion of roses and other odoriferous flowers, furnish materials for numerous factorics of perfumery and seented waters. The fishery in the bay occupies about 45 vessels belonging to the port, and great numbers of the inhabitants find employment in curing sardines and anchovies. The chief exports are earthenware and potter's clay, perfumery, salt fish, olive oil, wine, oranges, figs, and citrons. The dried fruits are famous. Antibes was founded 340 years b.c. by Greek colonists from Marseilles, as a barrier against the incursions of the Alpine tribes. The Romans enlarged it, and built numerous public buildings; a fine aqueduct, which conducted the water of a neighbouring spring to the circus, is still in good preservation. Pop. 4515.

ANTICOSTI, a large isl. at the mouth of the river St. Lawrence, $125 \mathrm{~m} . l o n g$, and 30 m . broad at its breadest part. It lies between lat. $49^{\circ} 5^{\prime}$ and $49^{\circ} 55^{\prime} \mathrm{N}$. ; and lon. $61^{\circ} 54^{\prime}$ and $64^{\circ} 30^{\prime} \mathrm{W}$. The original Indian name was Natiscoti, which, by a simple but not very felicitous transposition of letters, has been converted into its present, and far less euphonious name. It has an extremely sterile and unpromising appearance, being low and swampy on the S. side, and high, rocky, and barren on the N. It is mostly covered with woods of stunted growth, tenanted by bears, foxes, hares, and sables. Partridges, plovers, curlews, and snipes also abound. It has no harbours, but there are a few coves in which ships find tolerable shelter when the wind blows off the land. The island was uninhabited till 1809, when, after some disastrous wreeks had taken place, the governor of Newfoundland erected residences for two families at opposite ends of the island, for the purpose of affording relief to those who might be shipwrecked on its shores. A lighthouse alse was erceted on its S.W. point in 1821, and another afterwards at its E. extremity. The ship channel between the island and Lower Canada is 40 m . broad; but the navigation is rendered dangerous by numerous shoals and reefs. Provision posts have been established on the island by the government of Lower Canada, for the relief of the crews of vessels wrecked upon the island, and direction boards have been placed at different parts near the beach to intimate where these posts are. The island was first discovered in 1535 , by Jacques Carticr.

ANTIGUA, one of the N. Caribhce, Leeward, or W. Indian Islands, 50 m . E. St. Kitts, and the same distance N. Guadaloupe, about 28 m . long, and 20 m . broad at its broadest part; first settled in 1632. Its sheres are high and rocky, giving but little promise of the beauty to be found within, consisting of hill and dale, green fields, gorgcous flowers, and cliffs festooned with elegant intertropical plants. The sheres are indented on all sides by harbours, bays, and crecks, and lined on the N. and E. coasts with a number of small rocky islets. The only elevated land in the island is a range of hills, called the Sheckerley Mountains, with no great propricty, as their greatest height does not exceed 1500 ft . Several of the harbours are goed, but the best is English Harbour, on the S. coast ; lat. (dockyard) $17^{\circ} \mathrm{N}$. ; lon. $61^{\circ} 45^{\prime} 7^{\prime \prime} \mathrm{W}$. (A.) ; the entrance to it is narrow, but it is capacious and safe, being surrounded with hills. It is a naval station in time of war, and has a well-arranged dockyard. The capital, St. John, the residence of the governor of the Leeward Islands, is built on the shore of a deep and well-sheltered harbour of the same name, in the N.W. part of the island, and is of considerable extent, being about three quarters of a mile in length,
and half a mile in breadth; the houses are of stone, and well built. Pop. about 16,000 . The island is divided into six

parishes, each of which has a town or village. It contains six churches, as many chapels, and a number of other places of worship belonging to Methodists and other dissenters. The cathedral and parish chureh of St. John's, a new strueture, opened for Divine service in October 1847, cost upwards of $£ 35,000$. The elimate is healthy, although remarkable for its want of humidity, the droughts being sometimes so protracted as to ruin the crops, and reduce the inhabitants to great distress, there being no river in the island, and the few springs it contains being all brackish. On these accounts it is more dependent on the seasons as regards its produce, than any other of the W. Iudian Islands. It is subject also to violent
returns for 1847 show that there were 6493 children under instruction of some kind or other, in that year. A training sehool was opened by the Moravian mission in 1847, into which children are admitted as boarders, and where it is intended they shall remain until their education is completed, the object being to qualify them for the duties of teachers. The experiment of introducing European agricultural labourers into the island has been an entire failure, a great portion of them having died or left the island for America. The legislature is composed of a governor, a council of 12 , and an assembly of 25 members. The courts of equity and law are the same as in Great Britain. The legislature totally abolished slavery within the island, Aug. 1, 1834, dispensing with the intermediate stage of apprenticeship. The compensation allowed for the freedom of the slaves, including those of Anguilla, was $£ 425,547$, being $£ 14,12 s$. 3 d . per liead. Pop. (1851), ineluding Barbuda, 37,757.

ANTILLES, See West Indies.
AN'TIMO (St.), a tn. Naples, 7 m . N. the city of Naples, having two churches, some convents, a seminary, Government pawn-offices, several important fairs, and 7100 inhabitants.

ANTINGHAM, a par. England, eo. Norfolk; 1530 ac.; S.W. from N. Walsham. Pop. in 1841, 271.

ANTINOE. See Ababde.
ANTIOCH. Sce Antakia.
ANTIOCHE [Pertuis n'], a strait, W. coast, France, breadth about 7 m ., between Rochelle and Rochefort, separating the isle of Oléron from that of Ré. It was here that, July 15, 1815, Napoleon went on board the Bellerophon.

ANTIOCO (Santo), or Antico (San), an isl. Sardinian States, S.W. the isl. Sardinia, from which it is separated by the Gulf of Palmas, and a narrow shallow channel, not navigable for shipping; lat. (S. point) $38^{\circ} 58^{\prime}$ N.; lon. $8^{\circ} 26^{\prime}$ E. (r.) It is about 27 m . in circumference; 9 m . long, and 2 to 4 m . broad; soil fertile. It was extremely populous in the time of the Romans, who ealled it Enosis. A great number of medals, statnes, vases, marble columns, and other monuments of antiquity, have been discovered here. It was once famous for its wild horses, but the race has long been extinet. Thechief town, San Antioco, on the E. coast, on the Gulf of Palmas, is a military place, with a small fort. At Calasapone and Calasetta are some salt marshes. Total pop. 2219.

AN'IIOQUIA, a prov. and tn. New Granada, dep. Cundinamarea. The prov. lies between lat. $5^{\circ} 40^{\prime}$ and $8^{\circ} \mathrm{N}$. ; lon. $75^{\circ}$ and $76^{\circ} 30^{\prime} \mathrm{W}$ It is watered by the Cauea; is mountainous and extensively wooded; a very small portion being in grass, or under tillage. Gold and silver are the principal products ; but iron, copper, tin, and lead are also found, though either not worked at all, or only to a very limited extent. The negroes and Zamboes were formerly numerous in the mining districts of this province, but both races have been much reduced by the war of independence.-The Town, properly named Santa Fé de Antioquia, lies on the Cauca, in a deep
hurricanes. One of the most destructive with which it was ever visited occurred on Aug. 21, 1848, when, beside the injury done to property, many lives were lost. The principal exportable products are sugar, molasses, rum, rice, arrow-root, and tobacco; of the last two artieles, however, the quantities exported are small. The entire imports of the island, for 1851 , amounted to $£ 198,425$, and the exports to $£ 219,239$; showing a considerable decrease sinee 1847, when the imports amounted to $£ 217,998$, and the exports to $£ 369,590$. 'The revenue of the island, for 1851 , was $£ 218,88,8 s .8 d$.; and the expenditure $£ 21,193,17 \mathrm{~s}$. $10 \frac{3}{4} d$. The legislature not having yet made any grant for the support of schools, and parents being unable to do so from the extreme lowness of wages, reduced, in 1848, to $6 d$. per day for field-work, education has hitherto made but little progress in the island. The sehool
burning-hot valley, 1790 ft . above the sea; lat. $6^{\circ} 36^{\prime} \mathrm{N}$. ; lon. $76^{\circ} \mathrm{W}$. The houses and churches are pretty well built, and the inhabitants are lively, active, and naturally given to handierafts, making good watch-makers, carpenters, and locksmiths. The town is surrounded by maize and sugar plantations; and though the heat is great, yet the air is dry and healthy, and the plague of tropical insects is not felt. Pop. in 1807, 18,680 ; now stated at 4000 .

ANTIPAROS [anc. Oliaros], a rocky islet, Grecian Archipelago, about 16 m . in cireumference, W. of Paros, from which it is separated by a strait 1 to 2 m . wide; lat. (S. point) $36^{\circ} 56^{\prime} \mathrm{N}$. ; lon. $25^{\circ} 5^{\prime} \mathrm{E}$. (R.) The island is in general flat, cortaining only a few eminences of no great elevation. lts soil is fertile, and in good cultivation, producing cotton, barley, and grapes. It has one small village, inhabited by about

100 families, with a harbour suited only for small eraft; was aneiently peopled by a colony of sidonians, and was the birthplace of Phidias and Praxiteles. The wonderful grotto, whieh has rendered the island famous in modern times, is situated $i_{11}$ a high hill about 2 n . from the sea, and 500 ft . from the surface of the ground. The entrance is by a large natural areh of rugged rock, overhung with a variety of trailing plants. The descent into the grotto is effected by the aid of ladders, ropes, and torehes. The prineipal cavern is 120 yards long, hy 113 broad, with an average height of 60 yards. It is an inmense marble arch, the roof and sides of which are covered with stalactites, and innumerable erystallizations, assuming the various figures of columms, sereens, ramifications of trees, and festoons of flowers, the magnificence of whieh dazzles the eye, and seems almost to realize the idea of the enehanted halls of fable. The stalactite and stalagmite pillars are of great length and thickness. The former, dependent from the roofs, sometimes meet with the latter rising from the floor, and thus form a continuous pillar apparently giving support to the areh. One stalagmite is stated to be of the great thickness of 20 ft .

ANTI PAXO, one of the smallest of the Ionian Isles; lat. $39^{\circ} 8^{\prime} 42^{\prime \prime}$ N.; lon. $20^{\circ} 5^{\prime} 45^{\prime \prime}$ F. (n.) ; about $1 \frac{1}{2}$ or 2 m . S.S.E. Paxo. It is 2 m . in length, and half a mile in breadth; produces the olive, grape, and other fruits.

AN'TIPHELLUS, now Andiphilo, a small seaport tn. Asiatie Turkey, territory of Lycia, on the Mediterranean, 39 m. S.E. Telmissus or Nakrai ; lat. $36^{\circ} 15^{\prime}$ N. ; lon. $29^{\circ} 40^{\prime}$ E. It has an aetive trade in firewood, and contains the houses of several offieial persons. The ancient town of Autiphellus stood at a short distance, on a finely-situated promontory, whieh still presents a theatre, tombs, foundations of temples, and other buildings. Many of the tombs have remained unopencd during the 2000 years they have existed; others lave been pillaged. Many of them are lighly ornamented with arelitcetural alesigns. The form of the sarcophagus found here is peeuliar to the district of Lycia.-(Fellows' Asia Minor.)

ANTIPODES ISLAND, a small isl. in the S. Pacifie Ocean, about 760 m . S.E. by E. the middle island of New Zealand, and so called from its being nearly antipodal to Greenwich, the latter being in lat. $51^{\circ} 28^{\prime} 6^{\prime \prime} \mathrm{N} . ;$ lon. $0^{\circ} 0^{\prime} 0^{\prime \prime}$; the former, or Antipodes Island, in lat. $49^{\circ} 35^{\prime}$ S.; lon. $179^{\circ} 30^{\prime} \mathrm{E}$.

ANTISANA, a voleano in the Andes of Quito, 35 m . S.E. by E. the eity of that name, and 80 m . N.N.E. Chimborazo; lat. $0^{\circ} 29^{\prime} 45^{\prime \prime} \mathrm{S} .$, lon. $78^{\circ} 24^{\prime} 30^{\prime \prime} \mathrm{W}$. Its height is estimated at $19,137 \mathrm{ft}$. Antisana is not known to have had any considerable eruption for the last 260 years. When visited by Ilumboldt, in 1802, smoke was seen issuing from several openings, and an appearance rescmbling a current of lava was observed by that illustrious person near the summit, while on the slope of the monutain pumice-stone and scorix were noticed. There is a village or hamlet of the same name on the mountain, 3800 ft . above the plain of Quito, and 13,454 ft . above the sea, being, with exception of the village of Tacora in Peru, and that of Calamarea in Bolivia, the highest congregation of houses known on the face of the globe, although there are several post stations in Peru at a much greater elevation.

ANTIVARI, a tn. European Turkey, in Albania, on tho Adriatic, 17 m . W. Scutari ; lat. (W. point) $42^{\circ} 2^{\prime} 18^{\prime \prime} \mathrm{N}$.; lon. $19^{\circ} 6^{\prime} 30^{\prime \prime} \mathrm{E}$. (r.) It is built on a rocky eminence, about 2 m . from the sea, on the banks of the small river Richanatz; is the see of a 1 . catholic archbishop; contains nearly 1000 houses, a bazaar with 100 shops, and is defended by a eastle. At the mouth of the river is a harbour for light vessels, by which a considerable trade in exporting oil and leather is carried on. Pop., composed of Turks and Christians, 4000.

ANTOINE (St.), the common nane of at least 16 villages in France, but the only one worthy of notice is a tn. and com., dep. Isere (Dauphine), on the Furand, among mountains, about 27 m . W. Grenoble. The only object of importance is the celcbrated abley of the same naine, belonging to the Augustine order. It was founded in the 13 th eentury, and its chureh, an interesting and fine edifice, is in good preservation. Some silk stuffs are manufactured here. Pop. 2007.

ANTOING, a tn. Belgium, near the French frontier, cap. can. of same name, prov. Hainaut, rather more than 2 m . W.N.W. Tournay, on an eminence which overhangs the $r$. bunk of the Scheldt, aud commands a view of the battle-field
of Fentenoy. The only buildings of note are the chureh of St. leter, the hospital, and the old castle of the l'rinces of Ligne, with a very lofty tower. The high road from Mons to Tournay passes through the commme, and the eanal of Antoing enables Mons to communicate with the Sclieldt without entering the French territory. The manufactures are earthenware and salt. Linseed and rapeseed are crushed for oil, and a good deal of chicory is prepared. Pop. 2104.

ANTONGIL BAY, Madagascar, E. coast, $290 \mathrm{~m} . \mathrm{S}$. Cape Amber or Ambro ; 50 m . in length S . to N. , and about 25 m . in width at the entrance. The depth of water in the bay decreases, as the head is approached, to $30,25,20$, and 15 fathoms. The common anchorage is to the N. or W. of Isle Morosse, a small island at the head of the bay. Wood and water are readily proeured here. There is an excellent harbour also, called by the French Port Choisenl, where ships may anchor in 6 or 7 fathoms.

ANTONIE (心т.), a vil. IIolland, prov. N. Brabant, 25 m . E.S.E. Hertogenbosch (Buis le Duc), on the L. elge of the Peel. It has a R. catholic chureh, and 960 inhabitants.

ANTONIN (Sr.), the name of several plaees in 1'rance; but the only one of any note, a tn. dep. Tarn-et-Garonne, in a spacions valley at the junction of the small strcam Bommette with the Aveyron. The town is, in general, ill built, but the E. portion contains large building dedicated to St. Genevieve, oecupied by the eivie authorities and the gendarmery. In the vicinity, on a lofty precipice above the Aveyron, stand the picturesque ruins of the castle of Adelays. The manufacture of leather, paper, woollens, and serges, is carricd on. Pop. 2691.

AN'TONINA, a small port, Brazil, prov. Sũo-Paulo, on the Itapema creek, S. side the Bay of Paranagua, from the city of which name it is distant N.W. about 10 m . ; lat. $25^{\circ} 29^{\prime} \mathrm{S} . ;$ lon. $47^{\circ} 40^{\prime} \mathrm{W}$. It has a chureh and a sehool, and is favourably situated as to salubrity, in comparison with some neighbouring places. A road across the hills communicates with the town of Curitiba, whence goods are brought on mules to a river, along which they are transported in canoes to Antonina. The trade of the town consists in rice, mandioca flour, dried beef, hides, building timber, and corlage. The port, which is protected from the winds, and may be entered at all times, has $21 \frac{1}{2} \mathrm{ft}$. of water. Pop. of town and district above 6000.-(Dic. Geo. Imp. Brazil.)

ANTONIO (Pont), isl. Jamaica, 6 m . W. from the N.E. end; lat. $18^{\circ} 11^{\prime} 18^{\prime \prime} \mathrm{N}$. ; lon. $76^{\circ} 27^{\prime} \mathrm{W}$. (r.) It lies 30 m . N.E. Kingston, and is composed of the L. and the W. harbour, divided by a peninsula on which stands the town of 'Titchfield, N. of which is Navy Island. The E. harbour has good holding ground for anchorage in 9 to 11 fathoms water, but is not so seeure as the W. harbour, being more exposed to the N. winds, but its chamel is broader, and not so difficult to take. The W. harbour has good anehorage in 5 to 7 fathoms.

ANTONIO (SAx).-1, A cape, Spain, in Valencia, one of the most E. points of prov. Alicante, and forming the N. extremity of the Bay of Jabea. It is high, naked, and preeipitous. On the table land at its summit are several windmills, a small convent, and a watch-tower ; lat. $38^{\circ} 48^{\prime} 5^{\prime \prime} \mathrm{N}$.; lon. $0^{\circ} 10^{\prime} \mathrm{E}$. (r.)-2, A eape, isl. Cuba, W. end. It is low, and covered with wood; lat. $21^{\circ} 51^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $84^{\circ} 57^{\prime} 2^{\prime \prime}$ W. (r.) - 3 , A cape, Brazil, at the entrance to the Bay of Bahia; lat. $13^{\circ} 0^{\prime} 42^{\prime \prime} \mathrm{S}$. ; lon. $38^{\circ} 31^{\prime} 45^{\prime \prime} \mathrm{W}$. (r.) There is a light on this point 140 ft . high. $-4, \mathrm{~A}$ cape, Buenos Ayres, at the mouth of the Rio de la Plata, S. side. It is ligh and steep, and rises almost perpendicularly from the sca; lat. $36^{\circ} 19^{\prime} \mathrm{S}$. ; lon. $56^{\circ} 45^{\prime} \mathrm{W}$. (1.) $-5, ~$ A peak, and N.E. cape on the Kurile, isl. Kunashir.-G, A port, isl. Iviea or Iviza, N.W. side; lat. $39^{\circ} 0^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $1^{\circ} 14^{\prime}$ E. (n.) It has anchorage for large vessels.-7, A large port or bay, Patagonia, with anchorage for large vessels; lat. $40^{\circ} 49^{\prime} \mathrm{S}$. ; lon. $64^{\circ} 54^{\prime} \mathrm{W}$. (r.)

ANTONIO (SANT), the most N., and one of the largest of the Cape de Verde Islands; lat. (N. point) $17^{\circ} 12^{\prime} \mathrm{N}$. ; lon. $25^{\circ} 5^{\prime} 7^{\prime \prime} \mathrm{W}$. It is of great height, its loftiest summit attaining an elevation of 7400 ft . above the surface of the sea, and may be scen in clear weather from a distance of nearly 90 m . This, however, is rarely the case, as it is almost always covered by a dense atmosphere. It is extremely fertile, producing large quantities of corn, arehil, and cotton. The cuast

## ANTRODOCO

all around is clear, and although there are no ports in the island, there are several anchorages, one of which is Tarrafal Bay, on the W. side, where excellent fresh water may be obtained. The best anchorage here is in 35 to 39 fathoms, about one-third of a mile off shore, soft bottom. Pop. about 4000.

ANTONIO DE BEXAR (SAN), frequently called simply Bexar by the inhabitants, a principal city, and once cap. of Texas, on the river of the same name, which runs throngh the town, and is here upwards of 60 ft . wide, and 12 ft . deep, 80 m . S.W. Austin. The town is said to be the most pleasant and interesting in Texas ; laid out and built with some attention to regularity. The houses are of stone, of one story in hcight, have thick walls, and but few windows. The climate is pure, dry, and healthy; and as little rain falls here, the rich and fertile river-margins are intersected by numerous irrigating canals, so that even in the driest season a good crop is obtained. Peaches, melons, and other fruits are cultivated with success. Although it has suffered severely from revolutionary commotions, and from the irruptions of the Indians, it is still a place of considerable trade. Pop. at one period 12,000, now about 3000.-The San Antonio River abounds in fish, and is navigable for canoes to its source, and for small steainboats to within 10 m . of La Bahia del Espiritu Santo, now called Goliad.

ANTRIM, a maritime co. Ireland, prov. Ulster, boundel, E. by the N. Channel, W. by co. Londonderry and Lough Neagh, N. by the Atlantic, and S. by co. Down and Belfast Lough. It extends about $55 \mathrm{~m} . \mathrm{N}$. to S .; and in general breadth, from E. to W., about 28 m . It comprises $761,877 \mathrm{ac}$., of which 176,335 are mountain and bog, 503,288 arable, and 53,288 water; the remainder is in plantations, and occupied by towns. One-third of the co. is mountainous, but nowhere rises more than 1810 ft . above high sea level. Estates here are generally large, but the farms, except in the hilly districts, are small. Improved implements and practices have been extensively introduced. The principal agricultural productions are potatoes, barley, and oats. Wheat, pease, beans, and flax, are also cultivated, but to a comparatively small extent; the last, in particular, has much fallen off.

The cattle are of small size, but the breed has been much improved by crossing with Dutch, Leicester, and Ayrshire stock. Not much attention is paid to sheep, but in the mountain pastures are fed numerous herds of goats. Pigs are reared in great numbers; and on these the small farmers and cottars, who also employ themselves in domestic linen-weaving, chiefly depend for the payment of their rents. During the salting season, from September to May, the number of swine brought to market is immense; and the bacon and pork of many thousands are annually exported from Belfast. The staple manufactures of the county are the spinning of linen and cotton yarn, and linen and cotton weaving, in which the great bulk of the population are engaged. The fishery districts are Ballycastle and Carrickfergus, comprising 121 m . of maritime boundarics, which, in 1849, had 636 registered vessels, employing 2061 men and boys. Coals have been found in the former district; but the most remarkable feature in the geological structure of this county is the stupendous range of basaltic columnar strata, forming, at one part, the celebrated Giant's Causeway, about 8 m . N.E. Coleraine, and extending alnost the whole length of the N. coast. (See Giant's Causewar.) Of these perpendicular basaltic columns, magnificent specimens are also seen at the promontories of Bengore and Fairhcad. The latter consists of a range of tremendous rocks and precipices, attaining in some places an elevation of 636 ft . The lower portion is an inclined plane, strewn with huge masses of rock, thrown together in the wildest confusion; above this rises a mural precipice of columnar greenstone, 320 ft . in hcight, the whole presenting a scene of surpassing Yol. I.
grandcur and sublimity. The sea coast is diversified by a succession of projecting precipitous cliffs, here and there

THE FAIR HEAD, ANTRIM. - From the Picturesque Annusl.
broken by bays and creeks. The county is divided into 14 baronies, and comprehends 75 parishes, and parts of parishes, and returns six members to Parliament; two for the county at large (constituency, January 1, 1849, 1314); two for Belfast borough, and one for each of the boroughs of Carrickfergus and Lisburn. No county of Ireland includes a larger proportion of Presbyterian Protestants than Autrim, many of whom are descended from natives of Scotland; and the people of this part of the country have the eharacter of being the most quiet, industrious, and orderly of the whole population of Ireland. The principal towns are Belfast, Carrickfergus, Lisburn, Larne, Randalstown, Ballymena, and Ballymoney.

Antrim is also the name of two baronies, Upper Antrim and Lower Antrim, and of a par., all in co. Antrim. Upper Antrim contains $36,493 \mathrm{ac}$; pop. in 1841, 15,629. Lower Antrim contains 80,827 ac. ; pop. in 1841,25,135. Area of par. 8884 ac.; pop. in 1841,5182 . Pop. of co. in(1851),352,264.

ANTRIM, a market tn. Ireland, cap. co. Antrim, pleasantly situated on the Six-Mile-Water, at the N.E. extremity of Lough Neagh, 15 m . N. by W. Belfast, and 18 m . W. Carrickfergus. It consists of two principal streets, with several smaller diverging. The houses are mostly of stone, and well built. The supply of water is abundant. The parish church is a modern Gothic structure, with a lofty square embattled tower, surmounted by an elegant octagonal spire. There are, besides, several places of worship for dissenters, a meetinghouse for the Society of Friends, a R. catholic cliapel, and several schools of different descriptions; a mendicity society, a branch savings'-bank, and a union workhouse. Antrim carries on a considerable trade in bleaching, and in the weaving of linen, calico, and hosiery. In the neighbourhood are two paper-mills, where the first machinery used in the N . of Ireland for making paper was introduced; also several flour and meal mills, and malt kilns, as well as a brewery. About half a mile from the town is the celebrated round tower of Antrim. It is 95 ft . in height, and in good preservation. The doorway is placed at an elevation of about 12 ft . from the ground, is but four ft . four inches in height, and is constructed of large blocks of coarse-grained basalt, found in the neighbourhood. This doorway is remarkable in having a pierced cross, within a circle, sculptured in riliero on the stone immediately over the lintel, in evidence, it has been presumed, that these towers were regarded as sanctuarics. Pop. in 1841, 2645.

ANTRODOCO, a tn. Naples, prov. Abruzzo Ultra II., dist. of, and 9 m. E. from Citta Ducale, 17 m . N.W. Aquila, dist. of, and 9 m . E. from Citta Ducale, 17 m. N. 22

## ANTWERP

having a chureh, and two convents. It is the centre of a considerable agrieultural district, and has four important annual fairs. Pop. 3450.

ANTROS, a small isl. or rock, W. coast, France, at the mouth of the Gironde, on which is the well-known lighthouse ealled the Tower of Cordouan, esteemed one of the most elegant strmetures of the kind in Europe; it exhibits a revolving light of the first class, the elevation of which, above the level of the sea, is 207 ft ., and may be seen, in clear weather, at the distance of 24 m. ; lat. $45^{\circ} 35^{\prime} 2^{\prime \prime} \mathrm{N}$. ; lon. $1^{\circ} 10^{\prime} 2^{\prime \prime}$ W. (R.)

ANTUCO, a volcano and valley, Chilian Andes, 140 m . E. Concepçion; lat. $26^{\circ} 50^{\prime} \mathrm{S} . ;$ lon. $70^{\circ} 40^{\prime}$ W. The volcano, according to Lyell and Mrs. Sommerville, is $16,000 \mathrm{ft}$. high. Immense currents of lava have at various periods issued from the mountain, the last diselarge occurring in 1828. 'This event is said to be an exception to the general rule; few volcanoes in the Andes, and none of those in Quito, having heen seen in modern times to pour out lava, but having merely ejected vapour or scoriæ.'-(Lyell's Geology, p. 332.)The valley is remarkable for the mildness of its elimate, and the beauty of its plants and flowers.

ANTURA, a vil. Syria, pash. of, and 80 m. N.N.E. from Acre, about 5 m . from the coast ; lat. $32^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $35^{\circ} 52^{\prime} \mathrm{E}$. it contains a convent and a chureh.

ANTULLLI, or Antoorlee, a vil. IIindoostan, prov. and dist.Candeish, $10 \mathrm{~m} . \mathrm{S}$.W. Boorhaunpoor, formerly surrounded by a mud wall, with brick bastions.

AN'TWERP [German, Antwerpen; French, Anvers], a city and port, Belgium, cap. prov. and arrond. of same name,

r. bank, Scheldt, $27 \frac{3}{4}$ m., by rail, N. Brussels, and 32 m . E.N.E. Ghent; lat. (Cathedral) $51^{\circ} 13^{\prime} 12^{\prime \prime}$ N. ; lon. $4^{\circ} 24^{\prime} 15^{\prime \prime}$ Li. (r.) ; about 12 m . above the estuary of the Scheldt, and about 50 from the open sea. It is situated at an abrupt bend in the river, which here is about a quarter of a mile wide, with an average depth of 30 ft. ; its limits landward, as marked by its fortifications, form the segment of a circle, of which the Scheldt is the chord. It is strongly fortified, its walls and other defences completely encompassing the city on the land side from the river on the N., to the citadel on the S., a distance, following the line of fortification, and including the citadel, of about $2 \frac{3}{4} \mathrm{~m}$. The latter, one of the finest and most complete defences of the kind anywhere existing, was built by the Duke of Alva, in 1567. It is a regular pentagon, surrounded by a wet diteh, 90 ft . broad; and has three bastions, each containing a casemate capable of holding 400 men . The other works were erected partly by l'hilip I I., in 1567, and partly by Philip V., King of Spain, in 1701. Outworks and forts extend along both sides the river to near the Dutch frontier. The gencral appearance of the city is exceedingly picturesque-an effect produced by its numerous churehes, convents, magnificent public buildings, its claborate and extensive fortifications, the profusion of beautiful trees with which it is adornet, and in no small degree, also, by the stately antique-looking houses which line its older thoroughfares. The entire breadth of the city, at the widest part, which is between the walls and the river, or from E. to W., is about three quarters of a mile; its greatest length, between the citadel on the W., and the fortifications on the E., is about $1 \frac{3}{4} \mathrm{~m}$. , including the esplanade or Place d'Armes on the one hand, and the great and small basins on the other. Nearly all the streets, of which there are altogether about 200, are exceedingly tortuous and irregular; so mueh so, that a stranger has much difficulty in finding his way. Still, many of them, from the elegance of their buildings, are imposing. The principal one, called Place de Meir, will bear comparison with any street in Europe. The squares, of which there are several, are also fine. At the head of the numerons publie buildings with which the city is adorned, stands the cathedral, one of

A NTW FRP CATIffdRAL, FROM THE EGG MARKET.
From Prout's Sketches in France and Germany.
the largest and most beautiful specimens of Gotlic arehitecture in Belgium. It is believed to have been commenced in the middle of the 13 th century, and to have taken 84 years to finish. It was burnt in 1533 , but the tower and choir were preserved. The exterior is distinguished by the delicaey and elaborate bcauty of the workmanship, and the interior by au
imposing simplicity. The height of the spire has been variously stated from 366 ft . up to 466 ft . The entire length of the building is said to be 500 ft ., and the breadth 250 . The object of greatest interest and attraction in this church is the celebrated masterpiece of Rubens, the 'Descent from the Cross.' The other ehurehes of note are St. James's, St. Andrew's, and St. Paul's. The first is a very handsome structure, surpassing even the cathedral in its internal decorations. Behind the high altar is the tomb of Rubens, who resided in Antwerp from his 10th year till his death, in 1540. It is covered by a slab of white marble, on which is a long inscription, let into the pavement. St. Andrew's contains a carved pulpit, of exquisite workınanship. All these three churches are enriched with paintings by Rubens, Vandyek, Teniers, and other masters. The ehurches of St. Michael, of the Carmelites, Angustines, and Jesuits, may also be named as fine edifices. Amongst the other public buildings are the Exchange, built in 1583, and said to have been a model for the old London Exchange, and for that of Ainsterdam, neither of which, however, equalled it; the IIotel de Ville, a splendid edifice of marble, rebuilt in 1581; the Maison Anseatic or Hall of the Hanse Towns, a large and magnificent structure; and the palace, intended for the King and royal family, when they reside at Antwerp. Its institutions comprise academics of painting, of the fine arts, and of the sciences; a gallery of sculpture ; a picture-gallery, with 200 pietures, many of them the finest works of the first masters of the Flemish school ; a public library, with 15,000 volumes; a botanical garden, and numerous learned societies and sehools; and several hospitals, asylums, and workhouses. Thequay along the Seheldt forms a pleasant promenade, being spacious, and finely shaded by elms. Of the docks, dockyards, and basins, constructed by Bonaparte, at an expense, it is said, of $£ 2,000,000$, the last only remain, the former having been demolished after his downfall. The area of the great basin is 17 ac., and that of the small one 7. They are now converted into commercial docks, and are lined with capacious warehouses. The harbour thus formed, is one of the finest in the world. It admits vessels of any size, and can easily hold a thousand. The principal manufactures of the city are black silks and velvets, for which it is particularly famed. Cotton, linen, lace, carpets, hats, and eutlery, are also manufactured to a considerable extent. There are also sugar refineries, and a good deal of shipbuilding. The trade and commerce of Antwerp are extensive; and for lides, it is one of the most important markets in Europe. The number of foreign vessels that arrived there in 1846 was 1970 ; tonn. 286,474. Of these 359 were English, 704 German, 375 Danish, and the remainder other foreigners. Besides these, there arrived Belgian ships 243 ; tonn. 42,813. Total, 2213; tonn. 329,287. In 1839, the number of ships that entered the port was only 1182 , of which 337 were English, and the whole tonn. 202,038. The exports chiefly consist of hides, flax, cotton and linen manufactured goods; glass, zinc, oak bark, grain, and sceds; lace, refined sugar (in 1847, 187,092 cwt.), candied sugar (in 1847, 23,632 ewt.) The principal imports are hides, coffee, sugar, cotton stuffs, and other manufactured goods; corn, raw cotton, leather, timber, tobaeco, wool, rice, dyc-stuffs, salt, wine, fruits, \&c. The following list exlibits the quantities imported, in 1846 and 1847, of a few of the principal articles :-

| Articles. | 1847. | 1846. |
| :---: | :---: | :---: |
| Skins.. | 675,609 | 541,400 |
| Coffee. | 278,038 bales | 252,000 balcs |
| Cotton. | 30,800 | 30,950 " |
| (Carolinic.......... | 1,611 bushels |  |
| Aracan ........... | 22,092 |  |
| Madras........... | 11,160 " |  |
| Rice, Picdmont......... | 15,833 $\quad$ " |  |
| Ports of Europe | 166,784 " |  |
| Manilla............ | 230 tons |  |
| ewoods | 2,600 bags |  |
|  | 121,650 cascs | 60,000 cases |
| Sngar (Raw)... | 50,500 bags | 21,600 bags |
|  | 1,900 harrels | 3,050 barrels |
|  | 5,074 ${ }^{\text {5 }}$ | 11,316 ${ }^{\text {, }}$ |
| Tohace | 1,180 bales 800 seroons | 2,791 bales 415 seroons. |

A large proportion of the imports are only transit, and are forwarded with the utmost facility by means of canals and railways. The passenger traffic of Antwerp is also very considerable, between 4000 and 5000 arriving annually, from

England, by the stcam-packets, of which there are nine plying between Antwerp, II ull, and London. It has, moreover, become an important point of embarkation for emigrants, 2961 having sailed from this port in 1844,5275 in 1845, and 15,170 in 1846. Ships of the largest burden come up to the town, there being from 32 to 40 ft . water in the river at ebb tide, with a rise at springs of from 12 to 14 ft .

Antwerp is a very ancient city, and had a much larger population, and a much more extensive foreign trade, in the 15 th and 16 th centuries, than now. Its inhabitants then numbered 200,000 , and 2000 vessels entered the port amually. Its first reverse occurred in 1576, when it was pillaged for three entire days by the Spaniards; nine years afterwards, it was besieged for 14 months by the Prince of Parma; and in 1648, the navigation of the Scheldt was closed in accordance with the terms of the peace of Westphalia, which, added to other calamities, completed the ruin of the city. In 179.1 it fell into the hands of the Freneh, and was surrendered by them to the allies in 1814. On the revolt of the Belgian provinces in 1830, the Dutch garrison, consisting of 4500 men, commanded by General Chassé, refused to evacuate the citadel, and continued to hold it for the King of the Netherlands. To compel the evacuation, the fortress was invested in 1832 by the French, under Marshal Gerard, and taken 24 days after the trenches were opened. Pop. about 79,000. -(Mcert's Belgique ; Allgemeine Encyklopädie; Moniteur des Indes.)

ANTWERP, a prov. Belgium, bounded, N. by Hollnクd, E. by prov. Limburg, S. by S. Brabant, and W. by E. Flanders; length, about 40 m. ; breadth, about 30 ; area, about $620,000 \mathrm{ac}$. It is divided into three arrondissements, Antwerp, Mechlin, and Turnhout; and these are subdivided into 22 cantons, containing 145 communes, among which are the four principal towns or citics, Antwerp, Mechlin, Lierre, and Turnhout. Since 1830, it has formed one of the nine provinces into which the kingdom of Belgium, then erected, has been divided, sending four members to the Scnate, and nine to the Representative Assembly. The province is almost an uninterrupted flat, composed chnefly of fertile soil, but partly also of an extensive tract, called Campine, consistiug of heath and barren moor, with some woods of fir. It is bordered, W. by the Scheldt, and intersected by the Great Nethe, the Moll-Nethe, the Little Nethe, the Dyle, the Ruppel, the Senne, and several smaller streams. The soil is in genera light and sandy, with a wet elay subsoil, but is by no means unfertile. Good crops of wheat, rye, barley, buckwheat, pulse, rape, flax, hemp, hops, madder, chicory, beet, potatoes, sainfoin, and lucerne, are raised; and fruit, also, of every kind, and a good deal of tobacco. In 1841, the number of acres under cultivation was about 394,000 . Cattle, sheep, and horses, are reared in considerable numbers; fish abound in the streams, and honey, of excellent quality, is produeed throughout the district. The trade, both internal and external, is very important. The principal manufactures are lace, tulle, cotton, linen, woollen, and silk stuffs; soap, spirits, ale, and beer; tobacco, refined sugar and salt, leather, and oil. Numercus printfields produce goods which vie with those of Switzerland, Germany, France, and England. The agrieulture and manufactures of the province have been considerably iuproved, by several establishments, for the employment of prisoners and mendicants, and by the formation of what is called the 'free colony' of Wortel, occupying an extensive moorland tract between Antwerp and Turnhout. Still more important improvements have been effected by the increased facilities of transport, both by land and water. The canal of Willebrock carries its produce to the capital; while more recently, the railway from Antwerp to Mechlin or Malines, has brought it into immediate connection with all the great towns and mineral and manufacturing districts in the S., E., and W. Pop. in 1826,330,125; in 1844, 365,173.-(Meert's Belgique.)

ANURADIIAPURA, or Anarajapoora, the anc. cap. isl. Ceylon, but now a mass of ruins. It lies about 45 m . S.E. Aripo, and 48 m . N. Dambool, on the road between these two places, about lat. $8^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $79^{\circ} 37^{\prime} \mathrm{E}$. A few native luts now contain all the inhabitants of this once densely populated city; and it is questionable if even these would long remain in the place, were not Annradhapura the seat of a district court, and a Government agency. The country around is desolate unhealthy, and nisturally uninteresting; and the
:uins are surrounded by dense masses of jungle. The walls of Anuradhapura were built about the year A.v. 60, and their remains still exist. They enclose a space of $16 \mathrm{~m} . \mathrm{sq}$., or an area of $256 \mathrm{sq} . \mathrm{m}$. , and are built due N. and S., E. and W. In this vast space, besides the buildings of the city, there were of course included extensive gardens, water-courses, $\& c$. The ruins are characterized by an immense number of stono pillars, generally square, which meet the eye on every side; carved stones in great multitudes, some in the form of bullocks, and of lions' leads, and portions of sculptured columns lie scattered about in all directions, evidencing the state of refinement to which the inhabitants of this once populous city had attained. The main streets appear to have been as broad as the widest streets in London at the present day. One of the carliest existing buildings, which is in an excellent state of preservation, is the Thupharamaya Dagohal,,* crected u.c. 307. It consists of a dome-shaped mass

dagoball of thupharamaya.-From Major Forkes's Crylon.
of brickwork, surmounted by a tapering spire, and standing on a square-flagged platform. The entire erection is about 50 ft . high. It is surrounded by long, slender, well-proportioned columns, each consisting of two blocks of granite, the one forming a square base and octagonal shaft, both together about 22 ft . long; the other forming the capital, riehly decorated with small human figures standing round the lower part of the projecting ornament, and adding about 2 ft to the height of the pillars. There were originally 108 of these pillars, standing in four rows, on the platform round the dagobah. This dagobah, though by no means the largest, is the most elegant structure of the kind in the city, and is, besides, one of the finest extant remains of Singhalese art. Probably the most remarkable ruins in this ancient capital, are the remains of the numerous pillars which formerly supported the Lowa Maha Paya or brazen palace for the priests; one of the largest buildings that ever existed in the East, and built 150 years before our era, by Dutugaimono. It was 225 ft . square, and of the same height, supported by 1600 stone pillars, forming a square, with 40 on each side. The pillars are nearly all standing, though in very various states of preservation; time, and the wants of some of the later monarchs, having made great havoc among them. They are generally about 12 ft . high, those in the centre being twice as thick as those outside. From the small interspaces it is evident they were intended to be built npon; and history informs us, that, when first erected, the Lowa Mala l'aya consisted of nine stories in height, each containing 100 apartments. In the centre of this palace stood an ivory throne, having a representation of the sun, in gold, on the one side; a similar emblem of the moon, in silver, on the other; and above, the stars, in pearl. It was called the 'brazen palace, from being

[^2]roofed with metal in place of tiles. To particularize all the interesting remains of this city, would greatly exceed our limits. We cannot, however, pass over in silence the Ruanwelle Dagobah, originally 270 ft . high, and standing on a platform paved with granite, 500 ft . square; nor the granite trough, said to have been made for Dutugaimoni, for the pur pose of holding his eleplants' food, and at which six of these animals might feed without incommoding each other, composed of a single block of stone, and having an excavation 9 ft . long by 4 broad, and $2 \frac{1}{2}$ deep. It is to be remarked, that in all these interesting remains of Singhalese art, and evidences of Singhalese refinement and power, the more ancient structures are decidedly superior to those of a more modern date. Anuradhapura appears to have been founded about b.c. 540 , by Anuradha, a follower of Wijeya, who had shortly before invaded the island. It was greatly enlarged and improved by the usurper Pandukabhayo, who, in A.c. 437 , made it the capital of the island. He appointed 500 chandalas, or people of low caste, to be scavengers in the city; 200 to be night men, 150 to be carriers of corpses, and an equal number to be engaged at the cemetery. In the year b.c. 307 , in the reign of Tisso, the saered Bo-tree of Gotamo was transported from the banks of the Ganges to this place. From this period to the Christian era, and for three centuries thereafter, the city seems to have been in its most flourishing condition. The first blow to its prosperity appears to have come from the wavering monareh Mahasen, who reigned in the third century. He became attached to the heterodox Buddhistic sect, and employed his power in the destruction of the great buildings occupied by the more numerous and more orthodox community. Subsequently his opinion changed, and he endeavoured to restore what he had formerly destroyed. Its prosperity received a further check in the fitth century, from a 24 years' struggle between several Malabar invaders and the royal race. It was finally deserted by the royal line in the year A.D. 769. An unsuccessful attempt was made to restore it by a Singhalese monarch, in the 1Ith century-(W. Knighton, in Jour. Asiatic Soc., Bengal, 1847.)

ANWICK, a par. England, co. Lincoln; 1820 ae.; E.N.E. Sleaford. Poo. in 1841, 314.

ANWOTH, a par. Scotland, co. Kirkeudbright; 9023 ac.; contains two ancient structures, the castle of Cardonnes, and tower of Rusco. Pop. in 1841, 883.

ANXIOUS BAY, S. Australia, having Cape Radstock, lat. $32^{\circ} 12^{\prime}$ S.; lon. $134^{\circ} 15^{\prime}$ E. (r.), on the N.W., and Waldegrave Point on the S.E., $125 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. from the entrance into Spencer's Gulf.

ANZA, a river, Sardinian States, Piedmont, having its source in the glaciers, on the E. side of Monte Rosa; it traverses the beautiful though narrow vale of Anzasea, in a direction E. by N., and falls into the Toce near Vogogna, after a course of about 20 m . The scenery along its banks is exceedingly picturesque. There are several mills on it for crushing the ore obtained from the gold mines in the vicinity. The inlabitants of the valley of Anzasea are remarkable for cleanliness and industry; and the females especially, for the beauty and symmetry of their persons.

ANZASCA VAL. See Axza.
ANZI, a tn. Naples, prov. Basilicata, dist. of, and 12 m . F. from Potenza, on a high mountain. It had its name of Ance or Anza from the Romans, and was famous for its impregnable position. It has a parish chureh, and a convent. l'op. 3297.

ANZIN, a tn. France, dep. Creuse (Flanders), about 1 m . N.W. Valenciennes, in the centre of the most valuable coal mines of France. The coal field of the surrounding district is a very extensive tract; but what is properly called the 'Concession ' of Anzin includes about 118 k . ( $51 \mathrm{~S} \mathrm{sq} . \mathrm{m}$. ), and is worked by 11 coal pits, giving employment to 2000 persons, of whom nearly two thirds are miners, and raising annually about $3,361,452$ bushels of coal. Some of the pits at Anzin are 150 fathoms deep. The seams are very numerous. About 50 have been counted, with a thickness varying from 3 ft . to 30. The coal is of a rich caking quality, in general tolerably free from sulphur, well adapted for the smithy. The ample sapply of fuel has led to the establishment of numerous public works at $\Lambda$ nzin-one blast furnace, several forges, with apparatus for making chains and iron plates; glassworks, breweries, distilleries, salt-refineries, and works for firebriciss. A good deal of chicory, also, is prepared. Pop. 3132.

ANZO, or Anzio [anc. Antium], a small seaport tn. Italy, Papal States, 31 m. S.S.L. Rome. It is beautifully situated, and enjoys a mild, agreeable climate. The ancient port, built by Nero, still exists, but has decreased in depth from sanding up; still having, however, $2 \frac{1}{2}$ to 3 fathoms. A sccond port, formed by a jetty, built by Innocent XII., is so shallow as to admit only of sinall boats. Its commeree is small, and inhabitants few. It was a favourite Roman watering-place, and the birthplace of Nero and Caligula. In and around Anzo are many fine ancient arehitectural remains.

ANZUAN, or IIluzuan, an isl. Mozambique Channel. See Jomannait.

AOR, or AUr (Pulo), a small isl. in the China Sea, off the E. coast of the Malay peninsula, from which it is about 47 m distant, and from Singapore 116 m . ; lat. $2^{\circ} 29^{\prime} \mathrm{N} . ;$ lon. $104^{\circ}$ $34^{\prime}$ E. (r.) It is double-peaked, and has the appearance, when viewed from a distance, of being two islands. The lighest of these peaks is 1805 ft ; the other, 1520 ft . The island is only about 3 m . in length, and little more than $1 \frac{1}{2} \mathrm{~m}$. in breadth. Its formation is granitic, and the soil red. It is covered with cocoa-nut trees, which fringe its bays and cluster amongst the crevices of its rocks, to a height of 1000 ft abovo the level of the sea. There are here and there, also, fine fruit groves, in which the durian and mangostan abound. The natives generally are of small stature, and puny appearance. Their principal settlements are on the S.W., N.W., and N.E. sides. Although shy of strangers, they are generally found to be inoffensive, yet it is not considered prudent to venture far into the country without due precautions. On the S.W. side of the island there is a commodious bay, which affords shelter in the N.E. monsoon, and in which vessels frequently anchor in bad weather, to await a favourable change for entering Singapore Strait. The island is generally adopted as a point of departure by ships bound to China, which also steer for it on their return. Passing vessels also are supplied here with firewood, cocoa nuts, and water. Pop. 1400.-(Horsburgh's Indian Directory ; Jour. Ind. Archip.)

AONTA [anc. Augusta], a tn. Sardinian States, cap. dist. of same name, 50 m . N.N. W. Turin, 1. bank, Dorca-baltea, in the middle of the Val d'Aosta. It is the seat of a council of justice, under the jurisdiction of Turin; and of a bishop, suffragan to the Arehbishop of Chamberry; and possesses a collegiate and three parish ehurehes, two colleges, and two hospitals. Amongst its antiquities are a triumphal arch, a gate with three arches, and the remains of an amphitleatre. It has some trade in wine, eheese, hemp, and leather. Pop. 7000.-The province, which has the title of a duchy, and is intersected by the Dorea-baltea, forms one of the great valleys of the S.E. slopes of the Alps, and is surrounded by the highest peaks of the Pennine and Graian Alps; area, 1024 geo. sq. m. The thick pine forests of the mountains, the rich pastures of the Alpine slopes, the mandel and vine plantations on the deeplycut terraces, and the mines of silver, copper, and iron, employ the inhabitants in woodcutting; the manufacture of turpentine, piteh, and tar, Alpine husbandry, vine culture, and mining, but not in sufficient numbers, there being a scarcity of ground fit for grain growing. The poor people, many of whom suffer greatly from goitre, leave their homes in considerable numbers, and wander about as sweeps, masons, and smiths, returning after a time to their native place to spend their earnings. Pop. 75,000.

APAE, or Apee, a sinall isl., S. Pacific Occan, one of the New Hebrides; lat. $16^{\circ} 36^{\prime} \mathrm{S}$.; lon. $168^{\circ} 10^{\prime} \mathrm{E}$. (r.) ; about 35 m . S.S.E. the island of Mallicollo or Manicolo, and 350 m . N.E. the nearest point of New Caledonia.

## APALACIIIAN MOUNTAINS. See Alleghany.

APAM, a native tn., N.W. Afriea, Gold Coast, kingdom Ashantee, 40 m . E.N.E. Cape Coast Castlc ; lat. $5^{\circ} 16^{\prime} \mathrm{N}$. ; lon. $0^{\circ} 35^{\prime} \mathrm{W}$. It is situated on a small eminence, and contains the ruins of an old Duteh fort, the ball of which, however, is kept in a habitable stato by a person appointed for that purpose, who has also charge of the flag. The town, with a great number of its inbabitants, was destroyed by the Ashantces in 1811; and shortly afterwards, the fort was pillaged by a native chief, the gun-carriages burnt, and the whole building laid in ruins.

APAMAMA, an isl., N. Pacific Ocean, one of the Gilbert Isles, or Kingsmill group, in lat. $0^{\circ} 30^{\prime} \mathrm{S} . ;$ lon. $173^{\circ} 54^{\prime}$, W., aecording to Raper; and in lat. $0^{\circ} 27^{\prime} 21^{\prime \prime}$ N.; lon. $173^{\circ} 57^{\prime} 30^{\prime \prime}$
W., aecording to Wilkes, Commander of the U. States' explow ing expedition. It is about 5 ft . above the surface of the water, and is 10 m . long by 5 m . in breadth. There is anchorage on the S. side, the soundings varying from 2 to 5 fathoms, with a broken coral and coral sand bottom. It has a large population, but yields little more than supplies their wants. $\Lambda$ small quantity of fresh water may be had by digging on tho beaches, but neither wood nor refreshments are procurable for shipping. Apamama is also known by the names of Simpson and Hopper Island.

APANORMIA, or Aponormeria, a tn., N.W. coast isl. Santorin, Grecian Archipelago, 7 m . N.W. Scauro ; lat. $36^{\circ} 3 S^{\prime}$ N.; lon. $25^{\circ} 28^{\prime} \mathrm{E}$. The only landing-place in the Bay of Santorin, which is lined with lofty precipices, is at this point, and at Phiro. (See Epanomeria.)

APATI, or Jasz-APATHI, a tn. Ilungary, dist. Jazig, 11 m. E. Jasz-Berény, and 50 m. E. Pesth. It lics in a fertile plain, and has an elegant cburch. Pop. 7607.

APATIN, a tn. Mungary, near its S. borders in Sclavonia, 1. bank, Danube, 13 m. S. Bezdan, and 127 m. S. Pesth; lat. $45^{\circ} 40^{\prime} \mathrm{N} . ;$ lon. $19^{\circ} 3^{\prime} \mathrm{E}$. It has a ehureh, some manufactures of woollen cloth, and spinning-mills. Silkworms are reared, and madder produced in the vicinity, where there is also some good meadow land. Pop. 7100.

APCIIERON. Sce Apsheron.
APELDOORN, a vil. and par. Holland, prov. Gelderland, $17 \mathrm{~m} . \mathrm{N}$. Arnhem, and $11 \mathrm{~m} . \mathrm{N}$. W. Zutphen, on the Grift Canal. From its position on this canal, and on the high road from Arnhem and Utrecht to Deventer and Zutphen, it is a considerable thoroughfare. It has a ehurch, seliool, orphan hospital for girls ; and manufactures of morocco leather, copper plate for brewery and distillery boilers, and for sheathing ships, and of chloride of lime. Pop. of vil. 700 ; of par. 5200.

APENNINES [Italian, Apennino], an Alpine ehain of mountains, S. Europe, being the continuation of the Alps into Italy, which the chain traverses in its whole extent. It commences in the Sardinian States at the valley of Savonna, near the town of that name, W. side of the Gulf of Genoa; proceeds N.E. to near Genoa, then in an irregular line E.S.E. till it enters the Papal States, after which it runs S.E. in a branching irregular manner till it reaches the boundary between Calabria Citra and Calabria Ultra, where it changes its direction to S.S.W., and terminates at the Strait of Messina, throwing off some spurs $W$. into what has been called the heel of the boot. The ridge of mountains that traverses Sicily may be regarded as a continuation of the Apennines; the connection being merely interrupted by the Strait of Messina. The total length of the chain, from the valley of Savonna to Cape Armi on the Strait of Messina, is about 629 m .; or, following the sinuosities, about 787 m . Its broadest part, between Mount Marciano, S.E. of Sinagaglia on the Adriatic, and the mountains of Piombino in Tuscany, is 121 m. ; but in Liguria and the Calabrias it is not more than 18 to 24 m . The average height of the Apennines has been estimated at 4330 ft ., and in no part do they reach the limit of perpetual snow, though some summits rise upwards of 9000 ft . above the sea. Numerous valleys advance to the coasts of the two seas that wash the shores of the peninsula, dividing Italy, more especially on the N. slope of the Apennines, into a multitude of narrow valleys running perpendicularly to the chain. On the S. slope, the valleys of the Tiber, Arno, Garigliano, and Volturno, are the only ones of the chain of any great extent; and the rivers that flow through them are the largest that rise in the Apennines, and, indeed, the only ones of importance.

Divisions. - The mountain chain is usually divided into three great sections, the N., Central, and S. Apennines; and three minor sections, called, respectively, the Tusean, Roman, and Vesuvian sub-Apennines. The N. Apennines extend from the valley of Savonna to the source of the Tiber at Monte Cornaro; lat. $43^{\circ} 47^{\prime} \mathrm{N}$. ; lon. $12^{\circ} 6^{\prime} \mathrm{E}$; a total length, in a direct line, of about 75 to 182 m . ; passing throngh the Sardinian States, the duchies of Parma, Incea, Modena, and the grand duchy of Tuscany. The Central Apennines run from Monte Cornaro to Monte Vellino, N. of Lake Celano in Naples; lat. $42^{\circ} 9^{\prime}$ N.; lon. $13^{\circ} 33^{\prime} 30^{\prime \prime}$ E.; a length, without deviations, of $\check{5} 5$ to 133 m ., and passing from Tuscany throngh the Papal States, and entering the kingdom of Naples. The $S$. Apcnnines extend from Monte Vellino to the termination of the ehain at Cape Armi, Strait of Messina, a total
length of 55 to 133 m ., wholly within the Neapolitan dominion. The Tuscan sub-Apennines are composed of a branch stretching S. from Monte Cornaro towards Perugia, surrounding the lake of the same name, and spreading its ramifications over the whole space between the Arno and the Tiber. The Roman sub-Apenmines cover the S. portion of the Papal States; stretehing out from Monte Vellino, they comprise all the heights between the Salto, the Tiber, the Liri, and the Garigliano. The Vesuvian sub-Apennines run parallel to the principal chain from which they are separated by the upper course of the Calore and Volturno. Vesuvius is, however, an isolated mountain, not properly connected with this chain, but merely surrounded by it.

The following are the highest summits in each of the three great divisions:-

Gcology.-The S. slopes of the Apennines include several volcanic masses; and the only active volcano on the continent of Europe, Vesuvius, belongs to one of these masses, that of the environs of Naples. The others are those of Santa-Fiera and Viterbo, Rome, Santa Agata, and Roces-Monfina. In the same section are numerous springs of warm water, and of gas and vapours. The only veleano in the N. slope is Monte Voltore, near Melf. The environs of Modena are known for their mud volcanoes. The whole chain is calcareous; granite only appearing towards its S. extremity in Calabria. It is poor in metals, though iron is wrought in small quantities; and there are some coal seams, but of little importance. Vast saliferons deposits exist in the vicinity of Cosenza, but the true wealth of the Apennines consists in their building materials, but more especially the celebrated marbles of Carrara, Equi, Seravezza, and Sienna. The sub-Apennine hills, in many cases, are of tertiary formation.

Vegetution.-Under a height of 3280 ft ., the flanks of the main chain are covered with varied vegetation, of which oranges, citrons, olives, and palms, form the lower zone; but pine forests are rare in the Apemnines, though they produce pines, beaches, eypresses, laurels, chestnut trees. Above $3: 80 \mathrm{ft}$. the mountains are in general dry, their summits naked and bare.

Passes. -The principal chain is crossed by numerous passes, of which the most important are the pass of Bochetta ( 2549 ft .) ; the Col de Gieoi ( 1539 ft ), on the roads from Genoa to Milan, and from Genoa to Novi; the Col de Centocroci, between the valley of the Taro and that of the Vara; that of Monte Carelli or Pietra-mala ( 3293 ft .), on the road from Florence to Bologna; the Col d'A vezzano ( 4569 ft .), on the road from Avezzano to Aquila; the passage of Nicastro ( $105 \pm \mathrm{ft}$.), on the way from Nicastro to Cantanzaro, and many others, which need not be particularized.

General Aspect.-The Apennines do not present the pyramidal peaks of the Alps, the cloudy tops of the Pyrences, or the scarped walls and horizontal lines of the Jura. The forms presented by them are, however, agreeable to the cye; the sub-Apennines are undulating and rounded in their contour ; while the main chain is distinguished by features much more marked and irregular. Notwithstanding the beatuty of their forms, they do not present the attractions of mountains of the first order. From their limited elevation they lave no glaciers, their slopes are rarely covered with pastures, and their summits exhibit only bare naked rocks. Their valleys are narrow, presenting more the aspeet of large rugged and wild ravincs.-(Orographie de l'Europe; Guibert, Diet. Geo. ct Stat.)

Al'ENRADE [Danish, Aabenran], a seaport, Denmark, duchy Schleswig, eap. bail. of same name, on the Little Belt and in the Bay (fiord) of Apenrade; lat. $55^{\circ} 2^{\prime} 36^{\prime \prime} \mathrm{N}$.; lon. $9^{\circ} 25^{\prime} 15^{\prime \prime}$ E. (n.) It is beautifully situated in a deep valley, surrounded by woody leights and a fertilc country. Its streets
are crooked; it has only one chureh, which is a collegiate charge; and in the vicinity is an old Gothic castle. Aperrade carries on a considerable seafaring trade, and, in respect of shipping and commerce, ranks as a Danish port next to Flensburg. The harbour, though seeure, has only 11 ft . water; and the whole tonn. belonging to the port is about 9677. It has extensive doeks for shipbuilding; employs a good many hands in fishing; and, since 1819 , when baths were established, has been much resorted to for bathing quarters. Pop. 4100.-The balinyick lias an area of 112 geo. sq. in. Pop. 9200

APES HILI. See Aryma.
А PIA, a vil. and harbour, isl. Upolu, or Oahtooah, one of the Samoan group, S. Pacifie Ocean; lat. $13^{\circ} 48^{\prime} 54^{\prime \prime} \mathrm{S}$. ; lon. $171^{\circ} 41^{\prime} 12^{\prime \prime} \mathrm{W}$. (R.) The village stands in a grove of breadfruit and cocoa-nut trees. It is paved with large black boulder stones, and contains a chureh in the European style, having boarded floors and glazed windows, a store built of stone, and a remarkable native building used for public meetings. The latter is 102 ft . long, 22 wide, 21 high, aud neatly paved with small pebbles. The harbour is small, and will not contain more than six moderately-sized vessels in fine weather; but it is safe. Water and firewood are abundant and easily obtained; so also are pigs, poultry, and yams. It is much resorted to by whalers. (See Upolu.)

APICE, a tn. Naples, prov. Principato Ultra, dist. of, and about 9 m . S.W. from Ariano; on a hill. Pop. 3420.

APLEY, a par. England, co. Lincoln; 1240 ae. ; S.W. Wragby. Pop. in 1841, 162.

AP'O, or Appo.-1, An isl. and sheal, Strait of Mindoro, Indian Arelipelago, both situated between the island of Mindoro and that of Busvagon, the $N$. point of the former being in lat. $12^{\circ} 39^{\prime} \mathrm{N}$. ; lon. $120^{\circ} 28^{\circ} \mathrm{E}$. (R.) ; and that of the latter, or shoal, in lat. $12^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $120^{\circ} 31^{\prime} \mathrm{E}$. (Ilorsburgh.) The island is about half a mile in diameter, is covered with trees, and lined with white beaches on its N. and E. sides. A reef, which projects half a mile, surrounds it. The shoal is 10 m . in length from N . to $\mathrm{S} .$, and about 9 m . in breadth. -2, A small isl. off the S. extremity of Negros Island, one of the Plilippines, in lat. $9^{\circ} 0^{\prime} \mathrm{N} . ;$ lon. $123^{\circ} 0^{\prime} \mathrm{E}$.

APOLABAMBA, a dist. Bolivia, between the river Beni and the S.E. confines of prov. Puno, in Pern, intersected near its centre by the 15 th S . parallel. It is mountainous, and is interseeted, besides, by numerous rocky heights and ranges of precipices, and is traversed by several considerable streams. The productions are riee, maize, plantains, cotton, cacao, \&e., the latter raised with little trouble. Wood also abounds throughout the country, and monkeys swarm in the forests.
$\triangle P O L D A$, a tn. grand duchy, Saxe-Weimar-Eisenach, circle Wcimar-Jena, 9 m . N.E. Weimar, on the Werlitz. It is the seat of a superintendent or Lutheran lishop, and has a castle, with manufactures of woollens, kerseymeres, ant stockings. It has also several distilleries, and an extensive bell foundry, which furnished Schiller with the subject of his song ' Die Glocke.' Pop. 3298.

Al'OLIMA, one of the smallest of the Navigator's Islands, situated between the islands of Upolu and Savaii, the Oteewby, and Oahtooah, respectively, of Arrowsmith; lat. $13^{\circ} 49^{\prime} \mathrm{S}$. ; lon. $172^{\circ} 3^{\prime} \mathrm{W}$. (r.) Apolima is apparently the erater of an extinet voleano, and is accessible at one particular point, being, with this exception, faced ali round witl perpendieular cliffs. Its highest summit, which is on the s. side, is 472 ft . above the sea. The soil in the interior is ex tremely fertile, producing, in great abundance, cocoa, breail fruit, taro, yams, \&e. In the centre of the island is a village of about 20 houses, having a permanent population of about 75 persons.-(Wilkes.)

AI'OLLONIA, or Amanamisa, a dist., cape, and fort, in N. W. Africa, Gold Coast, Aslantee country. The mistmar, which is tributary to the King of Ashantee, lies between the rivers Ancolora and Assince, the one forming its E., the other its W. boundary. It is about 53 m . in length from E. to $\mathbf{W}$. and 10 to 15 m . in breadth. Its coast line consists of a straight sandy beaeh, bchind which is an undulating range of high land. A great portion of the country is covered with dense forests, and is but thinly peopled; but for 30 m . along the coast, villages are numerous. The soil is naturally fertile, and produecs in abundance rice, millct, sugar-eane, and cocoa
muts; while the woods furnish excellent timber for ship build-ing.--Cape Arollonia, which is formed of four hills or hummocks, presenting the appearance of a long projecting point, is in lat. $4^{\circ} 59^{\prime} \mathrm{N}$. ; lon. $2^{\circ} 35^{\prime} \mathrm{W}$. (r.) $\qquad$ -Fort Alol lonid, a British settlement, and the first European fort met with after leaving Sierra Leone, stands on the beach about 4 m . from the cape. It was at one time an important trading station, but is now abandoned, and going rapidly to decay.

AI'OS'TLES' ISLANDS, Straits of Magellan, where it joins the Pacific Ocean, near Cape Deseado; lat. $52^{\circ} 34^{\prime} \mathrm{S} . ;$ lon. $75^{\circ} 6^{\prime} \mathrm{W}$. They are twelve in number, a circumstance from which they have obtained their name, and are all small and barren. Their shores abound with shell fish, but are encompassed with dangerous reefs.

AP'PALACHIAN MOUNTAINS. See Alleghany.
АPPALACHICOL $\Lambda$, a tn., river, and bay, U. States. The town, which is a port of entry, and cap., of Franklin co. Florida, is situated on a peninsula, at the mouth of the river of the same name. It is regularly laid out, has an Episcopal church, two banks, and several stores and warehouses. It las a considerable trade in cotton, and an admiralty jurisdiction. The River Appalachicola is formed by the union of the Chattahoochee and the Flint in Gcorgia, and flows thence tlorough Florida, for a distance of 70 m ., into the Gulf of Mexico. It forms at its mouth a broad estuary, named $\Lambda \mathrm{p}$ palachicola Bay, and is navigable throughout for small vessels. There were 20 steamers plying on the river in 1844.

APPALACIIIE BAY, Main of Florida; lat. $29^{\circ} 40^{\prime} \mathrm{N}$.; lon. $84^{\circ} 30^{\prime} \mathrm{W}$.

API'ENZELL, a can. in the N.E. of Switzerland, the 13 th in order of the confederation, compreliending the two independent republies of Ausser-Rhoden or Outer Rhodes, and Inner-Rhoden or Inner Rhodes; length, 23 m. ; breadth, at the widest part, 16 m ., which suddenly diminislies N.W. to between 4 and 5 m .; superficies, about 160 geo. sq. m .; wholly enclosed by the territory of St. Gall. It is an ele. vated district, the lowest part being at least 1400 ft . above the sea, while it is traversed in various direetions by the outer and lower branches of the Alps, of which Mount Sentis, in the S . of the cauton, is abont 8000 ft . high. It lias large tracts of rich pasture land, and extensive forests of pine and is watered by the Sitter, and by several smaller affluents of the Rhine. The prevailing rock is limestone, besides which, occur whetstone, grit, and a species of marble. Salt is found in some localities, and there are a few mineral springs. Glaciers occupy the higher valleys. The climate is cold, but healthy. The chicf productions of the soil being flax, hemp, and several kinds of fruit, particularly apples, pears, cherries, and grapes, from which are produced cider, kirschwasser, and some wine ; but the wealth of Inner Rhodes, which is the more elevated division of the canton, lies in its herds and flocks, which are numerous; that of Outer Rhodes in its manufectures, consisting of embroidered muslins, gauzes, cambries, tulle, and other cotton stuffs. Bleaching, dyeing, paper-making, letterpress, and cloth printing, are also carried on to a considerable extent. Very little machinery has been yet introduced into the canton. Most of the weavers are proprietors of land, and form the great proportion of voters in the public assemblies. The exports consist chicfly of the various manufactured articles, and of cattle, hides, cheese, butter, honey, and wax. The imports are corn, fruit, wine, brandy, tobacco, salt, raw cotton, colonial produce, dyeing materials, leather, soap, cast iron, steel, pewter, tin, hardware, pottery, \&e. The working classes are divided into four different sections, namely, manufacturers, weavers, winders, and embroiderers. The first are of every grade, from the individual who manufactures the quantity only which himself and his family can weave, to those that employ 100 weavers or embroiderers. All the weavers here, as throughout Switzerland, make use of coffee, milk, oatmeal, and potatoes, which compose their principal food. A fow indulge themselves with meat and half a pot of cider on Sundays. They work from 13 to 14 hours a day, but do not constantly weave, devoting a portion of their time to cultuvating their farms, and taking care of their cattle. Schools are numerous, particularly in Outer Rhodes, in which all children above six years of age are obliged to attend, no person being admitted to the sacrament who cannot read. Writing, arithmetic,
grammar, singing, and drawing, form the clief branches of instruction. After children have left the public schools at the age of 12 , they continue to receive, every cight days, and afterwards once a month, until the age of 17 , lessons of repetition. At the age of 17 they receive the religious instructions necessary to the holy sacrament, after which they are declared of age, assist at the popular assemblies, and perform their part of military duties. For the richer classes, and those in easy circumstances, there are here, as in all the other cantons, public schools, where, independently of the dead languages, German, French, Italian, English, geography, mathematics, and geometry, uatural history, and drawing, form the basis of instruction. There are several orphan institutions in the canton, and savings'-banks lave been established in almost every parish, but they are little used by the working classes, who prefer buying furniture. Servants, artists, and children, throngh their parents, however, deposit their savings in these banks. Each parish is bound by law to take care of its respective poor, but each has, at the same time, its own particular regulations and customs as to the extent and manner of affording relief. The people are, in general, moral and well-behaved. Those of Inner Rhodes are Catholics, those of Outer Rhodes Protestants. The separation between them took place in 1597. The two, however, count but as one canton of the Swiss confederation, and have only a single vote in the federal Diet, to which they send deputics each in its turn. Both governments are pure democracies. The supreme or legislative power is constituted by a general assembly of all the male natives above 17 years of age, called the Landsgemeinde, which meets once a year. The manner of voting is by raising the hand. Every individual comes armed to this assembly, the right to bear arms being the test of citizenship. All bankrupts, paupers, \&c., are excluded from this assembly. The principal towns are Appenzell, Trogen, Huntroyl, Herisan, and Gais. Appenzell is, next to Geneva, the most densely-peopled canton of Switzerland, in proportion to its extent. 1'op. 51,40).

APPENZELL, a tn. Switzerland, cap. of Inner Rhodes, the R. catholic division, can. Appenzell, 7 in . W.S.W. Trogen, abont the same distance S.E. by E. St. Gall, and 103 m . E. by N. Berne; beautifully situated in a rich and populous

valley, l. bank, Sitter, about 2500 ft . above the sea. Its houses, chiefly of wood, are ill built, and it contains a townhouse, arsenal, capuchin convent, and a nunnery. It is the residence of the principal magistrates of the canton, and the place in which the Landsgemcinde, or supreme council of the Inner Rhodes, annually meets. The inlabitants are partly employed in agriculture, but principally in weaving and bleaching, and have a considerable trade in linen, cotton, saltpetre, whetstones, millstones, and timber. A few miles S.E. are the mineral springs and baths of Weisbad, and N . the village of Gais, both noted resorts of invalids. Pop. 1450.

APPIANO, a tn . Venetian Lombardy, cap, dist. of same name, prov. of, and 8 m. S.W. from Como, and 20 m. N.N.W. Milan. It is tolerably built, has three churches, and carries on a considerable trade in silk, which is here manufactured of superior quality. The vicinity produces grain, fruits of all kinds, and vegetables; cattle and sheep are also rearci. Pop. of the town, 2117; of the district, 23,065.-(Dizio. Univ. Italia.)

Al'PIN, a large dist. Scotland, co. Argyle, lying chiefly along the E. side of Loch Limnhe. In this district is the valley of Glencoe, which derives a melancholy interest from having been the seene of an atroeious massacre in the reign of William III.

APPINGEDAM, a market $t n$. Ilolland, prov. of, and 14 m . N.E. from Groningen, on the Damsterdiep, which plasses through the town. It is the seat of a court for the arrond. and can. of Appingedam, and has a townhall, a Calvinistic, and a R. catholie chureh; a Jewish synagogne, three schools, and a Bible society. Important horse markets are held here in July and August, a colt market in September, and cattle markets weekly during summer. Yop. 900.

APPLEIBY.-1, A bor. and market in., par. Appleby St. Michael or Bongate, England, co. Westmorland. The town is cap. of the co., and lies on the slope of a hill, 1. bank, Eden, 28 m . S.S.E. Carlisle, and 21 m. N.N.E. Kendal. It is compactly built, and consists of one principal street, and several smaller, the former terminated at the upper end by the castle, at the lower by the chnreh of St. Lawrence. On the opposite side of the river is a suburb, ealled Bondgate, connected with the town by an ancient stone bridge of two arehes. It is well lighted, and abundantly supplied with good water. Near the chureh is the market-house, rebuilt in 1811, in the Gothic style. The townhall, situated in the main street, is spacious and commodious; close by is the jail. There are here a chapel for the Wesleyan Methodists, an excellent free grammar school, founded by Queen Elizabeth; and an hospital or almshouse for 13 poor widows, founded by the Countess of Pembroke. The town has very little trade, and no particular kind of manufacture; and cannot be said to he in a thriving condition, nor to be in any way improving. The corporation consists of a mayor, 12 aldermen, 16 common councilmen, and other officers. Both the Lent and summer asizes are held here, and petty sessions every Saturday. The borough returned two members to the House of Commons up to the passing of the Reform Aet, by which it was disfranehised. Three fairs annually, chiefly for linen, cattle, sheep, and horses. Area of par. 14,550 ac. Pop. in 1841, 1165.-(Local Correspondent.)-2, Appleby St. Lawrence, a par., co. Westmorland, E. Ward; area, 5350 ae. Pop. in 1841, 1354.-3, A par., co. Lincoln, wapentake Manley, parts of Lindsey; area, 5180 ac. Pop. in 1841, 505.-4, $\Lambda$ par., counties Derby and Leicester; area, 2020 ac. Pop. in 1841, 1075.

APPLECROSS [anc. Comaraich], a par. and vil. Scotland, co. Ross; 2700 ac. Pop. in 1841, 2861.

A1'PLEDORE.-1, A small sea-coast tn. England, co. Devon, near the mouths of the rivers Taw and Torridge, 7 m . S .W the town of Barnstaple. It stands on the side of a hill, and contains a chapel of ease, and an Independent chapel. It has of late years beeome a favourite bathing-plaee, for which the beauty of its scenery, and the great extent and excellence of its beach peculiarly adapt it.-2, A tn. and par., co. Kent. The town, on the banks of the river Rother, is a clean and neat little place; and though now nearly 8 m . from the sea, it onee was an important maritime town of the Anglo-Saxons. Area of par. 2760 ac. Pop. in 1841,561.

AIPLEDRAM, a par. England, eo. Sussex; 1070 ac. Pop. in 1841, 156.

API'LEGARTII, a par. Scotland, eo. Dumfries; 11,500 ac. Pop, in 1841, 857.

AP''LEAHAW, a par. and vil. England, co. Ilants; 850 ae. ; E.S.E. Ludgershall. Pop. in 1841, 372.

API'LETON.-1, A par. and township, England, co. Berks; 2300 ac. ; N.W. Abingdon. Pop. in 1841, 496.2, Appleton-le-strcet, a par. co. York, N. Riding; $4780 \mathrm{ac} . ;$ W.N.W. New Malton. Pop. in 1841, 944.-3, Appleton-uponWisk, a par., co. York, N. Riding; 1800 ae.; S.S.W. Yarm. Pop. in 1841, 559.

API'ODI, a river, Brazil, prov. Rio-Grande-do-Norte; it rises in lat. $6^{\circ} 25^{\prime}$ S., flows N.N.E., and falls into the Atlantic in lat. $4^{\circ} 32^{\prime}$ S., after a course of 153 m . It receives several nffluents, among which the most important is the Upanema, whieh joins it 20 m . above its embouehure.-(Dic. Geo. Imp. Brazil.)

API'ONG, or PADANG, one of three large islands, N.E. coast, Sumatra, in the Straits of Malacea, about 90 m . S. by W. Singapore, separated from Sumatra by Brewer's

Strait, or Salat Panjang, whieh is from 1 to 5 m . in width, and navigable for large vessels. The coast line of the island is low and swampy, as are those of the others. Appong is celebrated for its sago, whieh is reckoned of superior quality. It is made by a people who inlsabit the woods, ealled Orang Utan, the well-known name also of a large speeies of ape, common in Sumatra and Borneo. There are 350 persons employed in the cultivation and preparation of the sago, of which they could produee, it is believed, about $400,000 \mathrm{lbs}$. annually. Aeeordirg to Carnbee's map of Sumatra, the island lies between lat. $1^{\circ} 0^{\prime}$ and $1^{\circ} 30^{\prime} \mathrm{N}$; ; and lon. $102^{\circ} 10^{\prime}$ and $102^{\circ} 34^{\prime} \mathrm{E}$.

APRICENA, a tn. Naples, prov. Capitanata, dist. of, and 7 m. N. N.E. from San Severo. Pop. 4560.

APRIGLIANO, a th. Naples, prov. Calabria Citra. dist. of, and 5 m. S.E. from Cosenza; on a steep hill. Pop. 1012.

APSHERON (Peninsula and Cate of), on the Caspian Sea, W. coast, formed by the most E. branel of the Caucasus. Its heights and clifl's are composed of chalky rocks, upon whieh here and there repose masses of a sort of brown freestone. The chalky roek exhilits, in great numbers, petrifications of the same kinds of fish that still exist in the Caspian Sea. Abont $36,000 \mathrm{lbs}$. of prepared saffron are ammally exported from Apsheron. There are 10 salt lakes on the peninsula, from several of whieh considerable quantities of salt are taken, but much more might be obtained. There are also a number of naphtha pits, black and white, which are wrought by the Russian Government. The peninsula of Apsheron has been celebrated for many centuries, in all the E. countries, as a saered soil, and the fire-worshippers still make pilgrimages to adore the fires which there issue from the earth, arising from the ignition of the naturally-formed naphtha. The cape is in lat. $40^{\circ} 29^{\prime} \mathrm{N}$. ; lon. $50^{\circ} 30^{\prime} \mathrm{E}$.

AI'SLEY RIVER, Australia, New S. Wales, dist. New England, a braneh of the river M'Leay. It flows through a ravine whose upper edges are from 2 to 3 m . apart, while the width at the bottom does not appear to exeeed 200 ft . This tremendous gulf is upwards of 3000 ft . in perpendieular depth.

APSLEY STRAlT, a narrow channel, between Mclville and Bathurst Islands, N. coast, Australia. It is about 40 m . in length, with a breadth varying from 2 to 5 m . The land is low on either side, and the shores from one end of the strait to the other bordered by a broad belt of impenetrable mangroves, and indented by numerous salt-water creeks, whieh present the appearance of rivers. Alligators of enormous size abound in the Straits, many of them measuring from 14 to 17 ft . in length. A settlement was formed in 1824, on the Melville Island side of the channel, about 8 or 10 m . from its N . entranee, but was subsequently abandoned.

AP'T [anc. Apta Julia], a tn. France, dep. Vauelnse (Provence), 30 m. E. Avignon, l. bank, Calavon, in a fruitful and beautiful valley. The river is spanned by a remarkable Roman bridge of a single areh, which stands unseathed by the floods and storms of 19 eenturies; and the valley is hemmed in on all sides by hills, clothed to their summits with vines and olive trees. The town is surrounded by old walls, of massive structure. The houses in general are well built; and the streets, though in the older quarters narrow and erooked, are, in the more modern parts, wide, elean, and adorned with fountains. The most remarkable building is an ancient Gothic eathedral. 'The leading manufactures of Apt are woollen and cotton stuffs, wax tapers of superior quality, and confectionery. Excellent poreelain, and common carthenware, are also made; and a good deal of silk is spun. There are also several wax refineries, tanneries, and distilleries. Before the introduction of pereussion-locks, the gunflints of Apt were in great demaud. Iop. 4377.

APULIA, Apuglia, or Puglia, an ane. prov., S. Italy, kingdom of Naples, now comprehended in the provinces of Capitanata, Terra di Bari, and Terra di Otranto. To the whole or a part of this district, the name La Puglia is still given. Originally, it was called Daunia, Japygia, Peucetia, and Messapia, and formed part of Magna Gracia or Great Girecee. Here is the vast plain lying between the Apennines and the sea, ealled La Tavoliere di Pugliere, eomposed nearly wholly of pasture lands, all belonging to the crown, and on whieh upwards of $1,000,000$ sheep are fed.

APURE, a river, Venezuela, formed by the junction of several streams which issue from the sierra de Merida, a part of the E. chain of the Andes of New Granada; and, after an. E. course of about 300 m ., falls into the Orinoco at Capuehino; lat. $7^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $66^{\circ} 47^{\prime}$ W. It is one of the principal tributaries of the Orinoeo, into which it rushes with such violence as to agitate the current for nearly 3 m . below its junction. The Apure is navigable for nearly the whole length of its course, and furnishes to the province of Varinas, and the neighbouring provinces of Venezuela, a ready water carriage to Guiana, for the coffec, cotton, and indigo which they produce. The river is infested by erocodiles, and its banks abound with mules, wild horses, and cattle, immense numbers of which, particularly the wild horses, perish by its inundations, being swept away before they have time to reach the rising ground of the llanos or plains.

APURIMAC, a river, S. America, which rises from a lake in the Andes of Peru, in lat. $15^{\circ} 38^{\prime} \mathrm{S} . ;$ lon. $76^{\circ} 25^{\prime} \mathrm{W}$. , among the savannahs of the plain of Condoroma, N. from Arequipa, and W. from the Lake of Titicaea. It flows through a mountainous country, in a N. direction; and, joining the Yueay or Vilcamayu at lat. $9^{\circ} 15^{\prime} \mathrm{S} . ;$ lon. $72^{\circ} 30^{\prime} \mathrm{W}$., forms the Ueayale, one of the principal tributaries of the Amazon. Numerous streams flow into the Apurimac, the most considerable of which are the Pachachaca, Pampas, Mautaro, Pancartambo, and the Urubamba. Its whole course, till it meets the Iucay, is between 500 and 600 m .

AQUAMBCE, or Aкambee, a petty state in the interior of the Gold Coast of Africa, formerly independent, now subject to Dahomey. It lies on the E. bank of the Volta.

AQUARA, a tn. Naples, prov. Principata Citra, dist. of, and 16 m . S.E. from Campagna. Pop. 2897.

AQUILA, a tu. Naples, cap. prov. Abruzzo Ultra II., dist. Aquila, on a hill, at the foot of which runs the Alterno, 27 m . S.W. Teramo, and 110 m . N.W. Naples. It is fortified, has a cathedral, 24 churches, several convents, a royal college, founded by Ferdinand IV., and transferred from Sulmona in 1816; an academy, an hospital, two eliaritahle institutions, and an elegant theatre. It is the seat of a court of justice, and of a bishoprie; contains several paper-mills, and manufactories of linen and wax, and carries on an extensive trade in saffron, grown in the neighbourhood. Aquila was founded by Frederick II., King of Sicily, in 1240, and was for a long time one of the most populous, as well as one of the wealthiest towns in the kingdom. Its walls are 3 m . in extent, with 12 gates, nearly all of which are now bloeked up. It could then boast of above 100 churehes, with numcrous monasteries and nunneries. It is still the residence of many noble families. It suffered considerably from earthquakes in the years 1703 and 1706 . Of all its ancient fortifications only one small fort remains, which was taken by the French in December 1798, after a feeble resistance. In the neighbourhood are the ruins of the Amitcrnum of the Romans, the native place of Sallust the historian. Pop. between 7000 and 9000 .

AQUILEIA, or Aquilej $s$, a small tn. Austrian States, Illyria, $21 \mathrm{~m} . \mathrm{N} . W$. Tricste, near the shore of the Adriatic. It is encompassed by a wall and ditel, and has a good church. The inhabitants, 1480 in number, support themselves ehicfly by fishing. In the times of the Roman Emperors, it was a flourishing commercial town, and, on account of its wealth, named Roma Secunda. In 452, it was destroyed by Attila, when a portion of the inhabitants fled to the island, and founded the future Venice.

AQUINO [ane. Aquiwum], a tn. Naples, prov. Terra di Lavore, dist. of, and $15 \mathrm{~m} . \mathrm{S}$. from Sora; the see of a bishop, who resides at Rocea Siccea. The town, which was a Roman colony, is now little else than a scries of ruins; however, it still preserves its eathedral. The town was destroyed by the Lombards in the sixth eentury, and has long been in a state of decay. It is the native place of Juvenal the satirist, and of Thomas Aquinas. Pop. 806.

AQUIRAs, a small, poor vil. Brazil, but the oldest in prov. Ceara. It lies on the Pacoti, between Lake Aquiras and the ocean; has a church, and brandy distillery and sugar factory. Its district is sandy, dry, and badly watered. Pop. of dist. about 5000 .

AQUITAINE [Latin, Aquitunia], one of the four great divisions of Gaul or France by the Romans. It subsequently
took the name of Guienne, and at present forms the departments Gironde and Lot-et-Garonne.

ARA, a small river, Spain, in Aragon, rising on the S. side of the Pyreneas, prov. Iluesca, near the boundary of the kingdom of France; and, flowing in a S.E. direetion, it tuites with the Cinea, 2 m . S. Ainsa, after a course of about 45 m.

ARABAT, a tn. Russia, in the Crimea, gov. Simferopol, on the shore of the Sea of Azov, 70 m . N.E. Akmetchet or Simferopol, on a narrow peninsula, which separates the Sea of Azov from the Black Sea; lat. (E. bastion) $45^{\circ} 17^{\prime} 9^{\prime \prime}$ N.; lon. $35^{\circ} 29^{\prime} 5^{\prime \prime} \mathrm{E}$. (R.) It consists prineipally of one long street, is fortified, and contains a mosque.

ARABAT EL MATFOON. See Abydus.
ARABGIR, Arabkir, or Arabkell [anc. Arabrace], a tn. Asiatie Turkey, pash. of, and 102 m . S.E. from Sivas; lat. $39^{\circ} 3^{\prime} \mathrm{N}$. ; lon. $38^{\circ} 55^{\prime} \mathrm{E}$. Originally a small town, with a fortress, it owed its enlargement and prosperity to the Armenians, and is said to be well built and populous. It is especially noted for its manufacture of goods from English cotton yarn, conducted by the Armenian inhabitants, and employing about 1000 looms. It contains 6000 houses, of which 4800 are occupied by Turks, and 1200 by Armenians. The district around is rough and hilly, but intersected by wellwatered valleys, inhabited by Turcomans.

MRABIA, the south-westernmest part of Asia, is called by the natives Jezíret el 'Arab, that is, the peninsuia of the Arabs; and by the Turks and Persians, Arabistan. In early times it was called by the IIcbrews simply Kedem or the East, and its inhabitants Bend Kedem or people of the East. The name Arabia, when it first oceurs in the Seriptures (as in Ezek. xxvii., 'Arabia and the princes of Kedar'), is evidently applied not to the whole peninsula, but only to the territory of some pastoral tribes. Peninsular Arabia is encompassed on three sides by the sea, namely, on the N.E. by the Persian Gulf, on the S.E. by the Indian Ocean, and on the S. W. by the Red Sea. Its most S. point, Rás 'Arah (the Cape St. Anthony of some maps), stands in lat. $12^{\circ} 35^{\prime} \mathrm{N}$. ; lon. $43^{\prime} 56^{\prime}$ E. (R.) The shoals and patehes of rock stretching E. from this eape render its vicinity dangerous to mariners. Thirty miles to the W. of it are the Straits of Bab-cl-Mandeb. The most E. point of Arabia, Ras-el-Had, stands in lat. $22^{\circ} 23^{\prime} \mathrm{N} . ;$ lon. $59^{\circ} 55^{\prime} \mathrm{E}$. (r.) A line drawn from the head of the Gulf of Sucz to that of the Persian Gulf, and marking the limits of the Arabian peninsula on the N., will be found to ron nearly in the 30 th parallel of N. latitude. But beyond, or $N$. of this line, extends a vast and desert region, which, being now oecupied chiefly by Arab tribes, is also called Arabia; it is bounded on the E. by the valley of the Euphrates, on the W. by the depressed tract in which lie the valley of the Jordan and the Dead Sea, while towards the N. it gradually contracts till its terminates in the vicinity of Tadmor or Palmyra, in about lat. $34^{\circ} \mathrm{N}$. ; so that Arabia extends in length from N. to S. through 21 degrees of lat., or nearly 1300 gee. m., while its average breadth may be assumed to be about 600 m . It ineludes also the peninsula of Sinai, between the Gulf of Suez and that of Akabah. The whole area of the vast country thus described does not, probably, fall much short of 750,000 geo. sq. m., or about eight times that of the British Islands:

Notwithstanding the early reputation of Arabia, and the interest attaching to a country, the inhabitants of which have enacted most important parts in the early commerce and general history of mankind, we still remain very imperfeetly acquainted with it. European travellers have hitherto penetrated but partially, and to a short distance only, from ita coasts. Nor are the difficultics opposed to its complete exploration likely to be soon evaded or overcome. Immeasurable tracts of inhospitable stony desert; the risk of meeting with bands of predatory and merciless Bedawin; the rapacity of guides, and the extortionate demands of petty ehieftains when they have once got the stranger in their power; the jealousies perpetually reigning among the small communities into which the interior of Arabia is livided, with the bigotry and fanaticism of the people; these, together with the heat of the elimate, and the forbidding aspect of the desert, are enough to deter the most couragcous and indefatigable traveller. The only European who has as yet traversed Arabia quite across from sea to sca, is Capt. Sadlier, who was sent, in 1819, by
the Government of Bombay, to congratulate Ibrahim Pasha on his victory over the Waláby. He proceeded from Katiff, on the shores of the Persian Gulf, to Derrayel, the ruined capital of the subdued fanatics, and, finding that the conquerors had withdrawn, continued his journey to Yambo on the Red Sea. We know, however, that A rabia, taken collectively, is an arid sun-burnt wilderness; the hills, naked rock ; the plains, rough stones or drifting sand. In this dreary waste may be traced, here and there, particularly near the mountains in the S. half of the peninsula, some green spots which reeeive the benefit of the annual rains; and the wadies or valleys, descending from the rain-collecting heights, figure only as so many green lines more or less strongly marked in the dazzling sunburnt prospect. But it is seldom that the tracts of cultivated land, even in the plains, attain a width of 20 m . ; so that all the irrigated Tehámas or lowlands, and all the green wadics of Arabia taken together, bear but a small proportion to the whole peninsula.

Divisions.-There is much diserepancy in the accounts of native writers respecting the territorial divisions of peninsular Arabia; and the limits of those divisions which they concur in establishing appear to have fluetuated much at different periods, if, indeed, they were ever ascertained with precision. The first of the divisions met with in proceeding down the Red Sea is Hejáz, which, as it includes the sacred cities, Mecea and Medinel, is always set forth conspicuously by Arab geographers. It extends a short way within the mountain barrier, and terminates S. in about lat. $20^{\circ} \mathrm{N}$. Next comes Yemen, which, according to some writers, embraces the whole of S. Arabia; but the name is now generally used in a confined sense, Yemen proper occupying the S.W. part of the peninsula, and comprising a Teháma or maritime lowland on the shores of the Red Sea, with an elevated inland district of considerable breadth. Appertaining to Yemen is Aden, now a free port in the hands of the British. Next to Yemen, E., and separated from it by a disert five days' journey in width, is Hadramaút, which commences on the coast at Makallah. The E. linits of this province are variously assigned by authors, some extending the name nearly as far as Omán, while others confine it to a district only 100 m . in length. Beyond it, along the coast, lies Mahrah; but aeross this traet, and apparently included at one time in Hadramaít, extends the principality of Shejer or Shehr, at the E. termination of which, near the coast, is the populous district of Dhofar, which lias occasionally figured as an independent state. At the E. angle of the peninsula is situated Omán, the chief port of which, Maskat, now carries on a considerable trade with British India. On the S. shores of the Persian Gulf is Bahreïn, from which, towards the head of the gulf, extends the maritime district of Hajar, while at a short distance S.W. in the interior lies the fertile district of El-Ahsa (erroncously written Lahsa or Lachsa). The interior of Arabia, from Hejaz and Yemen across to the vicinity of the Persian Gulf, is comprised, by Arab geographers, under the single name of Nejd. Towards the N.W. and N. are the deserts of Sinai, and those of Sham, Jezíreh, and Irak (Syria, Mesopotamia, and Babylon).

Mountains.-The cultivated tracts of Arabia are generally in the vicinity of the mountains, the torrents from which, in the rainy season, collect soil, and endow it with fertility. The proximity of the green fields, however, to the rocky heights, depend on the rapidity of the streams, and the configuration of the country. There are also some oases or productive spots in the interior, surrounded by deserts, and which seem to indicate that the waters of streams lost in the sands higher up, are here again collected and brought towards the surface. The mountains exercising this bencficent influence on the land, rise, as far as we have any knowledge of them, at no great distance from the sea-shore, and form, with their ridges, a kind of elevated frame, which encloses the greater part of the peninsula. On the W ., along the shores of the Red Sea, from the Gulf of Akabah to the Straits of Bab-el-Mandeb, a distanee of 1000 m ., the Arabian mountains are conspicuous throughout, presenting peaked summits of naked rock, from 5000 to 8000 ft . in height, and varying from 12 to 60 m . in distance from the coast. This range falls so abruptly to the W., that it may be said to present towards the sea a series of inaccessible cliffs. The ouly two passes at present known through it are, respectively, at Tayef, in lat.
$21^{\circ} 12^{\circ} \mathrm{N} . ;$ and above Reda, in lat. $18^{\circ} \mathrm{N}$. , and consequently 200 m . asunder. Elsewhere there are only steep and narrow paths, readily climbed by the mountaineers on foot, but utterly impraeticable for beasts of burden. Jebel Moilah, near the entranee of the Gulf of Akabah, rises to a height of 7000 ft ., thus matching in elevation the group of Sinai on the opposite side of the gulf; and both exhibit the same mineral formatious, gnciss and porphyry in vertical strata, rising above hills of sandstone and gypseous rock. Jebel Kora, near Tayef, attains an elevation of perhaps 5500 ft ., while Gurned or Sefyán, about 30 m. S.E. of the former, has an estimated height of 8000 ft . Again, Sáber, the highest point of the elevated ridge which rises on the N.E. above the Straits of Bab-elMandeb, and commands a fine view of the Abyssinian coast, is supposed, from its vegetation, to attain a height of 7000 or 8000 ft . Further to the N.E., the maritime chain of mountains between Aden and Shehr have a height varying from 3000 to 5000 ft., the highest points being ahove shugra and Magadaiii. In Omán, where the coast between Ras-el-Had and Cape Mussendow runs from S.E. to N.W. towards the Straits of Ormúz, the maritime chain, extending close to the shore, seldom rises above 3000 ft . ; but the Jebel Akhdar or Green Mountains behind these, striking from W. to E., attain to double that height. Other mountains in the interior of the peninsula, as Jebel Shamár, on the route from Bagdad to Mecea, are deseribed by Arab writers, but without any indications of height, and there is no reason to believe that they equal in elevation the maritime ranges.
Rivers, Lakes, Deserts, \&e.-The sterility of Arabia is sufficiently proclaimed, when it is stated that that vast country has no considerable, and searcely any permanent rivers. A few small streams, indeed, in Omán, as the Massora and Sib, are said to he constant, that is, to contain water, and to flow throughout the year from their sources to the sea. But these, supposing their permanence established, form, after all, but rare exceptions. Arabian rivers, in general, are either consumed in irrigation or absorbed by the sands, even in crossing the narrow Tchámas or lowlands of Hejaz and Yemen, before they reach the sea-shore. Hence, too, the interior of Hadramaít has fertile and populous valleys, while the coast is comparatively barren and desolate; but groups of villages, with plantations of dates along the latter, mark the points where the rivers of the interior, swelled by heavy rains, occasionally foree their way downward to the sea. In the most elevated part of Nejd, the principal rivers (in the loeal language Seil), are the Taraba, which, in the parallel of $21^{\circ} \mathrm{N}$. , separates that country from Hejáz. Its course is to the N.N.E.; but as nothing more is known of it, we may infer that the stream soon disappears in the sands. 1 degree further S. flows the Thered in the same direction, and terminates in a lake on the borders of the desert. This river marks the N. limit of the cultivation of coffee. A day's journey S. of this, the Raniyah flows N.E., and under the 18th N. parallel the river of Bisheh waters copiously a fine country, and, rumning to the N.N.E., siriks in the sand. Some of the Arabs report that this river flows through the desert to the gates of Bagdad. Others, again, say that it enters a lake in the Wady Sulcïmeh, and thence runs through El-Ahsa into the Persian Gulf. But we may regard it as a point ascertained, that there is no river flowing through El-Ahsa, or entering the sea on the adjacent coast. Besides, it is obvious that a permanent stream, or even a water-course, frequently filled, and crossing the Arabian peninsula, would necessarily be accompanied by a series of towns and plantations, and by a commercial route which would not allow such a natural feature to remain in obscurity. It appears, neverthcless, that Arab geographers have been misled by fareiful accounts of the Wady Bisheh, or some other of the occasionally copious streams flowing from the same region; and hence they have described a great river Afnán or Aftín (for the original Arabic name is doubtful), as flowing permanently across the country from the W. mountains to the Bay of Bahrein. The lakes of A rabia are, like the rivers, but of short duration. After heavy rains pools are formed, which, being rapidly evaporated, leave the ground incrusted with salt. As to the wastes and oases of this country, Arabia is, collectively, a desert, and the cultivated tracts throughout are all so many oases, surrounded by sterile and irreclaimable wastes. The desert of Alikaf [the waves of sand], however, is of a peculiar character, swallowing everything which falls
on it, and is supposed by the natives to be the abode of demons, or of the children of Ad. A recent traveller (the Baron Von Wrede) reached the confines of El-Ahkaf, N. of Hadramatt, and throwing into the sand a weight with 60 fathoms of line attached to it, saw the whole disappear in five minutes.

Geology.-Respecting the geology of a country so imperfectly explored as Arabia, we cannot of course know anything beyond some incomplete and unconneeted details. The elsain of mountains on the W. side of the peninsula, from AntiLibanos to Bab-el-Mandeb, is granitic throughout. Its elevated summits present to view only piles of bare rocks. The exposed surface of the granite is generally blackened by the heat of the sun, and assumes a metallic gloss. The narrow valleys between these dark masses of rock display, not carpets of fresh green, but white lines formed of drift sand. At the base of the granitic chain, on the W., are found limestones of various kinds, and generally of recent formation. The hills bordering on the coast, however, consist of sandstone, in which shells and madrepores are embedded in abundance. Such is the general character of the W. range; but towards the S. angle of the peninsula, where Yemen exhibits a wide extent of elevated land, volcanic rocks make their appearance, and Mount Sáber, which rises above all the neighbouring mountains, and attains a leight of perhaps 7000 ft ., is a mass of trachyte. Proceeding along the S. coast, we find limestone predominating, and forming ridges of 5000 or 6000 ft . in lieight. But the elevated plains in the interior of Hadramalit, which rize still higher, are said to be formed of sandstone. In Omán, the limestone formation attains its greatest height in Jebel Akhdan; but further N., volcanic rocks again make their appearance, and the N. angle of Arabia, at the Struits of Ormuz, is composed, like the S. angle at Bab-el-Mandeb, of trachyte and basalts. It was the broken and indented coast of volanic formation which harboured the pirates.

Climate.-In considering the climate of Arabia, it is necessary to bear in mind, first, the position of that country, between the burning deserts of Africa on the one side, and those of western India on the other. Not that we can suppose the climate of the interposed peninsula to depend on those of the adjacent countries, but because it is evident that Arabia comes under the influence of those meteorological conditions which have consigned to drought and sterility a wide belt of country across the Old World, from the shores of the Atlantic nearly to those of the Pacific Occan. This tract of desert, it is true, lies for the most part beyond the tropic, and, towards Central Asia, it bends much to the N.; the Arabian peninsula, on the other liand, extends several degrees S. of the tropic. But, secondly, the intertropieal portion of Arabia falls within the domain of the monsoons or periodical winds, peculiar to the Indian seas. Now, the monsoons not only interrupt the ordinary course of the trade-winds (which blow from the E., with an inclination to the equator), but they also interfere with that general law of intertropical climate, by virtue of which the rain falls soon after the sun has passed the zenith; and the hottest season is also the rainy season. In S. Arabia, on the other hand, the hottest montlis of the year are comparatively dry and cloudless; and the scanty rains fall chiefly in the winter, when the atmosphere, being less heated, is also less loaded with aqueous vapours. In Omán, the rains fall from October till May, three or four times in the month, on the lowlands, but more frequently on the mountains. The same seasons obtain along the S . coast, the period of the rains being abridged, however, towards the W., so that the wet season at Aden lasts only from November to February. But the interior of Yemen seems to be exempt, in some degree, from the influence of the monsoons, and to enjoy the regular tropical rains-a cireumstance to which may be attributed the superior productiveness of that province. At Sanaa, the capital of Yemen, some rain falls in January, as on the coast; but the heavy rains take place in June and July, with alternating S.E. and N.W. winds. In the Teháma of Abu Arish, also, going N. from Yemen, the wet season coincides with the hottest months. But N. of Yembo, on the Red Sca, rain falls only in the winter, from November to February, and never abundantly; it fails totally abont once in four years.

Temperature.-To the extreme dryness of the atmosphere, and its frcedom from eloud or vapour-conditions tending to accelerate evaporation and the radiation of heat-may be ascribed the remarkable degree of cold occasionally felt in

Arabia, and whieh has given rise to very erroneous conjectures respecting the elevation of that country. At Tayef, rot above 3200 ft . in absolute elevation, and only in lat. $21^{\circ} 12^{\prime}$ N., snow is said to fall once in every four years; and the mountains in the neighbourhood, from 5000 to 6000 ft . high, are annually covered with snow. Further S., ice and snow are of frequent occurrence on mountains ranging from 6000 to 8000 ft . in height; while in Abyssinia, on the opposite side of the Red Sea, they are hardly known at the height of $12,000 \mathrm{ft}$. On the S . coast, in like manner, we hear of snow and ice at moderate elevations; and in Omán, the Jebel Akhdar, only 6000 ft . high, and lying nearly under the tropic, are frequently crowned with snow in winter. Yet Maskat, on the sea-coast of Omán, is perhaps the hottest inhabited place on the earth-a distinetion which it owes in a great measure to its sitnation beneath bare cliffs, which reverberate the heat. At this place the thermometer, in the shade, in June, generally rises above $100^{\circ} \mathrm{Fah}$., towards the afternoon. The heat of Mokha, also, and the adjacent Teháma, is to Europeans insnpportable in summer. In general, the violent changes of temperature which oceur frequently in Arabia, are prejudicial to health. The lumid S. wind, the cold and dry N. wind, and the storms from the E., attended with clouds of fine sand, all bring with them the seeds of disease; the N.W. wind alone is regarded as salubrious and refreshing. The coast of the Hejáz is thought to be particularly unhealthy; and of late years, since the campaigns of the Egyptian army against the Waháby, the plague, from which Arabia previously boasted to be exempt, has been added to the list of endemic diseases. Here it is as well to remark, that the imminent danger supposed to attend the occurrence of storms of wind in the desert -the sherky (sirocco) or east wind, loaded with fine sand, and the simoom or hot poison wind, from the south-exists only in the tales of credulous travellers. Whatever inconvenienecs must be endured on such occasions by men and cattle, yet it never happens that they are suffocated by the pestilent blasts, nor are the caravans ever buried in overwhelming sands.

Zoology.-The wild animals of Arabia are few in number. A country so ill provided with wood, bush, and pasture, and where the scauty waters are so closely heset by an active population, is necessarily unable to support suel herds of large animals as roam through the interior of Afriea. The ibex inhabits the rocky heights; the wild ass, and antelopes of moderate size, the plains. The jerboa and lizards are seen even in the midst of the bare sands. Apes, chiefly of the species called Hamadryas, are numerous in the woods which clothe the sides of the mountains, particularly in Yemen. It was stated, in the beginning of the 16 th century, that the road from Taes to Aden was rendered dangerous and difficult, by the numbers and audacity of the apes infesting it; but this has not been confirmed by more recent accounts. The beasts of prey are panthers, ounces, and hyenas. In domestic animals, Arabia possesses advantages whiel may be aseribed, in some degree, to the great care and attention which the austere nature of the country makes absolutely indispensable for the support of any kind of live stock. The camels of Nejd are famed for their speed and beauty; in size and strength they are much inferior to those of Egypt, and therefore less fitted for carrying burdens; but for riding, they are said to be unrivalled. Mahrah, also, boasts of its swift dromedaries, called Mahry (commonly written Maherry), which are those most liighly prized in the African deserts. Nejd possesses, also, the finest breeds of horses, large numbers of which were exported to India in the beginning of the present century. These horses unite perfect symmetry of form with great spirit, but they are small; and it is not improbable that the value of the breed is over-estimated by its enthusiastic owners. In Yemen, the ass is a handsome animal, nearly as large as a mule, with a sleek coat, and bearing a high price. As to lorned cattle and sheep, S. Arabia, particularly Yenien, now draws, and probably has always been in the habit of drawing, large and regular supplies from the Somálí coasts, near the E. angle of Africa.
Botany. - The flora of Arabia presents but little novelty; it seems to be made up of contributions from Africa, India, and Armenia. The sea-shore, where it is not absolntely barren, exhibits generally plantations of the date-palm, which thrives even where the ground is covered with incrustations of salt. On the S. coast, towards Oman, the mango and cocoa-nut are occasionally met with. Furtler inland grows
the fig-tree, the tamarind, the almend, and, in Oman, the orange, lemon, and citron. The wild bushes are chiefly mimosæ, euphorbiaceæ, and the sidr or lotus nebka. With these grow lavender, wormwood, jasmine, and other scented plants. As the mountains are ascended, the vegetation assumes a more European cliaracter. Apricots, plums, pomegranates, and grapes, are found at the height of 3000 or $4000 \mathrm{ft} . ;$ and above these, the sides of the mountains are covered with forests of juniper, less properly called cypress. The cotton plant and the sugar-eane grow in the Teháma; the sumach or gum Arabic, the aloe, and the cassia fistula, prefer the hills; and the tree which yields the olibanum or frankincense (a Boswellia?), abounds on the mountains of Slejer or Shehr, in Mahral.

Agriculture.-The Arabs cultivate for food wheat, riee, barley, and dúrrah or holens vulgare (the jowári of India), besides bananas, water-melons, and other garlen produce; but their chief dependence is on their date plantations. These oceupy everywhere the irriguous land, the level margin of the stream, the low sea-marsh, or the hollow moistened by land-springs. The borders only of these favoured spots, if they admit of having water occasionally led to thom, are given up to the cultivation of grain. Near every large date plantation, there is ordinarily a fort, with high walls and dry ditch, round which is collected nearly the whole population of the district or wady. As the suceess of field labour depends here wholly on irrigation, the Arabs have learned, from necessity, to attain this oljeet by very elaborate and ingenious means. They conduet the water through tunncls or subterranean canals (feléj, in the singular iflaj), so as to prevent its being dissipated in its transit by the thirsty superficial soil, and the snn's powerful rays. These feléj liave, in Oınán, an extent of many miles, with a height which allows a man to walk upright in them. Yet, notwithstanding the eare bestowed by the Arabs on their date plantations, to which, as well as to their horses and camels, they are ardently attached, the total produce seems unequal to the demands of the population; while W. Arabia receives provisions, not only sheep and cattle, but millet and other grain also, from the Somálí coast. S. Arabia imperts annually, notwithstanding the vaunted fertility of its numerous wadies, several thonsand tons of dates from the Persian Gulf. In Yemen, however, the cultivation of coffee, and of khat (Celastrus edulis) is found more remunerative than that of the necessaries of life. The former of these thrives only in a warm and humid atmosphere, and screened from the sun's rays; henee, being planted only under the shade of trees, it is confined to the well-wooded part of Yemen, from the neighbourhood of Mokha, S. to Mount Sáber. The cultivation of coffee was introduced into Arabia from S. Abyssinia; and it is now well known, that the best coffee exported from Mokha, even at the present day, is in faet the produce of Abyssinia. The khat, also, a kind of tea-plant, is originally Abyssinian; but the use of it as a stimulant seems as yet hardly to extend beyond Ycmen; yet there, sueh is the passion for it, that it bears a very high price. The tender shoots, and young lcaves, constitute the best khat; if chewed when quite fresh, they are capable of intoxicating; the denomination and price of the khat depend on its age and tenderness. At every festival or social meeting, the master of the house presents to eaeh of his guests a twig of khat; and, if the accounts given of its virtues, in promoting social fcelings, serenity of temper, sprightliness, and power of enduring fatigue, be true, it is to be regretted that so genial a restorative is not more widely distributed.

Manufactures and Trade.-Mannfacturing industry can hardly be said to exist in Arabia. Handieraft trades are there few in number. The armourers are the only smiths whose work exhibits skill. The town of Maes, in Yemen, is famous for its pottery, because it is the only place in Arabia where the art of glazing earthenware is understood and practised. Camelots are woven in Nejd; silk and woollen stuffs
are made in Omán; and cotton cloth is said to be manufactured in Ifadramafit. The cotton plant, as well as saffron, orchil, and other dye-stuffs, is certainly cultivated in the interior. But the Arab looms are unable to meet the demands of the home trade. The Bedawy proeures his supplies of cloth, oil, and other luxuries, in exchange for civet, musk, ostrich feathers, and other trifles, but cliefly for his horses and canels. The trade in coffee, khat, almonds, balsam, senna, and gums, enriches a few proprietors; but, generally speaking, the chief mercantile wealth of Arabia is, and always has been, derived from the carrying trade. The Arab is the active factor who distributes the cotton cloth of India throughout half-civilized Africa, and carrics back ivory, ghee, gums, and dyewoods, in return. The productions of Arabia are, as a source of wealth, quite insignificant in comparison with the advantages of oecupying the coasts which connect India with Africa and Europe. There are, however, treasures on the Arabian coasts, which, though not absolutely large, when considered as sourees of national revenue, are yet important when compared with the much-vaunted sweets and perfunies of the intcrior. The pearl banks in the Persian Gulf, extend from Bahreïn E. above 300 m . These give employment to nearly 30,000 men, in above 3000 boats, and yield about $£ 80,000$ yearly. The pearls are nearly all bought by the Panyans, who engross still more completely the produce of the pearl fishery in the Red Sea, on the coast of the Hejáz. On the S. eoasts of A rabia the fishermen colleet much ambergris and tortoise shell. They take immense quantities of fish, particularly on the line of coast between Mahrah and Oman, with which they supply the intcrior; and they are not only ichthyophagi themselves, but, if we are to bclieve the statement of a celcbrated Arabian traveller, they feed their horses too, on fish. It is certain, however, that they are actively engaged in the shark-fishery, from whieh their chief gains are derived; that they launch forth on a rough sea, riding on a plank supported by blown skins, and with bare legs thus exposed, llasten, with paddle and harpoon, to encounter the most formidable monsters of the deep. They kill the sharks for the sake of the tails and fins, which are sent to Maskat, and thence find their way to the Chinese market.

Káflahs.-Although the carrying trade between India and the shores of the Meditcrranean Sea has long since sunk into comparative insignifieance, yet enough remains to show the importance and the foundation of the monopoly of it, once enjoyed by the Arabs. While navigation was in its infaney, that patient and enduring animal, the camel-so justly entitled 'the ship of the desert '-offered the most convenient and economical mode of conveying goods from the Persian Gulf and

ravelling in aramia. - Drawn by H. Warren.
S. Arabia to Egypt and Phenieia, whence they were distributed through the west. It seems certain, that the trade routes of the Arabs, in the earlicst ages-in the flourishing days of Tyre and Sidon-nearly coincided with those followed in the days of the Caliphs, when the earavans startcd from Bahrein for Bagdad, and thence erossed the Syrian deserts to Aleppo, Damascus, or Egypt ; or from Dhofar and the ports of Hadramaít, they passed through Yemen on their way N. The establishment of the Mahometan religion had the effect of reviving this truly Arab branch of industry; for the Hadji or pilgrimage to Mecca, whieh was enjoined on all true believers, drew crowds annually to the sacred shrine from all
parts of the Mahometan world. This conflux of strangers required large supplies, and gave great aetivity to trade; but besides the pilgrim-caravans to Mecea being deemed saered, experienced favour and protection in all Mahometan countries; and hence, the Halji merchants taking advantage of the security thus enjoyed, always united commercial speculation with the work of piety. These caravans (or Káfilahs, as the Arabs call them), are at times exceedingly numerons. There are authentic accounts of caravans to Mecea which numbered 120,000 camels. Now-a-days, the ordinary commereial caravans rarely exceed from 500 to 1000 loaded camels. These, with the guides, merchants, and followers of all kints, on horses, asses, \&c., resemble in their mareh a little army. The laden animals are preceded by a vanguard of well-armed horsemen, and are divided into groups belonging to different owners. At night a lantern, raised on a pole, which is fixed on the back of a leading camel, serves to guide those in the rear, and pistol-shots fired from time to time indicate the position of the line, and serve to prevent straggling. The Bedawin, as they travel in their migrations, generally allow their camels to browze as they proceed, and to pursue irregular paths; but in case of a caravan which is very large or richly laden, or which has to cross a waterless desert or a country infested by robbers, care is taken to preserve exact order, and implicit obedience is habitually rendered to the lealer. The ordinary day's mareh of 17 m . is occasionally, in case of necessity, lengthened to 24 m .

Origin of the Arabs.-The doctors of the Korán ascribe the first origin of the Arab nation to the sons of Iram (Aram), Ad, Thamud, Jorhum, \&e., whose posterity are styled Arab el-Arabah or thorough-bred Arabs. These have long since vanished from the page of authentic history, and figure only in legends of remote antiquity. The sons of Kahtan (Yoktan) are entitled Mútarabah, or Arabs by adoption; and the Ishmaelites are named, in a similar sense, Mustarabah. But it may be inferred from the llebrew Scriptures, that some of the posterity of Ham, also, Seba, Havilah, Sabtah, and other sons of Cush, settled in S. Arabia, which was thus closely conneeted with the land of Canaan (Phenicia), and this connection is also testified by profane historians. It is reasonable to suppose that the different branches of the Semitic race, who thus oceupied at an early age the Arabian peninsula, spoke different dialects; but the prevalence since acquired by the language of the Korán, has for the most part effaced such distinctions. It has, however, been reeently discovered, that the upper classes in Mahrah, and especially in Dhofár, speak a peculiar language called Ehkili, which many circumstances combine to identify with the ancient Hamyaritic. At Mareb, also, where remains of the celebrated dam are still traceable, as well as at several plaees along the S. coast, inscriptions in the Hamyaritic tongue and claracter (probably the unknown character described by Arab writers under the name of Musnad), have been copied; and from the study of them, it has been found that the Hamyaritic language bore a close resemblance to Syriac and Hebrew, and still more to Ethiopie, which last may be considered perhaps as its immediate offspring. Some Arab writers have alluded to the Ehkilí, as if it betokened a relic of the Adite race. Its modern discoverer is more inclined to consider it as the language of the Cushites. It has the disadvantage of being, to a stranger, disagreeable to hear, and impossible to acquire, some of its sounds requiring to be uttered with an effort which causes a violent distortion of the face. Anterior to Mahomet, Hamyaritie was the general language of S. Arabia; but the language of the Koran quickly displaced it, and, in the first ages of religious fervour, it fell into disuse. The tribes of Mahrah and Dhofár, therefore, who now speak Ehkíli, are not to bo considered on that account as a separate race, but only as the descendants of that portion of the population who rejected the proffered Islám in the first instance, and have since received it tardily, and perhaps ineompletely. The others lost with their language a chief mark of race, but they retained, and still retain, aucient habits and dispositions, which broadly distinguish them from their Ishmaelite neighbours further $N$. While the latter are unalterably attaehed to a pastoral roving life, to arins, and rude independence, the former devote themselves ardently to mercantile pursuits, and dwell in towns; they seek the advantages of social combination, and eherish the memory of their ancient kings.

Jews.-It would appear that Jews were always numerous in Arabia. Subsequent to the dispersion, they possessed Yathrib [the Iathrippa of Ptolemy], afterwards named Medinch [the city]; and in S. Arabia, with which they were connected perhaps by commerce, they seem to lave been settled in a still carlier age. Their Scripture lore found favour with the people, who were quite willing to believe themselves the posterity of Yoktan, or of Abraham, and even kings were numbered among their converts. Hence, we may reasonably conclude, that of the Arabian Jews of later times, the great majority are probably not Israelites by descent, but only Judaizing Arabs. A few Jews, mostly silversmiths or distillers, are to be found in all the chief market towns of Arabia, except in the $\because$ еj $\alpha \mathbf{z}$, where they are forbidden. In Maskat alone they are exempt from insult and vexation. Jewish observances are said to characterize, in S. Arabia, many tribes professing Islám. But in Yemen, the native Jews still form a considerable community; and further N., towards Asir, are the warlike tribes of the Beni Hobáh (Num. x. 29; Judg. iv. 11), who cloak the Jewish faith under a Mahometan exterior. Among them are the Beni Arhab (Reehab), who, proud of their descent, and persuaded of their ligh destiny (Jer. xxxv. 19), assume the title of 'the Sword of Yemen.' We know not whether these Rechabites still observe the precepts of their forefather Jonadab-not to drink wine, nor to dwell in houses-but it is certain that the making of wine, and the distillation of brandy, are among the chief occupations of the Jews in Yemen. But with respect to these Arab genealogies, it must be remarked, that an ignorant people, living in large families, under patriarehal institutions, naturally seize on whatever flatters the pride of pedigree, and that popular traditions are not necessarily aucient, becanse they point to remote antiquity. In truth, the original affinity of the Arabs and Hebrews is sufficiently proved by a comparison of their languages; but the attempts of the former to explain in detail their derivation from the common stock, are obvionsly founded for the most part on lints furnished by the latter.

Government.-The prevailing form of government among the Arabs is patriarchal, the chief power being vested in a Sheíkh, that is, an old man or elder, whose authority resenbles that of the head of a family, and rests more on the sentiments and habits of the community than on organized means of control. The title of Sheiklh has, indeed, generally become hereditary, though not by so strict a rule as to prevent the frequent occurrence of contests for the suecession. The power of the Arab chieftain depends on his ability to sway the passions of the multitude by the ready use of tongue and sword. If through tyranny or incapacity he forfeits his popularity, he is ordinarily deposed by some ambitious kinsman, to whom the people willingly transfer their homage. In Sanaa the chief bears the spiritual title of Imán, as did formerly the ruler of Maskat also; but in the latter case, the title of Imám has been superseded by that of Sultán.

Religion and Laws.-It is believed, that in early ages the chief objects of adoration in S. Arabia were the sun and moon; but with these there were certainly other deities of a more popular character. In the recently-deciphered Hamyaritic inseriptions occurs the name of Athtor, who was probably the same as Ashtoreth, the Venus of the Phenicans. The northern tribes seem to have borrowed from the Pantheons of all the nations with whom they came in contact; and the Kaaba is said to have contained at one time 300 idols. But Mahomet put an end to this accumulating superstition, by estahlishing a system of pure monotheism, with which he associated as much ritual observance as sufficed, without being wearisome, to connect his doctrines with the habits of the people. The Ishmaelites, the fellow-countrymen and companions of Mahomet, hastened to rally round him as soon as success began to gleam on his career, and willingly exehanged their wavering superstitions for doctrines at once grand, simple, and deeisive; but in the S., where Judaism and Christianity too, had gained a firmer footing, the new Ishmaelitic creed met with an obstinate resistance; and it is said that some tribes in Asir, at the S. side of Nejd, remained uneonverted till the early part of the last century, when they were overpowered by the fanatical Waháby. At all events, they adhere at the present day to peculiar and barbarous rites, which are quite repugnant to the spirit of Mahometanism. On the S. coast, also, the natives manfest very generally a
striking indifference to the precepts of the Korin. This volume is to Mahometans not only an exposition of religious faith, but a code of laws also. In Turkey and Persia, the voluminous decisions of the 'Ulema or learned, and of the Fukahá (plural of Fakíh) or docters of the law, have reared a vast superstructure on this slender foundation; but among the Bedawin, the Sheikh is supposed to be a competent lawyer, and pronounces summary decisions, without appeal, or, in large communities, he pays a Cadi to discharge this office.

Physical Appearance and Dress.-The Arabs in general are characterized by a light and active figure, oval face, regular and finely-turned features, and a forehead neatly formel, but somewhat narrow. Their look is bold, but often inelines to melancholy. They have ordinarily a dark brown complexion; yet on Mount Sáber, in Yemen. and on the Subalın mountains, in Mahrah, dwell tribes who are not darker than the inhabitants of S. Europe. On the other hand, the native population of the maritime districts are frequently, owing to the mixture of African blood, nearly black. On the shores of the Persian Gulf in particular, the slave population (chiefly from the E. coast of Africa) is numerous, and the fair-skinned Arab comparatively rare. The ordinary dress of the well-conditioned Arab is a cotton shirt, cotton drawers, and a woollen mantle, called $\Lambda$ bbayeh, which is sometimes exchanged for a blue cotton frock, with very wide sleeves. To this the wealthier sort add a caftan of cloth. Round the head is bound a fringed kerehief, striped green and red, over which a shawl is worn in winter as a turban. The Belawin often cover their

nEDA WIN ARADS, WOMEN GRINDING CORN - Drawn ly II. Warren.
heads only with a lappet of cloth, round which they tie the lint cord of their matchlocks. They despise the straw hats worn by the cultivaters of the ground. The men of all classes wear sandals. The women, however, who when young have a very engaging appearance, and are much fairer than the men, go barefooted, with rings on their toes. Their brows and eyelids are darkened with antimony, the palms of their hands and their nails stained red with henna. For inerease of their attractions, they rely chiefly on henna and the scent of jasmine. The married women among the Bedawin wrap themselves, so as to conceal the face, in black eloaks, which leave the arms exposed, and have a very unprepossessing look. The young girls, on the contrary, have but little clothing, and are content to adorn themselves with shells strung together. The men pride themselves chiefly on their arms; their jembia or long dagger, their sword, from India or Persia; their light spears, tufted towards the head with horse hair or ostrich feathers; and their matchlocks. In the commercial towns may be seen all the fashions of Turkey, India, and Persia. The buttered heads of the Bedawin meet there the perfumed beards of foreigners; and even the wild tribes of the interior exhibit considerable diversity of costume.
Manners.-The Arabs may be all divided into thrce classes, which rarely commingle or change places one with another, namely, the inhabitants of towns, the cultivators of the soil, and the Bedawin, or people of the wilderness [from bedú, a desert plain]. These last are considered as the type of the
nation. Their independence, in which they glory, but which is founded on their poverty; their attachment to ancient habits, and their incapability of change, conduce to nourish in them a strong national spirit. The whele wealth of these wandering herdsmen consists in their camels and horses, their kine, sheep, and goats. They live indolently in tents, made of a coarse kind of dark coloured cloth, woven by their own women, drawn over poles fixed upright in the ground; the larger ones having several compartments, so as to have separate rooms

various forks of aratb tents. - From Laborde.
for the men, women, and domestic animals; and keep by one locality till the pasturage around is exhausted, and nceessity compels them to change their position; thus they wander in the course of a year over a large tract of country. They have no industry, and though in appearance all energy and fire, are incapable of patient exertion. Their only occupation, besides the care of their cattle, is pillage; for they are all robbers, erucl, treacherous, and vindictive-the principle of blood for blood maintaining among them perpetual and destructive feuds. Such are their vices, which are hardly atoned for by their well-known hospitality. The stranger within their tents is safe from injury; for him they kill the lamb or kid, and grind their best corn. The Bedawin themselves, and, indeed, the Arabs taken collectively, are the most temperate and abstemious people, perhaps, on the face of the earth. They can subsist on a fifth part of the food consumed habitually by Europeans. Numbers live half the year on nothing but camel's milk. Others on a few dates dipped in ghee, or melted butter; and some even live wholly on wild honey. A handful of meal, moistened with water, suffices for an Arab during a long journey.
Dheellings.-The agricultural tribes inhabit villages, which are frequently enclosed within square walls, the houscs abuting on the walls, while in the centre is an open space for the herds and flocks. Near the date plantations there are usually forts, with double walls, towers, and dry ditches; and near these stand the villages of the inhabitants. The houses, sometimes two stories high, are built of stone, or sun-dricd bricks of large size, and have flat roofs, covered with clay. In Yemen, which anciently attained a higher degree of civilization, the castles of the chieftains resemble the baronial mansions of Europe in the Middle Ages, and the houses of the opulent merchants are large and commodious. Considering the general frugality of the people, it may be concluded that the population of Arabia is large in comparison with the natural resources of the country. It is difficult, however, exactly to estimate its amount, as the people elude all such inquiries, from a superstitious dread of enumeration. Chiefly on conjectural grounds, therefore, the population of Arabia is assumed to amount to $12,000,000$.
Language and Literature.-The Arabic belongs to what is called the Semitic family of languages (spoken by the posterity of Shem), and is, therefore, cognate with the Hebrew ; it is, however, less impaired than the latter, and preserves more completely its primitive forms. The Hamyaritic, or language of S. Arabia, relies of which have reeently come to light, is said to be in this respect still more complete, and to retain, in a remarkable degree, its original construction. Of Hamyar itic literature, if such ever existed, nothing now remains; the inseriptions lately found in that language seem to be all of a
date subsequent to the Christian era. The history of the northern or Ishmaelitic Arabic, cannot be traced back long anterior to Mahomet. We know that the wandering Arabs held the gifts of eloquence and facility of rhyme in high estimation : the ready poet and story-teller was a weleome guest in every tent. At the fair of Okadh, in Hejáz, prizes were given for effinsious of this kind, and some of the pieces thus distinguished in the pagan age of the Arabs are still preserved. In this state of things, the publication of the Koran wrought wonderful effeets; and the language of the Koreish, in which it was composed, was studied with a diligence which neeessarily tended to polish and enrich it. The saered volume was originally written in the old Syriac charaeter, called estranghelo (that is, es-atr-angil, the writing of the gospel), which the A rabs had reeently learned; but a few years later, when the prophet's sueeessors had founded Kufah, on the Euphrates, and the copying of the Korán became the business of the place, moditications were made in the estranghelo, which resulted in the adoption of what is called the Kufie character. It was in the fourth century of the IIejrah, that the current writing, called Nishky, which continues in use at the present day, first came into fashion in Bagdad. In a few ages after Mahomet, Arabic was the most widely diffused language on the face of the earth. It has undergone, however, in the course of time, that wear and degradation to whieh all languages are liable, partienlarly where conquest or trade force the use of it on strangers. The vulgar Arabic of the present day has thrown aside many of the grammatical forms of the old language; and this curtailment, with the ehange of terms, has wrought such a transformation, that the illiterate Arab, though he learns to repeat the Korán, rarely understands it.

The eultivation of a language implies more or less of literary activity. As soon as the vietorions apostles of the new faith had sheathed their swords, they began to apply themselves with great ardour to learning, and partieularly to the study of the Greek authors. Every Mahometan court, from Seville and Cordova, to the Balkh and Samarcand, had its erowd of poets and prose writers. But the attempt to foree learning and refinement thus suddenly on the ehildren of the desert, proved a failure. The literature of the Arabs is remarkable alike for its extreme abundance-catalogues exist of nearly 20,000 Arab authors-and its want of masterpieces. Their historical works are not without value, though dry, and occasionally disfigured by fanatieism and credulity; but their other works are usually trivial in substance, and exhibit a tendeney to petty astuteness, verbal display, and shallow volubility, which may be referred with probability to the original liabits of the nation.

Ancient Divisions.-The Arabian peninsula was divided by ancient geographers into two parts, namely Arabia Deserta, embracing the modern ICjáz and Nejd, in the widest application of the latter name; and Arabia Felix, or Yenien and Hadramanit. As to the E. distriets, it is not easy to determine how they are to be placed under this vague division. Ptolemy, at a later period, added also Arabia Petrea, which embraced the Syrian deserts and those of Sinai, taking its name from the city of Petra, situated among the hills E. of the Wady el-Akabah. But, it must be observed, that the name Arabia was applied by the aneients with a latitude which does not now belong it; for the entire region on the E. side of the Nile, between that river and the Red Sea, was called by them Arabia, in contradistinction to Lybia, which lay on the W., or opposite bank. This mode of speaking remained in use till the latest period of what may be called aneient geography, in reference to the open country on the right bank of the Nile; but the line of demareation thus formed by the river, was, by early writers, continued ideally to the S. Ocean; and aecordingly, Merodotus, in his description of the cimamon-bearing Arabia, by which he unquestionably meant the E. angle of Afriea, round Cape Jerdaffoon, represents Arabia and Ethiopia as conterminous countries. And there can be no doubt that this extensive application of the Arabian name was ethnologrcally just; for, if we trace the Nile up as far as the ancients were acquainted with its banks, and thenee draw a line in eontinuation to the ocean at the equator, we shall find that the countries lying E. of the limit thus drawn, have been all oceupied, more or less, from the carliest ages, by tribes of Semitie origin, who generally succeeded in obtaining an aseendancy over the aboriginal races.

It was an ethnographical error of the Greek and Roman writers, to give to the country at the N.W. angle of the Arabian peninsula, embraeing Sinai and the Wady el-Akabah, the name of Arabia Petræa. Modern geographers have erred still further, in supposing this to mean the Stony Arabia, a name equally applicable to any part of the peninsula. The epithet Petræa was derived from Petra, the Greek name of the eapital of the Nabateans, who are called by aneient writers Arabas Nabatei, though, in faet, they were not Arabs at all. The attempt to derive the Nabatrans from Nebaioth, the son of Ishmael, cannot satisfy a serupulons etymologist; and, in faet, when the popular misconceptions respecting that people are set aside, it becomes plain enough that they were of Aramæan race, and a colony of the Nabat, who occupied the low lands on the banks of the Euphrates, and who, trading with the Gherræi on the N.E. angle of the peninsula, perceived, and seized the advantage derivable from possessing the N.W. angle also. Like the IIamyarites in the S., they bore no resemblance to the wandering tribes occupying the centre of the peninsula; and the architecture of their eities in the desert, admirable even in ruins, must have been marvellous at all times in the eyes of their pastoral neighbours.

History.-The Islumaelites appear to have always retained the habits of Bedawin; they were wild Arabs; the possession of Mecea and the Kaaba was their sole boast, and they made no figure in listory till the time of Mahomet. The sons of Yoktan, on the other hand, in S. Arabia, advanced in civilization, engaged in commerce, and had a regal form of government. Thas we find it stated, characteristically enough, that Arabia (N.) and the princes of Keder, offered lambs, and rams, and goats-pastoral produce; while the merehants of Sheba (the Sabæans) dealt in spices, preeious stones, and gold. According to the Arab tradition, however, Saba (Sheba) was not the son of Kalitan (Yoktan), but the third in descent from him, the geuealogy being Kahtan, Yeshal, Yareb, and Saba. The last had many children, among whom were Hamyar and Kahlan. The descendants of the former, ealled Hamyarites, or Hinyarites (the Homeritec of the Greeks and Romans), were not, therefore, identical with the Sabæans, but only a branch of that race. Of the carly history of the Sabæans, nothing now remains but a few obseure traditions. The greatuess of the nation appears to have been closely interwoven with the construetion and maintenance of the great dam at Marab, in the interior of Yemen, which collected the waters of several mountain-streams, and formed a reservoir whence the neighbouring country was irrigated. The construction of this great work dated from a period long antecedent to that of authentic history. Some ascribe it to Balkis, the Queen of Sheba who visited Solomon. The bursting of this dam, which probably took place in A.D. 170 , constitutes one of the most remarkable epoelis in Arab history. It was cornnected with a dispersion of the tribes of Yemen, many of whom going N., and associating with the Ishmaelites, eventually aequired the ascendeney among these people.

In the fourth century of our era, a king of Yemen embraced Judaism, and perseented the Christians within his dominions, putting several thousands of them to the sword. This awakened the hostility of the Abyssinians (the Axumites), and at length, in A.d. 530, an Ethiopian army crossed the Red Sea into Y'emen, and put an end to the Hamyarite dynasty. The Ethiopians remained masters of Yemen till A.D. 601 , when Khosru Parviz, the Sassanide king, sent a Persian army to aid in expelling them. It was during this oceupation of Yemen by the Ethiopians, that Abreha marehed against Mecea with a Christian army and a troop of elephants, but was induced to retire by the intereession of the Jews of Yathrib. This event gave rise to the Arab cra of the Elephant, and is the more remarkable because it took place in the same year (571) whieh gave birth to Mahomet, whose fiery genius was, no doubt, worked upon by the contest of religious doctrines which agitated Arabia in that age. In tracing the chief epoehs of Arabian history, we must not omit to mention, that the era used by the Arabs and Mahometans in general (Moslimin), is reekoned from the prophet's departure from Mecea, July 16, 622. With the diffusion of the new faith, a new destiny seemed opened to the Arabs. The continued success of their arms has no parallel in history. Within the course of a few generations, Arab dynasties were established from Central Asia and the frontiers of India, in Samareand, Balkh, and

## ARACAN

('abool, to the shores of the Atlantic, in Morocco and Spain. In the flourishing days of the Khalifs [suceessors], the Arab merchant visited China, the interior of Africa, the shores of the Baltic, and N. Siberia. In truth, Arab commerce enloraced at one time nearly the whole of the Old World. But this wide-spread superiority was in its nature transient. The power of the Khalifs was extinguished, after many a struggle, by that of the Ottomans, and in trade the Arabs were gradually and completely supplanted by $W$ nations. The Arabian peninsula derived but little advantage from the historic splendour of the Arab name. Bagdad, Cairo, and Grenada became centres of a civilization which exercised no influenee on the tenants of the desert. The most remarkable event in the history of Arabia since the age of the prophet, is probably that which closed the career of the Waháby, a sect of religious reformers, founded by the Sheíkh Mahomet Abd-el-Wahal, whose life extended from 1696 to 1791 . Towards the end of the last century, his followers in Nejd threatened not only Bagdad, but Mecea, and thus provoked the hostility of the Pasha of Egypt. The enthnsiasm of the Bedawin, roused by the appearance of an Egyptian army in Ncjd, made the contest for some tine doubtful, and the Tarks were defeated in three suceessive campaigns. But perseverance and artillery gained the victory at last. In 1818, Derrayeh, the capital of the Waláby chief, in the heart of the peninsula, was razed to the ground, and the spirit of the fierce sectaries completely quelled. Since that event, IIcjáz, and a part of Yemen, have remained under the rule of the Pasha of Egypt.-(The Travels of Burckhardt and Welsted in Arabia; Niebhur, Descrip. de l'Arabie; Wolf's Missionary Journey ; Captain Sadlier, in Trans. of the Lit. Soc. of Bombay; Cruttenden and Haines, in Jour. Roy. Geo. Soc.)

ARABIAN GULF. Sce Red Sea.
ARABIAN SEA, a large expanse of sea, S.W. coast, Asia, lying between the peninsula of Hindoostan on the E., Arabia on the W., and having the coasts of Beloochistan and sinde on the N. The distance from shore to shore, or from the Arabian to the Indian coast, may be, at the broadest part, about 1500 m . The Sca of Bab-el-Mandeb, and Persian Gulf, are both ramifications of the Arabian Sea, which is itself a portion of the Indian Ocean.

ARACAN, or Ahracan [Rekhaing], a maritime prov. British India beyond the Ganges, presideney of Bengal. It is a strip of coast, bounded N. by Chittagong, from which it is separated partly by the river Nauf; E. and S. by the Burman empire ; and W. and S. by the Bay of Bengal ; lying between lat. $18^{\circ} 25^{\prime}$ and $21^{\circ} \mathrm{N}$. The natives restrict the name to what is the present distriet of Akyab, one of the three distriets into which Aracan is divided. This portion of the country, which is called Aracan Proper, lies between lat. $20^{\circ}$ and $21^{\circ} 10^{\prime} \mathrm{N}$., on the sea-coast, extending in the interior to $21^{\circ} 40^{\prime}$ N .; area variously estimated from 11,000 to $16,000 \mathrm{sq} . \mathrm{m}$. The province is divided into the districts of Akyab, Ramree, and Sandoway. The chicf towns are Aracan, the foriner capital ; Akyab, the principal port, now the capital of the prov. Sandoway; and Kyouk Phyoo, the chief military post, and having a spacious and beantiful harbour. Aracan is separated from liurmah and the valley of Irrawadi by an extensive mountain range, which extends, from Cape Negrais N., along all its E. frontier, and is named the Aracan, Yomadoung, or Anameetopin Mountains, lying parallel to, and in some places approaeling very near, the sea-coast. These mountains consist chiefly of granite, schist, and limestonc; yield iron, and sraall quantities of gold and silver; and have an average elevation of 4000 ft ; the highest peak, the Table Mountain, rising 8340 ft . above the sea, and separating the valley of the river Aracan from that of the Miou or Mayoo. This range, which on the W. is generally abrupt and broken by numerons ravines, is said to be crossed by no fewer than 22 passes, of which, however, only five are in use ; the best of these, the pass of Aeng, being 4664 ft .above the sea. Elcvated forests, wooded valleys, rivers, and small lakes, form the general features of this interior mountain district, which extends about $20 \mathrm{~m} . W$. of the main range. Between the mountains and the sea the province is very narrow in the S . portion, but becomes wider towards the N . It is covered with thickly-wooded jungles, which are so intersceted by rivers, lakes, creeks, and inlets, as to render land communication from town to town exceedingly difficult. It is watered by numerous streans, of which
may be named the Nauf, Mayoo or Miou, the Kinladyne or Aracan, the Aeng and Sandoway, all of them navigrable to a greater or less extent. Along the coast are the islands of Cheduba, Ramree, Akyab, the Broken Islands, and numerous detached islets and rocks. In lamree and Cheduba are mud volcanoes. The soil of the higher grounds is a rich loam; that of the lower and most extensive portion chicfly argillaecous; while on the rivers and on the coasts there are large accumulations of sand. Oak, fir, teak, and bamboo, of all sizes, are found in the forests; and thronghout the country there is abundance of pine apples, plantains, mangoes, jacks, sweet limes, cocoa nuts, and almost all tropical fruits, with the exception of oranges, which are searce. Among the other vegetable productions are rice, sugar-cane, hemp, cotton, indigo, onions, garlie, and turmeric. Almost the only wild quadrupeds of which we have any account are the elephant, tiger, buffalo, deer, and goat. Wild fowl, poultry, and fish, are abundant; and bees and silkworms are indigenous. With respect to climate, the country, except among the hills, is considered exceedingly unhealthy. The mean temperature is about $80^{\circ} \mathrm{Fah}$., and the quantity of rain that falls is very great. The wet season continues from May to November, and the other third part of the year can scarcely be called dry, as much rain falls in Deeember, January, and April. The abnndance of moisture, and the high temperature, render the country peculiarly adapted to the cultivation of rice, which is, accordingly, its staple production, and of whieh there are three distinct kinds grown. Previons to the year 1830, the province produced rice enough only for the consumption of its scanty population; now 62,000 tons are annually exported, and have been yearly since 1838 . The shipments, which, it is understood, were first limited to the Coromandel coast, were then extended to China, Bourbon, and the Mauritius; and, latterly, to Britain, France, and Belgium. The quality of the grain is excellent. Other objects of eultivation are cotton, sugar-eane, hemp, tobacco, and indigo; and the fertility of the distriet is manifested by the largeness of its crops. Agrieulture, however, is little jractised, the inhabit ants being more addieted to liming, fishing, and trafficking. The prineipal artiele of manufacture and of export, next to grain, is salt. The only other exports, the produce of the province, are sandoway, tobaceo, bees'-wax, honey, raw cotton, lides, horns, sugar, earth and wood oils, shark-fins, fish-maws, chillies, ginger, cows, bullocks, and jonies The quantities exported of most of these commodities are trifling. The wood oil of Aracan is, as regards this country, a novel article of commerce, although long well known thronghout India. It is the production of a lofty tree (genus Dipterocarpus), which abounds in the country, and is obtained by cutting a large aperture, 3 or 4 inches deep, in the tree, near the root. A fire is then kindled in the orifice, by which the sap-vessels are stimulated, when the oil begins to drop slowly into a hollow formed for its reception at the bottom of the aperture. Some European goods, along with rice and other native produets, are exported to Burmal, in return for silver, copper, laequered ware, \&c. The inhabitants are a laardy, inoflensive race, athletic, intelligent, and have an independence of maner which strikingly contrasts with the obsequiousness of the Asiatic. They are far from being civilized; but few cannot read and write. Their language is the same as that of the Burmans, who look on the Aracanese as the prime stock from which they themselves are descended. In religion they are Buddhists, and the priests employ themselves almost entirely in edueating the young; the sehools, of which there are two or three in every village, being open to all. They are of filthy habits, and use all kinds of animal and vegetable food; their houses are usually made of bamboo, covered with mats, and raised on piles about 4 ft . from the ground. Limestone, proeured from the island of Cheduba, was formerly only cmployed in building temples, its use for private buildings being forbidden. Araean was an independent kingdom till 1783, when it was overrun by the King of A va, who attaehed it to his dominions as a province. In 1825, it was conquered by the British. In 1826, by treaty it was ceded by lurmah to the E. India Company. In 1795 , the population was estimated at upwards of $2,000,000$. Since that time it has greatly decreased, but latterly lias begun again to increase. Immediately after the British conquest it was reekoned at 100,000 or 120,000 . In 1831, the pop. amounted to 173,928 .
(Srawford's Imbassy to Ava; Jour. Roy. Geog. Soc., vols. i., viii. ; Nautical Mag.; litter's E'rdluunde.)

ARACAN, a tn. British India beyond the Ganges, prov. Aracan, of which it formerly was the capital, situated on the river of the same name, 50 m . from the sea; about lat. $20^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $93^{\circ} 10^{\prime}$ E.; in a valley surrounded by conical hills, and intersected by streams or water-courses, one of which divides the town into two. It was at one time a place of considerable importance, having had a population of 95,000 ; but it is now so much reduced, that, in 1835, its population was estimated at from 8000 to 10,000 . This decrease is to be accounted for by the unhealthiness of its situation, and the rise of Akyab (which see).

ARACATI, or Aracaty.-1, A river-port, Brazil, prov. of, and about 55 m . S.E. from Ceara, r. bank, Rio Jaquiribe [river of ounces], 10 m . from the sea; lat. $4^{\circ} 31^{\prime} \mathrm{S}$.; lon. $37^{\circ} 48^{\prime} \mathrm{W}$. (r.) It consists principally of one long broad street, with several minor ones branching to the S ., and contains a handsome townhall, a prison, three sehools, and five churches. The houses are built of a framework made of the stems of the Carnahuba palm, filled up with brick, and are generally two stories in height. The principal exports are cotton and hides, nearly all brought from the interior. Of the former, about 5000 bags, or 25,000 arrobas, of 32 lbs . each, are exported annually; and of the latter, 2000. With exception of one hill, situated about $8 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. of the town, and a few sand-hills near the coast, the country around is extremely flat. In the rainy season, the river, which runs close to the town, often rises 12 ft above its ordinary level. The bar at the mouth of the river, which has a depth of 8 ft . at low water, is narrow and dangerous, owing to the sand-banks on each side, on which the surf is very violent. The river widens within the bar, and forms rather a spacious bay; but, from the uncertainty of its depth, owing to its shifting sands, cannot be depeuded on. Pop. about 5000.-2, A river, Brazil, prov. Ceara. It flows S. to N., and falls into the Atlantic by two mouths named Aracati-Açu and Aracati-Mirim, in lat. $3^{\circ} 10^{\prime} \mathrm{N}$., after a course of 120 m .

ARACENA, a tn. Spain, in Andalusia, prov. of, and 47 m . N. by E. from IIuelva, in a valley, and having four squares, and straight, clean, and well-paved streets; two churches, four convents, three schools, an hospital, barracks, public storehouse, and the relics of an old fortification. Manufac-tures:-leather and oil; but the chief occupations are agriculture and eattle-rearing. Pop. 2370.

ARACUAHI, a river, Brazil, prov. Minas Geraes. It rises in the serra Esmeraldas, N. of Villa-do-Principe, flows N.E. and falls into the Jequitinhonha, in lat. $16^{\circ} 45^{\prime} \mathrm{S} ., 8 \mathrm{~m}$. W . of Tocoyos, after a course of upwards of 200 m . It is tolerably deep, and niight be rendered navigable for more than half of its course. In it are found chrysolite and other precious stones.

ARAD. -1 , A market tn. Hungary, on the Maros, 145 m. S.E. Pesth, and 27 m . N. Temeswar, divided by the river into $O$ or Alt Arad [Old Arad], and Nj or Neu Arad [New Arad]. The former is an open town, cap. dist. of same name, not very well built, but yet possessing some good houses. It is the seat of a Greek non-united bisliop, and contains a Greek theological seminary, a R. catholic gymnasium, and Wallachian normal sehool. Manufactures:tobacco and snuff. It has an important fair, second only to the fairs of Pesth and Debreczin; and a considerable amount of trade is carried on in cattle, and in timber grown in Siebenbïrgen or Transylvania, and floated down the Maros. Nj or New Arad lies across the river from Old Arad, in the Banat of Temeswar ; a bridge which conneeted the two was destroyed during the late revolution. New Arad is eliefly remarkable for its extensive fortress, one of the strongest in Austria, and used also as a prison for political offenders. The united pop. of Old and New Arad is 20,400 ; the former 16,400, of whom 5923 are R. catholics, 6985 non-united Greeks, 191 of the Reformed or Calvinistic church, and 725 Jews; the latter 4000 , ehiefly Germans, who are the leading persons, and hold the official stations of the town.-The District, which has an extent of about 1700 geo. sq. m., and a pop. of 251,600 , is finely diversified with mountains and valleys; the former containing marble quarries, and mines of copper and iron; and the latter producing in abundance wheat, maize, melons, and other fruits ; flax, tobacco, and excellent wines.

Vol. I.

- Arad, besides the above, is the name of four small places in Iungary, not deserving a separate notice.-2, One of the Bahreïn Islands (which sec).

ARAFAT' (Mount), or Jebel er' Raime [the mountain of mercy], a granite hill, Arabia, 15 m . S.E. Mecea; at the foot of a ligher mountain, in a plain about $1 \frac{1}{4} \mathrm{~m}$. in diameter, surrounded by barren heights, but separated from them by a rocky valley. It is about 1 or $1 \frac{1}{2} \mathrm{~m}$. in circuit; its sides are sloping, and its summit is nearly 200 ft . above the level of the plain, with broad stone steps leading to the top. It is one of the principal objects of pilgrimage to Mahometans, who affirm that it was the place where Adam first received his wife Eve, after they had been expelled from Paradise, and separated from eaeh other 120 years. On the summit the place is shown where Mahomet used to take his station during the pilgrimage. The mountain not being large enough to accommodate all the devotees that go annually on pilgrimage to Mecea, the law declares, that the plain in the immediate neighbourhood of the momutain may be regarded as comprised under the term Mount of Arafat. Burckhardt, who was present during the pilgrimage in July 1814, estimated the number present on the occasion at 70,000 , with at least 40 different languages amongst them. The camp covered a space of between 3 and 4 m . long, and from 1 to 2 m . broad, containing 3000 tents, and from 20,000 to 25,000 camels. A sermon delivered by a priest, from a platform about the 60th step of the mount, constitutes the main ceremony of the pilgrimage, and entitles all who hear it to the name and privileges of a Hadji.

ARAGON, a river, Spain, in Aragon, rising in the Pyrenees, near Canfrane, prov. Huesca, on the borders of France. It flows S. for about 20 m . to Jaca, thence W.N.W. to Thiermas, then S.W. through Navarra; and, after a course of about 110 m. , being augmented by the Agra and several other tributaries, it falls into the Ebro, of which it is one of the most important affluents.

ARAGON, or Arragon, an anc. kingdom, Spain; bounded, N. by France, E. by Catalonia, S. by Valencia and New Castile, and W. by the Castiles and Navarra; length about 240 m. , average breadth 90 m. ; area, $21,878 \mathrm{sq} . \mathrm{m}$. It is now divided into the three provinces Huesca, Saragossa or Zaragoza, and Teruel. It forms a basin eneompassed by monntains-the Pyrenees, the sierras of Mosella, Abarracin, Molina, and Soria, while offsets from these chains traverse the interior in all directions. Several peaks of the Pyrences rise upwards of $11,000 \mathrm{ft}$. above the sea; their tops are covered with perpetual snow. Their sides are clothed with forests of oak, beeeh, and pine; while lower down are rich and extensive pastures, with many beautiful and fertile valleys. The largest level tract is formed by the valley of the Ebro, which, entering on the W., flows S.E., dividing the province into two nearly equal parts. The Guadalaviar, the Xucar, and the Tagus, have their sources in the extreme S., and the Aragon, an affluent of the Ebro. in the N.W. of this kingdom. The elimate is variable, though generally healthy. On the mountains, and especially among the Pyrenees, it is extremely cold, becoming much warmer in the valleys near the Ebro and the Cinca. High and piercing winds from the N.W. and S.E., however, frequently prevail; those which come sweeping down from the hills of Montcayo being peculiarly piereing. The mountains and forests abound with game, and the rivers with fish. The flora of Aragon is varied and extensive, but, like that of the rest of Spain, little known. Its minerals are marble, jasper, pit coal, copper, iron, lead, quicksilver, cobalt, and alum. Extensive tracts are wholly stony and barren, while others, though capable of cultivation, are entirely neglected. Still, where proper means are employed, excellent crops are obtained, of grain and fruit, saffron, flax, and hemp. Silkworms are reared in considerable numbers. Manufactures:-woollen cloth, linen drapery, cordage, leather, spirits, wine, oil, and soda-most of which, with grain and other products of the soil, form articles of exportation. The commerce is limited, the prineipal means of transport being by the Ebro, and the great canal of Aragon, which, commeneing near Tudela in Navarra, joins the Ebro 30 mm . below Saragossa; it is 9 ft . deep, and 64 ft . broad at the surface. It was commenced, in 1529 , by Charles V., and, after having been abandoned for more than two centuries, was recommeneed and finally completed towards the close of the 18th century.

## ARAL SEA

The Aragonese are hardy, active, brave, and hard-headed, but exceedingly obstinate, hard-hearted, and prejudiced, lovers of self, and religious haters of foreigners, especially of the French. They have also a peculiar dress-knee-breeches, broad silken sashes, anl broad-brimmed slouebed hats. 'The favourite national air and dance is la jota Aragonesa, which is brisk and jerky, but highly spirit-stirring to the native, on whom, when far from Aragon, it acts like the pibroch on the exiled IIighlander, or the Ranz-des-Vaches on the Swiss, ereating an irresistible nostalgia or home-sickness.' Aragon is thinly peopled, the total population amounting to 847,105 - (Madoz; Murray's IIandbook; \&e.)

ARAGONA, a small tn. Sieily, prov. and dist. of Girgenti,
 fine gallery of pictures, and some interesting relics of antiquity. In the neighbourhood is the mud volcano of Maccaluba. The district grows great quantities of almonds. Pop. 6530.

ARAGUA, a valley and river, Venezuela, prov. Caraccas. The valley lies S . of the mountain range which skirts the sea along the N. of prov. Caraceas, and adjoins the lake of Tacarigua or Valencia, into which the river falls, after a S.W. course of about 30 m . The valley produces a great quantity of indigo, sugar, cotton, European wheat, and abundance of tobacco.- (Aspects of Nature; Alcedo.)

ARAGUARI, a river, Brazil, prov. Para, in Brazilian Guiana. It rises in the serra de Tumucaraque, in lat. $45^{\circ} \mathrm{N}$. ; lon. $52^{\circ} 32^{\prime}$ W. ; flows E. ; receives several small tributaries; forms several small lakes, and falls into the Atlantic, lat. $1^{\circ} 50^{\prime}$ N., opposite Ilha Nova. A branch of it flows N.E., and falls into the sea N. of Ilha Coelhos. Another branch flows S.E., and falls into the Irigi. Total course about 160 m .

ARAGUAIA, a large river, Brazil, the prineipal affinent of the Rio Tocantins, which it joins at São-João-das-duasBarras, about lat. $6^{\circ} \mathrm{S}$.; lon. $49^{\circ} 30^{\prime} \mathrm{W}$. It rises under the name of Copaiapos, in mountains of the same name, about lat. $18^{\circ} 30^{\prime} \mathrm{S}$. ; lon. $52^{\circ} \mathrm{W}$.; flows N., forming the boundary between the provinces of Goyaz and Matto-Grosso as far as they are conterminous, and bifurcates about lat. $12^{\circ} 20^{\prime} \mathrm{S}$., its arms uniting again about lat. $9^{\circ} 30^{\prime}$ S., and forming the island of Santa Anna or Bannanal. It has numerous affluents on either side, the principal one being the Rio-das-Mortes, which it receives from the left, opposite the island of Bannanal. The whole course of the Araguia stretches over about 13 degrees of lat., for 11 of which it is navigable for the vessels of the country.-(Dic. Geo. Imp. Brazil.)

ARAHAI, a tn. Spain, in Andalusia, prov, of, and 22 m . E.S.E. from Sevilla, on an eminence, the summit of which forms an extensive flat. The houses are ill constructed, of the worst materials; and it has two squares, three churehes, the townhouses, in one of which is a prison; a hermitage, storehouse, Latin sehool, seven other schools, philosophical society, hospital, and cemetery. Manufactures:-felt hats, soap, gypsum, earthenware, and oilmills and wine ; fruits and other produce are exported, and colonial produce imported. Many of the inhabitants are engaged in agriculture and in rearing cattle. Pop. 6988.

ARAlSCH (Al or El), or Larasire [the pleasure-garden; ane. Lixus], a tn. Morocco, prov. Fez, on the steep S. point of Wad al Khos [river of the bow, or winding river]; lat. $35^{\circ} 12^{\prime} 48^{\prime \prime}$ N.; lon. $6^{\circ} 9^{\prime}$ W. (R.) In 1765, the French entered the river with the intention of bombarding the town; but, being induced by a feint of the Moors to advance too far, they were surrounded and destrojed. Al-A raisch had formerly a number of good houses, paved streets, several mosques, a bazaar with stone piazzas, and a fort with two batteries. Its large castle on the summit of the hill, the lofty towers of the mosques and the fortifications, still give it an imposing appearance when seen from the sea; but, on a nearer approach, the whole is found to be little more than a heap of ruins. The environs are laid out in pleasure-gardens and orchards, from which the town received its name; but they are now negleeted. The once flourishing commerce of the port is also gone. At the entrance of the river is a bar with 5 or 6 ft . water at low tide, within which there is a good port about three quarters of a mile long by one quarter broad, with a depth of 24 ft . Pop. in 1830 and 1834, stated at 4000 ; but, in 1835, 2500, including 500 soldiers, and 250 Jews.-(Jour. Roy. Geo. Soc., vol. vi.)

ARAKAN. See Aracan.
ARAKHOVA, a small tn., N. Greece, 18 m . W.N.W. Livadia, on a declivity of Mount Parnassus, in an extremely fertile district. Pop. 2000.

ARAL SEA, an extensive lake or inland sea, Independent Tartary; lat. $43^{\circ} 42^{\prime} 41^{\prime \prime}$ to $46^{\circ} 44^{\prime} 42^{\prime \prime}$ N.; lon. $58^{\circ} 18^{\prime} 47^{\prime}$ to $61^{\circ} 46^{\prime} 44^{\prime \prime} \mathrm{E}$. ; and next to the Caspian Sea, from which it is nearly 200 m . F., the largest lake of the F. hemispliere, laving a length, N.E. to S.W., of 265 m. ; a central breadth of 165 m ., and an arca of 17,600 geo. sq. m. Its water is salt,

though not unpleasantly so; may be used for eulinary purposes, and is freely drunk by horses; it regularly freezes in the N. ; in other directions the ice is scen covering the shores as far as the eye can reach, and probably, therefore, may, in very severe winters, extend over the whole expanse. Towards the N. the sea narrows, and finally becomes divided into two very unequal portions by the island of Kug -Aral, which stretches across it W. to E. for about 25 m ., leaving between it and the mainland only a very narrow clamel on the W., and a passage of about 17 m . wide on the E . The portion of the sea N . of the island has an area of about 1600 geo. sq. mn., and is called the Kitschkine-Dengis or Little Sea, in contradistinction to the main expanse, which is called the Ulu-Dengis or Great Sea, and is ten times larger than the other portion, having an area of 16,000 geo. sq. m. The Little Sca is of very irregular shape, and divides into two great arms which penctrate far inland, the one N.E. forming the bay of Sary-Tseliaganak, and the other N. and W. forming the different hays of Perowski, Paskewiteh, Dsehideli, and Nesselrode, and containing several islands. The bottom of the Little Sea is muddy, and the depth in many parts exceeds 12 fathoins; the coast, whieh is deeply indented, presenting many peninsulas and headlands, is in some parts low and sandy, but generally consists of hills varying from 100 to 300 ft . in height, and chiefly composed of clay and salt. The UluDengis or Great Sea, is of an irregularly cireular forin, having nearly the same length and breadth. Among its peculiar features are the immense number of low and sandy islands which line its E., and the islands, in much smaller number, but of far larger dimensions, which lie at some dis-
tance from its W. shore. Of these islands, the largest, in addition to the Kug-Aral, already mentioned, are the TakmakAty on the S.W. shore, not far from the mouth of the AmooDaria, Nicolas I., the chief island of the Zaren group, about 60 m . off the central W. shore, and Barssa Kilmes towards the N. The greatest depth of the Great Sea is in the W., where, almost close to the shore, a depth of 37 fathoms has beert found ; the central depth is about 15 fathoms; on the N., and more especially on the E. and S. shores, and near the islands, the water becomes very shallow. The bottom is muddy in the N., but in the S. consists generally of fine sand. The E. and S. coasts are very low, consisting in the former dircetion of long monotonous tracts of almost barren sand, and in the latter direction of alluvial flats overflowed by the Amoo-Daria, which here forms large swamps generally covered with reeds. The most remarkable of these swamps is that of the Ajbujir, or Laudan, which commences at the S.W. extremity, and stretches southwards in an irregular curve for about 80 m . The W. coast, forming the E. abutment of the plateau of UstUrt, is generally bold and lofty, consisting of cliffs of sandstone, clay, and limestone, with scarcely an opening in them where a boat can land. These cliffs lower gradually, both on the N. and S.; but towards the centre form precipices of 500 ft . high. This is the only part of the Aral Sea where the scenery approaches to grandeur. The only rivers which it reccives are the Sir-Daria, Jihoon, or Jaxartes, which joins it on the N.E., and the Amoo-Daria, Jihoon, or Oxus, which enters it by several mouths on the S. It has no outlet. The prevalence of N.E. winds blowing for months without interruption, the violence of storms and hurricancs, and the occasional ocenrrence of lengthened calms, when not a breath of wind is felt, are very mfavourable to the navigation of the sea. Fish of numerous varieties abound, but the absence of seals, so common in the Caspian, is remarkable. The only part of the Aral shores regularly inhabited, is the S.W. and S.; but in winter the N. and E. shores and adjacent islands are frequented by Kirghises.

The Aral Sea lies between the steppes of Kirghis and Khiva, in the great depression of W. Asia; and, in Humboldt's opinion, is on the same level as the Caspian, of which, in times remote, it doubtless formed a part. At first it is supposed to have been but an enlargement of the Oxus, now its principal tributary, but then an affuent of the Caspian, to which again, in recent years, part of its waters seems to have found its way; accumnlations of sand filled up the old bed of the Oxus, and thus transformed an enlargement of the stream into a lake. The Aral Sea lias no visible outlet, and as its affluents do not furnish a supply of water equal to the amount of evaporation that takes place, the lake is supposed to be decreasing in size. This opinion is supported by the reports of the natives; and receives a further confirmation from the fact that N.E. winds being prevalent in these regions, the quantity of sand wafted hither by them from the arid wastes to the $\mathbf{E}$. and N. is very great. The map is after Jakob Chanykow's map of the Aral Sea and Khanate of Khiva.-(Basiner, Naturwiss. Reise durch Kirgisensteppe. St. Petersburg, 1848; Mumboldt's Asie Centrale; Zimmermann, Denkschrift über unt. Lauf Oxus ; Jour. Roy. Geo. Soc., vol. xiii.; Makschejew, Beschreib. Aralsee's, in Monatsberichte über die Verhand. der Gesell. Erdkunde zu Berlin, 1852.)

ARAMON, a tn. France, dep. Card, 15 m . E.N.E. Nismes, r. bank, Rhone; with manufactures of ropes, saltpetre, and earthenware. Pop. 2640.
aran (Valley of), a secluded mountain-hollow, France, in the Pyrenees, dcp. Maute-Garonne, on the frontiers of Spain, and overlooked S.W. by Maladetta ( $10,890 \mathrm{ft}$.), the culminating peak of the I'yrenees. Area, $260 \mathrm{sq} . \mathrm{m}$. It may be considered as the continuation of the valley of the Garonne, which, above St. Beat; is called Val d'Aran. Much of it consists of mountain acclivities; and it is traversed S.E. to N.W. by the head waters of the Garonne. Three towns, Viella, Salardu, and Bosost, and 27 villages, are scattered over the valley, which is inhabited by rude mountainecrs, who are constantly engaged in smuggling, except during summer, when they seek employment in the S . of France. Pop. about 13,000 .

ARANDA de Duero, a decayed tn. Spain, Old Castile, prov. and 46 m . S. Burgos, r. bank, Duero, here crossed by a handsome stone bridge of three arches. The river is fringed with rows of poplars, over which the balconied houses hang
with an agreeable effect. Some of the houses are built of wood and brick, and betray a considerable propensity to fall over ; many of the streets are irregular, short, and narrow. Aranda has a townhall, an unhealthy and ill-arranged prison, a mont-de-piété, three schools, and two churches. The portal of the church of San Juan Baptista is a fine specimen of Gothic architecture, and is enriched with niches, statuary, and wellexccuted high reliefs. The Dominican convent has also a handsome portal. In former times, Aranda was frequently a residence of the Kings of Castile, whose palace is still standing. The inhabitants are almost wholly employed in agriculture ; chiefly in raising grapes, from which a dark, weak, and not disagreeable wine is prodnced, to the extent of about 500,000 gallons annually. As it does not keep more than a year, it is all consumed in the surrounding country. Pop. 4122.-(Madoz; Hughes' Lisbon.)

ARANJUEZ [ArA Jovis], a tn. Spain, in New Castile, prov. of, and 28 m . S. from Madrid, and 22 m . E.N.E. Toledo, in an extensive valley, l. bank, Tagus, chiefly famous for its royal palace, and as being a place of retirement for the court during the spring months. The town is regularly built, in the Dutch style, with lines of trees on either side of the spacions strcets; and is clean, and presents an agreeable aspect. Its Dutch appearance is due to Grimaldi, minister to Charles III., who had bcen at the Hague, and by whom the town was remodelled. It has a church and two chapels, several schools, an hospital, a fine public square, entered through a marble triumphal arch in front of the entry to the palace-grounds, and adorned in the centre with a marble fountain; a noble bull-ring, and a tolerable theatre. The inhabitants are engaged in agriculture, in the manufacture of crystal, leather, soap, chocolate, and in ministering to the numerous visitors who sojourn in Aranjuez while the court is there. The royal palace, at the Madrid end of the town, and close upon the Tagus, is a building possessing no architectural beanty, and deriving its sole attractions from the fine gardens and wooded pleasure-grounds by which it is surronnded, which are undoubtedly on a scale of great magnificence. It was here that Charles IV., March 19, 1808, abdicated his crown. The Casa del Labrador, erected by that same monarch, is a pretentious building, in gandy Asiatic taste, filled with artistic articles; but described as being more a kingly toy than anything else. Aranjucz and its vicinity is reckoned a kind of earthly paradise by the natives of Madrid; and to those who have only been accustomed to the arid, treeless Castiles, it must indeed appear an oasis in the desert, with its green, leafy foliage, its brooks, gardens, and singing birds, among which last the nightingale is especially famous. After the month of May, the summer sun, acting on the waters and marshes in the vicinity, fills the air with fever and ague; and during the winter the atmosphere is moist and cold. When the court is at Aranjuez, the population sometimes numbers about 20,000 ; at other times it does not reach 4000.-(Madoz; Willkomm.)

ARANSAS.- $1, \mathbf{A} \mathrm{tn}$. Texas, the port of entry for Aransas Bay, in Refugio co., 170 m . S. Austin, on a peninsula, and having a considerable trade with Mexico. Aransas Pass, the entrance to the bay, is in lat. $27^{\circ} 50^{\prime}$ N.; lon. $97^{\circ} 2^{\prime}$ W. (r.), between the islands of Matagorda and San Jose, in the Gulf of Mexico. The bay, within the peninsula on which the town stands, is about 20 m . long, by 7 to 10 broad. It has a deptl of from 12 to 16 ft . The harbour is sccure.- 2, A river which flows into this bay. It is about 80 m . long, and has a few small tributaries.

ARANYOS, a river, Anstrian empire, in Transylvania, formed by the confluence of the Greater and the Lesser Aranyos, which rise in Mount Kalimyasza, near the Hungarian frontier, about lat. $46^{\circ} 28^{\prime} \mathrm{N}$., and unite near the village of Topanfalva. After a circuitous course of about 90 m . W. to E.N.E. it falls into the Maros, about 7 m . E.N.E. Fel Vincz. Grains of gold are found in the bed of this river, hence its name, Aranyos, golden; from arany, gold.

ARARAT, a celebrated mountain, W. Asia, in Armenia, forming the point of contact of Russia with Turkey and Persia, to all of which it belongs. It lies in the S. portion of the extensive plain of the Aras, about 35 m . broad, and of whose length about 70 m . can be taken in by the eye. It consists of two mountains, the Great Ararat, on the N.W.; and the Less Ararat, on the S.E. ; their summits, in a direct line, being about 7 m . apart, and their bases insensibly blend-
ing into each other by the interposition of a wide, level, upland valley. The summit of the Great Ararat lies in lat. $39^{\circ} 42^{\prime} \mathrm{N}$.; lon. $43^{\circ} 38^{\prime}$ E., and is 17.323 ft . above the sea level, and $14,320 \mathrm{ft}$. above the plain of the Aras. The N.E. slope of the mountain is about 14 m . in length, and the S.W. about 20 m . On the former, visible even from Erivan, 32 m . distant, is a dcep, gloomy, crater-like chasm. The mountain is covered with perpetnal snow and ice, for about 3 m . from its summit downward, in an oblique direction. On the entire N . half, from abont $14,000 \mathrm{ft}$. above the sea, it shoots up in one rigid crest to its summit, and then stretches downward on its S . side to a level not quite so low, forming what is called the Silver Crest of Ararat. Little Ararat rises $13,093 \mathrm{ft}$. above the sca level, and $10,140 \mathrm{ft}$. above the plain of the Aras; and is free from snow in September and October. Its declivities are greater and steeper than those of the Great Ararat ; and its almost conical form is marked with several delicate furrows, that radiate downwards from its summit. The top of the Great Ararat was first reached, October 9, 1829, by Professor Parrot, who reports it to be a 'gently vaulted, nearly cruciform surface, of about 200 paces in circuit, which at the margin sloped off precipitonsly on every side, but particularly towards the S.E. and N.E. Formed of eternal ice, without rock or stone to interrupt its continuity, it was the austere silvery head of Old Ararat.' Towards the E. this summit is connected, by means of a flattish depression, with a lower summit, distant 397 yards ; and, in like manner, covered with ice. After remaining on the summit three-quarters of an hour, determining the height, and making various observations, Parrot descended to the monastery of St. James; the third day after, he left it. The observations of Parrot have been in every respect confirmed by another Russian traveller, named Abich, who reached the
summit of the Great Ararat without difficulty, Jnly 29, 1845. He , with six others, remained an hour on the top, without experiencing any inconvenience from cold, so much felt by Parrot and his companions. Abich, previous to making the ascent, had his tent for some time pitched on the upper slope of the mountain, in the valley between the two peaks, nearly $\delta 000 \mathrm{ft}$. above the sea. He reports the important fact, that from this point the ascent can with facility be accomplished, few obstructions interfering with the progress of the traveller compared with those met with on the ascent from the monastery of St. James. It would appear even that the ascent of Mount Ararat is easier than that of Mont Blanc; for the height of the latter, above the valley of Chamouni, is 12,000 ft .; while that of the former, above the point where Abich pitched his tent, cannot be above 9000 ft ; and the limit of perpetual snow is lower on the Swiss than on the Armenian mountain. The season most suitable for the ascent is the end of July or beginning of August, when the summer attains its greatest heat, and when there is annually a period of atmospheric quiet, accompanied by a clear, unclouded sky. So soon, however, as the fine days in the earlier part of August are over, the atmospheric war commences in the higher regions of the air, the strife being hottest between the two great peaks. Then there is no certainty of fine weather, for sudden thunderstorms, always on the higher parts of the mountains accompanied by hail and snow, endanger the life of the traveller. This continual elemental strife has left, on the summit of the Little Ararat, an enduring memorial of its rigour in the lightning-tubes with which the rocks are bored. These tubes are covered with a greenish glass, which was formerly supposed to be obsidian. So numerous are they on the highest peaks, that they impart to the rock the appearance of wormbored wood.

ararat, from the plain of erivan.-From a Painting by J. Daille Fraser, Fsq.

Wholly isolated on the N., S., and E. sides, this enor mous mass shoots up abruptly from the plain on which it stands, in stupendous grandeur, to the eye exceeding in height the giants both of the Ilimalaya and the Andes. The N.W. slope of this mountain is partially connected with a chain, which, running W. into Turkish Armenia, borders the entire r. bank of the Axares; its W. end, wheeling round the head waters of that river, touches Erzeroom, and gives to the 1. bank a mountain-barrier similar to that which exists on the right. All travellers attest the volcanic nature of the Ararat mountains, as evidenced by the stones found on all their slopes, undoubtedly the products of a crater. They are composed chicfly of trachytic porphyry, and on them pumice and varions descriptions of lava have been met with (Parrot, p. 198). Reineggs avers that he saw the Great Ararat send forth smoke and flame for three days, in 1785 ; but this is believed to be one of the many romances which that traveller has related. No such occurrence was remembered, in 1843 , by individuals resident on the mountain at the period indicated, and no ernption is found recorded in the chronicles of the monastery of

Eelmiadzin, though they extend back over a period of 800 years. All doubt as to the volcanic nature of the two Ararats was put an end to on July 2, 1840, when an cruption took place from the head of the great chasm, which destroyed the monastery and chapel of St. James, the village of Arguri, and their inmates. (See Arquri.) Dr. Wagner, an enterprising German traveller and naturalist, who visited the spot in 1843, gives in substance the following account of that event, as related by Sahatel Chotschaicff, brother to Stephan Aga, village elder of Arguri, honourably mentioned both by Parrot and Dubois, and confirmed by other two eye-witnesses:- 'On July 2, 1840, half an hour before sunset, the atmosphere clear, the inhabitants of Armenia were frightened by a thundering noise, that rolled loudest and most fearfully in the vicinity of the Great Ararat. During an undulating motion of the carth, lasting about two seconds, which rolled from the moun$\operatorname{tain}$ E. and S.E., and wrought great destruction in the districts of Sharur and Nakhichevan, a rent was formed in the end of the great chasm, about 3 m . above Arguri, out of which rose gas and vapour, hurling with immense force stones and carth
over the slope of the mountain down into the plain. The vapour rose very quickly higher than the summit of Ararat, and seems to have been wholly of aqueous composition; for in the same night a heavy rain fell in the vicinity of the moun-tain-an unusual occurrence in this country during summer. The vapour at first was of various colours, in which blue and red prevailed. Whether flames burst forth could not be asecrtained; but the pillars of vapour or smoke had a red tint, which, had the eruption taken place during the night, might possibly have exhibited flame. The blue and red tint of the vapour soon became dark black, and immediately the air was filled with a very disagreeable smell of sulphur. While the mountain continued to heave, and the earth to shake, with the unremitting thunder, along with the subterranean cracking and growling, might be heard the whiz, as of bombs, caused by the force with which stones and large masses of rock, some upwards of 50 tons weight, were hurled through the air. Likewise, the dash of the stones as they met in the air in their flight, could be distinguished from the thundering noise issuing from the interior of the mountain. Where these large stones fell, there in general they lay; for in consequence of the gentle declination of the ground at the foot of the mountain, to roll far was impossible. The erurtion continued a full hour. When the vapour had cleared away, and the shower of stones and mud had ceased, the rich village of Arguri, the monastery and ehapel of St. James, were not to be seen; all, aiong with their inmates, were buried under the mass of stones and mud that had been ejected. The earthquake, which accompanied the eruption, destroyed 6000 houses in the neighbouring districts of Nakhiehevan, Sharur, and Ardubad. Four days after a second catastrophe occurred, which spread still further the work of destruction at the foot of the mountain. After the rent in the chasm, whence issued the vapour and stones, had closed, there remained in the same place a deep basin filled with water by the melting of the snow, by the rain, and by a streamlet from above, so as to form a small lake. The mass of stone and clay, which formed a dam, and surrounded the lake like the edge of a erater, was burst by the weight of water, and poured down the deelivity of the mountain with irresistible foree a stream of thiek mud, which spread into the plain, and partly stopped up the bed, and altered the course of the small river Karasu. A part of the gardens of Arguri that had escaped the eruption, were destroyed by this stream of mud, which carried trees, rocks, and the bodies of the inhabitants of the village, down into the plain, and to the bed of the Karasu. This stream of mud was three times repeated, and was accompanied by subterranean noises.'

A document, purporting to be an account of this remarkable occurrence, was drawn up by a Russian officer, Major Woskoboinikoff, wiso, however, did not approach the monntain nearer than Erivan, where be obtained his information solely from inhabitants of that town, who had visited the place after the cruption. He narxates, that the mass which covered up St. James's monastery and Arguri was loosened by the earthquake from the highest regions of the mountain. This veracious document, preserved in the town arehives of Tiflis, gave rise to the erroneons report that a part of Ararat had fallen, and that the snowy summit had considerably sunk; which story Dr. Wagner distinctly contradiets, not only from very perfect evidence derived from a minute investigation of the locality, but also from the concurrent testimony of numerous individuals who had spent their whole life on Ararat, and in its vicinity. Another fable, which has gained some currency, is that this mountain forms a landmark for the navigators of the Caspian Sea, to which a sufficient refutation is furnished by the fact, that the nearest point of the Caspian is about 260 m . distant. There are several glaciers on the Great Ararat, from one of which flowed the stream that passed through the village of Arguri ; the lowest begin about 10,000 ft, above the sea level.

The fauna of Ararat is very poor, the only mammal, according to Wagner, being the common hare-rather agile prey for the tigers Tournefort avers that he saw, and, even when caught, calculated to form but a scanty repast for such an animal. Birds are tolerably numerous till about half way up the great chasm, beyond which they do not ascend. The most celebrated is the rose-starling (Sturnus roseus), famed as a locust-killer. Insects are numerous, among which, as
peculiar, may be noted the curiously-formed coleopter, Callisthenes Araraticus. One reason for the small number of the mammalia is, doubtless, the want of water on the mountain, which at the same time causes a scant vegetation. Still, many forms of plants are to be met with. The Great Ararat, on its N. side at all events, has no trees; but on the Little Ararat, the birches form quite a forest, due no doubt to the greater moistness of the soil. In autumn, yellow achillcæ, white scabiosæ, and different kinds of compositæ, chiefly of red tints, are prominent. A few specimens of Juniperus oxycedrus and Cotoneaster uniflora are to be seen. The Alpine vegetation is the same as on the Caucasus; and the most frequently to be met with are Aster alpinus and pulchellus, Campanula saxifraga, Pyrethrum caucasicum, and Centaurea puleherrima.

That Noah's ark rested on the top of Mount Ararat is not to be credited; the difficulty of the descent, and the low temperature of the atmosphere, which must have killed many of the animals, alike preclude the supposition; and, moreover, Scripture does not say it rested on the top, but merely 'on the mountains of Ararat.' If this be the mountain there referred to, which is somewhat doubtful, seeing that the olivo docs not grow near it, the ark must have rested on one of its lower slopes.

The name Ararat is said to be derived from Arai, a king who lived 1750 years b.c. He fell in battle, in an Armenian plain, which was hence called Arai-Arat-the fall of Arai. Before him reigned Amassis, the sixth from Japhet, who called the country Amasia; hence the name Massis, by which alone Armenians in the present day know the mountain. By the Turks and Persians it is called Agridagh. The third syllable dagh, means mountain; but philologists are not agreed on the signification of Agri,-(Parrot's Journey to Ararat; Wagner's Reise nach dem Ararat; Dubois, Voyage autour du Caucase; Die Besteigung des Ararat, am July 29, 1845, durch H. Abich, St. Petersburg, 1849.)

ARARAUMA, a salt-water lake, Brazil, prov. Rio de Janeiro; length, E. to W., $22 \frac{1}{2} \mathrm{~m}$, ; greatest breadth, $7 \frac{1}{2} \mathrm{~m}$. It communicates with the sea, to which it lies parallel, and from which it is separated by a strip of land about 4 m . broad; and has a depth, according to the state of the tide, of from 26 to 80 ft . It receives the waters of several streams. At its E. extremity is the town of Cabo Frio, whence the sugar, rice, millet, French beans and coffee, produced plentifully on its banks, and brought chiefly from the small ports of Capitão-Mor, and Mataruna, are transhipped to Rio de Janeiro- (Dic. Geo. Imp. Brazil.)

ARARIPE (Serra de), an elevated table-land, Brazil, between 4 and $6 \mathrm{~m} . \mathrm{S}$. W. the tn . of Crato or Cratto, in about lat. $6^{\circ} 30^{\prime} \mathrm{S} . ;$ lon. $38^{\circ} 30^{\prime} \mathrm{W}$. It forms a semicircle round the undulatory plain on which Crato is situated, and is the source of a great many fertilizing strcams. In some places the ascent is steep and rugged. In the serra de Araripe, George Gardner, Esq., late superintendent of the Royal Botanic Gardens of Ceylon, found the chalk formation, which, it was previously believed, did not exist in any part of the continent of S. Ameriea.

ARAS [anc. Araxes], a large river, W. Asia. It rises in Mount Bin-Gheul, abont 10 m . S.E. Erzeroom in Turkish Armenia ; lat. $39^{\circ} 47^{\prime} \mathrm{N}$. ; lon. $41^{\circ} 45^{\prime} \mathrm{E}$. Its course is E.N.E. for 150 m. , when it enters Russian Armenia, and deflects to the S.E. round the base of Mount Ararat, turns again N.E. about lat. $37^{\circ} \mathrm{N}$., and continues in that direction till its junction with the Kur at Jeval or Djavat, in lat. $39^{\circ} 54^{\prime} \mathrm{N} . ;$ lon. $48^{\circ} 30^{\prime}$ E., after a course of above 500 m . It is a rapid dirty river, and opposite Mount Ararat it is described as having high steep banks, and a bed of elay-slate filled with limestone shingle. From the stcepness of its banks its water cannot be used for the purpose of irrigation, which the country round Mount Ararat stands greatly in nced of, the whole plain of the Aras being here ncarly destitute of vegetation. In some parts, however, a hard kind of grass (Dactylis littoralis) occurs, on which large quantities of a species of the cochineal insect are found. There is a ford passable all the year at Yedu Balook, near lon. $48^{\circ} \mathrm{E}$., where its bed is from 3 to 4 m . across. It was known to IIerodotus ander the name of Araxes, but this must not be confounded with the Araxes of Xenophon, whieh is the Chaborras of Strabo, and an affluent of the Euphrates,-(London Geo. Jour.; Parrot's Journey to Ararat.

ARASAIG, a vil. and dist. Scotland, eo. Inverness, W. coast; the name also of a promontory in the district, lying between two inlets of the sea, Loch Nanuagh on the S., and Loch-na-Gaul on the N. In the village there is a neat 12. catholic chapel Steamers call regularly eff this place.

ARATlCA, or Carlshoff, an isl., S. Paeifie, one of the Paumotu group or Paliser Islands, about 310 m . N.E. by E. from 'Tahiti, W. point in lat. $15^{\circ} 35^{\prime}$ N.; lon. $145^{\circ} 38^{\prime}$ W. (2.)

Alidu. Sce Aariu.
AliAUCANIA, an independent territory, S. part of Chili, between lat. $37^{\circ} 29^{\prime}$ and $40^{\circ} 18^{\prime}$ S., having the Andes on the E., and the Pacific on the W. Its S. and N. boundaries, however, not being precisely known, are somewhat differently stated by different authorities. Its entire length, taking the limits above assigned to it, is about 200 m .; its breadth from 90 to 180. As it differs little in its physical features, elimate, or productions, from other parts of Chili (which see), this article will be limited to an aceount of its inhabitants, who, though greatly overrated by the Spanish writers, form one of the most remarkable, perhaps, of all the uncivilized or semibarbarous races. With some of the vices eommon to all savage nations, the Araueanians possess many noble qualities. They are generous and humane towards the vanquished, courtcous, hospitable, benevolent, and grateful, enthusiastie lovers of liberty, and ever ready to sacrifice their lives in the service of their country, the independence of which they have successfully maintained for centuries by their indomitable courage, and singular aptitude for war. Seeing the evils of which gold is the cause, the Araucanians, after they had expelled the Spaniards from their country by foree of arms, closed their mines, avowing the most profound contempt for that precious metal, as the source of infamous ernelty, ummanly avariee, and degrading servitude. They are highly susecptihle of mental culture, but despise the restraints of eivilization; all of those who have been educated in the Spanish colonies laving embraeed the first opportunity of resuming the haunts and habits of their nation. They cultivate poctry and rhetorie, and are so desirous of excellence in the latter art, that their boys are brought to their publie assemblies to hear specehes, and to learn to speak in public. Their style of oratory, as might be expected in the case of a semi-barbarous people, is highly figurative and allegorical in imagery and sentiment, and lively, bold, and original. This remarkable race are of ordinary stature, but museular, robust, and well-proportioned. Their complexion is of a clear reddish brown, faces round, eyes animated and expressive, mouth handsome, teeth even and white, with little or no beard, all traces of which, when such appear, are carefully removed, although the hair of the head is assiduously cultivated. Possessed of great strength of constitution, neither the symptoms of decay nor the infirmities of age appear until they are far advanced in life; their sight, teeth, and memory remaining unimpaired till the latest period of their existence. Their most prominent vices are drunkenness, debauchery, and presumption.

The Araucanians have divided their country into four tetrarehies or distriets, corresponding to the natural divisions of the country, namely, the maritime country, the plain country, the foot of the eordilleras and the Andes. Each of these is governed by a toqui or tetrareh, independent of each other in the civil administration of their respective territories, but confederated for the general good of the whole country. Each tetrarehate is divided into nine provinces, commanded by apoulmencs, and these, again, into nine distriets, presided over by ulmenes or prefeets, who are subjeet to the former. All these offices are hereditary in the male line, and the limit of their authority carefully defined. The criminal jurisprudence is very imperfect, and not at all in aecordance with the general intelligence of the people. Justice, when administered at all, is administered in a tumultuous and irregular manner, but is oftener left to the eaprice of individuals, whence arise interminable feuds, and mutual ineursions on each other's possessions, attended by great destruction of property, but without effinsion of blood, as, though a warlike and violent people, they rarely employ arms in their private quarrels. The military government is more rational and better systematized than the civil. They maintain no standing army; but, as every Araucanian is born a soldier, no sooner is war proelaimed than all offer their services, and thus a force of 5000 or 6000 men is quickly in the field. Their army
consists of infantry and horse; the former variously armed with muskets, clubs, pikes, bows and arrows, and slings; the latter with swords and lanees. Their system of fighting is to close with the enemy as soon as they can, which they do with tremendous shouts and yells, and with a fierceness and impetuosity which no ordinary resolution ean withstand. The army is led by a commander-in-chief, appointed by a grand or general council, who selects his subalterns, and is implieitly obeyed by all ranks.

The Araueanians have little commerce of any kind, and all their transactions are conducted by barter. The articles which they usually give in exchange for goods are horses ant horned eattle. In these dealings they always act with perfeet good faith. When a trader from Spanish Chili comes amongst them, the Araueanian takes what he wants, without being required to give at the time the equivalent agreed upon. Sometime afterwards, the trader, having visited all the huts dispersed over the part of the country he is in, intimates that he is about to return, when not one fails to bring to the place appointed, generally the cottage of the chief, whatever he had bargained to give in exchange for the goods he had taken, which consist generally of edge tools, toys, and wine.

Polygamy obtains amongst the Araucanians, and celibacy is considered ignominious. Their marriage ceremonies lave little formality, consisting in little more than carrying off the bride by pretended violence. The women pay great attention to cleanliness in their houses, which are swept several times a day, and all their utensils earefully washed immediately after being nsed. They are equally eleanly in their persons, so are also the men, and all are partial to frequent bathing. Their dress is made of wool. That of the men consists of a shirt, a vest, a pair of short, close breeches, and a cloak ealled a poncho, the whole of a greenish blue, the favourite colour of the nation. In the case of the upper classes, however, the poncho is of varions colours. On their heads they wear a bandage of embroidered wool, which, on going to war, is ornamented with a number of beautiful plumes. The common people go barefooted; persons of rank wear woollen boots of various colours, and leather sandals. The women are modestly and simply attired. Their dress consists of a tunie, a girdle, and a short cloak, fastened in front with a silver buckle. They divide their hair into tresses, which float gracefully over their shoulders. The Araucanians subsist ehiefly on grain, pulse, and potatoes, of the last of which they have cultivated a great variety from time immemorial. They eat but little flesh or fish. Their usual drinks consist of various kinds of beer or cider. They use also great quantities of wine, of which they are extremely fond; but having paid no attention to the raising of vines, they are obliged to purchase it from the Spaniards. Their religion is simple. They aeknowledge a Supreme Being, whom they believe to be attended by some inferior deities, who execute his behests. They believe also in the immortality of the soul, but have some absurd notions regarding the future state. It is somewhat remarkable, however, that they have among them a tradition of a great deluge, in which only a few persons were saved, who took refuge upon a high mountain ealled Thegtheg [the thundering], which had three points, and still, whenever a violent earthquake oceurs, they fly to the mountain in fear that the sea will again return and overwhelm the world. Their funeral ceremonies, which are both numerous and complicated, are striking manifestations of the absurdities in which they believe. Araucania is the subjeet of a laudatory epic poem by Don Alonso de Ereilla, a Spanish poet of the 16th century, entitled Araucana. It comprises 37 cantos or 42,000 verses, and, though not want ing in lofty feeling, is so destitute of animation and of all poctic enthusiasm, and so overloated with proper names, as to have been likened to a newspaper in rhyme. The pop. of Araucania has been estimated at 70,000 .

ARAUCO, a vil. Araneania, near the mouth of the Tueapel, at the head of a bay, $30 \mathrm{~m} . \mathrm{S}$. Coneepcion. It is about 300 yards square ; cnelosed by a wall 12 ft . high, and guarded by towers at two of the angles; and consists of about 50 or 60 louses, arranged in rows.

ARAURE, a city, Venezuela, pleasantly sitnated, l. hank, Aearigua, an affluent of the Portuguesa, 60 m . E.N.E. Trux illo; lat. $9^{\circ} 17^{\prime} \mathrm{N} . ; 10 \mathrm{~m} .69^{\circ} 28^{\prime} \mathrm{W}$. The streets are straight, and the houses well built. It contains a handsome square and church. It is eap. of a well watered, fertile distriet, whieh

## ARAVULLI

191
ARBROATII
rields cotton and coffice, and depastures numerous herds of cattle. Pop. 10,000.

AlAVULLl Mountains, a range of mountains which traverses the territory of Rajpootana, N.W. India, from S.S.W. to N.N.E.; extending from lat. $24^{\circ} 0^{\prime}$ to $28^{\circ} 0^{\prime}$ N., or about 300 m . It nowhere attains any great elevation, the highest summit not excecding 5000 ft . above the level of the sea, but its declivities, especially those to the W., are so extremely stecp as to be nearly inaecessible. The range is composed of rocks of primitive formation, granite, quartz, compact dark-blue slate, gneiss, and sienite. Several kinds of valuable stones are found here, including garnets, rockcrystal, and an inferior sort of emerald. The southern extremity of the chain is united to the Vindhya by a hilly and broken country.

ARAWAN (Er), a tn. Salara, territory of Zawat, 125 m. N. Timbuctoo ; lat. $18^{\circ} 55^{\prime}$ N. ; lon. $3^{\circ} 0^{\prime}$ W. Fifty m. S. from this town is the spot on which Major Laing was murdered, in 1826, on his return from Timbuctoo.

ARAXAS, a tn. Brazil, formerly in prov. Goyaz, but by decree of April 4, 1816, transferred to prov. Minas Geraes. It lics W. of the Matta Corda Mountains, 220 m. S.E. Goyaz, and about 240 m . N.W. Villa Rica; lat. $19^{\circ} 0^{\prime}$ S. ; lon. $48^{\circ} 30^{\prime} \mathrm{W}$. It has a church, townhouse, and prison. The district attached to it has mineral springs in three different localities; and abounds in fine pastures, on which numerous cattle are reared, and land fitted for growing cotton, which is cultivated to some extent. The inlabitants manufacture cotton eloth, and dispose of it in the trading towns of Minas Geracs. Pop. of tn . and dist., the latter extensive, 5000.(Dic. Geo. Imp. Brasil.)

## ARAXES. Sce Aras.

ARBE, an isl. in the Adriatic, Gulf of Quarnero, belonging to Anstria, $11 \frac{1}{2} \mathrm{~m}$. in length ; and, at the broadest part, about the centre, 4 m . across. Some parts of it are mountainous and uninhabited; but it contains several extensive and fertile valleys, which produce corn, olives, wine, and figs, and afford good pasturage for sheep and cattle. Its chief exports are sheep, hogs, horses, hides, wool, fish, and wine. The principal town is on the S.W. side of the island; it is built on a hill, and contains a cathedral and collegiate church. Pop. between 4000 and 5000 .

ARIBEL, Arnil, or Enril [anc. Arbcla], a tn. Asiatic Turkey, in a fertile plain, r. bank, Little Zab, 56 m . S.E. Mosul. It derives its chief interest from the celebrated battle of Arbela, in which Alexander the Great defeated Darius, and decided the fate of Persia, b.c. 331. It subsequently formed part of the dominions of a family of Persian or Arabic princes, and is now the eapital of a sanjak in the Turkish pashalic of Bagdad. It was at one time a large and important city, defended by a strong fortress built upon a conical hill, and capable of containing a large garrison. The town stands on a large mound 60 or 70 ft . high, 900 ft . long, and 600 wide. It is cnclosed by a brick wall with bastions, and contains three large mosques, and two baths. At the foot of the mound is another town, surrounded by a mud wall, and nearly ruined and deserted. Pop. 6000.-(Royal Geo. Jour., vol. viii.)

## ARBIL. See Arbel

ARBIRLOT, a par. Scotland, co. Forfar ; 5050 ac . ; contains a mineral spring, once held in repute. Pop. in 1841, 978.

ARBOE, a par. Ireland, cos. Londonderry and Tyrone; $33,504 \mathrm{ac}$. ; contains an ancieut abbey and ornamented stone cross. Pop. 8005.

ARBOGA, a small tn. Sweden, län of, and 30 m. S.W. Westerås ; beautifully situated on the navigable river Arboga, by which it is intersceted, and near the Arbega Canal, which unites the river with Lake Hielmar. It has two cliurehes and a small library; mineral springs, iron manufactures, boatbuilding, and some coasting trade. It is one of the oldest towns in Sweden; in its vicinity many antiquities are found; and within its walls the Diet frequently sat. Pop. 2013.(Possart, Handbuch für Schweden; Sköldberg, Beslivifning iffer Skandinaviska Halfön.)

ARBOIS [anc. Arbosium], a tn. France, dep. Jura (Franche-Comte), 45 m . S.E. Dijon. The lills around form the sides of a cup, in the centre of which the town is situated. The lower slopes of the hills are covered with gardens, the higher with vineyards, from which wines of great celebrity
are obtained. These wines are gencrally white, and are made from white grapes. They are all good, and are sent far and wide; but there is one surpassing all the rest, called vin de gelée [frost wine], because always made late in autumn, often after the first frosts of winter. The manufactures are chiefly leather and paper. There are here scveral sawmills driven by water, and part of the ground is laid out in nurseries. In the neighbourhood is a good vein of nitre. Pop. 6730.

ARBOLEAS, or Arboledas, a tn. Spain, in Andalusia, prov. of, and 41 m. N.N.E. from Almcria, near the r. bank of the Almanzora, on a declivity, 20 m . from the sea. Its streets are rough and steep. It has a square, a church, town and court-houses, prison, two schools, and a public storehouse. Manufactures:-saltpetre, fine soap, gypsum, linen, counterpanes, and horse-cloths. It exports fruits, horses, and eggs, and imports oil. Pop. 2378.

ARBOLE'TES, a small scaport $t$. New Granada, on the Gulf of Darien; lat. $8^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $76^{\circ} 25^{\prime} \mathrm{W}$. It is described by Alcedo as 'a recess at once beautiful, capacious, and quiet; covered with trees, sheltered from every wind, and irrigated with a small river of delicious water.'

ARBON [anc. Arbor Felix], a small tn. Switzerland, can. Thurgau, cap. circle of same name, S.W. shore, Lake Constance, 7 m . N.N.E. St. Gall ; chiefly remarkable as the site of a Roman fortress, and of the ancient castle of the bishops of Constance. It has printworks, dyeworks, cotton and silk manufactures, and a small port upon the lake. Flax, vines, and fruit trees are cultivated in its neighbourhood, which is picturesque. Pop. of tn. and par., composed almost equally of Protestants and Catholics, 1130.

ARBORFIELD, a par. England, eo. Berks, S.W. Wokingham. Pop. in 1841, 300.

APBROATH, formerly Aberbrotnock, a scaport and manufacturing tn. Scotland, co. Forfar or Angus, at the mouth of a small stream called the Brothock, whence the name of the town; the prefix, Aber (Gaelic), designating the mouth of a river, or its point of junction with the sea; lat. $56^{\circ} 33^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $2^{\circ} 35^{\prime} \mathrm{W}$. (R.) It is 16 m . N.E. Dundee; on the Dundce and Arbroath line of railway, now connected with the railways to the $N$. and S . of Scotland. It consists of one spacious street, about half a mile in length, running N. to S., and a number of smaller, intersecting each other; all well lighted with gas. Many of the sliops are handsomely fitted up, and well stocked. The houses are generally well built, and the whole town las a cleanly and prosperous appearance, but is indifferently supplied witl water. It contains several respectable modern public buildings, including a neat and tasteful tower, called the Signal Tower, for communicating with the celcbrated Bell Rock lighthouse (see Bell Rock), about 12 m . distant. The places of worship are the parish church, with an clegant spire; three Free churches, three United Presbyterian churches, an original Secession, Episcopalian (Scottish), a R. catholic, Wesleyan Methodist, Congregational, and Glassite. There are puhlic reading-rooms in the town, with a well-supported public library, and several excellent scientific, educational, and claritable institutions. The principal manufactures are yarn, spun from flax and hemp; canvas, brown and bleached linen, leather, cast iron, and boncdust. There are 18 spinning-mills, most of them very extensive, and four power-loom factorics. The leather manufacture is very important; and shipbuilding is likewise carried on to a considerable extent. Arbroath is a free port, and owns about 13,000 tons of shipping; being an increase of 5000 tons since 1841.

A new harbour has been erected and completed within the last eight years. It consists of a basin 124 yards long, by 80 broad. At the entrance, which is at the S.W. corner, there are 15 ft . water at spring tides, and 9 or 10 at ncap tides. Though small, it is secure, but of rather difficult access. A small light, of red colour, is shown on the N. picr head, on the starboard side on entering the harbour. It is lighted by the pilots only when vessels are in the bay, in order to show the proper time of the tide for them to enter, and commonly visible 2 or 3 m . off, when the weather is clear. The roadstead lies nearly a mile off the town, and has from 9 to 10 fathoms water. The total revenue of the harbour in 1849 , was $£ 3350$. The exports are trifling compared to the imports; the latter of which consists cliefly of flax, from the Baltic and other places; potashes, vitriol, and manganese, for the bleaching-works; and
coals from Neweastle and Frith of Forth. The number and tonnage of vessels that entered the port in the year ending December 1847, was 726 , tonn. 42,574 ; cleared 241, tonn. 15,920. The town owes its rise, if not its origin, to an important monastic institution planted there in 1178 by William the Lion, who was subsequently interred within its preeinets. It is now in ruins, having been destroyed at the Reformation ; but some imposing and interesting fragments still remain to attest its former grandeur. Arbroath unites with Brechin, Bervie, Forfar, and Montrose, in sending a member to the IIouse of Commons. Here, as at many other places on the E. coast of Scotland, the sea has largely encroached on the land; many gardens and houses having been carried away by it since the commencement of the present zentury. Pop. in 1841, of par. 8707; of th. 7218.-(Correspomient in Arbroath.)

ARBUS, a tn., isl. Sardinia, 34 m . N.W. Cagliari. In the vicinity are lead and silver mines, in which most of the inhabitants are employed. Pop. 2000.

ARBU'TIINO'T, a par. Scotland, co. Kincardine; 9423 ac . Pop. in 1841, 1015.

ARC [anc. Coenus].-1, A river, France, which rises in lat. $43^{\circ} 29^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 40^{\prime} \mathrm{E}$., on the confines of deps. Var and Bouches-du-Rhône. After a W. course of 35 m ., passing not far from Aix, it falls into the Lake of Berre, near the town of this name. The ruins of a loman aqueduct, from the Are to the town of Astramela, still exist at a place called Cap d'CEil.

2, A river, Sardinian States, Savoy, rising at the foot of Mount Iscran, in lat. $45^{\circ} 23^{\prime}$ N.; lon. $7^{\circ} 6^{\prime}$ E. ; thence flowing S.W. to St. Michel ; thence N.N.W. to Aiguebelle, 4 m . below which, after a course of about 70 m ., it joins the Iserre.

ARCACHON, a bay, France, S.W. of dep. Gironde, with a coast line of about 30 m . in extent. At Cape Feret, near the N. entrance of the bay, is a lighthouse 150 ft . above the sea level, and visible 14 m . off. The fishing in the bay is good, and furnishes employment to the inhabitants of the numerous villages which lie along its shore. The largest of these is Fête-de-Buch, to which great additional importance has recently been given by the construction of a railway between it and Bordeaux. The harbour of Arcachon is much frequented, particularly by foreign vessels, which there take in cargoes of resin and pitch, which the neighbouring districts furnish in large abundance.

ARCADIA, a nomos or prov. Greece, of irregular form, in the middle of the Morea; bounded, N. by the nomos of Attica and part of Argolis, E. by Argolis and the Gulf of Nauplia, S. by Laconia, and W. by Messinia and Attica; lat. $37^{\circ} 14^{\prime} \mathrm{N} . ;$ lon. $21^{\circ} 42^{\prime} \mathrm{E}$. (r.) It is divided into the eparchics or dioceses, named, respectively, Gortynia, Mantinea, and Kynuria ; and is mountainous, intersccted by narrow valleys, which are frequently flooded so as to form small lakes and unwholesome inarshes. Much of the province is a table-land, which, in March, is frequently covered with snow. Arcadia is well watered, and produces in abundance, oak, pine, and chestnut trees, and yields excellent pasture for the mmerous flocks, the tending of which forms the chief oceupation of the inhabitants now as in ancient times. Its capital is Tripolitza. Ancadia is also the name of a division of Ancient Greece, of somewhat more circumscribed limits than the modern nomos.

ARCADIA (Gulf or), Greece, Morea, W. coast. It is shallow and open, las Cape Katacolo on tle N., and Cape Konello on the s., distant from each other 35 m .

ARCANGELO (SAN).-1, A tn. Naples, prov. Basilicata, 10 m. W. Tursi, having two churches, a monastery, and 3800 inhabitants.-2, A vil. Papal States, delegation Forli, 7 m . W. by N. Rimini, the birthplace of Clement XIV.

ARCAS.-1, A group of small islets or rocks in the Gulf of Mexico ; lat. $20^{\circ} 12^{\prime} 36^{\prime \prime} \mathrm{N}$. ; lon. $91^{\circ} 59^{\prime} 15^{\prime \prime} \mathrm{W}$. (r.) ; about 100 m . W. the peninsula of Yucatan.-2, A small isl. at the mouth of the Rio Grande, Senegambia, W. Africa; lat. $11^{\circ} 40^{\prime}$ N.; lon. $15^{\circ} 38^{\prime} \mathrm{W}$. ; and nearly in the centre of the river, about 5 or 6 m . distant from either shore.

ARCE, a small tn. Naples, prov. Terra di Lavoro, dist. of, and 11 m . S.S.W. from Sora, cap. can., on a high hill. It has a collegiate and two other churches. Pop. 4340.

ARCHANGEL, or Arkhanghelsk, a gov. Russia in Europe, extending from the Ural Mountains on the E. to Finland on the W., comprising liussian Lapland, a distance of sbout 920 m ., and from Vologda and Olonetz on the S to the

Arctic Ocean, about 400 m . It is thus, including the White Sea, which occupies a large space nearly in its centre, abont 400 m . longer than Great Britain, and more than twice its width, except where the latter is broadest. It comprises, besides, the large island of Nova Zembla, 650 m . long, by 150 m . wide, and several others in the Aretic Sca. Its most E. limit is about lon. $66^{\circ}$ E., and its most W. $29^{\circ} 54^{\prime}$ E. ; its most S. point is in lat. $61^{\circ} 10^{\prime} \mathrm{N}$., and its most N. the extreme point of Nova Zembla, in lat. $76^{\circ} \mathrm{N}$. The entire province is nearly one continuous flat, and nearly, also, an unvaricd scene of desolation and sterility, especially in the N. parts, where the ground remains frozen for nine months in the ycar. Nor are the S . portions much more inviting. Here meagre pastures, marshes, swamps, and extensive forests, occupy nearly all the surface, leaving but little for cultivation. Almost the only crops raised are hemp, flax, and some rye, neither the climate nor soil admitting of the cultivation of oats or wheat. The climate is excessively cold in winter, and oppressively hot in summer, witlı sudden transitions from the two extremes. The small quantity of grain produced being inadequate to the support of the inlabitants, they are compelled to mix their meal with moss, scrapings of the bark of the pine, and grated roots, and of this compound to make their bread. In the N . parts they cannot command even this miserable substitute for the staff of life, but must be content with dried fish. On some parts of the banks of the Dwina, where the pasture is a little more luxuriant than in most other places, some eattle are reared, and their calves sent to St. Pctersburg, where this particular kind of veal is much esteemed. The whole live stock of the country has been estimated at 35,000 horse, 90,000 horned cattle, 100,000 sheep, and 450,000 rein-deer-the domestic aninal of these regions. The timber of the forests is valuable, and forms the principal wealth of the government. Game abounds, and the lakes and rivers are well stocked with fish. Gold is found in this country, particularly in the district of Kola; and in those of Kemi and Pinega, naphtha and saline springs occur, the latter producing annually about 2714 tons of salt. Amber and the pearl oyster are met with on the sloores. The industrial occupations of the thin and widely-scattered population, comprise the weaving of coarse linen, manufacturing cordage, fishing, hunting, shipbuilding, preparing tar, charcoal, and potash, making mats, tanning leather, cutting wood, and floating it down to Archangel. The government is partitioned into eight districts : Archangel, Kemi, Kholmogory, Kola, Mezin, Onega, Pinega, and Scheakoursk. The means of land communication in all parts of the territory are very imperfect; but a great government road was, in 1839-40, constructed along the borders of the White Sea, through Kemi to Torneå, which has since been prolonged to the frontiers of Norway. Pop. in $1846,253,000$, all liussians, with exception of about 7000 Samoicdes, 6000 Syriaencse, and about 1700 or 2000 Laplanders.

ARCHANGEL, a scaport tn. Russia in Europe, cap. of the above government, r. bank, Dwina, 20 m . from its embouchure in the Bay of Arehangel, and 670 m . N.E. St. Petersburg ; lat. (Trinity church) $64^{\circ} 32^{\prime} 1^{\prime \prime} \mathrm{N}$.; lon. $40^{\circ} 33^{\prime} 5^{\prime \prime}$ E. (k.) It stands on a low flat, and extends about 2 m , along the river. It is ill built, and consists of two principal and very irregular strects, connected by narrow lanes and paved with wood. The houses are mostly of wood, and two stories int height; those of the wealthier classes being handsomely and comfortably furnished. The most remarkable buildings in the town are the great bazaar or mart, surrounded by high walls, and the marine hospital. The former is very extensive and wholly of stone. There are 11 churches in the town, 10 Greck and one Protestant, an ecclesiastical seminary with nine professors, a gymnasium, and schools for navigation and engineering. In and near the town there are a sugar refinery, the produce of which is sent mostly to the interior, a royal dockyard, some shipyards for building merchant-ships and coasting vessels, rope-walks, \&c. There are, generally, two or three men-of-war ships on the stocks here, and a body of 5000 or 6000 scamen of the imperial navy stationed in the town and neighbourhood. The harbour is at the island of Sollenbole about 1 m . from the town. The river below the town branches out in several streams, forming islands between. At its mouth there is a bar, with from 12 to $14 \frac{1}{2} \mathrm{ft}$. water on it, so that vessels drawing more than that depth,
must be partially loaded outside from lighters. The Dwina is here about 5 m . broad, and is navigable by small eraft for about 300 m . above Archangel. The produce shipped at the port is brought down the river and its branches, chiefly from the government of Vologda, being floated sometimes for great distances on rafts, or in boats which are afterwards broken up. The trade of Arehangel extends as far as Siberia, and along the coasts of the White Sea, E. and W., but is greatly dependent on the demand from the more southerly parts of

Europe, and especially from England, for corn; accordingly, in the dear years of 1846-7, the quantities shipped were very great, amounting, in the latter, to 33,300 qrs. wheat, 155,258 qrs. rye, 10,430 qrs. barley, and 198,170 qrs. oats. The other exports consist principally of linseed, flax, tow, tallow, trainoil, mats, deals, battens and ends, pitch and tar. The imports chiefly of articles for domestic use, such as coffee, spices, salt, woollens, harlware, \&c. A considerable quantity of sugar also is imported, but mostly for the refinery. There being no factories, materials used in manufactures are not required, nor is there a population to consume foreign articles, which are looked upon as luxuries. The number of vessels eleared in 1846, was 634 , of which 368 were British; the value of their cargoes amounted to $£ 1,063,700$. The coasting traders bring fish, furs, some salt and other commodities from Norway, which are afterwards sent to various inland towns. The trade of Arehangel must always labour under a serious restriction from its high N. latitude, and the consequent severity of its climate, the navigation being interrupted by the freezing of the Uwina for about six months in the year. This is one of the oldest ports in Russia, having been founded in 1584 , and was long the only one. It is the seat of an archbishop, and the residence both of a civil and military governor. Pop. (1849), 13,129.

ARCHANGEL (Bay of), Russia, opens to the White Sca, having Cape Keretzkoi on the N.E., and Cape Onega on the S.W., distant from etch other 85 m ., which is the width of the bay at its entrance ; it penetrates inland about 65 m . 'The centre is in lat. $65^{\circ} \mathrm{N}$. ; lon. $39^{\circ} 10^{\prime} \mathrm{E}$.

ARCHANGEL (New). See Sitka.
ARCHENA, a tn . Spain, prov. of, and 13 m . N.W. from Murcia, on a plain, l. bank, Segura. It is tolerably well built; has a square, a church, townhall, prison, cemetery, and a curious old palace of the Corbera family. The place, however, is chiefly celebrated for its mineral baths, whose waters are impregnated with hydrochlorate of soda, magnesia, and some other substances, and charged with sulphuretted hydrogen gas. Pop. about 2000.

AILCIII, a tw. Naples, prov. Alruzzo Citra, dist. of, and 17 m . W. from Vasto. Pop. 2400.

ARCHIDONA, a tn. Spain, in Andalusia, prov. of, and 34 m . N. from Malaga, built on the S. slope of a lofty and rugged mountain, 10 m . W.N.W. Loga. The principal streets, running E. and W., are level and commodious, but the lanes, which cut them at right angles, are narrow and steep, and
during wet weather the water from the hills above rushes through them like a torrent, cutting up the paving, and leaving large furrows. The houses are good; and there are several chnrches, a medical college, chureh seminary, two primary schools, a large hospital, prison, and the remains of an ancient fort. In the neighbourhood are rich orchards, giving ocenpation to many of the inhabitants; who are also employed in weaving, expressing oil, and curing bacon, which they export in large quantities. Pop. 7610.-(Madoz.)

ARCIIIDONA, a small tn. Ecuador, 124 m. S.E. Quito; lat. $0^{\circ} 25^{\prime} \mathrm{S} . ;$ lon. $77^{\circ} 10^{\prime} \mathrm{W} . ;$ on an affluent of the Napo. The houses are constructed of wood, and thatched. It was nearly destroyed in 1744 by an cruption of the volcano of Cotopaxi, which is distant W. about 100 m .

ARCHIPELAGO, a name which, although neither its origin nor precise signification have been ascertained, is now generally understood to mean a sea interspersed with numerous islands or islets; but formerly applied, more especially, to the islands scattered over the tract of sea (Grecian Archipelago) lying between Greece and Asia Minor, called by the Greeks and Romans the Aigean Sca (which see). The other principal groups of islands to which the term is now applied, are, 1 , The Aleutian Archipelago (sce Aleutian Islands); 2, The Chagos Archipelago (see Ciiagos Islands); 3, Low or Dangerous Archipelago, a cluster of islets, chiefly coral, in the S. Pacific Ocean, E. of the Society Islands, between lat. $14^{\circ}$ and $26^{\circ} \mathrm{S}$., and lon. $130^{\circ}$ and $145^{\circ} \mathrm{W} . ; 4$, Corean Archipelago (sce Corean Islands); 5 , Great Cyclades Archipelago (sce New IIebrides); 6, Laccadive Archipelago (sce Laccadive 1shands); 7, Louisiade Archipelago (see Louisiade Islanis); 8, Caribbean Archipelago (see West Indies); 9, Maldive Archipelago (see Maldive Islands); 10, Queen Adelaide's Archipelago (see Adelaide [Queen] 1shands) ; 11, Archipelago de la Recherehe, a scattered and intricate labyrinth of reefs and islands on the S. coast of W. Australia, between Doubtful Island Bay and Cape Pasley, and between lat. $33^{\circ} 45^{\prime}$ and $34^{\circ} 0^{\prime}$ S.; they are all barren, and the largest only about 4 m . in length; 12, Solomon Archipelago (see Solomon Islands) ; 13, Sooloo Archipelago (sce Sooloo Islanns); 14, Eastern, Indian, Malay, or Asiatic Archipelago (sce article below, namely, Anchirelago Eastern).

ArChipelago (Eastern, Indian, Malay, or AsiaTIC), the various names given to the extensive system of islands in the Pacific Ocean, lying between lat. $11^{\circ} \mathrm{S}$. and $19^{\circ} \mathrm{N}$., and lon. $95^{\circ}$ and $135^{\circ}$ E.; or between Australia S. and the coast of China N., New Guinca E. and Sumatra, including that island, W. It also includes a portion of the Malay Peninsula (which see). The whole archipelago being situated within the tropies, the equinoctial line running nearly through its centre, there is necessarily a general uniformity in climate, in animal and vegatable productions, and in the character of the different races of inhabitants. The islands vary much in external aspect; some being low, and sloping gradually to the water, while others are mountainous, and rise abruptly from unfathomable depths. Many of the smaller coral islands, it has been conjectured, have been reared on the summits of submerged voleanoes. "The grandeur and beauty of the seenery of this great group of islands,' says Captain Ilackwood, 'can lardly be surpassed; while the richness of its productions in the animal and mineral kingdoms is great, and, in the vegetable kingdom nnequalled in beanty, rarity, and value to man.' To this description it may be added, that the scas in this favoured region are singularly transparent, and generally smooth and placid. A prevailing feature of the entire system is the indication of volcanic origin; in some instances apparently recent, while in others lofty peaks are in active combustion. The intensity of the volcanic force in.this region is also remarkable. The noise of the explosions of a volcano in the island of Sumbawa, in 1815, was heard at the distance of 970 m. ; while the ashes it emitted were carried to a distance of 1100 m ., for 300 of which the darkness during the day was as deep as midnight. The minerals include gold, silver, tin, iron, copper, sulphur, and diamonds, the last, however, being confined to Borneo. Most of the islands are eminently beautiful, their soils fertile, and their vegetation of the most luxuriant kind, displaying all the bright colouring of the tropies, particularly yellow and red; while many of them are covered with deep forests of stupendous trees. The most rare and valued spices, and the most exquisite fruits, are amongst the

Irodnetions of this favoured region. The latter inelude bananas, orunges, leınons, shaddocks, ponegranates, pine apples, guava, tamarind, mango, \&c., besides two or three species of delicious fruits peeuliar to the archipelago; the former, the clove, nutmeg, black pepper, ginger, cassia, \&e. The cereals ehicfly eultivated are rice and maize; the latter, however, bcaring but a small proportion comparatively to the first, which forms the staple article of food. A great variety of plants with nutritive roots are also cultivated, including the sweet potato and yam. The latter has been grown in the islands from time immemorial, but is not held in much esteem by the natives, who greatly prefer the sweet potato. The cocoa-nut tree abounds, and is carefully tended by the natives; chiefly for the sake of the oil which they extract from it, and which they use largely in their cookery. The pistachio and several other oil-yielding plants are also extensively cultivated. The sugar-cane, eotton, tobacco, capsicums, onions, and cucuinbers are likewise common articles of culture. The sago-palm abounds. The gnms, of natural production, most abundant, are benzoin, catechu, camphor, and olibannm. The principal branches of manufacture practised by the islanders are weaving cotton and silk fabries, which is entirely conducted by females; cloth-dyeing and painting; working gold, silver, iron, and other metals; joinery, boatbuilding, and making salt, saltpetre, and gnnpowder.

The inhabitants consist of two distinct aboriginal races, Malay and Papuan; the one brown-complexioned, with lank hair; the other black or sooty coloured, with woolly bair. Further particulars respecting these races and their offishoots, will be fomd in the articles Borneo, Java, and Papua. The principal islands in the archipelago are Sumatra, Borneo, Java, Celcbes, the Moluceas, Luzon, Mindanao, the Sooloes, Timor, Flores, New Guinea, Palawan, Banea, Lombok, \&c. (all of which sce under their respective names.)

ARCIIUDI, or Arkudi, one of the smallest of the Ionian Islands, 4 m . N.N.E. the most N. point of lthaea; lat. $38^{\circ} 37^{\prime}$ N.; lon. $20^{\circ} 42^{\prime}$ E.; 2 m . in lerigth, from N. to S.

AliCIDOSSO, a tr. and com. Italy, in Tuscany, prov. Grosseta, 8 m . W. by N. Radicofani. It has a square, three churches, and a palaee of the Counts of Aldobrandeschi. The commune is well watered; yields grain, grapes, and olives, and good pasture. Pop. 4999.-(Dizio. Univ. Italia.)

ARCIS-sur-Aube [anc. Artiaca], a tı. Franee, dep. Aube (Champagne), l. bank, Aube, 17 m . N. Troyes. It was originally built of wood, but two conflagrations, in 1720 and 1727, having laid the greater part of it in ashes, it was rebuilt in a more substantial form, and is now a tolerably handsome town, with wide streets, well laid out. From its central position it seems well fitted for trade; and is the natural entrepot, on the one hand, for the grain of the surrounding districts, the timber of Upper Aube and the forest of Orient, the minerals of the Vosges, and the exports from Switzerland, for all of which it has a navigable ontlet by the Aube and the Seine as far as Paris; while, on the other hand, the same channel enables it to bring back all the commodities which these exporting districts import in return. The manufactures of Areis are not of much importance. The chief of them are cotton thread, which employs seven mills, and hosiery, which employs 2000 stocking-looms. During the eampaign of 1814, Areis was the theatre of a fierce struggle between Napoleon and the allies, when a third of it was laid in ruins. G. Danton, the triumvir of the first revolution, was born at Arcis. Pop. 2665.

ARCO, or Ancri, a small tn. Austria, in Tyrol, in a beantiful valley, on the Sarca, 7 m . N.W. Roveredo, and $3 \mathrm{~m} . \mathrm{N}$. Lake Guarda. It has a richly ornamented parish chureh; and on a height inmediately belind stands the old palace of the Earls of Arco, built in 1175. The district around is healthy, and one of the finest in the Tyrol. The inhabitants, about 2000, are chiefly engaged in spimning silk, extracting olive oil, and quarrying marble in the vicinity.

ARCOLE , a vil. Austrian Lombardy, 15 m . S.F. Verona, 1. bank, Alpone; celebrated for the battles of Nov. 15, 16, and 17, 1796, fought between the French, under Bonaparte, and the Austrians, in which the latter were defeated with great slaugliter. Fop. 900.

## ARCONA. See Arkona.

ARCOS de la fhonteha [ane. Arci-colonia], a city, Spain, in Andalusia, prov. of, and 30 m . E. by N. from Cadiz, r. bank,

Guadalete, which is here crossed by a stone bridge. The sandstone rock on which the town, in form of a bow, is placed, rises 570 ft . above the level of the river, by whieh it is washed on three sides. The houses are mean-looking; the streets paved, but generally steep and narrow ; and the ancient walls and defences are in a ruinous state. On the lighest part of the rock stands the castle of the Dukes of Areos, almost forsaken, and partly in ruins. The fine Gothic façade of one of the two parish charches oceupies one side of Constitution Place or Square; on other two sides are the theatre and the chapter-houses-medieval buildings; and the fourth side, which is only enclosed by an iron railing, overlooks the perpendicular S. side of the rock, and affords a fine view of the richly eultivated valley of the Guadalete, and of the hill country of Me-dina-Sidonia. There are, besides, in Areos, a townhall, prison, abattoir, granary, two general hospitals, a poorhonse and foundling lospital, a patriotic society (de amigos del pais), several primary schools, and, outside the town, two badly-kept cemeteries. The principal manufacture carried on is that of leather, esteemed the best made in Andalusia; but there are also manufactures of thread, sombreros, and cordage of agave, of esparto, and of hair. The vicinity is rich in wheat, barley, grapes, olives, legumes, and fruits of all kinds; a few sheep are reared, and the bulls and horses are fanied for their vigour and their majestic appearance. Pop. 11,272.-(Madoz; Willkomm's Spanien.)

ARCOS de val de vez, a tn. Portugal, prov. Minho, dist. Ponte do Lima, in a hilly but fertile territory on the Vez, 19 m. N. Braga. It has a monastery, two churches, and a poorhouse. Pop. 1640.—Several other small places and parishes in Portugal lave the name Arcos.

ARCO'T, a dist., S. Il indoostan, in the Carnatie, presideney Madras, consisting of two smaller divisions, called N. and S. Areot, respectively, comprehending an area of $12,700 \mathrm{kq} . \mathrm{m}$. The N. division is bounded, N. by Cuddapah and Nellore, $\mathbf{E}$. by Chingleput and the Bay of Bengal, S. by S. Areot, and W. by the Balaghaut of Cnddapah. The S . division is bounded, N. by N. Areot, E. by Chingleput and the Bay of Bengal, S. by Tanjore and Triehinopoly, and W. by Salem and the Balaghaut Camatic. The surface of the country in the N. parts is mountainous, but in the S . and E., near the sea, it is more level, and better adapted for cultivation. The lands tliroughout both distriets are for the most part held by small proprietary cultivators, either in severalty, or in joint village communities. Irrigation is effected by means of artificial watercourses, wells, and tanks. The cotton manufactures of these districts have been nearly annihilated by British eompetition, but a little still contimues to be done at Pullicat, a place once so famous for its cotton stuffs, as to give name to a partienlar and well-known description of muslin. The prineipal trading ports are Cuddalore, Pondicherry, and Portonovo. Arcot was ceded, in 1801, to the East Ludia Company ly Azim ul Omrah, nabob of the Carnatic, and lias since been greatly improved in every respect. Pop. of both districts (1851), 1,485,873.

ARCOT, or Arucati, a city, S. Ilindoostan, Mahometan cap. of the Carnatie, r. bank, Palaur, 70 m . W. by S. Madras ; lat. (fort) $12^{\circ} 54^{\prime} 14^{\prime \prime} \mathrm{N}$. ; lon. $79^{\circ} 22^{\prime} 23^{\prime \prime}$ E. (1.) It was first established as capital of the Carnatie in 1716. In 1749, it was taken by Chunda Saheb, who favoured the French interests, and, in 1751, a few compranies of British and sepoys, under Clive, took possession of the place, which had been evacuated by the natives, and for 50 days suecessfully defended it against a much superior force. It afterwards changed hands more than once, and ultinately, in 1801, along with the whole district, was ceded to the East India Company. The town, which is inhalited chiefly by Mahometans, is of modern erection, enclosed by walls, and contains a few bnildings worthy of notice. The palace of the nabob is a heap of ruins, with the exception of the principal gateway, which is still entire. The Jumma Musjed is a handsome mosque, with seven arches in frout, and two rather elegant minarets. There are several other religious edifices of tolerable architecture, and numerous tombs, of which that of saadnt Oolla alone is remarkable. The fort of Areot was an extensive structure, but the greater part of it has been demolished, and the space it oceupied is covered with scattered ruins, and patches of raghy and the castor-oil plant. On the side next the river, whose channel, though half a mile wide, is, during
the hot season nearly dry, the ramparts are kept in good repair, and form the only defence of the town against the periodical inundations. Pop., tn. and its dist. (1851), 53, 474.

ARCTIC HIGHLANDS, a country situated in the N.E. part of Baffin's Bay, on the W. coast of Greenland, between lat $76^{\circ}$ and $77^{\circ} 40^{\prime}$ N., and lon. $62^{\circ} 20^{\prime}$ and $74^{\circ} 20^{\prime} \mathrm{W}$., diseovered by Captain Ross in 1818 , who gave it the name it now bears. The coast trends S.E. and N.W., extending 110 m . On the N. and E., lills are seen rising to the height of upwards of 1000 ft ., covered with ice, and separated ly ravines filled with snow. The coast also is ice-bound, and it is only about the bases of the roeks, chiefly granite and gneiss, elose by the sea, that a stunted and scanty vegetation is to be seen. In the interior nothing is found growing but moss and lichens, a thin wiry sort of grass, and furze. The animals are hares, foxes, white bears, and rein-deer. The shores and neighbouring seas are frequented by seals, sea-horses, and whales. The inhabitants are Esquimaux, and have a close resemblance to the Greenlanders, but have rather larger faces. They are clothed in the same way, with sealskins, have the same manners and customs, and speak a dialect of the same language. They are a gentle and inoffensive people, and so simple and ignorant, that, when first visited by Captain Ross, they believed themselves to be the only human beings in the world, and that, beyond their own country, there was nothing but ice. Their sledges are drawn by dogs, whose flesh serves them for food in winter, when the iee prevents them obtaining the marine animals, aquatie fowls, and other produce of the sea, on which they subsist during the summer. They construet sledges, but have no canoes, and their knives consist chiefly of pieces of sharpened ironstone.

ARCTIC OCE $A N$, in its widest sense, is that portion of the N. Sea which extends from the arctic cirele (lat $66^{\circ} 30^{\prime}$ N.) to the N. pole, but more restrictedly from about the 70th degree of N. lat. Assuming the former limit, the Aretic Ocean is found entering deeply, in the form of gulfs, bays, \&e., into the N. parts of the continents of Farope, Asia, and America. The principal of these indentations are the White Sea, in Europe; Sea of Kara, Gulfs of Obé and Yenisei, in Siberia; and Baffin's Bay, in N. America. It is united to the l'acific liy Behring's Strait, and to the Atlantic by a wide sea, extending from (ireenland on the W. to Norway and Lapland on the E. This portion of the Aretic Ocean contains one of the largest arehipelagos on the globe. The middle of it is oecupied by Greenland, and on the E. is the extensive group of islands known under the name of Spitzbergen, the small island of Jan Mayen, and Iceland. West of Greenland, and divided from it by Davis's Strait and Baffin's Bay, there are a considerable number of islands of great size, with which we are yet but imperfectly aequainted. The regions embraced by the more restricted limits of the Arctic Ocean, namely, from lat. $70^{\circ} \mathrm{N}$., are the most dreary and dismal on the face of the globe. Their shores are covered with eternal snows, and the entire surface of their seas with large ficlds and huge masses of floating ice, in perpetual motion, and whose constant and tremendous collisions are attended with the most appalling sounds. Dense fogs, violent storms, and endless nights, add to the horrors of the seene. In the region of Spitzbergen, the sun is not seen for several months in the year, and the thermometer rarely rises above $45^{\circ}$ Fah.; while there is but one month in the year-July, in which snow does not fall. The only, or at least the greatest degree of light, the inhabitants enjoy during their long winters, or from the latter end of September to the beginning of May, is that which proceeds from the snow-blink, the aurora, the moon, and the stars. The Aretic Ocean freezes even in summer; and during the eight winter months a continuous body of ice extends in every dircetion from the pole, filling the area of a cirele of between 3000 and 4000 m . in diameter. Some of the masses of iee that line the shores of this ocean, extend many miles in length, and present sea-fronts of 200 ft . in height; while fields of ice, 20 or 30 m . in diameter, and from 10 to 40 ft . in thickness, are frequent, and sometimes extend over 100 m ., so closely packed together that no opening is left between them. They are also often found to have a violent rotatory motion, by which they are dashed against one another with tremendous foree. The icelergs, of which vast numbers are seen floating about, vary from a few yards to miles in circumference, and rise to many hundreds of feet in height. The ice in these
regio.s is very transparent and compact, and remarkable for the variety and beauty of its tints, the most prevailing of which are blue, green, and orange. The water of the Arctie Ocean is extremely pure, shells being distinetly visible at a depth of 80 fathoms; it also presents rapid transitions of colour, ehiefly from ultramarine to olive green, the latter produced by the presence of inyriads of marine animals. It exhibits equally sudden changes from purity to opacity. The pressure of its water, at a depth of $1 \frac{1}{4} \mathrm{~m}$., was found to be 2809 lbs . on a square inch of surface.

The history of adventure in the Arctie seas presents a striking disproportion between effort and aelievement. All that human daring can do has been done to open up the mysteries of these dreary regions, but hitherto without any good practical result. The first attempt to explore the polar seas was made in 1553 , by Willoughby and Chancellor, who were sent out with instruetions to ascertain if there was a N.E. passage, or if they could reach China by passing to the $N$. of Europe and Asia. Willoughby reached Nova Zembla, but he and all his erew were frozen to death. Chancellor entered the White Sea, and thus opened a eommunication with Russia. Capt. Cook reached Iey Cape, from the Pacifie, in 1778. In 1607, Capt. Hudson was sent out to attempt to discover the N.W. passage, and reaehed the latitude of $81^{\circ}$, but was under the necessity of putting back on account of ice. In 1773, this experiment was again tried by an expedition ander the command of Capt. Plipps, who advanced about as far as Capt. Hudson had previously done; and a similar attempt was male in 1818, which proved equally unfortunate, under Capt. Buchan. In 1827, Capt. Parry was sent out to reaeh the Pole in boats and sledges over the ice, and he attained about $82^{\circ} 40^{\prime}$, the highest latitude yet reached in these seas, and was obliged to return by the motion of the fields of iee to the south. In 1818, Capt. Ross attempted a N.W. passage, and passed tirrough Laneaster Sound. In 1819. Capt. Parry reached lon. $110^{\circ} \mathrm{W}$.; and in 1821-23, examined the coast to the N. of Inudson's Bay; in 1824, he reached Prince legeut's Inlet. In 1826, Capt. Franklin was sent overland to explore the N. coast of America, to the W. of Mackenzie Liver; and at the same time Capt. Beechy was despatched to meet him in Behring's Strait. The two expeditions approaehed each other to within a distance of 146 m ., but returned without meeting. In 1829-33, Capt. Ross sailed up Prince Regent's Inlet. In 1845 Sir John Franklin sailed with the Erebus and Terror in search of the longdesiderated N.W. passage. Notidings of this expeditionhaving reached this country in 1848, numerous searching expeditions were sent out at intervals up till 1853, under Sir John Richardson, Dr. Rae, Sir James Ross, Sir John Ross, Capts, Kellet, Austin, Penny, Maelure, Collinson, Sir E. Beleher, Dr. Kane, \&c., the last of whiel returned in the close of 1855 , without having discovered any traces of the missing vessels. Dr. Rae, however, in the spring of 1854 , ascertained that, in 1850 , a party of white men-proved, by relics obtained from the Esquimaux, to have belonged to Sir J. Franklin's expedition, and most probably including Sir John himself-had died of starvation near Point Ogle, at the mouth of the Great Fish River. Though these expeditions were thus fruitless in the main purpose for which they were sent out, they have added largely to our knowledge of the inhospitable regions which they visited; and Clapt. Maclure, who entered the Aretic Ocean by Behring's strait, returned to this country, in 1854, by Laneaster Sound, having thus solved the geographical problem of the existenee of a N.W. passage. Among the numerous islands of the Aretic Ocean, there are doubtless several water-ways connecting the Atlantic and the Pacifie oeeans, but navigation in all of them being impeded by ice, none of them is ever likely to become of commereial importance.

ARCUEIL [anc. Ansheilum, Arcolium], a vil. France, dep. Seine, about 4 m. S. Paris, on the Bierre, from whieh a magnificent aqueduct, built by Mary de Medicis, in 1624, conveys water to supply the fountains of Paris. Areucil is one of the greatest holiday resorts of the Parisians. It has a cotton-mill, a print-work for calicoes, and numerous bleachfields. P. 1910.

AliCY.sur-cure, a vil. France, dep. Fonne (Burgundy), 17 m. S.S.E. Auxerre, and famous for its grottoes. These are found in a limestone rock; consist of a series of caverns opening into each other, and sometimes even standing in
sucecssion over each other, and abounding with columns and other curious forms of stalactite. The numerous concretions in course of formation are constantly diminishing the extent of the grottoes, and it has been ealculated that two eenturies will suffice to choke them up, and convert them into fine quarrics of alabaster. Pop. 1495.

ARD (Locn), a beautiful lake, Scotland, co. Perth. It consists properly of two sheets of water, ealled, respectively, Upper and Lower Loch Ard. The former is about 3 m . long, and three quarters of a mile broad ; the latter somewhat less than 1 m . in length, and about a quarter of a mile in width. Its peculiar eharacteristics are peacefulness and seclusion. The E. extremity of the lake is about a quarter of a mile W. Aberfoil.

## ARDABIL. Sce Ardebeel.

ARDAGII, an ancient and decayed vil. and par. Ireland, co. Longford, $2 \frac{1}{2} \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. Edgeworthstown, and $6 \frac{1}{2} \mathrm{~m}$. S.E. Longford. It was at one time a place of considerable importance, but is now a mere hamlet. There is here a chureh, a plain commodious building, with a square tower; and close by are the ruins of the old eathedral, which seems to lave been a small structure, rudely bult of fragments of rock. The place derives its name from its elevated situation, and its origin has been ascribed to the fifth century, when its church was founded. Pop. of vil. 165 ; of entire par. 4524. Area of par. 11,417 ae.-ARDAGH is the name of another village, of other four parishes, and of a barony, in Ireland:-1, A par. barony of Imokilly, co. Cork; arca, 7880 ac. Pop. 2552.-2, $\Lambda$ par., co. Limerick, partly in the barony of Glenquin, and partly in that of Shanid; area, 9030 ac. Pop. 2223. In this par. is the vil. above alluded to ; it consists of one long irregular strect, in a ruinous condition. Three fairs, however, are held in it annually, in May, August, and November, chiefly for cattle, pigs, and pedlary.-3, A par., co. Mayo, barony Tirawley; area, 5494 ac. Pop. 2621.-4, A par., co. Meath, partly in the barony of Morgallion, and partly in that of Slane Lower; area, 3669 ac. Pop. 2518.-5, $\Lambda$ barony, co. Longford; area, 40,223 ac. Pop. $19,917$.

ARDALEN, a tn. Spain, in Andalusia, prov. of, and 31 m. N.W. Malaga, on an elevated plain. It is tolerally well built, but has uneven and badly-paved strects. It has a church, two schools, a townhall, and a prison. Pop. 2900.

ARDAMINE, a par. Ireland, co. Wexford; 4215 ac . contains a large and ancient tumulus, called the 'Moat of Ardeminc.' Pop. 1705.

ARDATOW, two towns, Russia in Europe:-1, A tn., cap. dist. of same name, on the Lemet, gov. of, and 80 m . S.W. Nijnci-Novgorod. It lias a churelı and courthouses. The inhabitants, about 600, are mostly labourers, many being employed in the neighbouring iron-works.-2, A tu., cap. dist. of aame name, on the Alatyr, gov. of, and $98 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Simbirsk. It has two eliurehes. Pop. about 1400.

ARDBRACCAN, a vil. and par. Ireland, co. Meath, $2 \frac{1}{2} \mathrm{~m}$. W. Navan, and formerly a bishop's sce. It has a very fine parisl clureh and Episcopal palaec, with two parochial schools. Pop. in 1841, 4596, partly employed in agriculture, partly in linen and cotton-weaving.

ARDCANDRIES, or AndCANDRIsk, a par. Ireland, co. Wexford; 1227 ac. Pop. 286.

ARDCANNY, a par. Ireland, co. Limerick; 3100 ac. Pop. 1283.

ARDCARNE, a par. Ireland, eo. Roseommon, shores of Lough Key ; 19,963 ac. ; abounds in limestone and freestone. 1'op. 8304

ARDCATH, a par. Ireland, eo. Meath; 4380 ac. Pop. 1481.

ARDCAVAN, a par. Ireland, co. Wexford; 2458 ac. Pop. 947.

ARDCIIATTAN, a dist., co. Argyle, Scotland, consisting of the united parishes of Ardchattan and Muckairn, together 30 m . in length, and from 15 to 20 m . in breadth. The surface is mountainous, and intersected with numerous streams abounding in tront. $\Lambda$ great part of it is covered with wood. Game is plentiful, and red deer numerous. The cultivated parts yield abundant crops of oats, barley, and potatocs. Some remains still exist of the ancient priory of Ardchattan, built in the 13th century, where it is said Robert Pruce held a parliament, in which the discussions were conducted in the Gaelic language. Pop. of par. (1841), 1461.

ARDCLARE, a par. Ireland, co. Roscommon; 8344 ac. Pop. 2555.

AlidCLINIS, a par. Ireland, co. Antrim; 15,692 ac. ; contains much romantic seenery. Pop. 1742.

ARDCOLLUM, or Andcolse, a par. Ireland, co. Wex ford; 2232 ac. Pop. 804.

A RDCLONEY, a par. Ireland, co. Tipperary ; 6429 ac. l'op. in 1841, 1571.

ARDEBEE1, Ardabile, Arnebyl, or Ernebil, a tn. Persia, prov. Azerbijan, on the Karasu, 100 m . E. Tabrecz, and 40 m. W. the Caspian Sea; lat. $38^{\circ} 14^{\prime}$ N.; lon. $48^{\circ} 21^{\prime} 55^{\prime \prime}$ E. (c.) It lies near the S. side of the great plain of Ardebeel, which is about 40 m . long by 40 broad, and 5000 ft . above the sea level; in great part uncultivated, and sparingly inhabited. The town, built from the ruins of a former eity, is surrounded by a ruinous mud wall, flanked lyy towers in a like state of decay. The houses are mean and small, built of mud or sun-dried bricks, will flat roofs. The fort is a regular square, constructed aceording to the European system of fortification. The only objects of interest in the town are the tombs of Sheikh Sufice, Sultan Kyder, and Shalı Ismacl, forming a collection of domes and ollong squares, once richly adorned with laequered tiles. There are no gardens round Ardebeel, the strong N.E. winds from the Caspian being very prejudicial to certain kinds of vegetation, especially fruit-trees. The climate is cold, and not considered healthy; yet in many localities around, more especially on the banks of the Karasu, abundant crops of rice, wheat, and barley are raised. Frascr gives the pop. at 500 or 600 families; Torld, who visited the place in 1837 , found it in a most ruinous condition, in consequence of a visitation of the plague, and mueh reduced in population.-(Frascr's Travels on the Shores of the Caspian; U'Arey Todd, Itinerary from Talrecz to Teheran, in Jour. Roy. Gco. Soc., vol. viii.)

ARDECIIE, a dep. France, deriving its name from a river which rises within it, and, with exception of a single canton, the very same as the old division of Vivarais in Langucdoc. Boundarics, N., departments Loire and Isere; W., Loire, Maute-Loire, and Lozère; S., Gard; E., the Rhone, separating it from Drome, Isere, and a small corner in the N.W. of Vaueluse; between lat. $44^{\circ} 14^{\prime}$ and $45^{\circ} 22^{\prime} \mathrm{N}$. ; and lon. $3^{\circ} 50^{\prime}$ and $4^{\circ} 50^{\prime} \mathrm{E} . \quad$ Greatest length, N. to $\mathrm{S} ., 80 \mathrm{~m}$.; greatest breadth, E. to W., 45 m . Area, 538,988 hectares, nearly equal to 2110 sq . m., or $1,350,000 \mathrm{ac}$., of which about 330,000 are arable, 110,000 meadow and pasture, 220,000 woodland, 70,000 vineyards, orehards, and garden ground, and about 400,000 swamps and moorland wastes. The whole department is of a mountainous claraeter. Mount Mezenc, in the W., the highest in the department, forms a central point for several mountain-chains, particularly that of the Cevennes, which send ramifications into the N.W. and S., forming, in the N. the mountains of Bouticres, in the W. the mountains of Coiron, and in the S . the mountains of Tanarguc. In the W. the mountains have usually a nuelcus of granite, and are overlaid by liuge masses, evidently of voleanie origin. In the E., and along the course of the Rhone, calearcous rocks predominate. Throughout the department numerous volcanoes must have been in active operation at no very remote geological period. Several of the craters still exhale mephitic vapours, and the warm springs issue from their sides. Many of these mountains exhibit ranges of basaltic columns, of great magnificence. The most important of the numerous streams are the Ardeche, the Erienx, and the Doux. They have all an E. course, and belong to the basin of the Rhone. The Loire, however, rises in the department, and continues within it for the first 15 m . of its course, but it is only as a moun-tain-torrent. Among the mountains various metals have been fonnd; silver (a mine of which gives its name to the town of Argentiere, and was at one time worked), antimony, several mines of lead, and, more valuable than all, iron, which is now extensively wrought in the E. of the department, near La Voulte; and, in connection with the limestone and valuable coal-field of Ardeche, supplies blast furnaces and forges, which rank as the most important works of the kind in France. The prevalenee of basalt makes it the chicf building stone of the district; but the calcareous roeks contain good marble, which is extensively quarried. At one time the whole of the $W$. district was covered with vast forests. Though now greatly redueed, they are still large,
and furnish mueh timber, chiefly of pine and beech. But the most common, and at the same time tho most valuable tree, is the Spanish chestnut, which covers extensive tracts, and yields excellent chestnuts, known in commerce as the chestnuts of Lyons. The annual produee is estimated at 400,000 bushels, of which one half are consumed within the department as food, and the other half either employed there in feeding vast numbers of swine, or exported. The hazel and walnut also cover considerable tracts, and furnish a good deal of oil. In the S . both the fig and the olive thrive; and the whole departinent abounds with mulberry trees, which supply food for silkworms, the rearing of whieh is earried on to a great extent, and ought, perhaps, to be regarded as the staple of the distriet. The vineyards are numerous, and a Iarge quantity of wine is produced; some of it, partieularly that of Limony, St. Joseph, Cornas, and St. Peray, being in great request, and well known over all Europe. Agriculture has its ehief seat in the S., in the extensive valley of Ardeche, and in the N. in the valley of Erieux. There all the ordinary grain and pulse crops are abundant. Nlong the valley of the Rhone are rich pastures, eovered with eattle and sheep. Horses, mules, and asses are not numerons, and the breed generally are of an inferior deseription. Much attention is paid to the rearing of bees. In addition to the different kinds of industry already mentioned, notice seems the to the tileworks of Theil, the ferret-silk of Vans, the figured vests of Montpezat, the worsted covers of Burzet, the blonde silk, glove-leather, and far-famed paper of Annonay. The inhabitants of Ardeche are frugal and industrious, sober, of striet morals, and strongly attaehed to their homes and families. One of the worst blots on the reign of Louis XIV., is the relentless persceution to which the fine peasantry on the $S$. frontier of this department, amongst whom Protestantism had taken deep root, were subjected on the revoeation of the Edict of Nantes. Ardeche is divided into three arrondissements, which are again subtivided into 31 cantons. Pop. 365,000 . -(Dict. de la France.)

ARDECHE, a river, Franee, largest stream in the dep. to which it gives its name. Its souree is at a place ealled Cap-d'Ardeehe, among the mountains of Cevennes. It first flows E., then, turning abruptly S., pursues a winding eourse to St. Alban, where it receives the Beaume from the N.W., and shortly after from the W. the Chasseanx, the largest of all its tributaries. Now become an important river, it proceeds E.S.E., and, after a course of 45 m ., falls into the Rhone rather more than a mile from Pont St. Esprit. It is properly navigable for only 5 m . from its month; but for a much greater length admits of the floating of timber and firewood, which are sent down in large quantities from the forests of st. Remeze. Nothing ean exeeed the magnifieenee of the seenery on the Ardeche, in the earlier part of its eourse. In one part, where a current of lava had flowed down from a neighbouring crater into its bed, it has eut a passage for itself over one side, laying bare majestie columns of basalt, which extend, with few intarruptions, for $1 \frac{1}{2} \mathrm{~m}$. below. In another part it plunges over a precipice, ealled Ray-Pie, which is almost perpendieular, and is above 100 ft . high. Below this cataraet is the bridge of Arc, justly regarded as one of the most remarkable natural enriosities in France. It lies $2 \mathrm{~m} . \mathrm{S}$. Vallon, about 11 m . above the confluence of the Ardeche with the Rhone, and consists of a natural arch of grayish limestone, 40 ft . tlick, running across the river, and forming a kind of vault 90 ft . ligh, and 180 ft . wide, through whieh it passes. Near the bridge are several stalactite eaves, which were often resorted to for eoncealment during the eivil wars of France.

ARDEE, a market tn., barony, and par. Ireland, co. Loutll. The Town is pleasantly situated on the small river Dee, in a fertile corn distriet, 36 m . N.N. W. Dublin. It eonsists of one prineipal street, with several lanes branehing off; and has some good houses, with many wretehed cabins. It was formerly a walled town, and still has a castle, now used as the courthouse, to whieh is attached the county jail. In the centre of the town is another old castle, now eoriverted into a dwelling-house. The spacious parish ehureh, still in good condition, was formerly the clureh of an Augustine monastery. In the town there are likewise a R. catholic chapel, eorn-market, two charity sehools, a savings'-bank, a union workhouse (opened in May 1842), and a eonstabulary barracks. Malting is extensively carried on, and a consider-
able quantity of corn is sold at the weekly market, held on Tuesday. Pop. of tn. 3679 -The banony is about $11 \frac{1}{2} \mathrm{~m}$. in length; breadth 7 m. ; area, $53,832 \mathrm{ac}$. Annual valuation under the Poor-law Act, $£ 55,796,138$. Pop. 28,704.——Area of parisil, 4885 ac. Pop. 6392.-There is also a sinall par. called Ambee, Ampiee, or Little Ainieee, in the co. Kildare. Area, 333 ac. Pop. 205.

ARDEKU, Amekoo, or Andekan, a tn. Persia, prov. Khorassan, two days' journey N.W. Yezd. It has 1000 houses, a good hazaar, which owes much of its prosperity to the manufactures of the place; for here are woven the eloth used for the tents of the royal household, and carpets, eheeked with blue and yellow.

ARDELAN, a prov. Persia, forming the E. portion of Kurdistan ; bounded, N. by Azerbijan, S. by Laristan, W. by Asiatic Turkey, and E. by Irak; about 207 m . long, N. to S., by about 130 to 150 m . wide, E. to W. Its eapital. as well as of all Kurtistan, is Senna, where resides the Wallee or governor, a Kurdish chief, paying tribute to Persia, but in reality ahmost independent, and possessing the power of life and deatlo over his subjeets. The province is divided into two distriets, the N. or Ardelan proper, and the S., named Kermanshal from its local capital. Both districts are mostly composed of high lands; and the elimate is so severe, that it is only in June, July, and August, that the flocks can remain in the summer stations. The villages in the narrow valleys are few and sparingly peopled; the inhabitants being ehiefly nomadic. Little agrieulture is earried on, the mainstay being the rearing of sheep, liorned eattle, and horses, the last of which are famed for their beauty, speed, and power of enduring fatigne. The woods yield exeellent oak and fine gall apples, the latter of which are exported ehiefly to India. -(Ritter's Asien; Chesucy's Euphrates Expedition.)

AIDDENNES, a frontier dep., N. France, deriving its name from the ancient forest of Ardennes, which traverses the N. division, cap. Mezieres ; bounded, N. and N.E. by Belgium, E. by dep. Mense, S. by Marme, and W. by Aisne; length about $65 \mathrm{~m} . \mathrm{N}$. to S. ; breadth 57 m. E. to W. ; area, 517,385 hectares, or about $1955 \mathrm{sq} . \mathrm{m}$. A ridge of the Fauciles mountains, a braneh of the Vosges chain, running in a direetion from S.E. to N.W., divides the dep. into two parts, the one belonging to the basin of the Meuse, and the other to that of the Seine. The principal rivers are the Aisne and the Meuse, both navigable, and conneeted by the Canal of Ardennes and the Bar river. The soil is not all equally fertile. Some of the plains in the S.W. are naked and aricl, while the distriets in the N . are traversed by mountains covered with wood and heath, the forests oceupying more than one-fifth part of the whole area. Of arable land there are $785,550 \mathrm{ac}$.; meadows, $120,475 \mathrm{ac}$.; vineyards, $43,810 \mathrm{ac}$.; orehards, nursery-grounds, and gardens, 24,500 ac.; heath and barren land, 27,050 ae. In the central valleys, which are extensive and fertile, eorn is grown, partieularly in the valley of the Aisne, one of the finest eorn districts in France. But though the quantity of grain produced is greater than formerly, it is not equal to the consumption of the department. The vine is eultivated only in the S . distriets, espeeially around Rethel, Sédan, and Vouziers. The pastures are excellent; the domestic animals, thongh strong, generally small; and the cows give but little milk. The sheep, of whieh there are large flocks, afford excellent mutton, and yield wool of a fine quality. The department abounds in game ; particularly roebueks, wild boars, hares, and rabbits.

The inhabitants are, in general, industrious, intelligent, and enterprising, though somewhat unpolished in their manners. Mining and manufacturing operations are carried on by them with great aetivity; the extensive forests supplying fuel in abundance for forges and factories. The minerals of the department consist of iron, lead, calamine, and some coal, with marble, freestone, limestone, and slate of excellent quality, of which there are extensive quarries at Fumay and other places; also potter's elay, and sand for the manufacture of glass. Iron-works are numerous, and yield annmally upwards of 400 tons of bar, and upwards of 560 tons of east iron. Chief manufaetures:-fine eloth, and other woollen stuffs at Sédan and Rethel ; eutlery, ironware, nails, fire arms, and soap, at Charleville; leather, glass, and earthenware, at Montherme; with hosiery, hats, serges, eopper, brass, and poreclain, at various plaees. Nail-making is likewise carried on to a
considerable extent, employing upwards of 6000 persons. Trade is earried on in the agrieultural and manufactured products of the department ; the Meuse, the Aisne, and the Canal of Ardemnes furnishing great facilities for intereommunication. The department is divided into five arrondissements, 30 eantons, and 478 communes. Pop. in 1846, 326,823.-(Dict de la France; French Official Tables.)

AllDENNES, an extensive tract of hilly land, forming a distinet ramification of the Vosqes, and stretching continnously over a large portion of the N.E. of France and S.W. of lielgium. One branels proceeding $N$. from the forest of Argonne, reaches the sources of the Meuse, Sambre, and Scheldt, while another branch, still more considerable, commeneing E. among the valleys of the Moselle, Eure, and Ourthe, proceeds W., and is finally lost in the plains of Champagne. None of the hills attain a great elevation. The highest, La Barraque Michel, is 2230 ft ., but the average lieight does not exceed 1540 ft . The prevailing rocks are sehistous, and in some places furnish extensive quarries of excellent roofing slates. Limestone oceurs very rarely, and only in thin beds. Anciently the whole tract formed one immense forest, and possesses considerable interest both in history and in the drama of Shakspeare, under the name of the Forest of Ardennes. Extensive districts are still under wood, but large portions have been cleared, and are now covered with populous towns and cultivated ficlds. In general, however, the surface is elevated, cold, and bleak, and the soil, even when it would admit the plougl, by no means well adapted for cultivation. It is more favourable for pasture, and rears great numbers of cattle, and a breed of horses, which, though small, are hardy and aetive, and much used for light eavalry. Among minerals, lead, antimony, and manganese are found, but the only mineral which seems to admit of being extensively worked to advantage is iron.

ARDERRA, a par. Ireland, co. Kilkemy; 777 ac . Pop. in 1841, 300.

ARDERSIER, or Androsser, a par. Scotland, co. Inverness; 3465 ac. Pop. 759.

ARDESE, a large vil. Venetian Lombardy, prov. of, and 18 m . N.N.E. from Bergamo, and 4 m. N. by W. Clusone; laving a bandsome clureh with a lofty spire, a chapel built in 1607, an hospital, and sehool. The inhabitants are engaged in working iron and steel, making cheese, dressing wool, and in tillage. Pop. 2118.-(Dizio. Univ. Italia.)

ARDFER'T, a tn. and par., W. coast, Ireland, co. Kerry. The town is 4 m . N.W. Tralee, and was anciently the capital of Kerry, the seat of a university, and a bishopric, and sent two members to the Irish parliament; but now it is a ruinous and insignificant village, its see laving long since been united to that of Aghadoe. Near the town are the pieturesque ruins of a Franciscan monastery. There are two free seliools, and a dispensary in the town. Pop. of tn. in 1841, 655.——The Parisil is partly in the barony of 'Trughanackmy but chiefly in that of Clammaurice. Area of both, $10,134 \mathrm{ac}$. Pop, in 1841, i3334.

ARDFIELD, a par. Ireland, co. Cork; 2645 ac. Copper ore exists in this parish. Pop. 1475.

ARDFINNAN, a par. Ireland, co. Tipperary; 1813 ac.; eontains the ruins of a castle built by King John in 1184. l'op. 1214.

ARDGLASS, a small decayed scap,ort tn. and par. Ireland, co. Down. The town is 7 m . S.E. Downpatrick, and abont 73 m . N.E. Wublin, pleasantly situated on the E. side of the tongue of land which separates the Bay of Killough from that of Ardglass. The town consists of one long street, nearly semicircular, with several smaller streets branching off. A free school, on the foundation of Erasmus Smith, educates about 90 boys and 80 girls. There are also four private celiools, and a dispensary. Ardglass is inhabited chiefly by fishermen, and possesses a good many fishing-smaeks and yawls, besides a few sloops. Several packets also ply from it to the Isle of Man. It is the centre of the stations of the Irish fisheries, on this line of eoast, and where, in consequence, numerous vessels assemble during the fishing scason, there being frequently from 300 to 400 in the harhour at one time, from various parts of both England and Ircland. The pier has a lighthouse, and in the harbour there is sufficient depth of water at any time of tide for vessels of 500 tons. On the quay are cajacious stores for corn, in which a considerable
trade is carried on. A quay and pier for fishing-boats have been erected at an inner larbour, called Kinmersport. Ardglass was in former times an important and flonrishing place, but its commercial privileges, \&c., laving been transferred to Belfast, its trade rapidly deelined. There are here 2 coustabulary poliee force and a coast-guard station; a manorial court is held for elaims to the amonnt of $£ 100$; and there are an excellent weekly market and four annual fairs. Area of par. 1137 ac. ; pop. 1433. I'op. of tn. 1066.

ARIDILLATS, a vil. France, dep. Rhone (Beaujolais) pleasantly situated on the Ardière, about 16 m . N. W. Villefranehe, and possessing a fine paper-mill, which was originally establislied by the celebrated aëronauts Montgolfier, whose improvements in the manufacture are said to form the foundation of the still more important processes which have since been introduced. Pop. 1112.

ARDINGLEY, a par. England, co. Sussex ; 4780 ac. ; N.E. Cuckfield. Pop. 742.

ARDlN゙G'TON, a par. England, co. Berks; 1310 ac. ; E. Wantare. l'op. 405.

## ARDISII. See Ardisir.

ARDJISII, Ardsisch, Argish, or Kuhtea-de-Arafsch, a decayed tn. European Turkey, cap. dist. same name, prov. Wallachia, l. bank, Ardjish, 90 m. N.W. Bucharest, on the road leading through the Rothenthurm Pass into IIuncary. It has six climelies, and a large monastery, the church of which is considered the finest in Wallachia ; and the ruins of a strong eastle, formerly the residence of the lords or princes of the district. See Ardisif.

ARDKEEN, a par. Ireland, co. Down; 4801 ac. Pop. 2238.

ARDKILL, a par. Ireland, co. Kildare; 5848 ac. Pop. 1214.

ARDLEIGH, a par. England, co. Essex ; 5100 ac. ; N.E. Colchester. Pop. 1605.

ARDLEY, a par. England, co. Uxford; 1440 ac. ; N.W. Bicester. Pop. 168.

ARIDMAILE, a par. Ireland, co. Tipperary; 4941 ac. Pop. 1757.

ARDMORE, a tı. and par. Ircland, co. Waterford, on the Irish Channel. The town lies 5 m . F.N.E. Youghal, and 33 m. W.S.W. Waterford. It has Protestant and R. eatholie churches, and was formerly a bishop's see. In the parish churchyard is one of the ancient ronnd towers; and S.E. the church are the dormitory and well of St. Deelan, both of which are held in high veneration. There is a fine beach, and the country around being beautiful, renders Ardmore admirably adapted for sea-bathing. Pop. of par. 8737 ; area, 24,215 ae. 1'op. of tn. 706.

ARDMOLE HEAD, a promontory, S. coast, lreland, co. Waterford, N.N.E. Youghal harhour; lat. $51^{\circ} 52^{\prime} \mathrm{N}$. ; lon. $7^{\circ} 40^{\prime} \mathrm{W}$.

ARDMLLCHAN, a par. Ireland, co. Meatlı; 3583 ac.; abounds in limestone. Pop. 1038.

ARINNAGEEIIY, и par. Ireland, co. Cork; 16,335 ac. Pop. 4798.

ARDNAMURCIIAN (PoINT of), a cape or licadland, Scotland, co. Argyle, the most W. point of the mainland of Britain. A lighthouse has been recently erected on this point, the lantern of which is 180 ft . above the level of the sea. It is a fixed light of the natural appearance, and may be seen, in clear weather, from a distance of 18 or 20 m . It was exhibited, for the first time, on the night of Dee. 1, 1849 ; lat. $56^{\circ} 43^{\prime} 45^{\prime \prime}$ N. ; lon. $6^{\circ} 13^{\prime} 30^{\prime \prime} \mathrm{W}$.

ARDNAREE, a vil. Ireland, co. Sligo, on the Moy, over which is a stone bridge of 16 arehes, whieh unites Ardnaree with Ballina, of which it forms a suburb (sce Ballina).

ARDNURCIIER, a par. Ireland, King's co., and co. Westmeath; 12,012 ac. ; contains the ruins of several ancient castles. Fop. 3687.

AlDOCI, a small vil. Scoiland, co. Perth, about 8 m . S.S.W. Crieff, celelrated for the Roman camps in its vicinity, one of which is the most entire of any in Scotland. There are here vestiges of three distinet Roman camps of different dimensions, and, apparently, construeted at three different periods, the largest and first supposed to be constructed by $\Lambda$ gricola, in his campraign in A.D. 84. Besides these camps, there is, opposite the bridge over Knaig water, a strong fori surrounded by five or six fosses and ramparts, about 500 ft . long by 430
broad. The vicinity of Ardoch, near which stood Lindum, a town of the Damuii, one of the aboriginal tribes of Britain, was the scene of many confliets during the Roman period. The interesting remains above alluded to have been enelosed by the proprietor of Ardoch by a high stone wall, to protect them from dilapidation.

ARDORE, a tn . Naples, prov. Calabria Ultra I., dist. of, and 7 m . S.W. from Gerace, situated upon a hill, in a fertile country. It suffered much from an earthquake in 1783, and was rebailt by Ferdinand IV. Pop. 2959.

ARDOYE, a vil. Belgium, prov. W. Flanders, about 12 m . S. Bruges. It gives its name to a rural com., which has an area of 4500 ac . ; a pop. of 7643 ; and possesses several breweries and malt-mills, brick and tile-works, and a bleachfield.

ARDOYNE, a par. Ireland, cos. Wieklow and Carlow; 6577 ac. Pop. 1791.

ARDPATRICK, a par. Ireland, co. Limeriek; 624 ac. Gold ore has been found in this parish; it contains ruins of an ancient monastery and round tower. Pop. 101.

ARDQUIN, a par. Ireland, co. Down; 3043 ac. Pop. 916.
ARDRAH, or AzEm, a tn. Afriea, cap. prov. of same name, kingdom of Dahomey; lat. $6^{\circ} 35^{\prime}$ N.; lon. $3^{\circ} 42^{\prime}$ E.; about 20 m . from the sea-coast, on the shores of a lake. Pop. 10,000 .

ARDRAHAN, par. Irel. Galway; 17,948 ac. P. 4191.
ARDRES [anc. Ardrea], a fortified tn . France, dep. Pas-de-Calais (Picardy), 9 m . S.E. Calais, in a marshy district, at the extremity of the Canal of Ardres, and on the railway from Calais to St. Omer. It was a place of considerable importance during the early English wars, and the splendid fetes given at the interview which took place here between Henry Vili. and Francis I., are commemorated by the name of Champ du Drap d'Or [field of the eloth of gold], which the spot still bears. Ardres has some salt-refineries. P. 1129.

ARDRISHAIG, a sinall vil. and seaport, Seotland, co. Argyle, 20 m . S.S.W. Inverary, W. shore of Loch Fyne, at the entrance to the Crinan Canal; with a boat-building yard, and two quays; inhabitants principally engaged in fishing. Steaners to Glasgow, \&c., daily. Pop. (1851), 600.

ARDRISTAN, a par. Irel. Carlow; 1571 ac. P. 598.
ARDROSSAN, a seaport and par. Scotland, co. Ayr. The town is 30 m . by railway $\mathrm{S} . \mathrm{W}$. Glasgow, and 18 m . N.W. Ayr. The streets are wide and straight, and the houses, mostly of two stories, are neat and well finished. There are also many handsome viilas in the vieinity. It is much frequented in the summer season by sea-bathers. The harbour, which is on an extensive scalc, was begnn by the late Earl of Eglinton, who expended $£ 100,000$ on it. It is still incomplete, but is capable of accommodating a large number of vessels. The pier and breakwater, the former 900 yards in length, completely proteet the harbonr from S. and W. winds, an island, called the Horse Island, protecting it from the N.W. At the extremity of the breakwater there are 26 ft . at spring ebbs, and it shoals gradually to 15 ft ., where the quays commence. There are two small red lights, one on eaeh pierhead. A branch line, about 4 m . in length, conneets Ardrossan with the Glasgow and Ayr Railway at Kilwinning. Stcamers ply regularly between Ardrossan and Glasgow, Ayr, Belfast, and Fleetwood. Pop. of par. 4947 ; area, 11.347 ac .

ARDSALLAGII, or Ardsalla, a par. Ireland, eo. Meath; 730 ae . Pop. 341.

ARDSKEAGII, a par. Ireland, co. Cork; 1929 ac. Pop. 280.

ARDSLEY.-1, (West), a par. England, co. York, W. liding; $2250 \mathrm{ae} . ;$ N. W. Wakefield. Pop. 1420.-2, (East), a par. adjoining the above. Pop. 900.

ARDS'TRAW, or Ardstrath, a par. Ireland, eo. Tyrone, on the Monrne, a branch of the Foyle, S. Lifford, and N.W. Omagh; area, $45,000 \mathrm{ac}$. Pop. 17,400.--Ardstraw- Bridge is the name of a vil. in this par., on the river Derg, and on the road from Dublin to Londonderry. Pop. in 1841, 134.

ARDVAR (Loch), an arm of the sea, Scotland, W. coast, co. Sutherland; lat. $58^{\circ} 16^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 4^{\prime} \mathrm{W}$. It is a small but safe harbour for small vessels. In the proper anchorage, there is water enough for the largest ships to ride, but in the narrow part of the channel leading to it, there are not above 3 ft . at low water, spring tides.

AREAS, or Sao Miguel das Areas, a sinall tin. Brazil,
prov. Sǎo Paulo, 150 m . N.E. Santos, and 110 N.W. Rio de Janeiro, on the confines of the prov. of that name, and on the road to the eity of São Paulo, in a fertile district, with a moist climatc. It has a chmreh, townhouse, and prison; and in its vieinity are cultivated coffee in large quantities, millet, rice, Freneh beans, mandioca, and sugar-canes. The principal commerce of Areas consists in coffee and fowls, which is transported on mules to Rio de Janciro. Pop., tn. and dist. 6000. -(Dic. Geo. Imp. Brazil.)

AREBO, or Arbon, a tn. Benin, W. Africa, on the river Formosa, about 37 m . from its mouth; lat. $5^{\circ} 58^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 8^{\prime}$ E. The English and Dutch factorics, formerly existing here, have been abandoned.

ARECHAVALETA, a tn. Spain, prov. Guipuzeoa, 27 m . N.E. Vittoria, on the high road from Madrid to Bayonne, having two churches, a townhall, sulphurous spring (temperature $71^{\circ}$ Fah.), with an attached pump-room. The people are chiefly engaged in making rural implements, coarse linen fabries, and in agriculture. I'op. 2430.

ARED, el-Aaredi, Jebel Aridi, or I'mariyef, a mountain range, Arabia, traversing Nejd S.W. to N.E., from about lat. $22^{\circ} 30^{\prime}$ N., lon. $41^{\circ} 41^{\prime}$ E., about 104 m . N.E. Meeca, to lat. $29^{\circ} 50^{\prime} \mathrm{N}$., lon. $46^{\circ} 30^{\prime}$ E., about 150 m . S.W Bussorah, a total distance of upwards of 550 m . At El Derayeh (lat. $25^{\circ}$ N., lon. $46^{\circ}$ E.), an offset, called Jebel Tuzek, leaves the main chain in a N.N.W. direction, having a total length of about 280 m . Jebel Aridh, and its offsets, form the hill countrv of Nejd (which sce).

ARELEY, two parishes, England:-1, (Kings), Co. Worcester; 1390 ac. ; S. by E. 13ewdley. Pop. 423.-2, (Upper), Co. Stafford; 5160 ac.; N.N.W. Bewdley. Yop. 667.

AREM BERG MEPIEN (Duciry or), a political division of IIanover, between Oldenburg and Ifolland; area, 544 geo. sq. m. It is traversed, S. to N., by the Ems, and consists chicfly of sandy wastes, moors, and leath. Its principal riches consist in turf. Agriculture is little attended to, but the culture of bees is pursued with advantage. Formerly constituting part of the bishopric of Munster, in 1803 it came into the possession of the Duke of Aremberg; in 1810 it was united to France; in 1815 it was given to Hanover; and, in 1826, it was erected into the duehy of Aremberg Meppen by George IV. of Great Britain. Pop. 49,000.

ARENAS [Spanish, Sands], the name of a namber of islands, capes, \&c., in various parts of the world :-1, An isl. or rather sandbank, off the N. coast of Colombia, in the middle of the Bay of Galera do Zamba ; lat. $10^{\circ} 46^{\prime} \mathrm{N}$., lon. $75^{\prime} 30^{\prime}$ $\mathrm{W} .-2, \Lambda$ low isl. Gulf of Mexico, 3 m . long by 2 m . broad; rocks all round; lat. $22^{\circ} 8^{\prime} \mathrm{N}$. ; lon. $91^{\circ} 23^{\prime} \mathrm{W}$. (r.) -3 , A bay or eape, off Cape Isabella, N. coast, Hayti, the cape being in lat. $19^{\circ} 58^{\prime} 40^{\prime \prime} \mathrm{N} . ;$ lon. $71^{\circ} 6^{\prime} 30^{\prime \prime} \mathrm{W} .-4, \mathrm{~A}$ Cay, N. America, Bay of IIonduras ; lat. $71^{\circ} 12^{\prime} \mathrm{N}$. ; lon $88^{\circ}$ W.-5, A sandy point, N. coast, Colombia, Gulf of Darien, at the entrance (E. side) of the Bay of Choco; lat. $8^{\circ} 33^{\prime}$ N.; lon. $76^{\circ} 56^{\prime} 15^{\prime \prime} \mathrm{W} .-6, \mathrm{An}$ isl. and point, N.E. coast, Guatimala, S. side, Gulf of Matina, or San Juan; lat. $10^{\circ} 56^{\prime} 42^{\prime \prime}$ N.; lon. $83^{\circ} 42^{\prime} 15^{\prime \prime}$ W. (r.) -7, A sandy point, N. coast, Venezuela, E. side of the entrance into the Lake of Maracaybo; lat. $11^{\circ} 7^{\prime} \mathrm{N}$. ; lon. $70^{\circ} 57^{\prime} \mathrm{W}$. (R.) - $8, \mathrm{~A}$ point, W. extremity of Luzon; lat. $16^{\circ} 21^{\prime}$ N.; lon. $119^{\circ} 41^{\prime}$ E. (r.) -9, Point Arenas, the most W. extremity of the isl. of Margarita, Caribbean Sea; lat. $11^{\circ} 0^{\prime} \mathrm{N}$. ; lon. $64^{\circ} 30^{\prime} \mathrm{W}$.

ARENDAL, aseaport tu. Norway, prov. of, and 36 m . N.E. Cbristiansand on the Skager-Rak; lat. $58^{\circ} 23^{\prime} 12^{\prime \prime}$ N.; Jon. $8^{\circ} 52^{\prime} 30^{\prime \prime}$ E. (r.) It lies at the mouth of the Nid River, and is built on rocks projecting out into the commodious haven, formed within the islands Tromö and Hiserö, between which is the narrow channel leading up to Arendal. The buildings of the town are of wood clustered in declivities, and seattered up the surrounding heights, one of which is erowned by a handsome church ; long ranges of white buildings, the dwellings of the merehant's line, the broad well laid-out quays, presenting, from the sea, an imposing appearance; and along the shores are neat houses and stores, close to whieh vessels lie, the water in the harbour being very deep. The town has a commercial and two other schools, a custom-house, and three yards for ship-building-a branch of industry here carried on extensively. On the hanks of a lake, N . the town, are some celebrated iron mines. Arendal is a place of considerable trade, possessing nearly 200 sea-going ships, chiefly employed in exporting

## ARENDONCK

## ARETHUSA

timber, and in imperting grain and other kinds of food. Much of the timber shipped here is brought a direct distance of about 100 m ., from Upper Tellmarken, with which there is water communication. In 1842,373 vessels arrivel at the port ; tonn., 39,674; departed, same year, 309 ; tonn., 35,5-43. Outside the islands, and abont 4 m . from the port, on island Torungen, is a fixed light, 130 ft . hith ; lat. $58^{\circ} 23^{\prime} 2^{\prime \prime} \mathrm{N}$. ;

lon. $8^{\circ} 52^{\prime} 5^{\prime \prime}$ E. (r.) Arendal, in 1840, suffered a geod deal of damage by fire, which, however, has since been repaired, much to the improvement of the town. In 1835, the pop. of the town proper was 1962 , ineluding suburbs Colbjörnsvig, Strömmen, Sandvigen, and Tromöen, 4000. In 1846, the town proper had inereased to 3562 ; including suburbs, $4 \overline{5} 00$. -(Sköldberg, Beslrifning ifver Skandinaeska Halfün; Forester's Norway, in 1848-9; Munch, Kart over det sydlige Norge.)

ARENDONCK, a tn. Belgium, chief place both of com. and can. of same name, prov. of, and 32 m . E. from Antwerp. The manufacture of stockings and worsted caps oceupies a fourth of the inhabitants. Of the former, 200,000 pairs are annually made; area of com. above 7000 ac. Pop. 3488.

ARENDSEE, a small tn. P'russian Saxony, gov. of, and 52 m. N. from Magdeburg; on the S. side of Lake Arend, which abounds with pike and cels, and in which petrifactions and amber are occasionally found. It is divided into the old and new town, and has a Lutheran chapter with seven prebendaries, an hospital, a brandy distillery, and several brewerics. l'op. 1950.

ARENSBURG, a seaport tn. European Russia, gov. Livonia, eap. and S.E. side of the isl. of Oesel; lat. $58^{\prime \prime} 15^{\prime} 6^{\prime \prime} \mathrm{N}$.; lon. $22^{\circ} 27^{\prime} 45^{\prime \prime}$ E. (R.) It is the most unimportant Russian fort in the Baltic. The exports are grain, timber, cattle, butter, clicese, tallow, and hides. The trade of the place is chiefly carried on with Liibeck, Sweden, and IIolland, in small vessels, of which from 20 to 30 arrive annually; they anchor at about 5 m . from the town. at a place called the Kettle; their cargoes are loaded and unloaded by small eraft or prams, to and from the town, the water in the port not being deep enough for vessels of burden. P. (1849), 3592.

ARENSWALDE. Sce Araswaline.
ARENYS de mar, a th. Spain, in Catalonia, prov. of, and 26 m . N.E. froun Barcelona, on the coast of the Mediterrancan Sea, in the midst of a rich wine distriet, tolerably well built, and having well-arranged streets, a square, a parish church, Latin and other schools, an hospital, theatre, and prison. Lace-making, weaving coarse cotton fabrics, distilling brandy, making soap, and other chemical operations, are carried on. Wine, charcoal, wooden hoops, barrels, and timber, are exported; and grain, alcohol, \&c., inported. Pop. 4780.

AREQUIPA, a city, Peru, cap. dep. of same name ; 450 m. S.E. Lima, 200 m. S.W. Cuzco, and about 40 m . from the shores of the Pacific; lat. $17^{\circ} \mathrm{N} . ;$ lon. $\left.72^{\circ} 10^{\prime} 30^{\prime \prime} \mathrm{W} . \mathrm{R}_{\mathrm{H}}\right)$ finely situated, 7850 ft . above the sea level, on the plain ol Quilea, on the river Chile, which is here crossed by a hand-
some stone bridge. It enjoys a delightfol climate, and is csteemed one of the best built and most beautiful towns of S . America. It has a square ornamented with an elegant bronze fountain, a cathedral, several churches, three nunneries, six convents, a college, and an hospital. The honses and publie edifices are all of stone, generally ouly of one floor, with very thick walls and vaulted roofs, to resist the shocks of earthquakes, which are trequent here, and so destructive as to have laid the city in ruins on four different oceasions, besides the damage done by less violent convulsions. It has mannfactures of woollen and cotton stuffs, and gold and silver tissue, with an active and flourishing trade. In the neighbourhood are several gold and silver mines, and the district romul the town is fertile and well cultivated. Cove Mollendo was formerly the port of the city, but in consequence of the filling up of that port, the harhonr of llay has been adopted in its stead. Iop. about 35,000 . -The depantment of Arequipa extends between lat. $15^{\circ} 30^{\prime}$ and $21^{\circ} 28^{\prime} \mathrm{S}$., and consists of seven provinces-Camaná, Condesnyos de Arequipa, the Cercado or district of Arequipa, Moqnejua, Arica, Tarapacá, and Caylloma.

AREQU1PA, a voleano of the Peruvian Andes, about $12 \mathrm{~m} . \mathrm{E}$. the city of that name ; lat. $16^{\circ} 20^{\prime} \mathrm{S} . ;$ lon. $71^{\circ} 55^{\prime} \mathrm{W}$. Its height, according to Pentland, is $20,320 \mathrm{ft}$. The summit of the moun tain, whieh is in the form of a stupendous cone, is generally covered with snow for about 500 ft . downwards. It lias a deep crater, from which ashes and vapour are constantly seen $\mathbf{t}_{0}$ issuc. In the immeliate vicinity of the voleano, there are other two mountains of great height, Pichu Pichu and Chacani, which are also generally covered with snow. They are composed of trachytic rocks, and are conjectured to lave formed a portion of the walls of a very extensive elevation-crater, in the midst of which the more recent ernption-cone of Arequipa has been raised.

AREs, a tn. and seaport, Spain, in Galicia, prov. of, and 17 m . S.S.W. from Coruña, tolerably well built, havingr a chureh, townhall, and the ruins of a castle and fortification. Fishing and curing fish are carried on. I'op. 1850.

ARETHUSA, a celebrated fountain of Sicily, in the city of Syracuse. It springs from the earth, under a natural areh

FOUNTAIN OF ARETHUSA.-Frons Gigaule de la Sulle Voyage Pittoresque en sicile
in the rock, within a short distance of the sea, being separated from the latter by the eity wall only. The water leseribed by ancient writers as pure and sweet, is now brackish, from the sea having found access to it, and is used for washing only. The fish spoken of by Cicero have also disappeared, together with its saered groves and temples. The fountain is named after the nymph Arethusa, who, according to Greek fable, was bathing in the river Alpheus, in Peloponessus, when the river-god, becoming enamoured of her, pursued her, upon which she supplicated the assistance of her patron goddess, Diana, who compassionately transformed her into a fountain. Alpheus, then, secking to commingle his waters with those of the metamorphosed nymph, Diana opened a passage under
ground, by which her favourite escaped to where the fountain now exists, the island of Ortygia, a part of Syracuse. The story goes on to say that Alpheus still pursued her, either underground or through the sea, without mingling his waters with those of the ocean ; consequently, that substances throwu into the Alpheus, in Grecee, will in due time appear in the fountain of Arethusa.-(Ovid's Metamorphosis, v. 572.) Pausanius gives a somewhat different version of this story (v. 7).

ARETTE, a tn. France, dep. Basses Pyrenés, about $11 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Oléron, in a fine forest at the foot of lills which form the first slopes of the Pyrenees. It is an ancient place, and several of the houses are interesting from their antiquity.

AREVALO, a tn. Spain, in Old Castile, prov. Arila, 69 m. N.W. Madrid, partly enclosed by ruined walls, well built, and liaving a handsome suburb, with a church, townhall, sessions-house, two prisons, a storehouse, hospital, Latin and other schools, \&c. Pop. chiefly agricultural, 2200.

AREZZO [anc. Arretium], a city, Tuscany, cap. of prov. and bishopric of its own name, on the slope of a hill, in the plain of Chiana, r. bank, Castro, an affluent of the Arno. It is surrounded by walls 3 m . in length; has paved, regular, and for the most part, well-built streets, a large square, a noble Gothic cathedral, containing some fine pictures and monu-
intelligent, fond of music, dancing, and amusement. Pop. in 1836, 228,416.-(Dizio. Univ. Italia.)

ARGA, a river, Spain, in Navarra, rising in the Pyrenees, near Irurita, and, flowing S. and S. W., it falls into the Aragon at Villefrauche, after receiving several tributaries. Total course, 60 m .

ARGAMASILLA de alba, a tn. Spain, in New Castile, prov. Ciudad-Real, 84 m . S.S.E. Madrid, on the Guadiana, ill built, and having a church, consistory, prison, and some schools. Pop. 1600.-Also, Argamasilla (de calatrava), a tr., 13 m . S. Ciudad Real, having a church, townhall, prison, and storehouse. The inhabitants are much employed in lacemaking for the traders in Almagro (which see). Pop. 2020.

ARgana, or Argitana Maden, a populous th. Turkish Armenia, pash. Diarbekir, l. bank, Tigris, near its source, 36 m . W.N.W. Diarbekir, cap. dist. of sane name ; lat. $38^{\circ} 13^{\prime} \mathrm{N}$. ; lun. $39^{\circ} 10^{\prime}$ E. It is situated on Mount Taurus, on a declivity so abrupt, that the houses appear to be piled one above another; and in winter the torrents rush down the streets with a violence that often renders them impassable. It is wretchedly built, and is inhabited by Kurds and Turks. At an elevation of 3644 ft . above the level of the sea, there is a rich copper mine. The surrounding hills are covercd with vineyards. Pop. 4000.

ARGANDA-der-rey, a th. Spain, in New Castile, prov. of, and 18 m . S.E. from Madrid, on the ligh road thence to Valencia, ill built, and having a church and two chapels, with a cemetery, townhall, hospital, prison, abattoir, and some schools. The inhabitants are employed chiefly in tillage, but also in soapworks and oilmills. The neighbourhood is cclebrated for the excellence of its red wincs. Pop. 2790.

ARGANIL, a tn. and par. Portugal, prov. Bcira-baixa, 21 m. N.E. Coimbra. It contains a parish church and a poorhouse, and has three annual fairs. Pop. 1675.

ARGELLES, or Argelez, a tu. France, dep. Hautes Pyrénées, cap. arrond. of its name, 17 m . S.W. Tarbes, in the bcautiful valley of Lavedan, one of the finest in the Pyrenees, 1. bank, Gave d'Azun, near its embouchure into the Gave de Pau. The town is not kept clean, but it contains a handsome square, and groups of pretty slated ments; several churches, municipal buildings, four hospitals, a university, academy of arts and surgery; a public library, nuseum, theatre, nedical and other schools; also an episcopal palace, a palace of the Albergotti family, an aqueduct, the remains of an ancient amphitheatre and citadel, and the monument of Mecænas. Of the churches, the handsomest, as well as the most ancient, is that of Santa Maria. The whole building, though irregular, and somewhat fantastic in its details, exhibits an elegance and facility of style which is extremely pleasing. Manufactures:-hats, combs, cutlery, nails, implements of husbandry, pins, and carthenware; also woollen stuffs for the army, the making of which employs more than 1000 persons. Dyeing, tanning, and expressing oil are carried on. Four annual fairs are held. Arezzo was an important Roman military station, and once famous for its 'terra cotta' vases. A few ruins are all that now remain of the ancient city. It is the birthplace of Mecænas, Petrarch, Guido, Pope Julius Il., and was long the dwelling-place of Dante. Pop. 11,716.(Dizio. Univ. Italia.)

AREZZO, a prov. Tuscany (cap. Arezzo), bounded, N. by prov. Florence and the Papal States, E. by the Papal States, S. by Grosseto, and W. by Sienna, with an area of $1776 \mathrm{sq} . \mathrm{m}$. E. and N.E., the Apennincs form a natural boundary to the province, and over its surface ramify the Tuscan subApennines, for the most part clothed with chestnut, beech, pine, and other trees and shrubs; and some of them yielding coal and sulphur. The valleys have a rich alluvial soil, producing abundant crops of grain, fruits, vegetables, wine, and oil. IIorned cattle, pigs, and sheep are reared; and turkeys, fowls, and game of all kinds are plentifnl ; agriculture, dressing hides, preparing wool, and expressing wine and oil, are the principal employments. There are numerous benevolent institutions in the province, and the education of youth is more attended to than formerly; crimes against the person are comparatively rare. The people are lively, active, and
houses, some of them adorned with marble, and interspersed with patches of rich verdure, which have a very pleasing effect. The only manufacture is steel. Goitre and cretinism are prevalent throughout the district. Pop. 1718.

ARGENS, a river, France, with three different sources, which unite at Chateauvert, dep. Var. The chief source is at the foot of Mount Scillon. The river owes its name (argenteus, silvery) to its limpid waters, which are almost always silvery white. Near the chapel of St. Michael, bctween Vidauban and the Thoronet, it precipitates itself over a lofty rock, and forms a magnificent cataract. Losing itself in the abyss into which it falls, it disappears, and again emerges abont half a mile below. In its course, which is about 60 m . it reccives numerous small tributaries, and falls into the Mediterrancan about $2 \frac{1}{2} \mathrm{~m}$. S.W. Frejus. It is not properly navigable, but an immense quantity of pine is annually floated down it, and cut up in planks at the sawmills of Muy and Frejus, to be afterwards carricd to Toulon and Marseilles.

ARGENTAN [anc. Aregenue, Argentonitu Castrum], a tn. France, dep. Orne (Normandy), picturesquely situated on a heiglit in an extensive and fertile plain, which is bounded on the E. by the forest of Argentan, 28 m . N.N.W. Alençon. The town, which is traversed by the Orne, is clean, has wellbuilt houses, and regular streets, and is surrounded by ramparts, which form a promenade. The old castle of Argentan, an extensive massy structure of the 15 th century, has been converted into a court of justice and a prison. The churches of St. Germain and St. Martin are interesting edifices of the same century. The manufactures are chielly linens, ticks, leather, and lace. Pop. 4760 .-The Arrond. of Argentan includes 11 cantons. Its chicf products are corn, cattle, poultry, and cheese. The last, in particular, bears a high name. The district also lias been long famous for its borses. The famous Haras du Pin, to which the superiority of the Norman breed is mainly attributed, is near Argentan.

ARGENTARO (Mount), a lofty and extensive promontory, N. W. end, isl. Sardinia; lat. $42^{\circ} 23^{\prime} 42^{\prime \prime}$ N. ; lon. $11^{\circ} 10^{\prime} 30^{\prime \prime} \mathrm{E}$. (R.) It is visible from a distance of 30 m ., and, scen from the N. or S., appears to be an island separated from the uain by the low land to the $\mathbf{E}$.

ARGENTAT, a tn. France, dep. Corrèze (Limousin), about 15 m . S.S.E. Tulle, in a beautiful valley, r. bank, Dordogne, over which is here a suspension bridge. The cathedral is a Gothie edifice, of striking appearance, but is disfigured by paintings in bad taste. Argentat carries on a considerable trade in corrn, ship timber, wood, eharcoal, and the rather dusty coal raised from a seam in the vieinity, of about 3 ft . thick. All these products are sent to Bordeaux by the Dordogne, which is navigable for small barques as far up as Argentat. Pop. 2076.

ARGENTEAU, a vil. Belgium, r. bank, Meuse, prov. of, and 6 m. N.E. Liège. The inhabitants are chiefly employed in agrieulture. A few make capsules and other vessels of platina. In the vieinity is an old eastle, pieturesquely situated on a rocky eminence crowned with verdure. Pop. 800.

ARGENTEUIL [Latin, Argentolium].-1, A tn. Franee, dep. Seine-et-Oise, r. bank, Seine, 7 m . below Paris, on a small hill, in a fine district abounding in vineyards and gardens, the greater part of the fruit and vegetables of which are sent to Paris. In the vicinity are extensive quarries of gypsum; and close to the town are the ruins of the Bencdietine abbey, in which IIeloise received her education; she afterwards beeame prioress of it, previous to being abbess of the Paraclete, founded by $\Lambda$ belard. Pop. 4569.-2, $\Lambda$ vil., with about 700 inliabitants, in the dep. of the Yonne (Champagne), 10 m . S.E. Tonnere.

ARGENTIERA, or KHimoni [anc. Cimolis, or Cimolus, and Echinusa, or the Isle of Vipers], an isl. Grecian Arehipelago, N. of Milo, from which it is separated by a channel abont 1 In . broad; lat. $36^{\circ} 49^{\prime} 18^{\prime \prime}$ N.; lon. $24^{\circ} 33^{\prime} 30^{\prime \prime}$ E. (r.) It is about 18 m . in eireumference, of a roundish or oval shape, hilly, some heights being 1000 ft . high, of volcanic formation, with a generally sterile soil, producing, however, in some parts, wheat, barley, cotton, grapes, and other kinds of fruit; and, in the valleys, feeding a few sheep and goats. It is said to have contained at one time a few silver mines, whence its name Argenticra. It is noted also for a substanee anciently ealled creta Cimolia, Cimolian ehalk, a species of fuller's earth, or decomposed porphyry, possessing some of the qualities of soap, and used in washing and blcaching. The island contains a few hot springs, but is destitute of fresh water. The elimate is unhealtly. It has a barbour affording good anchorage for light vessels, but lias hardly any trade.

ARGENTIERE (Col D'), a mountain-pass, Maritime Alps, on the road from Barcelonette to Coni, 7200 ft . above the sea level ; lat. $44^{\circ} 27^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 55^{\prime} \mathrm{E}$. The path over the Col skirts a little lake called La Madelaine, the source of the Stura. From the summit of the pass, the view is very extensive, especially towards France.-Argentiere is also the name of a vil. in liedmont, within a short distance of the pass.

ARGENTINA, a small fort and settlement, La Plata, at the head of Blanco Bay, 390 m . S.S.W. Buenos Ayres; lat. $38^{\circ} 20^{\prime} \mathrm{S} . ;$ lon. $62^{\circ} 10^{\prime} \mathrm{W}$. The fort was commenced in April 1828, with the view of cllecking the Indians, but was never completed, and is now almost wholly negleeted. Neither has it made any progress as a colony, 'although,' says Captain Fitzroy, 'it is the begimning of what may bereafter be a condiderable place. Situated favourably for communicating with Coneepcion, by way of the pass through the cordillera, near Tucapel, it is the only port between lat. $25^{\circ} \mathrm{S}$. and Cape IIorn, capable of recciving in sceurity any number of the largest ships.' The country around is ilat, and good grazing distriets are within a short distance, but it is subjeet to the disadvantage of long droughts, some of them of 2 or 3 years' continuance, although fresh water may generally be obtained, independent of the few running streams, by digging wells of from 4 to 10 ft . deep. The heat in summer is execssive, but in winter there are sharp frosts, sometimes snow.

ARGENTINE REDUBLIC. See Plata (La).
A RGENTON-sur-cheuse [anc. Argentonum], atn. France, dep. Indre (Berri), 18 m . S.S.W. Châteauroux. It is traversed by the Creuse, which divides it into two towns, conuected by a stone bridge. The upper town, the ruins of which
attest its antiquity, is built upon a rock, in the form of an amphitheatre, and has still some remains of its large old castle, flanked by 10 ligh towers, which was at one time esteemed impregnable. It has a wall of its own, with four gates, by which it communicates with the Iower town, which lies at the end of a valley shut in by two vine-clad hills. Manufactures :cloth, paper, tiles, pottery, and glass. There are also several small fulling-mills and bleaehing-grounds. In the neighbourhood, fine potter's clay of a white colour is found. Pop. 4346.

Aroenton is also the name of several small towns and villages in France.

## ARGHURI. See Arourm.

ARGISH. See Ardjisin.
ARGO, Ganoodes, or Gora, an isl. in the Nile, Nubia, in Dongola, between lat. $19^{\circ} 10^{\prime}$ and $19^{\circ} 32^{\prime} \mathrm{N}$. It is about 25 m . in length, and 5 m . in breadth. The soil is fertile, but a small portion only is cultivated, the island being but thinly inlıabited. Great numbers of sycamores, acaeias, palms, \&e., grow on it, and its pastures are covered with herds of eattle and horses. It abounds also with hares, pigeons, quails, and partridges. There are several interesting ruins on the island, including two colossal figures, in red granite, of excellent workmanship. They are both prostrate, and one of them has been broken into three pieces, but the other is in good preservation.

ARGOLIS, one of the ane. divisions of Grecce, and, with Corinth, still forming one of its provinces or nomes. It eomprises the peninsula formed by the Gulfs Egina and Nauplia or Napoli, and part of the mainland, to lon. $22^{\circ} 3^{\prime}$ E.; bounded, W. by Achaia and Arcadia, S. by the Gulf of Nauplia and the Mediterranean, and N. and N.E. by the Gulfs of Corinth and Egina. It is traversed throughout its whole length, from N.W. to S.E., by a ridge of mountains, intersected by deep valleys, through which flow rivulets, generally dry during summer. The valleys are most numerous, and of greatest breadth on the S. side of the ridge, but none of them are of any great extent. The coast is irregular, with numerous indentations, and generally low. The only good harbour is Nauplia, at the head of the gulf of same name.

ARGOS, a tn. Grecee, nome or prov. Argolis, 6 m. N.W. Nauplia, r, bank, Planitza, on the W. side of a large and fertile plain, yielding corn, cotton, tobacco, figs, grapes, and rice ; lat. (N.W. corner of Larissa) $37^{\circ} 38^{\prime} 9^{\prime \prime}$ N.; lon. $22^{\circ} 43^{\prime} 12^{\prime \prime}$ E. (L.) It has regular streets, houses principally of wood, with projecting porticoes, which give them a light airy appearance. Pop. (1853), 10,000. Here are the scattered ruins of the ancient Argos, little more than an undistinguishable mass. W. from the tewn, on an eminence, stands the Acropolis, called Larissa, once a place of great strength.

ARGOSTOLI, a city, Ionian Islands, cap. of Cephalonia, on a small peninsula, E. shore of the gulf to whieh it gives name; lat. (Hook Point fixed light) $38^{\circ} 11^{\prime} 12^{\prime \prime} \mathrm{N}$. ; lon. $20^{\circ} 28^{\prime} 30^{\prime \prime}$ E. (r.) It is marshy and insalubrious. The houses are low, small, and meanly built; but the town has a small lyeeum, a lazaretto, barracks, and churches. The harbour is considered the best in the Ionian Islands, and has several doekyards. The inner haven or port affords excellent shelter, exeepting when the wind is from the N.N.W., to which it is open. Manufactures:-cotton and pottery. Numerous trading vessels frequent the port; which is the residence of the British governor, of a Greek bishop, and the seat of the civil and criminal courts of the island. Pop. 8000 .

ARGUIN, an isl., W. coast, Africa, in a bay of the same name, about 54 m. S.E. Cape Blaneo; lat. $20^{\circ} 27^{\prime} \mathrm{N} . ;$ lon. $16^{\circ} 37^{\prime} \mathrm{W}$. It is between 30 and 40 m . long, abont 1 m . broad, and about 8 m . from the mainland; between which and the island the water is shallow, the deepest part not exeecding 5 ft . The island is formed of a whitish rock, covered to the depth of about 9 ft . with sand, which is constantly shifting. The N. part is flat, but the S. rises to a considerable elevation, and may be seen at a distance of 30 m . It produces no wood, except a small shrub ealled the phinám tree; which yields a caustic juice much used by the Arabs as a healing medicament. Water, of excellent quality, is abundant; but, owing to the constant shifting of the sand, the wells are often difficult to find. There are two considerable markets or fairs held on the island during the year, in June and Deeember; and many strangers come from a considerable distance to traffie, bringing necklaces, beads, cloths, and tobaceo, for which they receivo
fish and oil, on which the inhabitauts, 60 in number in 1844, entirely subsist. The only quadrupeds known are white rats; and the only birds litherto seen, storks, cranes, and pelicans. The heat is sometimes very great, but the clinate is healthy. Arguin is supposed to be identical with the island of Cerne, where IIanno settled a colony during his celebrated voyage of discovery.-The BANK or shonlof Arguin commenees about $12 \mathrm{~m} . \mathrm{S}$. Cape Blanco, and stretehes S. for upwards of 130 m. ; breadth at the broadest part, which is in the centre, about 40 m .; at either end the breadth does not exceed 10 m . It is a liard, sandy flat, generally covered with broken shells. Its outer edge has leen fixed at 7 fathoms, which lessens E., or towards the land, to 4 fathoms. Close to the breakers, on some parts of the bank, there are not more than 10 ft . water. Numerous shipwrecks have taken place on this dangerous shoal, anongst them that of the French frigate Medusc.-2, A tn. of same name on the coast opposite the island. It was formerly a Frencl settlement; and is the termination of the earavan route from Timbuctoo.

ARGUN, or Argoun, a river of N.E. Asia. See Amoon.
ARGUNSK, a fort, Siberia, gov. Irkutsk, I. bank, Argun, from which pearls are obtained, 130 m. E. Nertehinsk; lat. $50^{\circ} 50^{\prime} \mathrm{N}$.; lon. $120^{\circ} 15^{\prime} \mathrm{E}$. A considerable trade is carried on here; and in the vicinity silver and gold are obtained, and from several lakes salt is procured. Pop. 800.

ARGUR1, a vil. Russian Armenia, 186 m . S. Tiflis, and about 30 m . S.W. Erivan, on the level ground at the end of the great clasm on the N.E. slope of Mount Ararat, about 5400 ft . above the sea. This was formerly one of the largest and most beautiful villages in Armenia; its houses, all of stone, were enclosed within courtyards, surrounded by stone walls, and it had a well-built chureh. A rivulet, which had its source in a glacier, and passed down through the great chasm, had its outlet at the village, and, in conjunction with some spring wells, afforded a plentiful supply of good water. The inlabitants, about 1600 Armenians, and a number of Kurds, lived by rearing borses and cattle, and by growing some corn, though at a distance from the village, the soil in the immediate neighbourhood being very stony. They also cultivated the vine, which, according to very questionable tradition, was first planted here by Noah when he left the ark, whence the Armenian name of the village [argh, he planted, urri, the vine]. Up the mountain, a short distance from Arguri, was the monastery and chapel of St. James, 6375 ft above the sea. It stood on a grassy terrace, about 25 ft . above the rivulet in the lower part of the great chasm, which here has a depth of 600 to 800 ft . In this monastery Parrot and his companions resided during their exploration of the mountain. On July 2, 1840, an eruption of Ararat overwhelmed, in one common destruction, the village of Arguri and the monastery and clapel of St. Janes, with their inhabitants and inmates, consisting of 1500 Armenians, 400 Kurdish servants, and eight monks. Only 114 individuals eseaped, who were engaged in the fields, and otherwise at a distance from the seene of the calamity. Since the eruption, the wells of the village have giver forth discoloured water of a sulphineous taste. See Ararat.-(Parrot's Journcy to Ararat; Wagner's Reise nach dem Ararat.)

ARGYLE, an inland co. of New South Wales, 60 m . in length from N. to S., and 36 in breadth; area, 1,248,600 ac. It consists of extensive ridges and swelling hills, with irregular plains between; and is watered by streams branching from the Hawkesbury and Shoalhaven rivers. It is more scantily supplied with timber than most of the other counties, there being a tract called Goulburn I'lains, consisting of 35,000 ac., without a single tree. The plains of this county are exeeedingly fertile, and the seenery in general pieturesque. The county town, Goulburn, is 125 m . S.W. from Sydney. The county sends one nember to the Legislative Council. Pop. 5000.

ARGYLE, or Argyll, an extensive co. in the S.W. of the Highlands of Scotland, consisting partly of mainland, and partly of islands; bounded, N. by lnverness; E. by Perth, Dumbarton, the Frith of Clyde, and Kilbrannan Sound; S. by the North Channel; and W. by the Atlantic Ocean. Area, about $2,432,000 \mathrm{ac}$., of which 308,000 are under cultivation. Greatest length of mainland about 115 mn .; breadth exceedingly irregular, being about 60 m . near its $\mathbf{N}$. , and not much over 10 m . at its S ., extremity. From the windings
of the numerons lays and erceks with which the land is everywhere indented, it is supposed to lave more than 600 m. of sea-coast. Its principal inlets are Loch Shiel, Loch Sunart, Loch Linnhe, Loch Etive, Loch Fine, and Loch Long.

Argyle is divided into five districts, Cowall, Lorn or Argyle proper, Cantyre, Morven, and Sunart. Of these there are various subdivisions, such as Appin, Glenorchy, Ardnamurelan, and Knapdale. The county includes the islands of Tiree, Coll, Mull, Islay, Jura, Staffa, Iona or Icolmkill, Canna, Rum, Muck, Lismore, Lorn, Kerrera, Seil, Lasdale, Luing, Shuna, Lunga, Scarba, Colonsay and Oronsay, Gigha, Sanda, Gometra, and Ulva. The chief towns are the capital, Inverary, Campbelton, Uban, Bowmore, Lochgilphead, and Tobermory. For a long time this county scarcely formed part of the kingdom, being subject to the Maedonalds of the Isles, who assumed regal and independent sway over it. The estates, titles, and jurisdietion of the latter, however, subsequently fell to the Campbells, to whom they still belong. The Duke of Argyle, whose seat is at Inverary, is proprietor or feuar of the largest portion of the territory, and chief of the family of Campbell. The general features of the county are varied and striking; consisting of lofty mountairs, deep glens, and inlets of the sea running far into the land. Towards the N. it exhilits the wild grandeur characteristic of the W. IIighlands of Scotland.

The W. termination of the great Grampian range is within the county. The mountain masses which stretcl N.E. from the river Awe into the shires of Perth and Inverness, consist chiefly of granite; which also extends along the N.W. shore of Loch Limme into the distriets of Sunart and Morven. In almost every other part of the mainland (espuceially among the Grampians, on the E. borders of the county), and in several of the islands, as Islay, Jura, \&e., mica-slate is the prevailing roek, and is extensively quarried. Limestone, chiefly of the earlier, but partly also of the more recent formation, and sometimes in the form of tolerable marble, is found; and a small coal field is partially worked in the neighbourlood of Campbelton. The earth called Strontian was first discovered at the village of that rame in this county, and there two veins of lead exist. Copper has been discovered in several localities, and was at one time worked.
The climate, though variable, is on the whole mild. The hills and forests abound with fallow-deer, stags, roes, and almost every sort of game. The coast, although rocky, being indented with numerous deep bays and lochs, affords abundance of safe and excellent harbourage. In the interior there are several lakes, the largest of which is Loch Awe. The county is intersected by numerous streams, but none of importance. Both lakes and streams abound with fish. The soil is of a mixed character, the pasture varions, many of the hills being covered with heath, while others are green to their summits. Numerous herds of black cattle and sheep are reared; which, next to the fisheries, oceupies the chief attention of the inhabitants. Some of the glens are fertile, and in good eultivation; particularly Glendaruel, the finest in the county. Agricultural produce is chiefly confined to barley, oats, and potatoes; but wheat, rye, pease, beans, and flax are also cultivated to a small extent. The elief articles of export are sheep, cattle, horses, fish, slate, and granite. The principal manufactures are leather, the weaving of wool, and sinelting of iron ore. One of the most important brauches of industry is the fishing of herring, cod, and ling, which abound on the coast, and around the islands. The roads by which the county is traversed are generally good. It has also internal water comnunication by the Caledonian and Crinan Canals; the latter lying wholly within the county, and shortening the passage from the Frith of Clyde to the W. Highlands by 120 m . Nothing has given a greater impulse to the agriculture and industry of Argyleshire than the extension of steam navigation. By this means the most distant parts of the county are brought into easy cormmunication with one another, and with Glasgow, to which the inhabitants can now send their stoek and produce with the cestainty of finding a ready market. Among the autiquities of Argyle are the celebrated monastery of Iona, the remains of a Cistertian priory in Oronsay, and the castles of Dunstaffinage on Loch Etive, Ardtornish on the Sound of Mull, Skipness in Cantyre, and Kilehturn on Loch Awe. The most noted of its natural euriosities are tho
basaltic columns and cave of Staffa. Argyle is the birthplace of Ossian, and the seene of many of the occurrences recorded in his poems. The cave of Staffa still bears the name of Fingal's Cave. The population of the entire county, which in 1801 was 73,023 , in 1851 amounted to 89,298 . Pasliamentary constitueney for $1844-5,1766$. Valued rental, £12,466,5s. 10 cl . ; annual real value in 1815 , £227,493.-(New Stat. Acc. ; Forsyth's Beauties of Scotland; 1lon. Mrs. Murray's Guide to Beauties of Scotland; Anderson's Guide to Highlands; \&e.)

ARGYIRO CASTRO, or Ergir Castro [Turkish, Erghile], a tn. European Turkey, in Albania, l. bank, Ergir or Argiro, 40 m. N. W. Jamnina. This town, fortified by an extensive castle perehed on a rock of conglomerate, and commanding the mountain-pass of Derbend, is situated on several ridges of rock, broken ap by dcep ravines, and commected by stone bridges. The houses are seattered over an irregular and broken surface, giving the town a singular and romantic appearance. The place was taken and fortified by Ali I'asha in 1812. It was then a place of much greater consequence than it is now, its population being, in 1813, estimated at 13,000 ; but decay of trade, visitations of the plague, and the war of Greek independence, had reduced the inhabitants, in 1839, to 2000 Albanian and 200 Greek families; most of the

ARG y ro Castro.-From Holland's Ionian Isles, Albanin, ke.

Ly a patriot force, and nearly deserted by its inhabitants. The port is small, and landing difficult, on account of the great swell of the surf, except in the balsas, or double canoes of the country, which are constructed of inflated seal skins, and being

balza of inflated skinsi-From Dorbigny, קoyage dans l'Amerique Bleridionalo.
managed by the natives with great dexterity, will live where an ordinary boat would be swanped. On these fragile barques all kinds of goods are landed. At the entrance to the roads of Arica lies the island of Guano, so thickly covered with tho manure of the same name as to communicate no very agreeable odour to the prevalent W. winds blowing over the island, right on the ships at anchor.-The instrict of Arica is about 480 m . long, N.W. and S.E., and about 40 m . average breadth, E. to W. It is, in general, extremely barren, consisting principally of sandy deserts, with a few cultivated spots. In some of the valleys, Guinea pepper, wheat, maize, and other crops are grown. Pop. of the town about 3500 , though once estimated at 30,000 .

ARICA'Tl. Sce Aracati.
ARICIIAT, a flourishing seaport, Cape Breton Island, s. side, Madame Island, about lat. $45^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $61^{\circ} 3^{\prime} \mathrm{W}$. It contains several considerable establishments for proseeuting the fishery The trade is for the most part in the hands of Jerscy merchants, who employ the people in the neighbourhood in taking fish, large exports of which, both dry and pickled, are made to the West Indies, to S. America, and to Europe. Pop. between 1500 and 2000 .
few Turks there resident being government officials or soldiers. The vale of Argyro Castro, which is of a pastoral character, is 30 m . long, and from 4 to 5 wide.

ARIANO, a tn. Naples, prov. Principato Ultra, 44 m. N.E. Naples, on a steep hill in one of the most frequented passes of the Apennines, on the main road from Naples to I'uglia. It is the residence of a superintendent of education, and of a suffragan bishop; it contains a handsome cathedral, 12 parish churches, several convents, an academy, an hospital, several inonts-de-piété, and some earthenware manufactories. It suffered greatly from earthquakes in 1456 and 1732 . Iop. 11,718.

ARICA, a maritime tn. Peru, cap. dist. of its own name, dep. of, and 200 m. S.S.L. from Arequipa; 200 m . N.W. Potosi; situated in an agreeable vallcy, upon the coast of the Pacific ; lat. (mole) $18^{\circ} 28^{\prime} 6^{\prime \prime} \mathrm{s}$. ; lon. $70^{\circ} 24^{\prime} \mathrm{W}$. (r.) The houscs are chiefly constructed of canes and reeds, covered with mats. Glass beads are manufactured in the town, and near it salt is obtained plentifully. Arica was formerly a more considerable place than it is now, and had a larger population. From this port, the produce of the celcbrated mines of Potosi, in Bolivia, were shipped. It lias now fallen into comparative insignificance, and lias at various times suffered severely from earthquakes, especially in 1833, when it was almost entirely destroyed. It is the principal port through which forcign business is carried on with Bolivia, that country not possessing any convenient port of its own. The eustoms revenue of Arica in 1845, amounted to $£ 54,154$; and in 1846 , to £64,578. During the war of independence in 1821, Arica was much injured loy military operations, havmg been attacked

ARID, a small isl. Indian Occan, about 70 m . S.W. Possession Island; lat. $46^{\circ} 56^{\prime} \mathrm{S} . ;$ lon. $47^{\circ} 30^{\prime}$ E.

ARIEGL, a river, France, supposed to derive its Latin name, Aurigera, from the grains of alluvial gold found in its bed; has its source in Lake Embcix, at the foot of the Pie de Framiquel, in the E. Iyrcnees; flows N.W. through dep. Ariege, enters Ilaute-Garomne, and falls into the river Garonne at Pinsaguel, about $6 \mathrm{~m} . \mathrm{S}$. Toulouse, after a course of about 93 m . It becomes navigable at Cintegabelle, 17 m . above its embouchure, the place where Lord 1Iill, with a portion of the British forces, crossed the Ariegge in 1814. The river abounds in excellent salmon trout, slad-fish, \&e.

ARIEGE, or Armege, a dep. France, on the Spanish frontier, comprchending the former Conté de Foix, nearly the whole of Couserans, in Gascony, some conmunes of ancient Languedoc, and a considerable portion of the Pyrenees; bounded, W. and N. by IIaute-Garomne, E. by Aude, S.L. by Pyrénées Orientales, and S. by the valley of Andorre and the Pyrences. Srea, 1,124,816 ac., two-thirds of which are covered by mountains ; length, E. to W. 64 m ; breadth, N. to s. 48 m . The mountains rise gradually from $\mathbf{N}$. to $\mathrm{S} .$, and reach their greatest elevation on the extreme frontier, in the Pyrenees. The principal summit is Montcaln, $10,663 \mathrm{ft}$. high. 'The others range from an alcitude of 10,611 to 6299 ft , the height of the Puy Moreins. The various loranches streteling from E. to W. separate the department into two valleys, the one watered by the Ariege, and the other by the Salat. These two rivers are the only navigable ones. Among numerous other streams are the Volp, the Arize, the waters of which pass under ground in
two places, and the Leze, all of whieh flow into the Garonne. In the N., the elimate is mild and temperate, but in the S . the heat is oppressive in summer, and the cold extreme in winter. The higher lands in the S. furnish principally wood and pastures, with some medicinal plants ; the lower are remarkable for their fertility, particularly in the N. districts about Pamieres, St. Girons, and Mirepoix. Chief produce:corn, wheat, maize, millet, potatoes, hemp, and flax. The arable land in the department extends to $366,692 \mathrm{ac} . ;$ meadows, 82,835 ac.; vincyards, 28,603 ac.; wood, 222,664 ac.; heath and barren land, 322,664 ac. The vine is cultivated up to the middle of the lighest mountains. The wine is of indifferent quality, and is entirely consumed in the district. There are numerous orehards, and woods of chestnats, which yield a great deal of fruit. A large quantity of cattle, slieep, and goats, are reared. Bears, wild boars, wolves, foxes, badgers, rocbucks, chamois, polecats, otters, hares, and rabbits abound in the forests and mountains; also eagles and other birds of prey. Reptiles and vipers are found in the marshy plaees, and trout and craw-fish in the rivers and lakes.

The staple trade of the department is in iron, the prineipal mines of which are at La Rancié, in the Viedessos, whielı stupply nearly 60 furnaces in this one department alone. Lead and copper are procured in various places; and also small quantities of silver. Marble, jasper, gypsum, slates, and coal, are worked. Cloth, hosiery, cotton stuffs, woollens, linens, hats, soap, earthenware, and china; leather, paper, and glass, are manufactured; and iron, cattle, cork, resin, wool, marble, and jasper, exported. A considerable tiaffic is carried on with Spain, the groods being transported over the Pyrenees chiefly on mule or horseback.

The department, of which Foix is the capital, is divided into three arrondissements-Foix, Pamiers, and St. Girons, and subdivided into 20 cantons and 336 communes. Pop. 270,555.-(Murray's Mandlook for Franee; French Official Talles.)

ARIENZO, a tn. Naples, prov. Terra di Lavoro, 18 m . N.E. Naples, on Mount Tifati, between Naples and Benevento; and said to have been founded by the Normans. 1t has seven parish churches, an hospital, and a mont-de-piété. Pop. between 10,000 and 11,000 .

ARIGNA, a coal and iron dist. Ireland, in the N. of eo Roscommon, on the stream of the same name. Attempts have repeatedly been made to work the minerals of this district, but hitherto without any advantageous result.

ARINOS, a river, Brazil, prov. Matto-Grosso. It rises in the Parecis mountains, which form part of the N. boundary of the Diamond Distriet; takes a N.W. course, and falls into the river Tapajos, an affluent of the Amazon, in lat. $9^{\circ} 30^{\prime} \mathrm{S} . ;$ lon. $58^{\circ} 20^{\prime}$ W., after a course of about 700 m .-(Dic. Gco. Imp. Brazil.)

ARIPO, a sinall tn., W. coast, isl. Ceylon, Gulf of Manaar, Hay of Condately, 125 m . N. Colombo; lat. $8^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $80^{\circ} 8^{\prime} \mathrm{E}$. The surrounding country is sterile. To the E. is a bank where the pearl fishery is carried on, in the Gulf of Manaar ; and during the fishing season the civil and military authorities reside at Aripo.

ARISH, or Araish (El), a fort and vil. Egypt, near the Syrian frontier, 168 m . N.E. Cairo; lat. $31^{\circ} 5^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $33^{\circ} 57^{\prime} 45^{\prime \prime} \mathrm{E}$. (R.) ; on a low eminence abont half a mile from the Mediterranean, on a creek and small river of the same name. It has fragments of columns and other architectural remains, and is supposed to occupy the site of the anc. Rhinocolura; but, in modern times, it is remarkable only as giving name to a convention (Jaly 24, 1800) between the Turks and French, after the position of the latter, in Egypt, had been rendered inseeure by the battle of the Nile, by which the French agreed to leave Egypt within three months.

ARISPE, a tn. Mexico, 1. bank, Sonora, cap. intendancy of same name ; lat. $30^{\circ} 42^{\prime} \mathrm{N}$. ; lon. $109^{\circ} 15^{\prime} \mathrm{W}$. ; about 190 m. E. the Gnlf of California. 'This town,' says Major Pike, 'is celebrated throughout the kingdom for the vast quantity of gold table utensils made use of in the houses, and for the urbanity and hospitality of the inhabitants.' The pop. has been variously stated from 3400 to 7600 ; it may probably be between the two.

ARIZE, or Larize, a river, France, which rises near Puy Jugon among the mountains of Esplas, a branch of the Pyrences, dep. Ariège, and, after a course of about 25 m .,
falls into the Garonne opposite Carbonne. Near Mas-d'Azil, in lat. $43^{\circ} 5^{\prime} \mathrm{N} . ;$ lon. $1^{\circ} 20^{\prime}$ E., it traverses Roche-du-Mas, one of the most remarkable caverns of the Pyrences. Two lofty precipices, slanting towards each other, meet at their summit and form an immense areh, which is capable of slieltering 2000 men, and under which the Arize flows. The two entries to this cavern are wide, and were at one time fortified by highl walls. In 1625 , during the religious wars, the Calvinists of the surrounding districts took refuge here, and suceessfully withstood all the attempts of the R. eatholic army to force them to surrender.

ARJISII, or Ardisir [anc. Arzes, Arsissa], a small tn. Kurdistan, Turkey in Asia, pash. Van, on the N.W. shore of the lake, and 40 m . N. W. the tn . of that name. It has a eastle, now in a ruinous condition. In the neighbourlood are some beautiful gardens, and throughout the district large quantities of corn and cotton are produced. Lake Van is sometimes called Lake Arjislı.

ARJISH, or Eksish-DAGH [anc. Argaens], a celebrated mountain, Asia Minor, 117 m . N. by W. from the head of the Bay of Iskenderoon; lat. $39^{\circ} 3^{\prime} \mathrm{N}$.; lon. $35^{\circ} 40^{\prime} \mathrm{E} . \quad 1$ ts height is estimated, by IIumboldt, at $13,197 \mathrm{ft}$; and by Ilamilton, at $13,100 \mathrm{ft}$. It rises up almost to a single peak, from a broad and extended base, consisting entirely of volcanic rocks and scoriaceous cinders of different kinds. Its slopng sides are studded all round with numerous cones and craters, the effeets of voleanic action at various periods. Being nearly destitute of trees, and exhibiting little or no cultivation, it lias an extremely inhospitable look; an cffect which is inereased by the black, rugged, and cindery appearance of the roeks. The lowest limit of the snow line was found, by Mr. Hamilton, to be $10,300 \mathrm{ft}$. The elevation of this mountain is so great and so unusual in this part of the world, that the inhabitants of the surrounding country look upon it with awe and astonishment, and have associated it with many fables.- (IIamilton's Asia Minor; Ainsworth's Journey from Angora to Dir.)

ARJONA, a tn. Spain, in Andalusia, prov. of, and 14 m . N. W. from Jaen, on a mountain slope; ill-built, but laving a pretty promenade, with a church and five schools, a consistory, storehouse, hospital, and prison. The inhabitants are employed in agriculture, domestic weaving, and grinding oil. Pol. 3000.

ARJONILLA, a tn. Spain, in Andalusia, prov. of, and $16 \mathrm{~m} . \mathrm{N} . W$. from Jaen, on a plain surrounded by hills; tolerably well built, and having a church and three sehools, a consistory, hospital, prison, and abattoir. The inhabitants are employed in tillage, tanning leather, and making bricks and tiles. Pop. 2400.

ARK, or Ancil, a small isl. in d'Entrecasteaux Channel, Van Diemen's Land, between Brune Island and the mainland; lat. $43^{\circ} 17^{\prime} \mathrm{S} . ;$ lon. $147^{\circ} 19^{\prime} \mathrm{E}$.

ARKAlG, or Archaig (Locin), a solitary but beautiful lake, S. part of Inverness-shire, Scotland, 16 m . long by 1 broad. It communicates with Loel Lochy, from which it is only about 2 m . distant, by a dark and sluggish stream. The lake is but little frequented, although the seenery around it is of surpassing beauty.

ARKANSAS, one of the southern U. States of America, bounded, N. by Mlissouri, E. by the river Mississippi, whieh separates it from the states of Mississippi and Tennesse, s. by Louisiana and Texas, and W . by the Indian territory. It lies between lat. $33^{\circ}$ and $36^{\circ} 30^{\prime} \mathrm{N}$., and lon. $89^{\circ} 30^{\prime}$ and $94^{\circ} 30^{\prime} \mathrm{W}$., and is 240 m . long, by 228 wide; area, 54,500 sq. m., or 34,880,000 ae. The E. part of Arkansas, watered by the numerous tributaries of the Mississippi, is low, flat, and marshy, thickly wooded, and subject to frequent inundations. The middle is more diversificd, having an undulating and partly hilly surface, though of inconsiderable elevation. The W. is more hilly; being traversed by the Ozark range, which extends into Missouri, and, at some points, attains the height of 2000 ft . In various parts there are prairies of immense extent; and extensive forests of large trees, consisting principally of oak, hickory, ash, cotton, linden, maple, locust, and pinc. The territory is generally well watered, though in many parts it is otherwise. Its principal rivers are the Arkansas, the Red River, the White River, the St. Francis, and the Washita or Ouachitta, all tributaries of the Mississippi. Near the centre of the state are numerous hot springs; the temperature of which, though variable, rises in the driest seasons to the boil-
ing point. They aro much resorted to for chronic and paralytic affections. The higher lands are considered the most healthy; and the clinate is generally mild, but is said to be unfavourable to recent settlers. The soil is various; the most fertile being that which skirts the rivers. The staple crops are cotton, maize, and corn ; but garden plants and fruittrees are likewise cultivated with success. Wild animals abound, and the domestic species are reared in considcrable numbers. Iron, coal, salt, lead, and other minerals, are found. Manufactures and commerce, still limited, are increasing. This state has no colleges, and few common schools. The Arkansas territory, originally, and still partly occupied by Indian tribes, was colonized by the French in 1685, under the Chevalier de Tonti. In 1803, it was ceded by purchase to the U. States ; and, in 1819, was made a separate territory, having been formerly part of Louisiana. Seventen years afterwards, its constitution was framed, and it was aduitted into the Union. The governor is elected by the people for four years, the senators for four, and the representatives for two. The state sends one member to Congress. Arkansas is divided into 54 counties, and contains but few large towns and villages. Pop. in 1840, 97,574 ; of which 19,935 were slaves, and 465 free people of colour. Total $\mu$ op. in 1850, 209,639.- ( $U$. States Gazetteer; Davenport's American Gazetteer.)

ARKANSAS, a large river, U. States, America, rising in the Rocky Mountains, about lat. $40^{\circ} 30^{\prime} \mathrm{N} . ;$ lon. $109^{\circ} \mathrm{W}$. , Howing E.S.E. through the Missouri and Arkansas territorics, and, after a conrse of 2170 m ., joining the Mississippi in lat. $33^{\circ} 40^{\prime} N$. Its channel is broad, and unobstructed by rocks, shoals, or rapids; boats may, at some scasons, ascend the stream for 1980 in . It has numerous tributaries; the principal being the Neosho, on the N., and the Canadian, with its branches, on the S. Among the upper component streams or forks, and along the banks of the main river, lies an extensive plain of reddish sand, based on a thick stratum of reck salt, and covered in dry, hot weather with a crust of pure, white, erystallized salt, several inches deep; and named from these circuinstances the salt prairie, grand saline, or salt plain.(Gregg's Commerce of the Prairies.)

ARKENGAR'TII-DALE, a par. and township, England, co. York, N. Riding; 14,180 ac.; N. by W. Richmond. Pop. in 1841, 1243.

ARKESDEN, a par. England, co. Essex ; 2320 ac. ; S. Saffron Walden. Pop. in 1841, 498.

ARKIIANGEL. See Archangel.
ARKHOURI. See Argum.
ARKIKO, or Arkeiko, a scaport, Abyssinia, at the head of the Bay of Massawalı; lat. $15^{\circ} 38^{\prime}$ N.; lon. $39^{\circ} 37^{\prime}$ E. It is a small, miserable place, consisting entirely of mud hovels; and is surrounded by a flat and sandy country, with a few gardens in the immediate vieinity. It is governed by a nayib or native chicf; and derives its importance from being the point of the coast nearest to the Abyssinian territories, and through which all intercourse by sea to the N . of that country is now carried on. The principal exports are corn and slaves, sent to Arabia, fire-arms being taken in exehange.

ARKINSK, a Cossack settlement in Siberia, gov. of, and about 30 m . W. from Okhotsk, on the Okhota, which, a little higher up, receives the Arka. It was originally founded for the purpose of facilitating intercourse with the indigenous population, and is one of the centres whence the Yasak or tribute levied on the natives is collected. The settlers export to Okhotsk the nuts of the stone-pine, a tree which here, though nearly upright in summer, lics prostrate, covered with snow, in winter; and they do also a good business in collecting the soft horns of the rein-deer, for the Russian traders to Kiakhta, where the horns are sold to the Chinese, who make them into a jelly much sought after by gormands. The native Tungusses also make a jelly of these horns, but they only use it for glue.-(Erman's Travels.)

ARKLOW, a maritime tn. and par. Ireland, co. Wicklow. The town is on the r. bank of the Avoca, 14 m . S.S.W. Wicklow, and 39 S.S.E. Dublin. A bridge of 19 arches here crosses the river, which falls into the sea about 500 yards below the town. It is divided into the upper and lower town. The houses of the former are neatly built. The church, a handsome edifice, is in the centre of the town; which also possesses a R. catholic chapel, and a small Methodist meeting-house. The lower town, built mostly of thatched mud cabins, is inhabited prin
cipally by fishermen, engaged in the herring fishery, and in dredging for oysters; the latter chiefly sent to liverpool. The harbour being much obstructed at its entrance by a bar, is resorted to by the native fishermen only. The town contains a school for boys, two schools for girls, a savings' bank, a fever hospital, a dispensary, and a constabulary and an infantry barracks. Some little business is done in the malt trade. At one period a considerable portion of the copper ore obtained from the Wicklow mines was exported from Arklow. The principal import is coal.--The Parish of Arklow, at the S.E. extremity of the county, 8127 ac ., contains the celebrated mountain of Croghan-Kinsella; which, about the close of the last century, was supposed to possess native gold, and mining operations were established there by Govermment, but the works were destroyed in the insurrection of 1798 . They were afterwards resumed, but no gold being discovered, they were ultimately abandoned. 1'op. of th. in 1841, 3251; of par. 6237.

ARKONA, or Arcona, a promontory, N. coast, isl. Riigen, in the Baltic. There is here a fixed light, 202 ft . above the sea-level; lat. $54^{\circ} 40^{\prime} 54^{\prime \prime} \mathrm{N} . ;$ lon. $13^{\circ} 26^{\prime} 12^{\prime \prime}$ E. (r.)

ARKSEY, a par. England, co. York, W. Riding; 5220 ac.; N. Doncaster. Pop. in 1841, 1056.

ARKUDI. See Anchun.
ARLANC, or Arlant, a tn. Franee, dep. Puy-de-Dôme (Auvergne), 40 m . S.L. Clerinont; agrecably situated on a hill, at the foot of which flows the Dolore. Manufactures:blondes, laces, and ribbons. Pop. 1532.

ARLANZA, a river, Spain, in Old Castile, rising in the sicrra de Neilar, prov. Burgos; it flows W., and, after recciving the Pellosa and other tributaries, joins the Arlanzon about 8 m . N.E. from its confluence with the Pisuerga, after a course of about 60 m .

ARLANZON, a river, Spain, in Old Castile, rising 24 m. E.S.E. Burgos, in the sierra Pineda, and, flowing through Burgos, winds S.W., and falls into the Pisuerga 3 m. N.E. Torquemada, after a course of about 70 m .

ARLBERG, or AdLersiserg [Eagle's mount], a branch of the Rhetian Alps, in the W. of the Tyrol and the Vorarlberg, betwcen the sources of the Ill and the Lech. The chain is traversed by a road made by the Emperor Joseph II., in 1786, and greatly improved since 1835, along which there is much traffic between Venice, Trieste, and switzerland. A hospiec was erected on the summit in 1386 , to shelter travellers from the Alpine snows.

ARLECDON, a par. England, co. Cumberland ; 5700 ac .; E.N.E. Whitehaven ; new church, and coal worked. Pop. in 1841, 558.

ARLES [anc. Arelate, Arelatum], a th. France, dep. Bouches-du-Rhône (Provence), cap. arrond. of same name, and of two cantons, 1. bank, Rhone, about 24 m . N. from the sea, and 17 m. S.E. Nismes. It stands a little below the angle of the delta formed by the two branches of the Rhone, on a rocky table of shell limestone, which slopes gradually to the river. Its old ramparts, which are not now used, enclose a space of 193 ac . The streets, though not laid out in perfectly straight lines, are tolerably regular and spacious; but the pavement, composed of round flints, is fatiguing to the foot, and inconvenient. The squares, which scarcely execed three in number, are of limited extent, but regularly formed. The principal one is the Place Royale, which is used as the market-place, and occasionally as a circus for bull-fights-a sport to which the youth of Arles are much addicted. The principal ornanent of this Place is an ancient obelisk, a monolith of granite, the only one executed out of Lgypt. It was discovered in 1389, but not set up till 1676, when, in bad taste, it was crowned by a globe of fleur-de-lis, and dedicated, by inscriptions on its pedestal, to Louis XIV. It is about 50 ft . in height, and being well placed, has an imposing effect. Around the Place Royale are a series of public buildingsthe IIotel de Ville, an edifice of three stories, decorated with a row of Corinthian pillars, surmounted by a tower, and containing, on its first story, the public library of about 12,000 volumes; the nuseum, occupying the old chureh of St. Anne; the Gothic monastery of St. Trophimus; and the ancient palace of the archbishops of Arles. The other buildings of note in the town are the cathedral, built by St. Virgilius in the seventh century, adorned without by a fine portico and façade, and within by some fine paintings; the church of Notre

Dame, said to have been built on the foundations of a temple of Cybele; the church of St. Honoré, whieh was founded in the sixth century, and in which a series of ancient freseoes, analogous to those of Pompei, has been reeently discovered. The whole town, indeed, abounds in ancient monuments, the most interesting of which is the Roman amphitheatre, which was fitted to contain 24,000 spectators; and, both in size and magnificence, is supposed to have surpassed that of Nismes. Arles is the chief place of a sous-prefecture, and

tife catheipral, ArLFs, from the Grand Place. From Chapuy, Cathedrales Francaises.
possesses a court of commerce, a chamber of manufactures, an agrieultural soeiety, a communal college, and a school of hydrography. Its manufactures, whieh are not of mueh importanee, are almost confined to hats and famous sausages. It has also silkmills, and builds some vessels. Its trade is extensive, and gives it, in respect of exports, the fifth place among the ports of France, Arles ranking immediately between Rouen and Nantes. It possesses admirable facilities for trade. Its quays, which are well paved and very spacious, serve as an entrepot for all the merchandise which passes between Lyons and Marseilles. In addition to the Rhone, on whieh steam-vessels passing Arles regularly ply, two canals terminate in the town, one connecting it with the Durance, and another proeeeding S., to the Port de Bone. To these means of cominunication, a valuable accession has recently been made by railways. The great railway which is to pass through Parıs, and connect the Mediterranean with the English Channel, has been completed from Arles to Marseilles, while a branch of the same railway proceeds from Arles to Nismes. Arles possesses great historical interest. It is mentioned by Julius Cæsar, who, previous to the siege of Marseilles (Massilia), built twelve war-galleys at its port. It was once an archbishoprie, and makes an important figure in eeelesiastical history as the place where several celebrated councils have been held. Its ancient magnifieence is still amply attested by numerous remains of splendid edifiees.-The ArRond. of Arles, consisting of eight cantons, subdivided into 33 communes, has an area of $920 \mathrm{sq} . \mathrm{m}$. Pop. of tn. 14,239; of arrond. 85,222.-(Dict. de la France.)

ARLESIIEIM, a small tn. Switzerland, can. of, and about 5 m . S. from the town of Basel, in a fertile district, r. bank, Birs, 1154 ft . above the sea. It is well built, and has some baths, but is eliefly remarkable for its beautiful botanic garden. On a hill close by is situated the aneient eastle of Birseck. Pop. 800.

ARLES-sur tech, a tn. France, dep. Pyrénées Orientales (Roussillon), $20 \mathrm{~m} . \mathrm{S} . W$. Perpignan. It contains an aneient ehureh, the front and portal of which are enriehed with curious earvings in white marble. Manufaetures :-soap, hoops, deals, antl leather. In the neighbourhood are some iron forges, and,
at a short distance, the small fortress and village of Arles-lesBains, now Amélie-les-Bains, whose hot mineral springs are mueh resorted to. Pop. 1939.

ARLEY, a par. England, co. Warwick; 2130 ae.; W. by S. Nuneaton. Pop, in 1841, 265.

ARLINGHAM, a par. England, co. Gloueester; 2300 ac.; S.E. Newnham. Pop. in 1841, 793.

ARLINGTON, two parishes, England:-1, Co. Devon; 1890 ac. ; N.E. Barnstaple. Pop. in 1841, 206.-2, Co. Sussex; 4790 ac.; W.S.W. Irailsham. Pop. in 1841, 686.

ARLON [anc. Orolanum], a tn. Belgium, eap. prov. Luxembourg, 104 m. S.E. Brussels, and 15 m . W.N.W. Luxembourg. It has two churehes and a chapel ; a townhouse, an hospital, a court of primary jurisdiction, an athenæum, a sehool of design, and several initiatory sehools. It is the best cornmarket in the district. Its manufactures are woollen stuffs for eloaks, leather, and, on a small scale, earthen or delftwares. The antiquity of Arlon is attested by coins, and inseriptions on several busts of heathen deities, which have been discovered near it. It has frequently suffered by the ravages of war, both 11 ancient and modern times. Its last disaster was in 1793 , when it was pillaged by the Freneh, after the victory which they gained in the neighbourhood over the Austrians. Pop. 4508.

ARLSEY, a par. England, co. Bedford; 2370 ae. ; N.W. Baldock. Pop. in 1841, 820.

ARMA (Santiago de-), a tn. New Granada, prov. Antioquia, on the Arma, a tributary of the Cauea, 71 m . S.S.E. Santa Fé d'Antioquia. The climate is very hot. The distriet produces gold, and all kinds of grain and fruit.

ARMACAO, a small tn. Brazil, island of St. Catherine, prov. of that name; lat. $27^{\circ} 30^{\prime}$ S.; lon. $48^{\circ} 40^{\prime}$ W. There is a whale-fishing establishment here.

ARMAGI, an inland co. Ireland, prov. Ulster, having the cos. Down on the E., Louth on the S., Monaghan and Tyrone on the W., and Lough Neagh on the N. It is about 34 m . in length, from N . to S ., and in breadth, at the widest part, about 21 m . It contains 328,076 ac , of which 265,243 are arable, 35,117 uneultivated, 8996 plantations, 17,942 water, and 778 oceupied by towns. The surface, generally, is undulating and flat, excepting in the S.E., where it rises into hills of considerable height, the highest attaining an elevation of 1893 ft . above the sea. Granite is their principal constituent. In other parts greywacke and slate are the prevalent rocks, while red sandstone predominates along the margin of Lough Neagh. The minerals of this eounty are ineonsiderable, but they inelude a very beantiful description of marble, of which there are quarries near Armagh. The soil is, in general, fertile, except in the mountain district. The chicf erops are wheat, oats, barley, potatoes, and flax.

There are also a great many productive orehards in the N.E. parts of the county, the greater portion of the produce of which is sent to Belfast, and occasionally to Glasgow. Some dairy cows are kept, and a considerable quantity of butter is made. Cattle, of a small stunted breed, are reared in the mountainous distriets; sheep few and inferior. The weaving of eotton and linen is carried on to some extent, particularly the latter, which has long been the staple manufaeture. The farms here are smaller than in any other county in Ireland, running mostly from 2 to 15 ac .; yet the condition of the lower orders, as regards house-accommodation, is better than in most other parts of the kingdom, their eottages being generally whitewashed, well thatched, elean, and comfortable. In 1845, there were 71 national sehools in operation in the county, attended by 7973 children. The whole number attending the various schools, in 1841 , was 12,553 . The county is divided into eight baronies and 28 parishes, and returns three members to Parliament, two for the county, and one for the city of Armagh. Constitueney of the former, in 1849, 1242; of the latter, 753. Principal towns, Armagh
und Lurgan (wehich see). Pop. in 1841, 232,393; of which, 211,893 is in the rural, and 20,500 in the civic distriet, being 511 persons to the sq. m . of arable land, and 414 to, the sq. m . of the entire area of the county. Pop, (1851), 196,085.

ARMAGII [anc. Irish, Ardl Mache], a city, Irelani, prov. Ulster, cap. of the above co., 70 m . N. by W. Dublin, and $33 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. by S. Belfast, finely situated on the sloping sides of a gentle eminence, the summit of whieh is crowned by the cathedral. The streets are well laid out, regularly built, and well kept and ligbted. Some of them converge towards the cathedral, others ascend in more oblique directions, anl are intersected by those of greater magnitude which encirele the town. The honses are of a hard reddish ealcarcons stone, and generally slated. A number of the public edifices are of hewn limestone, of a vivid colour, and are, for the most part, advantagcously situated. The town is well supplied with water, by pipes from a reservoir on an eminence in the neighbourhood. The most conspicuous and most interesting arehitectural object in the city, is the eathedral. The original edifice is said to have been erected by St. Patriek, in the year 455 ; the present, in 1675 ; it is in the Gothic or pointed style, and in the form of a cross, 183 ft . long, with a tower and spire, the entire height of the latter from the ground to the weathercock being 150 ft . Some years ago it was repaired and beautified, chiefly at the expense of Lord Jobn G. Beresford, who contributed $£ 10,000$ for this purpose. On an eminence $N$. of the town stands the new R. catholic cathedral, a large and spacious building in the pointed Gothic style. It contains several monuments, but all of comparatively modern date, none of those belonging to the original eathedral being now in existence. There are, besides, a Protestant chapel of ease, a R. catholic chapel, two places of worship for Methodists, three for Presbyterians, and one for Independents. The other public buildings are the comnty court-house, prison, and infirmary, the district lunatic asylum, which cost $£ 20,000$; the royal school, styled the college; a public library, bnilt and endowed by primate Robinson, in 1741, containing 14,000 volmes, some accounts say 20,000 ; a market-house, a brown linen hall, a yarn-hall, and tontine buildings, the last ineluding a spacious news-room; various hospitals and charitable establishments, and a number of schools, comprising a national and Sunday school. Near the city is the archiepiscopal palace, with a domestic chapel, and extensive and well laid out grounds, open to the public; the mall, a place of public recereation; an observatory, with a very superior astronomical apparatus; and barracks for 800 men. The prineipal business of the place arises from the retail trade, for the supply of the populous surrounding district, and the weekly market, where a good deal of agricultural produce is sold, as well as the linen made in the neighbourhood. Considerable quantities of corn likewise are sent to Portadown and Newry for exportation. There are here a brewery, several tanneries, and flourmills. There were formerly two distilleries, but they bave ceased working. Armagh is the seat of the archiepiscopal sec of the primate of all I reland, whose ecclesiastical province comprises six consolidated dioceses.

The city is of great antiquity. In 448, a synod was held in it by St. Patrick, the canons of whieh, called Canoin Patraic, or Patrick's canons, are still extant. They composed the celebrated Book of Armagh, which was considered of such value, that its safe keeping became a hereditary office of dignity in a particular family, who held eight town-lands, as remmeration for the responsibility. In the Middle Ages, it was considered the metropolis of Ireland, and so contimued till that distinction was transferred to Dublin. It is still, however, the ecelesiastical metropolis of the kingdom. It was at one time celebrated for its college, which long continued one of the most famous seminaries in Europe. Armagh has been, at various intervals, from the most remote times, subjeeted to some of the worst calanities of war, having been often captured, plundered, and burned, alternately, by Danes, Ostmans, English, Scoteh, and, not unfrequently, by the Irish chieftains themselves, when at war with each other. On some of these occasions, numbers of the inhabitants were carried into captivity by the vietors. Armagh returned two memhers to the Irish Parliament, but sends one only to the British Hlouse of Commons. Constituency, 753. Markets are held ou Tuesdays for general purposes, and on Wednesdays and Saturdays for grain. The population seems to have been on
the decline latterly. In 1834 , it was 10,764 , of which rather more than one-half were R. catholics ; in 1841, it was $10,215$.

ARMANÇON, a river, France, rising in dep. Côte-d'Or, and flowing N.W., parallel, for a considerable distance, to the Bourgogne Canal, which crosses it by a fine aqueduet, it passes Tonnere, and falls into the Yonne, about 3 m . S.E. Joigny, after a course of 112 m ., of which about 16 are navigable. It receives as tributarics the Brenne, Armance, ant some other rivnlets.

ARMENIA, a mountainous country of W. Asia, not now politically existing, but of great historical interest. It varied in extent at different epochs, and its precise boundaries are not now known; but it may be regarded as lying between lat. $36^{\circ} 50^{\prime}$ and $41^{\circ} 41^{\prime}$ N., and Ion. $36^{\circ} 20^{\prime}$ and $48^{\circ} 40^{\prime}$ F. It was sometimes subdivided into First, Second, and Third Armenia, to which a Fourth was afterwards added; but the division by which it was almost universally known, was into Armenia Major and Armenia Minor, or the Greater and the Less Armenia. The boundaries of cach, according to Col. Chesney, the latest authority on the subject, and probably the best, are as follows:-Armenia Major, commencing at sumcïsat, stretches along the Euphrates, which bounds it on the W., till near Erzingan; a few miles to the S. of which it quits the river, and keeps the direction of Tarabuzm as far as the mountains S. of Glhumish Khanah. It proceeds N.E. along this range, then skirts the N. extremity of the district of Kars, and passing onward to near Tiflis, becomes the right bank of the Kur, whose course it follows to its estuary in the Caspian, which now becomes the boundary on the E. Leaving the Caspian, it turns S.W. in the direction of Tabreez, and passes through the districts of Van and Diarbckir, on the frontiers of which it again meets the Euphrates at Sumeïsat. Armenia Minor, or, as it might be called, the territory W. of the Enphrates, lies along the range of the Kof-tagh, which runs W. almost parallel to the Black Sea, and forms its N. boundary as far as a point on the river Ilalys or Kizil-Irmak, not far from its estuary in the Black Sea. Armenia Minor follows the course of this river for about 180 m ., and contmuing $\mathrm{S} . \mathrm{W}$. meets the Taurus, which beeomes its houndary almost to the sea, near Ayas, on the W. side of the 13ay of Iskenderoon. From this point it sweeps round the S. side of the districts of Adana and Marash, and meets the Euphrates; which thins intersects Armenia almost centrally, and forms the natural bonndary between the two divisions now described. Armenia Major has an area of about $84,000 \mathrm{sq} . \mathrm{m}$.; Armenia Minor, about 70,000 . The territory of this once celebrated kingdom is now partitioned among Turkey, Persia, and liussia. The first of these powers possesses the largest share, being that which borders on the Euphrates, and includes the N. part of Iiarbekir, with Moosh, Van, and the pashalie of Erzeroom. The share of Persia forms part of Kurdistan, and almost the whole of Azerbijan. The share of Russia forms its government of Armenia. It stretches along the river Aras, and is sometimes known as the district of Erivan.

The plateau of which Armenia chiefly consists is inountainous and voleanic. The ridges, of which there are fom principal, are generally parallel to each other, running, with sundry deviations, E. and W., and between them are broad valleys and plateanx ; that of the Aras, at Mount Ararat, being 2890 ft . and many others 5000 to 8000 ft . above the sea level. The mountains are mainly composed of traclyytic porphyry; with slate, limestone, \&c., appearing on the sides of the chains, and sometimes rising up with the porphyry. Granite is also met with, but is not frequent ; and in the N., in the Turkish province of Akalzik, tertiary fossiliferous formation is found. Its volcanoes are all quiescent; unless we except Ararat, of which an eruption took place in 1840, accompanied by a disastrous carthquake. A few momntains, as Ararat, A laghez, and Bangöl-dagh, rise above the line of perpetual snow, but this is not generally the case; and there are no passes but such as can be crossed in a single day. Silver, lead, iron, and eopper are found in the mountains; and the last two have, to some extent, been wrought in modern times. Rock-salt is plentiful, and is exported, in considerable quantities, to Persia and elsewhere. Mineral waters abound, but little or nothing is known of their constituents, or of their medicinal qualitics.

Several important rivers take their rise in Armenia, namely, the Kur or Cyrus, and its tributary the Aras or Araxes, flowing E. to the Caspian Sea; the Akampsis or Tehorak, and the

## ARMENIA

209
ARMENIA

IIalys or Kizil-Irmak, flowing N. to the Black Sea; and the Tikris and Euphrates, which flow into the Persian Gulf. There are also several minor tributary streams. The only considerable lakes are those of Van, 70 m . in length, and about 28 in breadth; Goukcha, Sevanga or Sevan, N.E. of Erivan, about 40 m . long by 15 broad; and Urumiyah.

The climate of Armenia is very severe, presenting quite a contrast to that of the warm regions of the lower Euphrates, and to the mildness prevalent on the shores of the Black Sea. Any one, indeed, leaving the shores of the Pontus in April, and travelling rapidly S., may in one week experience the delights and discomforts of three seasons of the year. On the shore of the Black Sea he leaves spring in her most beauteous garb; on the platean of Erzeroom he meets stiff, cold winter, and sees before him a wide extent of country covered with snow and ice; in Mesopotamia he finds approaching harvest, and the farmer busy with artificial irrigation to counteract the effects of the burning heat. Winter, in Armenia, continues from October to May, spring and harvest a month each, and the change to summer is very rapid. The heat, especially in the valleys, during summer, is great, and rain seldom falls. In Erivan, which is a degree of lat. S. from Trebizond, the thermometer in winter falls $36^{\circ}$ Fah. lower than it does in the latter; and in summer it rises $24^{\circ} \mathrm{Fah}$. higher. On the plateaux of Erzeroom, Gumri, \&c., the difference is still greater; indeed, in the town of Erzeroom the snow lies in the streets for eight months of the year. E. and S.E. winds in summer, W. winds in spring, and N.E. storm winds in winter, are most prevalent. Though

PATRIARCHAL CHURCH AND MONASTERY OF ECHMIADZIN
From Dulio:s, Voyage Autour du Caucase.
their ruling passion appears to be an inordinate love of gain, but they are generally esteemed honest. Their mental capacity is good, and those who are educated are distinguished by superior cultivation and refined manners; but the mass of the people inhabiting their native country, in consequence of centuries of neglect, are grossly ignorant and superstitious. The Armenians embraced Christianity in the fourth century; and in A.D. 536 , separated from the Greek church, being dissatisfied with the decisions of the council of Chalcedon. In doctrine, they hold that there is only one nature in Christ, and that the Holy Spirit proceeded from the Father alone. They have seven sacraments, but, in the mode of using them, differ in several respects from the R. catholics. They adore saints and images, but do not believe in purgatory. Thicir hierarchy differs little from that of the Greeks. The catholicus, patriarch or head of the church, has his seat at Echmiadzin, a monastery near Erivan. A minority of the Armenians, chiefly those residing in European countries, acknowledge the Pope, and conform, in doctrine and church-government, to the R. catholic church. They are called United Armenians.

The monastery of Echmiadzin, the seat of the catholicus, or head of the Armenian church, lies in the valley of the Aras, 13 m. E. Erivan, near the village of Vagarhabad, which is also frequently, though improperly, called Echmiadzin. The monastery is surrounded by a wall 30 ft . high, entered by four gates, and flanked by towers, which, as well as the walls, are built of brick, excepting the base, and furnished with loop-holes, giving to the whole structure the appearance of a large quadrangular fortress. eevere, the climate is, however, esteemed healthy. The soil of Armenia is reckoned, on the whole, productive, though in many places it would be quite barren, were it not for the great care taken to irrigate it; to such an extent indeed is the system of irrigation carried on, that in summer many considerable streams are wholly absorbed. Wheat, barley, tobacco, hemp, grapes, and cotton are raised; and, in some of the valleys, apricots, peaches, mulberries, and walnuts are grown. From the nature of the country, the rearing of stock is carried on to a greater extent than agriculture. The horses are spirited, fleet, and fiery. Pines, birches, poplars, and beeches flourish, but there are no thick forests except in the N. parts of the country. The flora is not so varied as might be expected in such an Alpine country; in several respects, it resembles the vegetation of the Alps of Tyrol and Switzerland.

The iulabitants are cliefly of the genuine Armenian stock; but besides them, in consequence of the repeated subjugation of the country, various other races have obtained a footing. Of these the principal are the Turcomans, who still maintain their nomadic labits, and from whom the country has received the name of Turcomania. In the S. portion are the predatory Kurds and the Turks; on the Tchorak, Georgians; and throughout the whole country, Greeks, Jews, and Gypsies. The total number of Armenians has been estimated at $2,000,000$, of which probably one-half are in Armenia. The remainder, like the Jews, are scattcred over varions countries; and, being strongly addicted to commerce, play an important part as merchants. They are found over all W. Asia; about 200,000 are in Constantinople and its vicinity; numbers are in Russia, Hungary, and Italy; some in Africa and America; and a large number in India, chiefly in the great marts Bombay, Madras, and Calcutta. Everywhere they are engaged in banking and trading. In physical structure, they belong to the Caucasian race, and, in general, are well made. Their eycs and hair are black, their look lively, noses aquiline, and their complexion somewhat swarthy. The women are remarkable for the delicacy and regularity of their features. Like the Jews, whom, in many respects, they resemble,

The monastery was founded in A.D. 524 ; but the church it contains dates from the time of St. Gregory 'the enlightener,' who introduced Christianity into Armenia, though various additions have been made to it in later times. The monks have here a printing-press and a seminary; but little good is to be expected from their labours, as they are unlearned, ignorant, and superstitious. In a similar condition are the Armenian clergy in general, which, indeed, is scarcely to be wondered at, when we know that any layman who has been 'chosen by the congregation, and has passed 14 days in the prescribed fastings and ritual observances of the church, may get ordination from the bishop. and may read mass, baptize, confirm, marry, give extreme unction, and have authority too to forgive sins.'-(Parrot.) Such a fact makes it easy to understand why ignorance should prevail, and the Bible in the vulgar tongue should be prohibited. Parrot, not knowing Armenian, expected to converse with the monks and priests of Echmiadzin in Latin, but none of them knew either Latin or Greck, though of works, in these languages, there were numbers in the library; three of them could speak Russian, but all other European languages were unknown.

The Armenian language belongs to the most distant offshoots of the Indo-Germanic root; but still, in its form and structure, has much that is peculiar ; and to the ear it is harsh and dissonant. The old Armenian language, also called Haican, which is that of literature, may now be considered a dead language. In the new Armenian language, which is divided into four dialects not differing greatly from each other, thereare many Turkish words, and the construction of sentences is regulated by the rules of Turkish syntax. With exception of some songs preserved by Archbishop Moses Choronensis, no specimens of the earlier Armenian literature have been preserved. After the introduction of Christianity, a great taste for the Greek language and literature arose, and a number of works in Greek and Syriac were translated into Armenian. Before A.D. 406, the Armenians had no alphabet of their own, but used indifferently Greck, Syriac. or Persian

Vol. I.
characters. In that year, however, Mesrop Masdoty invented the Haican alphabet, consisting of 38 letters ( 30 consonants and eight vowels), called, from its inventor, Mesropian, and which still continues to be employed along with the modern alphabet. Armeuian literature flourished from the fourth to the 1 th century. Of this period, many writers have obtained a name chiefly as historians and chroniclers. Their works, which might throw considerable light on the history of the East during the Middle Ages, have hitherto been little consulted. Armenian literature began to sink in the 14th century, and since that period scarcely any original work of importance has appeared; but, in all their wanderings, the Armenians have preserved a taste for native literature, and lave set up printing-presses wherever they have settled; so that we find Armenian works printed in Amsterdam, Venice, Leghorn, Lemberg, Moscow, Astrakan, Constantinople, Smyrna, Echmiadzin, Ispahan, Madras, Calcutta, Batavia, \&c. The most interesting colony is that on the island of San Lazaro at Venice, founded by Abbot Mechitar Pedrosian in 1717, who there established a monastery, academy, and printing-press, whence important Armenian works continue to be issued down to the present time.

According to the native historians, the name Armenia is derived from Aram, the seventh king of the first dynasty, who, abont b.c. 1800, gave a settled character to the kingdom. The Armenians call themsclves Ilaiks or Haikans, and trace their origin, in their traditions, to Haic or Maico, the father and patriarch of the people, a contemporary of the Assyrian king, Belus. Armenia subsequently fell into the hands of different rulers, and was exposed to many attacks. The Romans and Parthians had many fierce conflicts ; but at last, under Trajan, Armenia Major became a Roman province. It afterwards recovered its independence, and was under the rule of its own kings. Sapor, king of Persia, attempted its subjugation in vain, and it remained free until 650, when it was conquered by the Arabians. After this, it several times changed its masters. In 1552 , Sclim II. conquered it from the Persians, and the greater part has since remained under the Turkish dominion. Armenia Minor ultimately shared the same fate. Of the cities of ancient Armenia, some ruins are yet to be scen, which display a good style in architecture. The chief towns are Erivan, Erzeroom, Nakhichevan, Van, Akalzik, \&c. (which see.) Of ancient capitals there were several, the most important of which was Artaxata on the Aras.-(Wagner's Reise nach dem Ararat; Parrot's Journey to Ararat; Dubois, Voyage autour du Caucase; Convcrsations Lexikon, Broekhaus, 9th Edition.)

ARMENIA (Russian), a trans-Caucasian gov. Russia, comprising that part of Armenia S. of Georgia, and N. of the Aras and Mount Ararat, and comprehending the monastery of Echmiadzin. It was ceded to Russia, in 1827, by Persia, of which it formed the province of Erivan-a name by which it is still sometimes designated.

ARMENIERSTADT, or Szamos Ujvar [Latin, Armenopolis], a tn. Austria, in Transylvania, 22 m. N.N.E. Klausenburg; lat. $47^{\circ} 0^{\prime} \mathrm{N}$. ; lon. $23^{\circ} 52^{\prime} \mathrm{E}$. It is well and regularly built, and the strects spacious, and tolerably straight. It contains a neat Armenian church, an Armenian school, and an orphan hospital; and is defended by a strong castle. The inhabitants are mostly employed in weaving and in cattledealing A considerable transit trade is carried on with the interior. In the vicinity are salt springs and salt mines. Pop. 3000 .

ARMENT, Erment, or IIfrhont [anc. ITermonthis], a vil. Upper Egypt, l. bank, Nile, about 8 m . S. W. Thebes. It was the capital of the IIermonthite nome; and in Christian times it was an episcopal see. Apollo and Jupiter, corresponding to the Egyptian Mandoo and Amun ; the goddess Rato, and the sacred bull Basis, were here objects of worship. Its modern inhabitants regard it as the birthplace of Moses.

ARMEN'TIERES [Latin, Armentaria], a tn. France, dep. Nord, on the Belgian fronticr, 10 m . W.N.W. Lille, on the Lys, which has here a small harbour, and an aetive navigation. The town, which is well bnilt, has a commonal college or ligh school; with factories for spinning flax, hemp, and cotton yarn. There are also manufactories of woollen cloth, table linen, calicoes, lace, thread, beet-root sugar, and tobaceo; bleachfields, distilleries, soapworks, tanneries, and salt-refineries; with a conoiderable trade in grain, brandy, iron,
tobacco, soap, \&c. Bricks are made in the neighbourhood in Iarge quantities. Pop. 6675.

ARMENTO, a tn. Naples, prov. Basilicata, 26 m . S.s. F. Potenza, on the declivity of a rock. It lias two monts-de-piété. 1'op. 2570.

ARMIANSKOI BAZAR, or Bazar of the Arbrenians, a large vil., S. Russia, gov. Taurida; lat. $46^{\circ} 7^{\prime} \mathrm{N} . ;$ lon. $33^{\circ} 43^{\prime}$ E.; 81 m . S.E. by E. Kherson, and 85 m . N. by E. Simferopol; situated on the Isthmus of Perekop, about 2 m . S. of that town, on the principal road from Russia to the Krimea. It consists of numerons narrow lanes, lined with houses built of stone, or of turf plastered over, and enclosed by walls, which form the boundaries of the streets. It has altogether a filtly and mean appearance; but contains numerous bazaars, several mosques with wooden minarets, a Greek temple, and a Russo-Greek clurch, for the worship of the Tatars, Armenians, and Russians, who compose its population. Upwards of 20,000 cart-loads of salt from the salt-lakes of the Krinea, pass anmually, during summer, through the village, for the supply of the S. of kussia.

ARMINGILALL, par. Eng. Norfolk; 900 ac. P. 79.
ARMITAGE, par. Eng. Stafford; 1950 ac. I. 987
ARMLEY, a chapelry and vil., England, co. York, bor. and 2 m . S.W. Leeds, on the Aire, with a jail, house of correction, an Episcopal and several Dissenting chapels. It is an important seat of the woollen manufactures, chiefly carried on for the Leeds market. Pop. (1851), 6108.

ARMOY, par. Irel. Antrim; 9665 ac. P. 2766.
AliMTHORPE, par. Eng. York (W. R.); 2810 ac. P.449.
ARNA. - 1, A tn. on the W. limits of the Libyan desert, r. bank, Kuku, 420 m . N.E. from Lake Tchad. Its precise position, however, is not ascertainecl. Arrowsmith places it in lat. $17^{\circ} 13^{\prime} \mathrm{N} . ;$ lon. $21^{\circ} 30^{\prime}$ E., with a query ; and Kicpert, in lat. $18^{\circ} 20^{\prime} \mathrm{N} . ;$ lon. $21^{\circ} 40^{\prime}$ E., with a similar expression of doubt. $-2, \mathrm{~A}$ vil. Grecian Archipelago, on the N.W. shore of the isl. of Andros.

ARNAOU'TS. See Albania.
arNAU, or Riesenstadt, a tn. Bohemia, l. bank, Elbe, about 25 m . from its source, and 23 m . N. Königgrätz. It is walled; and has a castle, deanery, bospital, townhouse, and Franciscan monastery. The inliabitants are chiefly employed in weaving. Pop. 1439. The lordship of which Arrau is the capital lies along the Elbe, is well wooded, and rears a considerable number of cattle. The inluabitants, employed cbiefly in spinning and weaving, are 10,314 .

ARNAY-Le-duc [anc. Arnceum], a tn. France, dep. Côted'Or (Burgundy), 30 m. S.W. Dijon, agrecably situated near the Arroux. It is well built and well paved; and has a high school, manufactures of cloth and starch, tanneries, tileworks, corn and fulling-mills. Its trade is in cattle, grain, wine, vinegar, hemp, wool, leather, horse hair, and poultry. Near this town Admiral Coligny, the celebrated leader of the Huguenots, under whom Henry IV. was then making his first campaign, in 1570, gained a victory over Marshal Cossé Brissac. Pop. 2331.

ARNCLIFFE, a par. England, co. York, W. Riding; 35,860 ac.; N.E. Settle. Pop. in 1841, 834.

ARNE, a par. England, eo. Dorset; 2450 ac.; E. Ware ham, on the coast. Pop. in 1841, 168.

ARNEBURG, a tr. Prussia, gov. of, and 40 m . N. from Magdeburg, l. bank, Elbe. It was well fortified, but few of its defences remain; though it is still walled, and has three gates. The inhabitants are chiefly employed in agricnlture. Their position on the Elbe enables them to carry on a considerable corn trade. Pop. 1500.

AlNEDO, a city, Spain, Old Castile, prov. of, and 27 m . S.E. from Logroño, near the 1. bank of the Cidacos, an affluent of the Ebro, on a gentle declivity, surronnded by mountains. It has level paved strects, a spacions square, three parish churches, a townhall, several sehools, a large hospital, prison, granary, cemetery, and a beautiful paseo, close to which a stone bridge spans the river. On the top of a neighbouring hill stands an ancient castle, recently repaired and fortified, and now containing a barracks. Agricultnre, weaving linen fabrics, and distilling brandy, employ the inhabitants. At some scasons of the year great numbers are engaged as muleteers. Considerable nnmbers of eattle are reared in th. vicinity; for which, and various descriptions of merchandise, two annual fairs are held. Pop. 3345.

ARNEF, or Arani, a tn. Hindoostan, in the Carnatic, 80 m . W.S.W. Madras; lat. $12^{\circ} 40^{\prime}$ N.; lon. $79^{\circ} 20^{\prime}$ E. It has a fortress, in which Myder-Ali deposited his warlike stores during his invasion of the Carnatic, in 1782.

ARNEMUIDEN, a small tn. Holland, isl. of Walachern, prov. Zeeland, 3 m . E. Middelburg. It has a townhall, a custom-house, and a Calvinistic church; but is very much fallen off in its condition. Formerly it was a place of considerable importance, as a port and a place of trade. Its haven was at all times filled with vessels from every part of the world. In 1496, the Spanish princess Johanna, bride of Philip the Beautiful, arrived here with 135 vessels; and, in 1522, upwards of 150 vessels left this port to fetch Emperor Charles V. from England. Its harbour is now dried up, its commerce is gone, and it can only communicate with the sea by means of a canal. Pop. 1200.

ARNESBY, a par. Englant, co. Leicester; 1510 ac. Pop. in 1841, 505.

ARNGASK, a par, Scotland, co. Perth; 6116 ac. Pop. in 1841, 750.

ARNHEM or Arnieim, an old important and prosperous in. Holland, cap. arrond. ard can. of same name, prov. and cap. Gelderland, 10 m. N. Nymcgen, and 34 m . E.S.E. Utrecht, on a rising ground, r. bank, Rhine, about 2 m . below where it receives the Ijssel. It is the seat of the provincial court, of the court of the arrondissement and canton, and of a tribunal of commerce. The towu was fortified, and the defences were improved in 1702, by Coehorn, and it still has several gates; but, during the reign of William I., it was dismantled, and its ramparts are now public promenades. It is built in the form of a creseent facing the Rhine, which is here crossed by a bridge of boats. The environs are pleasant, the town being surrounded by an undulating country called the Veluwe, by parks, villas, and pleasure-gardens, and the air is pure ; on these accounts, it is much frequented during summer by visitors. The town, which is rapidly increasing, has a townhall, Government-house, courthouse for the provinee, weigh-house, barracks for 2000 men, eivil and military prison, and two squares, one of which is the corn-market, and a fishmarket. It has also two Calvinistic, a handsome Lutheran, and two R. catholic churehes; four hospitals for decayed persons and for the sick ; two orphan hospitals, and one for widows; numerous schools, among which there is one of design and architecture; and a natural history and literary society. The principal business in Arnhem is the transit trade along the Rhine, and connecting streams and canals, to Amsterdam, Rotterdam, Amersfoort, Utrecht, \&e., and the grain trade. It also possesses some manufactures in earthenware, soap, cotton, wool-combing, and dycing, and has oil and bark-mills. After Lent it has a fair for 14 days, and in August another for eight days, two horse markets and numerous cattle-markets.

Arnhem withstood successfully all the attacks of the Spaniards. In 1586, Sir Philip Sydney died there from a wound receivel in the battle of Zutphen. In 1795, it was taken by storm by the French, who were driven from it by the Prussians in November 1813. It has suffered severely several times by fire. Pop, about 15,000.-(Van der Aa's Nederlanden.)

ARNHEM'S LAND, the middle portion of the N. coast of Australia, lying W. of the Gulf of Carpentaria. Its limits are not well defined, but it may be considered as N . of lat. $14^{\circ}$ S., and as having for its E. limit Groote Eylandt or Island, and for its W. Melville and Bathurst lslands. The whole coast is skirted by isles and islets, of which those named are the largest. It was diseovered in 1623, by the commanders of the Arnhem and Pera, but is still imperfectly known. On Coburg peninsula was the Government station, Port Essington, now abandoned. The coasts are low, the rocks being loose sand with ferruginous concretions, and not esteemed healthy. In some parts it is well wooded, in others thiuly wooded. A table-land 3000 to 4000 ft . high, lies between lon. $132^{\circ}$ and $134^{\circ} \mathrm{E} .$, and about lat. $13^{\circ} \mathrm{S}$., composed mainly of granite. The district is watered by the rivers Adelaide, S. and E. Aligator, and Liverpool.- Arnhem Bax, N.E. coast, Arnhem's Land, between point Dule, lat. $11^{\circ} 36^{\prime}$ S.; lon. $136^{\circ} 7^{\prime}$ E. (r.), und Cape Wilberforce, lat. $11^{\circ} 53^{\prime}$ S.; lon. $136^{\circ} 34^{\prime}$ E. (R.) ; 40 m . broad at its mouth, 20 m . at its upper end, and about 50 m . deep. It is obstructed by numerons coral islands, and at its mouth are the Wisel and English Company's Islands.-_

Cape Arnhem, the N.W. point of the Gulf of Carpentaria, lat. $12^{\circ} 17^{\prime}$ S.; lon. $137^{\circ}$ E. (r.)

ARNO [anc. Arnus], a river, Tuscany, one of the largest in Italy, having its sources in the Apennines in Monte Falterone, and Apennino dell Penna, the former about 5 m . N.E. the village of Ponticelli. After the junction of the two sources, the river flows S.S.E. till it receives the Chiana Canal 6 m . N.W. Arezzo, whenee it flows N.W. to Pontassieve, where it rcceives from the right the river Sieve, after which its course is W., passing through Florence, where it becomes navigable, and Pisa, beyond which, about 7 m ., it falls into the Mediterranean, after a course of about 155 m . By a canal from Pisa to Leghorn, the difficult navigation of the lower part of the river is avoided. Besides the affluents named, the Arno receives the Greve, the Pesa, the Era, and the Elsa. Its source is 4429 ft . above the sea level; at Figline, the level of the river is 387 ft . above the sea, and at Florence, 50 m . from its embouchure, it is 144 ft . above the sea level.

ARNOLD, a vil. and par. England, co. of, and 4 m . N. by E. Nottingham. The village, which is about three quarters of a mile long, stands near Harwood forest, and has a church, three dissenting chapels, and an endowed free school. An annual cattle-fair is held at the end of September. The inlabitants are chiefly employed in cotton-mills and weaving hosiery. Area of par. 4670 ac. Pup. 4509.

ARNON, a river, France, an affluent of the Cher, into which it falls near Vierzon, in the department of Cher, after a N.N. W. course of 84 m .

ARNSBERG, or Arexsberg, the most S. of the three govs. into which the prov. of Prussian Westphalia is divided; area, about 2250 geo. sq.m. It contains 55 towns, and 3420 villages, with a pop. of half a million, being 250 persons per geo. sq. m. Of these 350,000 are Protestants, 4000 Jews, 100 Mennonites, and the remainder R. catholics. The surface is hilly, particularly in the S. division, but none of the mountains are of great height ; the highest, IIunan, belonging to the Huchgebirge, on the confines of Westphalia and Wittgenstein, not being more than 2600 ft . above the level of the sea. Arnsberg is watered by the Lippe, liuhr, Lenn, Eder, Lahn, Sieg, Dimel, Emsche, Wupper, Volme, and Ennepe, and belongs almost wholly to the basin of the Rhine; only a small portion along the E. boundary belonging to that of the Weser. About a fifth of the whole government is woodland. In particular, the forest of Arnsberg occupying an elevated tract from 700 to 900 ft . above the sea, stretches from E. to W. for 7 m . The soil is generally of a elayey texture, and by no means fertile. Sometimes, however, as in Arnsberg proper, it has a substratum of limestone, and is productive. The best soil is in the mountain valleys towards the $\mathrm{S} . ;$ while N., between the Lippe and Hellweg, lies a flat, rich, and wellcultivated traet of a marly nature, on which great numbers of eattle are reared. But minerals and the productions of the loom, are the great staples of Arnsberg, and give it a prominent place among the industrial districts of Giermany. Among the former are iron, copper, lead, silver, and calamine. Coal also is raised to a considerable extent, and there are numerous quarries both of slate and marble.-The Goverinment of Arnsberg is divided into 14 eireles-Altena, Arnsberg, Brillon, Bochum, Dortmund, Hagen, Hamm, Iserlohen, Lippstadt, Meschede, Olpe, Siegen, Soest, and Wittgenstein. Of these, in point both of romantic beauty and manufactures, Arnsberg proper appears to take the lead. It has seven towns, 121 villages, and about 30,000 inhabitants.

ARNSBERG, eap. both of the above cirele and gov., and at one time cap. of the whole duchy of Westphalia, on the spur of a hill half encircled by the Rulir, and immediately below the ruins of an old eastle of the same name, 44 m . S.s.E. Münster. It is divided into the old and the new town, and has three ehurches (one Protestant and two R. eatholic), a normal and an agricultural sehool, and a gymnasium with eight professors. In the Middle Ages, Arnsberg was one of the principal seats of the Vehnic court [Velm-gericht], which exereised a powerful sway throughout Germany. Pop. 4000.

ARNSTADT, a pieturesquely-situated and well built tn . Germany, in the principality of Sehwarzburg-Sondershausen, cap. seigniory of same name, $11 \mathrm{~m} . \mathrm{S}$. by W. Erfurt, upon the Gera, which divides it into two parts; lat. $50^{\circ} 49^{\prime}$ N.; lon. $10^{\circ} 57^{\prime}$ E. It has an old palace, almost entirely in ruins; several churches, of which the Frauenkirche, dating from 972, has
fine painted windows, and several old seulplures; a nunnery, now converted into the residence of the prince; a Franeiscan monastery, now beeome a school-house and parsonage; a gymnasium, a normal sehool, a cabinet of natural history, an orplan hospital, a lunatic asylum, and a house of eorrection. Manufactures:-cotton, linen, and woollen stuffs, ribbons, and leather. There are also breweries, stuceo, fulling, flour and paper-mills. Arnstadt is one of the best markets in Thuringia for grain, timber, and fruit ; and has also a eonsiderable trade in wool, peltry, and colonial produce. Pop. 5000 .

ARNSTEIN, a tn. Bavaria, eircle, Lower Main, on the slope of a hill near the Werpe, $16 \mathrm{~m} . \mathrm{N} . \mathrm{N} . W$. Wiirzburg. It contains two churehes, an hospital, and a eastle; and an oil, a stucco, and four corn-mills. Its trade is in wine, fruit, and grain. The historian Schmidt was born here. Pop. about 1500 .

ARNSWALDE, a tn. Prussia, prov. Brandenburg, gov. Frankfort-on-the-Oder; 39 m . S.E. Stettin; situated between three lakes, which abound in fish. It has some cloth manufactures. Pop. 4000.

AROA, a small tn. Venezuela, prov. Carabobo, abont 3 m . from the r. bank of the Aroa, 30 m . from the Gulf of Triste, on the Caribbean Sea, and $15 \mathrm{~m} . \mathrm{N}$. San Felipe; lat. $10^{\circ}$ $30^{\prime} 0^{\prime \prime} \mathrm{N}$.; lon. $68^{\circ} 0^{\prime} 55^{\prime \prime} \mathrm{W}$. The river rises in a sierra about $50 \mathrm{~m} . \mathrm{S} . \mathrm{S} . W$. the town, and, after a course of 80 m . in a N.N.E. direetion, falls into the Gulf of Triste, in its course fertilizing a large valley. At a distance of about 10 m . from the town, S.S.W., is a range of hills called by the same name; namely, the sierra Aroa.

AROCHE, a tn. Spain, in Andalusia, prov. of, and 48 m . N. from Huelva, on the S . slope of the sierra Morena, irregularly built, and partly surrounded by old walls; having a chureh, hospital, townhall, custom-house, and prison. The inhabitants are chiefly agricultural, and hold a fair in August for cattle and the produce of the neighbourhood. Pop. 2700.

AROHA, a range of basaltic hills, New Ulster, the N. isl. of New Zealand, on the E. coast. It eommences about lat. $37^{\circ} 52^{\prime}$ S., stretelies N., and terminates at Cape Colville or Moe-hao, a distance of 110 m . The hills composing this range are covered with wood.

AROK-SZALLAS, a privileged market tn. Hungary, on the small stream Gyöngöys-Patak, whieh ahnost eneireles the plain on which the town stands. It is on the high road from Kaschau to Pesth, from which it is 42 m . E.N.E. It is ill supplied with good water, but the ground around is fertile, and considerable rumbers of sheep and eattle are reared. Pop. 9106.

AROLSEN, a city, W. Germany, eap. of the principality of Waldeck, and seat of the gov., on the Aar, 12 m . N. Waldeck; lat. $51^{\circ} 23^{\prime} \mathrm{N}$. ; lon. $8^{\circ} 55^{\prime} \mathrm{E}$. It is well built, and has a handsome palaee, the residence of the Princes of Waldeck, containing a gallery of paintings, a eabinet of coins and medals, a valuable museum of antiquities from Hereulaneum and Pompeii, and a library of 30,000 volumes. The town possesses three churches and a grammar-school; with manufactures of worsted and woollen stuffs, and iron-ware, tanneries, \&c. Its yearly market is numerously attended. The country around is well wooded. Pop. 2000.

ARONA, a tn. Piedmont, prov. Novara, delightfully situated on the W. shore of the Lago Maggiore, and near its S. extremity, 38 m . N.W. Milan. It is a neat and bustling little town, carrying on a considerable transit trade between Piedmont and Switzerland, and having a small harbour on the lake, with several shiphuilding yards. It has four churches, a gymnasium, an hospital, and an old castle, in which was born the famous Carolus Borromocus, who has been canonized, and in whose honour a colossal statue was ereeted in 1697. This statue, which is situated on a hill above the town, ealled Monte di San Carlo, is 66 ft . high, and the Iedestal 46 ft . A staircase winds through the figure. The head, hands, and feet are cast, and the body made of large stones, covered with sheets of hammered copper. The work was executed by Zanelli and Faleoni, and is reckoned a highly meritorious performance. Pop. 5000 .

AROSA (EAy of), Spain, Galicia, W. coast, about 5 m . S.E. Cape Corrobedo, and 16 m. S.E. Cape Finisterre; lat. $42^{\circ} 30^{\prime} \mathrm{N} . ;$ lon. $8^{\circ} 50^{\prime} \mathrm{W}$. Dangerous place for vessels of all kinds

AROSBAJA, a market tn., N.W. eoast, isl. Madura,

Indian Archipelago. It is a large, prosjerous, well-built town, with two Mahometan temples, and two large marketplaces. It carries on with Java a considerable trade, to the prosperity of which the roomy haven on which the town is situated greatly contributes.-(Van der Aa.)

AROUAT (El-), a tn., N. Afriea, cap. klalifat of same name, in the Sahara, lying about 300 m . inland; lat. $33^{\circ} 48^{\prime} \mathrm{N}$.; lon. $1^{\circ} 38^{\prime} \mathbf{E}$. It is built on the N. and E. slopes of a hill, at the foot of which flows the Wady-Mzi, and is composed of from 700 to 800 houses, surrounded by a wall, forming nearly a square. It is divided into the E. and W. quarters, each of which forms a separate, and often adverse jurisdietion. In the former reside the Wled-Sewin, in the latter the Hallaf people ; these last laving also a dependent village population. The houses are mostly low, whitewashed, and ranged on terraces rudely faced with masomy. There are two marketplaces, or more; and an area, surrounded by areades, which serves traders for an exeliange. The people are industrious, many of them leing smiths, armourers, \&e., who display their implements in jublie stores; and shops, of a miscellaneous kind, are numerous. Fifteen or twenty Jewislı families are employed as wool-dressers, dyers, trinket-makers, \&c. The ehief articles of native traffic are-sheep, wool, oil, grain, butter, cheese, and negro slaves; mostly exchanged for garments, cutlery, agricultural implements, iron wares, cssences, spices, sngar, coffee, glass, small wares, women's trinkets, \&c. Besides being a thriving race, the people are reputed to be kind to their poor, and hospitable to strangers. In the environs are large gardens and plantations, watered by the Wady Lakhir, in which grow dates, vines, eucumbers, water-melons, onions, \&c., in large quantities. There are fine forests on the neighbouring hills.-The khalifat of El-Aronat is an aneient jurisdietion, was alternately dependent on Moroeeo and Turkey, and, before the French invasion, paid a yearly tribute of seven negroes to the dey of Algiers. Its possession was confirmed to the present khalif by the French, in 1844-5. It is bounded, N. by Jebel Amour, E. by the territory of WledNail tribe, S. by that of the Beni Mzabs, W. by that of ElArouat Ksal tribe. It comprises the following towns and villages-El-Outaia, Tadjemout, El-Haita, El-Assafia, AinMadi, and Ksir-el-Haëran. The people comprehend three tribes, namely, Arbas (the most numerous), the Wled-Sidi Atallahs, and the Arazlias.-(Sahara Algérien.)

AROUBA, an isl. at the mouth of the Gulf of Maraeaybo, belonging to the Dutel. See Uraba.

AROUCA, a tn. Portugal, prov. Douro, dist. Feira, situated among mountains of granite, 28 m . S. W. Lamego. It has a poorhouse, a Jatin school, and a celebrated Bernardine monastery. A considerable quantity of linen tliread, cele brated for its whiteness, is spun here. Pop. 2515.

AROUNDOU, a vil., W. Africa, 1. bank, Scnegal, in the Galam country; lat. $14^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $13^{\circ} 14^{\prime} \mathrm{W}$. It is situ. ated 5 m . S.E. Bakel, opposite Diogountrou.

ARPAIA, a vil. Naples, prov. Principato Ultra, about 2 m . E. Arienzo, between Capua and Benevento; supposed to have been the site of the anc. Caudium, where, in the year 311 u.c., a Roman army was compelled to lay down arms to the Samnites; but other authority plaees the scene of that famous disaster in a defile near Avellino, a little to the N. of Arpaia, celebrated as the Furcce Caudince.

ARPAJON.-1, A tn. [formerly Chátres], Franee, dep. Seine-ct-Oise, 20 m . S. Paris, in a fertile valley, at the confluence of the Orge and the Remarde; is surrounded by trees and sliady walks, and has a large market-hall. Tho larish church is large, but not of great antiquity. The IIotel Dieu, an ancient endowment, is well managed. In the town are tan-pits, cotton-works, and breweries; and some trade is carried on in grain, flour, poultry, pigs, calves, \&e. The Marolles station of the Paris and Orleans Railway is about 1 m . from Arpajon. Pop. 2017.-2, A vil. and com., dep. Cantal (Auvergne), 2 m. S.S.E. Aurillac; with tile-works and lime-kilns. Pop. 2331.

ARPINO [ane. Arpinum], a tı. Naples, prov. Terra di Lavoro, dist. of, and $6 \mathrm{~m} . \mathrm{S}$. W. from Sora; agreeably situated on rising ground. It has a royal college, with six professors, several cliurches and convents, and manufactories of cloths and woollen stuffs, the best in the kingdom; also tanneries, and in the environs is an extensive paper-mill. It was founded by the Volsci, and erected into a municipal town by the

Romans, who wrested it from the Samnites. Arpino is celebrated as having been the birthplace of Caius Marius and Cicero. The surrounding scenery is singularly beautiful. Pop. 11,060.

ARQUA, two villages, Venetian Lombardy:-1, Delegation of, and 5 m . S.W. from Rovigo, on the canal of Casta ${ }^{\circ}$ naro. It has an old dilapidated fortress, surrounded by walls and ditches, bult in 1129, by Guillaume Alardien. Silk culture and cattle-rearing are carried on. Pop. 3000.2, Arqua, or Arquato [Latin, Arquatum], Delegation of, and $12 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. from Padua, dist. Battaglia; pleasantly situated in the bosom of the Eugancan hills. Here the poet Petrarch spent the latter years of his life, and (July 18, 1374) died. Pop. 1200.

ARQUA, a tn. Mexico, state Zacatecas, formerly prosperous, but now falling into decay. It was well built, and contained numerous squares and churches. Pop. about 4000.

ARQUENNES, a vil. and com. Belgium, prov. Hainault, dist. of, and about 18 m . N.W. from Charleroi. It has stone quarries, and iron forges. Pop. 1675.

ARQUES, a small river, Franee, dep. Scine-Inférieure, rising at Monterollicr, 6 m. S.E. St. Saen, and falling into the English Channel at Dieppe. Its whole course, which is from S.S.E. to N.N.E., is 33 m . ; and of these, 6 m . below the town of Arques are navigable.

ARQUES [Latin, Arca, Arquce].-1, A th. France, dep. Seine-Inférieure (Normandy), 3 nt . S.S.E. Dieppe; 31 m . N.N.W. Rouen, in a beautiful valley, on the small river of the same name. It has a handsome parish church, with a cotton manufactory, and tanneries. Although now a mere village, Arques was, during the Middle Ages, the prineipal bulwark of Normandy on the N. Its castle, now in ruins, is celebrated for the number of sieges whieh it sustained, and especially for the victory gained beneath its walls in 1589 , by Henry IV., with 4000 Iuguenots, over the army of the League, amounting to 30,000 men, commanded by the Duke de Mayenne. Pop. 810.-2, A tn., dep. Pas-de-Calais, near St. Omer; has a manulactory of starch, glassworks, distilleries, and tameries. Pop. 1854.—Several other small places in France bear the same name.

## AlrRaCAN. See Aracan.

ARRAlOLOS, or Arroyolos, a tn. and par. Portugal, prov. Alemtejo, dist. Estremoz; on a hill of granite 14 m . N.N.W. Evora. It is not walled, but is defended by a castle, and contains a church, two monasterics, and an hospital. It las a manufacture of earpets and tapestry, and an annual fair, which lasts tliree days. Pop. 1473.

ARRAJAN, or Arrejan, an ane. tn. Persia, now in ruins, prov. Khuzistan, on both sides of the Kurdistan, about 1 m. N.W. Babahan or Behbehán, and 135 m . N.W. Shiraz; lat. $30^{\circ} 23^{\prime} \mathrm{N} . ;$ lon. $50^{\circ} 40^{\prime} \mathrm{E}$. The ruins, which consist of the remains of stone and brick buildings, lie scattered along the lofty banks of the river, mostly on the left shore; but also on the declivities of the bank, and partly along the narrow strip of land whieh separates the bed of the stream from its S. embankment. The houses appear to have been but of one story, with vaulted roofs. Both sides of the town were united by two bridges of magnificent dimensions, as their remains, and the eulogiums of aneient Arab travellers would indicate.-(Baron C. A. De Bode's Travels in Laristan and Arabistan.)

ARRAN, an isl., W. coast, Scotland, Frith of Clyde, co. Bute, between the peninsula of Cantyre and the coast of Ayrshire. It is 20 m . in length, N. to S., and about 10 m . in breadth. Its appearance is very remarkable, the N. part being erowded with lofty granitic mountains of a conical form, connected by sliarp, serrated ridges, and interseeted by deep gulleys and ravines. The highest summit, Goatfell, is 2900 ft . in height. The S. portion is eomposed of undulating hilly ground, sloping gently towards the sea, and presenting, in its cultivated fields and bright patches of verdure, a singular contrast to the ruggedness and sterility which characterizes the N. half of the island. The prevailing line of coast is low, but in many places steep and roeky; and is indented with several bays and harbours, the prineipal of whieh, Lamlash, on the E. side, is considered one of the best in the W. of Scotland. At the N. extremity of the island is a high isolated mass of new red sandstone rock, called the Cock of Arran, from a real or faneied resemblanec to that bird, and whieh
forms a well known sea-mark. On the small islet of Pladda, off the S. end of the island, and distant from it somewhat less than a mile, there is a lighthouse, with two fixed lights. The interior of the island, as well as the coast, abounds in remarkable and varied scenery, some of it wild and savage, some more bland and picturesque. It was at one time covered in many places with extensive forests, which have now wholly disappeared, and with them nearly all the animals of the chase, by whieh they were inhabited. The geology and mineralogy of Arran have attracted much attention. The island is divided into two parts, by a band crossing its centre behind the village of Brodick, composed of old red sandstone. N. of this line, the whole interior of the island is composed of granite, with a margin of mica and clay-slate, excepting on the E. coast, where the latter is formed, in part, of old red sandstone, and the carboniferous series. S. of this line, the island is composed almost wholly of trap, sienite, porphyry, and other unstratified rocks, with a narrow margin on the E. coast of new red sandstone; and on the S. and W., of alluvium and old red sandstone, with here and there patches of the carboniferous series. The island contains coal, freestone, slate, limestone, and ironstone. Rock-crystals, of a beautiful description, are found in the granitic mountains; and an extensive vein of sulphate of barytes is now, and has been for some years, suceessfully wrought in Glen Sannox. Though the hills generally present a scant vegetation, with few attractions for the botanist, the same cannot be said of the low grounds near the shore, where is a rich growth, including numerous beautiful species of plants, many of them of rare occurrence; and within tide-mark are to be found numerous beautiful, and many rare algæ. The soil on the E. side of the island is in general light, but varies greatly in the valleys, which are of considerable extent. On the W. side, the arable land is chiefly confined to the vicinity of the sea-coast. The principal crops are oats, barley, and potatoes. The whole rural economy of the island has been greatly improved of late years; and the condition of both the larger farmers and smaller tenants much advanced, particularly in their domestie aceommodation, the houses of the former being similar to those of the same class in other parts of the country, and the latter greatly superior, both in appearance and comfort, to those they occupied 20 years ago. The average rent of land is about $£ 1$ per acre. Considerable numbers of black cattle and sheep are reared on the hills, the former chiefly of the Highland Argyleshire breed; the latter are of the black-faced kind, and are diminutive in size, but take on flesl readily, and afford excellent mutton. In dairy husbandry, the small tenants, though still far behind, are rapidly improving. The larger fauma of the island presents little variety, comprehending only hares and rabbits, both of which are plentiful; some wild cats; the brown rat, which is very destructive; and a few deer, now to be scen only in the most retired recesses of the mountains. lioes, wild boars, and foxes, were formerly numerous, but have been long extirpated. Seals and otters are occasionally seen along the shores. Black game and grouse abound, and ptarmigan are sometimes met with on the summits of the mountains. Several species of snakes are found in the woods, glens, and moorlands. The sea around the island abounds in fish, molluses, zoophytes, and other marine animals, of numerous species. And the entomologist, no less than the geologist, botanist, or ichthyologist, may obtain a rich harvest in this delightful island. There are here numerous relics of antiquity, ineluding Danish forts, Druidical cireles, high, ereet columns of unhewn stone, cairns, and sepulehral piles, within which are usually found urns enclosing ashes. In this island Robert Bruce and some of his followers found shelter during a season of adversity; a cave, called King's Cave, at Drumidoon, on the W. side of the island, being pointed out by tradition as the place of his retreat and residence. On the walls of this cave there is a rudely-cut hunting scene, said to have been done by some of the followers of the fugitive monareh. Tradition asserts, also, that it was from the battlements of Brodick Castle, an ancient fortress, situated on an acclivity overlooking Brodick Bay, that Bruce saw the light on Turnberry-nook, on the opposite coast, which, taking for a preconcerted signal, induced him to cross to the mainland. The celebrated Celtic bard, Ossian, is said to lave died here. The inhabitants of Arran are tall, strong, and remarkably well formed. They are distinguished for sound sense, activity,
and enterprise. They are frugal and temperate, and, on the whole, of excellent religious and moral character. Gaelic is the prevailing language, though English is very generally understood. There are n number of good schools in the island; and a universal desire exists among the people to have their children taught at least the elementary branches of education. The yearly rental of the island, which belongs almost wholly to the Duke of Ifamilton, is from $£ 11,000$ to $£ 12,000$ a year. It is divided longitudinally into two parishes, Kilbride and Kilmorie, the one comprising the E., the other the $W$. side of the island. The receipt and expenditure for the relief and management of the poor, for the year ending May 14, 1847, was-Kilbride par. (pop. 2786), receipt, £164, 3s. $11 \frac{1}{2} d$. ; expenditure, £168, 18 s.: Kilmorie par. (pop. 3455 ), reeeipt, $£ 131,9 s .4 d$. ; expenditure, $£ 130$. Total receipt, $£ 295$, $13 \mathrm{~s} .3 \frac{1}{2} d$.; total expenditure, $£ 298,18 s$. Brodick is the principal village. Total pop. in (1851), 5,947.

ARRAN (Norti Island of), the largest of the group of islands called the Rosses, lying off the N.W. coast of Ireland, eo. Donegal ; area, 4335 ac ., of which 650 are under cultivation and in pasture; lat. (N.W. puint) $55^{\prime \prime} 1^{\prime} 24^{\prime \prime}$ N.; lons. $8^{\circ} 34^{\prime} \mathrm{W}$. (r.) It is about 3 m . long, and 2 broarl. Arraumore, the highest peak, rises 745 ft . above the level of the sea. The inhabitants chiefly subsist by fisling. On the N. point of the island is a lighthouse, exlibiting a fixed bright light. There is a small R. catholic chapel on the island. Pop. about 1000 .

ARRAN (Soutif Islands of), a group of islands, W. coast, Ireland, at the mouth of Galway Bay, co. Galway. The largest, Arranmore, Great Arran, Killane or Inishmore, is $8 \frac{1}{2} \mathrm{~m}$. long, and about 3 broad at the broadest part ; and contains 7635 ac ., inclnding two small islands at its N.W. extremity, called the Branach Isles. Pop. 2592. On the S. side of this island is a lighthouse, 490 ft . above the sea, and visible at a distance of 24 to 27 mn .; lat. $53^{\circ} 7^{\prime} 36^{\prime \prime} \mathrm{N}$. ; lon. $9^{\circ} 42^{\prime} 15^{\prime \prime} \mathrm{W}$. (в.) The middle island, lnishmaan, 3 m . long by 2 broad, contains 2252 ae. Pop. 473 . And the most 1.., Inisheer, 2 m . long by $1 \frac{1}{2}$ broad, 1400 ac . Pop. 456. The three islands form three separate parishes, in the diocese of Tuam, and union of Ballinakill. There are also included in the group, the small roeky isles called Straw Island, and Illawe-Earhaels or the Western Isle. Arrammore yields good oats ; and on it the most esteemed calves in the county are reared. The coasts abound with great varicty of fish, in catching which, and in agriculture, the inhabitants are chiefly employed. A pier, 245 ft . long, with a landing-quay, 326 ft . in extent, was erected by the late Board of Commissioners for the Irish. Fisheries at the village of Killeany, on this island, where 100 vessels of 40 tons burden may ride in safety. I'op. of Killeany, 604. To the port belong 41 open boats, and 17 row-boats. The islanders use also a boat called a curragh, made of osicrs, and covered with tanned canvas, and provided with a rudder. Their language is Celtie, and their costume peculiar, including a kind of boot made of untanned leather. The N.E. coasts of these islands present a sloping shingly beach; hut on the S . and W. are dark and rugged rocky eliffs, abounding with sea-fowl. On the S. Arran lslands are found antiquities of various kinds; and on Arranmore there are said, at one time, to have been 10 churches, on the other islands five.

ARRAS [anc. Nemetacum], a tn. France, cap. dep. Pas-de-Calais (Artois), in the middle of an extensive and fertile plain, r. bank, Scarpe, whieh here becomes navigable. It was strongly fortified by Vauban; and stands partly on a declivity, and partly on a flat, and consists of four parts, the city, the ligh town, the low town, and the citadel. The first and highest occupies the site of the town whieh Cæsar took. The high town owes its existence to a small oratory, over which a magnificent abbey was afterwards built. The low town, extending to the glacis of the eitadel, is a fine modern town, regularly built. The houses are of hewn stone, several stories high; and the public squares are very handsome. The two largest of the latter are contiguous, and are surrounded by houses of Gothie construction, which form a series of pillared arcades. The citadel, though enclosed within the same wall as the other parts of the town, is separated from them by an esplanade. It is in the form of an clongated pentagon, and capable of making a vigorous defence. The chief public buildings of Arras are the cathedral, a large Gothic edifice,
not of much external beanty, but with a fine choir, which is supported by very slender pillars, and remarkable for the boldness of its construction ; the public library, an extensive building, and containing 34,000 volumes; the Hotel de la lrefecture, the townhouse or Hotel de Ville, theatre, barracks,

the hotel de ville, arras.
From Coney's Ancient Cathedrals and Hotels de Ville.
\&c. Arras ranks as a fortress of the third class, is the seat of a bisliop, of a court of primary jurisdietion, and a court of commerce; and possesses a chamber of manufactures, a communal college, a literary and scientific society, a school of design, and an institution for the deaf and dumb. Its chief manufactures are ironware, hosiery, lace and lace-thread, pottery and earthen pipes, soap, leather, and nails. It has also flax and cotton-mills, salt-refineries, oilworks, engine-works, several foundries, and numerous breweries. Its trade is in rapeseed oil, oil-seeds, corn and flour, wine, brandy, lace, thread, wool, and leather. The corn-market of Arras is the most important in the N. of France. The notorious terrorist liobespierre was born here. Pop. in 1846, 24,321.

ARRAYAS, a tu. Brazil, prov. Goyaz, 120 m . S.E. Natividade, pleasantly situated in a hollow on the table-land of the serra de Santa Brida, and surrounded on all sides by low grassy hills. It contains a chureh, and three public sehools, two of which are elementary; one for boys, the other for girls; in the third Latin only is taught. The greater part of the inhabitants are in great poverty, arising chiefly from their extreme indolenee; they are, however, universally of a kind and obliging disposition. Pop. about 300; and of the district, in which some gold is obtained and eattle are reared, rather more than 2000.-(Gardner's Travcls in Erazil; Dic. Geo. Imp, Brazil.)

ARRECIFE, a scaport tn., E. coast, Lancerota or Lanzarote, one of the Canary Islands, of which it is the capital ; lat. $28^{\circ} 56^{\prime} \mathrm{N}$. ; lon. $13^{\circ} 36^{\prime} \mathrm{W}$. It is situated immediately S. of the harbour of Naos. The houses are large, the streets spacious and well paved, and the church handsome; and the town possesses two endowed schools, and a cemetery. The greater part of the inlabitants are engaged in the fishery on the opposite coast of $\Lambda$ frica, and in raising barilla, in which a considerable export trade is carried on. The harbour of Naos is small but secure, having two entrances, a N. and E.; the former with a depth, at low water, of 12 ft . the latter $17 \frac{1}{2}$, with a 9 ft . rise of tidc. During the winter, nearly all the island
vessels resort to this harbour. Pop. 2500.-(Jour. Roy. Geo. Soc., vol. vi. p. 287 ; Madoz.)

ARRESEE, a lake, Denmark, in the N. of the island of Seeland. It was at one time a bay of the Kattegat; but the drift sand, by completely elosing its mouth, has converted it into a very shallow lake, having a eircumference of about 23 m ., and an area of about $14 \mathrm{sq} . \mathrm{m}$. The short Fredrichswerker Canal connects this lake with the Koeskelde-fiord.

ARRESKOV-SEE, a small lake, Denmark, isl. of Fuihnen, tolerably deep, and abounding with fish.

ARRETON, a par. England, co. Hants, Isle of Wight ; 8270 ac.; S.E. Newport. Pop. in 1841, 1964.

ARRIATE, a tn. Spain, in Andalusia, prov. Malaga, in the vicinity of Ronda. It lies in a plain near the streamlet Ventilla, and has a chureh, prison, and two endowed sehools. It is surrounded by extensive meadows; and grain, olives, and fruit are cultivated, of which considerable quantities are exported to Cadiz, Malaga, \&e. I'op. 3024.

ARRIFANA, a fort, bay, and isl., S.W. coast, Portugal, prov. Algarve; the first in lat. $37^{\circ} 15^{\prime} \mathrm{N} . ;$ lon. $8^{\circ} 52^{\prime} \mathrm{W}$.; 19 m . N. by E. Cape St. Vincent.

ARRINGTON, a par. England, co. Cambridge; 1388 ac.; S.E. Caxton. Pop. in 1841, 317.

ARROAS ISLANDS, a group of small islands and rocks in the Strait of Malaeca, about 35 m . from the coast of Sumatra, and 55 from that of Malacea. The principal islands are called, respectively, the Great or Long Arroa, the Round Arroa, and the Western Arroa. The first is in lat. $2^{\circ} 52^{\prime} 30^{\prime \prime} \mathrm{N}$.; lon. $100^{\circ} 35^{\prime}$ E., and consists of two contiguous isles; it is nearly a mile in length, flat, and covered with trees. The second, or Round Arroa, is a high round rock, with some trees on it; lat. $2^{\circ} 49^{\prime} \mathrm{N}$. ; lon. $100^{\circ} 35^{\prime} \mathrm{E}$. (R) Western Arroa consists of a group of islets and roeks, lying abont a mile W. of the Long Arroa, and on the same roeky bank. The Malay fishermen sometimes frequent these isles to fish, and procure turtle.-(Horsburgh.)

ARROClIAR, of Arroquhar, a par. Scotland, co. Dumbarton, between Loeh Lomond and Loeh Long; area, about 48 sq. m. On the banks of Loeh Long, near its head, where is situated the parish church, a few houses are collected together, forming a sort of village, much resorted to during the summer scason as sea-bathing quarters. The scenery around is wild and romantic. Pop. (1841), 580.

ARROE, or IIARNISH ISLANDS, a cluster of islands in the Red Sca, about 30 m . N.W Mokha. The S.W. end of the largest, called Great Arroe, or Harnish Island, is in lat. $13^{\circ} 39^{\prime} \mathrm{N}$. ; lon. $42^{\circ} 39^{\prime} \mathrm{E}$. (R.) It is about 10 m . in length, and 3 in breadth at the widest part. The centre rises to a considerable height, and presents from some points of view a remarkable bluff. The W. side is steep, with no bottom, in some places, at 100 fathoms close to. There is good pasturage in the valleys; and antclopes abound. Little Arroe Island is about 4 m . N. from Great Arroe; it is of an oblong shape, of great height, and upwards of 7 m . in circumference; very rugged, with grass in some parts, and a few antelopes. Thero are a number of small islands and rocky islets scattered around. -(Horsburgh.) See also Aeroe.

ARROEsKIOBING. See Aeroe.
ARRONCHES [anc. Septem-Aroe], a tn. and par. Portugal, prov. Alemtejo, dist. of, and 16 m . S.E. from Portalegre, at the confluence of the Caya and the Alegrete. It is fortified, but not strongly; and lias two churches, a convent, an hospital, and a poorhouse. Pop. 1206.

ARROO. See Arim.
ARROUX, a small river, France, in deps. Côte d ${ }^{\circ}$ Or and Saône-et-Loire, being an affluent of the Loire, which it joins on its r. bank, 13 m . W. Charolles. Length about 65 m .

ARROW, a par. and township, England, co. Warwick; 4220 ac.; S.W. Alcester. Pop. in 1841, 543.

ARROWSMITII (Cape and River), Australia, the former on the W. shore of the Gulf of Carpentaria; lat. $13^{\circ} 15^{\prime} \mathrm{S} . ;$ lon. $136^{\circ} 32^{\prime}$ E. The latter is in W. Australia, Victoria Land; it rises in Herschell range, and falls into the sea in lat. $29^{\circ} 30^{\prime} \mathrm{S}$.

ARROYO del puerco [Pig Brook], a tn. Spain, in Estremadura, prov. of, and 10 m . W. from Caceres, in an elevated and extensive plain, enjoying a temperate climate. The houses are generally two stories high, the streets clean and well paved, and there are three large and two small
squares. The town contains a parish chureh, in which are preserved several fine pictures by Morales, six endowed schools, an hospital, a palace of the ancient Dukes of Benevente, and several flour and other mills. Manufactures :earthenware, linen and woollen fabries, oil, and soap; many of the inhabitants are employed as carricrs in conveying earthenware, oil, fruits, \&c., to Andalusia and lower Estremadura, and bringing back iron, grindstones, \&e. Pop. 7395.

ARROYO molinos de montanches, a tn. Spain, in Estremadura, prov. of, and 27 m . S.S.E. from Caceres, on the edge of the ridge of Montanches, the seene of the surprise and defcat of the French by Lord Hill, October 28, 1811. The town has a square, and crooked, ill-paved, and dirty streets; a parish chureh, a castle, townhall, prison, public granary, and several extensive flourmills; and in the environs are a hermitage, and some springs of excellent mineral water. Mannfactures:-earthenware, oil, linen and woollen quilts, figured handkerchiefs, and wine. In the vicinity large numbers of pigs are reared, the bacon of which is famed, and forms a staple article in the trade of the town. Pop. 3286.

ARRU, ARROU, or AliOO ISLANDS [Dutch, Aroe], a group of islands belonging to the Dutch, situated on the N. verge of the Great Australian Bank, S. and W. from New Guinea, and N.E. from Timorlaut Island, and extending from N. to S. about 127 m . Aceording to Carnbee's map, they lie between lat. $5^{\circ} 20^{\prime}$ and $7^{\circ} 6^{\prime} \mathrm{S} . ;$ and lon. $134^{\circ} 10^{\prime}$ and $134^{\circ} 54^{\prime}$ E. They are nearly unapproachable from the E., in eonsequence of the coral reefs by whieh they are beset, consequently many of them have not been visited. The largest are Cobror or Kobroor, 69 m . by 23 ; Meicor or Maykor, 26 m . by 11 ; Trana or Tranna, 34 m . by 20 to 7; Worcay or Workay, 21 m . by 10 . Besides these, there are smaller islands of various sizes, Wokan, Wammer, Doear, Kola Waria, \&e., and a great number of madrepore islets. They are separated by narrow channels, some of which are of great depth, and in which the tide regularly rises and falls. The growth of mangroves, which line the shores of these channcls, tends every day to abridge their breadth. The islands are all low and swampy, with patches of rock here and there, about 20 ft . high; but well-wooded and fertile, producing various cereals, fruits, and spices. The trees, which along the shores in many places form impenetrable forests, are of great height, many of them reaching to 90 ft . before they begin to branch out. The timber, of which there are scveral kinds, is remarkable for durability, and for the ease with which it works. The natives, according to Capt. Stokes, appear to be a mixture between the Malayan race and the Polynesian negro; they are a harmless people, and have a good eharacter for honcsty; but the greater portion are in a state of poverty, owing to an immoderate use of spirituous liquors, large quantities of which are brought by the traders from Java and Macassar. Many of them profess Christianity, having been converted by Dutch missionaries from Amboina; from which place also teachers are still sent for the schools, in which the Christian ehildren are taught the Malay langnage. The natives seem much disposed to embrace Christianity, and to follow the usages, and adopt the manners, of social institutions. They live in villages containing about 20 small thatehed houses, and great harmony prevails among them generally; their complexion is black, their hair long but strongly curled, and their stature about the middle size. Their food consists of sago, rice, maize, pumpkins, yams, fish, and pork. A small kind of kangaroo, simliar to those met with on the N. coast of Australia, and here called the lilandok, inhabits these islands; perroquets and birds of paradise abound; the latter are shot by the natives with bluit arrows, which stun them without injuring the plumage. They are then skinned and dried, forming a great article of export. Other productions which form articles of export are trepang, tortoise-shell, pearls, mother-of-pearl, and edible birds' nests. The ehief trepang fisheries are on the shores of the island Workay, and other smaller islands in the $\mathbf{S}$. of the group. The Arru Islands are much visited by native traders, and a considerable amount of commerce is carricd on by merchants from Banda, Macassar, \&c.; and large quantities of British goods are annually imported. Pop. of the group, about 60,000.-(Stokes's Australit ; Earle's Eastern Seas. Temminck, Coup d'ail sur l'Inde Necerlandaise; Moniteur des Indes.)

## ARRUL

216

## ARTAKI

ARRUL, a river which emerges from the S. end of Lake Munchar, on the W. confines of sinde, and after a course of 20 m . joins the Indus. At Schwan, about 4 m . above, it is nearly 100 yards wide, and the depth of its channel in the middle is never less then 12 ft . The banks are fringed thickly with tamarisks and acacias, and an undergrowth of camel thorn and grass. The Luckee hills, part of the great chain of Hale, at a short distance from its banks, consist of limestone, and a little below the junction contain a great variety of petrified shells, wood, and coral. Among the shells is a large species of nantilus, 18 inches across. In the country through which the Arrul passes, there is a good deal of land under tillage, and numerous hamlets are seen; but the only town of any importance is Sclwan, which now contains only 2000 families, but is surrounded by an enormous space covered with ruined houses, mosques, and sepulchres, bearing testimony to its ancient magnificence.

ARS-en-re, a tn. France, dep. Charente-Inferieure, (Aunis), 19 m . W.N.W. Rochelle; on the W. extremity of the Isle de Ré, with a good roadstead and a small port. Salt is procured here, and is refined and exported in large quantities. Beautiful transparent pelbles, white, yellow, and rose-coloured, are also found. Pop. 2311.
arSamas, or Arzamass, a tn. Russia, gov. Nijni-Novgorod, cap. dist. of same name, r. bank, Tioslia. 250 m . E. Moscow; lat. $55^{\circ} 25^{\prime} \mathrm{N} . ;$ lon. $43^{\circ} 45^{\prime} \mathrm{E}$. It contains 20 churches, and two convents. Manufactures:-soap, leather, silk, linen, \&c., the greater part of the latter of which is sent to Moscow and St. Petersburg. Pop. (1849), 8338.

ARSIERO, a vil. Venetian Lombardy, delegation, Vicenza, $6 \mathrm{~m} . \mathrm{N}$. Schio. In the neighbourhood are several papermills, and quarries of beantiful marble. Pop. 2800.

ARsOLI, a vil. Italy, Papal States, 13 m. N.E. Tivoli. Pop. 2000.

ART, or Arth, a tn. Switzerland, can. of, and $7 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. from Schwyz, in a picturesque valley between the mountains liigi and Rossberg, at the S. extremity of the Lake of Zug. The town is well built, and contains a convent of Capuchins, with a library; the church of St. George, remarkable for its fine architecture; and a large fountain formed of a single block of granite. The inhabitants are employed partly in spinning silk, and partly in rearing cattle. They realize considerable gains, by furnishing guides and conveyances for travellers ascending the neighbouring mountains. Pop. 2150 (Catholics).

Alita, a city, Turkey in Europe, supposed to be the anc. Ambracia, l. bauk, Arta, about 6 or 7 m . from its embouchure in the gulf of that name. The stream is here about 200 yards broad, and is crossed by a singular bridge, formed of three obtuse angles in place of a uniform curve, thus rendering the passage both difficull and dangerons. It lies in a picturesque but unhealthy locality; and its principal buildings are the palace of the Bey, the mosques, churches, and synagogues. In the commercial quarter, each trade has its separate street and bazaar. Manufactures:-woollens, cottons, Russian lcather, embroidery, which is brought to great perfection; and a species of cloak or shaggy capote, termed floccata, and much esteemed as an article of dress. Chief articles of trade :-cattle, wine, tobacco, cotton, hemp, hides, and grain. The market is abundantly supplied with fruit and vegetables. The N. part of the city is inlabited solely by Turks, who exclude all Franks. The city was nearly destroyed during the Greek insurrection. Part of the ancient walls, built of very large stones, still exists.-The River which rises in the mountains separating Albania from Macedonia, flows S., and falls into the Gulf of Arta after a course of about 70 m . It is not navigable for more than 5 or 6 m . pp from its mouth. Pop. 7000 .

ARTA (Gulf of) [anc. Ambracius Sinus], an inlet, Ionian Sea, about 25 m . in length, and 10 in breadth; it is composed of a larger and smaller basin; the latter forming the Bay of Prevesa, and lying next the Ionian Sea. The entrance to each basin is very narrow; the entire gulf being contracted at two points, by headlands rumning into it on the N . and S. It abounds with excellent fish, and its shores afford a variety of pleasing and picturesque seencry; but rocks and sand-banks render its navigation somewhat dangerous. Near its entrance was fonght the famons battle of Actium, between Antony and Augustus. See Actium.

ARTA, a tn., E. side, isl. Majorca, 37 m . E. by N. Pal. ma, at the base of a hill. It is well built, defended by a castle; has wide but rather steep streets, two large squares, a parish clurch, several chapels, a townhouse, and two schools. The iuhabitants are cliefly engaged in tillage, cattle-rearing, and fishing; but also in weaving, dycing cloth, and distilling brandy. Pop. 4001. In the neighbouring hills pipeclay and millstones are obtained; and on them are the renains of an ancient Arab castlc. The locality is, however, chicfly noted for a natural stalactite cavern, which occupies the hollow of a hill, 6 m . S.E. the town. The entrance to this cavern is in the form of a halberd, and its interior is divided into two distinet compartments, called ' Primero,' first, and 'Infierno,' lower, on account of its depth and obscurity. Having passed the vestibule, a gorgeous spectacle bursts upon the sight; vast columns of crystal ascend to the roof profusely, though

INTERIOR OF TILE FIRST CAVE OF ARTA. From Piferer, Reuerdos y Bellecas de Expatia.
naturally ornamented with representations resembling the different architectural orders, and reflecting innumerable combinations of prismatic hucs from the light of the torches; the roof is studded with brilliant stalactites, and the floor strewn with fragments which, from time to time, have fallen therefrom, and studded with large gradually-increasing stalagmites ; in the centre is a small pool of pure water. The second cave, ' Infierno,' is even more splendid, in all its details, than the first, inasmuch as the crystal is of a purer and more dazzling whiteness, having been less frequently exposed to the smoke of travellers' torches.

ARTAINE, a par. Heland, co. Dublin; 954 ac. Pop. in 1841, 367.

ARTAJANA, a fortified tn. Spain, in Navarra, 17 m . S. Pamplona; surrounded by walls flanked by 12 towers, tolerably well built, and having a church, two sehools, an hospital, store-house, and two prisons. Its inhabitants are chiefly engaged in tillage ; but also distil brandy, which, with wine, oil, and grain, is sent to Pamplona, Logroño, and Burgos. I'op. 1911.

ARTAKi, or Antaki [anc. Artace], a small seaport, Asiatic Turkey, W. shore of the peninsula of Cyzicus, Sea of Marmara, about 80 m . S.W. Constantinople. It has a small harbour, with the remains of an ancient mole; and at Cape Melanos, in its vicinity, are some ruins apparently of no great antiquity. The district is covered with vincyards, from the produce of which a winc is made which is much estecmed even at Constantinople.

ARTANA, a tn. Spain, in Valencia, prov. of, and 10 m . S.W. Castellon de la Plana, at the foot of an isolated hill, in the centre of the sierra de Espadan. It has straight, clean, and generally well-paved streets; two squares, a parish chureh, endoved school, hospital, and cemetery. On the crest of the hill are the ruins of an ancient castle, with an octagonal tower of Roman workmanslip. Tillage, and the manufacture of bass mats and oil, are the chief employments. Pop. 2077.

ARTAXATA, a former cap. Armenia, now a mass of ruins, on the Aras, 68 m. S.S.E. Erivan. It was built by King Artaxes, after a plan by Hannibal, destroyed by the Romans in the time of Nero, and rebuilt by King Tiridates under the name of Neronia. About A.D. 344, it again became the residence of the kings, who had left it on account of its unhealthiness. About a.D. 370, it was taken by the Persians, who burned it, and carried its inhabitants into captivity. At this time, it contained 9000 Jewish, and 40,000 Armenian houses, with a population of about 190,000 . It rose again after this; but after 798, notling more is heard of it.(Dubois, Voyage autour du Caucase.)

ARTERN, a tn. Prussian Saxony, gov. Merseburg, circle, Sangerhausen, on a height 670 ft . above the sea level, near the Unstrut, which here begins to be navigable, $27 \mathrm{~m} . \mathrm{N}$. Weimar. It is the oldest town in the district, and has a palace and two churches. Salt is made here, but the spring which furnishes it is not very strongly impregnated. Pure rock-salt has more recently been discovered, and has been reached at a depth of 150 fathoms. Artern has a distillery, a saltpetre-work, and a seam of lignite. Pop. 3600 .

ARTHINGWORTH, a par. England, co. Northampton; 3030 ac.; S.E. Market Harborough. Pop. in 1841, 242.

AlTHUR, a river, Van Diemen's Land; it rises in the Surrey Hills, about lat. $41^{\circ} 25^{\prime}$ S., and, after a N.W. coursa of between 50 and 60 m. , falls into the sea, in lat. $41^{\circ} 10^{\prime} \mathrm{S}$. ; lon. $144^{\circ} 40^{\prime} \mathrm{E}$.

ARTHUR (Port), a penal settlement, Van Diemen's Land, S. extremity of Tasman's peninsula, between Cape Raoul and Port Arthur ; lat. $43^{\circ} 9^{\prime} 6^{\prime \prime}$ S.; lon. $147^{\circ} 50^{\prime} 45^{\prime \prime}$ E. (r.) ; with anchorage and shelter for large vessels. It was first explored by Capt. J. Welsh, who gave it the name it now bears.

ARTHUR (Great and Little), two of the Scilly Islands (which see).

ARTHURET, a par. Eugland, co. Cumberland; 17,390 ac. Pop. in 1841, 2859.

ARTHUR'S SEAT, a remarkable hill in the immediate vicinity of Edinburgh, Scotland, rising 822 ft above the level of the sea. It is of easy ascent on its E. side, but on the W, is steep and rugged. On the S . side of the hill is a remarkable columnar precipice, called Sanson's Ribs. It is composed chiefly of trap, and other rocks of volcanic formation, in which spars, zeolites, jaspers, and agates, are occasionally found. On the E. the strata appear to change, and mountain limestone is seen piercing the surface. Separated from Arthur's Seat by a narrow valley, called the Hunter's Bog, and nearer the city of Edinburgh, rises a lofty ridge called Salisbury Crags, presenting a precipitous and almost perpendicular front. The upper part of it consists of greenstone, which was at one time extensively quarried for the public roads. This greenstone rests upon a sandstone, which, on coming in contact with it, is strangely scorched and twisted, and exhibits a variety of interesting geological phenomena, which were confidently appealed to by both parties in the keen controversy long carried on between Wernerians and Huttonians. From the top of Arthur's Seat, as well as from the road which has been recently formed around it, and, in honour of her present Majesty, is called the Queen's Drive, a most magnificent view is obtained.

ARTOIS, a former prov. France, now forming the dep. of Pas de Calais, excepting the arrond. of Boulogne, and a portion of the arrond. of Montrenil.

AR'TRANONT, a par. Ireland, co. Wexford; 2377 ac. ; has fine scenery, ruins of a castle, and Danish fort. Pop. in 1841, 754.

ARTREA, or Ardtrea, a par. Ireland, cos. Tyrone and Londonderry; 20,963 ac. ; abounds in frecstone and limestone. Pop. in 1841, 13,046.

ARTVIN, a tn. Turkish Armenia, pash. Trebizond, cap. dist. Sivanieh, in a valley, W. side of the Tchorak or Akampsis. Yol. I.

The houses are all of wood, with exception of a few stone buildings belonging to the Turks. It contains a large R. catholic church, and has some manufactures of cotton cloth, and a considerable trade in butter, honey, wax, olives, and oil. Pop. 5500, chiefly R. catholics.
aruba. See Oruba.
ARUCAS, a tn . Spain, on W. shore of Gomera, one of the Canaries, on the slope of a mountain which is upwards of 3000 ft . in height, having a church, chapel, school, and spacious public granary. Manufactures:-hats, linen and cotton fabrics, thread, and clothing, all used in the vicinity; but the chief occupation is agriculture. Pop. 4370.
arUM, or Aarum, a vil. Holland, prov. Friesland, between Harlingen and Bolsward, and 5 m . distant from either place. It lies in a cultivated district, and has a handsome Calvinistic church, and a corn-mill. Pop. 1100.

ARUN, a river, England, co. Sussex, famous for its gray mullets ; rises in St. Leonard's forest, in the N. of the county, flows S., receives the Rother from the right, 4 m . S.E. Pet worth, passes Arundel, to which it is navigable for vessels of 250 tons, and falls into the British Channel at Little Iampton, after a course of about 40 m . Canals unite it with the Wyc , a tributary of the Thames, and with Chichester harbour. Arun is also the name of a river in Nepaul, Hindoostan.

ARUNDEL, a bor., market tn., and par. England, co. Sussex. The town is 10 m . E. Chichester, and 19 W. Brighton, pleasantly situated on a declivity sloping to the Arun, which is here crossed by a neat stone bridge of three arches. It comprises three principal streets, two of which are spacious, the third narrow and irregular, but all are well kept. The houses are mostly old, and timber-built, many of them dating as far back as the time of Elizabeth; but there are also a number of handsome, substantial modern buildings. The town is amply supplied with water, effectually drained, and well lighted with gas. On the summit of a steep hill, on the N.E. side of the town, stands the ancient castle of Arundel, of Norman origin, the residence of the present Duke of Norfolk. The church, erected in 1380, is a handsome cruciform structure, with a well-built square tower rising from the centre. At the E. end is the collegiate chapel, in which are a number of curious and interesting monuments, chiefly relating to the noble family of Howard. The townhall, in the Norman style of architectare, was built by the late Duke of Norfolk, at an expense of $£ 9000$. There are here, besides the parish church, an Independent and a R. catholic chapel. The principal school is the national school, erected by Charles, Duke of Norfolk, in 1814, and is supported by voluntary contribution, and affords instruction to 300 children. The trade of Arundel is considcrable, the river being navigable up to the town for vessels of 250 tons burden. The chief imports are butter, bacon, lard, grain, and starch, from Ireland; grain and cheese from Holland; grain, oilcake, wine, fruit, and eggs, from France ; timber from the Baltic ; and coal from Newcastle and Scotland. The principal exports are oak-timber, corn, flour, and bark. The gross customs receipt fur 1847, was $£ 2453,7 \mathrm{~s} .4 \mathrm{~d}$.; but this is little more than half the amount of the preceding year. The number of vessels registered at the port on December 31, 1847, was 47, tonn. 4226. The number of vessels that entered the port during 1847 was 229 , tonn. 21,964 ; cleared 172 , tonn. 14,682 . There are two extensive breweries in the town. The borough was created in the reign of Edward I. The corporation consists, at present, of 16 councillors, including the mayor and four aldermen. The market is on Tuesday, chiefly for corn, of which large quantities are disposed, and on every alternate Tuesday there is an extensive cattle-market. Previous to the passing of the Reforin Aet, the borough returned two members to the House of Commons ; since then, it sends one only. Registered electors in 1850, 221. The par. comprises 1830 ac., 710 of which are pasture, 347 in tillage, and the remainder in park and forest land. Pop. of bor. and par. 2624.-(Correspondent in Arundel.)

ARVA.-1, A co. Ifungary, N. of the Danube, between lat. $49^{\circ} 10^{\prime}$ and $49^{\circ} 35^{\prime}$ N., having Galicia on the N. and E., and partly also on the W.; area, $797 \mathrm{sq} . \mathrm{m}$. Pop. about 125,000. It is watered by the Arva, occupies higher ground than any other county in Hungary, and is not generally very fertile, althougn its soil is peculiarly favourable for the cultivation of the potato. Oats and flax are also grown in con-
siderable quantities; but its principal resources are its great forests, which afford large supplies of timber. The pop. is chiefly of Bohemian-Slavonic, or Slowachian extraction. 2, A river, Spain, in Aragon, rising near the base of the sierra St. Domingo, prov. Iluesca; takes a S. course, and, being augmented by the Arva de Biel and other small streains, falls into the Ebro 3 m. S.W. Tauste, after flowing about 43 m .

ARVANS (Sr.), a par. England, co. Monmoutlı; 2840 ac. Pop. in 1841, 354.

ARVE, a river, Sardinian States, Savoy; it rises at the foot of the Col-de-Balme, flows S. W. through the valley of Chamouni to Sallenches, thence past Bonneville N.W. to Geneva, about three-fourtls of a mile W. of which it falls into the Rhone, after a course of about 70 m . The waters of the Arve being mainly derived from the melting of glacier-ice, are consequently cold, and turbid from the quantity of pounded rock they hold in suspension. After entering the Rhone, which is clear and pellucid, the turbid stream of the Arve may be distinctly traced for about half a mile, holding on its way down the course of the former river, and keeping entirely apart from its clear waters. The effect of the transparent and muddy streams thus flowing along together, without mingling, is sufficiently curious. The latter, however, finally prevails, discolouring the former throughout. The beautiful pebbles found in the bed of the Arve, renders it interesting to the mineralogist. Some gold dust is found among its sands. The scenery on its banks is beautiful.

ARVEYRON, a streamlet, Sardinian States, Savoy, an affuent of the Arve, which it joins a little above the vil of Chamouni. It issues from a natural arch in the lower end of the Glacier des Bois, the termination of the Mer de Glace. The size of the arch, and the regularity of its formation, varies with the season of the year.

ARVOREDO ISLAND, on the S.E. coast, Brazil, prov. Catherina; lat. $27^{\circ} 17^{\prime}$ N.; lon. $48^{\circ} 22^{\prime}$ W. (r.) ; off the N. end of the island of St. Catherina, and about 8 or 10 m. from the mainland.

ARZAMAS, a tn. and dist. Russia in Europe, gov. NijniNovgorod. The town lies at the confluence of the rivers Tiocha and Cholka; lat. $55^{\circ} 21^{\prime} \mathrm{N}$.; lon. $43^{\circ} 20^{\prime}$ E. It has two convents, several churches, some soap-factories, dyeworks, and iron-works. Two fairs are held annually; and a considerable trade is carried on with St. Petersburg in sailcloth. Pop. 9000 .-The DIstrict is watered by the rivers above named, and produces timber and a considerable quantity of flax. The farmers raise vast numbers of poultry; and thousands of frozen or dried geese are sent annually to St. Petersburg. Pop. of dist. 120,000.

ARZANO, a vil. Naples, prov. of, and 3 m. N. that city. It has some beautiful villas; and flax and liemp are much cultivated in the neighbourhood. Pop. 4143.

ARZBERG, a tn. Bavaria, Upper Franconia, circle of Wunsiedel. It has two churches, two sawmills, some limekilns, two iron-works; and the preparation of alum, leather, pitch, \&c., are carried on. In the vicinity are mines of iron, coal, and cobalt. Pop. 1380.—Arzberg is the name of numerous small towns and villages in Germany and Austria.

ARZEW, Arzeo, or Arzaw [anc. Arsenaria], a seaport tn. Algiers, prov. Tlemsen, 24 m. E.N.E. Oran; lat. (fort) $35^{\circ} 51^{\prime} 42^{\prime \prime} \mathrm{N} . ;$ lon. $v^{\circ} 17^{\prime} \mathrm{W}$. (R.) It is ill built, but exhibits many traces of former splendour ; consisting of fragments of columns, beautiful mosaic pavements, cisterns, \&c. The harbour is the best in the regency, and is frequently resorted to by European vessels as a place of retreat in winter and autumn. On the fort, on the point of Arzew, a fixed light is shown, visible 4 m . distant ; lighted for the first time, December 25,1844 . Corn and salt, the latter obtained from saline springs in the neighbourhood, are the principal exports. Pop. 500.

ARZIGNANO, a tn. Austrian Lombardy, $11 \mathrm{~m} . \mathrm{W}$. Vicenza, in a plain surrounded by hills, near the Agno. It lias manufactories of cloth and spun silk, dyeworks, brickworks, and lime-kilns; and an active trade in wool, silk, linen, wine, and cattle. Pop. 3500.

ARZILLA [the Carthaginian Zillia, and Roman Julia Traducta], a small scaport, Morocco, 21 m . S. Cape Spartel ; lat. $35^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 2^{\prime} \mathrm{W}$. It is a miserable village, without trade, wealth, or industry. The surrounding country is
well wooded, and partly laid out in gardens. Pop. in 1835 said not to excced 600.

ASA13. See Assab.
ASAIIAN, or Assahan, a tn., N.E. coast, isl. Sumatra, in the Batta country, cap. of a district, and situated on a river of the same name, about 20 m . from its embouchure in the Strait of Malacca. It carries on a considerable trade with Malacea, Penang, and Singapore. Its principal imports are salt, opium, cotton goods, arms, and gunpowder ; principal exports, wood for dyeing, rattans, rice, wax, horses, and slaves

ASAL. Sce Assal.
AsAM. See Assam.
ASAMA-YAMA, or Asama-no-dake, a lofty and very active volcano, Japan, in the interior of the island of Niphon, N.E. of the town of Komoro.

ASANGARO, a tn. and dist. Peru, N. bank of Lake Titicaca. The town lies on a river of the same name, about 10 m . from its embouchure in the lake; lat. $15^{\circ} 30^{\prime} \mathrm{s}$. lon. $71^{\circ} 30^{\prime} \mathrm{W}$. Potatoes are the principal agricultural produce of the district. Cattle and swine are numerous, forming the chief resource of the inhabitants.

ASAPH (ST.) [formerly, Llan Elwy], a city and par. N. Wales, partly in co. Denbigh, partly in co. Flint, $6 \mathrm{~m} . \mathrm{N}$. Denbigh, and 24 m . W. by N. Chester, beautifully situated on the slope of a gentle eminence betwcen the rivers Clwyd and Elwy. It consists of two principal streets, and several smaller diverging from them, all kept clean and in good order. The houses are all of brick, substantially and well built. St. Asaph is a bishop's see, said to have been founded by St. Kentigern or Mungo, Bishop of Glasgow, who, when exiled from his country, took refuge in Wales. On his return to Scotland, he was succeeded by St. Asaph, from whom the sce and town are named. The only building of any note in the place is its cathedral, a plain cruciform building, with a square tower in the centre. The interior is striking and impressive-an effect not a little heightened by a magnificent stained glass window in the E. end of the building. The original structure was founded in 1284, and was burned along with the town by Owen Glendower, in 1402 ; it has since been rebuilt, and has undergone various repairs, but is now disused. The other places of worship are the parish church, and the Calvinist, Wesleyan, Independent, and Baptist chapels. The educational means are an endowed grammar-school, a boys and girls' national schools, and several private schools. There are also a society for the diffusion of useful knowledge, and several charitable and benevolent institutions. The town has a weckly market on Friday, and four annual fairs. It is included in the Flint district of burghs. Pop. in 1841, of par. 3338 ; city, 1701.

ASARO, a tn. Sicily, prov. Catania, dist. of, and 9 m . S. Nicosia. Pop. 3000.

ASBEN, a considerable kingdom of Central Africa, about lat. $20^{\circ} \mathrm{N} . ;$ lon. $7^{\circ} \mathrm{E}$. The inhabitants are said to be Tuaricks, of the tribe of Kolluvi, but very little is known of the country. Asben is also the name of the chief town, or caravan station in the kingdom, and the distances are given as follows, in M'Queen's Africa:-Asben to Tripoli, 50 days journey; Asben to Tunis, two montls; to Tafileh, 70 days; and to Murzook, 40 days. (See Arr in Supplement, vol. ii. p. 1287.)

ASCALON, Asculan, or Ascalaan [anc. Ashkelon], a ruined city and scaport, Syria, 40 m . W.S.W. Jerusalem, and about $14 \mathrm{~m} . \mathrm{N}$. by W. Gaza; lat. $31^{\circ} 39^{\prime} \mathrm{N}$. lon. $34^{\circ} 31^{\prime}$ E. (R.) Ascalon was originally a city and lordship of the Philistines, but afterwards fell into the hands of the Jews, and of various other nations in succession. In the earlier part of the Clristian era it was a bishop's see, and in the Middle Ages it bears a conspicuous part in the history of the Crusades. After being several times dismantled, and repaired during the war between Richard and Saladin, its fortifications were ultimately destroyed, and its port filled with stones by the Sultan Bibars, in 1270. In 1666 it was partly inhabited, but in 1827 it is described as without a human inhabitant, and as exhibiting a scene of utter desola tion, and distinctly fulfilling the prophecies of Scripture regarding it. This ancient city lies on an eminence, abrupt towards the sea, but sloping gently landward, and is almost encircled by a ridge of rock, along the edge of which the walls were built. Within are the remains of a temple, of Grecian architecture, supposed to be that of Venus, which

IIerodotus states to have been plundered by the Scythians B.c. 630 . There exist also the relics of a Roman amphitheatre, and of various churches and other buildings. Ascalon was the birthplace of Herod the Great, and of Antiochus the academician, and the teacher of Cicero. It is by the Arabs called Janrah, and believed to be the residence of evil spirits. A little to the N. is a small modern village, named Scalona, pop. 400 , with a harbour for vessels employed in the coasting trade.-(Robinson's Bib. Researches ; Kitto's Palestine.)

ASCENSION, a rocky isl., S. Atlantie Ocean, about 8 m . in length, and about 6 in breadth, between Africa and S . America; lat. (Green Mountain) $7^{\circ} 57^{\prime}$ S.; lon. $14^{\circ} 21^{\prime}$ W. (r.), 595 m . N. W. the island of St. Helena, and presenting a very rugged and uninviting appearance from the sea. It was discovered on May 20, Ascension Day, 1501, by João de Nova Gallego, a Portuguese ; and was visited two years afterwards, by Alfonzo d'Albuquerque, who gave it its present name. It is of volcanic formation ; consisting of a single rocky mountain, named Green Mountain, rising to the height of 2820 ft . above the sea level; surrounded with numerous craggy peaks of less elevation, and with deep crevices and ravines filled with scoria, pumice-stones, and other igneous products. The scanty herbage of the island scrves but to support a few goats, whose flesh, however, is said to be exceedingly delicate. A sufficiency of fresh water was long a desideratum on the island; the only supply being what remained, after rain, in the clefts of the rocks. After many fruitless attempts to remedy this evil, Capt. Brandreth, who was appointed by the Admiralty in 1829, to survey and report on the island previous to its adoption as a military station, succeeded in discovering a spring at a depth of 25 ft ., which yiclds from four to seven tons of water daily, a quantity far exceeding the demands of the island. The coast all around is very steep; but at the

height of about 30 ft ., occurs a level plain, 6 m . in circumference, surrounded by precipitous rocks, supposed to be the erater of an extinct volcano which has gradually filled up. The only good anchorage is on the N.W. side of the island, in a small inlet, called Sandy Bay, opposite Georgetown, and known by a conical hill, called Cross Hill. Georgetown, lat. (barrack-square) $7^{\circ} 55^{\prime} 30^{\prime \prime} \mathrm{S}$. ; lon. $14^{\circ} 25^{\prime} 30^{\prime \prime} \mathrm{W}$. (r.) consists of a fort, military quarters, and a few detached residences. Sandy Bay is much frequented by East Indiamen and whalers, who have been in the habit of depositing letters, enclosed in a bottle, in a certain well-known crevice in the rock near the landing-place, called 'The Sailor's Post-Office,' which are taken up by vessels going out or home, as the letters may be addressed. The island formerly belonged to the Portuguese, but is now occupied by the British, who erected a fort, and placed a garrison there, soon after Napoleon was sent to St. IIelena. Several English families, from the latter place, took up their residence on the island at the same time. Ascension has been long famed for its turtle, which are caught in great numbers. The season for taking them is between December and June, both inclusive. As many as 2500 have been
turned in one year ; but from 400 to 500 is the usual number taken within that period. Many of the turtle weigh from 500 to 800 lbs . each. They are usually collected in two large ponds or crawls, the water of which is occasionally changed. Turtle can now be obtained only by purchase ; any one taking them on the beach, or floating near the island, are liable to a penalty of $£ 25$. The usual price of a turtle is $£ 2,10 \mathrm{~s}$. The coast abounds also with fish of various kinds, and all excellent; the conger-eel being the most prized. Another indigenous delicacy of this remarkable island, or rather rock, is the egg of the tropical swallow, or 'wide-awake,' as it is called, on the island. They are largely used as an article of food; 10,000 dozen being frequently gathered in a week. Wild guinea-fowl abound ; and wild goats were also to be had, but their extcrmination being considered essential to the successful rearing of sheep and cattle, they are now scarce, and will, in all probability, soon disappear. The atmosphere is clear and elastic, and the climate remarkably salubrious. Communication with the shore is frequently rendered difficult, if not dangerous, by the setting in of heavy seas or rollers, which rise suddenly in the inidst of the most perfect calm, and break with tremendous fury on the beach. The cause of this phenomenon is unknown. Some singular fossils have lately been discovered in this island, in a quarry on the N. W. side of the island, about 100 yards from the sea. They consist of the eggs of turtles, containing young turtle fully developed.-(Jour. Roy. Geo. Soc.)

ASCH, or Ascha, a th. Bohemia, circle, Elbogen, on a streamlet of the same name, and about 4 m . N. the Erzgchirge; lat. $50^{\circ} 14^{\prime} \mathrm{N}$.; lon. $12^{\circ} 12^{\prime} \mathrm{E}$. It has a parish church, and manufactures of linen, cotton, and woollen goods. Pop. 2500. - Asch is the common name of at least 10 small places in Germany.

ASCHACH, a tn. Upper Austria, r. bank, Danube, 13 m . N.W. Linz. It has a small old church, three benevolent institutions, a fine castle of the Counts of Harrach, and a considerable trade in laths, timber, fruit, and linen. Pop. 1240. -Aschach is the name of several other places in Germany.

ASCHAFAS, a group of small islands in the Red Sea, off the W. coast of Yemen, Arabia, from which they are about 25 m . distant. The 16 th parallel of N. lat. passes the most S .

ASCHAFFENBURG, a tn. Bavaria, prov. Lower Main, r. bank, Main, where it receives the Aschaff, and on the S.W. slope of the Spessart, 26 m . E.S.E. Frankfort-on-the-Miain, and on the proposed railway from Frankfort to Bamberg. It is the seat of important local and appeal courts; the buildings in connection with which form some of its most conspicuous edifices. It is surrounded by walls on all sides, except along the river. Its most conspicuous building is the royal palace, calledJ ohannisberg, a large square red edifice, with five towers, built originally by the Elector-Archbishops of Mainz, and now the usual summer residence of his Bavarian Majesty. It commands a delightful view of the surrounding country; and has a large garden, which is laid out in the English style, and forms one of the greatest attractions of the place. The high church, built in 974, has several fine monuments and sculptures by Vischer, and a number of paintings, including one by Grünewald, and another supposed to be by Albert Durer. The other buildings and institutions deserving of notice are the Capuchin cloister, the Catherine hospital, with its order of poor sisters; the library, which is at once extensive, and rich in ancient MSS.; the gymnasium, and several other educational institutions; the grammar-school, the school of agriculture, and the school of design. The chief articles produced here are cloth, paper, common and stained; leather, red and white; glte, soap, bricks, pottery, tobacco, brandy, spirit of wine, and liqueurs. The trade is considerable, and has been much extended by the establishment of steamboats, which ply on the Main between Würzburg and Frankfort. The antiquity of the town has led some to give it a Roman origin, and to find in its name a corruption of Ptolemy's Astiburgum. Pop. 9500.
-The principality of Aschaffenburg, as existing in 1803, and annexed to the dukedom of Frankfort, had an extent of 500 geo. sq. m., lying along both sides of the Main, and including the immense forests of Odenwald and the Spessart-parts of the ancient Hyrcania, mentioned by Cæsar and Tacitus. In 1814, it came into the possession of Austria, and passed by exchange and purchase to Bavaria. --The Curcle of Aschaffenburg has an area of about 80 geo.sq.m., and a pop. of 20,180 .

## ASCHE

220
ASHANTEE

ASCHE, or Asscire, a tn. Belgium, chief place com. and can. of same name, prov. Brabant, on the high road from Ghent to Brussels, and 6 m . N.W. Brussels. It has breweries, distilleries, tannerics, and soapworks; and is famous for a kind of very fine, light, sngared muffius or buns, which have a large sale, and are well known under the name of couques of Asche. Pop., tn. and com. 5300.

ASCHELSLEBEN, a th. Prussia, cap. circle of same name, gov. of, and 27 m. S.S.W. Magdeburg, on the Eine, near its junction with the Wipper. It is surrounded by a strong wall with five gates, and has six churches (five Protestant, and one R. catholic), a synagogue, a gymnasium, a poorhouse, and a foundling hospital. The chief articles produced are frieze, flannel, worsted stockings, leather, carthenware, brandy, beer, and vinegar. In the neighbourhood are several interesting ruins; among others the castle of Askanien, the cradle of the House of Anhalt.-The circle (arca 130 geo. sq. m.), with exception of a small level tract, is hilly, being traversed by the chain of the Hartz, which is here of considerable height. The soil of half the circle is good, consisting partly of the bed of a large lake which, in 1703, was drained, and brought under cultivation. Pop. of tn. 10,100; of cirele, 40,700 , of whom only 450 are R. catholics, and 200 Jews.

ASCIANO, an anc. tn. and com. Tuscany, prov. of, and 10 m . S.E. Sienna, on a declivity, l. bank, Ombrone. It possesses a collegiate and two parish churches, in which are some fine pictures of the 16 th and 17 th centuries; and municipal buildings. Pop. 6508.

ASCOLI [anc. Asculum], a fortified tn. Papal States, cap. delegation of same name, r. bank, Tronto, 14 m . above its embouchure in the Adriatic, 90 m . N.E. Rome. The town, one of the most ancient in Italy, is well built, and contains many handsome edifices and noble mansions. It is the scat of a civil court, and of a bishop; has several parish churches, and a college of Jesuits; with manufactorics of woollen cloths, cream of tartar, china-ware, sealing wax, paper, and glass. It has an active trade, and its port, at the mouth of the river Tronto, is much frequented by coasting vessels. Pop. 12,500.

The delegation is 30 m . E. to $\mathbf{W}$., and 23 m . N. to S . It comprises part of the ancient mark of Ancona and Fermo, is mountainous, and has about 3 m . of coast, which is low. It is divided into the districts of $\Lambda$ scoli and Montalto. Pop. in 1833, 78,946.

ASCOLI-di-satriano, a tn. Naples, prov. Capitanata, dist. of, and 13 m . E.S.E. Bovino. Built on the site of the Asculum Apulum of the Romans, which was destroyed by the Normans. It contains a fine cathedral, a diocesan seminary, an hospital, and some convents; and is the seat of a bishop. It was destroyed by an earthquake in the year 1400 , and rebuilt by the inhabitants on its present site. Pop. 5560 .

ASCOT HEATH, England, co. Berks, par. Winkfield; about $3 \frac{1}{2} \mathrm{~m}$. N. the South-western Railway, and 6 m . S.W. by W. Windsor. It is celebrated for its fine race-course, formed by William, Duke of Cumberland.

ASCOTT'Under-W ycirwood, a par. England, co. Oxford; N.E. Burford; 2540 ac. Pop. in 1841, 463.

ASDOUD, Esdud, or Shdood [anc. Ashdod and Azotus], a vil. Palestine, 20 m . N. by E. Ascalon; lat. $31^{\circ} 50^{\prime}$ N.; lon. $34^{\circ} 43^{\prime}$ E.; between 3 and 4 m . from the Mediterranean, on the top of a grassy hill, surrounded by thick plantations, beautiful pastures, and a finely undulating country. Although occupying the site of an ancient city of note, it exhibits no remains cither of antiquity or of grandeur. Asdoud was one of the five satrapies or lordships of the Philistines, who kept possession of it long after the Israclites were masters of the land. In the New Testament, it is mentioned under the name of Azotus, as the place where Plilip was found after his meeting with the Ethiopian eunuch. In very recent times, the village had a large khan or inn; but was remarkable for nothing but the number of scorpions by which it was infested.(Robinson's Bib. Researches; \&c.)

ASEERGHUR. See Asseerghur.
ASGARBY, two parishes, England, co. Lincoln:-1, Area, 1150 ac . S.E. Sleaford. Pop. in 1841, 77.-2, Area, 1590 ac .; N. by W. Spilsby. Pop. in 1841, 131.

ASII, by itsclf, and with various affixes, the name of five parishes, England:-1, Ash (near Sandwich), co. Kent, 6940 ac.; E. by N. Wingham. Pop. in 1841, 2077.-2, Ash (next

Ridley), co. Kent, 2930 ac. ; N. by W. Wrotham. Pop. in 1841,663.-3, Co. Surrey, 12,650 ac.; N.E. Faruham. Pop. in 1841, 2236.-4, Ash, or Ashe, co. Hants ; 2310 ac. ; E.N.E. Whitechurch. Pop. in 1841, 160.-5, Ash (Bocking), co. Suffolk; 750 ac. Pop. in 1841, 321.

ASHANGEE, a lake, Abyssinia, in Tigré. The centre is in lat. $12^{\circ} 18^{\prime}$ N.; lon. $39^{\circ} 33^{\prime}$ E.; greatest length, about 25 m . ; greatest brcadth, about 14 m .

ASUANTEE, an extensive and powerful kingdom, W. Africa, on the Gold Coast, Upper Guinea (cap. Coomassie), extending from lat. $5^{\circ} 0^{\prime}$ to $9^{\circ} 30^{\prime} \mathrm{N}$. ; and from lon. $0^{\circ} 55^{\prime} \mathrm{E}$. to $4^{\circ} 7^{\prime} \mathrm{W} . ;$ bounded, W. by the Assince, E. by the Volta and Soka, N. by the Kong Mountains, and S. by the Atlantic. It is thus about 310 m . from E. to W., and nearly the same from N. to S., its general form being pretty compact. It is well watered, particularly towards the coast, where the country is intersceted by several cousiderable streams besides those named. The principal are the Seence or Ancobra, called the Bara in the earlier part of its course; the Sube, the Amissa, Bosempra, and Birrim. The country is in general mountainous, though it has no systems, nor any great elevations. It is covered with dense forests from the coast to a distance of 200 m . inland. These are wholly impenetrable, excepting by paths which have been opened up in various places with great labour. Ashantee abounds in gold. The richest mines are in Gaman, and its provinces of Baman, Safoy, and Showy. In these places the precious metal is found in large pieces, some of about four lbs. weight, called rock-gold. The ore is of a deep colour, and is dug out of pits from 5 to 9 ft . in depth. About 10,000 slaves are employed on the banks of the Bara for two months in the year, collceting gold dust, which is also found in great quantities, as well as the solid netal. The climate is very unhcalthy; the heat great, though perhaps not so excessive as the position of the country would lead us to expect. Vegetable productions attain here their most gigantic dimensions. On the coast flourishes the enormous baobab, with the mangrove, palm and cotton trecs, all of which reach the most stupendous sizes. The country is extremely fertile, producing abundant crops of rice, corn, sugarcane, and yams, which last form the staple vegetable food of the people. The domestic animals are cows, horses of a small breed, goats, and a species of liairy shecp. The wild animals are elephants, rhinoccroses, giraffes, buffaloes, dcer, antclopes, apes, monkcys, bahoons, lions, tigers, lcopards, jackals, wolves, wild boars, \&c. The rivers swarm with crocodiles and hippopotami; and reptiles of all sizes, some of them enormous, and many poisonous, abound everywhere. Birds of all deseriptions, with every variety of plumage, many of extreme beauty, are also numerous. Few of them, however, exeel as songsters. Insects of various kinds abound. Sharks are so numerous on the coast, that they form the principal food of the natives. The rivers are also well stocked with fish.

The Ashantces are warlike and fcrocious, with a love for shedding human blood, and inflicting violent and sanguinary deaths, amounting to a passion. In war they spare neither age nor sex; and human teeth, and human jaw-bones, are worn as personal ornaments. Human sacrifices are made to an extent, with a frequency, and accompanied by an atrocity of circumstances hardly credible. Bowditch, who was in Coomassie during one of their saturnalia, relates that a procession entered the town, displaying a number of human heads, and accompanied by two parties of executioners of about 100 each, dancing with the most frightful gestures, and clashing their knives on the skulls which they carried. A hundred persons, says this writer, were sacrificed in different parts of the town on this occasion, the vietims being led to execution with knives thrust through their jaws and tongue, from side to side. The manner of death is hacking with large knives and swords. Slaves are sacrificed over brass pans, that their blood may mingle with the charmed ingredients contained in them. The exccutioners wrangle and struggle with each other for the victims, as they are brought up to suffer death. On the demise of any great personage, or any nember of the royal family, these horrors are increased tenfold; the streets are descrted, and, from morning to night, the work of murder goes on. Bowditch passed several headless trunks, in whose blood vultures were revelling; and Dupuis witnessed a royal progress, in which the most conspicuous figure was that of a gigantic negro bearing the execution-stool, cnerusted with
gore, and howling the song of death. The following description, by Lander, of the fêtiche tree, beneath which grand sacrifices are made every year, completes the account of Ashantee barbarity:- ${ }^{6}$ It was the most ghastly and appalling object I ever beheld. Its enormous branches were literally covered with fragments of human bodies, and its majestic trunk surrounded by irregular heaps of hideous skulls. Thousands of vultures were yet hovering round and over their disgusting food, and now and then pouncing fearlessly on a balf-devoured arm or leg.' Notwithstanding this singular cruelty of disposition, the Ashantees are a people of superior intclligence, and further advanced in civilization than any of the nations of W. Africa. They are also by far the bravest, and have greatly extended their dominions by conquest. The better classes are extremely cleanly in their habits; their dresses are graceful, and often of rich material. The lower orders, however, wear nothing but a piece of cotton cloth, fastened round the waist. The former live well ; soup, beef, mutton, wild hog, deer, and monkey's flesh, forming their usual fare; while the latter subsist principally on fish and millet. The common drink is palm wine. Morality is at a low ebb amongst them; the lusband has power of life and limb over his wife, and adultery is punishable by death. Polygamy is allowed, and marriage effected by paying a sum of money to the parents of the girl, and giving a family feast. The Ashantees excel in the manufacture of cotton cloths, and in the brilliancy of their dyes. They also make good earthenware, $\tan$ leather, and work in iron, making sword-blades of superior workmanship. But it is in the fabrication of articles in gold that they display the greatest skill, these often exhibiting a combination of fine taste, with dexterous manipulation. The chief article of export is gold, with a little ivory, and some dyewoods. They also export great numbers of slaves. Their principal imports are:-muskets, gunpowder, spirituous liquors, tobacco, iron, tin, copper, lead, with cotton and Indian goods, the latter chiefly for the extraordinary purpose of being unravelled, on account of their colours, and being re-manufactured in the native looms. The currency is gold, in dust. and lumps, and the well-known cowrie-shell. The government of Ashantee is a despotism, alleged to be controlled by an aristocracy, consisting of four persons, and an assembly of cabouers or captains. But this control, if it does at all exist, must be very slight, as it never scems to interfere with the royal will, which has all the appearance of being absolute. Of the military prowess of the Ashantees, their numerous victories over native tribes is sufficient evidence; but still stronger, perhaps, is found in their formidable and often successful resistance to disciplined troops. Though finally defeated and brought under subjection to the British arms, they had, throughout a series of years, afforded them no ground of claim to superiority. Their final overthrow occurred in 1826. The military force of the state, according to Bowditch, exceeds $200,000 \mathrm{mcn}$. The prevailing religion of the Ashantees is Fetichism (see Africa); but there are also many Mahometans among them. They appear, however, to have some idea of a Supreme Bcing, and of a future state, believing that their kings, priests, and chief men, go after death to reside with the Great Spirit, resuming their earthly state, which is thenceforth to be eternal. The origin of the Ashantee nation is involved in an obscurity which the interest of the subject would hardly warrant an attempt to penetrate. Taking up its history at an early part of the 17 th century, we find it then forming a powerful, though small monarchy, capable of sending 60,000 men into the field. In the beginning of the following century, the King of Ashantee, at the head of a large army, invaded the adjoining kingdom of Dinkra or Dinkira, having been incited thereto by an outrage offered to one of his wives, by the king of the latter kingdom. In this contest, in which it is said 100,000 men fell, the Ashantees were victorious, and the kingdom of Dinkira became a part of the Ashantee territory. After this they conquered, in rapid succession, all the states around them, until they extended their dominion to its present limits. Bowditch estimates the population of the whole empire, at somewhere about $3,000,000$; but this estimate must be in a great measure conjectural, or at best founded on very loose data.-(M'Queen's Survey of Africa; Bowditch's Ashantee Mission; Dupuis's Residence in Ashantee ; \&c.)
$\triangle S H B O R N E$, a market tn. and par. England, co. Derby.

The town is 12 m. N.W. Derby, and 38 m. S.S.E. Manchester, in a fertile valley near the l. bank of the Dove. The houses are mostly of red brick; the streets pretty regular, partially paved, and well lighted with gas; and the supply of water is abundant. The church is a handsome building, supposed to have been erected about the middle of the 13 th century. There are chapels here, also, for Baptists, and Wesleyan and Calvinistic Methodists, a free grammar-school, a preparatory English school, a school for girls under 12 years of age, several daiiy schools, and four sets of alms-houses, one of which is for the widows of foar Protestant clergymen. A new jail or lock-up has been recently erected, also a savings'-bank, the latter a neat stone structure. Cotton and lace are manufactured here, the former to some extent, but the chief trade of the town is in checse and malt, mostly sent to the mannfacturing districts in the neighbourhood. There are several news'rooms and libraries, all of which are respectably supported, and two or three branch banks. The town is governed by the county magistrates, who hold petty sessions here every Saturday. Market-day, Saturday; eight fairs annually, chiefly for horses, cattle, and wool. The romantic beauty of the scenery in the vicinity attracts many visitors. Area of par. 12,800 acres. Pop. in 1841, 4936.

ASHBRITTLE, a par. England, co. Somerset; 2460 ac.; W. Wellington. Pop. in 1841, 540.

ASHBURNHAM, a par. England, co. Sussex; 4280 ac. Pop. in 1841, 790.

ASHBURTON, a bor. and market tu. and par. England, co. Devon; in a fertile valley, 15 m . S.S.W. Exeter. It consists of four principal streets, all well kept. The houses are in general neat, and chiefly of stonc. The town is amply supplied with excellent water, and is lighted with gas. A new market-place is just now (1850) in process of erection. There are five churches altogether, some of which are rather handsome structures, a free grammar-school, also a free school for the instruction of children, several benevolent societies, and a public library. The principal manufactures are serges, for the home and China markets, but this branch has much decreased lately. Area of par. and bor. 8320 ac. Pop. of $\mathrm{p}^{\mathrm{ar} . \text { in } 1841,3841 \text {; of tn. } 3014 .}$

Pop. in 1841, 337.-12, Ashby-Parva, co. Leicester; 1260 ac.; N. by W. Lutterworth. Pop. in 1841, 179.-13, Ashby-Puevorum, co. Lincoln; 1620 ac.; N.E. Horncastle. Pop. in 1841, 102.-14, Ashby (St. Leger's), co. Northampton; 2050 ac.; $4 \mathrm{~m} . \mathrm{N}$. Daventry, on the Lincoln and Birmingham Railway. Pop. in 1841, 257.-15, Ashby (West), co. Lincoln; 1590 ac. ; N. IIorncastle. Pop. in 1841, 534. - 16, Ashby-Mears, co. Northampton; 1890 ac. Pop. in 1841, 496.

ASHBY-de-la-zouch, a market tn. and par. England, co. Leicester, in a fertile valley on the borders of Derbyshire, on the Gilwisthaw, a tributary of the Trent, $16 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Leicester. It takes its distinctive appellation from the ancient Norman family of La-Zouch, who came into possession of the manor in the reign of Henry III. In 1461, it devolved to the Crown, by whom it was granted to the noble family of Hastings. The town consists of several wide streets, well paved and well lighted. The principal street is particularly spacious and clean. Many of the shops are handsome, and a number of substantial new houses rising in various directions indicatc a progressive prosperity. The church is a handsome
structure, and the town has, besides, places of worship for Independents, Wesleyan and Calvinistic Methodists, and Baptists; several schools, and a small theatre. The manufactures are chicfly of cotton and woollen stockings, and hats. It has also a considerable trade in malt. On the S . side the town, are the 'Ivanhoe Baths' occupying a splendid edifice, and abundantly supplied with medicinal waters, considered the strongest of their kind in England, and singularly efficacious. On the S. side are also the ruins of Ashby Castle, celebrated in English history as the scene of many remarkable occurrences. It is of great antiquity, having been a place of note as early as the 11 th century. About 1 m . N.W. the town, are the meadows which Scott has made the scene of the famous passage of arms in his magnificent novel, Ivanhoc. Ashby was the native place of Joseph Hall, Bishop of Norwich, and of Dr. John Bainbridge. Pop. of par. in 1841, including 444 belonging to the chapelry of Blackfordby, 5652.

ASHCHURCII, a par. England, co. Gloucester; 4240 ac .; E.N.E. Tewkesbury. Pop. in 1841, 743.

ASHCOMBE, a par. England, co. Devon; 2250 ac. ; N.E. Chudleigh. Pop. in 1841, 297.

ASHDALAG, a large and beautiful vil. Russian Armenia, about 35 m. N. W. Erivan, high up on the S. slope of the Alaghez Mountains. It is inhabited exclusively by Christians, enjoys a very mild climate, and is surrounded by rich gardens. The inhabitants are in a comfortable condition, and cultivate the well-watered fruitful soil of the vicinity.-(Wagner's Reise nach dem Ararat.)

ASHDOD. See Asdoun.
ASHDON, or Asifingdon, a par. England, co. Essex ; 4840 ac.; N.E. Saffron Walden. Pop. in 1841, 1164.

ASHELDHAM, a par. England, co. Essex; 1810 ac.; S.S.W. Bradwell. Pop. in 1841, 219.

ASHELWORTH, a par. England, co. Gloucester; 1710 ac.; N. Gloucester. Pop. in 1841, 594.

ASHENDON, a par. England, co. Bucks ; 1790 ac.; N. Thame. Pop. in 1841, 312.

ASHFIELD, two parishes, England, co. Suffolk:-1, 1560 ac. ; E. Debenham. Pop. in 1841, 343.-2, Ashfield (Great), 2030 ac ; N.N.W. Stowmarket. Pop. in 1841, 396.

ASHFORD, a market tn. and par. England, co. Kent, agreeably situated on a gentle eminence, l. bank of the sour, which is here crossed by a stone bridge of four arches, about 54 m. E.S.E. London, and 20 m. S.E. by E. Maidstone. It consists of three principal streets, straight, well kept, and well lighted with gas, but indifferently supplied with water. The houses are, in general, of brick, and are well built. The church, which is in the perpendicular style, is in the form of a cross, with a tower 120 ft . high, surmounted by four pinnacles rising from the centre; the latter erceted in the reign of Edward IV. The other places of worship are a Baptist and a Wesleyan chapel, a chapel for the Countess of IIuntingdon's connection, and a meeting-house for the Society of Friends. The schools are, a grammar-school, British and national schools, three ordinary day schools, and several boarding-schools. There are a suit of assembly rooms, lately built; two well-supported libraries, and a reading-room. With the exception of some tanning, the only branch of manufacture is that of table-linen, hop-bags, sacking, \&c., carried on to a small extent. Market-day, Saturday. Cornmarket, Tuesday. The South-eastern and Dover Railway passes through the parish, the station here being half a mile from the town. The branch line to Canterbury, Ramsgate, Margate, and Deal, joins the main line near Ashford station. There is another brancl from Asliford to Hastings. Pop. of par. and tn. in 1841, 3082.-Also a vil., co. Derby, hun. High Peak, par. and 2 m. N.W. Bakewell. Pop. 950.

ASHFORD, four parishes and a chapelry, England :-1, Co. Devon; 2170 ac.; N. W. Barnstaple. Pop. in 1841, 174.2, Chapelry, co. Derby ; situated on the Wey. Pop. in 1841, 950.-3, Co. Middlesex ; 1500 ac. ; E. Stains. Pop. in 1841, 524.-4, (Bowdler,) co. Salop; 630 ac. ; S. Ludlow. Pop. in $1841,96-5$, (Carbonell,) co. Salop; 1480 ac . scparated from Ashford Bowdler by the river Theme. Top. in 1841, 266.

ASHFORDBY, a par. England, co. Lcicester; 1210 ac. ; W. Melton Mowbray. Pop. in 1841, 482.

ASHILLL, two parishes, England:-1, Co. Norfolk; 2970 ac. ; N. W. Watton. Pop. in 1841, 637.-2, Co. Somerset; 1860 ac . N. W. Ilminster. Pop. in 1841, 438.

ASHINGDON, a par. England, co. Essex ; 1020 ac. N. Rochford. Pop. in 1841, 119.

ASHINGTON, two parishes, England:-1, Co. Somer. sct; 550 ac. ; E.S.E. Ilchester. Pop. in 1841, 71.-2, Co. Sussex; 1430 ac. ; N. Steyning. Pop. in 1841, 282.

ASHKIRK, a par. Scotland, cos. Roxburgh and Selkirk; 3200 ac. Pop. in 1841, 563.

ASHLEY, four parishes, England:-1, Co. Northampton; 1190 ac.; bounded on the N. by the river Welland. Pop. in. 1841, 323.-2, Co. Stafford; 2600 ac. ; N.W. Eecleshall. Pop. in 1841, 853.-3, Co. Hants ; 2580 ac. ; S.E. Stockbridge. Pop. in 1841, $102,-4$, Co. Wilts; 1010 ac. ; N. Malmsbury. Pop. in 1841, 96.

ASHLEY-cum-sylverley, a par. England, co. Cambridge; $2143 \mathrm{ac} . ;$ S.E. Newmarket. Pop. in 1841, 417.

ASHMANHAUGII, a par. England, co. Norfolk, 700 ac.; N.N.W. Whitcehureb. Pop. in 1841, 180.

ASHMORE, a par. England, co. Dorset, 3940 ac. ; S.E. Shaftsbury. Pop. in 1841, 242.

ASIIOLT, a par. England, co. Somerset; 2650 ac. ; W. by S. Bridgewater. Pop. in 1841, 201.

ASHOVER, a tn. and par., co. Derby, pleasantly situated in a deep narrow valley, through which the Amber flows, $16 \mathrm{~m} . \mathrm{N}$. Derby, and $3 \frac{1}{2} \mathrm{~m}$. from the Stratton station of tho Midland Railway. The chief building is the church of AllSaints, which is a large and beautiful Gothic structure, with a square embattled tower, from the certre of which rises a handsome spire 69 ft . high. This church contains several monuments of considerable antiquity, and possesses a curious old leaden font of circular form, and ornamented with rude figures in bas-relief. The other places of worship are, one for the Wesleyan, and another for the Primitive Methodists. The rectory is neat and spacious, and surrounded by gardens and pleasurc-grounds. Besides an endowed school, there is also a school for girls, built in 1846. Lead mines were at one time extensively worked in the parish, but all mining operations have ceased, and Ashover has, in consequence, greatly declined. Limestone is still quarried to some extent; and there is a twisting-mill for Nottingham lace. Medicinal herbs are grown in considerable quantities. Area of par. 11,290 ac. Pop. in 1841, 3482.

ASHOW, a par. England, co. Warwick; 1100 ac ; N.N.E. Warwick. Pop. in 1841, 172.

ASHPRINGTON, a par. England, co. Devon; 2240 ac. ; S.E. Totncss, Pop. in 1841, 588.

ASH-PliIORS, a par. England, co. Somerset; 750 ac.; N.W. Taunton. Pop. in 1841, 226.

ASHREIGNEY, a par. England, co. Devon; 6220 ac. ; W. by S. Chumley. Pop. in 1841, 1088.

ASIIRUFF, Asimaf, or Ushauff, a th. Persia, prov. Mazanderan, 50 m . W. Asterabad, and about 8 m . from the Caspian Sea; lat. $36^{\circ} 41^{\prime} 45^{\prime \prime}$ N. ; lon. $53^{\circ} 33^{\prime} 53^{\prime \prime}$ E. (rı) It was the favourite residence of Shah Abbas the Great, who built here an extensive and magnificent palace. This and many other fine buildings that adorned the town are now in ruins; enough, however, still remains to leave a favourable impression of the Persian monarch's taste. Ashruff is said to have formerly contained 300 baths within its walls; but it has now only 500 houscs, thinly scattered through an extensive jungle.- (Frascr ; Burnes.)

ASHTLAD, a par. England, co. Surrey ; 2510 ac. ; S.W. Epsom. Pop. in 1841, 618.

ASHTOLA, or SUNGADEEP, a small desolate isl. Indian Ocean or Arabian Sca, off the coast of Mukran in Beloochistan; lat. $25^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $63^{\circ} 42^{\prime} \mathrm{E}$. ; about 15 m . from the mainland. It is accessible at one point only, on the N. side ; on all others the stcep cliffs rise to a height of about 300 ft . When Licut. Kempthorne visited it in 1835 , there were no inhabitants on it, nor any vestige of human habitation. Great quantities of turtle frequent the island for the purpose of depositing their cggs; and immense numbers of the former are killed by the Arabs, who export the shells to China, throwing the carcass away as unclean. Ashtola was at one time a favourite rendezvous of the Jowasimce pirates, who here committed many savage murders on the crews of the vessels they eaptnred. The remains of their look-out tower are still visible; it is built on a high cliff, very difficult of access, and commands an extensive viow to scaward.- (Kempthorne's Notes.)

ASHTON, seven parishes, England:-1, Co. Devon; 1560 ac ; N. Chudleigh. Pop. in 1841, 319.-2, Co. Northampton; 1290 ac . ; S. Northampton, on the London and Birmingham Railway. Pop. in 1841, 417.-3, Ashton (Cold), co. Gloucester ; 2310 ac.; E. by S. Bristol. Pop. in 1841, 414.4, Ashton (Keynes), co. Wilts; 3820 ac.; W. Cricklade. Pop. in 1841, 1332.-5, 1 shton (Long), a vil. and par., co. Somerset; 4110 ac. ; S.W. Bristol. Pop. in 1841, 1926.-6, Ashton-upon-Mersey, co. Cheshire; 3690 ac. ; N.E. Altrincham. Pop. in 1841, 2414.-Ashton (Steeple), a par. and township, co. Wilts ; 7450 ac. ; E. Trowbridge. Pop. in 1841, 1941.

ASHTON-UNDER-LYNE, a market-tn., par., and parl. bor. England, co. Lancaster, hun. Salford. The town is 6 m. E. Manchester, $160 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. by N. London, on a gentle declivity, 1. bank, Tame ; and consists of upwards of 200 streets, nearly all of which are perfectly straight, but many, especially the older ones, very narrow. The newer streets are more spacious; and all are well paved, well lighted with gas, and water is plentiful. The houses are in general substantially built of brick, and two stories in height, and many of them are handsome buildings. On the N . side of the spacious market place or square stands the townhall, an elegant structure, erected in 1840 at an expense of $£ 7506$. The banking-offices of the Ashton, Stalybridge, Hyde, and Glassop Bank, and the Manchester and Liverpool District Bank, are also worthy of notice. Amongst the architectural objects of autiquarian interest in the town are the old manor hall, the manor court-house, an antique circular structure, erected in 1636, on the site of an earlier building of a similar description; the parish almshouses, and the manorial cornmills on the river Tame, known to have existed in nearly the same form as now six centuries ago. The ancient parish church of St. Michael, which stands on an eminence near the S.E. entrance to the town, was founded in the 13th century; it has frequently been rebuilt, and is at present a fine specimen of ecclesiastical architecture in the later English style. It underwent a thorough repair in 1842, at a cost of $\mathfrak{£ 6 8 0 0}$. St. Peter's Church, erected in 1824 at an expense of $£ 14,000$, is adorned with a remarkably fine tower. Christ-Church, situated on the N.W. side of the town, was erected in 1847 at a cost of $£ 3000$; it is a cruciform structure, in the early English style. Besides the parish churches, there are 10 dissenting chapels, most of them neat brick edifices, belonging to various religious denominations. The means of education are 22 private and public day schools with an average attendance of 1859 pupils. The principal are those of the National Society, belonging to the three churches; of the British Socicty, belonging to the Independents; and that connected with the Wesleyan body. There are also four dame schools, in which are 64 children; one infant school, in comuection with St. Peter's Church, which has an average daily attendance of 148 pupils; and 12 Sunday schools, attended by about 4478 scholars. The charitable and benevolent institutions consist of the female henevolent society, supported by subscription; numerous sick and burial societies, and sundry bequests, which are disbursed from time to time ly the rector and churchwardens. A mechanic's institute was established in 1825; it has a library consisting of 2000 volumes, and a reading-room well supplied with the current literature of the day; also evening classes, conducted by competent masters, for the instruction of the subscribers in the various branches of education usually taught in such institutions.

Principal manufactures:-cotton-yarn spiming, and weaving calicoes by the power-loom. The number of faetorics at present existing within the borough is 84 , working 3533 horsepower, and giving employment to 14,377 work people; the weekly wages of whom amount usually to about $£ 7900$. The consumpt of raw cotton is estimated at $1,400,000 \mathrm{lbs}$. weekly.

The following remarks on the working population of Ashton-under-lyne and their social condition, by an intelligent local correspondent, will not be found without interest:-"The operative classes, which comprehend nearly the whole population of this town, are small in stature, sallow in complexion, marry early, have large families, and live expensively when in full employment; they are deficient in domestic economy, fond of attending public assemblies, careless about education and religion, and wanting in forethought and retrospection; but they are skilful and industrious workmen, attentive to the due execution of their tasks, and, when unexcited by evil influences, are generally contented.'

In 1843 a barrack was erected near the town, at a cost of $£ 42,500$, in which a battalion of infantry and a troop of horse are permanently stationed; and, in 1840, a cemetery, comprising nearly 3 ac., was laid out on the E. side of the town. The principal market-day is Satnrday; and, in 1846, a weekly cattle-market, on Tuesday, was established; markets are also held on Monday and Wednesday. There are four fairs annually; and one on the second Thursday in every month for the sale of horned cattle, sheep, pigs, \&c. Aston-under-Lyne sends one member to the House of Commons. Constituency in 1850, 724.

The increase of the wealth and population of this town within the last half century, but particularly within the last 20 years, has been very remarkable. In 1821 its population was 9222 , in 1841 it was 22,689 , and in 1851 it was 29,791 . Area of par. 9300 ac . Pop. in 1841, 46,304.-(Correspondent in Ashton-under-Lyne.)

ASIUURS'T, two parishes, England:-1, Co. Kent; 1000 ac. ; W. Tunbridge Wells. Pop. in 1841, 224.-2, Co. Sussex; $2250 \mathrm{ac} . ;$ N. Steyning, on the Brighton and London Railway. Pop, in 1841, 427.

ASHWATER, a par. England, co. Devon; 4220 ac.; S.E. by E. Holsworthy. Pop. in 1841, 1046.

ASHWICKEN, a par. England, co. Norfolk; 1260 ac.; E.S.E. King's Lynn. Pop. in 1841, 78.

ASIA, the largest of the great divisions of the globe. Its mainland is bounded, N. by the Arctic Ocean, S. by the Indian Ocean, E. by the N. Pacific Ocean, W. by Europe, and S.W. by Africa. Its greatest length is from the Dardanelles to Behring's Strait, a distance of about 7500 m. ; its greatest breadth, from C'ape Sievero Vostotchnia, in Siberia, to Point Romania, at the S. extremity of the Malay Peninsula, about 5166 m. Asia is joined to Europe throughont the whole length of its W. limit; being separated from it by an arbitrary line only, part of which is formed by the Ural Mountains; and is connected with Africa by the Isthmus of Suez. On the E., it is separated from America by Behring's Strait, where the two continents approach within 36 m . of each other. The coasts of Asia are singularly irregular; being deeply indented all round by immense bays and gulfs, forming projections of corresponding magnitude. The principal of the former are the Persian Gulf, Arabian Sea, Bay of Bengal, and Gulf of Siam, on the S. coast; the Gulf of Tonquin, Yellow Sea, Sea of Japan, Gulf of Tartary, Sea of Okhotsk, and Gulf of Anadir, on the E. coast. On the N., the indentations are cqually numerous, but, with exception of the Gulf of Obe, not of the same extent. The more remarkable peninsulas are those of Hindoostan, Malaeca, Cochin China, Corea, and Anadir, on the S. and E. coasts. The principal islands and island groups included within the limits of this division of the globe are, on the S. and E., the Laccadives, Maledives, the Chagos Archipelago, Ceylon, the Andaman and Nicobar islands, the Mergui Archipelago, Sumatra, Java, Borneo, Celebes, and the Sunda and Banda islands, the Moluccas, Sooloo islands, Philippines, the island of Hainan, Formosa, Chusau, Hong-Kong, the Japanese empire, Sagalin or Tarakail, and the Kuriles. On the N., Kotelnoi, Fadievsk, New Siberia, Liokoy, and, according to Humboldt, Nova Zembla. The mainland of Asia is comprised between lat. $1^{\circ} 15^{\prime}$ and $78^{\circ} 20^{\prime} \mathrm{N}$., and $\operatorname{lon} .27^{\circ} 0^{\prime}$ and $190^{\circ} 0^{\prime} \mathrm{E}$. If its islands are included, its S . limit will extend to $1 \mathrm{lat} .11^{\circ} \mathrm{S}$., the most S . point of Rotte, a small island S. of Timor. The countries comprised within its limits are Asiatic Turkey, Arabia, Persia, Beloochistan, Cabool, Punjab, Sinde, Hindoostan, Burmah, Siam, Laos, Anam, Malacca, China, Manchooria, Corea, Mongolia, Thibet, Tartary, Asiatic Russia; and to these, and to the islands abcve enumerated, respectively, the reader is referred for such details as may be missed in this article, which, to avoid unnecessary repetition, is intended to be merely general.
The vast extent of Asia, the diversity of its surface, and the conflicting accounts given of the physical structure of
large portions of its interior, particularly in Central Asia, renders it extremely difficult, if not impossible, to give such a view of its general conformation as should be at once accurate and intelligible. It may, however, be characterized, generally, and notwitlstanding its enormous elevations, as a flat country; its mean level above the sea not exceeding 1150 ft ., while a third part has not more than 255 ft . of mean height. The whole of that portion lying N.W. of the ThianShan Mountains, or of lat. $45^{\circ} \mathrm{N}$., and N. of the Altaï, or of lat. $50^{\circ} \mathrm{N}$., is one prodigious plain or tract of lowland, a third larger than Europe; the elevation of which is little more than 200 to 1200 ft . The S. portion again, which stretches along the Indian Ocean, is composed, likewise, of comparatively level regions; so is also a great part of the interior, where the elevations do not exceed from 2000 to 4000 ft . above the sea; though formerly believed to be more than double the height of the latter amount, or 9000 ft . a supposition contradicted by the fact that grapes, vines, oranges, and cotton, grow there readily and in great abundance. It may be added, that the heights of several of the other plateanx of Central Asia have been greatly overestimated; and that there is little doubt that, if carefully measured, most, if not all of them, would be found to fall far short of the heights at present assigned to them. Still, while a large portion of Asia is comparatively but little above the level of the sea, many extensive tracts have a great elevation, and no small part of the continent is actually below sea level. The extensive country N. and E. of the Caspian Sea, and around the Lake of Aral, forms a vast cavity of about 55,000 sq. m., all of which is below the sea level. The prodigious mountain systems of Asia are no less remarkable than its vast plains and deserts. With exception of the Ural Mountains, none of any note oceur throughout the whole of N. Asia N. of lat. $50^{\circ}$, and W. of lon. $120^{\circ}$ L.; but E. of that meridian the Aldan Mountains, and the Yablonoi and Stanovoi Krebit, attain a considerable elevation. S. of lat. $50^{\circ}$, and N. of lat. $31^{\circ}$, are to be found the principal mountain-systems of Asia, consisting of four great ranges, tolerably parallel to each other and to the equator; the largest extending, in an almost unbroken line, under the various names of Taurus, Elbruz, Hindoo Koosh, and Kuen-lun, from the Bosphorus to China proper, E. of the 100 th meridian, forming, in a sense, the backbone of the continent. The subsidiary systems lie at various angles to the equator, but, generally speaking, they run parallel to the coasts; the greater number, however, having a direction S.E. to N.W., as in Arabia, Persia, the coast of Malabar, the peninsula of Burmah and Anam, and Malacea; while on the coast of Coromandel, in N. India, China, Manchooria, and N.E. Siberia, the general direction is S.W. to N.İ.

Having thus rapidly sketched the physiognomy of the continent, we now proceed to notice its prineipal physical features in detail.

Mountains.-The great mountain systems of Central Asia are the Himalaya, the Altaï, the Thian-Shan or Celestial Mountains, and the Kuen-lun, all, generally speaking, parallel to the equator. The Himalaya range, the general course of which is from N.W. to S.E., consists of three parts, the Hindoo Koosh or Indian Caucasus, which extends from the Paropamisan range, in Afghanistan, to Cashmere; the Himalaya or Inaus of the ancients, which stretches from the valley of Cashmere to Bhotan, with a semi-circular inflection; and, lastly, the mountains of Bhotan and Assam. The entire length of the range of the Himalayas is about 1800 m . ; reckoning from the W. extremity of the Hindoo Koosh, near the rivre Dehas in Cabool, to the Brahmapootra in Assam. The nicau height of these stupendous mountains has been estimated at from 16,000 to $20,000 \mathrm{ft}$. The highest summit yet ascertained with any degree of certainty, is that of Kunchinginga in Sikim, which is $28,178 \mathrm{ft}$. in height. Dwalagiri ranks next to it. But there are several other peaks said to be of equal, and some of even still greater elevation. The number that exceed $21,000 \mathrm{ft}$. is upwards of 40 . Most of the passes are above $15,000 \mathrm{ft}$. in height, and some of them 18,000 and 19,000 . The line of perpetual congelation is at an elevation, on the S . side, of $12,981 \mathrm{ft}$. ; on the N. , of 16,620 ; a result precisely the reverse of what would, a priori, be expected, but which is supposed to be owing to the greater serenity of the sky on the N . side, the less frequent formation of snow in very cold dry air, and the radiation of heat from the neighbouring plains,
which are much nearer than those on the $S$. The erest of the Himalaya is of stratified crystalline rocks, especially gneiss, with large granitic veins, and immense beds of quartz. The zone, betwcen 15,000 and $18,000 \mathrm{ft}$. above the level of the sea, is of silurian strata; granite is frequent at the base, and strata of comparatively modern date oceur at great elevations. Vegetation is prolonged on the IImalaya to the height of upwards of $18,000 \mathrm{ft}$. These magnificent mountains are intersected by valleys and ravines of tremendous depth, through many of which rivers and torrents rush with ineonceivable impetuosity (see Hımalaya). The system of the Altaï surrounds the sources of the Irtish and Yenisei. The Altaï proper forms little more than a fourth part of the entire system; extending from W. to $\mathbf{E}$. from the confluence of the Uba and Irtish, to Mount Gurbi, and the S. of Lake Baikal. Its branches or continuations stretch under various names, first to the Gulf of Okhotsk, and afterwards to Eastern Cape, where it terminates; the whole length being about 4500 m. ; the breadth varying from 400 to 1000 m . The most prominent masses of this system, attaining the limits of perpetual snow, are situated between the parallels of $49^{\circ} 30^{\prime}$ and $51^{\circ} \mathrm{N}$. On the highest known summit, Bielukha, in the Russian Altaï, which attains an elevation of $11,000 \mathrm{ft}$. above the sea, a glacier $1 \frac{1}{2} \mathrm{~m}$. in length occurs. A great portion of this chain is unknown to Europeans; especially those branches that enter the Chinese empire. The common distinetion of 'great and little' Altaï is founded on error, and therefore apt to mislead; both the name and chain of the great Altair being, according to Humboldt, imaginary.-(Asie Centrale, vol. i. 1. 251.) See Altai. The Thian-Shan, or Celestial Mountains, run nearly alons the $42^{\circ}$ parallel of N . latitude, rising in Tartary and terminating in the desert of Gobi in Mongolia. Their highest summit, Bogda Oola, or 'Holy Mountain,' is always covered with snow. Indced, snow lies deep on the whole range in winter. Little is known of the country between the Thian-Shan Mountains and those of the Altaï-a space of about 400 m . in breadth. The Kuen-lun Mountains run nearly parallel with the former range, and in some parts with the Hindoo Kooslı also. They rise a little to the E. of the 100 th degree of $\mathbf{E}$. longitude, and, under the various names of Kulkun, Aneuta, Kuen-lun, Hindoo Koosh, Elbruz, and Taurus, running W. and N.W., closely skirt the Caspian Sea and Black Sea on the S., terminating to the W. of the latter, thus forming, with the exception of the American cordillera of the Andes, the longest line of elevation on the surface of the globe.

In the mountain systems of the N.E. of Asia, beyond the Altaï, the ridges (from S.W. to N.E.) are of little extent and elevation when compared to the four great chains above described, running from E. to W., and whieh constitute, as it were, the framework of Central Asia. The other prineipal mountain-systems are the Ural and Caueasian Mountains, botl in W. Asia, the former rumning N. and S., and the latter N.W. and S.E.; the Taurus and Anti-Taurus, in Anatolia, the former S.E. to N.W., and the latter N.E. to S.W.; the P'ersian mountains, and the Western Ghauts in the Carnatic, both runnin's S.E. to N.W.; the Vindhaya range, in Upper India, and the Assam chain, S.W. to N.E. The numerous other chains, of greater or less extent, existing over this great continent, will be found noticed in the articles on the countries in which they occur.

Volcanoes, Eurthquakes, dec.-The continent of Asia has few volcanoes in a state of aetivity, though its islands are erowded with them, Java containing a greater number than any other spot on the face of the globe. In W. Asia, the only aetive volcano existing is Demavend, 70 m . S. from the S. shores of the Caspian sea. It is $14,695 \mathrm{ft}$. in height, is covered with snow, and is constantly smoking. The tableland of W. Asia was at one time the seat of intense commotion, now restricted to the mountain just named, to Seiban-dagh, and Ararat. In the table-land of E. Asia, the only instance of igneous explosion that oceurs is in the volcanic chain of the Thian-Shan, where are two active volcanoes at the distance of 670 m . from each other, Peshan, and Ho-cheou. These are the centre of an extensive volcanie district, extending N. to the Altaï Mountains. Fire-hills and fire-springz are numerous in China, but, so far as is known, there are no mountains that eject lava. In Kamtsehatka, however, there are no fewer than nine volcanoes in a state or activity. Earthquakes are frequent and violent in many parts of Asia. The
